Japanese rice has lately come into great favour in Europe and in consequence of its superior quality, as compared with Indian rice, it fetches a much higher price at present, with every probability of its becoming higher. Rice has not as yet assumed a prominent position amongst our national exports, the shipments up to the present having been on Government account; but there is no doubt private merchants will now embark in the trade as numerous fields are open. In case of a deficiency in the crops in Australia, China, &c., we could supply their requirements and should we suffer from famine we must seek for relief from China. But rice, like coal, is heavy and bulky, and if it has to be first brought to the open ports for export or import, the price will be raised and thus the development of the industry for exportation, or the import of rice to relieve distress in case of famine, will be unnecessarily obstructed. The case of Niigata is a proof of the soundness of our argument; in 1875 and 1876 large quantities of rice were exported from there, simply because it was an open port, and the local farmers made large profits because the price of the grain was much higher there than in other districts which had no port opened to foreign trade. The foreign merchants also must have derived no little profit from the trade and the gain of both parties was owing to the port of Niigata being open. For these reasons we earnestly desire that in order to encourage the important coal trade the harbours nearest to the mines may be opened up, and that Shimonoseki, Fushiki, Ishinomaki, &c. may be thrown open in order to promote the export of rice. Thus the cost of these important products will be decreased and a great development of the export trade inevitably follow.

EQUALIZATION OF IMPORT DUTIES:—Although, as a general rule, *ad valorem* duties are better than specific duties, and it is as a broad principle desirable that import duties should be levied *ad valorem*, yet this is not invariably the case. For instance, in the case of woollen and cotton fabrics, they all come under the same denomination, but are vastly different in breadth and quality. It is manifestly unfair to levy the same duty upon goods so dissimilar and we therefore desire that duty may be imposed according to the breadth, weight, &c. of

the different materials. The Government will no doubt decide the question, yet as this Chamber has an opinion of its own on the subject, we shall be glad to report upon the matter at length if the authorities desire it.

ADDITIONAL BONDED WAREHOUSES:—We are fully convinced that the erection of additional bonded warehouses, and charging a moderate price for storage, would do much to encourage trade. On account of the scarcity of the warehouses and the high charges, only a very few merchants have hitherto availed themselves of these establishments. In consequence, the bulk of the imported goods are forwarded to the godowns of foreign merchants immediately they are landed, and when native merchants purchase these goods they have to be again brought to the wharf for shipment. The converse happens to exports, but in each case much unnecessary expense is incurred. Much inconvenience is also entailed. Most of the goods sent to Japan are drawn against, and the banks who hold the drafts will not allow the goods to leave the godowns until they are paid, and as a rule the native purchasers have to pay for these goods before they have an opportunity of examining them. On the other hand as regards exports, they are sent to the godowns of foreign firms where they remain for perhaps several days without the owner getting even an acknowledgment for them. After an interval, the goods are examined and the owner informed whether a purchase will be made or not. All this is very prejudicial to our merchants and militates greatly against their success. Amongst other causes which have insensibly led to the present state of matters, we may mention that godowns owned by foreigners are insured against loss by fire while ours are not; this is very detrimental to trade and unless some remedy is effected without delay, the injuries sustained by native merchants will increase year by year. We therefore strongly recommend that several additional bonded warehouses be erected by the Government in the vicinity of the wharves and that goods should be received therein for import and export at a low rate. Certificates could then be given for the goods stored and they could be sold by sample and the whole transaction completed without the goods leaving the warehouse. By this means the trouble and expense of constantly removing merchandise from one place to another will be obviated to the great benefit of merchants. The Chamber holds some further views on this subject of warehouses and charges, which we will be happy to submit to the Government if we should be honoured with an invitation to do so.

DRAWBACKS:—The practice of returning the duties paid on imported goods which are exported (technically known as "drawback") is only just and reasonable and we have long advocated the establishment of the system in Japan. It is done in Europe, America, China, &c., and although each country has its own regulations differing from those of other places, still the result is practically the same. What this Chamber desires to see adopted in Japan is a code of regulations on this subject of the most precise description, so that drawbacks will not only be allowed upon imported goods which are exported in their original form, but also on those that are exported after having been subjected to manufacturing or other processes; for example when Formosan brown sugar is refined into white or loaf sugar and exported, the duty paid upon it when imported should be returned, so also with imported English cotton yarn which may be spun into cloth here and exported, and numerous other similar instances. In all these cases the import duties should be returned, although a considerable amount of trouble and labour will be entailed and the money involved will not be very much, still it is only right that the refund should be made as it will encourage manufacturers and assist in promoting the prosperity of the open ports. We have several suggestions to make on this same subject, but as they would occupy too much space for insertion in this memorial we will defer them until some future occasion.

VALUATION OF IMPORTS:—According to the present system, when the value of imported goods is considered different from the invoice, the Custom House authorities order the appraisers to value the goods, and the duties are imposed by their valuation. If the owners or consignees refuse to pay the duties so imposed, the goods are taken over by the authorities at the price named by the appraisers. Although this system is not without its advantages, it is also open to abuse by crafty persons. As it is known that the authorities are obliged to purchase the goods at the price fixed by the appraisers, fraudulent imitations of well-known goods can be imported, invoiced at low prices and thus foisted upon the Government. This is owing to the fact that the appraisement is made by the trade marks alone. The existing system should be abolished. Competent appraisers should be appointed from amongst native and foreign merchants and in case of undervaluation in the invoices the owners or consignees should be compelled to pay duty according to the valuation of the appraisers. The practice of the authorities taking over the goods should be discontinued. If this is done there will be no opening left for fraud and the proper duties will be paid.

MODE OF LEVYING IMPORT DUTIES:—The system followed under the present tariff is to calculate the *ad valorem* duties upon

imports according to the values mentioned in the invoices. This plan has the merit of simplicity to recommend it, but if carefully considered will be found very unjust for the following reasons. In order to levy duties impartially, a proportionate difference should be made between such as are brought a long or short distance. At present however, no distinction is made and indeed cannot well be as the value given in the invoice is that of the goods at the place of manufacture, which is as a rule much lower than the price at the port where the goods are placed on ship-board. Take for example goods imported from England. If one merchant purchases muslin at the factory in Manchester and another merchant purchases in London there would be a different value given in the invoices, although the goods might be precisely similar in every respect. The reason is, that the freight from Manchester to London would require to be added to the cost of the muslin purchased in the latter place. Now when these goods arrive at one of the open ports in Japan, duty is levied according to the invoice although the actual value is identical. The same anomaly exists in goods imported from different countries: for instance cotton yarn is imported both from England and India, but England is much farther away than India, and if when the goods arrive here duty is levied according to the invoice, then we are imposing a heavy duty upon the yarn from India, and a light one upon that from England, because in the latter case, the invoice does not include the freight from England to India which has already been borne by the yarn from India. It will thus be seen that we impose a proportionally heavier duty upon goods from a country near to Japan than upon those from a country further away. Surely no one will contend that this method of taxation is impartial? We submit that we have demonstrated the injustice of the existing system of levying *ad valorem* duties and we recommend the abolition in the forthcoming treaty revision of the practice of calculating the duty merely on the value in the invoice and that there be added to such value, not only the cost of transit from the manufactory to the shipping port, but also the freight to this country. Impartiality in the duties charged will thus be secured.

PAYMENT OF DUTIES IN JAPANESE COIN ONLY.—When the existing treaties were entered into, silver *bons* were the only trade-coins used in Japan. It was accordingly agreed that customs duties should be paid in these *bons*, but as great difficulty arose in obtaining the coin it was subsequently arranged that the duties might be paid in Mexican dollars, 100 dollars being taken as equivalent to 311 *bons*. But as this rate of exchange was not exactly correct, the Government have sustained great loss in collecting the custom's revenue. Now that a standard coin has been introduced it is only reasonable that the duties should be paid in this coin only and the Mexican dollars prohibited. This is the more reasonable because the Japanese standard coin, the yen, has acquired the confidence of people in China, Singapore, the Straits Settlements, and other commercial places, and the foreign merchants residing in the open ports of Japan, now entertain no objection to using this coin as a circulating medium. As the Government have established a Mint, where bullion in any quantity can be coined into currency, there is no reason whatever why we should depend upon foreign countries for our coinage. The Chamber therefore desires that in the forthcoming treaty revision, provision be made for the payment of the custom's duties in silver yen alone, to the exclusion of every other coin.

JAPAN NEWS.

[The following Notes on various Japanese matters are chiefly derived from the native papers, occasionally supplemented from original sources of information, and are carefully collated and edited, so as make them readable and intelligible.]

NOTIFICATION.

In accordance with the regulation for annually assaying the coins coined at the Mint in Osaka, an assay of the coins retained for that purpose, out of those issued from that office during the Financial year from July 1878, to June 1879, has been made, and the following report thereupon, furnished by Mr. William Gowland (a British subject), the Assayer of the Mint is hereby notified for general information.

FINANCE DEPARTMENT.

October 13th, 1879.

I have myself assayed separately four gold five-yen coins, one silver trade dollar and four silver one yen coins, which were this morning selected by Mr. Matsukata, from among the coins retained for that purpose out of those issued from the Mint during the Financial year 1878-1879. The remaining gold five-yen coins 85 in number, I have melted and made into a bar and have taken and assayed a cutting therefrom. In the case of the silver coins, viz: 200 one-yen coins, 100 ten-sen coins and 1,000 five-sen coins, I have melted all together and taken dip assays from the melted silver.

The following are the results of the assays:—

No.	Denomination.	Date of Coining.	Finesness.
1	5 yen Gold	2nd Sept. 1878	900.1
2	" " "	4th Dec. "	900.2
3	5 " "	1st Feb. 1879	900.0
4	5 " "	6th May "	900.1
Cutting of 5 yen Gold from bar			899.8
1	Trade Silver Dollar	27th Aug. 1878	900.4
1	" " 1 yen	3rd Oct. "	900.3
2	" " " "	24th Dec. "	900.1
3	" " " "	7th Feb. 1879	900.0
4	" " " "	3rd May "	900.2
Cutting of 1 yen Silver from dip			900.7

Subsidiary Silver Coins.

Cutting of 10 sen silver coins from dip	800.5
" " 5 " " "	799.2

In each case, the coin, dip, or cutting was divided into four parts: one of each of which I myself assayed and I now deliver to you the other three parts each sealed up in your presence. In all cases, the fineness of the coins are within the scale.

(Signed) WILLIAM GOWLAND.

Associate of the Royal School of Mines.

To the

COMMISSIONER OF THE MINT.

Assay Office, 25th June, 1879.

COURT, POLITICAL AND OFFICIAL.

His Majesty the Emperor left Tokio yesterday for the Narashino Plains, to witness a review of the army, and was accompanied by Messrs. Terashima, Tokudaiji and about fifteen other leading officials and their secretaries. The distinguished party was escorted by a detachment of the Imperial Guard.

A grand entertainment will be given in the Hall of the Engineering college, in Tokio, on the 3rd November next, to celebrate the Emperor's birthday. All the native and foreign officers of the Government, and the Foreign Ministers &c., are to be invited. The *Nichi Nichi Shinbun* mentions a rumour that there will be display of fireworks, from the Japanese man-of-war *Nishin Kaa* now in harbour, during the evening.

Mr. Iwakura, the vice-Prime Minister, went to Kiyoto by the steamer which left on Wednesday, in order to transact some business connected with the old palace.

As previously announced, the funeral of the late General Kawaji, Chief Superintendent of Police, took place in Tokio on the 16th instant. The funeral was attended by a great number of people and by the Ministers and other officials of the Government. Two regiments of soldiers and all the policemen in Tokio not on duty, followed in the *cortège* and also a strong detachment of the Imperial Guard. The funeral was conducted according to the rites of the *Shintō* religion to which the deceased belonged, and the remains of the General were buried in the cemetery of Awoyama, near the grave of Mr. Okubo the late Minister for Home Affairs.

Lieut.-General Oyama, the Vice-President of the Military Staff Bureau, was on the 16th instant, appointed Senior Vice-Minister for Home Affairs and Chief Superintendent of Police. General Oyama will also retain his former appointments. General Oyama, inspected all the Departments of the Police Bureau on Saturday last.

The *Mainichi Shinbun* states, that it is rumoured that the police force throughout the country will be reorganized shortly. The change will, it is said, bring the police in the provinces under the control of the Police Bureau in Tokio, and that the force will be independent of the provincial Governors.

Writing on the same subject, the *Choya Shinbun* says it is rumoured, that the Central Police Station in Tokio will be abolished and all the police officers and policemen formed into regiments under the control of the Military Staff Bureau. All police affairs will then be transacted at the *Fucho*, and a Police Station established in each District or Department, at which the officers and policemen selected from among those in the regiments will be stationed.

Mr. Nabeshima, the Governor of Okinawa ken, returned here in the *Hiroshima Maru* which arrived in port on the 16th instant. Mr. Kinashi also returned in the same steamer.

Some time ago the Japanese Government with a view of conciliating the Loochoan islanders offered the officials of the

former Han Government appointments in the *Ken*, so that through their instrumentality the inhabitants might, with greater ease, be induced to observe the instructions of the Supreme Government. This offer the Loochoan officials obstinately refused to accept at the time. Since then however, they found it judicious to modify their views, principally it is supposed in consequence of becoming better acquainted with the actual intentions of the Japanese Government, through the ex-King and other Loochoan nobles in Tokio. The following appointments were lately made and accepted:—all the officials known as *Sanshi Kan* of the late Han have been made advisers of the *Kencho*, and the other officials have been made *attachés*. Since these changes were effected everything is said to be going on smoothly in Loochoo and the people are apparently quite contented with the new *regime*. It is said, apparently on good authority, that the recent visit of Mr. Nabeshima, the Governor of Okinawa *Ken* to Tokio, was to furnish in person a full account to the authorities of the recent changes and their effect.

Mr. Hanabusa, the Japanese Envoy to Korea, who left Nagasaki on the 27th ultimo, arrived safely in Fusan and accompanied by Mr. Mayeda the Japanese Consul for that place, proceeded to Gensan the newly opened port, in order to choose the site of the proposed wharf and the settlement. When these questions are settled, Mr. Hanabusa will return to Japan.

Mr. Hashimoto, the 3rd Secretary of the Home Department, has been appointed Commissioner to represent Japan at the Inter-National Exhibition of Industry to be held in Melbourne, in the Colony of Victoria, next year.

Mr. Ito, the Minister for Home Affairs, and suite, will it is expected return to Tokio, about the 2nd proximo.

Mr. Ishie, the Director of the Prison Bureau, will shortly visit Sendai, to inspect the prison lately erected in Miyagi *Ken*.

Mr. Kobayashi the Japanese Vice Consul for the Saghalien Islands is expected to visit Tokio early next month.

Mr. Watanabe, the Governor of Osaka Fu, arrived in Tokio a few days ago.

His Excellency the Italian Minister, entertained the Russian and Dutch Ministers and Messrs. Saigo, Yamada, Yemomoto, &c. at the Legation in Tokio on the evening of the 16th instant.

The two Chinese Officials who arrived in Tokio a few days ago, have applied to the Foreign Office for permission to inspect the principal manufactories in the capital.

The ceremony of presenting diplomas to those students who successfully passed the medical examination in the Tokio University took place on the 18th instant. The same forms were observed as in the case of the Departments of Law, Science and Literature. Addresses were delivered by the President of the Department Dr. Ikeda, the vice-President Dr. Ishikuro, the foreign Professors Drs. Schultze and Langgaard, and by the Minister for Education Mr. Terashima, and Mr. Fukuzawa. Thirty-seven students received diplomas; of these, three will be sent to Germany at the expense of the Government to study special branches of medical science, whilst the others will either be employed as assistant instructors in the University or be placed in charge of the provincial hospitals or sanitary bureaux.

The ceremony of presenting certificates of the completion of their studies to the successful students of the engineering college, will take place in a few days. A large number of the leading officials (native and foreign) of the government and the Foreign Ministers, &c., will be invited to attend to give *éclat* to the proceedings. A banquet will be given in the evening.

A general meeting of the Central Board of Health was held in their office in Tokio, on the 23rd instant, in order to discuss the permanent preventive measures to be adopted after the total disappearance of the present cholera epidemic.

The Tokio Board of Health while it was in existence during the recent epidemic, expended 86,864 yen in sanitary measures, hospitals, etc., etc.

NAVAL AND MILITARY.

The Japanese man-of-war *Hōshū Kan* arrived in port from Kobe on the 16th instant.

The Japanese man-of-war *Takao Maru*, arrived in Kobe from Korea, on the evening of the 18th instant.

A Military Medical Bureau has recently been established by the War Department, and the central military hospital in Tokio placed under its control.

Lieut. General Yamagata, has recently been relieved from

the command of the Imperial Guard, and Lieut. General Toriwo from his position as an *attaché* of the Military Staff Bureau. The latter has since been appointed to the command of the Imperial Guard.

On the 21st instant, the following French Officers of the Japanese Army, were decorated with the "Order of the Rising Sun":—Colonel Munier, second class; Captains Chalvert, Fauconnet, Golopin and Barré, Lieut. Baugouin and Veterinary Surgeon Augot, fifth class, and Mr. Dagrou the Chief Instructor of Music, sixth class.

INDUSTRIES, TRADE AND FINANCE.

The opening of the competitive exhibition of raw silk and cocoons, has been fixed for the 1st November next, in the Town Hall. A large number of exhibits have already arrived from various provinces and Mr. Ansei, of this town and nine other persons, have been appointed judges.

The *Naikoku Tsū-un Kaisha* (Internal Carrying Company) intends to undertake the carriage of exhibits from the different provinces to the 2nd National Exhibition of Industry to be held in Tokio in 1881, at a reduction of 10 per cent. from the ordinary rates.

It is intended to hold a competitive exhibition of cotton and sugar in the city of Osaka, from the 15th February to the 5th April next.

From the *Aikebono Shinbun* we learn that the total quantity of tea exported from the district of Uji, in Yamashiro, during the months of October, November and December, last year amounted to 70,000 *kin*, of the value of 26,250 yen. Our readers will remember that this district obtained a special prize at the recent competitive exhibition in Yokohama.

According to the *Kiyochiu Shinshi*, the grape crop this year in Yamanaishi *Ken* (the principal vine growing district), is worse than it has been for years past, but on the other hand, the yield of chestnuts and persimmons, is very abundant.

Mr. Yasui Kichizō, of Osaka, has recently ordered a steamer of 120 tons register to be built at the Kobe ship-building yard, which he intends to run between Loochoo, Osaka and Korea.

The number of silkworm egg-cards which have arrived in Yokohama from the various provinces, since the beginning of the season up to the 16th instant, is 439,712.

Mr. Usui the well known photographer took a portrait of General Grant during his stay in Tokio and has now commenced to sell copies as the Government have given him a copyright.

The Branch Office in Tokio of the Osaka Mint is about to be erected in the premises of the Finance Department, close to the eastern gate. The building will be in the foreign style of architecture, and will cover about 80 *tsubo* of ground. The estimated cost is 6,000 yen.

Mr. Matsuda Tsūshin, and four other residents of Kagoshima *Ken*, applied to the government last May for permission to establish a National Bank at Nafa, in Loochoo. The application was granted on the 9th September last, and the bank will be styled the "152nd. National Bank."

The *Mainichi Shinbun* also states, that in consequence of the numerous large sales of silk lately effected, a large number of Mexican dollars are on the market.

The following is the return of the exports and imports of Japan during the half-year ending June 1879:—

Imports	Yen 14,251,786.239
Exports	" 10,054,244.916
Excess of Imports	Yen 4,197,541.323
Imports and Exports duties and other customs revenue	Yen 1,061,991.290
Exports of gold and silver coin and bullion	Yen 7,999,854.688
Imports of gold and silver coin and bullion	" 1,424,244.214
Excess of export	Yen 6,575,610.474

The following is the return of the exports and imports of Korea for the half-year ending on the 30th June last.

Exports	Yen 330,500.865
Imports	" 253,073.190
Excess of exports	Yen 77,427.675

Of the imports, yen 24,480.29 was for Japanese products whilst yen 228,592.60 was for foreign articles.

MISCELLANEOUS.

Intelligence from Kiyoto states that Professor Nordenakjold arrived there on the 14th instant, and, accompanied by a number of officers from the *Fuho* visited all the places of interest in the city and neighbourhood on that and the following day. On the 16th, Mr. Makimura, the Governor of Kiyoto *Fu*, himself accompanied the Professor to the temple of Honguanji and Yasaka Jinsha, where various kinds of ancient pictures, &c., were shown to him. On the evening of the same day, the Professor took leave of Kiyoto and returned to Kobe by train.

A recent report from Yokosuka mentions, that the town has enjoyed such great prosperity lately, that the number of houses now amounts to 1,582 and the population has increased to 5,022; while new buildings are springing up in every direction. The ships in the harbour at present are the German corvette *Prinz Adalbert*, the Japanese men-of-war *Hiyei*, *Raiden*, *Adzuma*, *Asama*, *Seiki Kasuga* and *Fuso*, (the latter in the large dock) and the M. B. S.S. *Kinshin Maru*.

The rifle match between the officers of the police department, which was postponed owing to the death of General Kawaji, will take place to-day at the rifle-range at Mukōgano, Tokio.

It is reported (says the *Mainichi Shimbun*), that during the gale at Hakodate, on the 6th instant, five boats carrying cargo to the Mitsui Bishi s.s. *Kumamoto Maru* were upset, and that Messrs. Howell & Co., the owners of the goods, have commenced proceedings against the local agent of the company to recover damages.

A telegram has been received in Tokio from Kamaishi announcing the total destruction by fire of the local branch office of the Mining bureau on the 22nd instant.

Mr. Godai, the President of the Osaka Chamber of Commerce, arrived in Tokio, by the *Tokio Maru*, on the 23rd instant.

A person recently arrived from Kagoshima informed the *Choya Shimbun*, that Mr. Saigō Kikujirō, (the son of the celebrated rebel leader), is now studying in the local school, and intends as soon as he completes his studies there, to apply to be admitted to the Military College in Tokio.

An enormous piece of coral was lately dredged up near Tosa. From the account given of it in the *Nichi Nichi Shimbun*, this coral has five branches, the stem being fifteen inches in circumference and about five feet in length. A foreigner who saw it offered 2,500 yen to the owner for his prize, but the latter wanted a higher price.

Yamawaki Nawokichi, a *shizoku* of Ibaraki and a teacher in the Kawai school in Kanagawa Ken, who sometime ago surrendered to the authorities, was on the 18th instant sentenced at the Tokio *Saibankō* to be degraded and imprisoned for eighteen months with hard labour. The offence with which he was charged, was having conspired to assassinate the Ministers Sanjō and Iwakura and misappropriating 300 yen of the school funds.

Mr. Tōyama Unzo, the editor of the *Mainichi Shimbun*, who was sentenced on the 23rd October last year, to imprisonment for one year for violating the press laws, was released on the 23rd instant, his sentence having expired.

The *Choya Shimbun* informs its readers, that the *Shōji Junpō*, a commercial paper published in Kiyoto by the *Shōhō Kaisha*, has lately been much improved and its size enlarged. Mr. Yamamoto Nakuma, President of the Kiyoto *Fu* Assembly has been appointed editor and, as the *Choya* remarks, this step is a somewhat singular one as Mr. Yamamoto is blind.

Our weekly returns of cholera in the city of Tokio and in the Kanagawa ken, must have convinced our readers that the epidemic has virtually ceased, and we shall therefore discontinue them for the future, unless there should be an unexpected return of the disease. We may state that the last returns for the whole country (made up to the 21st instant) shew that 156,204 persons were attacked during the epidemic; of these 89,702 died, the mortality amongst the patients reaching 57.43 per cent.

IMPERIAL GOVERNMENT RAILWAYS. YOKOHAMA STATION.

Statement of traffic receipts, for the week ending Sunday, 19th October, 1879.

THE JAPANESE PRESS.

THE COMPLETE ABOLITION OF TORTURE.

(Abridged from the *Nichi Nichi Shimbun*.)

ON the 9th October instant, we published a Notification issued on the previous day by the Council of State, and have no doubt that our readers are already thoroughly acquainted with the contents of that important document. The Notification in question runs thus:—(here follows Notification No. 42 finally abolishing torture, which appeared in this paper on the 11th instant.)

The 8th day of October 1879, can therefore be considered the eventful and happy day when all the laws relating to torture were completely abolished, and instruments of torture entirely disappeared throughout the length and breadth of Japan. As we have frequently observed, the practice of torture was adopted in ancient times so that criminals would be convicted on their own confession, when the evidence was insufficient, and thus innocent persons escape wrongful punishment. The intention was no doubt good, but in practice the result was frequently contrary to the end desired. Sometimes, through extremity of torture, a person confessed a crime of which he was guiltless to avoid further anguish, and again hardened criminals occasionally endured the most excruciating agonies to conceal their crimes. Thus the kind and benevolent object of the law was defeated. For these reasons the opinion became universally adopted, that the practice of torture was a most detestable custom and could not be consistently followed in any community pretending to be civilized. We believe our readers are generally aware of these facts, and also that it was admitted as far back as when the government was in the hands of the Tokugawa family, that the reckless application of torture to criminals, was contrary to the true principles of law and justice. Accordingly we find that in the years of Genwa, Kanyei, Keian and Kiyohō (1615 to 1735), proclamations were issued that the use of torture should be confined to cases in which grave offences were concerned, and subsequently it was ordered that torture should only be resorted to when sufficient evidence existed to warrant the conclusion that the accused would have to suffer the punishment of death. But if the actual practice of the period is remembered, it will be conceded that the last order was disregarded to a great extent and during the latter years of the Tokugawa Government altogether unheeded.

After the restoration both the civil and criminal procedure of the empire was revised. In December, 1870, when the new laws were promulgated by His Majesty the Emperor, it was enacted that all instruments of torture of a cruel description should be abolished, the "stick" only being retained. It was also ordered that this instrument should

only be employed in cases where the criminal refused to confess and there was ample evidence of his guilt. The "stick" consisted of three bamboos lashed together into one round weapon five *bû* in diameter, the size being, however, reduced in May, 1873.

Thus ever since the month of December 1870, torture has only been applied in grave offences where strong evidence of guilt existed and the criminal refused to confess. Since that date also, every instrument of torture has been abolished except the stick, which alone could be used and then only to obdurate and guilty persons. However, as torture still had a place in our criminal code, the cries of miserable wretches undergoing extremities of physical anguish resounded throughout Japan and resulted in continual representations both from natives and foreigners, that the practice should be altogether discontinued. As civilization continued to advance in the country, the feeling gained ground that torture should be entirely abolished, and on the 10th June, 1876, the 318th article of the code was altered to, "Verdicts in criminal cases shall be given in accordance with the evidence adduced, and in the event of the death of the accused before a verdict is given, all proceedings shall cease." This alteration in the law removed the original object for which torture was inflicted and implied that the use of the "stick" was to be practically dispensed with. Over three years have since elapsed and the Government having, we presume, concluded from the experience gathered in that time that the laws relating to torture may now be altogether abolished, issued the Notification of the 8th instant. Now that the Notification has appeared, this detestable practice which continued for so many centuries has been blotted out altogether, and the effulgent rays of civilization illumine the laws of the Empire of the Rising Sun! Every praise should be bestowed upon the Government for this commendable step tending to give further evidence of our advance in civilization. Let historians write in large letters the record of this Notification in the annals of the years of Meiji!

THE TAKETORI MONOGATARI.

A paper read before the German Asiatic Society.

By DR. R. LANGE.

The earliest extensive Japanese prose compositions written in Hirakana are the Monogatari, being chiefly tales of fiction in which the "tender passion" plays a prominent part. The oldest among them extant is the "Taketori Monogatari." It derives its name from an old bamboo gatherer (*Take*, bamboo, *tori* a gatherer) who, one day, in a piece of bamboo, discovers a diminutive little elf-maiden of wonderful beauty, whose advent causes great blessings to descend upon his house. Soon growing into womanhood she is sought in marriage by five wooers of high degree, all of whom she refuses, and when the latter still press their suits she gives them five impossible tasks. After refusing even the hand of the emperor she returns to her heavenly home from which, for a fault which she had committed, she had been banished for twenty years.

From this short statement it will be seen that the story belongs to that fantastic and romantic species of fiction called *Mæhrchen*, (the nearest equivalent in English, "fairy tale," is neither as comprehensive, as definite nor as expressive) still, in many parts it refers to and portrays life as it existed in reality and tells us much that is of interest about the habits and customs of olden times. The time when it was first written can only be determined approximately. The most voluminous and best known of all the "Monogatari," the "Genji Monogatari," written about the year 1000 A.D. makes mention at one place of the Taketori Monogatari as being the father of all the others; in another place it speaks of Kosen Omi having painted pictures illustrating it and of Ki Tuanyaki having copied its text. This must have been at a time when the story was already well known. The two men whose names are here mentioned lived towards the end of the ninth and in the beginning of the tenth centuries, and, as the first appearance of the Hirakana falls into the beginning of the latter century, the Taketori Monogatari must have been written in the first half of the tenth century when Japanese literature was just entering upon one of its most flourishing epochs. This time may be still further narrowed down to the beginning rather than the middle of the century; for a

comparison of the close, concise idiom of our story as compared with the broad and diffuse style of the Genji Monogatari warrants the belief that a certain number of years must have elapsed to bring about this change in the language.

The author of this as well as of many other Monogatari, is unknown, and it is only surmise which attributes it to Minamoto Shitago the author and compiler of the "Wamiosho" lexicon. He must however, have been a man of letters, well acquainted with Indian and Chinese book-lore as well as with the old Japanese historical writings. In the poem of Manyoshu mention is also made of an old bamboo gatherer who, meeting nine celestial damsels in the fields, is teased by them in various ways, but no relation can be traced as existing between it and our story. The language of this as well as of other Monogatari of that time compares with the Japanese of our day, in about the same way as the German language of the middle ages compares to that idiom as spoken at present. It shows few Chinese words, and Chinese characters are also only sparingly made use of, the form in which they appear being the running or "grass" hand. It is to be regretted that the text of the Taketori Monogatari has been handed down to us in a very bad state. There is very special testimony to prove that the Monogatari from their very first appearance have been badly and carelessly copied: the poetess Seishonagon complaining of it in her book "Kusazoshi" written about the year 1000. Copies of an edition in two small volumes now extant contain so many wrong words and blank places that they are hardly of any use. Two commentaries exist of which only one, the Taketori Okina Monogatari Kai, in six volumes by Tanaka Obide one of the head scholars of Motoori Norinaga, can be recommended. By dint of comparing old manuscripts and printed copies and where this was insufficient (as happened very often) by supplying conjectures of his own, assisted by his teacher and by other literary friends, the compiler succeeded in making up a readable text of which the following is a translation, made as literal as possible so as to present to the reader an idea of the style of those times.

In ancient times there lived a man who subsisted by bringing home bamboo from the fields and from the mountains, utilizing it in various ways and he was generally called the "old bamboo gatherer" although his real name was Sanuki Miyatsukomaro. Amongst this bamboo he once saw a piece which was bright and shiny at the lower end and to his surprise he found, when he approached more closely, that it sparkled from within. Looking into it he saw it contained a wonderfully lovely little being about three inches tall. The old man said: "Having discovered it in the bamboo which is placed before my eyes morning and evening, it has been intended that this little thing should be as a child to me" and taking it in his hand he confided it to the care of his wife. Its loveliness surpassed all belief and, being so very small, it was placed in a basket in which it was brought up.

From the time that the old bamboo gatherer had met this child he frequently found canes which contained gold between the joints and thus gradually became wealthy.

The child grew very fast and when in three months she had attained to the size of ordinary human beings it was determined to tie up her hair,¹ and this being done she was henceforth kept behind the curtain.² Great care had been taken in bringing her up and everything unclean had been kept away from her as it is kept away from the gods; so it came to pass that when she had grown up, there could be found nothing to compare with her beautiful figure. The house was always filled with light and there was not a dark spot in it. With the old man a sight of her when he was angry was sufficient to restore his good humour, and when he was downhearted to make him forget his sorrows and his troubles. Continuing as he did for a long time to gather bamboo he came to be a man of wealth and position.

1. Tying up the hair of girls generally took place in olden time when they reached their thirteenth year. Up to about the eighth year of their age only the ends were cut off and the hair allowed to grow as far as the shoulders. From this time on it was allowed to grow without being touched by scissors, hanging downwards, until the time came for tying it up.

2. The women of the superior classes did not in those times show their faces to strangers, and, in general, remained seated behind a screen covered with a woven fabric (usually brocade.)

When the child had become tall he called Jinbo Akita of Mimurodo³ to give her a name. She was called Naotake Kaguyahime. For three days there was great rejoicing, people kept clapping their hands and gave themselves up to all kinds of amusement. All the friends and acquaintances, male and female, had been called and they all were very merry.

Men of high and low degree heard of the maiden and wished to possess her, or at least to see her, for they had all fallen deeply in love, but neither the people outside nor even those who had succeeded in getting within the fence surrounding the house were gratified by getting a look at her. At night they were unable to sleep quietly and went around in the dark here and there making holes in the fence, and while they looked through they were so enraptured that they knew not what to do. From that time on people speak of yobau.⁴ In their desperation many went away from the sight of human beings but they found no relief. They prayed to the people of the house to intercede in their favor but received scant sympathy from them. There were those who would not leave the place but remained there day and night. Others there were who had not been so deeply affected and who at last finding it was useless to continue remained away. But there were five among the lovers, of great repute for gallantry, who came day and night and of whom it was said that they never ceased thinking of the object of their love. These five were the prince Ishitsukuri, the prince Kuramochi, the Uda-jin Abe Minshi, the Dainagon Otomo Miuki, and the Chiunagon⁵ Iso Kami Marotaka.

These five suitors having always desired to see whomsoever was credited with even slight pretensions to beauty were naturally anxious to behold Kaguyahime. Their amorous feelings caused them even to forget their meals; they went to the old bamboo gatherer's house, they stood still and they walked, they went and they came and all without success. They sent letters and received no answer, they sent poems describing the depth of their love and their grief, without being favored with a reply. Knowing it to be useless they still continued coming without caring for the snows and ice of November and December or for the heat and the thunder and the lightning of August.

Once they had the old bamboo gatherer called out, and rubbing their hands and bowing down before him as they would before one of the Gods, they said "Give us your daughter." The old man replied, "The child has not been begotten by me so she will not bend herself to my will." Then days and months passed again and they returned home sad and dispirited in thinking of their love. They prayed to the Gods for help to be able to forget her but they found it impossible to cease thinking of the object of their adoration. Pondering and thinking that some day necessarily Kaguyahime would be betrothed, hope again entered their hearts and they came back taking no pains to conceal how forcibly and desperately they were in love. When the old man noticed this he spoke to Kaguyahime. "It is said my little idol that thou art an enchanted being; yet we have bestowed great care in bringing thee up until thou hast attained thy present size; wilt thou listen to what this old man says?" Kaguyahime replied "I will certainly be careful to listen to all you may say. I am said to be an enchanted being? I always took you to be my father and know nothing further about myself." "How glad I feel at what thou sayest" rejoined the bamboo gatherer "I am now over seventy years old and do not know whether I will live from to-day till to-morrow. With the people of this world it is fixed that man shall live with woman and that woman shall live with man, thus causing the family circle to increase; without this, human beings could not continue to live."

3. The name of a place in the province of Yamashiro. The Imbe were a celebrated family of ecclesiastics. The name Naotake Kaguyahime is analogous with names like Ki no hana Sakuyahime, the goddess of Fujiyama. Naotake, now called Onnatake is the name of a sort of bamboo of which the joints only slightly protrude from the stem.

4. The author seems to be fond of indulging in play upon words. *Yobau* in reality is equivalent to *yobu*, to come to, to call at (of *satsuma* and *cadura*) but is also made use of as denoting illicit intercourse. Here it is written with the characters *yō*, night, and *han* (after the vowel *han*) to creep, to steal in.

5. *Uda-jin*, *Dainagon* and *Chiunagon* are the names of titles of Imperial counsellors.

Kaguyahime looking as if she did not fully agree to his views, he continued "Even if thou art enchanted as it is said, yet thy face and figure are the face and figure of a woman of this world; during my life time it may be well enough for thee to remain single, but if possible make some resolve to marry one of those who for months and years have so faithfully persevered in coming here." Kaguyahime then replied "I am not beautiful and if any one should wed me without deep heartfelt love and should afterwards raise his eyes in admiration of another I would feel sore regret. I only think of this and I think no woman should betroth herself to even the wisest man in the world without being certain of his most earnest love." The old man then replied: "Thou speakest what I must echo from my very heart. But what must be the nature of the love of him whom thou wilt choose? These five men keep coming continually and they certainly would not do so without harbouring sincere love for thee." The maiden then spoke. "How can I say that therein alone I can find a test of true love. This is a mere trifle. Besides, the regard which they show me seems to be equal and alike with all of them. How can I know who among them loves me more than the others. If one of the five will accomplish some great exploit then I will serve him and humble myself to him, for his love must be greater than that of the others. Tell this to them from me." The old man agreed to this and going outside spoke to the lovers who had come there as usual at sundown, one of them blowing the flute, the second one singing a song, the third singing an accompaniment to the flute, the fourth whistling softly, whilst the fifth kept time by striking with his fan. "Many thanks I must tender to you gentlemen," he commenced, "for having so long continued to come to my humble house, at which I feel deeply honoured; I do not know whether I will live from to-day till to-morrow, therefore I have spoken to the maiden to induce her to become the wife of one of you. She says she is ignorant as to whose love, among you, is stronger than that of the others and therein she is right. None of you, therefore, being able to show superior claims you must show the depth of your love by some great exploit. After that she will resolve to whom to give her hand. Thus she has spoken and with reason, and whatever the result none of you should hate the others." When the five suitors had agreed to this, the old man went in and told her of it. Kaguyahime then said. "From prince Ishitsukuri I ask that he go to India and bring me Shaka's stone bowl⁶ from there. As to prince Kuramochi: In the eastern ocean there is a mountain called Hōrai.⁷ On this mountain there are trees with silver roots, with golden trunks and with fruits consisting of precious white stones and I want him to bring me a branch of one of those trees. Of the third suitor I ask that he bring me a fur coat of the fire mouse⁸ in China. To the Dainagon Otomi I command that he bring me the five colored jewel from the head of the dragon,⁹ and to the Chiunagon Iso Kami that he procure the porcelain shell of the swallows."¹⁰ The old man thought that these were difficult tasks, that none of these things could be found in this country and that he had not the face to tell the suitors of it; but Kaguyahime saying she could not see that these tasks were over difficult, he replied. "Be it so, I will tell them as you say." When he went out and informed them, the princes and nobles replied: "Why does she not quietly tell us not to come near her any more?" and moodily they returned home. They felt, however, as if

6. One of the wonders performed by Shaka was to take four stone bowls and press them together so as to make one out of them. This was the one which the prince was ordered to procure.

7. A fabulous mountain in the Eastern Sea carried on the backs of tortoises. Whoever touches it does not grow older and does not die.

8. In India was supposed to exist a stuff made from the hairs of the firemouse and called *kakampū*. When it became soiled it was put into the fire to be cleaned. Here there is only question of a fur coat which does not burn in the fire. Of a Chinese firemouse the commentator seems to know nothing.

9. The five colors are blue, yellow, red, white and black. It is commonly believed that the dragon has the jewel in its mouth.

10. The porcelain shell is called *Koyasugai* and is associated with the superstition that it makes childbirth easy. (*Ko* child, *Yasu* easy and *Kai* (by contraction *gai*) shell.

What relation there exists between this shell and the swallows does not appear and it seems to be merely an idea of the author that the swallows bring forth the shell when laying their eggs (see *supra*).

they must die if they could not call the maiden their own and they pondered if it would not be possible to procure the things even if they had to go to India for them.

Prince Ishitsukuri wondered how he could procure the stone bowl of which only one single specimen existed in India. He was not scrupulous about means of evasion and one day he sent word to Kaguyahime that he was just about embarking for India to procure this bowl. Having waited about three years he took a bowl, black and begrimed with smoke¹¹ which had been standing before an idol of Bindzura in a mountain shrine in the district of Tochi, in the province of Yamato, and placing it in a brocade cover, to which he attached a branch of artificial flowers, he brought it to the house of Kaguyahime. When she saw it she regarded it with astonishment and opening a paper which lay in the bowl she read :

Much sorrow have I seen by sea and land,
And tears of blood have shed to bring this bowl.

When Kaguyahime examined the bowl more closely with regard to the lustre she found that it did not even sparkle as much as a glow-worm. She therefore returned it with the accompanying verse :

Where is the dewy sparkling on this stone ;
What did'st thou on the hills of Ogura ?¹²

When her lover received the bowl he threw it away outside the door, but yet he sent the following lines :

How dark were Shirayama¹³ to my love !
The bowl is gone but hope remains behind.

Kaguyahime however returned no answer and would not even read his poem. Not knowing what else he could advance he returned home. Having tried to ingratiate himself with the maiden even after he had thrown away the bowl, people since that time characterise a shameless action as "haji wo suteru."¹⁴

(To be continued.)

ARRIVAL OF THE AMERICAN MAIL.

GREAT BRITAIN.

London, September 19.—The details of the capture of King Cetewayo show that while the King was being watched on the one side by Lord Gifford and some scouts, Major Marter, with a detachment of the 1st. Dragoons, approached him from the other. Lord Gifford, whose presence was unknown to the King, intended to defer the attack until nightfall, so as to prevent the King from escaping into the dense bush. Cetewayo had caught a glimpse of the dragoons, but he thought that in consequence of the bad condition of the ground they could not approach quietly. Major Marter, however directed the removal of all noisy accoutrements, and sent a native contingent on ahead. These surrounded the kraal where the King had taken refuge, and Major Marter then rode up and called to Cetewayo to come out of the hut. The King, after some parley complied. He preserved a dignified demeanor, and asked to be shot.

New York, September 26th.—The British Government has just issued a blue book containing reports from its Consuls in Russia on the condition of the Russian grain trade, now suffering severely from American competition. Stanley, Consul at Odessa, explains the cause of Russian wheat reaching market in bad condition. He says the greater part arrives from the interior in uncovered wagons, and

frequently for want of wagons remains exposed on railway platforms. Unless it can be produced cheaper and brought to Odessa in better condition, and the cost of transportation and placing it on board vessels be reduced, South Russian corn will soon no longer, except in exceptional seasons, find a market in England and Western Europe, being unable to compete with American, Indian and Australian corn. During the past year, owing to the depreciated value of the rouble, purchasers in England had to pay only £1 for what, at the normal rate of the rouble, they would pay £1 7s. 6d. Even then American corn was able to undersell Russian corn. To contend with American competition attention is at length being drawn to the absolute necessity of improving the facilities of this trade, and as the price of grain at its place of production is moderate and can stand comparison with that of other countries, direct communication is demanded with an export depot which will ship expeditiously and at a minimum. A scheme has been presented and approved by the municipality of Odessa to build an elevator on the American system, modified to suit the local custom, capable of holding 20,000 quarters.

London, September 27th.—Short time and low wages are causing great distress to the working classes.

London, September 27th.—The bicyclists, Ferrout, Cann, Keen and Stanton, who are engaged to visit America, go first to Boston, and after a tour of the principal cities, visit San Francisco.

London, September 29th.—The mass meeting summoned for Saturday, in Hyde Park, to denounce the incapacity of the Government and the demand for an appeal to the country, proved a failure. The attendance was meagre, and no prominent leaders were present.

London, September 29th.—The single scull race to-day between John Higgins and R. W. Boyd for £400, over the Thames championship course, was won easily by Boyd.

London, September 30th.—The *Times*, on the disorganizing effects of Parnell's policy, says it would become really formidable only if it should extend all over Ireland. The *Pall Mall Gazette* says that the complaints of the Irish tenant farmers are mostly genuine; that they are for the moment unable to pay their rent, and they believe in their right to remain on the land. If a general refusal to pay rent is followed by wholesale eviction, this will almost certainly be followed by a series of agrarian murders, and unless the Irish executive is prepared to support the landlords by measures amounting to little less than military occupation of a large part of the country, the landlords will have to choose between virtually conceding the tenants' claims, and giving the signal for an outbreak of something hardly distinguishable from civil war.

The anti-rent agitation is only one among many other symptoms of the general unrest of Ireland. For the moment it is most urgent, but even if the worst pinch of the agrarian distress was relieved by a universal reduction of rent, there would still be much disquiet, as in the condition of the country the enthusiasm by which Parnell's progress has been attended has infinitely weakened the hands of the more moderate home rulers and emboldened the ultras. Among its first results was somewhat to precipitate the proposal to assemble a National Convention. The fate of this particular project is at present uncertain, but the agitation upon which the more violent section of the home rulers have entered will, in one shape or another, produce its inevitable result upon the party generally. The troublous prospect in Ireland is not really affected by the success or failure of any given scheme for organizing a pressure upon the Government. The present temper of the Irish people and their leaders concerns us much more seriously than any particular proposal for its manifestation while this temper remains what it is—semi-seditious among the people and recklessly incendiary among the leaders—the situation must be a grave one, whether the Convention ever meets or not. The old statute which prohibited a Convention in Ireland has been repealed.

London, September 30th.—The suspension of the Hamburg House of Wedstein is announced. It has involved that of Meyer of Layos, with liabilities of 6,000,000 marks. Three Manchester houses are among the creditors.

Advices from Vienna announce the suspension of Schill & Co., a large firm of drapers. Liabilities 500,000 florins. Several Paris and Lyons houses are among the creditors. Sieber & Jerabek, cotton merchants, Vienna, have failed.

11. Such a one was used for the rice which was given as an offering to the gods Bindzura is one of the 500 scholars of Shaka and an effigy of him may be found in many temples. Originally covered with red lacquer, this coating is generally worn away, for a belief is current that a pain in any part of one's body is made to disappear by touching and rubbing the corresponding part of the idol.

12. The Ogura mountain is in the district of Tochi and its temples must have been celebrated at that time. The author uses the name to make a play upon words which especially in the songs of a later period is of frequent occurrence. Ogura calls up the word *Kurui* (in combination *gurai*) dark, hidden.

13. The Shirayama is in the province of Kaga. Here in poetic exaggeration reference is made to Kaguyahime the light of shining brightness rivals the snow-covered "White Mountain."

14. In the text, the *Nijori* not being marked, *hachi* bowl and *haji* shame is written in the same way. The author here makes the pun that from the time where the prince threw away the bowl (*hachi wo suteru*) it is said of an impudent fellow: He has thrown away shame (*haji wo suteru*.)

When the child had become tall he called Jinbo Akita of Mimurodo³ to give her a name. She was called Naotake Kaguyahime. For three days there was great rejoicing, people kept clapping their hands and gave themselves up to all kinds of amusement. All the friends and acquaintances, male and female, had been called and they all were very merry.

Men of high and low degree heard of the maiden and wished to possess her, or at least to see her, for they had all fallen deeply in love, but neither the people outside nor even those who had succeeded in getting within the fence surrounding the house were gratified by getting a look at her. At night they were unable to sleep quietly and went around in the dark here and there making holes in the fence, and while they looked through they were so enraptured that they knew not what to do. From that time on people speak of yobau.⁴ In their desperation many went away from the sight of human beings but they found no relief. They prayed to the people of the house to intercede in their favor but received scant sympathy from them. There were those who would not leave the place but remained there day and night. Others there were who had not been so deeply affected and who at last finding it was useless to continue remained away. But there were five among the lovers, of great repute for gallantry, who came day and night and of whom it was said that they never ceased thinking of the object of their love. These five were the prince Ishitsukuri, the prince Kuramochi, the Udaijin Abe Mushi, the Daingon Otomo Miki, and the Chiuagon⁵ Iso Kami Marotaka.

These five suitors having always desired to see whomsoever was credited with even slight pretensions to beauty were naturally anxious to behold Kaguyahime. Their amorous feelings caused them even to forget their meals; they went to the old bamboo gatherer's house, they stood still and they walked, they went and they came and all without success. They sent letters and received no answer, they sent poems describing the depth of their love and their grief, without being favored with a reply. Knowing it to be useless they still continued coming without caring for the snows and ice of November and December or for the heat and the thunder and the lightning of August.

Once they had the old bamboo gatherer called out, and rubbing their hands and bowing down before him as they would before one of the Gods, they said "Give us your daughter." The old man replied, "The child has not been begotten by me so she will not bend herself to my will." Then days and months passed again and they returned home sad and dispirited in thinking of their love. To the Daingon Otomi I command that he bring me the five colored jewel from the head of the dragon,⁹ and to the Chiuagon Iso Kami that he procure the porcelain shell of the swallows."¹⁰ The old man thought that these were difficult tasks, that none of these things could be found in this country and that he had not the face to tell the suitors of it; but Kaguyahime saying she could not see that these tasks were over difficult, he replied. "Be it so, I will tell them as you say." When he went out and informed them, the princes and nobles replied: "Why does she not quietly tell us not to come near her any more?" and moodily they returned home. They felt, however, as if

6. One of the wonders performed by Shaka was to take four stone bowls and press them together so as to make one out of them. This was the one which the prince was ordered to procure.

7. A fabulous mountain in the Eastern Sea carried on the backs of tortoises. Whoever touches in does not grow older and does not die.

8. In India was supposed to exist a stuff made from the hairs of the firemouse and called *kakampû*. When it became soiled it was put into the fire to be cleaned. Here there is only question of a fur coat which does not burn in the fire. Of a Chinese firemouse the commentator seems to know nothing.

9. The five colors are blue, yellow, red, white and black. It is commonly believed that the dragon has the jewel in its mouth.

10. The porcelain shell is called *Koyasugai* and is associated with the superstition that it makes childbirth easy. (*Ko* child, *Yasu* easy and *Kai* (by contraction *gai*) shell.

What relation there exists between this shell and the swallows does not appear and it seems to be merely an idea of the author that the swallows bring forth the shell when laying their eggs (see *supra*).

they must die if they could not call the maiden their own and they pondered if it would not be possible to procure the things even if they had to go to India for them.

Prince Ishitsukuri wondered how he could procure the stone bowl of which only one single specimen existed in India. He was not scrupulous about means of evasion and one day he sent word to Kaguyahime that he was just about embarking for India to procure this bowl. Having waited about three years he took a bowl, black and begrimed with smoke¹¹ which had been standing before an idol of Bindzurn in a mountain shrine in the district of Tochi, in the province of Yamato, and placing it in a brocade cover, to which he attached a branch of artificial flowers, he brought it to the house of Kaguyahime. When she saw it she regarded it with astonishment and opening a paper which lay in the bowl she read :

Much sorrow have I seen by sea and land,
And tears of blood have shed to bring this bowl.

When Kaguyahime examined the bowl more closely with regard to the lustre she found that it did not even sparkle as much as a glow-worm. She therefore returned it with the accompanying verse :

Where is the dewy sparkling on this stone ;
What did'st thou on the hills of Ogura ?¹²

When her lover received the bowl he threw it away outside the door, but yet he sent the following lines :

How dark were Shirayama¹³ to my love !
The bowl is gone but hope remains behind.

Kaguyahime however returned no answer and would not even read his poem. Not knowing what else he could advance he returned home. Having tried to ingratiate himself with the maiden even after he had thrown away the bowl, people since that time characterise a shameless action as "*haji wo uteru*."¹⁴

(To be continued.)

ARRIVAL OF THE AMERICAN MAIL.

GREAT BRITAIN.

London, September 19.—The details of the capture of King Cetewayo show that while the King was being watched on the one side by Lord Gifford and some scouts, Major Marter, with a detachment of the 1st. Dragoons, approached him from the other. Lord Gifford, whose presence was unknown to the King, intended to defer the attack until nightfall, so as to prevent the King from escaping into the dense bush. Cetewayo had caught a glimpse of the dragoons, but he thought that in consequence of the bad condition of the ground they could not approach quietly. Major Marter, however directed the removal of all noisy accoutrements, and sent a native contingent on ahead. These surrounded the knal where the King had taken refuge, and Major Marter then rode up and called to Cetewayo to come out of the hut. The King, after some parley complied. He preserved a dignified demeanor, and asked to be shot.

New York, September 26th.—The British Government has just issued a blue book containing reports from its Consuls in Russia on the condition of the Russian grain trade, now suffering severely from American competition. Stanley, Consul at Odessa, explains the cause of Russian wheat reaching market in bad condition. He says the greater part arrives from the interior in uncovered wagons, and

frequently for want of wagons remains exposed on railway platforms. Unless it can be produced cheaper and brought to Odessa in better condition, and the cost of transportation and placing it on board vessels be reduced, South Russian corn will soon no longer, except in exceptional seasons, find a market in England and Western Europe, being unable to compete with American, Indian and Australian corn. During the past year, owing to the depreciated value of the rouble, purchasers in England had to pay only £1 for what, at the normal rate of the rouble, they would pay £1 7s. 6d. Even then American corn was able to undersell Russian corn. To contend with American competition attention is at length being drawn to the absolute necessity of improving the facilities of this trade, and as the price of grain at its place of production is moderate and can stand comparison with that of other countries, direct communication is demanded with an export depot which will ship expeditiously and at a minimum. A scheme has been presented and approved by the municipality of Odessa to build an elevator on the American system, modified to suit the local custom, capable of holding 20,000 quarters.

London, September 27th.—Short time and low wages are causing great distress to the working classes.

London, September 27th.—The bicyclists, Ferront, Cann, Keen and Stanton, who are engaged to visit America, go first to Boston, and after a tour of the principal cities, visit San Francisco.

London, September 29th.—The mass meeting summoned for Saturday, in Hyde Park, to denounce the incapacity of the Government and the demand for an appeal to the country, proved a failure. The attendance was meagre, and no prominent leaders were present.

London, September 29th.—The single scull race to-day between John Higgins and R. W. Boyd for £400, over the Thames championship course, was won easily by Boyd.

London, September 30th.—The *Times*, on the disorganizing effects of Parnell's policy, says it would become really formidable only if it should extend all over Ireland. The *Pall Mall Gazette* says that the complaints of the Irish tenant farmers are mostly genuine; that they are for the moment unable to pay their rent, and they believe in their right to remain on the land. If a general refusal to pay rent is followed by wholesale eviction, this will almost certainly be followed by a series of agrarian murders, and unless the Irish executive is prepared to support the landlords by measures amounting to little less than military occupation of a large part of the country, the landlords will have to choose between virtually conceding the tenants' claims, and giving the signal for an outbreak of something hardly distinguishable from civil war.

The anti-rent agitation is only one among many other symptoms of the general unrest of Ireland. For the moment it is most urgent, but even if the worst pinch of the agrarian distress was relieved by a universal reduction of rent, there would still be much disquiet, as in the condition of the country the enthusiasm by which Parnell's progress has been attended has infinitely weakened the hands of the more moderate home rulers and emboldened the ultras. Among its first results was somewhat to precipitate the proposal to assemble a National Convention. The fate of this particular project is at present uncertain, but the agitation upon which the more violent section of the home rulers have entered will, in one shape or another, produce its inevitable result upon the party generally. The troublous prospect in Ireland is not really affected by the success or failure of any given scheme for organizing a pressure upon the Government. The present temper of the Irish people and their leaders concerns us much more seriously than any particular proposal for its manifestation while this temper remains what it is—semi-seditious among the people and recklessly incendiary among the leaders—the situation must be a grave one, whether the Convention ever meets or not. The old statute which prohibited a Convention in Ireland has been repealed.

London, September 30th.—The suspension of the Hamburg House of Wedstein is announced. It has involved that of Meyer of Layos, with liabilities of 6,000,000 marks. Three Manchester houses are among the creditors.

Advises from Vienna announce the suspension of Schill & Co., a large firm of drapers. Liabilities 500,000 florins. Several Paris and Lyons houses are among the creditors.

Siebert & Jerabek, cotton merchants, Vienna, have failed.

11. Such a one was used for the rice which was given as an offering to the gods Bindzurn is one of the 500 scholars of Shaka and an effigy of him may be found in many temples. Originally covered with red lacquer, this coating is generally worn away, for a belief is current that a pain in any part of one's body is made to disappear by touching and rubbing the corresponding part of the idol.

12. The *Ogura* mountain is in the district of Tochi and its temples must have been celebrated at that time. The author uses the name to make a play upon words which especially in the songs of a later period is of frequent occurrence. *Ogura* calls up the word *Kurai* (in combination *gurai*) dark, hidden.

13. The *Shirayama* is in the province of Kaga. Here in poetic exaggeration reference is made to Kaguyahime the light of shining brightness rivals the snow-covered "White Mountain."

14. In the text, the *Nijori* not being marked, *hachi* bowl and *haji* shame is written in the same way. The author here makes the pun that from the time where the prince threw away the bowl (*hachi* *wo uteru*) it is said of an impudent fellow : He has thrown away shame (*haji* *wo uteru*.)

Liabilities, 200,000 florins. This failure affects parties in Manchester and Liverpool.

London, September 30th.—The rinderpest is raging in Russian Poland with great virulence, and further precautions have been taken to prevent its introduction into Germany.

London, October 1st.—The Hall Colliery Company, Polesworth, near Tamworth, has failed. Liabilities, £20,000.

London, October 1st.—Fordham will ride *Parole* in the Cesarowitch handicap.

London, October 1st.—Owing to unfavorable reports of the labor market in America, the North Wales Slate Quarrymen's Union have declined to give further pecuniary assistance to members desiring to emigrate.

London, October 1st.—Five of the City of Glasgow Bank directors, sentenced the 1st day of February to eight months imprisonment, were released to-day amid the hooting of the crowd. Two other directors, K. Robert Sumner Stronach and Lewis Potter, convicted of fraud, theft and embezzlement, have still ten months to serve.

London, October 2nd.—A static street encounter occurred between Edward Levy Lawson of the *Daily Telegraph* and Labouchere of the *Truth*. Lawson attacked Labouchere on account of paragraphs in *Truth*.

London, October 2nd.—A letter on Egypt's African Empire says: "Gordon Pasha distrusts his native subordinates and is almost without European assistance." The letter further states that should he resign everything would fall to pieces.

London, October 3d.—Major Chard and Surgeon Reynolds of Rorke's Drift, South Africa, fame, arrived at Portsmouth yesterday. The Duke of Cambridge, Commander-in-Chief, and other distinguished officers welcomed and congratulated them.

London, October 3rd.—The Lords of Admiralty have given instructions for making a handsome piece of furniture from the timber of the old Arctic exploring ship *Resolute* for presentation to Mrs. Grinnell, widow of Henry Grinnell, who fitted out two expeditions to search after Sir John Franklin.

The greater portion of the cotton operatives at Wigan have resumed work at five per cent. reduction in wages. It is expected that the remainder will return to work on Monday. All the mills are working.

London, October 3rd.—Captain Robert Charles Clipperton, the present British Consul at Nantes, has been appointed Consul for Great Britain in Pennsylvania, Ohio, Indiana, Michigan, Illinois, Iowa, and Wisconsin, to reside in Philadelphia.

Capo Town, October 3rd.—Cetewayo has arrived and been conducted to the Castle.

FRANCE.

London, September 26th.—One million pounds sterling leave Paris to-day for New York.

Paris, September 26th.—The *Courier du Soir* says that Blangui is seriously ill.

The transport *Var* has landed another convoy of armed communists.

Paris, September 29th.—Gambetta, in a conversation with the Spanish Ex-Minister, Carvajal, said he would not undertake the direction of affairs except in circumstances of which there was no prospect.

Paris, September 29th.—A committee of Rouen cotton factory overseers, in a letter to the President of the Tariff Committee, state that not one-quarter of their production finds a market and the stock is increasing alarmingly. Prices are so low that wages have fallen twenty-five per cent. Unless there is some change soon, the industry will come to a complete standstill.

Paris, September 29th.—Legitimists' banquets are given to-day at Dijon, Marseilles, Perpignan, Montaurain and Chambord in honor of the birthday of the Count de Chambord.

The transport *Lenairin* with 450 Communists has arrived at Brest.

Paris, September 30th.—The Foreign Office is considering the expediency of creating a French Chamber of Commerce abroad, and giving the most important Consulates the assistance of commercial agents.

Lyons, October 1st.—Jules Ferry, Minister of Public

Instruction, speaking here, said the Ministry would accept no compromise on the Educational bill.

The *Messenger de Paris* states that the aggregate stock subscriptions invited during the past three months, exclusive of the Panama canal, amount to 1,068,000,000 francs, and still they come.

London, October 3rd.—Many eminent Bonapartists have arrived here to endeavor to effect a reconciliation between the Ex-Empress Eugenie and Prince Jerome Napoleon.

GERMANY.

Lisbon, September 26th.—Two distinguished German Geographical Doctors, Græfe and Gasseri, have arrived here on their way to Africa. They have been sent by the German Government on a scientific mission.

Berlin, September 26th.—Rinderpest has appeared near Königsberg. The disease is extending in Russian Poland.

Berlin, September 26th.—The statement of the Imperial Bank of Germany shows a decrease in specie of 4,806,000 marks.

Prague, September 27th.—The firm of Reitter has been declared bankrupt.

London, September 30th.—A Vienna dispatch says: It is now certain that Prince Gortschakoff will visit Berlin, although the date is not yet fixed. The Prince acts on his own initiative in making this visit, the object of which is to consult Bismarck on his recent journey to Vienna.

Berlin, October 1st.—It is regarded certain here that Bismarck will not take an active part in the forthcoming session of the Prussian Diet. He will be represented in the Diet by Count Stolberg Weingerode, Vice-President of the Prussian Ministry.

Field-Marshal Von Moltke has returned to Kollmar from the Autumn manœuvres, with a number of staff officers. The visit, it is believed, was made with a view of considering how Upper Alsace and Baden could best be defended in the event of a French invasion.

The Judiciary reforms decreed by the Reichtag throughout the Empire also came into operation yesterday. Herr Schülegens, formerly Alsatian Deputy in the Reichtag has been appointed Ministerial Counsellor in the new Alsatian administration. Wilhelm, son of Prince Bismarck, becomes Secretary to Field-Marshal Manteufel, Governor of Alsace-Lorraine.

Gov. Manteufel yesterday issued the following address: "To-day I assume the office with which the Emperor has entrusted me, of Imperial Governor of Alsace-Lorraine. May God give me strength to exercise the powers conferred upon me to the glory of the German empire and to the welfare of Alsace-Lorraine."

The election returns from country districts come in slowly. So far as received they indicate success of the Conservatives. Lasker and Richer, two of Bismarck's chief opponents, are probably defeated.

The *North German Gazette*, replying to an article of the *St. Petersburg Golos*, which declared that Russia is independent of any attempt to isolate her in Europe, says that Prussia and her friends in Germany supported Russia in the peace of Adrianople, in the Polish wars of 1841 and 1863, and in the Crimean war. If the friends of the *Golos* consider this support unimportant, then their own attitude is responsible if Germany is compelled to look elsewhere for the support which she had found in her relations with Russia. Germany's policy will remain a peaceful one and she will seek only peace-loving support. If the *Golos* and its condutators wish to repel the only strong and trustworthy friend on whom Russia can count, it is quite probable they may attain that object by continuing in the path upon which they have entered.

London, October 3rd.—A Berlin correspondent has good reason to believe that by the time the Prussian elections are finished the Liberals and Progressists will have lost about 50 seats in the Diet.

Berlin, October 3rd.—The Emperor William is endeavoring to reconcile Bismarck and Gortschakoff.

AUSTRO-HUNGARY.

Vienna, September 27th.—It is said that extensive preparations are being made for further negotiations in matter relating to trade, and the means of communication between Germany and Austria.

London, October 1st.—It is denied that Queen Victoria wrote to the Emperor of Austria expressing gratification at

the appointment of Baron Haymerle as Minister of Foreign Affairs. The Marquis of Salisbury merely wrote the British Ambassador at Vienna, instructing him to express the satisfaction of the Government at Baron Haymerle's appointment.

Vienna, October 1st.—Hodja Lodja, leader of the Bosnia insurgents against the Austrians, has been sentenced to five years imprisonment.

London, October 2nd.—Baron Chalices will succeed Count Zichy as Ambassador of Austria at Constantinople.

Archduke Albrecht, Field-Marshal and Inspector-General of the Austrian army, and leader of the military party, gave a dinner to Count Andrassy at Weisburg yesterday. This fact is regarded as a contradiction of the rumors that the Military party is averse to an Austro-German understanding.

Vienna, October 3rd.—The impression is that Gortchakoff will visit Bismarck during the autumn. The idea of such an interview originated at the meeting of the Emperors at Alexandrowe.

Pesth, October 3rd.—The Hungarian Diet assembled yesterday.

RUSSIA.

Berlin, September 26th.—The Russian telegraph lines have been repeatedly cut by the Turcomans. The news from the advanced detachment of the expedition against the Tekke Turcomans is accompanied with an urgent petition for reinforcement, and another division has therefore been ordered to assemble at an advanced post.

London, September 26th.—Russian official messengers state that 2,987 fires occurred in Russia during August, causing damage to property to the amount of 20,000,000 roubles.

London, September 27th.—A last caution has been given to the Russian newspaper *Russkaja Pravda*. Several Russian journals within the last few weeks have made a bold attack upon the Russian Government respecting the Turcoman expedition, the cession of Kuldja to China and the disregard of all economy in public services.

It is reported from several quarters that a new Russian four-and-a-half per cent loan of fifteen or twenty millions is about to be offered in London. The money is to be used for the construction of railways. It is also intimated that another and larger loan on account of war material may be expected.

London, September 30th.—Special dispatches from Tchikislar and St. Petersburg give different accounts of the Geok-Tepe affair from the official reports. A Tchikislar telegram merely says that there was a severe engagement, in which the Russian loss was 200 killed. A St. Petersburg telegram says that the engagement resulted in the temporary capture of Geok-Tepe. The opinion prevails at Baku that the expedition will return and winter at Tchikislar in consequence of sickness and scarcity of provisions. General Fergukasoff had arrived at Tchikislar, replacing General Lomakin in command.

Count Schouvaloff will quit the Russian Embassy in London at the end of October.

A Vienna dispatch says the Emperor of Russia is suffering from mental fatigue, and is daily getting worse.

London, September 30th.—A correspondent at St. Petersburg reports that twenty-five important political prisoners will be tried in that city in October. Among them are: Mirske, Gen. Orenteln's assailant; the coachman who drove the assassin of Gen. Mesentzoff; and Weimar and Bogdanovitch, who were connected with Solovieff, the man who fired at the Czar.

St. Petersburg, October 1st.—The *Golos* states that 11,854 persons were incarcerated in the Central Prison, Moscow, during the summer, 10,477 of whom were condemned to exile in Siberia.

ITALY.

Rome, September 29th.—One of our journals denies that Prince Jerome Napoleon's visit to King Humbert has any political signification.

Rome, September 29th.—A recent dispatch from Monsignor Jacobini respecting his interview with Bismarck and his promises, are considered at the Vatican highly satisfactory.

TURKEY.

Constantinople, September 27th.—The person recently arrested for attempting to enter the palace has been secretly

assassinated, it is believed at the instigation of an influential person, who feeling that his own position was insecure, believed the only means of averting his dismissal was by awakening the Sultan's fears of assassination, and fearing that the person arrested might make disclosures, bribed the soldiers to assassinate him.

Vienna, October 2nd.—The disturbance in East Roumelia is becoming a guerilla war. There is a gang of 600 well-armed discharged soldiers in the mountainous district of the west.

Constantinople, October 2nd.—The International Commission will hold a meeting before the end of the week to prepare a plan of reforms for the provinces of Turkey.

Phillipopolis, October 3rd.—Aleko Pasha is making a tour of Eastern Roumelia to allay the excitement there.

London, October 3rd.—The situation in Syria is alarming. The Arabs have joined the Kurds to oppose Midhat Pasha's reforms, and the Porte seems decided to send forty battalions of regulars to maintain order.

Constantinople, October 3rd.—Discontent is general in Bosnia and Herzegovina. The population is unanimous in its dislike of Austrian rule. The Duke of Wurtemberg has demanded reinforcements to suppress the insurrection, which is spreading in Herzegovina.

AFGHANISTAN.

Simla, September 27th.—General Baker's brigade to-day will proceed to Zargun Shahr, where it will be joined by the force under Sir Frederick Roberts, the last detachment of which leaves Ali Kheyl on Monday for Cabul. The Ameer's officials have been instructed not to oppose the advance of the British troops. A small body of rebels assembled near Lalpurn, but were disposed of. Six fatal cases of cholera have occurred in the ninth regiment. The Royal Artillery and eighty-first regiment are also afflicted by the same disease.

London, September, 29th.—There is a very general distrust of the conduct of the Ameer during the Cabul outbreak, but as he has now come to our camp he has given a material guarantee for his future good behavior. The gates of Cabul are closed apparently with the vague idea that the British are close at hand.

The *Times* points to the fact that Daoud Shah's being alive and at the British camp confirms the suspicions of the Ameer's insincerity, as he, in a dispatch to the Indian Government at the time of the outbreak, stated that Daoud had been killed while endeavoring to quiet the rebels.

Simla, September 29th.—Many persons here regard the Ameer's arrival in the British camp as an astute move on his part to foster the belief that he is innocent of complicity in the murder of the British Envoy at Cabul. On the other hand the officers express confidence in his entire innocence. The advance of the British forces continues. The Ameer accompanies the troops. It is expected that the column will arrive before Cabul on Wednesday next. Resistance is unlikely.

Sir Frederick Roberts has received instructions to issue a manifesto to the Afghan people that the British army advances on Cabul for the purpose of avenging the treachery to the British Envoy, that peaceable inhabitants will not be molested, but if opposition is offered, those persons with arms in their hands will be treated as enemies. Non-combatants, women and children are advised to withdraw to a place of safety.

Simla, September 20th.—A telegram from Shutargardan, dated 27th instant, says that General Roberts has arrived there. His party was fired at by a large body of Mongols near Jagathana and five Sikhs were killed. The Mongols were repulsed with loss. The latest news from Cabul states that all was quiet there. Dakka was occupied without opposition on the 26th.

Simla, October 1st.—General Sir Frederick Roberts telegraphs from Kushi that he will advance on Cabul to-day. The health of the troops is good. Lieutenant Kiulock, on the way to join his regiment, was ambuscaded and killed.

Kushi, October 2nd.—The townspeople of Cabul asked three Kohistanic regiments if they would fight the English. They replied: "They would meet the English if they went to Kohistan."

Simla, October 2nd.—The cavalry brigade of General Roberts's advance guard reached Jellalabad to-day. The whole expeditionary force will be concentrated for an attack

on Cabul by Sunday next. The Tarnekzai chiefs are in friendly relations with the British.

Simla, October 2nd.—Authentic information has been received here that communication with the British troops was cut off to-day on both sides of the Shu'argardian Pass by the tribes. Reinforcements are being sent up the Kurum Valley.

Zargun Shatz, October 3rd.—The preponderance of native opinion is that the Afghans will make a stand this side of Cabul. The Ameer is anxious to return to Cabul. The general opinion is that he was allowed to leave on his engagement to arrest the British advance, and he fears that the troops will avenge themselves by attacking his palace.

Simla, October 3rd.—General Hughes's brigade reached Khelat Ighilzai on the 30th of September. The Governor of that place furnished him with supplies. The tribes profess friendship for the British.

ROUMANIA.

London, September 29th.—Jean Bibesco, brother of the Ex-Hospodar, Georges Bibesco of Wallachia, died last week in Switzerland.

DUTCH ARCTIC EXPEDITION.

Hammerfest, Norway, October 3rd.—The Dutch Arctic expedition has returned, after penetrating as far as Francis Joseph Land.

THE SOUTH AMERICAN WAR.

London, October 3rd.—A despatch dated Valparaiso, September 8th, says: It is reported that the Chileans, before evacuating Calama, sacked and burned the place. The Chileans have made raids into Bolivia beyond Conchas Blancas, destroying the commissary and ordnance supplies, and seizing horses and carts.

It is reported that Peru has suspended payments from the treasury, and prohibited the exportation of silver.

GENERAL GRANT'S ARRIVAL IN SAN FRANCISCO.

San Francisco, Sept. 20, 1879.

Every one during the forenoon was on the tiptoe of expectation over the arrival of General Grant, but as he did not come early it was believed he would not arrive to-day.

The city is densely crowded, especially the hotels, where sleeping room is not available. The Reception Committee was discussing the propriety of postponing the reception till Monday, when at a signal given by the fire brigade that the City of Tokio was sighted the fire bells rang, whistles sounded and a general uproar was created.

Every kind of business was suspended and people poured forth in such numbers that in a few minutes the streets were densely crowded with citizens flocking toward the ferry down Market street. The sun was shining brilliantly and the effect upon the decorated buildings, arches and flags was very fine. The utmost good humor prevailed, and as evening approached the streets were lined with people and business wholly suspended and the city turned out.

MARINE AND SHORE PROGRAMMES.

The marine programme was carried out as fully as possible, and the shore programme was followed to the letter. Salutes were fired from every fort and battery in the harbor.

The cross fire from the batteries on the approach of the Tokio and escorting vessels, showed that any hostile descent upon San Francisco would be extremely hazardous.

The bay was covered with steamers freighted with sightseers who wanted to be the first to welcome General Grant. The sight was very fine some thirty yachts besides ocean and river steamers forming an escort to the incoming steamer.

At least thirty thousand people were afloat on the bay and two hundred thousand on the street.

THE LANDING.

The Tokio passed up the water front at a quarter to six p. m., followed by the escorting fleet.

About seven General Grant landed from the ferryboat Oakland, according to arrangement, at the foot of Market street, and was received by the Mayor and Governor also by Governor elect George C. Perkins. Governor Irwin was accompanied by his staff.

THE MAYOR'S ADDRESS.

The Mayor then addressed the General as follows:

General Grant—As Mayor of the city of San Francisco I have the honor and the pleasure to welcome you on your return to your native country. Some time has passed since you departed from the Atlantic shore to seek the relief which a long period in your country's service had made necessary, but during this absence the people of the United States have not forgotten you. They have read with interest the accounts of your voyages by sea and travels by land round the world, and they have observed with great pleasure the honors you have received in the different countries which you have visited, and the universal recognition which your brilliant career as a soldier and an American citizen has obtained. They have felt proud of you, and at the same time of their country, which you have so fitly represented.

And now, sir, you are again on your native soil, and the thousands who here greet you remember that your home was once in this city. This bay, these hills, the pleasant homes about us are all familiar to you. Great changes, it is true, have taken place. The young city is now the rival of cities which were old when its history began. But the men to whom this marvellous prosperity is due in those early days were your personal associates and friends, and many of them are here to-day waiting anxiously to take you by the hand once more.

It is a pleasing incident of your journey that when leaving your country at the ancient city of Philadelphia Mayor Stokely expressed the hope of that city for your safe journey and a happy return. It is now my privilege to express the joy of San Francisco that the hope of her elder sister has been realized. The city desires to receive you as an old and honored resident and friend, returning after a long absence, and to extend to you such courtesies as may be agreeable to you, and in obedience to such desire, which extends through all classes, I tender you the freedom of the city and its hospitalities. In the short time allowed to us we have arranged a reception in your honor and ask that for an hour you will permit us to present our people to you, and we beg that while you remain in the city—yourself, your family and your travelling companions—you will be its guests.

Permit me, in conclusion, to express the wish of each and every one of us for the future happiness and prosperity of yourself and every member of your family.

GENERAL GRANT'S REPLY.

General Grant, in reply to the speech of the Mayor of San Francisco, made a short speech expressing his gratification at his return to his native country.

Among other officials present were the Board of Supervisors and Supervisors-elect, members of Congress and the Reception Committee. The foreign Consuls were invited to join the procession, but were assigned no place, consequently but few were present, among them the English and French.

THE PROCESSION.

The procession was one of the greatest ever seen in San Francisco. The streets were lined with people and the windows and balconies were crowded. The procession was fifteen blocks long and about seven thousand persons took part in it.

It counter-marched on Market street before General Grant, from which point the General went to the Palace Hotel and was serenaded in the court yard.

Mrs. Grant will not leave the City of Tokio until Sunday morning. The streets during the procession were a blaze of light.

THE TIMES OF THE TAIRA.

By CAPTAIN F. BRINKLEY, R.A., AUTHOR
OF THE "TIMES OF TAIKO."

CHAPTER XXI.

BENKEI.

"Nine hundred and ninety-nine. A goodly number in sooth if they were all honest blades. A plague on dainty Lords and Squires that think more of the chasing on their scabbards than the names on their hafts. Not but what the times are mending in that respect too. The clink of

the hammer makes many a ward merry to-night that was silent enough last May-day, no doubt. Mayhap I shall find presently that all this is little more than rubbish, but come what will, I shall have pretty plain proof that one may follow one's own fancy a long way in this fair city."

The speaker was a man whose personal appearance almost justified the portrait notoriety had drawn of him. Seated on the mats before a low desk or stand on which a well thumbed manuscript reposed, he might at first sight have been accredited with even more than the ten feet of stature report gave him, for though in reality he lacked some three feet of that height, his vast limbs and enormous development of muscle would have sufficed to furnish a considerably taller giant. Nature, however, having created such exceptional prowess, had evidently become timorous of her own achievement at the last moment, and accordingly done what she might to check its abuse by associating it with a heart of equally exceptional tenderness. Nothing could possibly describe the gentle geniality of the man's expression, or the infinite good humour that seemed to brim up in his eyes and ripple continually over his face. In truth so preëminently conspicuous was this air of benevolence that it had the effect of obliterating all the stateliness of his colossal physique, so that he seemed rather like a large plaything than an object of fear.

The soliloquy we have quoted above was apparently suggested by an entry he had just made in the manuscript before him, and an examination of the entry, which was inscribed in a fair clerical hand, would have showed that with the exception of a date corresponding to that same day, and the number nine hundred and ninety-nine, it was nothing more than a copy of the characters traced on the hilt of a sword which lay across the writer's knees.

Looking back through the pages of the book one might have seen that their whole contents consisted of similar entries, ranging over a period of little more than a year, and in some few instances notes were added of such a nature as the following:—"A tenacious owner." "Two varlets that ran away too fast to be thanked." "This blade was proved on myself before it came into my possession," and so forth.

All this was sufficiently enigmatical, but the garniture of the apartment in which the man sat was still more curious. It was a rudely constructed chamber; large and lofty enough to accommodate even such an inmate, had it not been almost entirely occupied by an immense multitude of swords of all sizes and fashions which were placed in rude racks here and there, with less attempt to economize space than to consult convenience of access. They were evidently tended with much care, for their hilts were neatly swathed in paper and the atmosphere, about them was redolent of clove-oil, while to the loops of each, labels were attached bearing numbers and dates.

To this well furnished armory the giant now added the blade whose inscription he had just copied, and then clapping his hands, summoned a white haired old woman, who presently served his evening meal and sat watching him with an inquisitive eye while he discussed it. They offered a strange contrast these two: her wrinkled decrepitude and his lusty sturdiness, but for all that, she treated him with an air of authority and protection the unfitnes of which never seemed to strike either.

For a time the man devoted himself with unflinching assiduity to the consumption of his supper, stealing however every now and then a comical glance at his attendant, whose naturally cross-grained face was gradually sharpening to an expression of irrepressible discontent. At last when with trembling hand she had piled up his bowl for the fourth time; she closed the rice-pail with an ominous clatter and broke out into this querulous soliloquy.

"It don't seem to spoil his appetite a bit, leaving a body hampered in the house with a parcel of bloody swords."

"Bloody, did you say, old lady?" cried the giant, arresting his chopsticks in mid-air to achieve a sonorous peal of laughter. "Whatever they were when they came into my possession, there's not a stain on them now, I'll warrant you."

"Yes, yes," sneered the old woman, "you waste work enough on them I know, but there are some spots all the rubbing and scrubbing and mooling in the world can't take out. If the phantom-flames of the dead that owned the

blades were to pay us a visit, there'd be too much light to hide the stains, I'm very sure."

"Come, come, my lass," the man remonstrated, forgetting the absurdity of the appellation he employed in his momentary annoyance. "You know well that the loss of the swords never cost anybody more than the price of their substitutes. I'd carry home empty hands and a broken head anyday rather than the consciousness of having struck a base blow."

The beldame seemed to know that upon this subject even her long-suffering master's composure might be disturbed, for she retired at once from the contest, covering her retreat with a reserve of incoherent grumbling.

"No, no," the man presently resumed, "if I have won all these it has been without bodily hurt to their owners. The quest has been a merry one and harmlessly achieved, though to tell the truth, I have been as much surprised myself at its possibility as you are inclined to doubt it. Pshaw! I thought I had undertaken a difficult task, but now that it's nearly completed I begin to believe I've been somewhat wasting my time."

"Aha! you've found that out at last, have you?" cried the old woman exultingly. "And yet I'll be bound it will be the usual story again to-night. But have a care, master. A man's hands serve him badly when his heart is not in their work."

"You speak truth, old lady, though you render my meaning somewhat falsely. Right or wrong however I mean to go through with what I've begun. It were a sorry business to stop within one of my count."

"A sorrier business to lose the whole lot for the sake of that one, master," retorted the woman. "I tell you, Benkei, you'll have had luck in the end. It's only now I read the real meaning of what the seer told me at the fair of Kwannon."

"And what may that have been?" enquired Benkei, with more complaisance than curiosity.

"He said that at the thousandth essay, the first attempt should be a failure, and the second the beginning of vassalage."

"A pretty vague prediction it was too," said the man, evidently however somewhat shaken in his confidence. "But there'll be time enough to consider it when the first part is fulfilled."

"Yes, forsooth! you are so likely to be more reasonable then. But after all, successful or not, what possible use can you make of this multitude of swords? They're the plague of my life as well as of your own already. What with getting the cobwebs off them in the morning and the rust in the daytime, we have a task that's likely to last us both as long as we have breath in our bodies."

This question, natural as it seemed, had evidently harassed the giant's mental processes already, for his only immediate reply was a violent friction of his head—which was close shaven like a friar's—and a perplexed survey of the nine hundred and ninety-nine blades.

"You see, old lady," he explained in a deprecatory sort of tone, "a man doesn't always ask himself what's to follow the end before half his journey's over. After all, if I haven't any immediate use for the swords, that doesn't prove them an utterly profitless property. There's one among them, I can tell you, that the chief of the Heike himself would give a bag of gold to recover: a sword with a raven carved on the hilt, and an edge that would shave off your eyebrows without making you wink. And then the number! that's the whole point of the thing. Everything goes by thousands. Kiyomori has a thousand remounts in his stables; Hidehira, a thousand suits of mail in his armory; the flower of paradise has a thousand petals; life, a thousand vicissitudes; a thousand priests chant the perfect litany, and the tortoise lives a thousand years. Now, if a thousand men consent to let me have their swords for the asking, I take it to be a pretty fair augury for my future prospects."

"That depends very much on the fashion of the asking," the woman objected.

"Ho, ho, ho! you're a quick wit of your own, old lady," laughed the giant. "But isn't it a little hard to fancy a man incapable of civility because he happens to have bigger limbs than his fellows. Now look here. Suppose that meeting you on the road, I took you by the wrists thus"—suiting the action to the word—"and told you

you could only get out of my clutches by consenting to give up your sword, should you dispute the point, or should you —?"

But the further progress of the demonstration was interrupted by a piercing shriek from the woman, who wrenched her hands away from the other's grip and displayed two livid marks encircling her wrists.

"You mouser," she cried. "To show off your strength on an old woman of seventy! That's what you call your civility, I suppose?"

The consternation of the giant when he understood what he had unwittingly done was almost pitiable, but though he made the most earnest apologies, and declared that he had not been conscious of even closing his fingers, the old woman refused to be appeased until she had completely exhausted her treasury of invective.

"You see," explained Benkei ruefully when calm had been somewhat restored, "I've been a mistake all my life. I had teeth and hair when I was born, they say, and if my father had been suffered to accomplish his purpose and throw me into the river at once, a bushel of bother might have been saved."

"Teeth and hair when you were born!" echoed the old woman, all her resentment dispelled by curiosity. "Why nobody has that but the little imps."

"So my father thought too," said Benkei, "but his sister believed she knew better. She told him of one Koseki in China whose wife bore a child eighty years after she had conceived it: a child that came into the world with long white hair, and died two hundred years afterwards, the most revered man in the kingdom. On the strength of this my good aunt obtained permission to bring me up, though why she took it into her head to make a friar of me, 'twere beyond her wisdom, I fancy, to explain. A fellow of my inches would look well forsooth tinkling changes on a tiny bell or chanting verses from the canons to an audience of women and children!"

"Yet I'm sure you know well what advice your aunt would give you if she were here to-night," urged the woman; "and it's to be hoped you'd pay more heed to her than you do to a poor helpless body like myself."

"Nay, nay," replied Benkei soothingly, "I were right glad to follow your counsel if I might, but there's more to be lost by accepting it than by rejecting it now."

"So you would have it, and so you make it," retorted the old woman. "Well, well, I know you don't give a puff for all my preaching, but you may tempt fortune once too often before you've done with it; and you will too, if there be any truth in the divining rods."

Benkei however put a period to these forebodings, by rising and thrusting his swords into his girdle, after which he cast a lingering look over the well filled racks whose contents recalled so many stirring memories, and then bidding the beldame a cheery good-night, strode out into the moonlight.

The streets through which he passed at first were almost entirely deserted, and the dilapidated condition of the houses proved that the presence of no Heike palace brought prosperity to the district, but as he approached the vicinity of the river, the air of the spring evening began to be filled with sounds of music and mirth. The festivities of the laughter-loving city had recommenced with the opening of the cherry buds, and in the ten-houses that looked out over the wide rocky area where the stream crept timidly along as if ashamed of the surrounding evidences of its own excesses, gaily dressed dancing girls might be seen filling wine cups for their boisterous swains or waving hands of welcome to reluctant wayfarers.

Benkei's jovial face expanded into a very mirror of reflected happiness as he noted these evidences of frolic, and his step grew so elastic that one might have fancied he was treading an unconscious measure to the strains floating about him, but though he looked wistfully up at the pretty faces in the verandahs, and stopped more than once to inhale the savory odours encircling the cook houses, or listen to the clumsy witticisms of an itinerant buffoon who poured forth a monotone of broad scurrility to the accompaniment of a cracked guitar and a gourd drum, he made no serious delay in his journey until he reached the Fifth Avenue.

There posting himself under the shadow of the eaves at the corner of a street, he stood watching the passers by with an air of unconcern that went far to disarm suspicion.

Nevertheless of those whose attention was attracted by the extraordinary proportions of this giant loiterer, none failed to remark that his scrutiny was almost entirely directed to the girdles of the pedestrians, and possibly some divined the truth, for by degrees a little group of on-lookers assembled at the other side of the street, and began to whisper to each other fancies, that would have caused their object some uneasiness had they been audible to him.

But Benkei was intent upon a search which, though not novel to him, demanded on this occasion more care than he had hitherto been wont to bestow on it. He was determined that the sword which completed his magic number should be one of unusual excellence, and since the public taste was only just recovering from its lethargy in the matter of weapons, it was no easy matter to discover anything thoroughly satisfactory. The appearance and bearing of the wearer were not less important guides than the fashion and mounting of the sword, and from some cause or other, an eligible combination did not present itself on this night for so long, that Benkei was becoming uncomfortably impatient when the notes of a flute came faintly to his ears from the direction of the temple of Tenjin.

The sound had some inexplicable attraction for him: an attraction which was certainly increased by his sudden consciousness of the scrutiny to which he was being subjected from over the way: so without formulating to himself any definite object, he strode rapidly off towards the steps leading to the enclosure of the faue.

Standing before the shrine was a young man of slight but exceedingly symmetrical proportions. He wore a surcoat of white silk from beneath the folds of which peeped the glittering hilt of a gold-mounted sword, and slung over his shoulders was a wide-brimmed straw hat, such as is worn for purposes of disguise rather than protection. Facing eastward, his back was not presented either to the faue or to the road of approach, but his head was turned away and his ears so filled with the sounds of his own flute that it seemed impossible he could detect Benkei's stealthy coming.

The latter therefore, fancying he had been led thither by special good fortune, and seeing a weapon not only of unusual beauty but also belonging to one whose life probably depended on the keenness of his blade, only hesitated long enough to draw his hood more closely about his face, and then gathering himself together, sprang forward with astonishing rapidity, never doubting for a moment that his favourite manœuvre would be rendered more than usually feasible by his puny opponent's terror.

The assault was deftly timed and unerringly directed. There was no bungling either in its conception or execution and certainly nothing unfavourable in the opportunity; yet instead of finding his iron grasp fixed upon his adversary's wrists, Benkei saw the latter standing five or six yards away at the sequel of the onset, and felt his own right hand well nigh numbed by a blow which must have been delivered, he was disposed to think, by some spontaneous action on the part of the other's iron-ringed flute.

He knew well that no ordinary, nay—he almost thought—no human muscles are adjusted so as to be capable of such instantaneous achievements, and yet he could not discredit his own judgment sufficiently to attribute any exceptional thews to this slightly built stripling. Completely bewildered therefore by the nature of his discomfiture, and doubtful how to proceed, since the only method he considered perfectly legal had failed, he stood for a moment silently eyeing his youthful opponent. Not indeed that he altogether eschewed the use of his sword on such occasions, but it had invariably been his habit to employ that weapon only for purposes of defence, and in those rare instances where the first exertion of his immense strength, or the first terror his gigantic proportions generally inspired, had failed to achieve his purpose, he had never experienced any serious difficulty in beating down his adversary's guard, and coming to such close quarters that the issue was decided without risk to life or limb.

But he understood at once that these tactics were inapplicable to the present case, and moreover, the notion of crossing blades with a mere lad was inexpressibly repugnant to him. While he hesitated, however, the further direction of the affair was taken out of his hands.

His adversary, having deliberately wrapped up his flute and transferred it to his girdle, leaned against a pillar of

the wooden dome that covered the sacred font, and delivered himself of these words as the outcome of a leisurely study of Benkei's appearance:—

"Aha! I understand. You are the 'ten foot friar-fiend' that robs men of their swords and makes the citizens' evening rambles so perilous. An uncommon fashion of burglary, I admit, but since your frenks seem to be practised for the most part on my enemies, I am not disposed to interrupt them, though I cannot by any means consent to be your victim myself."

There was an undertone of merry contempt perceptible in this speech which threw Benkei into a doubt whether to be amused or exasperated. He replied without much consideration:—

"Your consent is possibly of more importance in your own eyes than in mine, young gentleman. The fact is that my habit has always been to spare their swords only who can show me my own blood on the blades, and I see no cause to vary my fashion now."

"Probably not," was the answer. "Nevertheless I think I can show you a satisfactory reason of another nature, unless you are too careful of that large body of yours to risk the demonstration."

Benkei drew his sword without further parley and commenced the attack. He could not yet persuade himself to anticipate serious resistance, and he therefore adopted at first a manoeuvre intended to intimidate rather than to injure. Raising himself to his full height, and his blade with both his hands over his head, he made as though he would have delivered a blow no guard could possibly avert, but an impulse of instinct obliged him to convert this menace into a reality, for by another inexplicable exercise of celerity, his opponent's point darted forward to within an inch of his throat, so that it was only by bringing down his uplifted weapon with all the force and promptitude he might command that he could hope to save his own life.

This was however but the prelude of the demonstration his adversary had promised. The stroke served neither for a defensive nor an offensive purpose, for falling where the object of its aim no longer stood, the keen point, encountering only the massive pillar of the dome, bit deep into the knotless timber.

Benkei, conscious too late of the error into which he had been betrayed, exerted all his great strength to extricate the blade. His pull proved more than sufficiently mighty, for its unabsorbed residue of force drove him staggering backwards, and before he could recover his equilibrium, a tremendous kick in the breast completed his discomfiture. He fell to the ground, for the moment a helpless mass, his sword flying some half a dozen paces from his hand.

When he recovered his feet the combat was virtually over so far as his own chances of success were concerned. Not only had his nimble adversary gained possession of the fallen sword, but climbing with it in his hand, first to the buttress and afterwards to the lofty lintel of the gateway, he now stood in such a position that one attempting to reach him would be completely at his mercy.

"Ha! ha! Mr. Sword-stealer," he laughed, "instead of taking my blade from me you have to beg for the restoration of your own, you see. Let us hear what plea you have to urge."

Benkei after a moment's rueful consideration of his youthful victor, surprised himself by bursting into a shout of merriment.

"By my faith," he cried, "I never fought with a cat on two legs before, and I take small blame for my defeat. But I am not so thickskulled as to cavil at necessity. You have me in your power, for if I cannot reach you though you wait, much less can I escape you if you follow. Say therefore what you ask, or do what you list. Neither of us can gain much by delay."

He had scarcely ceased speaking when his sword fell at his feet and the figure on the lintel, descending from its airy position, walked leisurely out of the gate, stopping only for a moment on the threshold to say:—

"I have a strange fancy that we two shall see more of each other in the future. Meanwhile since we are both on similar quests though with different objects no doubt, I have no just cause for enmity and you ought to be satisfied seeing that I have redeemed my promise."

"Satisfied enough for the matter of that," soliloquized Benkei, as he descended the temple steps; "for I have

seen an extraordinary performance at the cost of some shaken bones. Why bless me, if I don't begin to think wings are better than sinews in a battle after all. There are strange folk, to be sure, in this old city of ours, but there's not another, I'll be bound, who would have conceived the idea of countering a sword cut by a kick in the breast. This, I suppose is the failure the old lady's seer predicted, but what a failure it was! Why I do believe the fellow must have kicked higher than his head and for the life of me I couldn't reach my own girdle." Here the giant stopped to indulge in a peal of laughter. "Let me see now," he resumed; "here goes for a try. Yeisai, chosai, dokkoisho?"

This series of ejaculations was the accompaniment of a vigorous kick delivered amongst a bunch of huge radishes that depended from the lintel of a stall in the night market. Benkei, totally unconscious of the consternation his wild gambols caused the peaceful costers and their customers, smote his thigh in ecstasy as the fragments of the broken vegetables flew hither and thither and the long roots swayed violently to and fro; nor was his reception of the stall-owner's invectives a whit more rational, for having surveyed the man critically for a moment, he drew him to his side without any apparent exercise of strength, and measured the point to which the struggling merchant's head reached on his own person.

"Much of the same height and build," he muttered as he strode off again, "and just as I thought, his crown doesn't reach within half a dozen inches of the place where the kick was planted."

Thus ruminating, and interspersing his reflections with bursts of laughter as he recalled the tableau of his own figure sprawling before the gateway, and his adversary standing on the roof with the two swords in his hand, he at last reached his house without having determined how much or how little of his adventure he should confide to his shrewish attendant. Possibly however, experience had taught him the vanity of any resolution he might form on such a subject, for he resigned himself patiently, first to a course of cross-questioning which soon elicited all the details of the affair, and afterwards to an amount of ridicule and foreboding that made him begin to remember the wonderful kick with less mirth and more resentment.

It may be, that the circumstances of his home life that night suggested the advantage of a change more forcibly than usual; it may be that the breath of spring and the transient contact of those gladdening influences apart from which he was constrained to live, had kindled some unwonted fever in his blood, for he was conscious on the following day of an invincible restlessness, that drove him to curtail his usual attentions to the armory, and sally forth before sunset with a vague idea of shaking off the past and seeking some new beacon to brighten the future.

(To be continued.)

SILK MANUFACTURE IN ENGLAND.

The most beautiful of all materials used for weaving purposes, is silk, and it displays to the best advantage the art of the weaver. Its preparatory processes are also the most simple required by any of the textile substances, and as it is desirable to show the process of spinning, upon which in a great measure the beauty and quality of all cloth depends, the throwing of silk is, as in the case of weaving, therefore selected. Automatic spinning machinery was applied to silk long before it was invented for cotton, the former substance being, in consequence of the great length of its filaments, more adapted for the purpose, and the carding and combing processes, excepting for waste silk, are not required.

Mention is made of the silk manufacture in England so early as the year 1363, in an Act of Parliament passed in the reign of Edward III., but it was then of very slight importance. In France it was not introduced for more than a century later; but during the 16th century the mulberry-tree was extensively cultivated there, and the manufacture of silk was encouraged to such an extent that titles of nobility were conferred upon some manufactures who had persevered and had been successful in the business. James I. of England observed that the French were deriving great benefit from this comparatively new manufacture, so he determined to encourage the trade in England. For this purpose he sent letters to all parts of the country recommending the people to cultivate the mulberry-tree, and it became fashionable to do so. Thus it is related of Shakespeare, Milton, and others having planted trees of that description. The king also, by a like proceeding requested his subjects in the American colonies to cultivate the mulberry-tree instead of that "detested weed" tobacco. He encouraged Mr. Burlamach, a London merchant, to introduce throwsters, and dyers from the continent, and in 1629 they became of such importance that the throwsters formed themselves into a company under the name of

"The Master, Wardens, Assistants, and Commonalty of Silk Throwers." In 1661 they are said to have increased to such an extent in London that 40,000 men, women, and children were employed in the business. But this statement, although mentioned in the preamble of an Act of Parliament, is probably very far from being correct.

Although the cultivation of the mulberry-tree was encouraged, it does not appear, from that time to the present, that the production of silk has ever been in England attended with any degree of success. The raw silk, therefore, upon which the manufacture depends, is procured from countries more favourable for its production, and large quantities are imported from Italy, India, China, and Japan. Before silk throwing became well understood in England the silk imported, at that time from Italy, came already thrown or spun. At first the English throwster could only spin "tram," or the most simple process of spinning as required for weft. The "organzine" used for the warp was for a long time afterwards imported ready thrown.

In 1702 a gentleman named Crotchett thought he saw a good opening for profitable speculation; he, therefore, erected a small silk mill at Derby, but he did not succeed, and he became insolvent. Some time afterwards Mr. John Lombe, who was a good draughtsman, went to Italy to obtain the secret of the process, and he succeeded in doing so by corrupting the workpeople at one of the Italian mills. His plans were discovered and he had great difficulty in making his escape.

On arriving in England he fixed upon Derby where to commence the business, and rented from the Corporation of that town a small island formed by the river Derwent, where he built a new mill adjoining the one lately used by Mr. Crotchett. During the building of the mill he obtained the use of the Town Hall, in which he carried on the process under protection of a patent obtained in 1717, with such great success that it is said the new mill was gradually built and filled with machinery from the profits derived from the work done in the Town Hall!

In three or four years after he had obtained his patent John Lombe died, when the proprietorship devolved on his brother William, and subsequently to his cousin Thomas, who afterwards became Sir Thomas Lombe, and who obtained £14,000 from the Government in lieu of an extension of the patent. Hatton says that the Lombes had amassed £80,000 before the expiration of the patent.

One of the conditions the Government exacted for the payment to Sir Thomas was that he should deposit in the Tower of London—perhaps the only available public place at that time—a complete set of models for the benefit of the public, showing the process used by him. These models, some thirty or forty years ago, were destroyed by the order of the then Governor of the Tower! Three or four pieces remain, however, and are to be seen in the Patent Office Museum. They consist of a spindle belonging to the throwing mill, a reel, and a portion of a "sliding bench," or the rail.

There is a tradition that John Lombe was followed by a woman from Italy, and that his death was attributed to poison administered by her in revenge for his obtaining, surreptitiously, the secret Italian process of throwing.

The Derby silk mill was long afterwards considered a great wonder, although in reality the process was exceedingly simple, for it was in the combination of the numerous spindles into each machine that really formed the value of the new introduction. A second mill was shortly afterwards built at Stockport, and from that time Congleton, Macclesfield, and Leek followed the example.—*History and Principles of Weaving. By Alfred Barlow.*

DOUBLE ACROSTIC.

Now Earth begins her matin hymn;
The wide expanse of hill and plain,
The river and the mountain breeze
Uniting, swell the glad refrain;
Day throned upon the eastern height
From herb and flower bid incense rise
To mingle in the azure Heaven,
With Nature's wordless harmonies.

1.

In every land I'm found on hill and lea;
In every quarter now I plough the sea.

2.

The poet, Heaven inspired, thy banks hath often strolled along,
Perhaps dreaming of his "mystic and unfathomable song."

3.

From cowardice it springs, yet often leads
To courage, coolness and heroic deeds.

4.

Through this deformities will beauteous seem,
And dull prosaic life a happy dream.

5.

Thine ancient independence now is lost—perhaps not regretted,
While mariners forget how much to thee they are indebted.

6.

He serves to show how better far than unguents, draughts or pills,
A bath in clear cold water is to cure the body's ills.

7.

For being this, light-fingered folks sometimes get apprehended,
Though members of society are frequently commended.

DELTA.

DOUBLE ACROSTIC.

Glorious country of my birth,
Long may it be,
Before my first of sterling worth,
Capsized you see;
And in its place my *arond* stand,
Alas the day!
That Gladstone once more rules the land,
With vicious sway.

1.

Fair lady look upon this light,
And see reflected there,
All that is good and kind and bright;
Let mortal man beware,
Nor seek imaginary bliss,
By printing on the glass a kiss.

2.

This prince of fruits with yellow case,
Suggests a bottle of "square face,"
At least both hail from the same place.

3.

A season of a certain kind,
Tis opposite to spring you'll find.

4.

A battle-field in bygone days,
Well nigh five hundred years ago,
Where Britain failed, so history says,
To vanquish her reputed foe.
It named a duke who sought the hand
Of proudest lady in the land.

5.

She owned a tea-house built upon a wall,
And visitors received both great and small;
Her habits we should think were somewhat lax;
She stowed her visitors among the flax;
And when destruction came, e'en so it's said,
Her life was saved by just a scarlet thread.

6.

A curious garment some are said to wear,
With modern clothing it cannot compare;
By superstitious folk 'tis held to be
A lucky heir-loom to posterity.

7.

Pacific Isle, upon thy distant strand,
Fell the discoverer of this unknown land;
Had greater care impulsive thought controlled,
His influence would have been divine I'm told,
For here the savage ne'er had seen before,
A white man's face upon his island shore.

8.

A social hall, 'tis not afloat,
Although 'tis on the sea,
Nor yet the cabin of a boat,
In the Mitsa Biabi.

FUJITAMA.

METEOROLOGICAL REPORT

FOR WEEK BEGINNING FRIDAY, OCTOBER 17TH, 1879,

Observatory of Daigaku, Moto-Fujimicho Hongu, Tokio, Japan.

REMARKS.

Heavy line represents Barometer.

Light Continuous line—max. & min. Thermometers.

.....represents velocity of wind.

.....percentage of Humidity.

Max. velocity of wind, 28 miles per hour on Monday, 10 a.m.

The barometer is reduced to the freezing point and to the level of the sea.

The barometer has continued during this week, as in several weeks past, to be very fluctuating. The maximum height for the week was a little short of 30.4. The lowest minimum temperature thus far, for the season, was on Saturday, being 41° 6. A total of 1.91 inches of rain fell during the week, the most of which was on Monday, and was accompanied by a high wind.

LIGHTSHIP SIGNALS.

The following are the signals made from the lightship to denote the approach of vessels:—

Merchant steamer:—A black ball, with the national flag of the vessel below, at the yard arm.

Mail steamer:—A black diamond, with the company's flag below, at the peak.

Man-of-war:—National flag of the vessel at the peak.

Sailing vessels:—For a ship; flag B. (red): barque, flag C. (red ball on white ground): brig, flag D. (white ball on blue ground): schooner, flag E. (white ball on red ground) all commercial code, with the vessel's national flag below as soon as it can be made out.

SHIPPING INTELLIGENCE.

INWARDS.

Oct. 19, British barque *Lord of the Isles*, Felgat, 315, from Hongkong, General, to Hulton & Co.
 Oct. 19, Japanese steamer *Suminoye Maru*, Thompson, 534, from Kobe, Mails and General, to M. B. Co.
 Oct. 19, Russian corvette *Crysaer*, Capt. Nazimoff, 1,334, 8 guns, from a cruise.
 Oct. 22, British barque *Emulation*, Gunn, 391, from Newchwang, Beans, to Chinese.
 Oct. 22, German schooner *Mary C. Bokm*, Petersen, 72, from Kurilo Islands, Furs &c., to P. Bohm.
 Oct. 22, Japanese steamer *Tokio Maru*, Swain, 1,146, from Shanghai, Mails and General, to M. B. Co.

COMMERCIAL INTELLIGENCE.

IMPORTS.—Yarns and Piece Goods. The market has continued quiet and transactions generally have been on a restricted scale. In *Cotton Yarn* holders maintain a firm front in view of the stronger advices from Manchester, whilst dealers, being generally well in hand with contracts for arrival, seem little disposed to enter into further engagements at the moment. Some sales of *Grey Shirtings*, for arrival, have been reported at about former rates. The enquiry for *Indigo Shirtings* and *Velvets* continues. Dealers are expressing considerable uneasiness at the continued depression of *kinsatsu*.

COTTON YARNS:—

Nos. 16 to 24 Common to Medium ... per picul	\$26.00 to 32.00
" " Good to Best ... "	\$32.25 to 33.50
Bombay, No. 20 No. ... "	\$28.25 to 30.25
Nos. 28 to 32 Common to Medium ... "	\$35.00 to 36.25
" " Good to Best ... "	\$36.75 to 37.50
" 38 to 42 ... "	\$36.00 to 37.50

COTTON PIECE GOODS:—

Grey Shirtings:—7 lb. per piece 28½ yds. 39 in.	\$1.62½ to 1.92½
" " 8½ lb. " 38½ " 39 in.	\$1.92½ to 2.27½
" " 9 lb. " 38½ " 45 in.	\$2.25 to 2.62½
T. Cloths:—7 lb. " 24 yds. 32 in. per piece	\$1.40 to 1.65
Drills, English: 14-15 lb. 40 " 30 in.	\$2.50 to 2.75
Indigo Shirtings:— " 13 " 44 in.	\$1.85 to 1.95
Prints:—Assorted " 24 " 30 in.	\$1.60 to 2.20
Cotton Italians & Sateens Black 32 in.	\$0.11 to 0.14½
Turkey Reds: 2 to 2½ lb. 24 yds. 30 in.	\$1.40 to 1.55
Do. 2½ to 2½ lb. 24 " 30 in.	\$1.60 to 1.70
Do. 3 lb. " 24 " 30 in.	\$1.80 to 2.00

COTTON PIECE GOODS:—Continued.

Velvets:—Black ... 35 " 23 in. per piece	\$7.75 to 9.00
Victoria Lawns:— " 12 " 42/3 in.	\$0.75 to 0.80
Taffelclass:— " 12 " 43 in.	\$1.75 to 2.05

WOOLLENS:—

Plain Orleans ... 40-42 yds. 32 in.	5.50 to 6.75
Figured Orleans ... 29-30 yds. 31 in.	4.00 to 5.10
Lastings ... 29-30 yds. 31 in.	10.50 to 11.00

do. in basket ... "	\$5.60
Ching-pak and Ke-pak ... "	\$8.00 to \$9.25

China No. 4-5 Kongfun & Kook-fah ... per picul	\$6.50 to \$8.00
Daitong ... "	\$4.10 to \$4.50
Japan Rice ... "	\$2.60 to \$3.10
Kerosene Oil ... "	\$1.50 to \$1.92½
Newchwang Peas ... "	\$2.20 to \$2.25

EXPORTS.

SILK.—The demand has much fallen off during the week, news from the London market being worse again. Some holders have been rather anxious to sell. At the close, small concessions have been obtained in several instances. Our last quotations we repeat below. The market is weak.

Settlements:—340 Hanks, and 50 Oshius—70 bales of Filatures more have been rejected than bought during week. Arrivals 1,040 bales. Stocks 5,000 bales. Total export 5,125 bales, against 6,387 bales last year.

	In London at 3/9½. per lb.	In Lyons at fr. 4.80. per kilo.
Hanks,—Superior, nom.		
" Best.....	\$580 to 620 19/8	to 20/11 fra. 54½ to 58
" Good.....	\$560 to 570 18/9	to 19/4 fra. 52 to 54
" Good Medium.....	\$520 to 540 17/9	to 18/5 fra. 49½ to 51
" Medium.....	\$500 to 510 17/2	to 17/6 fra. 47½ to 48½
" Common, Inferior.....		
Oshius,—Good.....		
" Medium.....		

	In London at 3/9½. per lb.	In Lyons at fr. 4.80. per kilo.
Kakeda,—Extra.....		
" Best.....	\$710 to 720 23/9	to 24/1 fra. 66 to 67
" Good.....	\$680 to 700 22/9	to 23/5 fra. 64 to 65
" Medium.....	\$610 to 660 21/8	to 22/3 fra. 57½ to 62
" Common.....		
Filatures,—Extra.....		
" Best.....	\$690 to 750 23/2	to 25/1 fra. 64½ to 70
" Good.....	\$640 to 660 21/7	to 22/3 fra. 60 to 62
" Med. & C'on.....		

TEA.—Little change of importance to make on last weeks report, quotations in which however were slightly erroneous.

Correct quotations are as under, but buyers are by no means very eager at these figures. Stocks are small and supplies apparently come in just sufficient to fill up the vacancies caused by each day's purchases.

Quality has fallen off greatly, and with the exception of a few high grade parcels held for full figures, there is little or nothing at present worth purchasing on the market.

To-days prices close as under.

Common ...	\$24 & under	Fine ...	\$36 to 38
Good Common ...	\$25 to 27	Finest ...	\$40 & upwards
Medium ...	\$29 to 32	Choice ...	Nominal.
Good Medium ...	\$33 to 35		

SHIPPING.

The *Obed Baxter*, with a cargo of Tea, has sailed for New York, direct, and the *S. S. Scindia* for Kobe. The *Radnorshire* and *Glencagles* arrived to-day.

NOTICE TO MARINERS.

No. 1 of the 12th Year of Meiji, (1879.)

KODO NO SIMA BUOY.

AOGI SETO, INLAND SEA.

THE GOVERNMENT OF JAPAN hereby give notice that a Buoy has been moored to mark the sunken rock north of Kodono Sima in the Aogi Seto, the northern passage between Misima Nada and Bingo Nada.

The Buoy is moored immediately to the northward of the rock, in $4\frac{1}{2}$ fathoms of water at low water; on the highest point of the rock, which is of very small area, there is only 10 feet of water at low water of lowest spring tides.

The Buoy is painted Black and white horizontal bands, and surmounted by a cage which stands 10 feet above the water.

The following bearings are taken from the Buoy.

Centre of Karasima (Single tree)...N. $41^{\circ} 15'$ W.

Eastern extreme of Matsui Sima.....N. $37^{\circ} 45'$ E.

Eastern extreme of Kodono Sima...S. $1^{\circ} 15'$ E.

Bearings true. On the English Admiralty chart No. 132, $2\frac{1}{2}$ fathoms is given as the shallowest water on the rock.

MISCELLANEOUS.

W. & A. GILBEY'S WINES AND SPIRITS.

W. & A. GILBEY have special facilities for carrying on an extensive Foreign Trade, having held for many years in their Excise Bonded Stores, for the purpose of their Home Trade, a stock of not less than 12,000 Casks of Wines and Spirits, which are equally available for Export. These stores are by far the largest private Duty Free Warehouses in the World, and are under the supervision of a staff of Excise Officers specially attached to these Warehouses.

THE EXTENT of W. & A. Gilbey's purchases enables them to give the best VALUE to the public, as a twentieth part of the Foreign Wines consumed in the United Kingdom is supplied from their stock. In the year 1876 W. & A. Gilbey paid duty on 1,881,049 gallons of Wines and Spirits, and the average quantity bottled and sent out by them daily was 3,050 dozens or 36,600 bottles.

QUALITY is guaranteed by W. & A. Gilbey, and is the same whether the Wines or Spirits are obtained direct from their Head Establishments or from any of their Agents. The purity and genuineness of every article in this list are guaranteed in accordance with Act of Parliament, 38 and 39 Vict., Cap. 63.

W. & A. Gilbey have always adhered to the standard of Bottle Measure recently recognised by the Government, namely—

6 bottles contain one gallon; 12 half-bottles contain one gallon.

SECURITY is ensured to the purchaser, each bottle bearing W. & A. Gilbey's seal and label guaranteeing quality and measure, and the strength also in the case of Spirits.

W. & A. Gilbey's Head Establishments:—

England.—(Offices) Paultheon, Oxford Street, London; (Warehouses, Duty Paid) Oval Road, Camden Town, London.

Ireland.—(Offices) Upper Sackville Street, Dublin; (Warehouses, Duty Paid) Upper Sackville St., Dublin.

Scotland.—(Offices) Haymarket, West End, Edinburgh; (Warehouses, Duty Paid) Haymarket, West End, Edinburgh.

France.—Principal Establishment, Chateau Loundenne, near St. Estephe, Medoc.

Excise Bonded Stores.—Warehouses, Nos. 1 to 5, North-Western Goods Station, and Bouny Street, Camden Town, London.

Distillery.—James Street, Camden Town, London.

Printing Department.—Poland Street, Oxford Street, London.

IMPERIAL GOVERNMENT TELEGRAPHS.

ANY information required regarding the conditions for forwarding LOCAL TELEGRAMS which were slightly altered on the 1st day of the 7th Month (July) can be obtained at the principal Telegraph Offices, where also copies of the Regulations may be had at the price of 5 sen per copy.

T. ISHIE,
Acting Director-General.

Tokio, 31st July, 1879.

KEATING'S COUGH LOZENGES,

COUGHS,
ASTHMA,
BRONCHITIS,

ACCUMULATION OF PHLEGM.

Composed of the purest articles. These Lozenges contain no opium nor any deleterious drug, therefore the most delicate can take them with perfect confidence. Their beneficial effect is speedy and certain. The old unfailing family remedy is daily recommended by the most eminent Physicians. (In use nearly 60 years).

MEDICAL TESTIMONY.

July 25th, 1877. 22, Cold Harbour Lane, London.

Sir,—Your Lozenges are excellent, and their beneficial effects most reliable. I strongly recommend them in cases of Cough and Asthma. You are at liberty to state this as my opinion, formed from many years experience.

J. BRINGLOE, M.R.C.S.L., L.S.A., L.M.

Mr. T. KEATING, Indian Medical Service.

Dear Sir,—Having tried your Lozenges in India, I have much pleasure in testifying to their beneficial effects in cases of Incipient Consumption, Asthma and Bronchial Affections. I have prescribed them largely, with the best results.

W. B. G.—, Apothecary, H.M.S.

KEATING'S COUGH LOZENGES are sold by all Chemists, in bottles, of various sizes, each having the words "KEATING'S Cough Lozenges" engraved on the government stamp.

KEATING'S WORM TABLETS,

A PURELY VEGETABLE SWEETMEAT, both in appearance and taste, furnishing a most agreeable method of administering the only certain remedy for **INTESTINAL** or **THREAD WORMS**. It is a perfectly safe and mild preparation, and is especially adapted for Children.—SOLD IN BOTTLES BY ALL CHEMISTS.

Proprietor, **THOMAS KEATING, London,**

Export Chemist and Druggist.

THE GREATEST

WONDER OF MODERN TIMES!

HOLLOWAY'S PILLS.

Persons suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER,

In his work entitled "The Nile Tributaries in Abyssinia," says, "I ordered the dragoman Mahomet to inform the Faky that I was a Doctor, and that I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as possessing unmistakable purgative properties they create an undeniable effect upon the patient, which satisfies him of their value."

SIMPLE, SAFE AND CERTAIN!

HOLLOWAY'S OINTMENT.

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

MR. J. T. COOPER,

In his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls, butter, and horse-feed poured in upon us, until at last a tea-spoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining stock."

Sold by all Chemists and Medicine Vendors throughout the World

May 17th, 1873.

PATENT LAWS.

SINCE this subject was last treated in this journal, on the 3rd of May in this year, there have been many instances to point to the increasing necessity for the enforcement of patent laws. A speaker at the meeting of the Yokohama General Chamber of Commerce had, at that time already drawn attention to the question of the protection of foreign inventions, and the registration of their trade marks. He inferred that the proposed policy of the government in penalizing manufactured imports, and admitting raw material on a very moderate tariff, would tend at first to the introduction, on an extensive scale, of foreign machinery; and that such implements in Japanese hands would be likely to induce the forgery of established brands. The foreign importer would thus be placed at a double disadvantage. He would have to compete with the native manufacturer, fortified behind a protective tariff, and the counterfeits of the articles of his own commerce. The case, cited by the speaker, of imitation Silber lamps, of local manufacture and employed to light a section of the capital, is far from being an exceptional one. Most people are aware that labels, made to any order and in the semblance of any copy, capsules engraved and stamped with any device, and even corks marked with any familiar or other combination of letters and stars, can be imported from the great centre of fraudulent industry in Europe. A native trader was recently tried, and sentenced to a long term of imprisonment, for selling spurious foreign brandy. How many of his fellows are still driving a thriving and undetected trade! This is a point which affects Japanese far more than foreigners. Few of the latter are likely to buy their spirits and wines at the retail shops presided over by ex-house-servants. We may be sure that much of the large quantity of logwood extract, annually imported into Yokohama, is used to dye some matter else than cloths and other woven fabrics. If any faith can be placed in the result of a very simple test which we recently applied to two bottles of "La Rose," res-

pectively bought in distant Japanese stores, and each bearing an indisputable label, a great deal of the colour finds its way into the vats of ingenious resident wine-makers, and subsequently into the thirsty and unsuspecting systems of their native customers of European tastes. That the whole matter of the falsification of western industries in or for Japan is attracting considerable attention among the *bond fide* makers and merchants, whose trade is thereby injured, in Europe and America, is evident from a recent article in the *Times*, to which we drew attention two weeks since. There it was pertinently stated that well directed legislation for protecting the fruits of inventive genius is calculated not only to raise the standard of thought, but to stimulate intellectual study and research in the various branches of science and industry, and must, therefore, produce ultimate, if not immediate, benefit to the nation at large. In justice to itself and its own people, as well as to the outer world, to which it has accepted obligations in accepting intercourse, the government of this country should legislate, with all possible promptitude, on the subject of patents. No possible revision of the treaties can be complete until this matter is attended to.

Indeed, the fair settlement of the question, while it involves the application of the most elementary principles of international justice, would be at least as much to the advantage of this country as to that of the strangers who would be protected. As we indicated in our previous article, while we have a right to ask, at the present moment of adjusting our international accounts, that Japan shall give us our just dues, we can hold out an inducement, in the shape of future profit, for the equitable settlement which we claim. Laws enacted and enforced for the protection of patents would not only tempt outside manufacturers to register inventions already in operation and request: they would induce others to bring innumerable specialities to the country. Again, they would stimulate the inventive faculties of the Japanese themselves into brisk activity. We cannot too much insist upon this point. Fresh paths would be opened to the achievements of native skill, energy and perseverance. The hope that his well-directed and patient researches might bring him the material rewards of the emoluments, and the higher ones of honour, which await the successful inventor, would spur the earnest and ambitious student in the particular branch of his investigations. Apart from this partly sentimental view of the benefits to be derived from the pursuit of the policy which we advocate, the authorities would be large gainers in point of revenue. The commissioners of the British patent office are a very wealthy corporation. The sums which they have expended in the perfection of their wonderful library are almost fabulous. As an instance;—when the new patent act (of 1852) was passed, it was decided to classify and reprint all the specifications which had been filed between 1711 and the then present time. The documents so to be treated were found to attain to the large number of 12,977. The expense of the whole undertaking for paper, printing, and lithographing, was £92,000, a large sum, but one which was quickly reimbursed. Most people who know anything of London are

acquainted with the handsome offices in Southampton. Buildings, and the intricate yet simple machinery by means of which an inventor can assure himself that he has not been forestalled in his ideas. The rapid accumulation of models and designs some years ago compelled the commissioners to transfer their museum to South Kensington. We are unaware whether they have yet completed their negotiations for the purchase of a property which shall accommodate all departments of their charge. They are certainly rich enough to buy almost anything, as their receipts exceed £100,000 a year in fees from patentees alone; and after what might perhaps be called a lavish outlay for salaries, pensions, editing, compiling, printing, and literary purchases, they have a considerable surplus. The Japanese Government may here find an example which it would be just, prudent, and profitable to follow.

As with manufactures, so with the equally valuable property which a man's brain and pen make his own. Copyright laws are as necessary to protect an author from foreign plagiarists as patent laws are essential to guard the manual inventor from the unscrupulousness of imitators. The fraud to be prevented is at least as great and as injurious in one case as the other. A very profitable trade is being done by dishonest printers in the metropolis in reprinted editions of English and American text books of several descriptions. The disadvantage which this entails upon the authors needs no description. It will be as evident to any reader as is the brazen impudence which prompts a borrower, when printing an edition of a stolen foreign school book, coolly to append his own name as author or original publisher. We think that the authorities, even in the absence of laws which relate to foreign copyright, might, in a case like this, put those in action which operate as regards Japanese literary productions. It may be said that it is the duty of the wronged one to set the necessary legal machine in motion: that the administrators of the law are only supposed to take action on request made to them. Perhaps so; and it would then be worth the while of some agent for the pirated authors, to apply for an injunction. We hardly think that the imposition would be allowed to continue; but this opens a question which we will not at present pursue. We conclude this article with the expression of the hope that both patent and copyright laws, for the protection of foreign as well as Japanese inventors and writers, will be provided for in the pending revision of treaties.

THE LOOCHOO QUESTION.

IV.

BEFORE proceeding upon the line of enquiry indicated at the conclusion of our last article, we must refer briefly to some points that have arisen incidentally, or been brought into discussion by way of argument or as corroborative evidence in the case. Most of these, and certainly all of any importance, have been brought under general notice, through mention, either in the published series of despatches, or in the documents that have from time to time appeared in the public prints. Some, as for instance, the use of the Chinese calendar, the education in the Chinese colleges of the sons of Loochooan nobles and officials, and some others, have already been alluded to in our previous articles; and as to these, and such as these, a passing notice is all that is called for: they point to Chinese influences, but have no bearing on the political question. But there is one point among those adduced by the Chinese Government, by way of collateral support to the main foundation of their claim, and, quite legitimately made the most of in their despatches, which cannot be thus lightly passed over, because it has a *prima facie* appearance of strength and validity: but it really admits of a very complete answer.

The Chinese Government points to the fact that Loochoo made separate and independent treaties with certain foreign powers; and this fact is turned to account in various ways. It is argued that this fact is conclusive evidence of the independence and sovereign existence of Loochoo: it is also said that, in dealing as she has with a nation whose independent sovereignty is thus established, Japan has simply seized arbitrarily a country not belonging to her: and, that, in so doing, she has infringed the rights of China, and even broken her treaty-engagements with her, by which each empire is bound to respect the territorial possessions of the other: and, furthermore, that she has acted in contemptuous disregard, not only of China, but of the foreign powers who made treaties with Loochoo.

Now, without entering into argument upon the somewhat kaleidoscopic views, presented by the Chinese despatches, of the political status of Loochoo—which is at one moment made to appear as an integral portion of Chinese territory; at the next, as an independent sovereign state; and, yet again, as a subject state under the mixed jurisdiction of the two Empires¹—we will confine ourselves to the actual charges preferred and arguments used by China on grounds connected with these treaties. To take them in inverse order, beginning with the last-mentioned. If the action of Japan in this matter is an offence to the foreign powers who made treaties with Loochoo, that is a matter between Japan and the powers in question, and one with which China, who was not a party to those treaties, has no concern. It is not at all certain that the Chinese despatch writers do not intend to go further, and charge Japan with having outraged the world at large. Expressions, to which it is difficult to attach any other definite meaning, occur in the despatch just referred to; and the fact of Loochoo being a portion of the Chinese Empire is elsewhere declared to be 'patent and notorious to all the world.' However, as foreign powers generally are not likely to take more than an abstract interest in the question, we may safely leave this part of the charge on one side. The powers more nearly concerned are France, Holland, and the United States of America, whose representatives signed treaties with the Chief of Loochoo at about the same period that they and other foreign powers were making treaties with Japan herself—1854-5. The treaties with Loochoo amount to little more than undertakings to succour shipwrecked mariners, afford fuel and water to ships, &c., &c. When applied to by the foreign parties to those treaties, the Japanese Government have not repudiated them (as they might lawfully have done), but undertook that their provisions should be carried out—as indeed they would have had to be in any case, seeing that Japan at the same period had undertaken the same, as well as other and far more onerous obligations, on behalf of *all* the subjects of her Empire, towards these and other foreign powers.

The other charge, that, in seizing (as she is said to have done) a country whose sovereign existence has thus been 'recognized,' Japan committed a public robbery, and that moreover this act was in derogation of the sovereign rights of China in general, and, in particular, was in breach of Japan's own treaty-engagements to that Empire, is perhaps a little complex; but, (apart from the validity of the alleged 'recognition,' of which presently) it admits of being shortly met by the answer that, the question here is one of *fact*, and that, if the islands belong to Japan herself, her acts cannot amount to a seizure at all; and

1. See the despatch of Prince Kung, dated 10th May, 1879; (published in *Japan Weekly Mail* of October 11th at page 1,349) in which all of these views, and possibly some others, are either explicitly or implicitly contained.

that, the fact that they do actually and completely belong to Japan being proved, the charge falls to the ground: and the second part of the charge (which would admit of being turned aside without any direct answer by reference only to its own inherent inconsistency) falls at the same time; for, if the islands belong to Japan, they cannot form a portion of Chinese territory; nor can China have any other rights over them, an inherent right being *ex hypothesi* impossible, and Japan being under no diplomatic obligations in the matter, such for instance as those which formerly were framed to bind Russia towards other European powers, in relation to the Kingdom of Poland.* If the facts upon which this answer rests be well established, there is nothing more to be said: and as to this, we feel some confidence that enough has been already said to leave no room for doubt in the minds of our readers.

The answer to the argument drawn from these treaties of Loochoo, is of a different nature, and rests not so much on grounds of fact as of law. It is argued that because Loochoo made these treaties, it must be a sovereign state—the making of treaties being a mark of sovereignty: and that, by entering into these treaties, several foreign powers, on their side, recognized the sovereignty of Loochoo: and thus the sovereign independence and separate state-existence of the islands is placed beyond dispute. Now the answer to this is, that the status of a sovereign state is not to be acquired by so simple an expedient as falsely pretending to it: and it is no less fallacious to argue that foreign powers who, in ignorance of the true state of the case, make treaties with an island-chief in apparent possession of, and actually assuming, as towards them, the rights of an independent sovereign, thereby 'recognize' those rights. To constitute such 'recognition' the pretensions recognized must accord with existing facts, and their admission by foreign powers be made, not in ignorance, but with full knowledge of those facts. The pretension of Loochoo to have the right of entering into independent treaties was a mere pretension and nothing more: though, at the time, the Government of Japan was not only decentralized, but considerably disorganized, and other feudalities, besides the Chiefs of Loochoo, not unfrequently assumed, tentatively, attitudes of independence incompatible with the traditions of even the loosest of feudal relationships. But, unless all the historical evidence already adduced is to go for nothing, there is no occasion further to labour the point, that in affecting to conclude independent treaties with foreign powers Loochoo was putting forward a pretension unfounded in fact. Nor is it open to much question that, at the time these treaties were made, when next to nothing was known by foreigners of the political relationships of the various island-kingdoms of these seas, the other parties to the treaties were ignorant of Loochoo's want of the right to contract: and it is very certain that in what they did they had no intention of 'recognizing' any 'rights' as between Loochoo and Japan, or any other country. Such being the circumstances, it follows that, if the law applicable to the case be rightly stated, as we venture to believe it is, then the whole superstructure, based by the Chinese despatch-writers upon these treaties, falls to the ground, by the removal of its foundations.

Now, as was very natural in the circumstances, all these matters have been brought into argument by the Chinese Government to 'fill up the crevices,' so to speak, of a case,

* The illustration has reference solely to the presence or absence of a treaty-right of interference by one power with the exercise of dominion in any particular by another. We are not afraid that the allusion will suggest, to any reader of our previous articles, any comparison, in another direction, dangerous to the position we have taken on the question at large.

the framework of which was not too robust. Not that any difference in the scale of importance is ostensibly made between the real ground of the case itself and the most trifling even of the collateral matters adduced to corroborate it. With the exception that some of the arguments, presumably those considered of most importance, are repeated more frequently than others, no trace of discrimination—no idea of proportion—is discernible: but all the parts—foundation and superstructure, walls and the buttresses which prop them—all alike are heaped together in the equality of a common confusion.

This criticism suggests itself at once upon even a superficial analysis of the form of the Chinese despatches. But the matter is not merely one of form: it betrays a corresponding want of discrimination, and of the power to view things in their just proportions, in the minds of the writers. And when we couple this with the curious mental attitude of Chinese officials as displayed in their ideas upon 'Empire' and 'Tributary States,' the presentation of a claim, based upon grounds scarcely sufficient, in European eyes, to support even the barest *prima facie* case, almost ceases to be matter for surprise.

We incline to the belief that the action of China has been taken, to an extent not easy for Europeans to realize, under conditions, and, though to a less extent, through and by reason of want of familiarity with facts, and with the logical bearing of facts in the world of general politics. Lack of knowledge is not itself a mainspring of action; but it may be accountable for the manner of taking action and for the grounds assigned for it. There is no doubt that, until recently at any rate, the Chinese official classes were systematically hoodwinked by the Loochoos; and, though the deception was not practised altogether without internal connivance, they did, as a body, seriously believe that, at the very least, the islands belonged more to China than to any other country. How far this ignorance of facts and these grotesque views of international politics and public law are shared by the men at the head of the state in China to-day, it is impossible for us to say: but, whether shared by them or not, when such opinions are held by the rank and file of the official classes, as there is little reason to doubt, they become a political force; and forces of this kind statesmen know very well how to turn to account, without necessarily themselves sharing the opinions or feelings which go to make them up. If, therefore, the Chinese Government had motives for desiring an opening for a certain display of activity, they would have found, in the feelings excited (whether genuinely or by factitious means) among the official classes of China by Japan's proceedings in Loochoo, a weapon ready to their hand: and it may well be that, on the principle that 'any stick will do to beat a dog,' the Chinese Government seized the opportunity thus afforded them to take a step which their interest seemed to demand, without too closely canvassing the appropriateness or substantial foundation of the pretext chosen.

Such a motive is to be found in a perhaps not unaccountable jealousy widely felt in China of the growing importance and power of her island-neighbour, and a certain misgiving among her politicians as to the possible development in Japan of aggressive tendencies in the future. The history of the Formosan affair discloses the existence of these feelings; though it is true that there was no indication of it until after the lapse of a considerable time from the commencement of those proceedings. Indeed, it would appear, that the Chinese Ministers entertained no such misgivings, until they were put into their minds by the subsequent course of events, or by other less passive agencies. Certain it is that, at the outset, the Chinese Government made no kind of objection to the

proposed movements of Japan, either on the score of any claim of her own to be the protector of the Loochoons, or on account of the afterwards alleged infringement of her own rights by the despatch of a hostile force to the island of Formosa. But it is equally certain that at this time the suspicions and anxieties of the Chinese Government were, by whatever means, thoroughly aroused; and ever since then every step taken by Japan has been eagerly watched and subjected to a suspicious scrutiny.

There is a party in China, on which one of her ablest and most powerful statesmen leans for support—though it is by no means certain that he would, otherwise than for his own political ends, endorse their sentiments—which consistently advocates something like what it is the fashion to call in England just now an ‘Imperial Policy;’ which, in China, means a general hostility to things foreign, including the rival influence of a neighbouring Empire in particular. It has been called a ‘war-party,’ and, whether the name be well deserved or not, it is to this influence now, whencesoever the original impetus may have been derived, that the present attitude of the Chinese Government must be attributed. The Formosan affairs of 1874 cost China a most unpalatable diplomatic defeat; and the soreness felt in consequence is directed not only against Japan, but against the Ministers and Government responsible for the humiliation. It is to wipe out this, and to recover the ground then lost, that an opportunity had to be sought: and, whether the possibility of making good the claim to Loochoo was believed in or not, the chance was not to be let slip. The fact that Japan was gradually tightening her hold upon the islands was regarded in itself in the light of a growing menace to China, both on general grounds, and in some degree specially also as being a stepping-stone to Formosa; over which Japan, at a remote period, exercised a certain authority, and upon which she has always of late been suspected by China to have designs. Whatever grounds there may have been in the past for these suspicions, we can most sincerely affirm a not unfounded belief that they are absolutely baseless now. Nevertheless, there is no doubt that such feelings are widespread; and, that being so, a ministry might well be driven, even against its own wishes and better judgment, especially having regard to the stain remaining to be wiped out, into taking diplomatic measures of which the outcome could not be foreseen, but which, if they were intended to end as well as to begin in diplomatic negotiations, seemed foredoomed to defeat. Of course, if this matter had been put forward as a mere pretext for war, then no doubt it would as a pretext have been sufficiently appropriate. But this extremity does not seem to have been intended—contemplated, as a possibility, it must of course have been: but that the case was certainly not put forward as a mere pretext for declaring war—nay more, that the Chinese Government had a sincere intention of avoiding war if possible—is sufficiently shown by the subsequent course of events. The fact is, they were driven into a diplomatic blunder, as the lesser of two evils, trusting to the chapter of accidents to bring them out again: that trust will be found, we believe, to have been not misplaced.

In our next article we hope to bring to a conclusion our review of the question up to the present time.

EXTRA-TERRITORIALITY IN JAPAN.

XII.

A RECENT English diplomat and writer of acknowledged ability, speaking of the extra-territorial authority of foreign ambassadors and consuls in eastern countries, asserts that “it is a power fearfully abused and

ill-defined.” He adds, that “such mighty interests are constantly placed in jeopardy by it, that I would respectfully venture to submit that there is no portion of international law which requires a more careful revision.”¹

There can be little doubt of the serious abuses of extra-territoriality of which this writer, in common with many others, so justly complains.² But they arise we conceive, not so much from any erroneous principle of international law as from a mistaken application of their principles; from the notion that the treaties with eastern countries confer upon the subjects of the western powers, privileges and immunities which were never intended, and which in fact never were conferred thereby. The whole subject of the treaty rights and privileges of foreigners in Japan has been totally overclouded, confused and obscured by the use of the vague, indefinite and misleading phrase, “extra-territoriality.” Treating this figure of speech as a fact and reasoning from it as such, has led to most erroneous and absurd conclusions. Instead of securing to private individuals, as it was intended to do, the simple right to be tried and punished for their offences by their own courts in the manner prescribed by their national laws, it has been made the pretext on the part of foreign officials and subjects, for the exercise of powers and the enjoyment of immunities, for which there is not a shadow of legal justification.

For the want of a better word to express the treaty-rights and privileges of foreign subjects in eastern countries the term “extra-territoriality” has been generally employed for that purpose; but that such subjects are extra-territorial, or in legal contemplation beyond the territory in which they are commorant, is as completely opposed to every accepted principle of law, as it is inconsistent with actual truth; no foreign subject in Japan, in his private unofficial capacity is in legal contemplation, *extra-territorial*. The fiction of extra-territoriality, as every one knows, was invented to secure to public ministers and ambassadors absolute immunity from the laws of the country in which they temporarily reside. Representing as they do the dignity and presence of their own sovereign, it would be absolutely incompatible with their official character to submit to be tried and punished as criminals under the local laws. Hence by the usage of civilized nations, the person of a public minister or ambassador is considered absolutely inviolable. To secure this inviolability, the fiction of extra-territoriality was invented, whereby such persons are regarded in law as absent from

1. *Embassies and Foreign Courts. A History of Diplomacy by a member of the British diplomatic service, Chapter XX. p. 334.*

We cannot forbear giving the following brief extract, in which this author depicts in lively colours the fallen prestige of an Eastern potentate, under the Circean spell of christian extra-territoriality. He says:—

“In our day the reception of Ambassadors at Constantinople is a most undignified affair. They go when they like to see the Sultan, and they do what they please in his presence. They, (or some of them,) lecture him as though he were a culprit, and he answers with fitting humility, every nerve twitching with the bitter sense of his fallen fortunes, I never saw anything so touching as one audience. I would as soon have been present at the ceremony of administering the rod to a weakly boy, or the application of the cat-of-nine-tails to a sickly soldier. I felt a sensation of sincere pity, almost of national humiliation, when I, (among a crowd of tinselled nobodies, who all shuffled in a disorderly manner into the presence together,) witnessed the vulgar and shameful scolding by which a Christian Ambassador thought proper to insult the mild and helpless Prince who now sits on the tottering throne of the Eastern Cæsars. There was small bowing or reverence there; and the Court of the Sultan might as well have been a bear-garden.” Chapter XIX. p. 305.

2. If the reader desires to particularly acquaint himself with the serious dangers and abuses of extra-territoriality he cannot do better than read “Von Arnim’s Cursory Remarks of a Traveller,” (Berlin, 1838,) pp. 1. to 104., also the interesting works of Von Hammer, entitled “Constantinople and the Bosphorus,” Vol. I. p. 1 to 600; Moser, part IV. p. 329; Von Steck, Versuche, p. 88; Dumont, Corps Diplomatique, tom. VII. part II. p. 4; and Klüber, Vol. I. pp. 343, 344.

the territory of the sovereign to which they are accredited and within the territorial jurisdiction of their own sovereign. How any one that has given the subject a moment's thoughtful consideration can contend that it was the intention of the so-called extra-territorial provisions of the treaties with Japan, to extend to private subjects the enjoyment of such immunity from the laws of the country as is accorded by the usage of nations to public ministers, entirely surpasses our comprehension. No such "fiction of law" is necessary to secure to private subjects the right of being tried and punished by their courts "according to their own laws," for crime and offences committed by them. Their persons are neither sacred nor inviolable by the law of nations and they neither represent the person nor the dignity of their sovereign. The only analogy that exists between the rights, privileges and immunities accorded by the law of nations to public ministers, and those secured by treaty to private subjects in Japan, consists in this, that both are exempt, though not to a like extent, from the ordinary jurisdiction of the local courts; in other words, from the judicial power of the territory. The analogy extends no further.³

Public ministers and ambassadors, by the comity and for the convenience of nations, are considered to be extra-territorial, and consequently wholly exempt from the laws of the country. This exceptional immunity is accorded to them to secure their inviolability, without which, their office could not exist. Their exemption from the judicial authority of the country is a necessary consequence of their extra-territoriality and inviolability. Not so, however, in the case of private treaty subjects living in Japan. Their exemption from the judicial authority of the territory is not founded on any extra-territorial principle, but results solely, from express treaty stipulations. It is to those stipulations, strictly, that we must look, therefore, to ascertain and define the immunities of private subjects in Japan, and not to any fiction of public law which has no relation to the subject. What then are the privileges, so secured to treaty subjects? Simply the right to be tried and punished, by their own courts, according to their own laws, for crimes and offences committed by them in the country. Now in all conscience, is not every violation by a foreigner in Japan, of the lawful commands of the territorial sovereign a crime or an offence? We think it is. The treaties do not define what acts shall be considered as crimes or offences; they simply provide that all crimes or offences committed by British subjects or Americans in Japan shall be punished. By whom? By their respective Consular Courts. In what way? According to the laws of their respective countries. The laws of Great Britain may declare certain acts to be criminal if committed in Japan by British subjects, but the Treaty declares that all crimes are to be punished. The phrase "according to the laws of Great Britain," considered either logically or grammatically, obviously and clearly relates to, and qualifies the acts of trying and punishing, and has no relation to the

3 There are abundant instances in history where the private employes or servants of a public minister have been voluntarily surrendered to the local authorities and punished by them for breaking the municipal laws of the country. It will be perceived at once, that if such private employes or servants were really extra-territorial, or legally within the territory of the minister's country and absolutely out of the territory of the local sovereign, it would follow that he could not lawfully try or punish such person, unless he would have had such jurisdiction had the act been done on the soil of the minister's country. There can however be no question of the perfect legal rights of the local courts of any country to take cognizance of, try and punish any criminal act committed in the country by the servants or employes of a foreign minister, upon the voluntary surrender of such persons by the minister to the local authorities for that purpose. If this be so, it necessarily results that the private subjects of a foreign state, although exempt,—either by the usage of nations or by virtue of express treaty agreement—from the criminal jurisdiction of the local courts are nevertheless civilly bound to obey the laws of the territory.

subject matter of the clause. What sound reason can be assigned for the assumption that it was the intention of the British and American treaties that the subjects and citizens of these countries residing in Japan were only to be punished for violating British and American laws? Is it rational to suppose that the Japanese, or either of the treaty governments ever contemplated such a thing? Such a conclusion is neither to be inferred from the language of the treaty itself, nor from the nature of the compact.

The sages of the law, it is said, in the exposition of treaties, pacts, statutes and other solemn instruments, have handed down to us certain rules of interpretation, which are commended as the dictates of enlightened reason and common sense, of which this is one, viz:—*That the reason of an obligation should first be regarded.* Whatever helps the parties to go straight to this point, conduces to honesty, to mutual satisfaction, and to exact and equal justice. What both promisor and promisee proposed at the time, as the object to be attained, that, and that only, is the agreement. We do not see how any impartial, fair-minded man, having a just regard to the reasons which prompted Japan and the other high contracting parties to enter into the so-called extra-territorial treaty arrangements, can escape the conviction, that it was clearly the design, that foreign subjects should be tried and punished for all violations of Japanese law. The serious danger which would necessarily result from withdrawing whole communities of foreigners from the common restraints of the territorial laws, even if there were no other objection to such a pretension, is more than sufficient to refute any such presumption.

We will conclude what we have to say on the subject of extra-territoriality in Japan, at present, with these words of a great Lord Chancellor of England:—"When the Roman citizen carried abroad with him his rights of citizenship," and boasted that he could plead in all the courts of the world, '*Civis Romanus sum*,' his boast was founded, not on any legal principle, but upon the fact that his barbarian countrymen had overrun the world with their arms, and reduced all laws to silence and annihilated the independence of foreign legislatures."⁴

And so, we think, when the subjects of Christian nations come to Japan and boast that they carry with them their national laws and that they may therefore disregard and disobey at their pleasure the laws of the country, unless those laws have first received the sanction of their ambassadors, their boast is founded, not upon any legal principle, but upon the fact, that the extra-territorial assumptions of foreign powers, have reduced all local laws to silence and annihilated the legislative independence of the territorial sovereign.

It would be strange indeed, if after the lapse of twenty centuries, the very maxim which the ancient Romans regarded as the "badge of universal slavery which their warriors had fixed upon mankind," should come to be adopted as the maxim of Christian nations in their intercourse with non-Christian states. "*Civis Christianus sum*," is but the popular paraphrase of extra-territoriality, and is as wholly devoid of legal principle as the old Roman plea of which it is a copy. It is the dying echo of Mediæval barbarism.

MR. HENRY VON SIEMOLD has just produced a work on Japanese archaeology which will prove of the greatest interest, not only to students of that science in all parts of the world, but also to general readers; whilst, as a work of

4. Lord Brougham's Judgment in the great case of *Warrender vs. Warrender*, 9 Bligh 115, to 118.

art, it will be a welcome addition to every drawing-room.* The photographs of the various specimens, arranged in symmetrical groups, reflect the greatest credit upon the artist who has thus reproduced, for our benefit, in bold and clear outline, numerous objects of a pre-historic age which must have cost the author much time and labour to collect; objects which many of us might pass by unnoticed, or have left unsought for beneath their covering of later and historic rubbish. But, under Mr. Siebold's guidance and with the assistance of his beautiful photographs, these objects become interesting pages of history and faithful records of the life, death, manners and customs of a race which existed before history was written and before even language passed on its mythical traditions. The discovery of implements and weapons of the stone age has shown that in those pre-historic times a great similarity existed in the appliances for war, for the chase, for domestic use or for ornament of peoples then inhabiting different parts of the globe, and it must remain an interesting speculation to determine whether this similarity of appliances was the effect of inter-communication between them or was purely the result of a similarity of wants producing similar contrivances. As our author points out, the Japanese "celt" (a kind of chisel, available either as a weapon or an implement), is known as the *raifu* or "thunder-bolt," just as in Germany it is called by the peasantry "Donner Keil." And thunder would appear to be a favorite adjective for these relics, for here we have also the *raijo* or "thunder-mallet," and the *raitauchi* or "thunder-hammer."

Mr. Siebold's work commences with an introductory chapter in which he describes the two distinct characteristics of the stone implements discovered in Japan; the one, polished and ornamented, to be attributed to Japanese origin; the other, rarely polished and never found in conjunction with metal, traceable to the Aino period. He also adds some interesting speculations as to the origin of the inhabitants of Japan, but is obliged to own that more information is yet required before that point can be satisfactorily determined. His present researches must, however, add many links to its proper investigation. Special chapters are devoted to "Stone Implements and weapons," "Japanese Graves," "Japanese Caves," "Japanese Ancient Pottery," "Japanese Shell-heaps," "Stone and Bronze objects," and "Clay Figures," each of which will be found to contain concise and useful information.

In our notice, last September, of Professor Morse's work on the Omori shell-heaps, we referred to the conclusion that gentleman had arrived at of the early inhabitants of Japan having practised cannibalism; but Mr. Siebold does not confirm this supposition and points out that human bones have been found in one shell-heap only, whereas in seven similar heaps no single bone of human origin could be discovered. He reminds us at the same time, that Marco Polo particularly states that the inhabitants of Japan did practice cannibalism by devouring their prisoners. We think, however, that even that testimony, based on information collected in China by the great traveller, can hardly be accepted as conclusive; and, although it seems unquestionable that human sacrifices were made in Japan at religious ceremonies, and that faithful servants were buried alive at the obsequies of their master, still we are not yet forced to admit that actual cannibalism existed. We will not further anticipate the satisfaction of readers of Mr. Siebold's "Notes" by extracting from his work, but we would recommend its purchase by all who are at all interested in these curious records of ancient time.

THE competitive exhibition of Tea, which has lately been held at the Town Hall, has had the effect of bringing

* NOTES ON JAPANESE ARCHEOLOGY, with especial reference to the Stone Age, by Henry von Siebold. With 12 photographic plates: Yokohama, Typography of C. Lévy, 1879. (Office of *Echo du Japon* and Kelly & Co., Yokohama.)

many of the native tea-merchants together; and, in our opinion the most interesting result of this meeting has been the publication of the speeches delivered on the 19th October, by merchants and others interested in the tea trade, which will be found in our columns devoted to the "Japanese Press." The speakers could not have been more frank in expressing their views, and foreign merchants cannot fail to be interested in reading them. One conspicuous point about the discussion was that no attempt was made to disguise the faults of the tea trade, whilst Mr. Masuda's sweeping condemnation of the actual dishonesty of his countrymen, engaged in that business, could hardly have been stronger. "He wished to impress upon the meeting that those engaged in the tea trade have lost the confidence of the public, and also that no honest person would engage in a business so fraught with chicanery and danger." He described the country producer and the town consignee as being both engaged in a game of mutual deception, and both certain to be ruined sooner or later. He himself had been in the business for several years and left it simply because of the fraud and deceit with which the trade was saturated from beginning to end. Such language, coming from one of the most prominent merchants in Tokio, is a most severe censure upon the tea trade of Japan, and it will form a strong argument for those who are disinclined to credit the native merchants generally with much commercial morality.

Of course the subject of direct exportation was discussed and one speaker strongly urged that large companies should be formed with branch offices in America, which he considered would be a 'great benefit to trade.' Fortunately, other speakers were more prudent in their ideas, and hinted that the advisability of direct exportation was not easily to be determined. It is possible, that the advice we tender on this subject may be considered by our native readers as caused by a wish to keep Japan from spoiling foreign trade, but it is intended as sincere when we recommend native merchants to devote what attention they can to the improvement of their own business here in Japan, and not to seek further evils, of which they yet know little or nothing.

THE combination of Steamship owners connected with the China and Japan trade is an important item of news, and cannot fail to interest the mercantile communities of the East. The particulars of the agreement made between the P. and O. Company, the Messageries Maritimes, the Ocean and Glen steamers and the Castle line, must now be familiar to our readers and we need not, therefore, repeat the details; but we may well remark that the combination is a very strong one and must, until new interests enter the field, over-ride any possible opposition from the "outside" steamers hitherto trading to the East. No ordinary tact and perseverance must have been displayed by the originator of this movement, and he must be congratulated on having gained the co-operation of so many opposing elements in the shipping trade; nor is it likely that at least a large proportion of the mercantile interests in London have not also given their acquiescence to the scheme. The circular states that the combination is intended as much for the benefit of merchants as of shipowners, and we can hardly assume that what, on the face of it, is evidently an arrangement for the sole benefit of the principal steamship owners, should be declared as intended for the advantage of a class who can look after their own interests, unless a previous understanding had also been arrived at with some if not most of the mercantile houses. But in spite of the undoubted strength of this combination, and in spite of the mercantile support we must presume has been promised to it, the difficulties in the way of carrying it out successfully, for any length of time, are great and, we should feel disposed to add, insuperable. A few of these difficulties may be briefly pointed out. One of the objects of

the combination is to prevent the accumulation of tonnage, and to put on the berth, at any one time, only sufficient for the requirements of the trade; but this cannot be done at both ends without obliging steamers to lay up both in England and in the East when cargoes are scarce, for otherwise when cargoes are plentiful the discovery might be made that the tonnage was at the wrong end; and when steamers, have either to be kept back or sent away empty in order to carry out the programme of "regulating the tonnage," which of the combining lines is to suffer? Here must arise an occasion of dispute within the circle of the confederacy that cannot fail to dissatisfy some owner and perhaps lead to his withdrawal. It is of course presumable that these contingencies have been provided for in the details of the arrangement made between the ship-owners, but of these details the public are not yet informed, nor of the *modus operandi* that will be pursued against any "outsider" who may be bold enough to take his chance against the combination. Again, what is to become of the steamers which are now, if possible, to be shut out of the eastern trade? They must either run here at a loss, lay up, or try other employment, and if forced to other employment the vessels already in that trade should, according to this principle, also combine against the new comer. We may thus have certain "pariah" steamers, owning allegiance to no combination and fought against by all.

Combinations or monopolies of any kind are, *per se*, objectionable and they have always been strenuously fought against; for a time they may succeed but ere long they invariably succumb, either through internal dissension or by force of external opposition. Many causes exist to make the present steamship owners' combination a justifiable one, if not an imperative one for their own interests, and we do not doubt that it will hold good for some time; more especially as every possible step has been taken to conciliate the views of merchants and shippers. But it is not in the nature of things that conflicting interests will not, in the course of time, clash, and we are not disposed to think that the present amalgamation will form an exception to this rule.

NEW "rules of the road at sea" were formally issued in England on the 18th of August last, but do not actually come into force until the 1st September, 1880, so that mariners and others have ample time to make themselves fully acquainted with their provisions. These rules are no doubt of great importance, much more so indeed in one respect than the laws of any country, which, if found defective, can be altered by that country alone. With these rules, however, it is different; for sometime to come at least they are practically immutable as they represent the law, not merely affecting British ships, but also the ships of France, Russia, Germany, the United States, Austria, Italy and other countries, all of whom have agreed to these regulations and all of whom would have to be consulted if a change, however slight, required to be made. Amongst the alterations in the existing regulations we observe, that any vessel which is employed "either in laying or in picking up a telegraph cable, or which from any accident is not under command," shall carry, at a certain height above the hull, three red lights in a vertical line, which in steamers are to take the place of the white masthead lights. Vessels exhibiting these red lights are to carry the ordinary side lights when making any way through the water, but not when making no way at all. A ship which is being overtaken by another is to show from her stern to the overtaking vessel, a white or a flare-up light. In the "steering and sailing rules" an important alteration is introduced which seems judicious and likely to put an end to those complicated admiralty cases in which there is usually a large amount of contradictory evidence forthcoming.

The new rule says, that when two "ships are running free" with the wind on different sides (and only under such "circumstances can they meet end on), the ship which has "the wind on the port side shall keep out of the way of the "other." Another desirable change extends to sailing-vessels the rule which obliges steamers to go at a moderate pace in a fog, and also makes the precaution necessary, not merely when there is a fog, but when there is mist, or when snow is falling. There are also new provisions regulating sound signals in time of fog, &c. which however do not seem to have met with much favour, in fact we read that in America exception has already been taken to them. Some slight alterations will probably be made and then there is reason to believe, that these new regulations, affecting this important subject which embraces such vast interests, will be worthy of the collective wisdom brought to bear on them.

THE following extract from the *Pall Mall Gazette* describes a new method for making timber which is of interest, and might be of practical value in countries where lumber is deficient:—"Some samples of hard-wood lumber made out of common wheat straw have lately been exhibited in Illinois, and have, it is stated, attracted much attention among the lumbermen. The wood has all the polish and finish of the hardest black walnut and mahogany. An ordinary straw board, such as is usually made at any paper mill, is used for producing it. As many sheets are taken as are required to make the thickness of lumber desired. These sheets are passed through a chemical solution which thoroughly softens up the fibre and completely saturates it. The whole is then drawn through a succession of rollers, dried and hardened during the process, as well as polished, and then comes out of the other end of the machine, hard dry lumber ready for use. It is said that the chemical properties hardening in the fibre entirely prevent water soaking, and render the lumber combustible only in a very hot fire. The hardened finish on the outside also makes it impervious to water. The samples which have been exhibited could hardly be told from hard-wood lumber, and in sawing the material the difference could not be detected."

WE notice in one of the English papers an account of a recent scare caused to the police force in Berlin. The authorities of the Empire have been uneasy for some time past on the score of the socialists, and a close watch has been observed over the communistic fraternity, who are the cause of so much annoyance to their paternal Government. In the course of this *surveillance*, a telegraphic message addressed to a prominent socialist leader, in Berlin, was intercepted. It read: "cannot send the 5,000 daggers till day after to-morrow. You must postpone." Here was a horrible discovery. 5,000 daggers! Enough to assassinate the whole department of public safety! What diabolical plot was now in course of fruition? At any rate whatever it was, it could easily be nipped in the bud. A watch was set at the railway station, a number of boxes arrived addressed to the socialist leader and were promptly confiscated. The boxes were taken to the police station, and solemnly opened in the presence of an interested crowd of officials and the daggers found, sure enough. But they were the little ornamental nickel ones which ladies have been using for hairpins of late and not a bit more dangerous. The leading socialist and would-be regenerator of society happens also to be a dealer in fancy goods, and the "daggers" were required in the way of his legitimate business.

A RECENT number of the *Engineering and Mining Journal* expresses the opinion that the time is not far distant when water-gas (hydrogen and carbonic oxide) will come into general use, replacing fuel for domestic pur-

poses, at any rate in cities, and in many metallurgic operations. The same paper thinks it probable that, enriched with hydrocarbons, it will supplant the coal-gas now in general use for illuminating purposes, since it has at length been fully proved that enriched water-gas is a cheaper and much more satisfactory illuminant than coal-gas, the difficulty which existed through the hydrocarbons having no chemical affinity for the water-gas, having been surmounted. The German physicist, Wagner, styles the new process of making water-gas "an epoch-making invention." On the invitation of the Swedish Iron-master's Association interesting experiments are in course of progress with the manufacture of water-gas by the "Strong Process" having in view its adaptability in many of the operations of iron manufacture. No promising have these experiments been up to the present, that Swedish metallurgists predict a complete revolution in the manufacture of iron through its use. We are informed that large permanent water-gas works are being erected in Sweden, and others will shortly be established in Germany and Russia. The chief economy in the use of water-gas is stated to be not so much in its greater calorific equivalent, as in the greater calorific intensity of its flame, and in the fact of a larger proportion of its combustible elements being actually utilized. It is worth recollecting however, that large sums of money have already been squandered in England in unsuccessful attempts to utilize the gas produced by the decomposition of water and however good the results of laboratory experiments, the test of actual experience on an extensive scale has yet to be made. We believe that there is at least one place in America where this water-gas (enriched) is used in lieu of the ordinary coal gas with good results, but we are not aware whether the venture is commercially successful or not.

REUTER'S TELEGRAMS.

LONDON, October, 26th, 1879.

Germany and Austria have signed a treaty of Alliance.

LONDON, October 28th, 1879.

A new German Loan is announced.

LONDON, October 31st, 1879.

Parliament is further prorogued until the 19th of December.

JAPANESE ERA 2539, MEIJI 12TH YEAR, 11TH MONTH, 1ST DAY,
DO-YO-DI.

NOTES OF THE WEEK.

The P. & O. steamer *China* arrived from Hongkong on the 27th instant, followed by the O. & O. steamer *Gaelic*, on the morning of the 30th. The *City of Tokio* left here for Hongkong on the 26th, and the *Sunda* went forward with the home mails on the 30th. The *Gaelic* left for San Francisco, with mails for America and Europe, this afternoon at four o'clock.

The M. M. steamer *Tibre*, with the European Mail of the 21st September, left Hongkong this morning, at 8 o'clock.

Monday next, the 3rd instant, will be kept as a general holiday by all Japanese and by most foreigners, in honor of

the anniversary of the birth of H. M. the Mikado. Tokio will be *en fête* during the day and well into the night. The Foreign Minister and Madame Inoué entertain a large company at a Ball to be given in the Engineering College, while here, the Governor of Kanagawa, has issued numerous invitations for an official dinner. Altogether, next week will be a holiday time, for in addition to Monday, we also look forward to two days devoted to racing,—days which an excellent custom has invariably made Bank holidays. The bright, clear autumn weather of Japan has come at last, and holiday makers could wish for no more pleasant prospects than those of the next week.

We are requested to correct a portion of our report, last week, of the Church Meeting held on the 21st ultimo. We are informed that the Chairman did not say that the gentleman in Foochow had offered his services to the Church Committee for the chaplaincy here.

Mr. Fairclough made his appearance on Thursday evening in the title rôle of Bulwer's *Richelieu* and again proved himself a genuine and conscientious artist in every sense of the term. His previous representation of some Shakespearian characters, especially that of *Shylock*, had won for him so great appreciation at the hands of the public, that the house was "engaged full" some days ago, and by a few minutes after nine o'clock, there was no more standing-room.

What need is there again to paint the merits of Mr. Fairclough? Have we not all seen him for ourselves? Do we not all recognise the great art which enables him entirely to merge his own existence for the time being, in the character he undertakes? In cajolery, defiance, entreaty, scorn, hatred, love, revenge, he is alike good and we are well within the limits of the truth, when we say that no such powerful actor has before appeared in Yokohama. The part last night suited him to perfection and were we to instance all the places in which he carried the audience with him, either to the height of exultation or to the depth of despondent rage, we should far exceed the bounds of this notice. We should not forget to mention, however, his powerful play in the third act, where, after his loving protection of *Julie*, he defends himself by words only against the nefarious designs of the *Cherrier de Mauprat*, turning by the force of his invincible will alone, an enemy into a friend: also his splendid delineation of contrasted feebleness and revived energy in the last act. In fact one could always see amid the old man's abject misery his proud article of faith "*Resurgam*." Mr. Fairclough was called before the curtain at the end of the last three acts and warmly applauded. Miss Elcia May, made a charming ward to the Cardinal and played the part of *Julie de Mortemar* with fine effect. Her scene with *Richelieu* when he receives her in the third act, and the scorn displayed when he suggests that she may have yielded to the king's solicitation, were above all praise. In fact to our mind, the third act was the gem of the whole performance; the stage was clear for the play of the professional artists and they both showed a dramatic power and talent, which we own fairly surprised us.

Of the Amateurs, it were perhaps unjust to say too much and ungracious to say too little, but we cannot refrain from complimenting Mr. Brower on the marked improvement in his bearing and elocution. Had the disguise of dress been a little more perfect one could not have recognised him as *Gaston* and this is how a part, however small, should be played. We wish we could say the same of every one, but let us remember that it is not as easy to appear in high class drama as in burlesque or comedy, a Robson could not make a *Shylock*, and one of the brothers *Dromio* would be sadly out of place as *King Lear*. Even our local princes of the Theatrical art came far below our ideal; it is true that they had to contend against the overpowering brilliancy (we had almost said genius) of the chief actor, still there were some parts in which they failed to rise to a proper and impassioned reading. This was especially the case with *de Mauprat* in the third act, where he comes to assassinate the Cardinal in his own house, with the concurrence of *Hugnet* and the disaffected guards. Here we think Mr. Bayne fell far short of a great rendering, and it is in passages of this kind that true art shows itself. On Thursday, the cool philosophic *Lucater* could have played the part as well. Mr. McClatchie

was not as successful as in *Iranhor*; in spite of his most conscientious endeavors *Wamba* was ever present, especially when he departed "more fortunate than *St. Denis*." Mr. Herbert's play as the *Black friar* was especially good, the obsequious attendance on the eminent *Red friar*, who could one day make of poor Joseph a bishop, was well conceived and thoroughly carried out. Mr. Russell had also good success in the part of *François*, and Mr. Brewer as the traitorous officer *Huguet*. "The divinity which doth hedge a king" prevents us from saying anything about Mr. Howland; the fear of the Bastille haunts us yet.

We hope that Mr. Fairclough will not leave us without giving some more of his special rôles—the advantage of having a master among them must prove invaluable to the members of our Amateur Corps—and we have faith to believe that they will not let him pass away from us, without gaining from him some of that experience in their adopted art, which is so requisite if they intend to uphold their name and fame in Yokohama. With such a model before them they cannot fail to improve at every succeeding representation.

We should add, that a small string band from the *Prins Adalbert* enlivened the scene-shiftings, and that the proscenium would seem to be undergoing a course of decoration, it being now in a transition state of blue and green in violent contrast; in fact a chromatic chaos, out of which it will doubtless emerge a "thing of beauty and a joy for ever."

The interests of the Amateur Rowing Club affect us all too closely for us not to feel real regret at the reported failure of their endeavours to secure the French Hatoba as the new site of their boat house. It is reported that an old engagement entered into by the Japanese Government with the French Minister prevents any change being made in the purposes for which that Hatoba was built; but by mutual consent it is always possible to annul or modify any agreement, and we trust that the French Embassy will yet see its way so far to modify the privileges it possesses over the French Hatoba as to permit of a portion of that enclosure being used for what may well be termed a public benefit. At present there cannot be two opinions as to the blot upon the fair picture of our Bund which the dilapidated buildings, the rotten fence and the dreary waste of overgrown grass in its centre, presents to every eye. The place for years has had no practical use beyond that of a landing for passengers, and this purpose need not now be sacrificed. But the opportunity presents itself of transforming what is an eye-sore into a pleasant garden, of changing waste land into an agreeable promenade, and of devoting a portion of it to the rendezvous of the most popular club in Yokohama. For such a good purpose—for what would be appreciated as a general boon to the community—must we appeal in vain to the consideration of those who hold the power of granting or refusing it? We trust not; we hope yet that the satisfaction of giving pleasure—especially where no actual personal loss or inconvenience can be experienced—will prevail over other feelings, and that the power held by the French Legation over this central part of our Bund will merely be so far exercised as to ensure that it is relinquished under proper guarantees that a suitable "recreation ground" be provided for the general public as well as the Rowing Club.

Mr. J. R. Black has announced the forthcoming publication of a work entitled "Young Japan," which will form a narrative of Yokohama and Yedo since the signature of the treaties in 1858, and comprise a glance at the progress of Japan during that period. Mr. Black has taken an interesting topic for his literary labours, and, as he himself has borne no small or ephemeral share in the vicissitudes of this port, we may count upon the subject being well and thoroughly treated by his experienced pen. No slight additional attraction to the work will be its illustrations, which, from those that have appeared in the *Far East* (under his editorship), we may rely upon as being faithful and well executed.

The demand of the native import merchants in reference to the non-removal of the hoops from bale goods has not been generally accepted by foreign merchants, and we hear that several of the importing firms have declined to agree to the terms which the dealers would impose. Perfect unanimity on the subject is, however, far from existing; and foreigners show themselves much less united than the native merchants. The

native papers contain several allusions to the dispute, and the *Hochi Shimbun* writes as follows:—

"Foreign merchants seem to be of opinion that as the Japanese merchants generally lack the capacity of joining their forces and thus maintain a decided opinion for any length of time, this question will sooner or later break up by some of them separating themselves from the association and thus making the others unable to insist on their claim. But on this occasion we are of opinion that such will not be the case, because it is reported that some five or six foreign firms have already agreed to comply with the request and are receiving orders from our merchants which they contract to execute. Consequently it seems at present that these five or six firms are transacting all the trade which would otherwise have been in the hands of over fifty firms. As the former would naturally make all efforts to meet with our demands in order to have the control of the trade in their hands, and thus profit themselves, our merchants will not experience any difficulty in obtaining their supplies. As moreover, our Mitsui & Co. &c. &c. have branch establishments abroad, we can order our things through them by means of the telegraph if necessary. With all these advantages in our favour we fully believe that our merchants will not sustain defeat on the present occasion as in former cases. But if they should, on the contrary, their reputation will at once fall to the ground. Although the present case is of only the small matter of 'hoop irons' yet it is to remove an injurious custom which has existed for over twenty years, and is to restore to some extent our rights in the transactions of trade, which we have hitherto been deprived of by the foreigners. Our merchants must make all endeavours to attain a complete victory in this case."

The usual winter change has been made in the train service between Yokohama and Tokio. The first train, from both ends, will in future leave at 8 a.m., and the last at 10 p.m. The 9 p.m. train has been omitted, and the customary gap of an hour and a quarter between the different departures no longer exists in two instances. And, as a hint to passengers by sea, we would warn those for Yokosuka, that the steamers generally leave five minutes before the time advertised.

By the arrival of the *Niigata Maru*, we learn the result of the principal event in the Kobe Regatta viz:

The band of the *Iron Duke* was present and added materially to the pleasure of the day.

We extract the following from the *Economiste* as being a sensible objection to the new telegraphic tariff:—

LE TARIF DES TELEGRAPHES SOUS-MARINS.

"Paris 9 septembre 1879.

"Monsieur le Rédacteur en chef,

"Permettez-nous d'appeler votre attention sur la récente décision du Congrès international télégraphique, réduisant, à partir du 1er avril prochain, de cinq à trois le nombre de chiffres comptant pour un mot dans les télégrammes échangés avec les pays d'outremer.

"Le prix des dépêches sous-marines étant déjà très-élevé, il semble qu'il n'y ait aucune raison pour les aggraver encore par cette restriction, évidemment exagérée, sans parler de la nécessité fâcheuse imposée au commerce de remanier de fond en

comble des codes télégraphiques établis à grands frais. Une fois que le commerce, sans protester, aura laissé entrer les gouvernements intéressés dans cette voie en quelque sorte arbitraire, il n'y a pas de raison pour qu'ils s'arrêtent.

"Et, en somme, c'est le commerce seul qui fait vivre les Compagnies de télégraphes sous-marins. C'est donc à lui d'essayer de protester.

"Veuillez prendre cette question en considération, s'il y a lieu, et agréer, etc., etc.

"Wm HERMANN et KAHN."

PARIS LETTER.

PARIS, September 13th.

We know that in Russia, when two editors indulge in unusually bad language, a jury of honor composed of their peers is impanelled, and their decision being final, the war ceases. In France the only arbiter is a duel, but even this is not always effective. Edmond About's *Journal* is at dagger's-drawn with the avowed representative organ of communism, and the language they exchange is positively horrible: perhaps three-fourths of the words could not be found in any dictionary (slang editions even included). Hence, the Russian plan of conciliation is worthy of being commended. It would no more prove successful with the French character, than the once made resolution of the great powers—Germany and France included—to leave quarrels to international arbitration. One legitimist and three radical editors are at present in prison for violently attacking the constitution and its administrators. They have celebrated the oyster season by a common meal, and the bivalves have made these extreme men great friends. The gaul regulations limiting the supply of wine, the party washed down the luxury with warm milk. There is a literary precedent for this. In the eighteenth century, the younger Crébillon and another author, consumed one hundred dozens with impunity, the accompanying beverage being milk direct from the cow. Oddly enough, this kind of diet is replacing that composed of chopped raw meat, so recently in vogue for the debilitated.

The questions of Divorce, repealing the Concordat, and voting the Ferry educational bill, "the whole bill, and nothing but the bill," are gradually getting mixed up. Alexandre Dumas takes the first in hand, in the press, while Deputy Naquet leads the atumping. Having failed to convert society by dramas, by the plan of killing erring wives and husbands, Dumas falls back on the more prosaic remedy. The agitation for the repeal of the Concordat has culminated in a bill: an arrangement, it is urged, made at the commencement of the century demands modifications. Other times, other manners. The recess continues to be rather advantageous than detrimental to the Ferry bill, and to judge by the tone of the agreeable journals, ministers have burned their ships, and do not intend their bill to be disposed of in the Senate by a few philosophers, as if it were a measure for making a feeding line of railway, or regulating runs for rabbits. Nor is the absence of ministers from town, to be attributed to their reluctance to meet each other and commence wrangling and sparring, but simply to their enjoying their vacation rambles like humbler mortals. The opposition journals indulge in jeremiads, as if France were on the eve of disappearing from the scene. The returned communists have conducted themselves satisfactorily; no seditious cries have been uttered, their language and their attitude attest they prefer a home-life to transportation. One of the amnestied believing he saw in the crowd the man who had denounced him, attacked him, which was reprehensible, and three others have been taken up for intoxication. But it is not essential to go to New Caledonia to learn how to get tipsy, nor is it fair to judge of the returned by the regrettable conduct of a few who forget themselves. The country is not alarmed at the clemency it has voted, and they are only effete parties who make mountains out of molehills. The nation has not the slightest desire to exchange its present liberties for the compression and silence of the Empire, or the Middle Ages programme of the Royalists. It would be simplicity itself to expect, that so impressionable a people as the French on being restored their liberty, would not use, and even misuse it, till time brought its seasoning effects. There is no use of trying the old game of ruling by fear; the trick has been seen through, and the Republic has nothing to dread, so long as it permits its enemies and imprudent friends to cry from the house tops.

The republicans, however, would do well to speak more of the

duties of the Republic and less of the pretensions of its enemies. The Comte de Chambord may think this or that, Prince Jérôme Napoleon may eat meat on Fridays and patronise bismuth preparations during war; the Comte de Paris may spurn the liberal testament of his father for the mess of pottage; but such will neither augment nor diminish the chances of a restoration. When the frogs wished for a king, they demanded and accepted—but never discussed. When a hare ragout is desired, the mainpoint is to possess the hare, and when people resolve to have a monarch, they trouble themselves very little about his virtues, or even vices. In 1814 when the sculptor Bosio presented a bust of Louis XVIII. to that king as the emblem of the homage of the nation, so utterly unknown was his majesty, that the model selected was the classic head of Vitellius, to which was joined a wig and epaulettes to compose the Bourbon. The escapades of Prince Napoleon at Strasbourg and Boulogne, did not prevent his subsequently becoming Emperor. All dynasties in France have been bankrupt, and seem to glory in their insolvency towards the liberty, honor, and repose of the country, aye even to make it a title for restoration. Henri V. invokes the injustice of the revolution of 1830; the Comte de Paris, that of 1830, and the Bonapartists call Napoleon III. the martyr of Sedan. The day, and may it be distant, when France shall be enough abased, enough oppressed by a foreign war, enough terrified by internal troubles, she will throw herself into the arms of the first pretender who comes. The Republic, not being dependent on the life of an individual, its friends, Gambetta at the head, labor assiduously to consolidate the government of the country by the country, and so dispense with "medicine men."

Though the harvest be not wholly terminated, and the vintage very far from commencing, the social season comes round with the punctuality of a calendar. The theatres and shooting mark the overture. The *Châtelet* theatre's great stage, is filled with upholstery and the contents of a menagerie, to represent *Venus Noire*, that is to say, the interior of Africa. The romantic part of the play lies in a Baroness who sets out to discover her husband, a missing explorer; she is accompanied by three lovers, who intend demanding her hand, in case the baron's demise be certified: he has been taken prisoner, is beloved by a native princess, is condemned to die from exposure to the sun in a desert, when the latter upheaves in the shape of a volcano, and liberates him. Nature is wondrous kind. In reviving Auber's *La Muette de Portici*, the Grand Opera has "struck ile"; the singing is uniformly good for a wonder, and the acting commendable. The rôle of *Fenella* is, as ever, charming in its dumbness. As a general remark there is no serious sporting in France: the few good shots are the exception, and the real Nimrods are few and far between. Plenty of licences are taken out, but I fear Paris has to depend for her supply of game on the poaching fraternity a vast institution said to have its own lawyers to plead, and funds to meet all fines. The usual run of men with dogs and guns are amateurs, to whom when in action it is best to give a wide berth, as in blazing, they respect neither persons nor dogs; they are capital in spoiling a dog, and their whole aim appears to be, to make a noise, and parade in the city and suburbs in a suit of coffee-colored canvas, with a game-bag, gun in case, and a dog or two held with a tea-cord leash. These are chiefly the John Gilpins; they desire a dog to retrieve, not to set, and to place a dead lark or a cock robin at their feet, would be on the part of the dog a thing of beauty. The *Globe* of this city, in a sporting article condemns the massacre of small birds, and also "a poor biped, hare or rabbit."

If stag parties be unenjoyable, a hen reunion is not very attractive; the "Laughing Club" is composed of actresses, who dine together once a month, and sing ballads of their own composition; a resolution has been voted, that for the future gentlemen may be present, as strangers are in the House of Commons.

It was Billoir, an ancient soldier of the imperial guard, that inaugurated the fashion of cutting up your victim after committing the murder. He operated thus on his mistress, in the quarter of La Chapelle, in this city. He has been out-Heroded by Prévost, a policeman, who has committed a like crime in the same neighborhood, and who was also a soldier

in the imperial guard; he was present on duty, at the execution of Billoir. Prévost was pinched for money, and knowing a watchmaker, invited the latter to call on him a few evenings ago, with samples from which to select. In the mean time he arranged with a comrade to do his beat for the evening, and provided with a key-hammer employed on railways, a hatchet, and butcher's knife, awaited the coming of the victim, Lenoble. The latter displayed his watches; one was selected, to be paid for by monthly instalments, and while Lenoble was writing the agreement and drinking glass of wine, he was felled with the hammer. Prévost originally was a butcher; so he at once scientifically disjointed the corpse. But here is where the originality of the atrocity commences; he skinned the remains, and cut the flesh off the bones. Furnished with a clothes basket, and disguised as a workman, he threw some portion in the moat of the fortifications; the head he placed between the mattresses of his bed, sleeping one night on it. Next evening he again set out disguised, with the basket having the chopped remains, which he threw handful by handful, in the mouths of the sewers as he passed. A woman seated under the trees, was struck by his proceedings, especially as he had stopped to kick something into the sewer; she rose to look, and fainted at the sight of a part of a human arm. When she came to, she described the man, adding he was dressed, and resembled a policeman whom she had known to be a detective. Ultimately she was confronted with him, asserted he was the person, and as the inspector observed his room must be searched—where the head was; he at once confessed. As is usual on these occasions, the Home Office is inundated with applications from individuals of the same name, demanding permission to change it. An actress discarded her lover. The discarded lay in waiting, entered her apartment in the Champs Elysées shot her dead, then drawing an arm chair before a mirror sat down and killed himself. There is nothing romantic in a footman who has destroyed himself, feeling his occupation "too humiliating." At Agen, a thief said the "spirits" appeared to him, and told him to go to a certain house, with jemmies and other aids, and he would find money: he did so, and succeeded; he told the judges he had once in company with the spirits made the voyage to heaven and hell. "What did you see in the latter place?" demanded the judge: "I do not like to say." "But you must"; "Well, I observed it was filled with judges." Sentence three years imprisonment.

Cham, the late caricaturist, was the great enemy of free-thinkers; yet the latter mustered strongest at his funeral. His sketches were ever superior to his illustrations.

The genealogical tree of Prince Napoleon is published; he is descended from Charlemagne, by his mother's side, and is related to all the royal families of Europe.

NAGASAKI LETTER.

NAGASAKI, 24th October, 1879.

The banquet to Professor Nordenfjöld and the officers of the Swedish expedition took place on Wednesday evening last and it must be chronicled as a brilliant and unqualified success; in fact, "the oldest resident" declares it to have been the grandest affair of the kind ever held here. Thanks to the energetic action of the Committee and to the hearty co-operation of the representatives of the leading native and Chinese mercantile houses, the entertainment attained proportions which even the few Scandinavian residents here, who bore the brunt of the canvassing campaign, scarcely anticipated. Mr. Mangum, the United States Consul, was an excellent chairman, and his speech in proposing the health of the illustrious guest was felicitous to a degree. Covers were laid for ninety and there were very few absentees. The polyglot nature of the proceedings was, although interesting in itself, perhaps somewhat of a drawback, for it can scarcely be supposed that there was one individual present capable of following the rhetorical displays in English, French, German, Dutch, Swedish, Danish, Russian, Japanese and Chinese. It was quite a happy thought in Mr. T. B. Glover, when giving the toast of 'the ladies' to suggest that the company should respond to it in a tongue all could understand—"the language of love." So too was the *apropos* toast to Captain Aldrich, of H. M. S. *Sylvia*, an arctic explorer of

note and a popular officer in these waters. The dining room was elaborately decorated by the indefatigable exertions of Mr. Olarovsky and the stage of the old theatre, in which the banquet was held, was transformed into a capital reception room. And to all this we had the fine band of the *Richmond* to lend its aid to the "feast of reason and the flow of soul." The menu was a surprise and is worthy of a word of notice, being the result of the combined efforts of our Russian consul and a Japanese artist. It was illustrated in colours by the *Vega* in the midst of the ice and a series of sketches of polar region life, ending with the familiar Japanese sea-side cottage scene. All seemed to thoroughly enjoy themselves and we note the occasion as a red-letter episode in the monotony of our life here.

Professor Nordenfjöld has since been making excursions to Takashima and other places of interest to him and his associates in this neighbourhood.

I notice considerable progress is being made with the new government hospital in foreign style, on the site of the graveyard just above Kojimachi. The remains of a goodly number of those who fell in the Formosan expedition were brought to Nagasaki and interred there, but the situation being required for the purpose indicated, they have recently been removed to the Inaridake cemetery where also repose the bones of many who died in the Satsuma rebellion.

Freights have lately risen to a fair figure and there is a scarcity of vessels for the coast trade.

The weather continues fine, and the rice crop promises well. That is more than can be said of the prospects of sportsmen.

THE ATHLETIC SPORTS.

The Autumn Meeting of the Amateur Athletic Association of Yokohama, was held on Saturday (25th Oct.), the weather being specially propitious. The ground, after recent rains, having had time to dry sufficiently to make it elastic and pleasant-going, was better prepared by nature and art than if art alone had all to do with it. When the sports commenced, within a few minutes of the time appointed for the first event, a bright sun was shining; but it was soon veiled by clouds, which tempered the rays to the competitors. Opportunely enough the arrival of the French corvette *Armide*, on Saturday morning, gave the officers of the vessel another occasion to display their well-known and proverbial courtesy, and allow their band to be in attendance. Otherwise the pleasant meeting would have lacked an element of enjoyment in the absence of music in the intervals of the sports. The foreign attendance was good but hardly so strong as on other occasions. Although many of the stalwart strikers of old time have left the field, there are several fresh young contestants, who bid fair to keep up the credit of former meetings, as the lists will show. Of course the "Ladies's Purse" was the most approved race of the day. Miss Fraser, after the termination of this struggle, gave the prize to the fortunate winner, Mr. Whitmore, accompanying the reward "with a few appropriate words." The winner, returned thanks, "gracefully but almost inaudibly." The ladies, in their generosity, no doubt understand that the want of breath in the man they honor is the reason why he does not more stentoriously proclaim his gratitude; for has not his scarcity of wind been incurred by his successful efforts to gain their favor?

1.—100 YARDS FLAT; HANDICAP. Two Prizes.

1ST HEAT.

F. Walker, scratch...	1
F. W. Strange, 5 yards	2
Dr. Armstrong, R. N. scratch	3

All got a good start and came up to the tape in splendid style, only a few inches separating each. Time, 11½ secs.

2ND HEAT.

T. R. H. McClatchie, 4 yards	1
H. A. Vincent, 5 yards	2
E. F. Kilby, 3 yards	3

McClatchie soon passed his man and came in a capital winner by about a yard. Time, 11 secs.

3RD HEAT.

F. V. Samuels, 3 yards	1
C. E. Churchill, 4 yards	2
J. W. Whitmore, 5 yards...	3

Samuels showing good form scored an easy win, the others being nowhere. Time, 11½ secs.

2.—THROWING AT WICKETS. ONE PRIZE.

A. J. Clode...	1
F. V. Samuels...	0
J. W. Whitmore...	0
H. A. Vincent...	0
F. W. Strange...	0
H. A. Herbert...	0
D. Fraser...	0
T. G. Richmond...	0
F. Walker...	0
C. E. Churchill...	0
W. Sutter...	0
M. H. R. Harris...	0

On the first attempt Fraser and Clode managed to hit on their third try; Walker taking the stump with his first ball. On the throw off, all three missed in three tries, and on the fourth, Clode managed to get in a straight one and won.

3.—440 YARDS FLAT: HANDICAP. TWO PRIZES.

F. V. Samuels, 10 yards...	1
T. R. H. McClatchie, 15 yards...	2
C. E. Churchill, 15 yards...	3
E. F. Kilby, 20 yards...	0
Dr. Armstrong, R.N., scratch...	0
F. Walker, scratch...	0

For this event only six out of 12 entries came up to the post. Churchill passed Kilby on the back stretch and led until about 100 yards from home, when Samuels put on a splendid spurt and went through his men to the front, landing himself a winner by about 2 yards; McClatchie getting in second a few feet in advance of Churchill. The others tailing off nowhere. Time 57½ secs.

4.—LONG JUMP: HANDICAP. ONE PRIZE.

H. A. Vincent, 1 foot...	1
G. C. Charlesworth, scratch...	2
F. W. Strange, 2 feet...	0

This event was won by Vincent with a jump including his handicap of 17 ft. 10 in. Charlesworth, second with 16 ft. 10½ in.

5.—FINAL HEAT. 100 YARDS FLAT.

T. R. H. McClatchie, 4 yds...	1
F. V. Samuels, 3 yds...	2
F. Walker, scratch...	0

Walker and Samuels got the worst of the start, but McClatchie was never headed and won by about 1½ feet; Walker about 2 yards behind Samuels. Time 11 secs.

6.—880 YARDS FLAT.—For Non-commissioned Officers and Men of the Men-of-War in port. No entrance fee. Five competitors to start or no race. Entries made on the ground. Three prizes—\$5, \$3, and \$1.

Vines...	1
Cook...	2
Harrigan...	3

Seven put in an appearance for this, Vines winning easily.

7.—PUTTING THE SHOT (16 LBS.): HANDICAP. ONE PRIZE.

A. J. Clode, 6 feet...	1
H. A. Vincent, 7 feet...	0
J. W. Whitmore, 5 feet...	0
F. W. Strange, 2 feet 6 in...	0
T. G. Richmond, 2 feet 6 in...	0
D. Fraser, 1 foot 6 in...	0
G. W. F. Playfair, 1 foot 6 in...	0
G. C. Charlesworth, scratch...	0

Clode won this with a throw of 25 feet, Vincent second with 23 feet.

8.—LADIES' PURSE. 600 YARDS FLAT: HANDICAP.—Open to members of the Association only. One prize—"The Purse."

J. W. Whitmore, 35 yds...	1
T. R. H. McClatchie, 20 yds...	0
F. W. Strange, 25 yds...	0
A. T. Watson, scratch...	0
F. Walker, 7 yds...	0
A. J. Clode, 45 yds...	0

Whitmore collared the limit man at the dressing room and kept his lead throughout, slowing down at the finish and winning easily with about 10 yards. McClatchie and Strange being about the same distance apart for second and third place. The others did not finish. Time 1.22 secs. The winner was then presented with the purse by Miss Fraser, who congratulated him on his well-earned victory. Mr. Whitmore having very modestly thanked the fair donor, three cheers were given for the ladies and three more for the winner.

9.—HIGH JUMP. HANDICAP. ONE PRIZE.

F. W. Strange, 10 inches...	1
F. V. Samuels, 8 inches...	0
J. H. Whitmore, 6 inches...	0

Strange won with a jump of 4 ft. 7 in. without his handicap; Samuels failing to get over at that figure, with 2 in. added.

10.—100 YARDS FLAT: HANDICAP. For boys under 12 years of age. Entrance Free. Three Prizes.

1ST HEAT.

A. Mitchell...	1
E. Walker...	2
I. Eyton...	3

2ND HEAT.

W. Walker...	1
H. Smith...	2
R. Spooner...	2

3RD HEAT.

W. Bayne...	1
F. Collins...	2
A. Edwards...	8

11.—880 YARDS FLAT: HANDICAP. TWO PRIZES:

1st, "The Secretary's Cup," presented.

F. V. Samuels, 20 yards...	1
F. W. Strange, 45 yards...	2
Dr. Armstrong, R.N. scratch...	0
F. Walker, scratch...	0
C. E. Churchill, 25 yards...	0

Strange kept his lead on the first round, cutting out the running at a stiff pace, Churchill following the leader. On the back straight Samuels put on a splendid spurt and passed Churchill, collaring Strange on the last turn and immediately going to the front won by nearly 10 yards. This was a beautiful race and the winner certainly showed that he was capable of making faster time if need be as he came in quite fresh. The time as given as 2 min. 11 secs.

12.—150 YARDS FLAT: HANDICAP. For Honorary Members of the Association, Married Men, and Visitors. One Prize. Entries made on the ground.

H. Snow...	1
J. R. Morse...	2
W. Brent...	0
F. A. Cope...	0
S. D. Heyburn...	0
M. de Hemptinne...	0
C. H. Cobden...	0

Morse and Brent kept pretty close together, but Snow who was the only scratch man put on a spurt and won by a few inches. Time, 17½ secs.

13.—HURDLE RACE. 120 YARDS. OVER 10 FLIGHTS: HANDICAP. ONE PRIZE.

G. C. Charlesworth, scratch...	1
J. W. Whitmore, 5 yards...	2
T. R. H. McClatchie, scratch...	3
Dr. Armstrong, R. N., 10 yards...	0

All cleared the hurdles in fine style, but Charlesworth managed to pass Whitmore just at the finish and won by a few yards.

14.—FINAL HEAT. 100 Yards Flat: HANDICAP. For Boys under 12 years of age. Three Prizes.

W. Bayne...	1
F. Collins...	2
J. Eyton...	3
A. Mitchell...	0
E. Walker...	0
W. Walker...	0
H. Smith...	0
R. Spooner...	0
A. Edwards...	0

Bayne won easily and the other two leaders ran a dead heat for second place, which Collins won in the run off.

15.—440 YARDS FLAT: HANDICAP. For Boys between 12 and 15 years of age. One Prize, presented, Six to enter or no Race.

Martin, 13 yards...	1
Geffeney, 40 yards...	2
Brooke, 20 yards...	3

Geffeney led round at a good pace but Martin passed him just at the finish.

16.—STEEPLE CHASE. HANDICAP. TWO PRIZES.

F. V. Samuels, 35 seconds...	1
J. W. Whitmore, scratch...	2
F. W. Strange, scratch...	3

All started together, Whitmore being the only one who cleared the first water jump. All three came in closely together, Samuels passing Whitmore by a few feet just at the finish, Strange only a few yards behind.

17.—TUG OF WAR.—Open to Teams of 10 Men from the Mon-of-War in Port. Prize,—\$10 to Winning Team.

Only one team from the *Charybdis* put in an appearance for this prize. A team from the residents however tried them twice and pulled off the honors.

18.—CONSOLATION ONCE ROUND. For all who have started but not won a prize at this meeting. One Prize. Presented by the winners at this meeting.

Dr. Armstrong	R. N.	1
F. Walker	2

Walker led at the start but on the back straight Armstrong passed him and won easily. Time 62½ secs.

The different winners were then presented with their prizes by Mrs. Kilby and at the close three cheers for the ladies were given, and thus ended a very successful meeting of the Y.A.A.A.

JAPAN NEWS.

[The following Notes on various Japanese matters are chiefly derived from the native papers, occasionally supplemented from original sources of information, and are carefully collated and edited, so as to make them readable and intelligible.]

COURT, POLITICAL AND OFFICIAL.

The *Hochi Shimbun* states, that Lieut.-General Oyama, the new Chief Superintendent of Police, has lately been relieved from the position of President of the Military College and that Mr. Tamano, the President of the Supreme Court, has been appointed Senior Vice-Minister of Justice.

Mr. Justice Kishira, has been appointed President of the Supreme Court. He has also been appointed one of the committee for revising the proposed code of laws, and it is rumoured that he will also be appointed Junior Vice-Minister of the Judicial Department.

Mr. Yanagiwara, the secretary of the Senate, was on the 24th ultimo, appointed President of the committee to revise the draft of the proposed new code of laws for Japan. Eight committeemen, chosen from amongst the officials of the Senate, Judicial Department and Council of State, have also been appointed.

Mr. Iwakura, the Vice-Prime Minister and suite, arrived in Kobe on the morning of the 24th ultimo, and left for Kiyoto by the afternoon train. On the following day he visited the grave of Kōmei Tennō, (the late Emperor), the Imperial Palace, and the branch of the Noble's Club.

Mr. Yamao, the Senior Vice-Minister for Public Works, who has been on a visit of inspection to the mines in the northern provinces, returned to Tokio a few days ago.

Mr. Hayashi, the Junior Vice-Minister for Home Affairs, returned to Tokio on the 25th ultimo. He has been visiting the districts in the northern provinces damaged by floods, and arranging for the construction of new roads, the harbour at Nobiru, &c.

Mr. Nabeshima, the Governor of Okinawa Ken, having completed the business which called him to Tokio, returned to Loochoo on Wednesday last.

Mr. Kagawa, the Governor of Oita Ken was, at his own request, relieved from office on the 25th ultimo.

Mr. Nomura, the Governor of Kanagawa Ken, returned from the Hot Springs at Ikaho, Joshiu, on the 29th ultimo.

It is reported that the annual meeting of the Governors of all the cities and prefectures in the Empire will be held at Tokio, in February next.

Mr. Sonoda, an officer in the Police, has been presented by the Council of State with 200 yen, in recognition of his services in Loochoo, when the Han Government was abolished.

A native contemporary says, that about two hundred policemen who distinguished themselves in the Satsuma rebellion, received decorations on Monday last.

The fencing school in Tokio for the Police, the opening of which was postponed in consequence of the death of General Kawaji, was inaugurated on the 30th ultimo. About three hundred police, selected from the members of the force stationed in Tokio, gave an exhibition of fencing on the occasion.

The *Yomiuri Shimbun* states, that the police force of Tokio,

numbers 4,875, officers and men; of these 652 are off-duty in consequence of leave, illness, wounds, &c.

The ceremony of giving diplomas to the students in the Engineering College who were successful in passing their examination, has been definitely appointed to take place on the 8th instant.

Out of 580 persons who applied for diplomas to entitle them to practice as doctors, only about 150 have passed the necessary examination, recently held at the Sanitary Bureau of the Home Department.

In order to obviate the inconvenience arising from the scarcity of Post Offices in remote villages and districts, the Post Offices authorities are about to establish a number of small offices of the sixth and seventh classes.

The *Hochi Shimbun* mentions a rumour, that robbers have recently broken into one of the godowns of the Council of State, situated within the castle walls in Tokio, and stolen a quantity of books, official records, &c.

Mr. Katawaka Kenkichi, the well-known President of the Rishisha society of Tosa, has been elected a member of the Kochi ken assembly.

The general meeting of the *Nikokusha* (Patriotic Society), will be held at their premises in Osaka, commencing to-day and lasting for several days.

The authorities of the Foreign Office are putting the Yenri-yokan in readiness for the reception of the Duke of Genoa, who is expected early this month.

A telegram from Hakodate announces, that the *Vettor Pisani*, with the Duke of Genoa on board, arrived there at 6 p.m. on the 29th ultimo.

The *Nichi Nichi Shimbun* states, that up to the present the practice of lodging a sum of money as security on appeal, has been confined to the Supreme Court. It is rumoured that the same system will be extended to all the Courts.

On and after to-day, the Law Courts in Tokio and the Judicial Department, will open at 9 a.m. and close at 3 p.m.

NAVAL AND MILITARY.

A committee has been appointed to revise the regulations affecting the Japanese naval forces. The committee will meet twice a week in an apartment in the Naval College, Tokio, until their labours are completed.

A Torpedo school, under the control of the Naval Department, has been established at Yokosuka. Lieut. Shibayama has been placed in charge.

The Japanese surveying vessel *Moshun Kan*, returned to Shimomaseki from a cruise, on the 17th ultimo. Since then, the officers have been engaged in ascertaining by means of the telegraph line, the difference of longitude between that port and the Naval Observatory in Iigura, Tokio.

A telegram from Nagasaki, states that the Japanese man-of-war *Tsukuba Kas*, which left here some time ago on a cruise round Japan, arrived there on the 28th ultimo.

His Excellency Sanjo Saneyoshi, the Prime Minister, issued a notification on the 27th ultimo, containing the new regulations for enlistment in the army.

The Military Department recently issued an order, that every man in the service must be provided with two pairs of *scamji* (straw shoes) in case of emergencies.

The *Mainichi Shimbun* states that the British ship which arrived here on the 29th ultimo (?) brought 1,381 packages of machinery for making bullets and other small-arms ammunition, which had been purchased by the Military Department in Germany. This machinery is valued at \$174,477.59.

The annual grant to the Military Staff Bureau has been increased by 6,000 yen.

Medals for service were given to the Lieutenants and non-commissioned officers of the Tokio Garrison, on the parade ground at Hibiya, on the 30th ultimo.

A grand review of all the troops in Tokio, will take place in the presence of the Emperor on the Hibiya parade ground, at 8.30 a.m. on the 3rd instant. Lieut. General Nodzu will be in command.

INDUSTRIES, TRADE AND FINANCE.

The province of Ugo has long been famed for the fertility of its rice fields, as much as 1,000,000 koku being annually produced on an average. The price obtained has however been hitherto

very low, as there was generally a considerable quantity of mildewed grain mixed with the good grain. Ono Toda Yoshitaro, a local farmer, observed that this was owing to the rice, when cut down, being placed in large heaps on the banks of the paddy fields to dry, and the plants at the bottom becoming damp and the grain mouldy. The plan adopted by Toda Yoshitaro to remedy this, is both simple and efficacious, he erects rough bamboo staging and places the rice thereon to dry. The result has been satisfactory, and the price of the local rice has considerably increased, as it is now equal to the average produced in other localities.

The authorities of the Agricultural Bureau recently forwarded a number of Italian bees to Wakayama Ken, in order to ascertain if that locality is suitable for them.

According to the *Choya Shimbun*, a silk-reeling establishment will shortly be erected in the Agricultural College at Komabano. A large quantity of the necessary machinery has already been forwarded there.

The railway to be constructed between Kiyoto and Tsuruga, will be by way of Yonehara and Shiwotsu, the distance by the surveyed line, being thirty miles and twenty-seven chains. The works include two tunnels, respectively 88 yards and 770 yards in length, and two iron bridges over the Amanogawa and Ane-gawa. There will be seven stations, viz: at Yonehara, Nagahama, Minamibayami, Iinoura, Shiwotsu, Hikida and Tsuruga. When this section is completed the total line from Kobe to Tsuruga will be 120 miles and 63 chains.

Mr. Godai, the President of the Osaka Chamber of Commerce, and well-known as an indigo merchant, recently visited Tokio, and submitted a memorial to the authorities of the Agricultural Bureau, on the subject of developing and encouraging the manufacture of indigo in various provinces of the interior.

Mr. Yanagawa, a *shizoku* residing in Tokio Fu, is about to establish a company called *Kenseikisha* (Hardstone Company) with a capital of 8,000 yen, for the manufacture, at Osaka, of artificial stone from concrete.

A native paper attributes the increase of 54,417 yen in the exports from Korea, during the last financial year, to the large quantities of rice and beans exported during that period. It says that rice was exported to the value of 179,209 yen, and beans to the value of 89,665 yen.

Recent advices from Corea state that Mr. Hanabusa, the Japanese Envoy, and Mr. Mayeda the Consul with other officials, visited Gensan, the port in Corea lately agreed to be opened to Japanese trade, and fixed upon the site for the settlement. Fourteen Japanese merchants have already applied for leases of ground and were each granted lots of 300 *tsubo* in extent upon condition that they erected buildings on them by May, 1880, when the port will be finally opened. Gensan is said to be very well situated for commercial purposes, it is only about 50 *ri* distant from the capital, with which it is connected by two good highways. There are at present about two thousand houses in the place and a large trade is expected to be done.

The Korean Government have appointed Mr. Kinkishiu, one of their officers, Governor of the province in which Gensan, the port to be opened to Japanese trade, is situated. Mr. Kinkishiu, was some years since in this country as Korean Envoy, and is therefore well acquainted with the habits and customs of Japanese. Mr. Hanabusa, the Envoy to Korea, has returned to Japan. According to the last accounts he left Osaka on the 22nd ultimo, overland for Tokio.

During the last four years, sixty-two sailing vessels of foreign form of construction, and from twenty to two hundred and fifty tons burthen, have been built in Hakodate.

Some of the leading merchants in Tokio are said to be contemplating the establishment of public markets in Tokio, similar to those common in western countries.

It is rumoured that about fourteen of the rice merchants of Yokohama and Kanagawa, have applied to the Authorities to establish a *Beisha Kaisha* (association for managing dealings in rice), in this port.

The *Akebono Shimbun* says that the Osaka Mint is now coining daily, 9,000 yen worth of copper coins. Two-thirds of these are 2 sen pieces and the remainder 1 sen.

MISCELLANEOUS.

The second meeting for the present year of the *Kiyoson Doshu* (Literary Society), took place in the premises of the society in Hiyoishi-Chō, Shinbashi, on the 26th ultimo, when addresses were delivered by a number of the members. At about 6 p.m. the company adjourned to the 15th National Bank, in Hōraibashi, where a banquet was prepared at which about 380 guests were present, amongst whom were the Imperial Princes Arisugawa, Higashi-Fushimi, and Kita-Shirakawa, as well as a number of nobles, officials, scientists, newspaper editors, &c., &c. Speeches were delivered by several of the guests, native and foreign, and the party separated at about 9 o'clock. The Marine band played during the evening.

The regular meeting of the Tokio Geographical Society was held in the Gakushuin in Tokio on the 25th ultimo. Mr. Awoye, of Kochi Ken, read a paper on the "Volcanoes of Kiushiu," which, according to the native journal from which we derive our information, "caused a thunder throughout the hall."

The native papers state, that the authorities of Okayama ken have recently prohibited the priests, of the religion known as *Kurosumi*, from preaching in some of the places within that prefecture. The reasons assigned for this step are, that the members of the *Rinshisha* Society of Kochi, finding that they were prevented from delivering their seditious lectures, joined the *Kurosumi* sect as priests and gave their offensive lectures under the guise of sermons.

The *Mainichi Shimbun* states, that one of the servants of the Police Bureau is in custody, charged with having opened a letter addressed by an officer of the Supreme Court to one of the police superintendents, and given a copy of it to a newspaper. The contents of the letter are not mentioned.

A report lately sent to the Home Department by the authorities of Ishikawa Ken states, that 1,551.23 *chō* (about 41,000 acres) of paddy-fields, vegetable gardens, &c., sustained damage in the districts of Yebizen, Kaga, Noto and Yetchiu, during the floods which occurred in July last.

A telegram from Yezo states, that there was a gale of wind accompanied by a great fall of rain at Sapporo and the vicinity which lasted from about 4 p.m. on the 20th instant until about 9 a.m. on the 22nd. The Ishikari river rose nearly 7 feet above its ordinary level, but fortunately no damage has been sustained.

The *Choya Shimbun* mentions a rumour that Mr. Godai, the President of the Osaka Chamber of Commerce, visited Tokio in order to offer some suggestions on the revision of the treaties.

The police authorities notified all the Branch stations in Tokio on the 25th instant, that a number of firemen were to be kept constantly in readiness at each of the stations from the 7th November to the 30th April. This step has been taken because of the greater number of fires maintained in houses during the winter and the consequent greater probability of accidents.

A treatise on police affairs, written by the late General Kawaji, is about to be published.

The *Choya Shimbun* states, that Mr. Tokuno, the Director of the Printing Bureau, is about to establish a private school at his own expense, in order to provide a superior education for the children of such of his friends and acquaintances, who are unable to do so themselves. An Englishman will be engaged as teacher.

A horse, bred at Hakodate, has been purchased for the use of the Emperor. It is described as being of pure white colour, very fast and quiet, good tempered and rising four years old.

The great bridge of Yodo, which has not been repaired for several years is to be removed and a new one erected, constructed on foreign principles. The new bridge will be 120 *ken* (240 yards) in length.

The *Hochi Shimbun* says, that amongst the merchants of Tokio there is only one who owns so much ground that he has to pay 5,000 yen annually for land-tax. The lucky individual is Mr. Kajima Seibei.

A great inconvenience having been experienced in Tokio, from the want of a sufficiently large building for public entertainments, &c., a number of the leading merchants have agreed to erect a spacious hall at their joint expense. The site has not yet been decided upon.

The Governor of Kanagawa Ken has issued a notification, that all dogs must have a collar with the name and address of

the owner, and that if this is neglected no one need feel surprised if his dog gets killed.

The *Akebono Shinbun* says, that the Council of State have summoned the chief priest of the Yeiheiji temple in Yechizen to Tokio. The cause is apparently unknown.

The cold weather has already set in very severely at Sapporo, in Yezo. It is stated that at 7 a.m., on the 16th ultimo, the thermometer was as low as 28 degrees Fahrenheit.

The chrysanthemum is in full bloom in Daigozaka, Tokio, and the Gardens will be open to the public from to-day.

IMPERIAL GOVERNMENT RAILWAYS.

YOKOHAMA STATION.

THE TAKETORI MONOGATARI.

A paper read before the German Asiatic Society.

By DR. R. LANGE.

(Continued from last week.)

Prince Kuramochi, also thought of finding an easy way to get over his task. He obtained leave at Court under the pretext of desiring to visit the hot springs at Tsukushi,¹ but had it reported at the house of Kaguyahime, that he left in order to find the branch with precious jewels which she had required of him. Having said that he wished to go incognito he took only his nearest retainers, who accompanied him as far as Naniwa.² When he embarked from there, those who had come with him returned, but this was only done for the sake of appearances and in three days he had the ship rowed back. Having made his arrangements previously, he engaged six workmen the most skillful of whom was called Uchinaro, had a house built which was difficult of approach and around which moreover he put three fences, and sent the workmen into this house, hiding there himself with them. In sixteen different places which belonged to him, the grain warehouses had been opened and the contents sold and with the amount realized he had a branch made, set with precious stones in exact conformity with that which Kaguyahime had demanded. Having so far carried out this clever fraud, he took the jewelled branch secretly over to Naniwa, went on board and had it reported at his palace that he had come back, acting at the same time as if he himself had undergone great hardships. Many of his people came to meet him. The branch he brought with him, had been put in a long box carefully covered. Somehow or other the news in regard to it had spread and there was a great report about, that the prince Kuramochi had brought with him the Udongo flower.³ Kaguyahime when she heard of it became frightened, thinking that she

had lost with the prince. While pondering over it, she was told that the prince had come and was knocking at the door. He was still in his travelling dress and the old bamboo gatherer went to receive him. The prince said: "I have risked my life for this branch, show it to Kaguyahime." The old man then carried it within the house. A verse was attached to the branch:—

"No fear of death could stay my firm intent.
Without this branch I never would return."

She could not but feel moved at reading this and the old man then said: "He has brought the branch covered with jewels from the Hōrai mountain and in no point does it show any difference from that for which thou hast asked him. What excuse wilt thou make now. He has not even gone home, but has come here in his travelling dress, thou wilt soon have to marry him." While he said these words she sat with her head resting on her hand, lost in thought and sighing deeply without replying a word. The prince thinking that now there could be no more objection made, came up on the verandah.⁴ The old man seemed to take this as a matter of course and said: "Such a branch as this cannot be found in this country. How canst thou refuse him now? Besides he seems to be an excellent man." Kaguyahime replied: "I feel sorry to be always obliged to refuse the request, (that she should get married) therefore I asked for such difficult things. I am quite overwhelmed with the thought that he has procured this branch and feel deeply mortified at the whole affair." The old man did not seem to mind what she said, but had everything arranged in the inner room and then spoke to the prince. "What kind of place was it where you found this branch?" "It is a wonderfully beautiful and lovely object," he continued as he kept looking at it. The prince replied: "Three years ago on the tenth day of the second month we sailed from Naniwa; as we steered out on the high sea, we had no thought as to what direction we should take, and as for myself, pondering how little life was worth to me unless I could attain the object in view, I was content to go to where the winds would take us. If we died it would make no difference and as long as we lived we harboured the hope that we would find the mountain Hōrai. Continuing in this way, we left our country behind and went to far distant parts. At times, when the sea laboured, we thought we would be hurled to the bottom of the ocean, then again the wind drove us unto unknown shores where beings having the shape of devils came out and wished to kill us. Coming we knew not whence, and going we knew not where, we often gave ourselves up for lost; our supply of provisions became exhausted and we had to live on the roots of plants; indescribably horrible cannibals came out once and wanted to devour us, and frequently we were obliged to support life with the scanty provisions we obtained by gathering shellfish on the shore. Living under another heaven we were attacked by various strange maladies. We had no thought as to which direction we should take and we continued thus to be driven about on the sea for five hundred days, allowing the ship to go where it was driven by wind or sea. Then about the hour of the dragon⁵ a mountain was seen in the distance. We called all the people in the ship together and continued to look at it. It was a high mountain showing pleasing outlines as seen from our vessel. Although we thought it might be the mountain we looked for, yet we felt afraid and continued for two or three days to sail around it, often probing and touching it with long poles. Then we saw a female figure clothed in the dress of the angels come out of the heart of the mountain, holding a silver cup in her hand with which she went to get water. When we saw her we landed and asked the name of the mountain. She replied: "This is the mountain of Hōrai." Then our joy knew no bounds. We further asked who she was; whereupon replying that her name was Hokan Ruri, she abruptly left us and went back into the mountain. We then examined the mountain but found no way to ascend it, but passing round at its base we found trees with flowers such as exist in no other part of the world. Rivulets of the colors of gold, silver and ruri⁶ flowed out of the mountain and they were arched over by bridges composed of various precious stones. Close by, there were trees

1. Old name for Kinsiu.

2. Old name for Osaka.

3. A fabulous plant said to bloom once every three thousand years.

4. The prince therefore must in the meantime have gone into the garden, fronting which was the room of Kaguyahime.

5. 8 o'clock A.M.

6. Ruri is said to be a dark blue jewel.

with flowers which shone and shimmered with sparkling brilliancy. There I took this branch; it is a poor and mean specimen I know, but as it is just like the one I was ordered to bring, I broke it off and carried it here with me. The mountain was beautiful beyond description and nothing in the world could be compared to it, but yet I could not rest, and tearing myself away, went back immediately to my ship and having favorable winds we succeeded in arriving here in four hundred and four days. My success was owing, probably to the efficacy of the prayers which I offered to the gods. Yesterday I came from Naniwa to the capital and I have hurried here to this place without even taking off my dress, wet from the waves as it is."

When he had finished his narrative, the old man compassionated him in the following verse:⁷

"For many a year have I plucked the bamboo stems,
Yet never met I sorrow such as thine."

The prince having listened to this said: "Many days there was a heavy sorrow at my heart and only to-day have I found rest." He then made the following verse in reply:

"My sleeves no more are wet with bitter tears,
Past sorrows are forgot in present joys."

Suddenly, six men came together into the garden and one of them holding up a letter with a letter-holder⁸ spoke out: "Ayabo Uchimaro of the Imperial workshop says: 'We have manufactured the branch with precious stones and although we laboured with all our might for more than 100 days, still the prince has not given us our pay for it. When we receive it we will divide it so that we can again fill our rice-pots.'" With these words he handed over the letter, or rather the petition. The wife of the old bamboo gatherer let her head drop down, thinking of what the man had said. The prince saw that there was no hope of escape and his senses forsook him. Kaguyahime when she had heard it, asked that the letter be given to her and opening it she read as follows: "The prince has been hiding himself for more than a thousand days with common labourers in order to have a branch made set with precious stones, and he has promised these men an official position. When we heard that he needed this branch for Kaguyahime we thought we could get our pay by asking for it here in this palace."⁹ Kaguyahime who until now, in her perplexity from which she saw no escape, had been sad and dejected, now resumed her pleasant, bright ways and calling the old man she said to the prince: "I did truly take it to be a branch plucked on the mountain Hōrai. I haste to return it after hearing of the extraordinary fraud which you have practiced." The old man nodded assent, saying that being certain of the imposition there could be no objection to handing it back. Kaguyahime, who had resumed her old gaiety, composed the following couplet as an answer to Kuramochi's verses, giving it in return together with the branch.

"Hearing, indeed I heard this branch was true
Seeing, I find though precious, it was false."

The old bamboo gatherer who at first had tried so hard to persuade her to accede, now after the experience he had acquired, sat helplessly as if in a dream. The prince was so crestfallen and out of countenance, that he did not know whether to stand up or sit down and he slunk away as soon as the sun began to decline. Kaguyahime called the aggrieved artisans and, expressing her joy and satisfaction at what they had done, gave them a handsome reward. They returned with gladness in their hearts, thinking that everything had gone as they desired, but on their way home they were entrapped by Kuramochi who, as a warning to others, had them flogged until the blood came, and it was not until he had taken their money, which he threw away, thus stripping them of all their wages, that they were allowed to escape. The prince had thus disgraced himself for life; nothing worse than this could have happened to him. As he acknowledged to himself, it was not merely the failure to gain Kaguyahime for a wife, but the bad repute now attaching to his name which mortified him, and alone without a companion, he fled into the mountain fastnesses. The director of his

palace sent the servants to search for him but they failed to discover any trace, and as he did not reappear with the lapse of time, it was generally supposed that he had died. Since then people speak of *Tamazakuru*.¹⁰

The Udaijin ANE MIUSU, descended from a high family, was also possessed of great wealth. He wrote a letter to a man named Okei who had arrived that year with a vessel from China, in which he asked Okei to procure for him the fur of the fire-mouse. This letter he despatched by a trustworthy messenger, together with the necessary money which the man delivered safely to Okei, who was then in port on the coast.¹¹ Okei after opening and reading the letter replied "The fur obtained from the fire-mouse does not exist in this country; I have heard people speak of it, but I have never seen any; if it does exist it ought ere this to have been brought to this country. This is a very difficult piece of business. I will find out in India from a rich man whom I know, whether this fur has ever come there and if so I will buy it, otherwise I will return the money by the messenger."¹²

The vessel came back from China. When news was received that Ono Fusamori had arrived and was on his way to the capital, a fast horse was sent to meet him and he arrived from Tsukushi in only seven days. When the letter was read, it was found to contain the following: "I sent my people to search for it, but it was only with difficulty that I was able to obtain the coat made of the fur of the fire-mouse. Now, as well as in former times, it is difficult to find. In olden times a great sage brought one from India to my country. I heard that it was kept in a mountain-temple in the west, and asking for the mediation of the government I succeeded at last in being able to purchase it. The governor of the province told the messenger that the amount of money was not sufficient, so I have laid out what was lacking and paid for the fur. I must have fifty *rios* more, please to send me this amount when the ship comes back; if you do not send the money, return the fur as security." When the Udaijin had read this he said "What is this he says? only very little money is lacking now and I am greatly rejoiced that he has sent the fur." He then turned in the direction of China and prayed with folded hands. When he looked at the chest in which the fur lay, he found it bright with the many colours of the different sorts of jewels with which it was ornamented. The fur coat was of a dark blue color, the ends of the hairs shone with a golden lustre, its beauty was incomparable and its great value was apparent to the most cursory observer. Even if it would successfully resist the action of fire, this valuable quality seemed of slight importance, as compared with the exquisite beauty of the garment. The Udaijin thought it but natural that Kaguyahime would be anxious to possess it. After having examined it with great satisfaction, he put it in a chest to which he fastened the branch of a tree; then he made a very careful toilette. He thought that his present would remain in the house of the maiden and adding a couplet to it he went to convey it there himself. The couplet was as follows:

"For love of thee my life is worn away,
This morn first sees my dress unwet with tears."

When he came to the door of the house, the bamboo gatherer came out to receive it and to show it to Kaguyahime. When she looked at the fur she said: "This is a wonderfully beautiful fur, but I cannot pronounce it perfect until I know whether it is genuine or not." The bamboo gatherer replied, "Under any circumstances I will ask him to come in. Such another fur is not to be found in the world, so it may be considered as genuine. You ought not to put these people to such trouble." With these words he called upon the prince to come in. On this occasion even the old wife of the bamboo gatherer thought in her heart, that the girl would be sure to get married. The old man, although he was sorry that Kaguyahime remained un-

7. The play upon words in these and the following verses it is impossible to translate.

8. A letter embodying a petition was held up and presented with two pieces of bamboo.

9. The artisan called the house of Kaguyahime a palace, because he expected that the prince would live there with her. According to old customs, the bridegroom lived in the house of his father-in-law.

10. *Tamazakuru* seems to be a word which was used at that time, but is now obsolete. *Tama* is *tamashii*, soul; and *zakuru* is synonymous with *hanareru* to absent oneself. *Tamazakuru* therefore seems to signify to die, while at the same time it would point an allusion to *tama* jewel.

11. This refers to Hakata in Chikuzen, where the ships coming from China used to land.

12. To understand what now follows, it is necessary to be acquainted with what is only made apparent later on by the letter of Okei; namely, that the latter goes to China and causes search to be made for the fur, which when found he sends back by Ono Fusamori.

married and endeavored to get her to unite herself to a good man, yet knowing her repugnance against marriage he was too sensible to try and force her inclination. Kaguyahime told him, "If this fur upon being put in the fire will not burn, then I will consider it to be genuine and will consent to submit to the will of this man. As it is the only one of its kind, you can tell him that I will have no doubt of its being genuine, if it is not consumed by the fire. We will now make the trial and submit it to the flames." The old man agreed to this and informed the Udaijin of it. The latter replied, "This fur did not even exist in China and it required a great deal of trouble to secure it. Why have you such doubts? but still go on and make the trial by fire." The trial was made and when the fur was put into the fire it burned with a great blaze and thus it was proven that it was quite a different sort of fur. When the Udaijin saw this, his face became as green as the leaf of a plant. Kaguyahime was loud in her demonstrations of joy and sent back the chest with the following verse which she put within it:—

"Oh, had I thought no ashes would remain.
Some other fate had met his wondrous fur."

Thus it came that this suitor returned. It had been reported that the Daijin Abe had arrived with the fur and was living at the house with Kaguyahime. People then made enquiries whether he really lived there and were informed by one of the household, that as the fur had burned with a great blaze he could not marry the maiden. When people heard this they said for the first time *ayenashi*¹³ to characterize something where one loses courage.

(To be continued.)

PLACES OF INTEREST IN THE NORTH.

MATSUSHIMA AND ITS NEIGHBOURHOOD.

The archipelago of pine-clad islets, collectively bearing the name of Matsushima, has been famed for its beauty ever since the dawn of Japanese civilization, and is one of the "Safu-kei," or "Three Views" of Japan, which hold the highest rank in the appreciation of native lovers of the picturesque.* Instead of Matsushima, the appellation of Shiogogama no Matsushima, i.e. "the Pine Islands of Shiogogama" is often made use of, Shiogogama being the town on the coast where the peculiar landscape begins. The best way of visiting the locality is to take *kuruma* from Sendai to Shiogogama (a distance of $4\frac{1}{2}$ ri), and thence row or sail across ($2\frac{1}{2}$ ri) to the hamlet which has borrowed the name of Matsushima, stopping a night at each place, and returning the same way, unless it be desired also to visit the new canal near Ishinomaki and the port of Nobiru described below. There are numerous inns at both places; but by far the best are the Shiyouhifrou at Shiogogama and the Kanraitei at Matsushima, both of them former pleasure-houses of the Daijyau of Sendai. At both these houses the view, the accommodation and the reception met with are all that can be desired. At Shiogogama should be visited the temple formerly belonging to the Shingon sect of Buddhists and known under the name of Hofurefzhi, where were worshipped the deities Kuwafwofi of the Twelve Visages and Yakushi Niyourai. In 1869 it was "purified," i.e. converted into a Shintau place of worship, and re-dedicated to Shiogogama Daijyauzhi, a son of the divinity Izanagi no Mikoto and the reputed inventor of the fabrication of salt from sea-water. (The word Shiogogama means "Salt Kila.") In the temple court will be noticed a sun-dial inscribed with Roman figures. It bears date 1783, and was presented by Hayashi Shikei, (a writer on the necessity of the defence of the country against the inroads of foreigners which he prophetically foresaw). There is likewise a weather-beaten iron lantern presented by the warrior Idzumi Saburo Tadaira in 1187. But in its present state, the magnificent cryptomerias and other forest-trees in the midst of whose deep shade it stands, are undoubtedly the temple's chief attraction. From Shiogogama may likewise be reached by an easy walk the Suwe-no-Matsuyama, celebrated in Japanese poetry, but otherwise unremarkable. The chief local production is ink-stones.

From Shiogogama to the hamlet of Matsushima is

13. The author makes a play upon the word *Abe* which only differs by the *ni* from *aye* (or *abe*).

* The other two being Miyazima and Chikubushima.

a delightful sail amidst the promontories, bays and inlets, which indeed stretch along the coast of Sendai for 18 ri, as far as Kikakuwa-zai, the most celebrated of the group whose sharp summit (a climb of $1\frac{1}{2}$ ri), crowned by the temple of Daikinfzhi, is seen long before the island on which it stands is approached. There are said to be 88 islands between Shiogogama and Matsushima, and 808 in all between Shiogogama and Kikakuwa-zai, of which 7 are inhabited. But eight and its compounds are favourite round numbers with the Japanese, and, moreover, even the smallest rocks are included in the enumeration. Even down to the smallest rocks, likewise, each has received a separate name, many of them very fantastic, thus Dragon's Head Island, the Twin Islands, the Twelve Emperors, Buddha's Entry into Nirvana, Question and Answer Island, Palace Island, and so on. All the islands are formed of white sandstone into which the sea makes its inroads, and doubtless many of them disappear in this manner while their number is kept up by the gradual breaking up of peninsulas. On every available nook stands one of those thousand pine-trees that have given name and fame to the locality. At the hamlet of Matsushima, the temple of Dzuwigañzhi will repay a visit, though its exterior is not promising, and though, like the majority of Buddhist edifices throughout the country, want of funds stands in the way of necessary repairs. It is supported by the produce of a small donation of land made to it by the head of the Daté family, whose ancestral tablets are all here, and by the munificent present of one thousand wen† from H. M. the Mikado in return for hospitality received on the occasion of his Northern tour in 1876. Other minor contributions are received from time to time. In the outer court are to be seen in front of a small cave called the Hotsushif-ga-Ihaya two large figures of Kuwafwofi cut in slate-stone, that to the left bearing date 1800, that to the right 1828. Behind the chief altar is preserved in a shrine a well-carved wooden figure of Date Masamune, the founder of the Sendai family and of this temple. The various apartments of the temple are very handsomely decorated, and, when the gold foil which is lavishly strewn about, was fresh, the effect must have been extremely fine. The small inner room in which the Mikado slept is shown, and before quitting the temple may likewise be seen a carved wooden gateway, said to be an imitation of one at the temple of Kinfzhi in the Corea.

The special articles brought for sale at the hamlet of Matsushima are pens made of pine-wood, and bamboo chopsticks.

Two and a-half ri distant rises the hill of Tomiyama, whence by far the best general view is obtained, and where any traveller who, during the boat journey from Shiogogama, may have been disappointed with his trip, will allow that there is very great beauty, even if he think that the reputation of the place has been somewhat exaggerated by the native lovers of scenery. The whole distance may be accomplished in *kuruma* excepting the last 3 *chian* leading up to the temple of Daikauzhi,‡ which stands near the top of the ascent. From this spot the eye wanders over a maze of islets and promontories, the land and sea seeming mixed in an inextricable but lovely confusion. Opposite the spectator, in the direction of Shiogogama may be descried in the blue distance the double peak of Shirashi-no-take, while to the right rises the range dividing Oushiu from Deha. The highest hill to the left is on the island of Funairishima, above the port of Ishibama, a place of call for merchant steamers, to whose left again lies Sabusaba a port to which the Mitsu-Bishi Mail Co. occasionally send packets. Those desirous of enjoying the view for any length of time should endeavour to obtain such accommodation as this temple affords. The traveller to Ishinomaki should take the ascent of Tomiyama on his way thither, as

† [It will be noticed that the writer of this article is another disciple of the new system of spelling Japanese words. We have no right to interfere with his orthography, much as it goes against the grain to see it and much as we feel it detracts from the interest of his narrative, but we must enter our protest against the well known word *yen* being transformed into "*wen*"! This last blow to our prejudices (if invariable custom can indeed be called a prejudice) is the cruellest of all: it surely must prove the final feather to break the back of any remaining sympathy with the new system.—Ed. J.W.M.]

‡ Said to have been founded by Tamura Shiyagun, a celebrated general who was sent against the Ainos, still inhabiting this part of the country during the reign of the Emperor Kanmu.

it is but 20 *chiyan* off the main road. The road to Ishinomaki crosses a ferry over the Narushi-gaha before entering the village of Ohono (Afugiya inn), and, after traversing an extensive rice-plain, crosses the New Canal and descends to

Ishinomaki (Chiba-ya inn, in the main street, good; Tanaya and Tashiro-ya tea-houses on Hiyoriyama very pleasantly situated). Hiyoriyama (r. on entering the town), commands an extensive sea view, which likewise includes the archipelago of Matsushima, the windings of the Kitagami, a high range of mountains inland, and a bird's eye view of the town. Ishinomaki, noted for its salmon fisheries, stands at the mouth of the river Kitagami, the natural outlet for the trade from Nafu and the north. But on account of its exposure to the full sweep of the Pacific Ocean and to the violent south-westerly gales which blow through the Matsushima group, and of the formation of a bar at the river's mouth, all attempts to remove which have proved unsuccessful, works are now in progress with a view of making a harbour at the small fishing village of Nobiru 4 *ri* further up the bay, where the Naruse-gaha falls into the sea. To connect the intended port with the river Kitagami has likewise been the object in making the new canal which was commenced under foreign superintendence in 1878, and which is ten miles long and a hundred feet wide. Boats will enter it from the Kitagami-gaha by means of a lock which is nearly completed. At present this canal can hardly be said to be navigable, having only an average depth of from 2 to 3 feet; but it is intended to deepen it sufficiently to admit of cargo-boats of the largest size being towed through. Instead of returning to Matsushima, it is possible to go by *kuruma* to Hamaidzu (4 *ri* 6 *chiyan*), and cross by ferry to

NOBIRU (poor accommodation). The port of this place is as yet little more than a creek with 5 or 6 feet draught of water, and has, like Ishinomaki, a bar across its mouth; but, it is proposed to alter the course of the river by making a cutting to a point about two miles inland where there is a wide bend, and it is supposed that the flow of the river in its new bed will suffice to keep the channel clear. The old bed of the Naruse-gaha will be kept available to take off any superfluous amount of water in times of flood, the bar at the mouth being kept down by dredging; and on the island, which will be formed between the two arms of the river, it is proposed to erect godowns on an extensive scale for the purpose of storing the produce which will be brought for shipment to other ports. The rest of the ground in the island will be leased to Japanese for house-building purposes, for it is expected that a numerous population will be attracted to the spot by the increased facilities for trade which the completion of the harbour will afford.

A breakwater built substantially of fascines and sausages made of bamboo withies filled with stones, according to a system employed with success in Holland, will be thrown out at right angles from the shore at Nobiru. This will serve as a pier, and vessels will thus be enabled to load and discharge cargo with facility. In rough weather it is intended that they shall move to the anchorage in the small harbour of Katsugi-ura which is situated in the island of Minato-Shima and is within easy reach of Tona on the mainland. Here a second breakwater will be constructed. The harbour itself is small, but it is hoped that by the addition of a breakwater a sufficiently commodious and safe anchorage for ships in stormy weather will be secured.

Another work, on the south side of Nobiru has the attention of the government with a view to connect the river Abukuma with Nobiru, viz. a canal from a point on this river to the town of Shiogama. The produce thus conveyed to this place will there be shipped in ordinary boats to Nobiru. This work has, however, not yet been commenced nor is it likely to be begun before the harbour works at Nobiru and the canal on the north side are finished and in working order. It has been estimated that by taking advantage of one or two streams flowing parallel to the course proposed for this canal, the latter can be constructed for one-third of the sum required for the canal joining Nobiru and the Kitagami-gaha.

It will be seen from the foregoing sketch of the works which are either being constructed, or in contemplation, by the Government, that they are projected on a scale of considerable magnitude. Estimates of the whole have not yet

been published; but it has been stated that exclusive of the canal between the Abukuma-gaha and Shiogama, the total expenditure can scarcely be less than 3,000,000 *weh*. It is computed that 400,000 *weh* will be needed for the construction of the breakwater at Nobiru together with other minor works in connection with it, and 600,000 *weh* for the cutting to the Naruse-gaha. This latter sum will include the expense of building on the new island the godowns required for storage. The entire outlay will be defrayed out of Government funds, and the government propose to recoup themselves by levying tolls on all cargo-boats passing through the canal.

Quarries in the neighbourhood supply all the stone required for the works, but the bricks used in the construction of the lock at the entrance to the canal have been brought from Tonkiyan. Labour must naturally be found on the spot, but at present the difficulty of obtaining it is the chief obstacle to the rapid progress of the works. When they were first commenced, labourers could be hired for 16 *sen* a day, whereas it is now difficult to get the coolies to work for 30 *sen*.

It is stated by a correspondent who writes to the "Allgemeine Zeitung," that the Japanese Government have appropriated 255,000 *weh* out of the 3,000,000, *weh* raised by the internal loan, for the new harbour at Nobiru. June 1880 is fixed as the date of the completion of the works, but it is the general impression that they will not be finished until the end of that year. Much must depend on the state of the weather in so far as regards the breakwaters at Nobiru and Katsugi-ura; as one severe storm may undo the work of several months.

The ultimate success of the works as a piece of engineering is a question on which it is not for us to give an opinion, and granted their success from a professional point of view, their commercial value to Japan is a point which must be left for the future to decide. The motive which has prompted the Government to make an effort in this direction is the want of a good harbour on the Eastern Coast. A glance at the map will show that from the entrance of Yedo Bay for a distance of 300 miles northward along the Pacific shore of the Main Island, there exists not a single good harbour. Hence there is no natural outlet for the produce of the country. The district included, viz. the Miyagi Ken (in which Nobiru is situated) is undoubtedly rich, and rice, silk and cotton are numbered among its products. It is fortunate, moreover, in possessing two large rivers, the Kitagami and the Abukuma, which are navigable for a long distance and by which produce of all kinds can be brought cheaply and expeditiously to the coast. On the Kitagami, for instance, large cargo-boats can be taken up about 50 *ri* as far as the important town of Morioka, whence large quantities of rice, &c., are brought down the river to Ishinomaki. But here, owing to the reasons already given, the means of exporting it are miserably inadequate. The bar at the mouth of the river is impassable for any but craft of small size, and during a large portion of the year communication with vessels lying in the roadstead is entirely suspended. There is little doubt that with a good harbour the resources of the Miyagi Ken and of the districts with which its large water-courses connect it, might be greatly developed, whence the application by the government to this object of such very considerable sums.

The Washington Treaty of July 1878 has directed the attention of foreigners to Sendai as a possible Treaty Port of the future. Sendai, however, is not actually on the coast, and if any port in the Ken were ever opened to foreign trade, that port would probably be Nobiru.

THE JAPANESE PRESS.

MEETING OF NATIVE TEA MERCHANTS.

(From the "Chugai Bukka Shimpō.")

THE tea-merchants in connection with the recent competitive exhibition held meetings occasionally to discuss the methods of growing tea, its manufacture and sale. On the 19th instant a special meeting was held at the instance of the Director of the Board of Trade. Twenty-eight merchants, including residents in Tokio, Yokohama

and the provinces, attended, and the question of the sale of tea was fully ventilated. The following is a *precis* of the speeches delivered on the occasion.

Mr. Minobe, of Kiyoto, said that about the year 1870, a company was formed in Yamato with the object of carrying on an export trade in tea on a large scale under the management of foreigners. The result was however disastrous, for owing to the continual losses it sustained, the company proved an utter failure, and since then the tea from Yamato is all sold to foreign merchants residing in Yokohama and Kobe.

Mr. Otani, of Yokohama, observed that the quality of tea was much deteriorated from the careless manner in which it was packed. This caused, in many instances, great impediment to its profitable sale. He had noticed that the majority of cases of careless packing occurred in tea from Ise and its neighbourhood. In some of the provinces, the leaf was merely placed in bags and in damp weather absorbed a great deal of moisture which so deteriorated the quality of the article, that first class tea was frequently reduced to the lowest grade in about ten days after it reached Yokohama. The speaker calculated that in some exceptionally unfavourable seasons the loss through this cause was at the daily rate of twenty-five sen per picul. Mr. Otani attributed this loss to the action of the brokers who infest the tea districts, buy up all the tea they can possibly procure in small lots, mix the whole together and forward it to the open ports without care or management, for sale to foreigners. If the consignment meets with ready sale there will in all probability be little or no loss from moisture, but if some days elapse loss is unavoidable. The speaker expressed an opinion that when different kinds of tea were mixed, they should be well fired together before packing, and that much greater care should be exercised in the process of packing than was now usual. Mr. Otani also stated that there was a description of tea called *Wakamushi* (tea which has not been sufficiently steamed), the leaves of which are of good colour and which when watered gives a good liquor. Inexperienced foreigners often buy this tea, but when they come to manufacture it, they find both the colour and quality undergoes a most remarkable change. Another kind of very inferior tea is known as *Sumizome* (black-dyed), and came principally from Shimosa and the neighbourhood four or five years ago. The process of producing it was thus described:—as inferior teas, such as *Senrin*, &c., are brown in colour and cannot be mixed with good tea, they were steamed separately and while this was being done, very finely powdered charcoal was added, which changed the colour to that of black tea. This adulteration can easily be detected on a careful examination of the leaf, or by placing the leaves in water when the charcoal will form a precipitate. None of this stuff appeared to have been made for some time past until last year, when a quantity was sold to a foreigner and the fraud not discovered until the article reached its destination abroad. This method of adulteration is supposed to have been discovered by some tea-manufacturers who had observed foreigners using indigo to improve the colour of the tea, when re-firing it in their godowns in Yokohama. As this practice of colouring with charcoal is not only ultimately prejudicial to those who follow it, but also tends to injure the reputation of all the tea produced in the country, the most stringent measures should be taken to prevent its repetition in future.

Mr. Kawai, of Tokio, said that he had long been a tea merchant in the capital and recollected when large quantities of tea were sent every year to Oshiu and other northern provinces. The reverse was, however, now the case; not only were those provinces producing sufficient for local requirements, but samples had been sent from there and inquiries made if they were fit for export. The tea trade of Tokio was now confined entirely to the supply of local wants and did not exceed 500,000 yen per annum. The speaker said that, he had been frequently asked why an old established tea merchant as he was, did not embark in the export business. His reasons for not doing so were very simple and would, he thought, be considered all-convincing. He had noticed that the export trade as at present conducted was a purely speculative business, and that not a single native merchant who had engaged in it had made money, in what might be termed a legitimate way, during the twenty years the ports had been opened. Some

ventured to try it, and of these many were ruined in the course of two or three years, while others saved themselves from a similar fate by abandoning the business in disgust. For himself, he was wholly opposed to speculative trade, and was quite satisfied to confine himself to the line he had been in for so many years, and with which he was acquainted.

Mr. Sakuri, of Yokohama, observed that he had not long been established in the tea trade and his experience was therefore comparatively limited, but after careful consideration he had come to the conclusion that the greatest evil the Yokohama merchants had to contend against, was the excessive amount of the drafts drawn by the consignors of tea in the provinces on the merchants to whom it is consigned. Some of these drafts exceed the original value of the tea by ten per cent. and the consignees being anxious to get as much tea as possible into his hands, honours the draft if he thinks it not very different from what the tea will produce at the rates which may be ruling at the time. Prices frequently fall suddenly, a loss is sustained, and as it is generally impossible to obtain a refund from the consignor, the loss falls upon the consignee.

Mr. Kimura, of Yokohama, strongly objected to the present practice of packing tea in fragile wooden boxes and covering them over with matting or straw. If the box got broken, which it frequently did owing to the thin wood of which it was constructed, it was impossible to detect and repair the injury, as the matting or straw concealed it. This was a frequent cause of the tea becoming damaged *in transitu*. He suggested the abolition of the present system, and that in future tea should be packed in stout wooden boxes, well nailed, and roped. If this was done he believed that the expense of packing would be lessened and damage *in transitu* effectually prevented.

Mr. Masuda, of Tokio, said that the previous speakers had forestalled him in most of the remarks he had intended to make, but there still remained one or two matters to which he desired to draw the attention of the meeting. The practice of drawing for excessive amounts against consignments, mentioned by Mr. Sakurai, was, as far as his personal experience went, chiefly confined to the province of Ise, and was not limited to tea alone, but extended to saké, oil, and in fact every description of merchandise sent from there to Tokio or Yokohama for sale. The speaker described the manner in which the transaction was carried out. The consignor went to some merchant in his vicinity and obtained a draft on Yokohama, for say, 110 yen against goods worth only 100 yen. Out of this, the consignor received the 100 yen and when the consignee honoured the draft the remaining 10 yen is treated by the consignor as an immediate profit. There exist two reasons for the custom. In the first place, as there are no thoroughly safe wholesale merchants in Yokohama, the consignor wishes to obtain the full value of his goods at once; and again if the amount of the draft is excessive, it is to the interest of the consignee to exert himself to obtain a high price for the goods in order to save himself from loss. It thus happens that these persons, being actively engaged in a game of mutual deception, are sure to be all ruined sooner or later. He wished to impress upon the meeting, that those engaged in the tea trade had lost the confidence of the public and also that no honest person would engage in a business so fraught with chicanery and danger. After all that had been said, he felt that although it was almost needless, still he must add a few words. Those who send tea to Yokohama are principally people of little capital and are obliged to obtain advances. In western countries merchants can consign goods, and, according to the confidence the banks have in them, obtain nearly the whole value by means of drafts, but this certainly is not the case here, and shewed that people place no dependence on those engaged in this trade. It was no doubt this feeling of distrust, which caused Mr. Kawai to say, that he would not like to become a tea merchant in Yokohama. Mr. Masuda said that, as for himself, he had been in the business for several years and left it simply because of the fraud and deceit with which the trade was saturated from beginning to end. One of the gentlemen present had said, "that in Yok-kuichi, solvent and respectable merchants dreading, and even refused to associate with, tea merchants." The same feeling pervaded all the provinces and afforded ample evidence that the trade and those engaged in it had forfeited the confidence and respect of the public. The natural result is that no one will venture to risk his capital in the business

and when large quantities of tea are in the market, the wholesale merchants are forced to sell at almost any price to foreigners. Not only are these people unable to hold out for a good price, but they occasionally sell under current rates and abscond. All these evils are principally owing to want of sufficient capital. People seldom remain long in the trade and the firms are continually changing their partners. Those who do engage in the business are generally without experience, little or no capital, and consequently no dependence can be placed upon them. In the raw silk trade everything is different. The banks are only too willing to advance upon the goods, and even when such large sums as two and even three millions of yen are lent, there has never been an instance known of a silk merchant selling the hypothec and absconding. Tea fluctuates greatly in price; parcels worth \$1,000 sometimes fall to \$500 in the course of the year, but silk is not liable to such great changes. Mr. Masuda concluded by saying, that he earnestly desired to see everyone concerned in the tea trade; producer, broker, wholesale merchant, etc., actively engaged in restoring the confidence of the public and thus inducing capitalists to associate with them in the business. By this means the foundations of an honourable trade would be laid, and no pains ought to be spared to promote the prosperity of this particular industry, which was one of the most important in the empire.

The Director of the Board of Trade (Mr. Kawaso), asked the gentlemen present for an expression of opinion on the subject of selling tea to local foreign merchants and the advantages or otherwise of direct exportations to foreign countries.

Mr. Otani, stated that the *editori* (brokers), were the principal intermediaries with foreign firms. As these brokers sometimes have samples of the same description of tea from different people the suspicions of buyers are consequently aroused. He knew of cases in which the same tea had been contracted to be sold to two or more different firms. He also mentioned, that although the tea merchants of Yokohama had established a Guild, the members were not agreeing very well amongst themselves.

Mr. Muranatsu, of Yokohama, said that there were several very pernicious practices connected with the sale of tea to foreigners. The principal of these, was the custom of paying a commission of one per cent. to the Chinese employed by the foreign merchants, and it ought to be discontinued at once. He frequently experienced great difficulty in his business, through not being able to ascertain the current price of tea in America.

Mr. Tomioka, of Tsu, regretted that there were no fixed rules, governing the sale of tea both in Japan and abroad. The producers were very chary of entrusting their goods to the merchants. He suggested that large companies should be formed in the provinces with branch establishments in America and tea exported direct. He considered that this step would be attended with great benefit to the trade and handed in a memorial containing his views on the subject.

Mr. Sakurai, of Yokohama, remarked that as far as he knew no serious complaints were made about the inferior quality of tea now being produced, as these descriptions find ready sale amongst those whose only desire is to buy at the cheapest possible rate.

Mr. Onishi of Yokohama, said that the present custom was to deliver the tea in the godowns of foreign merchants where the quality, weight, &c. is ascertained before any sale is effected. In the event of a fire occurring, after delivery and before actual sale, who would have to bear the loss? As they had been fortunate enough to escape from such an accident up to the present, the matter seemed to have escaped attention. He could only attribute this custom to the trade not having been originally established on proper principles.

Mr. Kamibayashi, of Tokio, said that he had introduced into the interior, the practice of manufacturing the tea, so that it was fit for export without undergoing any further preparation. This had proved very successful from a pecuniary point of view and he could like to see the practice followed in all the tea districts.

Mr. Sato, of Tokio, thought that the ultimate success or failure of direct export to America could not be hastily decided. Even if losses occurred on two or three successive years transactions they must not be discouraged, but should strive to establish a feeling of confidence on the part of

consumers in Japanese tea. As regards the re-manufacture, there are great differences of taste and the fashion is continually changing, so that this branch should not be entered upon without due consideration. If all the tea is re-manufactured only to suit the consumers in one or two places, it will meet with no demand elsewhere. For example, tea from Shimosa, is wholly consumed in one country. He was of opinion that no correct conclusion on this subject could be arrived at, until after careful observations had been made extending over a series of years.

Mr. Masuda, again addressed the meeting, and observed that the grievances complained of by the last speakers could be remedied by the wholesale merchants in Yokohama, and that therefore no one else should be held responsible for their further continuance. As far as the desirability of exporting tea was concerned, it was a very difficult question and not readily answered. It was necessary, in order to be successful, that a merchant should be quick to see his opportunity and then act with promptitude. To this end a merchant must be acquainted with the circumstances of foreign countries, a knowledge which can only be attained by constant exports, if only in small quantities. No doubt it is easy to get a market report, but neither the persons who read them nor those who prepare them, know much of the real state of matters, unless they are actually engaged in the business treated of in the document. Mr. Masuda then gave his own opinions on the subject of re-manufacturing tea in the interior, and also on the mixing of various kinds of leaf. The speaker concluded by inviting an expression of opinion from other gentlemen present, several of whom responded.

Mr. Shinben, of the Board of Trade, gave a succinct account of the experience he had gained during his two years' stay, under instructions from the Government with one of the leading tea merchants of America. He also stated why the prevalent custom of producing tea of inferior quality was very undesirable.

Mr. Mayeda, also of the Board of Trade, explained the peculiarities of the tea-consumption of Europe and stated that there was a probability of an increase in the demand for Japanese tea. Every effort should be made to cultivate a taste for their tea, so that it would take the lead in public estimation over that from China and India. The best plan he considered, would be to endeavour to introduce it into schools, hospitals, &c., and that a trade mark should be put on every package showing that the contents were the genuine product of Japan.

Mr. Mngaki, also of the Board of Trade, explained why the price of tea in France was so high. He agreed with Mr. Mayeda as to the measures to be adopted to promote the consumption of Japanese tea.

After the conclusion of the speeches, Mr. Kawaso, the Director of the Board of Trade, addressed the meeting. He said that the speech of the Home Minister when opening the exhibition and that of the Director of the Agricultural Bureau when closing it, were both to the same effect, viz:—that the Japanese tea trade was not in as flourishing a condition as that of China or India and every effort ought to be made to improve it. He had to make almost similar remarks but would not confine himself to words only, he would convince them by the statistical return he produced. * He asked them to observe the prices put down for the product of the three countries. While Japanese tea fluctuated to as low as forty per cent. from its highest price and Chinese tea to as low as twenty per cent, Indian tea had only fluctuated about one per cent. Now this decline in the price of Japanese tea is very serious, being much greater than in the Chinese product which we affect to despise. This might be due to natural causes, but he thought it was due to another matter also. He alluded to the returns prepared by the merchants in both India and China, wholly independent of the government. Now here in Japan no attention was paid to this, so that if the authorities did not take the matter in hand, no statistical information would be prepared at all. This is owing to the persons principally concerned neglecting to collect all the information they can, carefully watching the different markets, and thus getting the highest price for their goods. He trusted that more attention would be paid to these matters in future.

* Return extending over ten years, shewing the annual production of tea in China, India and Japan, and the prices obtained, in the country of production and abroad.

COUNSEL FOR THE DEFENCE IN
CRIMINAL CASES.(From the *Choya Shimbun*.)

ALTHOUGH a person may be accused of crime, yet so long as he is not proved guilty he should be treated as an innocent man and those engaged in investigating the case should behave toward him in a strictly impartial manner. This is the principle adhered to by the Judges of all civilized countries in Europe and America. Taking all nations into consideration, it cannot be said that all Judges are learned and clever men and incapable of error in their decisions. This is especially the case in countries where the criminal laws are in a backward state, and we frequently find instances of Judges treating accused persons in a harsh and menacing manner, and acting towards them as if they were already proved guilty. Innocent people are then often unjustly punished. It is undeniable that a system ought to be established which would protect accused persons when undergoing examination and therefore we consider it is indispensably necessary to allow accused persons to employ barristers or advocates.

It is the natural disposition of all men to avoid anything that may injure them and to seek after what may prove to be advantageous, so that even evil-disposed persons must feel greatly distressed when arrested and charged with crime. Innocent people are not unfrequently accused in courts, sometimes by mistake and sometimes through false charges made by wicked people. In such cases the prisoner would naturally be grieved at his misfortune or indignant with his accusers, and either feeling would be sufficient to cause great perturbation of mind. Now as words and gestures are the exponents of thought, if the mind is in a state of confusion and embarrassment, the gestures and conversation will be confused and embarrassed also. This then will be the case with people arraigned on a false charge. Can they be expected to repel the accusation with courage and spirit and give full and clear explanations so as to remove every suspicion of guilt? Unless they happen to be exceptionally clever and courageous they certainly will be unable to do so. Here in Japan, although the use of torture has been finally abolished, the Judges still treat accused persons with great harshness and intimidate them with the object of extracting confession. When a man is in a state of perplexity with grief, or anger, or the menacing language of a Judge, what can be better calculated to protect his rights and liberties than an able and experienced advocate?

What mankind should first protect is life; reputation and property are secondary matters. We consider that the reason why advocates are employed by both parties to civil actions is, that they may be the better able to maintain or defend their rights. This being so, why are advocates not allowed to appear for accused persons in criminal proceedings? If an innocent prisoner, through perplexity, embarrassment or the threats of the Judge, makes contradictory statements in his anxiety to defend himself, he is looked upon as guilty and the results are infinitely more serious than the defeat of one of the parties to a civil action. If an innocent person is sentenced to penal servitude or imprisonment, his freedom and reputation are at once lost, and if it should happen that the death penalty is inflicted—the fact of his innocence being subsequently established will not restore him to that life which is the most valuable possession of the human race. The custom in Japan is for experienced official prosecutors to appear for the Government against accused persons, who have to depend upon themselves alone, whether they are foolish or clever, to prove their innocence. Can it be expected that they will succeed in doing so, opposed by experienced officers, although in point of fact, they may be actually guiltless of the offence imputed to them? All this tends to show the necessity which exists for permitting advocates to appear on behalf of persons charged with crimes, and we trust that provision will be made for it in the new criminal code now under consideration.

THE TIMES OF THE TAIRA.

By CAPTAIN F. BRINKLEY, R.A., AUTHOR
OF THE "TIMES OF TAIKO."

CHAPTER XXII.

SWORD AND GLAIVE.

Benkei did not actually propose to himself that night any intention of again attempting to complete the number of his thousand blades, but for all that before setting out, he not only thrust his swords into his girdle but also took in his hand a glaive, which being of proportions adapted to his own throws was indeed a most formidable looking weapon.

It was the saint day of Kwannon and a blind man might have found his way unerringly without a staff to the fane of the Goddess of Mercy, for the patter of the worshippers' feet awoke ceaseless echoes in the streets and alleys around. There was the roistering swashbuckler, swinging along on stilted clogs with a kerchief knotted over his wine-flushed face, and there was the daintily dressed damsel, progressing delicately by the tiniest possible translations of lacquered and brocade-looped pattens, while the white-robed pilgrim tinkled his bell on the outskirts of the living stream, the dull flapping of his straw sandals sounding like a humble reproof to the impudent clatter of his neighbours' foot-gear. Benkei, towering a head and shoulders above all his fellows, but yet adapting his movements to those of the weaker elements of the crowd with a watchful consideration that betrayed a heart not disproportioned to his colossal frame, moved leisurely on till he found himself under the lofty portals of the temple enclosure.

Here he took his stand and in obedience to habit rather than design, devoted himself at first to considering the swords of the passers by with the eye of a practised connoisseur; but the field of his vision was crossed by so many in pursuit of pleasure and so many whose mission was to impart it, that he began to think the whole city had conspired to make him sensible of his own isolation. Neither was it possible to misinterpret the timidity and aversion his aspect excited among the peaceful tradesfolk. Plainly his notoriety had outstripped his success, and the epithet his opponent had applied to him in the combat of the preceding night was one from which he might not hope to emancipate himself lightly.

And yet perhaps at that moment not one of those that crept round the opposite pillar of the portal to avoid the "fiar-fiend," or stopped to gaze fearfully back at the giant leaning on his long bladed glaive, had a heartier hatred than the man himself for the scenes of riot among which he had lately lived. Even then he was cursing the strange fate that seemed to have made violence the precursor of his birth and the rule of his life. His mother, the only surviving child of the Lord Deputy, was affianced to the Vice Minister of State when, as a girl of fifteen, she went to return thanks at the shrine of Kumano for her recovery from an illness contracted the preceding autumn during a midnight vigil at the temple of Tenjin. While she knelt before the altar the Lord Abbot came in, and seeing a face justly accounted one of the most beautiful in the empire, sent a body of armed friars who stopped the girls' equipage on her return journey, and putting her escort to flight, carried her back forcibly to Kumano. Then followed the attack upon the fane directed by the Lord Deputy himself with seven thousand spears—an attack which was repulsed by the cenobites after many hours of hard fighting—and then, the intervention of the nobles, at whose instance the Minister consented to surrender his intended bride to the abbot. Of this union between a prelate of sixty-five and a child of fifteen, Benkei was the offspring; Benkei born with teeth and hair and the limbs of a two year old boy; for which monstrosity its father conceived such an aversion, that he would fain have cast it into the river. Thus tolerated rather than loved, the lad grew up, not unhappily indeed, for his nature was too sunny to be easily clouded, but always at cross-purposes with the world. Increase of restraint was the only remedy ever conceived for his increasing vigour, until as a last and crowning error he was placed at a monastery, where he garnered some learning but above all illimitable contempt for the conventionalities born of hypocrisy and broken by expedience. With the trammels of priestcraft he necessarily severed

the slender links that attached him to his family, and following since then the wayward promptings of a restless energy, he found himself at last without one honest friend in the present or one noble purpose in the future. And yet the man was dowered with sympathy as large and a heart as generous as the best of those that whispered words of indignity and pointed the finger of scorn at the sword robber, who had come to desecrate the portals of the Goddess of Mercy.

Benkei then, casting up the injustices of the past and the wrongs of the present, found the sum so heavy that an unwonted cloud began to trouble his clear vision, and a bitterness of wrath made him for the moment fiercely glad to be at variance with his fellows. If the thousandth sword was to be won that night, the last entry in the recording manuscript would surely differ much from its predecessors.

Did some such thought as this occur to the man, as he raised his head from his reverie, and looked round half angrily on the crowd? If it did, another influence immediately banished it; for at that moment the notes of a flute began to be audible among the patter of the passers' feet.

Whether of mellow softness or of ringing purity, the flute's voice had some charm that made it impossible to doubt the musician's identity. Benkei recognized the sounds at once, and to his angry mood they recalled the memory of one at whose hands he had received his first defeat. He was no longer disposed to be mirthful over the fashion of that victory, nor even to discern between the cause and the fact of his discomfiture. Aggressor or aggrieved an insult remained to be avenged, and the only concession he made to his conscience was to be glad that his own contrivance had not furnished this occasion.

As for the wayward people, the novelty of such an element in their day's amusements, apart from its excellence in this particular instance, would have sufficed to attract their attention. Genuine drifters for the nonce upon the current of vagary and chance, they were ready and willing to be absorbed into every eddy of diversion however feeble the attraction it exercised. Thus, as the flute-player came along with the sinking sunbeams peeping under his wide-brimmed hat and lending strange tints to his white surcoat, his progress was accompanied not by the strains of his own music alone, but also by the murmur of an inquisitive crowd that followed his footsteps.

Benkei had some fear lest the inception of the sterner part he desired to take in this incident might be rendered difficult by the intervening concourse. He accordingly moved out from the pillar against which he had been leaning to the middle of the portal, and drawing himself up to his full height, became at once an object that ran little risk of being overlooked.

Nevertheless, though his sudden craving for resentful action had engendered a determination to improve this opportunity at all hazards, it was by no means easy to devise a method of attaining the desired end without adding to the obloquy he already found so irksome. To pursue his wonted role of spoliation at such a time and in such a place would be to offer a public justification of the ignominious title he had earned, while to strike an unexplained blow might warrant a still fouler addition to his ill-fame. Above all, the comparison that must inevitably be drawn between the physical capacities of two such opponents as the giant friar and the graceful lad, could not but excite universal sympathy for the one and indignation against the other. Men might not discern that the consciousness of this disparity was a sense bitter enough to paralyze half the giant's powers. They might even accredit him with the disloyalty of rejoicing in his advantage and so, exonerate his victory no less than they would welcome his defeat.

It appeared so impossible to resolve those doubts or remove these prejudices that Benkei was conscious of a momentary inclination to abandon the essay altogether. But he had an inexplicable conviction that his presence was already known to the flute-player, and strangely enough, it seemed harder to do anything that might excite a suspicion of paltriness in his youthful enemy's eyes than to brave the worst inference his conduct might inspire among the multitude. He therefore stood in his place, irresolute but immovable, and the people streaming away to the right and left as they approached him, the space that separated

him from his still carelessly advancing enemy became presently no wider than the range of his long glaive.

At that moment, however, the flute-player arrested his steps. He could not indeed have continued his progress any farther without almost colliding against the huge body of his late adversary, to whose presence, however, neither his halt nor the proceedings that immediately followed it seemed to have any conscious reference. So far as concerned the disposal of his flute, and the knotting of a silk cord across his breast to confine the sleeves of his surcoat, the method and deliberation of his actions constituted an accurate rehearsal of the scene at the fane of Tenjin on the preceding evening, but it was only when these preliminaries were completed that their purpose became at all intelligible to the bystanders, for it was not till then that, pushing his large hat back over his shoulders, he looked up smilingly at the giant in the portal, and with a slight token of recognition, said:

"So then, the anticipations I formed at our last meeting are fulfilled. This is certainly speedier good fortune than I could have hoped."

Benkei experienced a sentiment of astonishment that almost amounted to consternation at the composure of his speech. Was there here also some close-grained baulk to to entrap his point or airy perch inaccessible to his clumsy limbs? Something there must be other than mere miraculous hardihood or self-confidence, and tormented by this suspicion, instead of replying to the other's greeting, he found himself looking vaguely round in search of the source of his pigmy opponent's assurance.

"What do you seek, Benkei?" enquired the latter in the same bantering tone. "I should have thought that the object of your quest to-day would have been retaliation, but you scarcely suggest the idea of a man who sees himself within arm's length of his desire."

Benkei was by no means in a condition to suffer a gibe patiently. Neither was he dispassionate enough to remember that the same reason which prevented his own forbearance must operate not less, nay perhaps even more, powerfully with his adversary. He was only conscious that to the injury of defeat was now added the insult of a sneer, and that whatever his own inclinations might be, his enemy did not hesitate to show that he was determined to provoke a combat.

"You mistake me, young gentleman," he said. "I was indeed in some doubt whether my sword might be unsheathed without shame in this quarrel, seeing that there is nothing at hand to succour your disadvantage, but I owe you a debt that I would fain pay even at the cost of some self respect. Take your stand therefore, and look for nothing at my hands save what you can earn with your own."

"Trouble not yourself about the strength of your stroke or the weakness of mine, Benkei," replied the other as he drew his sword from its scabbard and fitted the hilt firmly to his fingers. "Such prefaces can only mar the merit of your own success and magnify that of your adversary. Fall to therefore, so soon as you please, but take heed that you serve not some of your neighbours after the fashion of the post at the font of Tenjin."

The caution seemed a needful one, for up to this point the chief actors' performance had so little resembled that of men on the eve of mortal combat, that the people, pressing close on either side were intently watching the two men's demeanour and listening eagerly to every word they uttered.

But the very first sweep of Benkei's ponderous glaive seemed to generate an impulse that drove the gaping citizens back in all directions, with such scared haste that not a few stark strokes had been dealt and parried before the audience found leisure for comment or applause. The giant Benkei, exhausting all the resources of sagacity and strength in the management of his favorite weapon, and fighting with the dogged, sombre fury of one that neither expects nor extends mercy, was in truth a spectacle for which experience and hearsay alike failed to produce a parallel. Gifted with that large excess of muscular force which distinguishes the paragons of power and agility in the animal kingdom, enabling them to attain prodigious effects by means of the pettiest apparent efforts, it resulted that to whatever exercise of prowess he adapted his mighty throws, every motion seemed to tell less of the vigour

that inspired it than of the reserve that controlled it. He never appeared to approximate to the acme of his energies, much less to attain their limit, and this suppressed potentiality at once displayed a portrait of easy grace and afforded a promise of infinite endurance. Thus even those whose technical knowledge did not extend to a due appreciation of this display, could not but be struck by its abstract excellence, and as it gradually became evident that the skill of the combatants needed small space for its exercise, the spectators drawing closer and closer, began to indulge in comments on the conduct of the contest or speculations as to its issue.

Both the men were as yet scathless, but this fact was plainly attributable to a different cause in either case. Benkei for his part fought with a most unwonted lack of temperance and an exercise of muscle he had never before found necessary, but he might as well have essayed to cut down a Will-o'-the-wisp as this agile adversary, who disdainingly to notch his blade by foil or parry, eluded the darts and sweeps of the giant's long glaive by a series of extraordinary manoeuvres that elicited murmurs of astonishment from the multitude. Now a backward spring placed him far beyond the weapon's range, now a forward bound carried him well within the circle of its effect, and more than once he flew by Benkei's shoulder, touching him with the hilt of his sword as he passed. Thus if the one found safety in his own skill, the other evidently owed his preservation to his opponent's forbearance, and in this lay the chief wonder of the thing, for since the flute-player had rather invited than avoided the combat, to what possible cause might his present clemency be attributed?

On Benkei himself, the consciousness that for all his superior age and strength he was receiving quarter and giving none, soon began to produce a paralyzing effect. His blows, erring in their aim, became less and less dangerous, while his air of resolute purpose was exchanged for one of trouble and bewilderment. This was indeed the consummation of his humiliation; a consummation so bitter, that it wrung from the strong man a groan all the more passionate in that it was without precedent.

It was for this moment apparently that the other had been waiting: the moment when his adversary should become completely convinced of his own inferiority. Simultaneously with his expression of despair Benkei lowered the point of his glaive, and before he could raise it to avert the danger of whose approach he was dimly conscious, his miserable adversary had leaped swiftly behind him and thrust his sword deep into the giant's side close under the left arm.

Benkei reeled perceptibly as he wheeled round to face this sudden attack, but though the ground about his feet was presently stained with blood, he seemed to feel no inconvenience from his wound. His was in truth one of those natures that are roused by deadly hurts to more relentless ferocity, and if his strong skill had been dangerous, the fierce fury he now displayed might well have appeared irresistible. The silence of awe fell upon the spectators. Scenes of violence and bloodshed were not novel in those days of faction feuds, but whatever of baleful turmoil citizen or soldier had hitherto witnessed neither might placidly endure to anticipate the horror of shred flesh and shorn limbs that must result from the success of such strokes as Benkei was now dealing.

The glaive however, wielded with more wrath and less wariness, did not by any means find its mark of easier access than before, nor was Benkei's antagonist at all perturbed by the ferocity that seemed so appalling to the onlookers. He certainly evinced an increased watchfulness but it was directed not to Benkei's onsets so much as to the condition of the wounded man himself, who to the surprise of all neither staggered nor fell, though each vigorous sweep of his glaive sent the drops of gore flying almost into the faces of the bystanders.

At length a desire to terminate the contest seemed to visit both men simultaneously. Benkei, shortening his glaive and grasping it with a grip of iron, hurled himself desperately on his foe, just as the latter crouched for a spring which should bring him to close quarters; but what trick of fence or marvel of promptness this concurrence of design elicited, it was impossible to determine, for the spectators only knew that they presently saw a shower of

heavy blows from the flat of his opponent's sword rain in rapid succession upon Benkei's head: saw the giant stagger—raise his hand to dash away the rushing blood that blinded him, and then fall to the ground in an extremity of prostration that showed how long his will had battled with his weakness.

The victor, instead of abandoning his foe to whatever succour chance or friendship might afford, knelt down and raising the prostrate man's head, look compassionately in his face.

"It is a pity to see such an one laid low, master," said one of the spectators coming forward, "but if my opinion be worth anything there's not another blade in Ki-yoto could have brought about what yours has wrought to-day."

"It is in truth a pity, as you say," replied the other looking up eagerly at the speaker; "but if you words be not idle, help me I pray you to mend what I would fain have done more gently."

"That will I, master," was the answer, "and the more readily since what you ask falls within the practice of my own art. I think we shall do best to examine the first wound at once, for if I mistake not, it has more to do with this faintness than any of the blows that followed it."

So saying he ripped open Benkei's doublet and laid bare the orifice of a deep gash, which however proved to be more formidable than perilous, for the sword, taking a fortunate direction, had passed under the shoulder blade and out through the muscles of the back. Some rolls of soft paper and a skillfully applied bandage soon sufficed to stop the bleeding, and after Benkei's head had been two or three times laved with water, he opened his eyes and looked dreamily about him.

Strangely enough, instead of exhibiting either sullenness or resentment when he became conscious of his condition and circumstances, the glance that fell upon his adversary's face was full of admiration and contrition. The man was generous enough not only to acknowledge his defeat, but even to love the prowess that had subdued him.

"I think you are not one, Benkei, to need any excuse for what has happened," said Yoshitsune, whom the reader will have already recognized, "yet I would not have you think that I have acted in this matter without a purpose. Do you yield to me now, and promise me your fealty, so long as I may claim it without forfeiture of honour?"

"I do promise," replied Benkei stoutly, "and right glad am I to have found such a master."

At that moment Saburo arrived. He had evidently heard the details of the encounter at the fane of Tenjin on the preceding evening, for he expressed no surprise at either the evidences or the results of this new fray. The two men then helped Benkei to rise and supported him as he made his way slowly and painfully home, where he was received with anything but a comfortable welcome by his old attendant.

If habit and a naturally easy temper enabled Benkei to endure this virago's invective in silence, it was not so with his new friends. Saburo took her roundly to task for her shrewish utterances, and told her that whether her advice had been well or ill-judged her present intemperance proved that she was never worthy of much credit. The rebuke was well merited and not too harshly administered, but if Saburo could have foreseen its consequences, he would have cut his tongue out ere it did him so false a service.

It may well be supposed that Benkei's wonderful armoury not a little excited his visitors' surprise and curiosity, more especially when they heard how purposelessly and at what risk it had been furnished.

"And yet," remarked Yoshitsune, "I ought to be right glad that you harboured such a strange fancy, else perhaps I had never won the services of the strongest arm in the five provinces."

"May it earn more praise under your direction than it has hitherto under my own," answered Benkei. "When a man has the misfortune to carry a double burthen of flesh and bone, he is apt to trust more to the weight of his arm than to the suppleness of his wrist, and, by my faith, you have taught me to-day that I am likely to merit more mirth by my bungling than worship by my skill."

"Not so, Benkei," cried Yoshitsune warmly. "If I came off scathless 'twas not because the peril was small,

for I tell you fortune can never be kinder to me nor death nearer than they both were to-day."

"And I say, Benkei," added Saburo, "that though I have seen our young master but once at the work, I dare swear he will never find his match in fair fight; yet none the less had I known he was destined to-day to be the thousandth opponent of one hitherto without a conqueror, I should have put my wits to some rough usage ere I suffered him to visit Kwannon alone."

Benkei, who evidently found these eulogies more irksome than consolatory, changed the subject abruptly by enquiring how his name had come to be known to Yoshitsune before their meeting that evening.

"Your name is more easily discovered than concealed," replied Yoshitsune smiling. "The hero of a thousand exploits must needs be the mover of many tongues. But I understand your question. You would ask me rather, whether my conduct towards you to-day was not influenced by something more than the mere accident of our encounter. I reply that it was. Had we not met by chance, it was my purpose to seek you, for I judged that the gain of such an ally would be no small step in the work I have to do."

"You discern indeed the chief part of my thoughts," said Benkei, "for your promptness in crossing blades to-day had perplexed me not a little, and I am right glad to know that I must needs have fought, even though I had less stomach for the fight. But there is still a point on which I would fain seek information. If I mistake not you said last night that our quests were similar though of different aim. Is it possible that the proceeds of my vagaries may in something serve your purpose yet?"

"I would they might," Yoshitsune answered, looking round the countless racks with an expression of concern that was reflected on Saburo's face. "I spoke truly when I said our quests were alike, but I fear me your thousand blades have cost you less pain than the one sword I seek seems likely to give me."

"It is so in truth," said Saburo, replying to Benkei's gaze of astonishment. "I cannot see the loss in abandoning a purpose that only holds by a self-imposed engagement, but I can see plainly enough that we are walking into a trap with our eyes open."

"The fact is," explained Yoshitsune, "that I have promised, somewhat rashly perhaps, to obtain possession of a certain sword within a certain time. Saburo is very positive that my promise, was extracted by an enemy's subtlety, and that the quest being impossible was only designed to keep me from more profitable action. It may be so, but none the less it shall not be said that I set my promise lightly aside. I have ascertained beyond doubt that up to a few months ago, the sword was certainly in one of the two temples Nei indicated, but though I have searched unceasingly, I cannot discover to what fane it has been since removed. Meanwhile there is much else that I have little heart to leave undone, so that I am well nigh constrained to choose between being profitless and forsworn."

"If that be so," returned Benkei eagerly, "why not abandon the quest to me for the nonce? Though I lack skill, I have the advantage of habit. It is little likely that I shall find my path barred by such another blade as yours, and with a better purpose I may fairly count on no worse success than I have had hitherto."

"I am much tempted to follow your counsel," said Yoshitsune after a moment's reflection, "though whatever confidence I feel in such a substitute, I may not consent to abandon the quest altogether myself. For the present, however, you will do me no common service by undertaking the search. At the same time I can give you no clue for your guidance, other than an unconfirmed statement that the sword was at one time under the guardianship of the abbot of Kwannon, and the ascertained fact that it was removed from the fane of Tenjin at the fall of last year."

"That explains your visits to the two shrines," remarked Benkei, in whom Yoshitsune's last words had produced an agitation he evidently found difficult to master. "But you have omitted to give me the most important indication of all: the description of the sword itself."

"That is easily done," replied the other, "for the blade is no other than the 'Raven,' which my grandfather, Tamoyoshi, had made on the model of the celebrated 'Beard-divider.'"

Benkei remained silent for a moment. He had leaned forward so as to conceal his face while Yoshitsune spoke, and when he looked up both his hearers found their hearts stirred to involuntary mirth by the strong light of laughter that shone in his cheery countenance.

"How long do you give me to achieve the quest?" he enquired carelessly.

"You speak as though its accomplishment were a certainty," Yoshitsune replied. "Say rather yourself how long you require, if indeed it be a question of time at all."

"Saburo," said Benkei, "lend me a hand, will you. This scratch has stiffened my joints a little, and I think I can find something that will speak more truly than my own voice in this matter."

So saying, he limped across the room with Saburo's assistance, and taking down from one of the highest racks a sword more carefully bestowed than any of its fellows, carried it back, and laying it across his knees, began slowly to unfasten the silk case that enveloped it.

"One night last winter," he said while so employed, "I was on my way home from a visit to Kumano, when I saw a man descend the steps leading from the fane of Tenjin. I should not have paid any heed to him had I not recognized, as he rode past, one of the most ill-famed of Kiyomori's spies and a man from whom I had already had the gratification of rescuing a blade much too honest for such a knave. He was attended by four men on foot, and I observed that he carried in his hand something like a sword wrapped in brocade. He was, however, riding at a round pace, so though I was strongly impelled to follow, I gave up the idea and was about to resume my way when I saw his horse stumble and roll over on the frosty road. I was up with him in a minute and took from him the sword you see in my hand now. That it was a prize I felt pretty certain, for though a very craven, its owner made a reasonably stout opposition before he consented to part with his charge. So I carried it very carefully home and proceeded to examine it. The first peculiarity that struck me was an appearance of injury to the hilt in the neighbourhood of the rivet; just such an injury as might have been caused by the celebrated exploit of the 'Comrade-cutter.' I did not of course draw any certain inference from that appearance alone," continued Benkei, pausing to watch the breathless excitement of his auditors: "an old sword will generally show marks of wear about the rivet, but when I saw that the blade was such a master piece of forging as I had never before conceived possible and when, taking off the hilt, so, you see, I found that there was carved upon the hilt—"

"What? what?" cried Yoshitsune and Saburo in a breath, for Benkei had purposely turned the tracing downwards.

"A raven," shouted Benkei, all his hardly suppressed exultation bursting forth at once: "a raven and your grandfather's name and the name of the man that forged it by his orders; when I saw all that, I said that I had found something which should one day stand me in good stead, and I say now that if any one pretends my fancy has been fruitless, I will refute the libel with this very blade on his body!"

(To be continued.)

SPECIAL DOUBLE ACROSTIC.

Our sails are set, the anchor's off the ground,
Head yards a-box, the ship turns slowly round,
But ere we fill, we'd breathe a kind goodbye,
With moistened corner of the weather eye.
Adieu kind hearts, fair forms, and slender waists,
With varied charms to suit the varied tastes;
Adieu to all, most have been more than kind,
Stamping a grateful impress on our mind.
And now we're homeward-bound across the main,
We fondly hope we yet may meet again;
Friendship is sweet, and we would not destroy
Those associations without alloy,
Which float around our peaceful sojourn here,
And tempt us now to drop a parting tear.
Adieu once more, and may your future be
All peace, love, health, and much prosperity.

1.

Starboard fore brace! we're off, so fill away,
Again to plough the waves down Yedo bay.

2.

"Remember me," this favour we would ask,
We hope you'll find it no unpleasant task,
Your kind response is echoed from the shore,
We've heard those cheering notes at sea before.

3.
Acknowledgment is due, we do not fail
To make obeisance with our upper sail.

4.
My last light's like my life, so full of scenes
Of varied sorts, 'tis simply this it means.

FUJITAMA.

DOUBLE ACROSTIC.

These are the garments our first parents wore,
We know not whether they were green or yellow,
But since historians are apt to call
The period when they were used the fall,
We shouldn't wonder if they'd been long in store,
And their greenness had got rather mellow.

1.
Found in Thibet as well as in Peru,
The one has four legs, t'other has but two.

2.
Phonetic reading of an ever-green,
If you are sharp you will at once be seen.

3.
The bearded soldier and the smooth faced boy
As mimic warriors here are wont to toy,
And from its precincts British troops deploy.

4.
Love for curios is pronounced a taste,
At once refined, commendable and chaste.

5.
In this light I've simply made an error,
Your forgiveness I implore with terror.

6.
A brief period bound to pass away,
And yet is ever in the present day.

BLACK.

WHITE.

White to play and mate in two moves.

W.H.S. and Q. correct, but the second and third moves discovered were not intended by the author; the problem is therefore rearranged as a two move.

METEOROLOGICAL REPORTS

FOR WEEK BEGINNING FRIDAY, OCTOBER 24TH, 1879.

Observatory of Daigaku, Moto-Fujimicho, Hongō, Tokio, Japan.

REMARKS.

Heavy line represents Barometer.

Light Continuous line—max. & min. Thermometers.

-----represents velocity of wind

.....percentage of humidity

Max. velocity of wind 12 miles per hour on Monday, 10 a.m.

The barometer is reduced to the freezing point and to the level of the sea.

A heavy rain fell during Monday of this week, amounting as will be seen to 2.18 inches. The rain of Sunday night, which was evidently the beginning of the storm, taken with this makes a total of 2.66 inches for the week. Since that time the barometer has steadily risen and the percentage of humidity fallen, and the weather has been decidedly fair. The maximum temperature for the week is 72.5 degrees, and the minimum is 41 degrees.

MISCELLANEOUS.

W. & A. GILBEY'S WINES AND SPIRITS.

W. & A. GILBEY have special facilities for carrying on an extensive Foreign Trade, having held for many years in their Excise Bonded Stores, for the purpose of their Home Trade, a stock of not less than 12,000 Casks of Wines and Spirits, which are equally available for Export. These stores are by far the largest private Duty Free Warehouses in the World, and are under the supervision of a staff of Excise Officers specially attached to these Warehouses.

THE EXTENT of W. & A. Gilbey's purchases enables them to give the best VALUE to the public, as a twentieth part of the Foreign Wines consumed in the United Kingdom is supplied from their stock. In the year 1876 W. & A. Gilbey paid duty on 1,881,049 gallons of Wines and Spirits, and the average quantity bottled and sent out by them daily was 3,050 dozens or 36,600 bottles.

QUALITY is guaranteed by W. & A. Gilbey, and is the same whether the Wines or Spirits are obtained direct from their Head Establishments or from any of their Agents. The purity and genuineness of every article in this list are guaranteed in accordance with Act of Parliament, 38 and 39 Vict., Cap. 63.

W. & A. Gilbey have always adhered to the *standard* of Bottle Measure recently recognised by the Government, namely—

6 bottles contain one gallon; 12 half-bottles contain one gallon.

SECURITY is ensured to the purchaser, each bottle bearing W. & A. Gilbey's seal and label guaranteeing *quality* and *measure*, and the *strength* also in the case of Spirits.

W. & A. Gilbey's Head Establishments:—

England.—(Offices) Pantheon, Oxford Street, London; (Warehouses, Duty Paid) Oval Road, Camden Town, London.

Ireland.—(Offices) Upper Sackville Street, Dublin; (Warehouses, Duty Paid) Upper Sackville St., Dublin.

Scotland.—(Offices) Haymarket, West End, Edinburgh; (Warehouses, Duty Paid) Haymarket, West End, Edinburgh.

France.—Principal Establishment, Chateau Loudenne, near St. Estephe, Medoc.

Excise Bonded Stores.—Warehouses, Nos. 1 to 5, North-Western Goods Station, and Bouny Street, Camden Town, London.

Distillery.—James Street, Camden Town, London.

Printing Department.—Poland Street, Oxford Street, London.

NOTICE TO MARINERS.

No. 1 of the 12th Year of Meiji, (1879.)

KODO NO SIMA BUOY.

AOGI SETO, INLAND SEA.

THE GOVERNMENT OF JAPAN hereby give notice that a Buoy has been moored to mark the sunken rock north of Kodono Sima in the Aogi Seto, the northern passage between Misima Nada and Bingo Nada.

The Buoy is moored immediately to the northward of the rock, in $4\frac{1}{2}$ fathoms of water at low water; on the highest point of the rock, which is of very small area, there is only 10 feet of water at low water of lowest spring tides.

The Buoy is painted Black and white horizontal bands, and surmounted by a cage which stands 10 feet above the water.

The following bearings are taken from the Buoy.

Centre of Karasima (Single tree)...N. $41^{\circ} 15'$ W.Eastern extreme of Matsn Sima.....N. $37^{\circ} 45'$ E.Eastern extreme of Kodono Sima....S. $1^{\circ} 15'$ E.Bearings true. On the English Admiralty chart No. 132, $2\frac{1}{2}$ fathoms is given as the shallowest water on the rock.

COUGHS,
ASTHMA,
BRONCHITIS,

ACCUMULATION OF PHEGM.

Composed of the purest articles. These Lozenges contain no opium nor any deleterious drug, therefore the most delicate effect can be taken with perfect confidence. Their beneficial effect is speedy and certain. The old unailing family remedy is daily recommended by the most eminent Physicians. (In use nearly 60 years).

MEDICAL TESTIMONY.

July 25th, 1877. 22, Cold Harbour Lane, London.

Sir,—Your Lozenges are excellent, and their beneficial effects most reliable. I strongly recommend them in cases of Cough and Asthma. You are at liberty to state this as my opinion, formed from many years experience.

J. BRINGLOE, M.R.C.S.L., L.S.A., L.M.

Indian Medical Service.

Mr. T. KEATING,

Dear Sir,—Having tried your Lozenges in India, I have much pleasure in testifying to their beneficial effects in cases of Incipient Consumption, Asthma and Bronchial Affections. I have prescribed them largely, with the best results.

W. B. G.—, Apothecary H.M.S.

KEATING'S COUGH LOZENGES are sold by all Chemists, in bottles, of various sizes, each having the words "KEATING'S Cough Lozenges" engraven on the government stamp.

KEATING'S WORM TABLETS,

A PURELY VEGETABLE SWEETMEAT, both in appearance and taste, furnishing a most agreeable method of administering the only certain remedy for **INTESTINAL or THREAD WORMS.** It is a perfectly safe and mild preparation, and is especially adapted for Children.—SOLD IN BOTTLES BY ALL CHEMISTS.

Proprietor, **THOMAS KEATING, London,**

Export Chemist and Druggist.

THE GREATEST

WONDER OF MODERN TIMES!

HOLLOWAY'S PILLS.

Persons suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

Sir SAMUEL BAKER,

in his work entitled "The Nile Tributaries in Abyssinia," says, "I ordered the dragoman Mahomet to inform the Fakay that I was a Doctor, and that I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as possessing unmistakable purgative properties they create an undeniable effect upon the patient, which satisfies him of their value."

SIMPLE, SAFE AND CERTAIN!

HOLLOWAY'S OINTMENT.

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

Mr. J. T. COOPER,

in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls, butter, and horse-feed poured in upon us, until at last a ten-spoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining stock."

Sold by all Chemists and Medicine Vendors throughout the World
May 17th, 1873. tf.

"HIGHEST AWARD & PRIZE MEDAL PHILADELPHIA
EXHIBITION, 1876."

**OAKEY'S
WELLINGTON KNIFE POLISH**

PREPARED EXPRESSLY FOR THE PATENT KNIFE-CLEANING MACHINES, INDIA RUBBER AND BUFF LEATHER KNIFE BOARDS. KNIVES CONSTANTLY CLEANED WITH IT HAVE A BRILLIANT POLISH EQUAL TO NEW CUTLERY. PACKETS 3D. EACH; AND TINS, 6D., 1/-, 2/6 AND 4/- EACH.

**OAKEY'S
INDIA RUBBER KNIFE BOARDS**

PREVENT FRICTION IN CLEANING AND INJURY TO THE KNIFE. OAKEY'S WELLINGTON KNIFE POLISH SHOULD BE USED WITH HIS BOARDS.

THE MIKADO'S BIRTHDAY.

THE anniversary of a Royal Birthday is an event of importance in every country. Widely different, however, are the feelings with which the person of the sovereign is regarded by his subjects in the various countries of the globe. In some the sovereign is a kind of inaccessible divinity. His word is law, his most faintly expressed wish a command and to the great mass of his subjects he is rarely visible. In fact, he is only a shade better than the monster of whom Uhland writes:—

*Denn was er sieht ist Schrecken
und was er blickt ist Wuth
Und was er spricht ist Geissel
und was er schreibt ist Blut.*

In others the monarch is simply the head of his people, is responsible for his acts as much as the meanest of his subjects, and governs, or is supposed to do so, more by love than by coercion. Thibet stands out now as the great representative of conservative despotism, while our own England may be taken as an illustration of a country where the sovereign is as one of the people. But in all lands,—on the shores of the Bosphorus equally as in the heart of Peking, where as yet the rough hand of democracy has not stepped in to pluck the crown from the monarch's head to the cry of Liberty, Fraternity and Equality,—the day on which the eyes of the sovereign first opened in baby wonder on the beauties of creation is held sacred by the people whose loyalty he holds.

The march of civilization is fast bringing the world to the same level, and differences of creeds, of manners and institutions, are rapidly becoming merged one into the other. Japan could not resist the progress of events, and the Treaty which gave the Americans access to the harbour of Shimoda opened what to the excited imagination of the beholders seemed a fairy-land to the bewildered gaze of the world. She is now undergoing the same levelling process which other countries have gone through before her, and the most startling of the

changes which she has undergone is undoubtedly that which has effected the position of her monarch. By a metamorphosis as sudden and bewildering as any incident in the "Arabian Nights' Fables" the Mikado emerged from a position something analogous to that of the Grand Llama of Thibet and presented himself before his astonished subjects as a constitutional sovereign. The religious awe in which he was formerly held was thus at one stroke destroyed; and it is probably within the power of no man to analyse the feelings with which he is at present regarded by the nation at large.

If the shade of honest old Kämpfer, whose narrative of Japan we are happy to think will live when works of greater literary pretension—and, must we say it, stricter accuracy,—are forgotten, could revisit the scene of the good doctor's experiences in the past, Japan would certainly create as much wonderment as ghostly senses are capable of realizing. Amongst the many quaint and instructive incidents of that work few will compare with the description of the audience which the "Ambassador," as Kämpfer calls the Director of the Dutch Factory at Deshima, obtained of the Shōgun:—

"The Hall of Audience" he tells us "consisted of several rooms looking towards a middle place some of which were laid open towards the same, others covered by screens and lattices. Some were of 15 mats, others of 18, and they were a mat higher or lower according to the quality of the persons seated in the same. The middle place had no mats at all, and was consequently the lowest, on whose floor covered with neat varnished boards we were commanded to sit down. The Shogun and his Royal Consort sat behind the lattices on our right." And before being allowed to sit down—Kämpfer and his companions were ordered "to make their obeisances after the Japanese manner, creeping and bowing their heads to the ground towards that part of the lattices behind which the Emperor was."

After describing, with a tinge of resentment in his tone which the recollection of such indignities probably prompted, the humiliating manner in which the 'Ambassador' crawled on his hands and knees to a place shown him between the presents, ranged in due order on one side, and the place where the Emperor sat on the other; then still kneeling, bowed his forehead quite down to the ground and crawled backwards like a crab without uttering a single word—he says:—"The audience is otherwise very awful and majestic by reason chiefly of the silent presence of all the Counsellors of State and also of many Princes and Lords of the Empire, the gentlemen of His Majesty's Bedchamber and other chief officers of his Court, who line the hall of audience and all its avenues, sitting in good order and clad in their garments of ceremony."

It is hard to believe that we are in the Japan of Kämpfer's History. Nobody with the least regard for veracity would venture to designate any Japanese ceremony of the present day as either specially "awful" or "majestic." Such certainly was not the characteristic of the generous entertainment given by His Excellency the Foreign Minister, on the evening of the anniversary of the Mikado's Birthday. It is not surprising if the sudden transition from the respectful awe with which

the most petty officer in the feudal times was clothed in the popular eyes to the familiar deference paid to the Japanese dignitary of to-day, should jar painfully even on the susceptibilities of foreigners, who out of their own country are not called upon to feel any particular sympathy with the glories of a departed age. And some such feeling may be excused in a stranger who, passing along the street which faces the scene of the entertainment of last Monday, and enquiring of a bystander the reason of the lighted stalls which bordered the thoroughfare, offering to wayfarers the usual temptations of a nightly fair,—was informed that the pedlars of the neighbourhood were attracted to the spot by the spectacle of "Honorable Dancing!"

What, however, the entertainment at the Engineering College lacked in point of majestic splendour was compensated for by its cordiality and gaiety. The graceful device of the chrysanthemum shone over the entrance to the grounds and thousands of gaily colored lanterns, arranged with that taste for which the Japanese are always conspicuous, greeted the eye in every direction. Entering the building the visitors found the same taste shown in the simple yet effective decorations of the Main Hall, and if there was an absence of variety in the costumes of the Japanese dignitaries and unofficial guests, the uniforms of foreign officers and the dresses of the ladies gave an agreeable colouring to the scene. The reception was enlivened by the music of two excellent bands, a magnificent supper was provided in an adjoining hall, and a brilliant display of fireworks afforded entertainment to the crowds of spectators in the neighbourhood who had been disappointed of admission to the grounds. Some of the guests indulged in dancing, but it is a question if this was intended to form part of the evening's programme, and the early departure of the visitors from Yokohama hastened the conclusion of the entertainment.

Entertainments of this kind, in which official stiffness is tempered by social goodwill, have been very frequent of late and are doing much to promote a cordial feeling between Japanese and Foreigners resident in this country. Diplomacy's great field in Europe is in social circles, and the furtherance of social intercourse between the people of Japan and the subjects of Foreign Powers is, we are convinced, a more effective means of allaying the East and West than all the friendly platitudes of diplomatic correspondence.

THE MEMORIAL OF THE TOKIO CHAMBER OF COMMERCE.

THE report of the Tokio Chamber of Commerce on Treaty Revision must in every way be considered a creditable document. In an article in this Review several weeks since, we took occasion to refer at length to the former condition of Japanese merchants. Until ten or fifteen years ago the combined action of all the merchants would have carried no political weight or significance with it and their social status was that of the lowest among the lowly, inferior even to the artisan and mechanic. Considerations for trade and industry formed a very unimportant factor in the eyes of those who governed the nation, and the feudal character of the Government which divided province from province, and allowed a separate autonomy to each in all matters not affecting the Shōgun's arrogated authority, made of the merchants what the Jews were in the middle ages in Europe,—petty traders, whose only aim was pecuniary gain. National pride and considerations for the national weal and woo were then confined to those who despised the whole mercantile class and no broad, liberal views as regards their vocation could therefore actuate the latter. Every province boasted of a few rich successful

merchants, some of whom had many branch establishments in other parts, but throughout the whole of the empire there could be seen none of these exponents which show that trade has a national character: no insurance, no statistics (other than for duties), no mercantile law, no chambers of commerce, no joint stock companies and, as far as we know, no large business corporations whatsoever deserving of the name. The treaties made with foreign nations naturally caused trade and industry to become an important element for the consideration of statesmen, and apart from other unmistakable signs, the memorial of the Tokio Chamber of Commerce shows that the merchants themselves are now acquainted with the principles of national economy, and have studied its doctrines and its bearing upon their calling as well as upon the state at large.

The Chamber's request that the Import duties should be increased is a perfectly natural and legitimate one. This Review has never been an advocate for "protection" in its extreme sense, but upon economic grounds, for the purpose of revenue and to equalize taxation, it cannot be denied that a moderate increase of the present duties on Imports is not only justifiable but is fairly needed. It must be borne in mind that until about ten years ago nearly all the taxes paid to the state were paid by the agricultural classes. The report of the Chamber shows that to cultivate one's paternal acres was considered almost a sacred duty in Japan, and partly for this reason, partly also, because under the old regime no other calling was open to him, the peasant went on from year to year tilling the soil, reserving for himself only a bare, often a miserable, existence, and paying out the rest as taxes. At present, however, neither the force of tradition and usage, nor the impossibility of changing his vocation oblige the farmer to be chained to the soil; furthermore, the change which has made itself felt everywhere else has also affected him, and this, together with the greater amount of liberty which he generally enjoys, causes him to give due expression to his dissatisfaction at taxes which are light compared to what he had to pay in former years. The report of the Chamber draws attention to this, but the Government has been aware of it and has even acted upon it long ago; it has reduced the direct taxes on the farmer and has, instead, imposed indirect taxes, conforming itself in this regard to the habits of western nations. Indirect taxes mean that, instead of taxing the incomes of the people, the articles on which the income is spent are taxed. The consequence is that the price of these articles is thereby raised and as, in Japan, indirect taxation was imposed not only to partly take the place of direct taxation but also to cover the increased expenditure which Japan's altered status has rendered necessary, the price of all articles has risen considerably. To counterbalance these indirect taxes, a correspondingly higher duty should be laid on imports, for these imports being subject only to the same tax that they were in former years when no indirect taxes were levied, naturally pay no part of the increased taxation which falls altogether upon the home made articles (saké, tobacco, &c.) It is not to be wondered at that Japanese merchants should be alive to this inequality in the fiscal system and their memorial proves that they feel it deeply. The figures which they bring showing that while some other Governments collect from ten to sixty per cent of their gross revenue by means of their tariff, while in Japan, less than six per cent are collected from this source, are sufficiently suggestive.

With regard to the duties on exports, the view of the Chamber that they should be taken off can hardly be

justified on economic grounds when Japan's present financial condition is taken into consideration and the arguments adduced in the Report are certainly not very strong nor very convincing ones. No less an authority than Mr. J. R. McCulloch, has stated, that "the imposition of a reasonable duty on imports and, in some cases, exports is in no respect inconsistent with the freedom of trade." The Japanese Government imperatively needs revenue and the tariff being the cheapest and best way of raising it, it is hardly yet time to abolish these duties. It would be well enough to abolish all duties on minor articles for in their case, the tedious and vexatious delay at the Custom House is not counterbalanced by the duty received; but in the case of staple articles like Tea and Silk, a moderate export duty may well be maintained. Even if such a duty is paid altogether by the producer yet it is collected at smaller expense to the Government than would be the case with any excise tax yielding a similar amount. The advantage of Customs' duties consists in their being collected at one place, through the medium of a few hundred merchants at comparatively trifling cost, and it is for this reason that with all nations the tariff has been a favourite mode of collecting revenue.

The Tokio Chamber of Commerce asks that the coasting trade should be reserved for Japanese ships. Most of the nations of the world even at the present time retain this trade themselves. In England all restrictions and limitations upon foreign shipping have been abrogated since 1854. While they existed, the arguments used in their favour were the same as those which are now advanced here, and it may therefore be instructive as well as interesting for the purpose of analogy and comparison to give a short review of them.

Under the reign of Henry VII. the importation of certain articles into England was prohibited, unless it was done in English ships manned by English seamen. During the reign of Elizabeth, the policy of excluding foreigners from any participation in the coasting trade was inaugurated, and successive legislation made the prohibition stricter and more severe. In 1651 the republican parliament promulgated the famous Navigation Act, which stipulated that the products of Asia, Africa and America could be imported into England, Ireland and the Plantations, only in English ships of which the captain and the greater number of the crew were English; and which stipulated further that no goods, produced or manufactured in Europe, should be introduced into Great Britain except in British ships or in such ships as were the actual property of the people of the country in which the goods were produced. It was a decisive measure for the protection of English ships and seamen, and a great blow at the Dutch, who were then the carriers of the world. It was represented to Cromwell at the time that the insufficiency of English ships and the impossibility of their bringing a full complement of the goods which the country needed, would be sure to cause great distress, and many of the Protector's warm friends and admirers joined in this protest, openly declaring that general commercial depression and absolute ruin to many industries must inevitably ensue upon carrying out the provisions of this act. Regardless, however, of friend or foe, with that indomitable, stubborn energy and determination which had always led him on to success, did the great Puritan leader persevere, and the rise of England's naval greatness to no small extent dates from the day when this edict went into effect. It has received universal eulogy, and economists of note, however they might differ in other respects, have been almost unanimous in praise of this law which, with various modifications, remained in force for two hundred years. Adam Smith says in regard to it: "It is

"not impossible that some of the regulations of this famous act may have proceeded from national animosity, they are as wise however, as if they had all been dictated by the most deliberate wisdom." The "father of political economy" goes on to show that although unfavourable to foreign commerce, the enactment of these laws was necessary for the protection and defence of the country and concludes by saying that for these reasons "the act of navigation is perhaps the wisest of all the commercial regulations of England." John Stuart Mill, in his Political Economy, says: "The navigation laws were grounded in theory and profession on the necessity of keeping up a nursery of seamen for the navy. On this last subject I at once admit that the object is worth the sacrifice and that a country exposed to invasion by sea, if it cannot otherwise have sufficient ships and sailors of its own to secure the means of manning on an emergency an adequate fleet, is quite right in obtaining those means even at an economical sacrifice in point of cheapness and transport."

From a political point of view whatever has been advanced in favour of the English Navigation Laws as benefiting England may be said with equal or greater force to refer to any law, by which Japan retains the exclusive control of her coasting trade. Emerging from a seclusion of three hundred years duration under a feudal system which made anything like universal laws for the country and centralized power impossible, she found herself with an extremely large extent of seaboard as compared with her territory, without any of those means of defence which her exposed position and the present state of modern warfare renders necessary. It is idle and futile to say (as has not unfrequently been the case) because her navy could not, under any circumstances, for an indefinite period of time, face the navy of any first-class foreign power, that it is useless to create one. The same argument might be used with regard to the navies of Spain and Portugal, of Sweden and Denmark, even of Austria and Italy, and probably of all other navies except those of Great Britain and perhaps France; and an analogous argument could be also used in regard to the armies of all but a very few countries. As long, however, as all continental nations continue to keep a large standing army, and all nations having a seaport maintain a navy which they constantly increase, we have no right to ask Japan to abide by an exceptional standard. Besides, the history of the last few years has demonstrated her necessities in this regard plainly enough.

Exclusively of what concerns her external relations, it is necessary for Japan, in order to preserve peace and consequently prosperity within her own dominions, to have an effective navy; and an effective navy implies the existence of a large merchant marine to furnish transports and to offer a "nursery for seamen." The hardships which the suddenly altered political status of the country unavoidably entailed upon what were formerly the most powerful and the most favoured subjects, has in late years found vent in uprisings and rebellion, and may do so again. If such a contingency is unlikely to occur in the future, it is rendered so merely by the power of the Government to concentrate an overwhelming force at any given point by means of its navy and the merchant transports which it can control. Without such power this country would be in the chronic state of anarchy of many of the South American Republics.

Leaving aside the whole higher grounds of self-defence and political expediency, a great deal may be said justifying any law by which Japan retains the coasting trade for herself, on economic grounds. No one will deny that the building of her own merchant ships is a legitimate industry, perfectly natural to the country and one for which

it is fully fitted. There is a sufficiency of good serviceable timber, and with the necessary experience, the requisite skill and knowledge will certainly not be beyond the reach of the native artisan. To foster a *legitimate* industry is certainly one of the functions of every Government. In Japan, where ship building has not been as with Western nations a steadily progressive art, (all formerly existing models having suddenly become antiquated and obsolete) it is necessary, to enable the necessary skill and knowledge to be acquired, to have a margin of prospective profit wide enough to permit of even repeated failures.

It is not by any means certain that the great desiderata of merchant shipping: cheap, efficient, regular and speedy transit for goods and passengers will not be obtained in as high a degree if left solely to Japanese, as they would be if foreign ships participated in the trade. The rates of the Mitsu Bishi Company at present are certainly not unreasonable, and offer a favorable contrast to what they were in former years. All old residents in Japan will remember this. In Western countries where competition is legally free and untrammelled, powerful and wealthy companies, relying upon the "freezing out" process when opposition shows itself, are often enabled for many years to maintain what is virtually a monopoly at exorbitantly high rates. If such a company succumbs it is more often from corruption among its members and other internal causes than from any outside pressure brought to bear by the outraged but long enduring public. The Pacific Mail S. S. Company offers a glaring though by no means solitary instance in support of this. For twenty years it controlled the carrying trade to the Pacific Ocean. In ordinary seasons the rates were two or three times higher than they ought to have been, but upon the first appearance of anything like opposition they were reduced to so ruinously low a figure that the unlucky opponent, not having the same accumulated fund of profits already made to draw upon, was soon bound to retire.

But if competition is necessary, the figures of the Chamber prove that the capability for it exists already in this country and exists moreover in a very fair state of development. It surprised us and has doubtless surprised many others to find that the Mitsu Bishi possesses only about one-fifth of the Japanese owned steamers and only seven sailing vessels out of a total of one hundred and forty six. With such a showing there is no fear of competition not being forthcoming when it is needed.

THE LOOCHOO QUESTION.

V.

MUCH fruitless enquiry and discussion has arisen from an explanation of the causes of the present difficulty having been looked for in the wrong quarter. Some eyes have turned towards Japan, and sought to account for the situation by reference to the real or supposed policy of this country. This is to begin at the wrong end. The action of Japan in the matter might be better described as inaction. This country has done nothing but continue in its own course, dealing with Loochoo in strict accordance with a preconceived plan of government, not confined to Loochoo, but extending throughout the Empire. The final step, that of the present year, when the islands were converted into a Prefecture upon the regular pattern, was no doubt (as we pointed out in our first article) expedited by the exigencies of the political situation produced by the attitude assumed by China: but it was only expedited; it must in any case have been taken sooner or later. Until the attitude of China became threatening, the Government of Japan was no doubt willing that, in a province so peculiarly consti-

tuted as Loochoo, the introduction of the new order of things should be as gradual as possible. But when China began to question the claim of Japan to alter at her own will the system of administration in the islands, and moreover herself to assert a proprietorship in the soil, there was nothing for it, but to take a decisive and practical step which should establish beyond cavil the fact at least of Japan's possession in face of the question raised as to its rightfulness. To any one who has given an impartial consideration to this case, these observations are unnecessary: but it has been the fashion with a certain section of the press both in China and Japan, and with persons in a better position even than the press to ascertain the truth and to have formed, if they had cared to, a fair and unbiassed opinion, to ascribe the whole blame of the present troubles to a restless policy on the part of the Japanese Government, and to attribute all its actions in regard to Loochoo to an ungenerous and unfriendly longing to do something which should serve as a 'slap in the face to China.' Nothing could be more unfair or uncalled-for than this imputation; and nothing, as events are proving, further from the truth. There was in reality no occasion to cast about for any such motive at all: every step taken by Japan has admitted, as we have shown, of a plain and sufficient explanation; and, where rules of logic and sound reason are strong enough to overcome personal prejudice, this in itself ought to have precluded these excursions into the field of conjecture in search of motives, which never had any existence but in the minds of those who, though without any special affection for China, have cast about for means to damage the cause of a government to which they have a personal antipathy. If all that we have written on this question generally, though it fail to convince our readers of the actual justice of Japan's position in the matter, and of the strength of the case on which her government relies, yet only be the means of showing that the government of Japan at any rate *believed*, and had good grounds for believing, that right was on its side, we shall have done something: for this 'slap-in-the-face' theory has been put forward upon authority to which weight is attached by a large number of persons, and being freely circulated, has no doubt gained currency not only among the friends and supporters either of China or of her newly found partizans, but among foreigners generally, with the exception of those who examine and think for themselves and are not content to take their opinions at second-hand.

But in point of fact the feeling which would underlie the motive thus attributed to Japan, of wishing to humiliate China—a belief in the existence of which feeling seems to have even found some place in the minds of the leading Chinese statesmen themselves—is itself wanting. Until China began this trouble, the policy of Japan towards her was entirely friendly, and the desire to maintain the same policy remains unshaken: but when China put forward claims and made demands which it would have been beneath the dignity of Japan as a nation to entertain, the latter had perforce to assert herself in turn: but throughout there has been an unfeigned desire to remain at peace; and the Japanese Government has done no more than the honour of the nation demanded in repudiating the inadmissible assertion of a Chinese right of interference. So far from even showing any desire to take a revenge by making China smart for her overbearing and insolent pretensions, this government has shown a conciliatory spirit in many ways. Topics, the discussion of which it was known might have had the effect of driving China into declaring war, have been studiously kept in the background; and in other similar respects concessions have been made

to Chinese feelings and prejudices and to the exigencies of her Government which point to a desire on the part of Japan not only to avoid war, but, by assisting, as it were, to break the fall which its previous blunder had made inevitable, to avert from the Government of China the humiliation which she is accused of having sought to effect.

This feeling on the side of Japan, though not understood at first, has now been brought home to, and is undoubtedly appreciated by the Government of China. The diplomatic campaign opened inauspiciously on both sides. The first despatch presented to the Japanese Foreign Office by the Chinese Envoy (whose mission to this country is believed to have had for its chief object to arrive at a settlement of this very question) was conceived in an offensive tone; which is perhaps attributable to the sinister influence of that 'unfriendly diplomacy,' which, it is no secret, busied itself on behalf of the Chinese mission, and to which General Grant alluded as finding its opportunity in the quarrels of these two Eastern Empires.*

However this may be, the correspondence thus opened was carried on for some time in a spirit and in a manner which could possibly lead to no good result. From the time that the Chinese Foreign Office took the matter out of the hands of its representatives in this country and communicated through the Japanese Minister at Peking, the correspondence has been both more friendly and more practical. But the position was one from which it was impossible for the Chinese Government to extricate itself with dignity except at the cost of war. The object of China was never to have possession of Loochoo, but only to assert herself. If she had seriously meant to insist upon having possession of the islands, or at least upon excluding the possession of Japan, it is impossible to suppose she would not, instead of beginning as she did by diplomacy, rather have taken a practical step to begin with, by sending a small squadron to cruise off the islands first, and proceeding to diplomacy afterwards. But this was not her object: as to what her object really was, we have already expressed our opinion and the grounds of it. She felt that she must do something, and hoped that what she did might bring about the desired consummation. The result was, as we have seen, an absolute deadlock.

Beati possidentes: Japan had possession and meant to keep it; and simply had to sit still and await events. China had demanded the islands, and ought to have been prepared to go to war for them; as she was not, she was in as uncomfortable a position as could well be; and she might have remained there, but for that chapter of accidents, which, as we have said before, was her only hope: and accident brought her a mediator.

General Grant appeared on the scene like the *Deus ex machina* at the end of a play to unravel the entanglements of the plot and set a-going once more the wheels that had ceased to work. His coming was a god-send to the Chinese Government; and they were not slow to avail themselves of their good fortune. All they wanted was to escape from the predicament in any way that would save their dignity. Arbitration was the obvious course; and, though no definite proposal to submit the matters in dispute to a formally constituted tribunal of arbitration has ever been made; yet, from the reports we have of the communications that passed between Prince Kung and General Grant, and from suggestions thrown out in the later despatches, there is no doubt that this was the direc-

tion in which the Chinese Government were looking. That they would have been perfectly content with a finding adverse to their claim has been more than hinted: a decision in favour of Japan, which they evidently regarded as a foregone conclusion of any arbitration, would have enabled them to recede with good grace from an untenable position. However, arbitration was never formally proposed, and if it had been, it could not have been accepted by the Japanese Government, consistently with the position they had throughout assumed, and, as we believe, rightly assumed, in the matter. When a man tells me that the coat I wear is his, or, at any rate that he has a share in it, and therefore I must not wear it when and how I choose, but must consult him and ask his consent, I, knowing that the coat is my own, paid for out of my own purse, naturally decline to entertain any question upon the matter at all, or to refer it to the arbitration of a bystander, but tell the claimant that, if he thinks the coat is his, he must take his own steps to recover it.

But, although arbitration was inadmissible, the case was eminently one in which mediation was likely to succeed. The distinguished American statesman, who was called upon to use his endeavours towards promoting an understanding that would relax the existing deadlock, having heard the case of China from the lips of the Prince Regent of the Empire, undertook to take such steps as might be open to him, on his arrival in Japan, towards the desired result: but he frankly told the Chinese Minister that he had at present heard only their own side of the question: and that, after hearing the Japanese view of the case, he might very possibly come to a conclusion adverse to the claim of those who first enlisted his sympathies and good offices. He was, as we know, during his stay in this country, put into full possession of the whole case on the side of Japan, and in this country, as in China, urged peaceful counsels and the desirability of maintaining a good understanding between the two Empires—an object the importance of which there is no doubt is fully realized by the men at the head of both states; but which, without the solvent influence of a mediator was in great danger of being frustrated by the existence of the embarrassing situation into which the Chinese Government had stumbled. General Grant naturally declined to pronounce a decision *ex cathedra* upon the merits of the case; and it would be impertinent to guess what opinion he may have formed. But this much we may say; that his efforts to bridge the gulf which separated the two governments were well-directed and practical, and commended themselves generally to both parties: they have already borne fruit and there is every reason to hope that the fruit will be allowed to ripen. Not that the way is as yet perfectly clear: there are still difficulties to be overcome of a nature requiring very delicate handling. The position of affairs down to a recent date may be gleaned from the series of despatches which we publish in another column. These, notwithstanding their date, are unaffected by the turn given to the negotiations by the interposition of a mediator: and the situation will be seen by a perusal of them to have been not inaptly described as one of deadlock. But though the passive position of Japan remains unaffected, mediation has afforded China an opportunity for a new departure in a more promising direction. This is not the time to discuss the future: it is enough to say that a way has been opened for the Chinese Government: To recede from its former position and withdraw its unfounded claims is a condition precedent to any practical response being made on the part of Japan: but that once done, a *via media* is open to both countries, and China would find the Government of Japan ready and willing to

* See Report of Interview in July between General Grant and certain Japanese Ministers of State, condensed in our issue of 11th October, pp. 1,346-7 from correspondence of the *New York Herald*. It is satisfactory to know that the 'diplomacy' alluded to was entirely personal, and altogether without national significance.

listen to any reasonable proposals. There are grounds for hoping that the wisdom of this course is not unperceived by the Government at Peking; and, whilst Japan, being in a position where she might still continue to say *J'y suis J'y reste*, will naturally look for some beneficial return for any concessions she may be induced to make, there is no reason why such return should be of a kind other than beneficial to both countries alike: and we look forward with some confidence to a termination of this dispute which, by drawing these two neighbouring empires closer together, will be the means to them both of bringing good out of evil, in a way that probably will permanently modify the political situation in Eastern Asia.

As events develop themselves, we shall no doubt have occasion to refer again to these matters: for the present, we take leave of the subject here.

IT appears to us that unnecessary opposition has been raised to the request, or rather the demand, of the Japanese merchants as to the non-removal of the hoops from bales of goods purchased by them. And we think that the real cause of the dispute which has thus arisen between several of the principal foreign importing firms and the native dealers lies more with the manner in which the demand was made than with the matter of it. If, instead of suddenly promulgating an ultimatum to the effect that unless an old established custom (as old as the foreign trade with Japan) was immediately cancelled no more purchases would be made from the objecting firm, the native dealers had consulted with the foreign merchants and explained their wishes in a less summary and arbitrary manner than the one they adopted, we think that all the present pother would have been avoided and that the request, quite reasonable in itself, would have been unanimously agreed to. However, the native dealers preferred to make their wishes known in the shape of a positive demand and the result has been that the business in bale goods is, for the time being, confined to those firms who agree to the conditions of the combination. We cannot agree with the argument that the question is one simply between the native dealer and the Chinese or Japanese godown-keeper of the foreigner; nor do we consider it a correct statement to assert that the custom of removing the hoops originated from any agreement between the dealer and the godown-keeper by which the former relinquished his right to the hoops as a *douceur* or bribe to obtain information from the latter as to his master's business, &c. The old custom of removing hoops before the delivery of bales from godowns is simply an importation from China of a Chinese foreign trade *squeeze*, which at one time was universal there but is now no longer general. This trade *squeeze*, for it can bear no other name, has been of profit to foreign merchants in so far that it enabled them to maintain a Chinese staff at purely nominal wages and its relinquishment now would doubtless oblige them to increase the pay of some of their employes. But this in no way affects the perfect right of the Japanese dealers to say that they decline to buy goods unless the original packing is left intact any more than it would prevent them from changing their mind as to the colour or material of the goods they wanted. All that can be expected of them is that contracts made before the stipulation should be executed under the old custom. Whether foreign merchants demand a higher price or not for the goods they sell under the new custom is a question which they will decide for themselves and is one which will become a mere matter of bargain between seller and buyer. On the face of it we cannot be surprised that the Japanese dealers desire to have the hoops intact on the bales they purchase, as much as they require the wood and the tin-lining of the packing cases in

which other of their goods purchases are packed. Even if the argument of reduced bulk and reduced freight did not apply to bales still enclosed in their iron hoops, the fact that these hoops have a value of quite sufficient weight to account for the Japanese wish to "secure all they can for their money." Whether the foreign merchant can afford to give the hoops or not 'for the money' is another question; but it is not a question, we think, to cause a strike in the trade.

MR. ITAGAKI, the well known political leader of the Tosa clan (now Kochi *ken*) has lately delivered himself of his opinions on the Loochoo question, and of the means Japan should adopt in the event of a war with China, which if not very practicable are at least very amusing. According to the *Kinji Hiron*, Mr. Itagaki told his interviewer that China was supposed to have an army of 800,000 well-trained men, against which Japan could not muster 100,000 men, including the reserves; her only chance of success would, therefore, be in the employment of clever stratagems, one of which should be to send a force to China, fight a great battle on her shores and advance at once on Peking. Mr. Itagaki himself, it is satisfactory to hear, is an adept at clever stratagems for he tells us that during the war of the restoration he, on several occasions, beat a superior force of the enemy by the use of some clever ruse; and he also did not fail to inform his interlocutors of the power he held over the people of his province, amongst whom he could readily raise 10,000 men in case of need, and, if any difficulty occurred with a foreign country, could by himself alone increase that force to 100,000 picked men. But with the exception of those belonging to the Kochi *ken*, Mr. Itagaki found that the men of Japan were now lacking in spirit, were becoming less courageous day by day, and looked only for immediate advantages. In Tosa, however, people were still patriotic, and, thanks to the speaker's training, were still ready to face whatever difficulties might arise. It is satisfactory to know that if a foreign war does arise, the men of Tosa are ready to be the vanguard of Japan's army, and that Mr. Itagaki is ready and capable to lead them.

BUT it is still more satisfactory to learn that the difficulties between Japan and China are supposed to have been arranged and that no Japanese army need yet be called upon to invade China or seize Peking. The native papers repeat a rumor that China has lately addressed a despatch to the Japanese Government informing them that, after all, the Loochooan affair is too trivial a matter to be the cause of so much correspondence and that they will henceforth drop the subject. We are still unable to confirm this rumor, although it is one which we trust will prove to be well founded. But an important item of news has reached us from China, which we believe can be relied upon as correct and which may yet prove to be the origin of the reports circulated by the native papers in Tokio. It is to the effect that the conservative or anti-foreign officials in China have complained to the Throne of the action of Li Hun Chang in submitting the question to General Grant, and that Li, annoyed at this interference, has declared his intention to wash his hands of the whole matter and take no further share in the discussion.

THE new regulations for revised "rules of the road" by sea do not appear to include the remedy which has often been suggested for approaching steamers to know the course which the other is steering, or rather for each to know the direction the other is on the point of taking. The importance of this knowledge has often been demonstrated and the evidence obtained in many "collision cases" has proved that accidents have occurred from ignorance, until too late, of

the direction given to the helm of an approaching vessel. Several plans have been suggested; amongst others the one of Captain J. M. James, of Tokio, who early this year, published a useful pamphlet on the subject of ships lights and signals and recommended a simple mechanical contrivance by which the action of the helm either to port or starboard should at once disclose a second light immediately above the red or green, and thus show the approaching vessel what steering orders had been given. Others again have suggested that a second light from the masthead should give intimation whenever a change was made, or ordered, in a steamer's course. But whatever difference may exist as to the best plan to be adopted to afford this information, all nautical men are agreed as to the importance of its being given in some shape or form, and we are surprised that so necessary a point seems to have been omitted from the new regulations. It would prove a feather in the cap of the Japanese Marine if they initiated the scheme suggested by one of their own officers, and especially if they could assist in the general introduction of a system of signals which would prove of the utmost utility.

THE Swatow Opium Guild case pending at Shanghai before the Mixed Court constituted of the Taotai, H. M.'s Consul and several other officials, native and foreign, has advanced another stage. This important action threatened at one time to rival the celebrated case of *Jurnidye vs. Jurnidye*, but we now learn that all the evidence has been heard, the speeches of counsel delivered and nothing now remains but the decision of the Taotai, which has been reserved. Extraordinary as were the different developments of the case, it was reserved for the two last days' proceedings to present a state of things, rarely, if ever before witnessed, in any Court in any country. The opening scene on the first of these days was a skirmish between the Consul and the Taotai as to the position occupied by the interpreter of the latter, which resulted in the Taotai announcing that he would not be responsible for what his interpreter might say in English, and in the following rather undignified proceeding, the account of which we extract from the *N. C. Herald*:—"Mr. DAVENPORT—Would you tell him, (the Taotai), Mr. Spence, that as he has already stated that Mr. Duff and Mr. David have failed to establish their cases, I have nothing further to do in the matter, and I am going away; that all I have to do now is to appeal or report the case to the Southern Commissioner of Foreign Trade, and to H. M.'s Minister at Peking. The plaintiffs having failed to prove their case, according to the Taotai, there is no use my staying any longer, and I am going.

Mr. DAVENPORT then commenced to gather up his papers.

Mr. DRUMMOND (to Mr. Davenport)—Will you leave all the papers in the case that are not in the hands of the Taotai already?

Mr. DAVENPORT—Address yourself to the Taotai.

Mr. DRUMMOND repeated the question to the Taotai through Mr. Kreyer.

Before an answer could be got from the Taotai, Mr. Davenport had vacated his seat, and Mr. Drummond again appealed to Mr. Davenport to leave the papers behind.

Mr. DAVENPORT—Address yourself to the Taotai.

Mr. DRUMMOND (as Mr. Davenport was leaving the Court)—Your absence is your own fault.

Mr. DAVENPORT—Address the Taotai.

Messrs. Davenport and Spence then left the Court through the Magistrate's Yamen. Messrs. Duff and David, the plaintiffs, also walked away, and none of them were seen near the Court afterwards.

After the lapse of a few seconds, the Taotai, through Mr. Kreyer, said he had expected that Mr. Davenport and the two plaintiffs would have remained and heard the case, and

subsequently announced that he would proceed with the case alone as it was a Chinese Court."

The speeches of the Counsel for the Guild must have been remarkably amusing to witness. The Taotai was addressed hour after hour in English mingled with French quotations, and when all was over, copies of the speeches were handed in that they might be translated for the benefit of the person to whom they had been orally delivered. The Taotai, notwithstanding the statement that he would reserve his decision, has evidently quite made up his mind to support the Guild, and as the Consul is just as positive that this Association has been guilty of a grave infraction of the treaty rights of British subjects, it is more than probable that the decision of the Taotai will be very far from the last of the Swatow Opium Guild case.

THESE "Mixed Courts" are as unsatisfactory in their results as "mixed marriages" have the credit of being. We notice in one of the last Shanghai papers the report of a case heard before the local Chinese Magistrate Chen, supported and assisted by a European, which if the report of the case be accurate, and there is no reason to doubt it, the paper in question has very appositely headed "an unusual case." A foreigner residing in Hongkew, wanted a house-boy, and was recommended one by his almah, his cook and two friends of the cook. The boy was accordingly engaged and, after a short time had elapsed, stole \$80.00 from his master's safe and absconded. The employer complained to the native magistrate who promptly ordered the arrest of the almah, as it was upon her recommendation principally that the thief was engaged, and she might therefore be considered to some extent responsible for what had occurred. At any rate she ought to have been more careful, and locked up she was, together with the cook and his two friends who joined in her recommendation. The magistrate also made an order that the whole party should be imprisoned until they paid the foreigner \$50.00 towards his loss, the remaining \$30.00 to be left in abeyance until the apprehension of the actual thief, should he ever return. Two days afterwards the boy was arrested, and then all the parties were brought before Chen with the following result:—The boy who stole the money to pay \$35.00, the almah, who recommended him \$35.00, the cook who sanctioned the recommendation, \$5.00, the two friends of the cook who countenanced the sanction of the recommendation of the almah \$2.50 each, thus aggregating the foreigner's \$80.00; all the parties to be kept in gaol until the judgment is satisfied.

FURTHER LOOCHOO DESPATCHES.

The following are official translations of the series of despatches that have passed (through the Japanese Envoy at Peking) between the Foreign Offices of China and Japan, up to the 8th of last month. A different translation of the first of these despatches was given by us on the 11th October, in the series we then republished from the *New York Herald*. The remainder have not hitherto been published in any form, either in this country or elsewhere:—

Translation of the despatch of the Chinese Government addressed to H. I. J. M.'s Envoy Extraordinary and Minister Plenipotentiary at Peking and received by him on the 10th day of 5th month of the 12th Year Meiji:—

We beg to communicate to you upon the following subject.

For many hundreds of years up to the present time, the Rulers of Riu Kiu have in every generation received investiture at the hands of our Middle Empire—they have adopted and used our calendar (eras being marked by the names distinguishing the reigns of the successive Monarchs of our Middle Empire)—and they have paid tribute to our Middle Empire. These facts are well known to all countries in the world. The Government of the Middle Empire has, however, allowed the Riu Kiu Islands, except as to the receipt of tribute from them, to enjoy an autonomy carrying with it the right of themselves conducting all political and social administration and themselves framing all compelling and restraining laws. This shows that our Government has always recognized the state exist-

ence of Riu Kiu. Moreover, some foreign powers, who have made treaties with our Middle Empire and with your own, have also made treaties with the Riu Kiu Islands. So the state existence of the islands has in this manner been also recognized by foreign powers.

The Riu Kiu Islands having submitted to our Middle Empire subsequently submitted themselves also to your great country. We have long been aware of this; yet we took no account of this mark of disloyalty towards our Empire, because we always rested content with the knowledge of the substantial proofs which existed of the state existence of Riu Kiu. The status of the islands having thus been fully recognized both by our own Middle Empire and by the foreign powers, the fact of sending tribute to our Middle Empire is not to be regarded as derogatory to that status.

Now what offence has Riu Kiu committed against your Empire that has caused your Government to convert it into a Japanese Prefecture? Such action on the part of your Government is regarded by us as a breach of the treaty of friendship now existing between the two Empires which provides that each Empire shall respect the territorial possessions of the other. Inasmuch as the state existence of Riu Kiu has been recognized by both our Middle Empire and the foreign powers as above mentioned, the course now taken by your Government is nothing short of this, that you have arbitrarily taken possession of a country not your own and overthrown its reigning dynasty. In this, your Government displays a contemptuous disregard both of our Middle Empire and of the foreign powers.

Riu Kiu being a small and powerless country has submitted itself to the will of the two Empires, and the nearest land to it being your Empire, your Government should have accorded to it protection; instead, your Government has arbitrarily taken possession of the country and overthrown its reigning dynasty. This is a very serious matter and one calculated to bring disrepute upon your Empire; and moreover is antagonistic to the universal view notoriously entertained by foreign countries.

You came to our land with instructions to preserve friendly relations between the two Empires, and the present question of the abolition of Riu Kiu and its conversion into a Prefecture is truly a great matter affecting those relations of friendship which now so happily exist.

What we have here written is intended as a suggestion to you of the greatest importance to the maintenance forever of our present friendly relations. We therefore entreat you to pay the strictest attention to what we have to say viz:—that should your Government withdraw the Imperial decree by which Riu Kiu was abolished and converted into a Prefecture the friendly relations already existing between the two Empires will in consequence be strengthened; and thus the friendly object and spirit of your mission to our Empire will be more conspicuously displayed.

In conclusion we beg to commend the above to your consideration and trust that you will devote the strictest attention to a thorough and deliberate examination of the whole matter.

Instructions relating to the despatch of the Chinese Government Regarding Riu Kiu.

The said Despatch may be summed up as follows:—

"The Chieftains of Riu Kiu have in every generation received ceremonial investiture at the hands of the Emperors of China; and the Chinese Government has always recognised the state existence of the Riu Kiu islands."

Now, we would ask, what offence Riu Kiu has committed against your Empire, that has caused you to depose her ruler and convert the islands into a Japanese Prefecture.

Your action is regarded by us as a breach of the Treaty of Friendship existing between the two Empires which provides that each Empire shall respect the territorial possessions of the other.

We therefore call upon you to withdraw the Imperial Decree by which the Principality of Riu Kiu is abolished and the islands converted into a Prefecture."

Now, the abolition of the Riu Kiu Principality and its conversion into a Prefecture was effected, after mature deliberation and with due regard to right and justice, by the unanimous decision of the Imperial Cabinet—the execution of which decision admitted of no delay; and an Imperial Decree having been issued in the matter, to withdraw that Decree is now quite out of the question.

On the other hand, if a matter of administrative detail affecting this remote group of islands at the southernmost extremity of the Empire is to be made a diplomatic question between this Government and that of China, and were this to lead to a breach of the friendly relations existing between the two countries, the effect upon the welfare of the people of the two nations would be calamitous in the extreme.

We entertain, however, the strongest belief in the friendly disposition of the Chinese Government, and feel confident that it would attach too much value to the good understanding, which now happily subsists between us, lightly to imperil the continuance of that understanding on account of so trifling a matter.

Entertaining as we do this belief, we are led to the conclusion that the questions that have been raised and the doubts that appear to be felt by the Chinese Government are to be attributed to a judgment formed upon evidence and considerations hastily accepted and adopted upon worthless authority, and to the want of trustworthy information derived from thorough inquiry into the history of the relations that have subsisted between our mainland and the islands in question.

We accordingly feel great confidence that all doubts and questions will be set at rest when the Chinese Government learns the real facts of the case, a brief statement of which is here given for its information.

Riu Kiu consists of a group of small islands (the united area of which is about equal to one *Kori* in Satsuma) at the furthest extremity of a chain of islands starting from the mainland of

Japan with which it is connected by geographical position (1.), by identity of language both written and spoken (2.), by that of religion (3.), and by that of manners and customs (4.)—as well as by the political bond which has incontestably united it to Japan as a dependency from the earliest times.

The History of our nation abounds with mention of acts of homage tendered to our Emperors by the inhabitants of these southern islands and of the reception of tribute from them; more particularly in the periods (according to the Chinese calendar) of the Zui and Tong dynasties of the Chinese Empire.

In the 7th year of our own period of Tempio (=23rd year of Kaigen of Tong dynasty of China) the Dazaifu sent a Commissioner to Minami-shima for the purpose of erecting monuments on the islands, showing the names of places, distances, the places for ships to anchor, the places where fresh water could be obtained, etc. At this period Minami-shima was under the control of the Dazaifu and tribute of *Akeji* [a red wood], the product of the islands, was received from it.

These historical facts afford conclusive evidence that the islands were at this early period under the sovereignty and subject to the administrative control of our Empire.

In our period of *Kogen* corresponding to that of *Sho-ko* of the Sung dynasty of the Chinese Empire, Minamoto Tametomo once lived in the island of Oshima, lying off the coast of Idzumi. Thence he adventured upon sea voyages and passing through many islands of which he took possession, finally reached the islands of the Riu Kiu group. Thence he abode, and married the youngest sister of Oosato Ansu, the then Chieftain of the islands and the issue of the union was a son who received the name of Son-ton. After Tametomo had once more embarked and returned to Oshima, his son Son-ton became Chieftain of Riu Kiu, and bore the name of Shunt ten O. (5)

More than two hundred years later, these islands were conferred upon Shimadzu Tadakuni, Prince of Satsuma, by Ashikaga Yoshinori, the then Shogun as a reward for eminent services rendered to the country. (This was in the first year of Kakitsu—the 6th year of Sei-to of Ming Dynasty.) Thenceforward Riu Kiu has continuously submitted to and acknowledged the authority of the family of Shimadzu. At one period, the tax due to the Prince of Satsuma remained unpaid. Toyotomi Hideyoshi, who was then about to invade Corea, ordered the Chieftain of Riu Kiu to furnish a certain quantity of provisions for the use of his army: the summons was obeyed, tho' only half of the quantity was actually supplied; and in consequence, Tokugawa Iyeyasu, sometime afterwards ordered Shimadzu Iyehisa, Prince of Satsuma, to fit out an expedition to Riu Kiu to punish the people for this neglect of duty. The expedition resulted in submission of the Chieftain Shonei who was then conveyed to Yedo together with the members of the *San-shi-kuan* [governing body] (in the 4th year of *Ki-cho* 37th year of *Bun-reki*.)

The same Tokugawa conferred upon Shimadzu Iyehisa, as an hereditary right, administrative power over the whole group of the Riu Kiu islands. Thereupon Shimadzu Iyehisa deputed a body of his own vassals to re-organise the government in the islands and to form administrative divisions.

He issued an ordinance forbidding the inhabitants of the islands to possess arms of any kind. He also caused the islands to be surveyed. At this survey the total yield of revenue-land was 123,000 (*6*) *Aoku*: out of this total a portion representing 88,000 *Aoku* was assigned to the Chieftain Shonei from which to draw his revenue: the remainder paying revenue direct to Satsuma. The amount of 720,000 *Koku*, well-known as the yield of the revenue land of

(1.) The Riu Kiu-Koku-Shi-Riyaku [an "Outline of the History of Riu Kiu"] published by Chieu Fang, accurately describes the position of the group as follows:—"The nearest land to it is Satsuma of Japan, which can be reached in a boat no bigger than a leaf; whereas it is a great distance from Ming, in the province of Foh-Kien, in China, and is separated from it by thousands of *ri* of waves with no harbour of refuge between."

(2.) The forty-eight characters which constitute the syllabary of the written language of Riu Kiu are the same as the Japanese which are called *I-Ro-Ito*, this syllabary having been introduced into the islands by Tametomo who taught the people the art of using it. All documents, either official or private, are made up of a combination of Chinese characters with those of the *I-Ro-Ito*, just as on the mainland.

The spoken language is of the same origin as the dialects of the mainland. The inhabitants call their islands collectively "Okina-wa" and claim descent from *Amanuiku* [Heaven descended one]. Both of these names are pure Japanese.

(3.) The inhabitants worship Ise-o-Kami, Tenjin, Kuma-non-o-Kami etc.—all of them Divinities of the Shinto Theology.

(4.) On ceremonial occasions, such as banquets, etc., the rules of etiquette observed are those of the Ogasawara style.—In the record of the Chinese Envoy to Riu Kiu, it was remarked that the inhabitants use neither chairs nor stools, but seat themselves on the floor, and place their food on a small low table each person having one to himself. This is precisely in accordance with the universal custom of the mainland.

(5.) In the *Tsong-Tan-Ten-Shin Ro* published by Shue-Paw-Wang it is recorded that "Shuntun O was the son of Oosato Ansu whose ancestor was one of the Emperors of Japan." The chieftainship was lost to the Family of Shuntun in the third generation from him and passed to an aboriginal family of Riu Kiu: but more than 200 years later it was recovered by one of his descendants Sho-yen.

(6.) [Translators' note.] This includes the produce of the island of Oshima off the coast of Satsuma which at this period formed politically one of the same group as Riu Kiu, tho' subsequently placed by Satsuma under a different administration from that of Riu Kiu proper.

the Shimadzu Princes, and officially recognised as such by the Shogun at the time we are speaking of, included the above amount of 123,000 *Aiku*. Besides the amount of revenue payable to Satsuma direct, the Chieftain paid also to the Shimadzu Princes out of his share of the revenue an annual tax of 8,000 *Aiku*.

Shonei was detained in Kagoshima by the Prince Shimadzu for the space of three years. An ordinance consisting of 15 articles was issued to be observed by the Chieftain of the island, Shonei, and by the before mentioned San-shi-Kuan. Both the Chieftain and the san-shi-Kuan respectively subscribed an oath binding themselves to observe the ordinance and to remain loyal. Thenceforward for three hundred years up to the present time the people of Riu Kiu were continuously under the jurisdiction of Satsuma [Here follow the Ordinances and oaths published in the *Japan Weekly Mail*, on 18th October.]

Within a recent period, the old feudal system has been abolished and a new mode of administration established throughout every part of our mainland, whereby all the dominions of the feudal rulers were converted into Prefectures and placed under the immediate control of one Central Government. Since even the province of Satsuma upon which Riu Kiu had always been dependent has also been converted into a prefecture under the name of "Kagoshima Ken," it was only natural that Riu Kiu should no longer be allowed to continue in its former condition—a solitary exception to the rest of the Empire. If the Chinese Government therefore will consult our historical records, we feel sure, it will arrive at a true understanding of the question.

But as we have now received a despatch from the Chinese Government on the subject it is incumbent upon us to reply to the points therein raised by that Government—fully explaining to it the real facts of the case—and to prove the justice and righteousness of the course taken by our Government.

The ground upon which the Chinese Government recognizes the Riu Kiu islands in a position of independence is that, except as to the receipt of tribute from them, it has always allowed them to enjoy an autonomy carrying with it the right of themselves conducting all the political and social administration and themselves framing all the compelling and restraining laws of their state. Such autonomy then is to be taken as the test of independence; and any country not enjoying it is not independent. Accepting this test let us see how Riu Kiu is situated as to autonomy—and consequent independence—by a glance at her relation with our Empire.

After the expedition which was sent thither in the periods of *Kicho* the islands were made a part of the province of Satsuma and their internal administration was placed under the control of that Province—we have sent armies to protect the islands and our civil officers have actually governed their people—we have caused the islands to be surveyed and have annually received taxes from them—and we have given them laws imposing both positive and negative obligations. Besides all this, an authentic copy of the oath of the Chieftain of the islands, wherein he promised for himself and his successors to remain forever faithful vassals of one of our principalities, is even to this day in the possession of our Government.

In the face of these incontestable facts will any one insist on the assertion that Riu Kiu is an autonomous and independent nation? Surely not.

The Chinese Government has contended in another part of its despatch that Riu Kiu is a common dependency of the two Empires. But it would be quite impossible for the people of any country in the world to be subjected to two distinct Empires and to be under the jurisdiction of two separate Governments. If a common dependency such as that suggested by the Chinese Government appears to exist, it is nothing more than an illusion, the explanation of which is that one of the two Empires has been deceived. Now to show that Riu Kiu is dependent, and dependent upon us, there may be mentioned the many occasions and various ways in which we have gone to the aid and comfort of the people of these islands: it may be especially mentioned that whenever their country has been stricken with famine they have been provided, out of our public treasury, with all necessities to preserve them from starvation; and when then have suffered outrage at the hands of an enemy, they have been avenged by the aid of our forces, just as in the recent case of Formosa—when some of the people of Riu Kiu having been massacred by savages in the island of Formosa, our Government fitted out an expedition to Formosa to punish the perpetrators of the outrage: and the right of our Government to take this course was not disputed but on the contrary was recognised by the Chinese Government as a legitimate and proper act on our part.

This is a strong proof that Riu Kiu is not independent but dependent, and that solely upon our Empire. That being so, the abolition of the Riu Kiu principality and its conversion into a prefecture is to be regarded merely as a reformation of the old system of our Government and is an event not in the least exposing this Government to the charge brought against it by that of China of having arbitrarily taken possession of another country and overthrown its reigning dynasty. It is purely a matter of internal administration as to which we are unquestionably in a position to exercise full rights of absolute sovereignty, and with which no foreign country whatever has any right to interfere.

To turn to another point; it appears to us most extraordinary that the Chinese Government should also have brought against us, as they have in one paragraph of their despatch, the charge of infringing the first article of the Treaty between the two countries, as though the islands formed an integral part of the territory of China; whilst they elsewhere assert, in contradiction to this contention, that they have always regarded the islands as in the position of an independent territory, and that the fact of their reception of tribute from the islanders was not to be regarded as affecting this view of their relations with the islands. Now, if Riu Kiu is really independent it cannot form a portion of Chinese territory; on the other if it is a

Chinese territory it is in no way an independent country. In fact the two propositions are clearly inconsistent: while it is equally clear that one or the other of them must be true, i. e. Riu Kiu either is dependent on China or it is not: the dilemma is complete.

On our side the matter stands very differently. We reduced Riu Kiu to obedience by force of arms as has been already related, and we have since actually protected and governed its people. These claims are clearly of a very different nature from those put forward by the Chinese Government, that they have received tribute from Riu Kiu and 'allowed' it to enjoy political autonomy. From all of which considerations it is quite clear that the present question of the abolition of the Riu Kiu principality has no connection whatever with the existing treaty of friendship between this Empire and China.

In conclusion it needs only to be added that our Government harbours no spirit but one of the most cordial friendship towards the Empire of China and is actuated by a firm determination to maintain with it the most friendly relations: being possessed as we are by a strong sense of the interdependence of our two Empires; which, from the nature of the civilization existing in them respectively, are of mutual benefit and support each to the other, like two wheels in one machine. In this spirit and with this consciousness it is the earnest wish of our Government to avoid as far as possible all disputes and discords with the Government of China.

Nevertheless should the Chinese Government insist upon our recalling the decree abolishing the Riu Kiu principality, we shall have but to answer that we cannot comply with the demand made upon us.

We earnestly trust therefore that the Chinese Government, not overlooking the importance of the relations of friendship which now so happily exists between the two countries, will not act in this matter without a thorough and deliberate examination of all the facts which bear upon the question.

Despatch of the Chinese Government dated the 5th day of the 7th month of the 5th year Kwangshew (the 22nd day of the 8th month of the 12th year Meiji.) Addressed to H. J. I. M's Envoy at Peking and received by him on the same day.

We, the Imperial Prince and the Ministers directing the Foreign Affairs of the Great Empire of Tsun [Here follow the names and titles], have to acknowledge the receipt of your despatch, which came to our hands on the 15th day of the 6th month of the 5th year Kwangshew (the 2nd day of the 8th month of the 12th year Meiji), accompanied by a translation of the answer of the Minister of Foreign Affairs of your distinguished Empire, in which His Excellency has set forth the grounds upon which his Government acted in the course it has taken with regard to Riu Kiu.

From a careful perusal of every paragraph contained in the reply touching Riu Kiu, we gather that your Government claims the islands in question as the sole and absolute possession of your Empire—which claim, the reply adds, is supported upon good grounds and by sufficient proofs. Now, from the result of our own investigations into this matter, we have no doubt that, from the time of Shunten down to the present Shotai, there has been in the islands a succession of Rulers, in number about thirty eight in all: But during this period the chieftainship has been held by five or six different families. The reply asserts that Shunten was the descendant of your countryman Minamoto Tametomo but his dynasty ended with the third generation from him: and Shoyen, the ancestor of the present Shotai, was a descendant of the family of Tien-sun-ehi [Grandson of Heaven]. It was in the period of Ban-reki [or Wan-rei according to the Chinese pronunciation] of the former Ming Dynasty (A.D. 1573-1619.) when Shonei was sojourning in your country, that the ruler of the islands subscribed an oath and, for the first time, paid tribute to your country: but it was never paid in the periods of the Dai and To Dynasties [A.D. 589-960.—Chinese pronunciation 'Sui' and 'Tong'].

On the other hand, our Middle Empire as early as the beginning of the period of Hong-woo of the former Ming Dynasty [A.D. 1368-1398.] sent an Envoy to Riu Kiu with an Imperial Decree and caused the Ruler to pay tribute of the products of the islands.

These facts demonstrate clearly enough, without further exposition on our side, to which of the two Empires the Riu Kiu Islanders first submitted themselves and paid tribute.

As to the argument drawn from such matters as the geographical position, the written language, the religion and customs of the islands, we are willing to admit that some of these matters are close to yours: yet there is nothing which, proves them not close to ours. With regard to the spoken language, the real state of the case is, that, while those of the islanders who occasionally carry on trade with your country would understand Japanese perfectly well, yet all the rest of the islanders speak a purely aboriginal language. Having regard to these facts, Riu Kiu may fairly be called a common dependency of the two Empires; but it can hardly be claimed as a sole possession of yours.

From the period of Jun-chie of our present dynasty [A.D. 1544-61.] Riu Kiu has regularly paid tribute to and sought investiture at the hands of our Emperor, returning at the period first mentioned, into the hands of the then Emperor, the Royal Signet bestowed by the Emperors of the former Ming Dynasty. Her Rulers have received investiture as 'Kings of the Middle Mountain' and received an Imperial Decree together with a silver signet plated with gold. Riu Kiu was at that time ordered to send tribute to our Empire once in every two years: and from that time forward her Rulers have upon their accession received investiture at the hands of our Empire and have sent the tribute at the appointed times. Moreover they have adopted and used our calendar: the sons and brothers of the Rulers have been admitted into the National Academy of our Empire and received instruction there in literature and other branches of learning: the islanders have erected

at Kume-shima and at other place in the islands, buildings called Tien-shi-kwan [Hotel of Heaven's Envoy] for the reception of Envoys despatched from our Empire: We have afforded relief to Riu Kiu islanders who have not unfrequently encountered heavy storms and suffered ship-wreck, and the from of such relief as we have to offer to dependents is prescribed in a record. Are these facts not concurrent proofs that Riu Kiu belongs to our Empire? The reason why our Middle Empire has always invested the Rulers of Riu Kiu and given them a title as "Kings of the Middle Mountain" is that we have always recognized the existence of Riu Kiu as a separate state. So also have the foreign powers, who have made treaties with your Empire, made treaties likewise with Riu Kiu: and it is a significant circumstance that, though, at the time when the foreign powers made treaties with Riu Kiu, the various dominions of the Feudal Princes of your Empire were not as yet brought under the immediate control of the Central Government, yet none of these, that we have heard of, made treaties with the foreign powers—but only Riu Kiu. Is this not a substantial proof of the state existence of Riu Kiu?

To your argument that "if Riu Kiu is really an independent nation, it cannot from a portion of Chinese Territory; on the other hand, if it is Chinese Territory it can by no means be an independent nation," we would reply, that the fact of installing its Rulers and receiving tribute from it is the actuality of the islands belonging to us, and that of our not interfering, on the other hand, with the right of the islanders to carry on their own political and social administration and frame their own compelling and restraining laws, is the reality of their state existence. These two sets of conditions are in nowise inconsistent the one with the other, but are perfectly capable of existing side by side. Our attitude towards Riu Kiu as here portrayed is precisely that in which we stand to all the other Dependencies of our Empire. Thus Riu Kiu is a part of our Empire—and the fact is patent and notorious to all the world.

Again you say there is no nation in the world subjected to two distinct Empires: but if this be so, how comes it then that, both in the Introduction and in a Note to the Chapter on "Tribute" of a work called the *Okinawa-shi* [Records of Okinawa], published by a countryman of your own, the *status* of Riu Kiu is distinctly described as that of a common dependency of the two Empires enjoying a large amount of self government, and that it is further stated that both China and Japan have concurred in treating it as a country foreign to themselves?

Now your Government have arbitrarily seized upon and overthrown the reigning dynasty of a country which belongs to our Empire—a country the separate existence of which has been as fully recognized by foreign powers as by ourselves—dealing with it in fact on the same footing as you have dealt with the dominions of the feudal lords of your own Empire in converting them into Prefectures. And although this action on the part of your Government is a direct breach of the treaty of friendship existing between us, which provides that each Empire shall respect the territorial possessions of the other, nevertheless your Government declares that the matter has no connection whatever with the existing Treaty.

Such an assertion by your Government cannot but be regarded as made with a most serious kind of contemptuous disregard both of our Middle Empire and of the Foreign powers. Your Government has arbitrarily taken possession of a country that does not belong to it and overthrown its reigning dynasty, notwithstanding that, throughout, we have entertained the most sincere desire to maintain friendly relations with your Government.

Yet your Minister for Foreign Affairs declares in his reply, that his Government "harbours no spirit but one of the most cordial friendship towards our Empire" and that it is the "earnest wish of his Government to avoid as far as possible all disputes and discords with our Government": but we are really almost at a loss to understand what meaning his words can have, when, at the moment that his Government has just taken a step calculated to affect most seriously the friendly relations of the two Empires, he declares that this action on the part of his Government does not in the least compromise these relations!

After all, the past cannot be recalled, the future shall be met with warning. We deeply regret that your Government has arbitrarily taken possession of Riu Kiu and overthrown its reigning dynasty—seeing that its existence as a separate state had been so universally recognized: At the same time we do not wish it to be supposed that we have been moved to bring forward the present question in consequence of Riu Kiu having been forbidden by your government to continue the practice of sending tribute to our Empire.

Under these circumstances we can only express an earnest hope that your Government will give the matter the most mature deliberation and adopt such measures as it may deem best calculated to smooth the way for a satisfactory solution of the present question. If your Government persists in the attitude it has assumed, further discussion would be useless. In these days, as the nations of the world are like the members of a family and fixed rules of law are imposed for their obedience, some great and wise man would necessarily appear before us to dictate what is equity and justice.

However, when we consider the intimacy of our respective countries having neighbouring positions, we have a strong sense of the two countries being of mutual support and benefit, and that the insignificant Riu Kiu Islands should not be taken into account so as to affect relations of so great importance: we fully recognize the great impolicy of allowing such a question as this to interfere with our amicable relations, and therefore trust that your Government will give to this matter the most mature deliberation.

With this object we have taken this opportunity of again communicating with you on the subject, and of begging you to pay the most serious attention to what we have said, and to take only such

steps as you may deem necessary and advisable. Meanwhile we await your reply.

Reply of the Minister of Foreign Affairs to Chinese despatch of 22nd August. Tokio, 8th October, 1879.

We have to acknowledge the receipt of the despatch of the Tsun-li-yamen [Court of Foreign Affairs] of the Chinese Empire, dated the 8th. day of the 7th month of the 5th year Kwan-Shew (22nd day of the 8th month of the 12th year Meiji) containing amongst other matters a distinct assertion that Riu Kiu belongs to China.

Our Government has given full consideration to all that is contained in that despatch; but, as the grounds and evidence which support our right to the sole and absolute possession of these islands have been fully given in our previous answer, we can do no more in the present reply than declare once and for all the most grave and decisive considerations on which we rest, so as to preclude all further correspondence upon the present question.

Our position is briefly this; we originally reduced the islands to obedience by force of arms, and have ever since ruled the people with a paternal hand. Thus, what we have enjoyed in the islands is actual possession and dominion—and not a mere empty ceremony.

We will not here refer to those historical events which took place before the period Keicho: but an expedition undertaken by us during that period [viz. —in A. D. 1599], resulted in the complete subjection and reduction into our possession of the whole group, the ruler himself subscribing to an oath of perpetual allegiance. Nevertheless, the countries neighbouring to our own made no move, nor did any of them at that time undertake to make even the slightest protest against or to interfere in any kind of way with our proceedings. At that time, our possession of and authority over the islands became absolute and undivided: and from that time forward we have continuously, as occasion required, despatched forces to protect the islands, and civil officers to govern the people, just as we have to other parts of our country on the mainland. Moreover from the time of Shonei down to the present time, each successive ruler has repeated an oath, to prove his faithfulness and obedience: and the San-shi-kwan (the Council of the Ruler) has from time to time repeated a similar oath, testifying to their gratefulness and binding themselves to fidelity [Translations of such documents in the time of Shotai are given as illustrations in Enclosures Nos. 1 and 2 respectively.] The duty of taking this oath they have never since neglected, but have faithfully adhered to it with the same strictness, as if no more than a single day had elapsed since it was first taken, although it is in reality some three hundred years from that time to this. At the present time we have abolished the principality of Riu Kiu and converted it into a prefecture; but this is nothing more than an administrative change—an actual exercise of that authority over the islands, which came to us as a natural consequence of the events of the period of Keicho. Thus it is quite clear that we have always acted in our relations with Riu Kiu in but one way, from first to last, our whole course of dealing with the islands has throughout been consistent. The present change was effected after a firm determination had been arrived at; and with that we cannot allow any country whatever to interfere. In what we have done to Riu Kiu, there is nothing beyond what is here related.

The evidence adduced in the despatch of the Tsun-li-yamen in support of the statement that Riu Kiu is the territory of China consists of—the acceptance (at the hands of China) of ceremonial investiture—the payment of tribute—and the adoption of the Chinese calendar, by the Riu Kiu islanders. But all these—the ceremonial investiture, the payment of tribute and the adoption of the calendar thus referred to—are but insignificant formalities, the only real meaning and object of which has been to draw closer the bonds of friendly intercourse between China and Foreign countries; and they cannot for a moment be considered as evidence of the exercise of any political authority whatsoever. According to the Ta-ting-hwei-tien, even Western Nations as well as Riu Kiu and Annam, were amongst the barbarous countries tributary to the Chinese Empire, and the words, "Western Nations," found in the Ta-ting-hwei-tien are explained in Shing-woo-li (published by Hoi-wen) to include "Italy, England, &c." Thus the Empire of China has declared all the countries of the world with which it has had intercourse to belong to itself. It is quite needless to say that such has never been and is not now the real state of things. Now, in exactly the same way, a claim is made to the territorial possession of Riu Kiu, although the Prince and Ministers of the Tsun-li-yamen have themselves admitted that the fact of their reception of tribute is not to be regarded as affecting the *status* of the islands. From this it seems to us that they are quite aware that possession, and administration of the government of a country and the receipt of actual taxes therefrom—these are the things that constitute dominion and Empire, and not the observance of empty formalities.

Another point raised in the despatch is that the sons and brothers of the rulers of Riu Kiu have been admitted into the National Academy of the Middle Empire and have received instruction there in the several branches of learning and also that relief has been afforded to shipwrecked Riu Kiu islanders. Such matters are amongst the commonest acts of mere amity between nations, and are not worthy to be mentioned as grounds for a claim to the possession of a territory. The present is a practical question and must be decided by reference to substantial realities—not to shadows. Thus the present affairs of Riu Kiu are purely matters of internal administration, and have no connection whatever with the existing treaty of friendship referred to by the Chinese Prince and Ministers.

The fact that Riu Kiu has made treaties with some foreign

(7.) These were published in the *Japan Weekly Mail* of 25th October, page 1,411.

powers is further set forth in the despatch as a proof of the separate state existence of Riu Kiu. Such an argument is quite worthless; because, though an independent country can make treaties with foreign countries, yet no country whatever can acquire the right of independence by making such treaties. This is exactly the case with our islands of Riu Kiu. When they made those treaties with Foreign powers it was just at the time of the downfall of feudalism in our Empire, when there was no fixed rule in the management of foreign intercourse, and so the Riu Kiu islanders, overstepping the limits of their position and rights, took the opportunity of endeavouring, by whatever means, to establish themselves as a small sovereign state. At that time the Foreign powers, who made treaties with Riu Kiu, had had no means of ascertaining the true state of things. Under such circumstances, the fact that Riu Kiu should have made treaties with foreign countries was a casual circumstance, entirely without significance as evidence of national independence.

As the provisions contained in the treaties thus made were merely directed to securing the safety of navigators, and as they were not inconsistent with the existing treaties of our Empire, we did not repudiate them, but undertook ourselves to carry them out. At all events, this matter of the treaties does not in the slightest degree concern the Chinese Empire.

To come to some other points—As to the question of Shoten having been a descendant of Shun-ten, we may refer to the introduction of a work called 'Chiu-san Shei-fu, published by a Riu Kiu islander, whose name was Sai-taku: and moreover, in the 'Ta-tsing-wan Hing-tong-kao' (a Chinese publication) both accounts (of his descent) are given. With regard to the fact that Minami-shima paid tribute to our Empire and that the Riu Kiu islands were conferred upon Shimadzu Tadakuni by the Shogun Ashikaga, we must point out that these events took place at a date long anterior to the period of the Ming dynasty; and we must also remark that the book Okinawa-sei, to the introduction of which and to a note in it reference is made by the Chinese Government, contains merely the opinions of a private individual, to which no authority whatever can be attached. We will not go into further historical details, which are not of much practical importance, as we wish to exclude from the present answer all irrelevant matter.

In conclusion we have only to add that, the abolition of the Riu Kiu principality having been effected after mature deliberation and with due regard both to our rights and to considerations of justice, we are unable to take any further steps in the matter to meet the wishes of the Government of the Chinese Empire, in compliance with the demand made by it. We are really almost at a loss to understand what is the real meaning of the Government of the Chinese Empire, when it says that some great and wise men will necessarily appear before us, to dictate what is equity and justice; but we have to remind it, that according to the principles of international law, every independent country has the right of deciding upon its own course of conduct. It is our earnest wish to maintain forever the happy relations now existing between our respective Empires, which are to so great a degree mutually dependent the one on the other. The Chinese Prince and Ministers also say in their despatch that the insignificant Riu Kiu Islands should not be taken into account so as to affect relations of so great importance. That being so, it is strange that they should now, all at once, declare their desire to appeal to some other person to settle the present question. We, on the other hand, have a strong feeling that to continue the discussion of a trifling matter like the present would be most impolitic, considering our friendly relations with the Government of the Chinese Empire. We therefore trust that the Chinese Prince and Ministers, in the exercise of that great wisdom which is conspicuous to all the world, will not take any further action in this matter without mature reflection.

LECTURE AT THE TOKIO CHRISTIAN ASSOCIATION.

A general meeting of the above Association was held on Thursday evening the 30th October, the President, W. G. Dixon, Esq., in the chair, when a lecture was given by Mr. C. J. Cooper, Professor of History in Tokio Daigaku, upon the subject: 'How Anglo-Saxon England became part of Christendom.'

The lecturer commenced by remarking that the conversion of England was mainly the work of the 7th century, one of the most momentous in its results to the world of any of the centuries after Christ. It was the century which saw the rise of that hostile religion in Arabia, which within a few years of Mohammed's flight from Mecca in A.D. 622, reduced the most ancient centres of christian worship, thus suspending the hopes of the spread of the christian faith in Asia for twelve hundred years. Asia Minor had long been falling under a sort of mental paralysis, due largely to her unhappy over-excitement on subtle points of dogma, which might seem to have had but little vital connexion with the religion of Christ. But when during this 7th century, christianity thus lost so much in the east, she gained more in the west. The 6th century had just been closing in, when St. Augustine landed at Ebsfleet. At that time the powerful king Aethelfrith sat upon the throne of Northumbria, Aethelbert on that of Kent. The former by his union of the two kingdoms of Bernicia and Deira, and by his subsequent great victories over the Strathclyde Britons and

the Picts, prepared the way for the magnificence of his successor Eadwine, the first king of the northern part of the island, to receive christianity. The circumstances of Augustine's mission might be passed over rapidly, because they were the most familiar. He was received by King Aethelbert with a courtesy which said much for that sovereign's qualities of mind. At this time there seem to have been at least two old places of worship, in which Divine service was conducted; the one, a venerable church at Glastonbury, emphatically called 'the Old Church,' and the other, a church at Canterbury, called St. Martin's. The latter had a short time before been redecorated, in order that the French Princess, consort of King Aethelbert, might there enjoy the form of worship to which she had been accustomed in her own country. The sympathy of the Queen of course greatly facilitated the efforts of Augustine, who before long won the king's heart, seated himself firmly upon a Bishop's "stool" at Canterbury, and received the Pallium of a Metropolitan from the Pope. Letters received from Rome directed and encouraged him, and it was noticeable that these letters were remarkably liberal in tone. He also received from Rome a supply of fellow-labourers, two of whom succeeded him in the Archbishopric dignity, whilst one of them, the celebrated Paulinus, accompanied the daughter of Aethelbert to the court of her husband Eadwine.

Of missionaries in the north of England, Paulinus was the first in the field, but it remained for a greater than he to be the true missionary of the north. Already an important series of events in Ireland and Scotland was paving the way for the conversion of Northumbria. St. Columba, an eminent Irishman, after long missionary labours amongst the Picts, had founded the monastery of Iona, off the Scottish coast; and even earlier, Ninian had done much among the Picts. The kingdom of Eadwine stretched from what is now called Nottinghamshire and Lincolnshire to the Forth, upon which was his strong frontier city of Eadwine's-Borough (Edinburgh), and the ancestors of modern Lowland Scotchmen were of course mainly Anglo-Saxons. Paulinus took advantage of a moment when Eadwine had won a great victory, to impress the king with the weight of the claims of christianity, and before long the royal residence had become a sort of reception house for the candidates for baptism. Paulinus was engaged for many days together in baptizing converts in the river hard by. Probably the conditions imposed by him as a qualification for the rite were very far from rigorous. A time came at length when the glory of Eadwine passed away, and he fell in a desperate battle with Penda, the Pagan king of Mercia. Paulinus was obliged to flee from his episcopal city of York, and ended his days as bishop of Rochester. For a while Penda and his terrible ally Cadwalla, king of North Wales, dictated the course of affairs in Northumbria.

Two puppet kings, both of whom had embraced but now renounced Christianity were set up respectively in Bernicia and Deira, but the shame of his country aroused the indignation of a prince of the blood royal, and in a furious onset Oswald drove the Mercians and Welsh from Northumbria and became its king. In exile he had had intimate relations with the monks of Iona, and now besought the Abbot to send him a missionary. In the event, the missionary who came was Aidan, and there followed the joint labours of the monk and the king, which form one of the most picturesque incidents in the annals of the propagation of the faith. Traversing Northumbria together on foot, Aidan preached and the king was his interpreter.

By this time christianity was making strides in every direction except in Mercia and Sussex; and the fountains of it were at least four. There were not only the Latin mission at Canterbury and the Irish mission in Northumbria, but also independent teachers amongst the West Saxons and East Anglians respectively. In the country of the former the missionary was Birinus, probably a native of Italy who had been resident in Gaul. But it was necessary to mention also an obscure person, Meidulf, who seems to have been a Scotman, and from whom the monastery of Malmesbury, which during later times became very magnificent received its name. In East Anglia, the Burgundian Felix was preaching vigorously; (here also there was the Irish monk Fursey).

A bitter controversy arose at last between the Latins and

the Sooto-Irish. The latter, who traced back their christianity to an early Asiatic source, differed from the former in ritual, in church government, in their method of fixing Easter. The matter was settled in favour of the Roman or "Catholic" usages at a great synod held under the auspices of Oswio, successor of Oswald on the Northumbrian throne, at Whitby. At that synod, Oswio in deciding for Rome might seem to have gone upon reasons quite unsatisfactory, and Wilfrid the principal defender of the Latin cause might seem to have gone beyond the bounds of courtesy to opponents.

About the date of this synod, a terrible plague ravaged England and carried off a remarkable number of the leading persons of the earlier half of the century. From that time a new set shone forth, for they were correctly described as shining. In the year 668 Theodore, a native of St. Paul's city, Tarsus, arrived in England, having been chosen by the Pope, upon the request of the Northumbrian and Kentish kings, to be Archbishop of Canterbury. He took in hand with diligence the organization of the Church in England, and from him and his companion Hadrian "streams of life-giving knowledge" were said by the ancient historian to have flowed. Much was done in his day for the definite establishment of the parochial system and the extension of the episcopate. Great Councils were held at Hertford and at Hatfield, in which rules were laid down as to the ecclesiastical position of bishops and clergy, the decision of Whitby with regard to Easter confirmed, and the authority of the "Ecumenical" Councils of Christendom recognised.

Mercia, where up to the date of his death King Penda had held out for paganism, was now governed by the ardent believer, Wulfere, and the saintly Chad was the Mercian Bishop with his see fixed at Lichfield. Chad was one of the meekest and devoutest of men, disliking every kind of ostentation, travelling on foot whenever occasion required that he should travel, and giving himself up whenever not engaged in his episcopal duties to retired contemplation and prayer. There was a well-known story that in times of violent storms, he was always found upon his knees in the House of God, and that upon being asked why this was so he replied, that it was meet to meditate upon the coming Judgment and the Divine Power. In the Anglo-Saxon Chronicle, no small space was occupied with the record of the "hallowing" of the Monastery of Peterborough, which took place during the reign of Wulfere. It was attended by princes, princesses, bishops, thanes. Rich was Abbot Sexwulf, remarked the chronicler, in the enjoyment of such friendships, but "now being with Christ far richer." Those were days in England of great enthusiasm for religion, when valuable grants of land were continually made to the churches and abbeys, and numerous persons of royal blood, both male and female, entered upon the religious profession. Amongst the most prominent individuals of the closing decades of the century were Aldhelm, Abbot of Malmesbury and afterwards Bishop of Sherborne, Boisil, Abbot of Melrose, Eata, Abbot of Melrose and afterwards Bishop of Lindisfarne, and Cuthbert. The Venerable Bede belonged more properly to the following century. By this time some considerable advance had been made in the arts and in learning. Stately buildings had risen at Hexham, at Ripon and many other places, and many books had been introduced into England chiefly by the care of Benedict Biscop, who had made many journeys to Rome. The Abbeys of Wearmouth and Jarrow were becoming highly learned, though they were both shortly to be eclipsed in renown by the great School of York, where was one of the finest libraries of the age. It was of one of the venerable teachers of York, that a poet of the 8th century said "Jam cui Christus amor, potus, cibus, omnia Christus" (To him Christ was Love, Food, Drink. Christ was everything.)

In conclusion the lecturer reminded his hearers that the story he had been telling them in brief outline, belonged to everyone of British race, under whatever name, whether they were called English or American, or Scotch. The great characters in that story were even from a secular point of view, persons of no ordinary calibre; but he might, he trusted, be pardoned, if at Allhallowmass, a season so long venerated in England, the interest he felt in them that night was of a particularly solemn kind; and if he ventured to close with the words:—

"At Hallowmass, when the leaves are golden,

"The woods seem whispering stories olden

"Of the brave for Christ, who have passed away."

SHANGHAI LETTER.

SHANGHAI, October 28th, 1879.

The Race days are fast approaching and in consequence steady work is being done on the course. In fact all interesting paws were finished on Saturday last, when a small race meeting was held during the forenoon, finishing just in time to escape the heavy downpour of rain with which we were favoured in the afternoon of that day. There should be some good racing this meeting, as many of the old cracks are going well and there are some promising animals amongst the Griffins, although knowing ones pretend to decry the whole lot. The German stables perhaps possess the best among these, and it will be strange if the Maiden Stakes do not fall to our Teuton friends, but the Eroo stable has a capital Griffin in *Hark Forward*, and Mr. Troy's *John Dunn* and Mr. Ten Broeck's *Wild Echo* are not to be despised, *Black Satia* seems to be in good form and there seems little doubt of his failing to be to the front when he runs. *Black Satia* divides the honour of favourite for the Criterion Stakes with *Jolly Friar*, and as the latter is going better than ever, the Eroo stable is credited with the win of the St. Ledger. The "Wild" stable is numerically a very strong one, but there is some danger of the ponies being over-trained. We have every prospect of fine weather, and this alone is needed to make the Autumn Meeting a perfectly successful one.

The Autumn Regatta was held on Monday and Tuesday last, and unlike last year, fine weather was the order of each day, so that there was nothing to interfere with the carrying out of the sports. Somehow the interest that used to be shown in aquatic has fallen off in Shanghai, and it is only by extraordinary efforts on the part of a few indefatigable hard workers that a programme can be framed and the various events filled. This year the Hon. Secretary, that good ear and enthusiastic rower, Duncan Glass, had much to contend with, but managed to provide a sufficient number of races to fill up two afternoons, as usual. The interest, of course, centered in the "Merchant's Cup," for which an English and Scotch eight contended. Public opinion was not decided one way or another during the training until just before the races, when the English were made hot favourites, and the general opinion was that the Scotch would follow them at a distance from start to finish. But the result hardly justified this opinion, for the Scotch jumped off with a decided start, increased their lead every stroke, until at the very commencement of the race they showed their opponents that they had, besides the proverbial thoughtfulness and caution of their race, a quickness of action which served them to good purpose, for they rapidly went ahead of the English, and rowing in good style maintained a lead which placed the race in their hands throughout, giving them an opportunity of reserving their strength for a spurt when advisable, and enabling them to finish a fast race as they liked—doing it, in fact, in 8 m. 15 sec. for the mile and a half, which was uncommonly good time considering that they were never pressed by their opponents. The two crews were made up as follows, and I have no doubt but that several of the names will be recognized by many of your readers. Especially as two of the Scotch crew took part in the International Race at Kobe in 1876, when they showed of what good metal they were made.

The event next in point of importance on the first day was the race for Single Sculls for the Ladies' purse. Three boats started, but from the first Mr. Menser showed himself by far the best and came in an easy winner. The purse was presented to him by Mrs. Mackenzie, who made a neat little speech on the occasion. The Challenge Four-oared Race which followed was remarkable for ending in a victory for the Committee against the Club, thus reversing the decision of many previous years, Duncan Glass, the stroke of the Scotch eight, being again stroke of the winners. Another Four-oared Race suc-

ceeded this, and the day's sports were concluded by an all Comer's Race, which afforded a good deal of fun, as, with one exception, the crews were of an extremely mixed sort, being composed of rowers who considered training quite superfluous, some of these found to their cost after the race that their opinions were erroneous. The second day's sports did not create so much interest as the first day's, as the Bank's and public generally did not observe it as a half-holiday, but I suppose there was hardly a soul in Shanghai who did not look forward to the result of the "Banker's Cup," for the Senior Sculls, a race that was a renewal of last year's match between the veteran Duncan Glass and the Hongkong champion Schultz. Betting was in favour of the latter as he had reserved himself solely for this contest, whereas Glass was contending in all the events on the programme where he was wanted. The Teuton, however, did not justify the good opinions formed of him. He gained the start it is true, but lost it almost at once, and from that time until the mile and a-half was finished Glass kept well ahead of him, and had the race as his own nearly the whole of the course, finishing a winner by several lengths. His victory was loudly applauded, and the successful oar was lifted from his boat on reaching the boat house and carried into the dressing room by his admirers. The next interesting event of the day was the race for one mile and a half between the "Veterans" and the "Griffins," which was the closest race of the day, ending in a victory for the latter. The crews were composed of the following:—

VETERANS v. GRIFFINS.

10 years and over in China. 3 years and under in China.
Entrance Fee, \$40 per boat. Distance 1½ miles.

About the success of the Regatta there can be no doubt, to which the fair weather greatly tended, and it is to be hoped that such spirit will now be infused into the members of the S.E.C. that they will produce a still more attractive programme next year.

Our Volunteers have burst out into most astounding brilliancy of costume, having discarded the sombre uniform of former days for the bright scarlet of the English army, adopting also the recently introduced helmet, made for them of white material, ornamented with brass mountings. The uniform is really very effective, and what with this novelty and the energy of the Captain Commandant, the Volunteers are making themselves known in earnest. No doubt these ardent warriors sigh for another Muddy Flat in order to distinguish themselves. If they do get a chance I hope our Municipal Council will be equal to the occasion and find a decoration for the gallant heroes which shall rival, or perhaps eclipse, the Victoria Cross. The rifle match between Shanghai and Kobe fell an easy victory to the latter, but our marksmen had much to contend against. Some of their best shots were absent, and the state of the weather when they fired precluded all hopes of high scores. It is therefore to be hoped that a return match will take place, when Shanghai may have a chance of redeeming her shooting reputation. Should Kobe consent to long ranges I have little fear for our rifle shots, as they are better at 500 than at 200 yards, whereas the Kobe team prefers from 100 to 300 yards range for a match.

Our evening entertainments have already begun for the season. On the 15th instant Mr. Iburg gave his first subscription concert, which was fairly well attended, the audience being treated to such good music as can only be supplied in the Far East in this port. We have now got Mr. John Jack's theatrical company among us. They gave "Our Boys" on Saturday to a well filled house, and earned deserved praise on all sides, and to-night, when this piece is repeated, they will doubtless have even a better house. Of Mr. John Jack's histrionic abilities there can be no doubt, but opinion seem to be divided as to the merits of the rest of the company, which the performance of other pieces in their repertoire will put to the test. I suppose the company will visit Yokohama sometime during the season,

so that your residents will have an opportunity of judging for themselves of the company's abilities.

H.M.S. *Moltke* is in port now, being the only vessel representing the British flag, while we have three American, three German, and one French man-of-war anchored here.

REUTERS' TELEGRAMS.

LONDON, November 5th, 1879.

The Mediterranean Fleet is ordered to Vourlah Bay, to insist upon execution of—(remainder of message unintelligible, probably refers to reforms in Asiatic Turkey).

LONDON, November 7th, 1879.

The Turkish Ambassador has asked the Secretary of State for Foreign Affairs for explanations.

The Russian Ambassador in London is recalled.

Unintelligible part of telegram of 5th instant, was:—
"The *Hindustan* has been wrecked near Madras. All lives saved."

JAPANESE ERA 2530, MEIJI 12TH YEAR, 11TH MONTH, 8TH DAY,
DO-YO-SI.

NOTES OF THE WEEK.

DIED.

At 217-A Bluff, on the 7th instant. ALEXANDER URQUHART, aged 35 years.

The Shanghai and way-port steamers have arrived and departed during the week as usual, and we are momentarily expecting the M. M. steamer *Tibre*, with the European Mail of the 21st September, as she left Hongkong last Saturday. The P. & O. steamer *Malacca*, with the Mail of the 24th September, left Hongkong on the 4th instant, three and a half days in advance of contract time and may therefore be expected early next week.

There have been several arrivals and one departure amongst the men-of-war. H. M. S. *Scinger* arrived from Takao, and the *Iron Duke* from Kobe, both on Thursday. The U. S. S. *Ranger* left for San Francisco also on Thursday, her place being taken by the *Alert*, which came into port the same day. The Russian gun-boat *Abreck* arrived from Vladivostock on Monday.

The past week has been a red-letter time for holiday makers; on Monday, loyalty to our adopted country gave the satisfaction of closed Banks and offices in honor of the Mikado's birthday. Tuesday and Wednesday were certainly of the customary type, but the last three days have been devoted to pleasure by all those whom silk buying, urgent affairs, or newspaper writing have not confined to that window with a 'northern light' or to office desk. Like London after the season, Yokohama has been out of town; racing matters this autumn having attracted but few spectators to the Jockey Club meeting, which took place on Thursday and Friday. The best thanks of the community must, however, be given to the Jockey Club, since if they had failed to get up any meeting at all our accustomed holidays might have been in jeopardy! Perish the thought that spring and autumn race meetings may ever disappear from the annals of Yokohama; but still for those who do take an interest in such matters let us hope that next year's attractions at the race-course will be greater than those we have just had. More perfect weather could not have been hoped for, and tourists 'up country' have certainly had the best of it.

The Emperor of Japan completed his twenty-seventh year on Monday, and the event was celebrated throughout the capital as a general holiday with every mark of loyalty and enthusiasm. A grand review took place on the Hibiya parade ground, in the presence of the Emperor, who arrived on the scene shortly after 7 a. m. (which would certainly be considered a very early hour by most potentates), accompanied by Messrs. Sanjo, Oki, Kuroda, &c., and was received by the Imperial Princes, Councillors of State, &c., who were waiting in readiness. About 15,000 men of all branches of the service were paraded under the command of Lieut. General Nodzu, and after witnessing the various manoeuvres gone through, His Majesty returned to the palace at 10.30 a.m. In the evening a reception was given by the Minister of Foreign Affairs and Madame Inoué in the Hall of the Engineering College, at which some five hundred guests, including all the notables of the capital, were present. During the entertainment, the naval and military bands played alternately, and about two hundred and fifty different kinds of fireworks were let off. Here, in Yokohama, all the men-of-war in harbour dressed ship, and fired royal salutes at noon in honor of the occasion, and in the evening Mr. Nomura the Governor of the *ken*, entertained a large company in the Town Hall, amongst whom were the foreign consuls, the commanders of the different men-of-war in harbour, the principal Government officials in Yokohama, and the leading merchants. The naval band performed during the evening and there was a display of fireworks from the Japanese man-of-war *Nishin Kan*, whilst the English yacht *Albion* made herself conspicuous under a blaze of light from Japanese lanterns. His Highness Prince Henry of Germany visited the Mikado during the day, and a congratulatory telegram was also received at the palace from H.R.H. the Duke of Genoa from Hakodate.

We have pleasure in giving publicity to an invitation from Tokio Geographical Society to foreigners to join that association of Japanese *savants*. The Society is desirous of having its transactions translated into the English language for the benefit of foreign members, but as this must necessitate an expenditure not originally contemplated, it is hoped that a sufficient number of foreigners will join to make the proposed plan feasible. The regulations of the TOKIYAU (*Anglice* Tokio) GEOGRAPHICAL SOCIETY have now been printed in English, and can be obtained from the Secretary. We may mention that the entrance-fee is ten yen; and the annual subscription twelve yen, six yen being payable in January and six in July.

We have readily awarded praise to the Imperial Japanese Post Office for the work it has already accomplished; but it is impossible yet to describe its organization as complete or to imply that no room still exists for improvement. Several instances have lately occurred of excessive delay in the delivery of letters despatched to or from Tokio, (in some cases extending over twenty-four hours,) and we have heard of frequent disappointments in the receipt of letters addressed to places in the interior. The Post Office officials invariably give very attention to suggestions addressed to them and we hope that our present complaint will also be met by its remedy,—an increased despatch in the delivery of local letters.

The collision case between the M. B. steamer *Takasago Maru* and the brig *Junma* was decided yesterday by the umpire, selected by the arbitrators, in favour of the sailing vessel. The case has been argued for several days past, by Mr. Kirkwood on behalf of the Mitsui Bishi Company, and by Mr. Lowder for the *Junma*, before two arbitrators—Lieut. Dean of the *Charybdis* and Captain J. M. James, of Tokio—who, being unable to agree upon their decision, finally referred the matter to an umpire. The claim of the steamer amounted to \$6,000 and that of the brig to \$3,000. The award has now been made in favour of the latter.

The following information has been received from Hakodate regarding the Saghalien Fishing Association. "The schooners *John Mackean* and *Pioneer* have returned from Saghalien, and Captain Maies reports that, on the 29th September, the boat of the *Pioneer* was capsized while laying out a kedge and Captain Thomas L. Stevens, a Russian (name unknown,) Thomas David-

son and two Japanese sailors were drowned. We learn that the accident occurred at night and that a strong current was running at the time. Mr. Sweet and another Japanese sailor who were also in the boat succeeded in reaching the shore in safety. The *John Mackean* was at anchor some three miles from the *Pioneer*, and those on board knew nothing of the calamity until the next morning."

Captain Stevens had commanded vessels on this coast for some years past and was recently in the employ of the Mitsui Bishi Mail S.S. Co. His many friends will deeply regret his untimely death.

The Sanitary Bureau of the Home Department, has compiled a return made up to the 4th instant, which shows very decidedly the steady decrease of the cholera epidemic. The total number of cases which have occurred throughout the empire, since the outbreak of the disease, is 157,692: of these 93,234 have died, 38,824 have been cured and 26,634 are still under treatment in the different hospitals and lazarets.

One of the principal business portions of the native part of the town had a narrow escape from a very destructive fire on Tuesday morning. About 2.45 the alarm was rung out and flames were perceived issuing from the premises of Matsukiya and Hagiwara, in Honchodori, Sanchome. Assistance was quickly at hand, and the fire was extinguished about 4 o'clock; but not until about six buildings had been burnt down. It was extremely fortunate that there was little or no wind, or else a great portion of that part of the town must inevitably have been destroyed.

STUART ELDRIDGE, M.D.,
Surgeon-in-Charge.

JAPAN NEWS.

[The following Notes on various Japanese matters are chiefly derived from the native papers, occasionally supplemented from original sources of information, and are carefully collated and edited, so as make them readable and intelligible.]

COURT, POLITICAL AND OFFICIAL.

The memorial services usual on similar occasions will be held in the Imperial palace, on the 13th instant, the seventh anniversary of the death of the first daughter of the Mikado, and also at her grave in Toshinagaoka, Tokio.

The following appointments were made by the Council of State, on the 6th instant:—

His Excellency Mori Arinori, Senior Vice-Minister for Foreign Affairs, to be Envoy Extraordinary and Minister Plenipotentiary.

Vice-Admiral Yonomoto Takeaki, Envoy Extraordinary and Minister Plenipotentiary and an official of the 2nd class in the Department for Foreign Affairs, to be Senior Vice-Minister for Foreign Affairs, also retaining his former appointments.

His Excellency Uyeno Kagenori, Envoy Extraordinary and Minister Plenipotentiary, to be Junior Vice-Minister for Foreign Affairs.

The *Nichi Nichi Shimbun* states, that Mr. Mori Arinori, who was appointed an Envoy Extraordinary and Minister Plenipotentiary on the 6th instant, will proceed to London shortly to represent Japan at the English Court.

Lieut. General Yamada, the Minister for Public Works, received the insignia of the Order of the Rising Sun of the first

class on the 1st instant. On the same day, Don Mariano Alvarez, the late Spanish Minister, received the insignia of the Order of the second class.

Mr. Kono, the vice-President of the Senate, has been appointed an *attaché* in the Department of Home affairs and is said to be entrusted with the preparation of the various measures to be laid before the meeting of Provincial Governors to be held next year.

Mr. Ito, the Home Minister and Mr. Matsukata, the Director of the Agricultural Bureau will not return to the capital until about the middle of the month. They have been invited by the Governor of Yamagata Ken to visit his prefecture and inspect the damage done by the recent floods, and also the various industrial undertakings established for the development of trade.

Mr. Hanabusa, the Japanese Envoy to Korea, returned to Tokio on the 2nd instant. Mr. Kabayashi, the Japanese Vice-Consul for Kolsakoff, is expected to arrive in the course of a few days.

Mr. Nishimura, the first secretary of Yamanashi Ken, was appointed Governor of Oita Ken on the 30th ultimo, in the room of Mr. Kagawa resigned.

Mr. Mayeshima, the Postmaster General, left for Kiyoto yesterday, on important official business.

Mr. Motono, the Superintendent of Customs at this port, left for the Atami Hot Springs a few days since, for the purpose of trying if the waters will benefit the rheumatism he has lately been suffering from.

No fixed rules have hitherto existed for the punishment of offenders residing in the seven small islands off Idsu. A branch office of the Police Bureau has now been established there, with power to try and sentence criminals to terms of imprisonment not exceeding three years. Sentences of from three to ten years penal servitude will require the approval of the President of the Tokio *Saibansho*, and all criminals accused of crimes, involving the punishment of death or penal servitude for life, will be tried in Tokio.

The Council of State has notified the Judicial Department, that sums of money varying from 400 to 600 yen will in future be annually granted to the Presidents of the Tokio *Joto Saibansho*, and the local courts of Yokohama, Kobe, Nagasaki, Niigata and Hakodate, towards the expense of entertaining distinguished visitors to Japan.

The Council of State have presented the family of the late Mr. Otsuka with 300 yen to defray the expenses of his funeral. The deceased was on the staff of the Land-tax Revision Bureau, and died about three weeks ago of cholera, contracted while in the discharge of his duties in the interior.

A special meeting of the Central Board of Health, was held on the 1st instant, Mr. Sano, the president of the Board, in the chair. It is reported that the object of the meeting was to discuss the advisability of establishing local boards of health after the end of the present year, in every city and prefecture throughout the empire.

The Governor of Kanagawa Ken, issued a notification on the 5th instant, which stated that the office for the inspection of epidemic diseases, established in connection with the Kencho last August, has been closed and that ships entering Yokohama will no longer be inspected or disinfected.

A central office, having charge of all business connected with the geological survey of the whole of Japan, is to be established in connection with the Public Works Department, Tokio. The necessary instruments for carrying out the survey are to be ordered at once in Europe, and will cost about 30,000 yen.

Mr. Shinagawa, the first secretary of the Home Department, Dr. Mayet, of the Finance Department and the other members of the committee to inquire into the advisability of establishing a Japanese Fire Insurance Company, held a meeting on the 4th instant.

The examination of teachers for the Primary Schools will take place in the Normal School, Tokio, on the 10th instant.

As the 31st ultimo was the anniversary of the signature at Peking, of the treaty between China and Japan in settlement of the Formosa affair, the son of the late Mr. Okubo who represented Japan on the occasion, invited Generals Saigo, Kuroda, Kawamura and Oyama, and several other high officials who

were associated with his father, to an entertainment in commemoration of an event so honourable to Japan.

Advices from Hakodate state, that the Duke of Genoa landed there at 10 a.m. on the 31st ultimo. His Royal Highness visited the branch office of the Colonization Commission, the public gardens and museum and returned on board the *Vettor Pisani* at 3 o'clock in the afternoon.

Mr. Kawase, one of the Councillors of the Senate, has been appointed to attend to all matters connected with the entertainment of the Duke of Genoa. Mr. Tokitô, the 1st Secretary of the Colonization Commission, visited the *Vettor Pisani* in Hakodate, on the 30th ultimo and conveyed to the Duke, the Mikado's formal invitation to visit Tokio. The Duke was expected to leave Hakodate on Thursday and arrive here about Tuesday next.

It has been decided that Prince Henry will reside in the temple of *Sokokuji* during his stay in Kiyoto, and in the *Senjinkan*, a building on the premises of the Mint, while he is in Osaka.

NAVAL AND MILITARY.

The annual celebration of the *Yasukuni Jinsha*, at Tokio, took place on the 6th instant. His Majesty the Emperor, sent Mr. Kunishi, one of the officials of the Ceremonial Bureau, to present his offerings at the temple, and Generals Yamagata and Oyama, Admiral Kawamura and about one hundred and fifty other naval and military officers attended during the day. Horse-racing took place on the 6th, and No dancing commenced yesterday and will be continued to-day. This evening there will be a grand display of fireworks. An electric light exhibited before the temple, on Thursday night, proved a great source of interest. Imagine a Jablokoff candle, supplied by a Siemen's dynamo-galvanic machine, at a *Yasukuni Jinsha*!

A grand special memorial service, for the souls of those who died in the wars of the restoration and the south-western rebellion, will be held in the *Yasukuni Jinsha* next March, when the Governors of all the cities and prefectures will be in Tokio.

The *Heiji Shimibun* says, that Mr. F. Shanten, (?) a native of Switzerland, lately forwarded to the Military Department some samples of a composition invented by him and said to remove rust from firearms &c. The inventor applied to have this composition adopted in Japan and stated that experiments were being made with it in Russia, Austro-Hungary, France, Sweden, Denmark, Holland, Belgium, Guatemala, Mexico, &c., and that it had proved so successful that the authorities of one country had already approved of it and purchased four thousand packages for use in their army. The Japanese Military Department has forwarded the samples to the arsenal at Koishikawa, to have the merits of the invention thoroughly tested.

The Naval Minister visited the French man-of-war *Arnauld* on the 5th instant, and was received with the usual honours.

The *Mainichi Shimibun* says, that the non-commissioned officers and men of the Imperial Guard will shortly commence a course of instruction in fencing with the Japanese sword.

INDUSTRIES, TRADE AND FINANCES.

The competitive exhibition of raw silk and cocoons was opened on Saturday last at 10.30 a.m. by their Excellencies the Ministers for Home Affairs and Finance. It is unnecessary to give any account of the opening ceremony, as it was precisely similar to that of the tea exhibition which we described some short time since. The following is the translation of the speech delivered by the Minister of Finance on the occasion:—

"It is no doubt true that the balance of trade has frequently been against Japan since the opening of the ports to foreign trade and commerce and it is entirely owing to the production in this country of tea, raw silk, etc., that the difference is not greater than it really is and that our exports occasionally exceed the imports. Raw silk especially, is our most important staple as we find from statistics that it amounts on an average to at least one-third of the total annual exports of Japan.

Silk is an article of luxury and not of necessity and the trade is therefore liable to constant and sudden changes owing to those unexpected dissensions and calamities which not unfrequently occur in all countries. Compare, for example the price of silk in 1875 and 1876 and the difference will be found to be about fifty per cent! This shews conclusively what a hazardous business the silk trade is to be engaged in, and competition is now threatened by the invention in Europe, of a method of pro-

paring hemp which is said to make it a perfect substitute for silk in most, if not all, of the purposes for which silk has hitherto been considered without a rival. The large production in China also affects the price very materially, and it is undeniable when we remember that in 1876, Japanese Mybashi No. 1 was thirty-five per cent. lower than Italian silk in the London market, that notwithstanding the great improvement recently introduced into the manufacture of silk in this country, we are still unable to compete on equal terms with the old home of sericulture in Europe. These few examples tend to shew some of the difficulties which those gentlemen who are engaged in the silk trade of Japan have to contend against.

Now although this business is so hazardous, yet, as it exercises a very material effect upon the prosperity of the empire, those who are engaged in it should bear that fact in mind and strive to successfully overcome the uncertainties and difficulties of their position and thus lay the foundations of a permanently prosperous trade in the future. Competition exists in all branches of commerce and to be a successful competitor demands the exercise of patience. If our silk producers will only take advantage of the superior capabilities which the soil and climate of Japan possesses for silk culture, and with energy and perseverance strive to produce a good article at a moderate price, not abandoning their efforts on every temporary discouragement and thus sacrificing the fruits of their former labours, it may be at the threshold of success, there is no earthly reason why the silk of Japan should not take rank before that of Italy and France as the premier silk of the world. On the other hand, if the true principles of trade are neglected and the producers are satisfied with occasional high prices, the result of ephemeral causes, we can only expect that other countries will maintain and indeed increase, the lead they have already obtained. This want of energy and perseverance is what we have most to dread and I trust that the gentlemen connected with the most important industry of the Empire will remember and act upon the suggestions I have made on the occasion of the opening of an exhibition intended for the special benefit of their trade."

Mr. Hara Zenzaburo, the well known silk merchant of Yokohama, then replied to Mr. Okuma on behalf of the exhibitors, and assured him that his valuable remarks and advice would be carefully borne in mind and carried into effect by the silk producers of Japan. The exhibition was subsequently opened to the public from noon to four o'clock p.m.

The total number of exhibitors at the exhibition is 1,122, and there are 1,294 exhibits. Out of these, 779 are samples of raw silk and 515 of cocoons. The examination of the exhibits was commenced by the judges on the 3rd instant and in order that the cocoons might be tested by reeling, a number of work-women have been engaged. Mr. Tomura, of Bentendori, has forwarded raw silk and cocoons produced in Italy, France, China, India, etc., so that they can be compared with those of Japan.

The Colonization Commission has recently caused weaving machinery to be manufactured in imitation of that used in Europe. It is intended for Sapporo.

Mr. Takashima, a *shizoku* of Kiyoto Fu, sometime ago invented a chemical composition for coating paper bags, which would effectually prevent any grain placed therein from being eaten by rats or mice while stored in godowns, &c. Experiments with this composition have been made in Shiga, Miye, Okayama, Fukuoka, &c. and proved very successful. A company has now been established in Otzu, under the name of *Hogekisha*, to manufacture the article and permission has been obtained to open a branch office in Tokio. The price charged by the company for a properly prepared bag of the smallest size, is six *sen*.

The rice crop in Osaka Fu is estimated at 300,196 *koku*, which shows an increase over that of last year of 57,800 *koku*. The quantity of Chinese rice in the country is calculated to be 72,850 *koku* in Yokohama and 21,000 *koku* in Kobe.

The *Akebono Shimibun* states, that many applications have recently been made to the authorities for permission to establish Rice Guilds (*Beisho Kaisha*), in different parts of the country, but as the government think the unrestricted formation of these associations is calculated to prove injurious, none will be sanctioned until regulations for their guidance have first been prepared.

The *Mainichi Shimibun* learns from Nagasaki, that a meeting of the local native Chamber of Commerce, was held on the 25th ultimo, to consider the advisability of establishing a Rice Guild (*Beisho Kaisha*) at that port. Out of sixty-six members present, sixty-five refused to sanction the idea, so the proposal of the sixty-sixth member has fallen through for the present.

The same paper says that the owners of the junks engaged in

the carrying trade to Yokosuka, having learned the success of the native merchants combination respecting the "iron hoops" question, resolved to form an association and raise the hire of the junks for the trip from Yokohama to Yokosuka from 4.50 *yen* to 15 *yen*. As foreigners resisted this demand and the junk owners did not keep faith with each other the arrangement fell through, but the junk owners succeeded so far that the hire has been raised to 8.50 *yen*.

The following fares have been fixed for boats plying for hire in the harbour:—

		In ordinary weather.	In stormy weather.
From the Hatoba to any ship in harbour, irrespective of distance ...		6	9
Do. do and return...		10	15
Detention of boat per hour ...		4	6

Mr. Yamamoto and two other leading merchants of Kobe, propose to form a company to be called *Kaikōsha* for the purpose of building a number of steamers and sailing-vessels to open up regular communication with all Japanese ports not visited by the Mitsu Bishi company.

During the month of October, 76 native vessels carrying 3,555 passengers and 330,013 packages of cargo and 30 foreign vessels, arrived in Yokohama. The departures for the month were 76 native and 32 foreign vessels.

It has been decided to issue pension bonds to the *shizoku* of Okinawa *ken*, similar to those given to the ex-King. However, as some of them are still in possession of their hereditary estates and some time will necessarily elapse before the pensions can be accurately ascertained, it has been decided to permit these nobles to receive the taxes for the present year from the farmers as hitherto.

The *Mainichi Shimibun* says, that the following is the revenue and expenditure of the Printing Section of the Finance Department (formerly known as the Paper money Bureau) during the half year ending June last:—

Total Revenue...	Yen 565,742.428
" Expenditure ...	" 433,250.057
Net profit ...	Yen 132,492.371
Expended on new works since the establishment of the Bureau ...	Yen 582,711.486

The following is the official return of Imports and Export in all the open ports in Japan, during the month of September last, as prepared by the Customs' Bureau of the Finance Department:—

Value of Imports...	Yen 3,413,058.041
" " Exports...	" 2,227,885.337
Excess of Imports over Exports...	" 1,185,172.704
Total Customs' Revenue...	" 239,736.972
Gold and silver coin and bullion imported	" 469,681.040
" " " exported	" 426,555.400

Excess of Imports over Exports... 43,125.640

The following return of the trade of this port for the month of October has been published by the Customs' authorities.

EXPORTS.		Weight in Kins.	Value in Yen.
Tea	1,796,199.44	565,663.870
Raw silk	274,139.27	1,628,340.550

MISCELLANEOUS.

The *Aikebono Shimbun* of Saturday retails what it terms a street rumour which it gives for what it may be worth without in anyway vouching for its truth. A native gentleman occupying a leading position is said to have been passing in his carriage, on the night of the 26th ultimo, through Fujimicho, Tokio, when three men armed with swords suddenly placed themselves in front of the carriage and presenting their weapons at the coachman's breast called upon him to halt. The coachman complied and alighting ran away crying for assistance. The gentleman inside when his carriage stopped looked out of the window, when the moon shining on his face disclosed his identity to the assailants. They exclaimed, apparently much disappointed, "we are mistaken" returned their swords to the scabbards and fled unmolested.

Our readers will recollect that some short time since a Chinese exchange-shop keeper was assaulted and robbed at his place of business in Honmura Road, and that his assailants escaped at the time although strict search was made for them. The *Mainichi Shimbun* which states that the unfortunate Chinaman died of the wounds he received when the assault was committed, informs us that the perpetrators of this and a number of other crimes have just been arrested in Kiyoto, and prove to be three escaped convicts from the gaol at Tokio.

Two *shizoku* of Kochi Ken, four of Yehime Ken, one of Okayama Ken, one of Nagasaki Ken and two of Hiogo Ken, have recently been prohibited by the authorities from lecturing in future.

Another native editor has brought himself within the "lash of the law." Mr. Uchida, the editor of the *Choya Shimbun* was fined five yen on the 5th instant, for libel. Considering the small fine inflicted, we should imagine, either that the libel was not a very full-bodied or high-flavored one, or else libelling is a much cheaper luxury with native newspaper-men than Europeans find it. If the latter idea is correct, how many people must wish that extra-territoriality was abolished, if they would thereby be enabled to libel their neighbours to the top of their bent at five yen per head!

The allotments of land in the foreign settlement in Tankiji, Tokio, now unoccupied, will be offered by public auction about the 20th instant. The authorities are having plans of the lots prepared, which when completed, will be forwarded to the different Consuls. Foreigners only will be permitted to acquire these lots.

The *Hochi Shimbun* states, that some mischievous person has broken off, at about six inches from the ground, the tree called *Giyokuran*, lately planted by Mrs. Grant in the Ueno Public Gardens.

Mr. Otani, and another officer of the Religious Section of the Home Department, left the capital for Nikko lately, on business connected with the maintenance of the shrines of the Tokugawa family.

The *Choya Shimbun* says that as rice is at present very scarce in Okinawa Ken, the authorities are making occasional shipments there from the government store-houses.

At the time of the royal progress some years since, a temporary bridge was erected over the Oigawa on the Tokaido. During the recent floods a portion of this bridge was swept away and in consequence passengers have to cross the river in boats. In order to remedy this inconvenience, Mr. Tsukamoto and a few more of the leading merchants of Shimada, lately commenced to erect a new bridge at the estimated expense of 5,000 yen, which will be entirely borne by themselves.

A heavy gale of wind, accompanied with a great fall of rain, is reported to have taken place in the Hakone mountains and the vicinity on the 27th ultimo. Several rivers were flooded, that near Tonosawa rising about five feet and the bridge over it being almost carried away. About five or six *ken* of the bridge across the Sakawa on the Tokaido were also washed away.

A typhoon is reported to have visited Hasunuma-Mura, in the province of Kadzusa, on the 27th ultimo. It was extremely violent while it lasted, as many trees and over fifty houses were blow down in two or three minutes. A number of people were hurt by the timber and stones which were blown about, and one has died from the effects of the injuries which he

received. Sums of money have been distributed amongst the sufferers by the local authorities and leading inhabitants.

A fire which destroyed forty houses broke out in Sudacho, Tokio, at about half-past two o'clock on the morning of the 2nd instant. In addition to the houses totally burnt, twelve others were more or less damaged before the fire was finally quelled.

A large fire occurred in the western division of Osaka, on the morning of the 6th instant, and was not finally extinguished until half-past two in the afternoon, after totally destroying seventy-four houses.

The Chrysanthemums in the Imperial Gardens, in Tokio, are now in full bloom. The gardens will be visited by the Imperial Princes, the leading Government Officials and the *Kwazoku* on the 10th and 11th instant.

YOKOHAMA JOCKEY CLUB.

AUTUMN MEETING.

FIRST DAY.

Thursday, 6th November, 1879.

The first day's races of the Jockey Club came off yesterday afternoon. With the exception of a rather high wind the weather was all that could be desired, and the turf on the course in capital condition. The spectators, both foreign and native, were very few, and the number of ladies in the Grand Stand could be enumerated on the fingers of one hand. As for the races themselves, they dwindled down to a series of matches between three or four ponies. The band of the *Prinz Adalbert* was present and played several selections during the afternoon.

1.—THE TRIAL PLATE.—For China Ponies that have never won a race. Weight as per scale. Entrance, \$5. One mile.

Colonel Forester's <i>Checkmate</i> , 10st. 11lbs.	1
Mr. Rabagas' <i>Gled</i> , 10st. 2lbs.	2

A good start was effected, *Checkmate* leading; after getting past the drop both ponies raced together to the home straight, when *Checkmate* came away and won a good race by half a length. Time 2m. 29½ sec.

2.—THE GRIFFINS' PLATE.—For Japan Ponies, *bond fide* Griffins. Weight as per scale. Entrance, \$5. Five furlongs. Open to Amateur riders only.

Colonel Forester's <i>Brother to Nancy Lee</i> ,	1
Mr. R. Claus' <i>Pluton</i> , 10st. 8lbs.	2
Mr. Rabagas' <i>Grey Friar</i> , 10st. 1lb.	3

The ponies got away to a fair start and for a hundred yards were well together, *Brother to Nancy Lee* then forged ahead, followed by *Pluton* some distance in the rear. About one hundred yards from the winning post the latter came up to *Brother*

to *Nancy Lee*, but did not succeed in passing him: *Grey Friar*, nowhere. Time 1m. 38sec.

3.—THE CELESTIAL CUP.—For China and Japan Ponies Weight as per scale. Entrance \$5. Three-quarters of a mile.

Mr. Peter's <i>Skedaddle</i> , 10st. 2lbs. ...	1
Mr. Jenkin's <i>Saunterer</i> , 10st. 2lbs. ...	2
The Baron's <i>Oyama</i> , 10st. 4lbs. ...	3

For this race three ponies came to the post, and after a short time got away to a bad start, with *Skedaddle* in the rear. *Saunterer* and *Oyama* raced together to about the quarter post, when *Skedaddle* came through them in splendid style, and despite his disadvantage at the beginning of the race, won with hands down. Time, 1m. 39sec.

4.—THE FUJIYAMA CUP.—For China Ponies. Weight as per scale. Entrance \$5. One mile and a half.

Mr. Peter's <i>Skedaddle</i> , 10st. 2lbs. ...	1
Colonel Forester's <i>Checkmate</i> , 10st. 11lbs. ...	2

The pair got away to a good start and cantered together, hard held, for the first mile, *Skedaddle* was then let out and came away with ease. Time 4m. 10½ sec.

5.—THE CLUB CUP.—For Half-bred Japan Ponies. Weight as per scale. Entrance \$5. Three-quarters of a mile.

Mr. Mason's <i>Warwick</i> , 10st. 4lbs. ...	1
The Baron's <i>Admiral Rous</i> , 10st. 10lbs. ...	2

At the commencement *Warwick* took the lead and retained the same position throughout. Rounding the home straight *Admiral Rous* bolted to the outer rails, and thus lost all chance of improving his position. Time 1m. 46½ sec.

6.—THE AUTUMN PLATE.—For Japan Ponies. Weight as per scale. Entrance \$5. Three-quarters of a mile.

Mr. Mason's <i>Jim Hills</i> , 10st. 4lbs. ...	1
Mr. Brown's <i>Exile</i> , 10st. 4lbs. ...	2

This was a very hollow affair, *Jim Hills* took the lead at the start, and *Exile* being unable to force the pace, 'Janie' won as he pleased. Time 1min. 50 sec.

7.—THE ITO CUP.—For China Ponies. Winners at this Meeting 7lbs. extra. Weight as per scale. Entrance \$5. One mile and a quarter.

Captain Blenkiron's <i>Black Velvet</i> , 10st. 11lbs. ...	1
Mr. Jenkin's <i>Saunterer</i> , 10st. 2lbs. ...	2

This resulted in a match between *Black Velvet* and *Saunterer*, and like the previous race was a dead thing for the black. In the home run, the latter was let out and came in first without punishment. Time, 2m. 55sec.

SECOND DAY.

Friday, 7th November, 1879.

The attendance showed some improvement on this occasion, a marked increase in the number of natives being noticeable. In the Grand Stand, we observed amongst other visitors the Russian Minister, the Dutch Minister and lady, and several other members of the Diplomatic Corps; and of Japanese officials, Their Excellencies Inouye, Wooyeno, Yoshiwara, and Admiral Enomoto. The band of the *Prins Adalbert* was again on the ground and played during the afternoon.

1.—THE COFFEE CUP.—For Japan and China Ponies. Weight as per scale. Entrance \$5. Once Round.

Mr. Peter's <i>Skedaddle</i> , 10st. 2lbs. ...	1
Mr. Jenkin's <i>Saunterer</i> , 10st. 2lbs. ...	2
Captain Blenkiron's <i>Black Velvet</i> , 10st. 11lbs. ...	3

A good start, all the ponies getting away well together, *Saunterer* taking a slight lead. This position was maintained to the home straight when *Skedaddle*, after a good race with *Saunterer*, won by a length. Time 2m. 15s.

2.—THE KANAGAWA PLATE.—For Half bred Japan Ponies. Sweepstakes of \$10 each, with \$75 added from the fund. Winners of one race 7lbs.; or two or more races, 10lbs. extra. Weight as per scale. Once round and a distance. Open to Amateur riders only.

The Baron's <i>Admiral Rous</i> , 10st. 10lbs. ...	1
Mr. Mason's <i>Warwick</i> , 10st. 4lbs. ...	2

After a fair start *Admiral Rous* took the lead and won as he liked. Time 2m. 37s.

3.—THE AKIKO CUP.—For China Ponies. Weight as per scale. Entrance \$5. One mile and three-quarters.

Captain Blenkiron's <i>Black Velvet</i> , 10st. 11lbs. ...	1
Col. Forester's <i>Checkmate</i> , 10st. 11lbs. ...	2

For this event the ponies got away to an ordinary start, *Black Velvet* taking a slight lead. On the first round past the post both ponies were together, but at the half-mile stake the *Black* came away and won in a canter. Time 4m. 19½s.

4.—THE OWNERS' CUP.—For Japan and China Ponies. Winners of No. 3 or No. 7. first day, 7lbs. extra. Weight as per scale. Entrance \$5. Half a mile. Open to Amateur riders only.

Mr. Jenkin's <i>Saunterer</i> , 10st. 2lbs. ...	1
The Baron's <i>Oyama</i> , 10st. 4lbs. ...	2

This was the finest race of the meeting, and was an uncertainty to nearly the finish. Both ponies got away well together when *Saunterer* took a slight lead, but after a couple of hundred yards had been covered, *Oyama* came up to the leader. From this point a most exciting race took place between the two, *Oyama* keeping his position to within fifty yards of the Judge's box, when *Saunterer* being called upon came away and won by a length. Time 60½s.

5.—THE NIPPON CUP.—For Japan Ponies. Winners in 1878 or 1879, of one race, 7lbs.; of two or more races, 10lbs. extra. Weight as per scale. Entrance \$5. Three-quarters of a mile. Open to Amateur riders only.

The Baron's <i>Oyama</i> , 10st. 4lbs. ...	1
Mr. Mason's <i>Jim Hills</i> , 10st. 4lbs. ...	2
Mr. Brown's <i>Exile</i> , 10st. 4lbs. ...	3

They got away to a bad start, and after going about fifty yards the *Brother* stopped short and was out of the race. The others after rounding the 'quarter' made things warm, *Oyama* coming in first by about two lengths. Time 1m. 41½s.

6.—THE CHINA CONSOLATION.—For China Ponies beaten at this meeting. Weight for inches. Entrance \$5. Once round and a distance.

Mr. Rabagas' <i>Gled</i> 10st. 2lbs. ...	1
--	---

All the Ponies but one having won a race, this resulted in a 'walk over' for *Gled*.

7.—THE ORIENTAL CUP.—A Handicap for all Ponies that have run at this meeting. To be handicapped by the stewards after No. 5 has been run. Winner of any race after the publication of the Handicap 5lbs. extra. Entrance \$10. Second Pony the same entrance fee. Once round.

Mr. Peter's <i>Skedaddle</i> , 11st. 4lbs. ...	1
The Baron's <i>Admiral Rous</i> , 12st. 7lbs. ...	2
Captain Blenkiron's <i>Black Velvet</i> , 11st. 4lbs. ...	3
The Baron's <i>Oyama</i> , 11st. 0lbs. ...	0

After two false starts the ponies got away well together with *Admiral Rous* leading and *Black Velvet* bringing up the rear. At the finish the latter closed up and a good race took place, *Skedaddle*, at the finish, forging ahead and winning by a length from the *Admiral*. Time, 2m. 18½s.

8.—JAPAN PONIES.—For the Bettos' Race, four ponies started, *Jim Hills* coming in an easy winner by uncountable lengths.

9.—CHINA PONY BETTOES' RACE.—For this *Gled*, *Checkmate* and *Black Velvet* started and made a good race to the home straight. They finished—*Black Velvet* 1, *Gled* 2, and *Checkmate* 3.

THE TAKETORI MONOGATARI.

A paper read before the German Asiatic Society.

By DR. R. LANGE.

(Continued from last week.)

The Dainagon, Otomo Miyaki, called all his servants together and said to them. "In the head of the dragon there is a five colored jewel. To whoever will bring me this jewel I promise to grant any favor or wish which he may prefer." The serving men replied. "Your command does us honor, but any jewel such as you desire is most difficult to procure, how much more so the one which comes from the head of the dragon." Seeing that they spoke thus, the Dainagon continued. "Whoever calls himself a true servant should know that he ought to fulfill the commands of his lord even at the risk of his life. The dragon is to be found in this country as well as in China and India, he rises out of the sea and out of the mountains. Why then

do you maintain that it is such a difficult task to obtain the jewel?" The retainers thereupon said: "What are we to do. However difficult a task it may prove to be, we will act according to your commands and search for it."

The Dainagon had perceived their cowardice and it was with a smile that he further addressed them. "As retainers of the Lord whom you serve you stand in good repute¹ and it is not to be imagined that you will act contrary to my orders." With these words he dismissed them giving them for the journey all the silks, cotton and ready money that he possessed in his house. "Until your return" he added "I will remain in the house, abstaining from unclean food and praying to the gods; but do not venture to come back without the jewel." After having been thus spoken to they left, some of them going this way and some the other way wherever their legs carried them. They were not sparing of evil speech respecting their master and upon the love affair in which he was engaged. The things they had received they divided among themselves and some remained quietly at home, while others went wherever their inclination took them.

It is wrong for a father or a master to give unreasonable demands, these men spoke angrily of the Dainagon because he had set them such an impossible task.

The Dainagon now thought that an ordinary house would not be good enough for the reception of Kaguyahime and he caused to be erected a splendid building, gilded and ornamented with bright lacquer, while the roof was covered with variously coloured silken threads. The furniture within surpassed description. Upon damask and fine woven stuffs he had pictures painted which were hung up in every room. He sent away his wives and lived quite alone making all these preparations for the reception of Kaguyahime. During a whole year he thus waited day and night for the return of the men he had sent out. When no news came, he grew impatient and, disguised as if he was a man of the lower class, he went to Naniwa accompanied by two servants. There he made enquiries as to whether anything was known of the retainers of the Dainagon having embarked on board ship to kill the dragon and whether they had returned with the jewel in its head. The seafaring men made reply laughingly. "This is strange questioning; the ship does not exist which could go upon such an errand." "What foolish talk these seamen indulge in," he said to himself, "they speak thus because they do not know my power. It would be an easy thing for me to kill the dragon with the strength of my bow and arrow and to take the jewel out of his head. I will wait no longer for those knaves who tarry so long." Thereupon he engaged a ship and passed through many seas until far into the ocean near Tsukushi. Without any warning a storm arose; it became dark and the ship flew on while no one on board knew where it was going. The waves beat against the planking of the ship which seemed to be drawn into a whirlpool; thunder and lightning followed each other and every moment the ship appeared as if it would strike. The Dainagon lost his head, he had never seen anything so terrible as this, and he broke out into a lament. "What is going to become of us?" The man in charge of the vessel said in reply. "I have followed the sea for a long time but have never experienced such a frightful storm. If the ship is not hurled down to the bottom of the sea, the lightning will strike it. It will be only if we are favoured by fortune and the gods give us their assistance, that we can hope to be driven into the South Sea," but, being in the service of such a foolish Lord, I will have to resign myself to death." In such words did the mariner give vent to his plaints. The Dainagon listening, this reproved him. "When one travels at sea he puts his trust in the word of the seaman as he would in a high mountain. Why do you talk like this so that no confidence can be placed in you?" While he thus spoke he was sick and throwing up his food. The other hereupon replied. "I am no god, what shall I do? The wind blows and the waves are high. It seems as if the god of thunder was about to hurl himself upon our heads and the cause of all this, is simply because you search for the dragon to kill him; it is the dragon that has called up the storm. Pray to the gods at once." The Dainagon submitted and prayed. "God of the mariner listen to me. In my childish wish I foolishly desired to kill the dragon, from henceforward I vow not to

hurt a hair of his head." This prayer he repeated, standing up and sitting down probably not less than a thousand times. It may have been the effect of the prayer that at last the thunder ceased and that it gradually became a little brighter; the wind however continued to increase in intensity. The man at the helm hereupon said. "This is the work of the dragon. The wind is changing and is beginning to blow from a direction which is favorable to us and which does not forbode us any harm." The Dainagon however was hardly in a condition to listen any more to what was said. The three or four days during which this wind blew brought them to a shore which upon examination proved to be the coast of Akashi in Harima. The Dainagon was of opinion that they had been thrown upon the shore of the Southern Sea and he lay groaning on the cabin floor. When those on board communicated with the shore, the governor of the province came to enquire after the health of the Dainagon, but the latter was as yet unable to rise. Mats were spread in a grove of pine trees and the Dainagon was carried out and laid thereon and it was only then that he became conscious that he was not in the Southern Sea. It seemed to fatigue him greatly to reach the shore and he had the appearance of one who suffered from a violent cold; his body was swollen and both of his eyes looked as if plums were growing thereon. The governor himself could not repress a smile at his appearance, and he ordered a chair to be made in which, still suffering great pain, he was carried home.

The men he had sent out having heard of his return came and addressed him: "The jewel from the head of the dragon being so difficult to get, we did not come back to your house. Now, having seen yourself how great the obstacles are, we thought you would not reproach us and have therefore returned." The Dainagon rose from his couch and said: "It is well that you have not brought it. The dragon seems to be one of the gods of thunder. If you had gone to obtain the jewel many of you would have come to grief. I was near being killed when I wanted to attack the dragon. So it is well that you did not even go out in search of it; that crafty woman Kaguyahime wishes to kill the people and from henceforth I will not go near her house. You also must not go there." Then he divided even the little which he had left in his house amongst them. When his former, but now divorced wife heard of this, she laughed so as to split her sides. The silken cords with which the house had been covered were carried away into their nests, by crows and herons.

There were some who believed that the Dainagon had really brought home with him the jewel from the head of the dragon, but when they were told that this was not the case and that he had only brought home on both eyes jewels of the plum species, they found it scarcely possible to refrain from laughter. Since that time if people speak of anything which is difficult to endure they say.—*ana tayegatai*.³

The Chinnagon, Tso no Kami Marotaka, addressed the retainers of his house: "Let me know whenever the swallows build their nests." When he was asked the reason he replied. "I desire to know, because I wish to possess myself of the porcelain shell of the swallows." His people thereupon said. "This shell cannot be found in the body of a swallow no matter how many of them you may kill in searching for it; how then can they bring it forth when laying their eggs? Moreover, swallows fly away when they see human beings." There were some others however, who said. "In the corners of the eaves of the Imperial kitchen where the rice is cooked many swallows build their nests. Reliable people might be sent there to build a lookout and to watch. The numberless swallows there would lay eggs, and the shell might then also be found and taken out." The Chinnagon rejoiced at this and replied, "I did not of course know of this, but it is an excellent idea. What you have told me has been well spoken." He thereupon sent about twenty reliable people and placed them upon a framework of timber. Very soon he sent messengers from his palace to inquire whether they had already found the porcelain shell. The swallows however became frightened when so many people had come up around them and left their nests and this was the answer which was returned to him. He was revolving in his mind what should

1. The family Otomo is said to have been a very powerful one.
2. The sea, south of Shikoku.

3. *Ana, Alas! Tayegatai*, it is difficult to endure this. The author here makes a play upon the word *tayegatai* (*taye*—*take* or *taye*) difficult to eat in reference to the "plums."

be done, when an old man called Kuramatsuro, one of the *intendants* of the Imperial kitchen came to him and said: "If you wish to obtain the shell I would like to offer you advice." The Chiunagon bent his head in token of attention and the other continued: "You have employed a poor artifice to get possession of the shell. This is not the way to obtain it. Twenty men have gone up on the scaffolding with great noise, the swallows have become frightened and will not return to their nests any more. The following will be a better way. Let the scaffolding be taken down and bid all the men leave; then have one trustworthy man placed there in a basket. While the swallows lay their eggs let him quietly be pulled up and with a quick movement he can take out the shell." The Chiunagon approved of the plan, had the scaffolding taken down and all the men returned. Then he questioned Kuramatsuro. "How is it known which is the time when the swallows lay their eggs and when it will be expedient to have the man pulled up?" The other replied: "When the swallows are about to lay an egg they lift up their tails and fly around in a circle seven times. Then they drop the egg. While they are making these seven revolutions is the time to have a man pulled up to take the shell." Thus he spake and the Chiunagon rejoicing at the speech went, unknown to any one into the Imperial kitchen and mixing with the people there he looked and looked and turned night into day in his eagerness to obtain the shell. In his joy at the advice of Kuramatsuro he said to the latter: "You are not one of my retainers but still you have assisted me towards accomplishing my desires at which I am greatly rejoiced." Then he took off his dress and put it on the other's shoulders, giving it to him as a present and at the same time tendered him an invitation to come to his palace in the evening. As the day drew to a close he again went to the kitchen and looked and beheld the swallows were really building nests. As Kuramatsuro had said, they were flying around in a circle with their tails raised high in the air. A man in a basket was drawn up and he put his hand into the nest and felt around in it but when he said that he could find nothing, the Chiunagon became enraged, saying he must have been careless in his search. He was deliberating whom else to send up and at last decided to go himself. He was pulled up and waited there for a favorable moment. When the swallows with raised tails were flying fiercely round he raised his hand and put it within the nest. When he felt a flat object he called out. "I have got it, lower me down! Old man I have got it." The people rushed together and wished to let him down quickly but in the confusion some pulled too hard and the rope broke. He fell upon a kettle, face upwards, laying there with the whites of his eyes turned up like a corpse. The people gathered around him in a frightened way, dashed water into his mouth, and when the signs of returning life appeared they lifted him down from off the kettle. When asked how he felt, he replied; "I feel that I have regained consciousness but I cannot move my thighs, still I feel happy having at last grasped the shell. Let some one turn a paper wick and light it so that I can look at the shell more closely." Then he raised his head and opened his hand to look, but found that he had caught hold of an old piece of dirt. At the sight of this, he called out "Oh, woe is me, this is an affair wherein nothing is gained." Since then the people say of an affair which turns out differently to what is anticipated:—*Kai ga nai.*⁴

THE JAPANESE PRESS.

TREATY REVISION AND THE TOKIO CHAMBER OF COMMERCE.

(From the *Chingui Bukka Shimpō*.)

THE memorial presented to the Government by the Tokio Chamber of Commerce, on the subject of treaty revision has been published both in this and other papers, so that the reading public must now be well acquainted with the contents of this important document.

We have hitherto remained silent on this matter, as we were under the impression that the editors of all those papers which claim to be the organs of public opinion would have written on the subject of this memorial with

⁴ *Kai ga nai* may mean 1st, there is no profit (in it), and 2ndly, there is no shell.

all the force and ability at their command, and we were anxious to ascertain the general drift of public feeling. We have been disappointed. Although over a fortnight has now elapsed the only paper which has approached the subject is the *Mainichi Shimbun*, published in Yokohama and in no other instance has either approval or disapproval of the memorial been expressed; in fact one would imagine that the matter was looked upon as if it was of no importance.

Are we to suppose that the editors of the newspapers which have maintained such persistent silence find that the views of the memorialists coincide exactly with their own, and therefore nothing more remains to be said on the subject? If this be so, why do they not say so explicitly and thus give their support to the Chamber? On the other hand, if they are opposed to the measures recommended by the Chamber, why do they not say so frankly, state their objections, and discuss the matter? Do they think the matter of no importance, or of not sufficient interest to find space in their journals? It seems to us that whatever view may be taken of their silence, these journals are acting a very unpatriotic part.

The foreign newspapers in Yokohama have treated the memorial very differently. Ever since they published a translation of it, they have repeatedly discussed its contents and although we cannot by any means approve of the conclusions they have arrived at, yet we do them only justice when we say that they have performed what they consider their duty to the interests they represent.

We will now deal with the principal objections brought forward in these foreign journals to the suggestions contained in the memorial and point out the errors into which they have fallen.

Some of these journals say, "Surely some mistake occurred and instead of the memorial having been sent from the Chamber to the Finance Minister, Mr. Okuma must have sent it to the Chamber;" and again, "According to the opinion of some foreigners this memorial treats of matters altogether beyond the control of merchants and it appears very much as if the opinions of diplomatists had been embodied into a memorial purporting to emanate from a Chamber of Commerce." The critics also quote a celebrated French Minister who said, "the natural wish of merchants is, that no duties should be imposed upon the goods they trade in," and remark that the Tokio Chamber of Commerce is apparently anxious that the business of the members should be interfered with by the imposition of increased taxation, &c. &c.

Although it may at first sight appear to outsiders that the memorial is more like the production of government officials than merchants and that the foreign editors are therefore justified in the objections they have raised, yet if the question is looked into carefully, their error will be made apparent.

The subject of treaties with foreign nations, is one which exercises an important influence upon every native of the Empire, so that when the matter is under discussion, the wishes of the whole people must continually be borne in mind and consequently the views of individuals become insensibly the same as those of diplomatists. This is more especially the case at present, when the financial condition of the country is considered and the necessity of increasing our productions and thereby promoting the prosperity of trade.

If the members of our Tokio Chamber of Commerce resembled European merchants residing in oriental countries, whose sole policy is self-aggrandisement and who do not hesitate to clutch everything advantageous to themselves they can lay their hands upon, the members would, of course, deal with the subject of treaty revision entirely from a selfish point of view. But it is clear from a perusal of the memorial, that their object is to establish permanently the prosperity of trade and that they have no desire to obtain any temporary, although immediate, benefits. This is evidenced by the suggestions to devote the duties to opening up the country by means of better roads, new bridges and other means of communication and to increase the revenue to be paid in coin, so that in course of time all the national loans can be discharged in specie. In fact, the whole document bears the impress of an earnest desire to benefit the whole country and secure its future prosperity.

We are inclined to think foreigners have hitherto laboured

under the delusion, that as our countrymen were so very docile and accustomed to entrust the matters treated of in the memorial entirely to the authorities, that therefore this document could not possibly be the spontaneous production of private individuals. Now however they discover their mistake and in their chagrin and disappointment indulge in these unreasonable attacks upon the memorial.

Another foreign editor says :—

"It is almost impossible to conceive that any body of men experienced in the wants of their own commerce could be found to recommend to their Government the continuance of a policy which stifles the enterprise of the people, and forms the most serious obstacle in the paths of development and of production. Yet we find the Tokio Chamber of Commerce solemnly advocating the existence of a monopoly which it knows perfectly well is most injurious to the country, which is heavily taxed, and otherwise hampered."

"The Chamber is not ignorant of the facts that in consequence of existing regulations the ports of Japan are most effectually closed against the Japanese people equally with foreigners; that production is prevented; that the spirit of individual enterprise is surely being crushed; and that the whole trade of the nation is retarded and confined to dimensions which, compared to the resources of the land, are a slur upon the commercial capacity of the people. Japan, with her population of thirty-five millions and with nine-tenths of her land lying waste, is found, in 1879, whining over an imaginary balance of trade; and this at a period when the official records show the total export of grain for the year ended 30th June to amount to \$2,050,164 only. Compare this petty traffic in the natural productions of the soil with the export trade of the United States. The population of that great and rising nation is not much in excess of that of Japan; labour is incomparably dearer; produce has to be transported over thousands of miles by inland carriage to ports of shipment; yet in 1878 the agricultural produce exported was valued at no less a sum than \$592,475,813, or nearly eighty-two per cent. of the gross American exports. The difference between the values of American and Japanese exported agricultural products, \$590,000,000, represents the value of the power of labour existing in Japan lying idle or wasted in consequence of restrictions imposed upon it which transfer to others the fruits and rewards."

"Here it is advisable to anticipate the objection of the Chamber that the coast trade of America is a close monopoly, and that the example should be followed by this country. Admitted that no foreign owned vessel is privileged to trade between one American port and another, we are saved the task of entering upon a discussion of the policy, which is condemned very bitterly by many talented American economists, by the existence of the following conditions :—1. Every port in the United States is open to foreign trade. 2. Of a total export of \$736,101,072 in 1878, \$569,588,781 were carried in foreign vessels. 3. The percentage of American imports and exports carried in American bottoms in 1858, was 73.7; in 1878, twenty years later, it had declined to 26.3."

"Taking them in order the first question is, is the coast trade, under the conditions of its existence, sufficient to satisfy the requirements of the people? The answer is clearly no. The eagerness of the inhabitants of the rich grain-growing districts of Rikuzen and Rikuchin to increase production and to employ the wealth of labour now wholly unoccupied, is an eloquent reply in the negative. And if the people of these two districts declare that their best desires are thwarted and their energy repressed by the want of a free coast trade, we may reasonably assume that the same objection may be urged by others in all parts of the empire not in the immediate vicinity of the large markets. We look upon the assertion that the means of transport now open to producers are sufficient, as really meaning that production must be confined to the carrying capacity of the monopolists; and that, until that company possesses more vessels, the export of Japan must standstill. It is a truth, and the Chamber knows and feels it well, that the present monopoly of the coast trade is the curse of the country, and the cause of much of its embarrassment; and

that to it must be ascribed the continued poverty of the nation."

"As a fact, the influence of the government association has put an end to all competition, and thereby effectually checked the rising movement in the merchant marine. When an independent steamer attempts to compete, the government association runs it off the line—at a loss to the company it is true, but then, the government pay the loss. So far from this policy exercising a beneficial influence upon the mercantile marine generally, it directly interferes with its rise. Are any members of the Chamber willing to enter into such competition as that described for the purpose of testing the value of their assertion that there is no monopoly, and that private persons are not interfered with?"

"If the government company buys a steamer no difficulties are put in the way; but if a merchant desires to use his capital for his business and to hire a carrier, the carrier is inhibited by the government from carrying out his contract. If there is no government monopoly, as the Chamber asserts to be the case, why should not a hired vessel have the privileges of a purchased vessel? Let such conditions as may be advisable be imposed; the officers carry Japanese certificates; the crew be composed of a specified proportion of Japanese subjects. Conditions of this sort would be reasonable, consequently they are ignored by the Chamber as unworthy of consideration."

These are the opinions of the foreign editors and it almost seems as if they had neglected to read over and consider the full effect of the whole memorial before expressing their views upon each separate clause. We feel sure that the Chamber of Commerce devoted a vast amount of time and consideration to the important subject they had to deal with. The suggestion to open ports in the vicinity of localities which produce such bulky and weighty articles as coal and grain, is intended to facilitate the export of these commodities and thereby encourage the development of these industries. A similar policy is pursued in the United States, the example of which country is referred to by the Chamber.

Foreign editors argue, that the restoration to us of the right of controlling the coasting trade would be wrong and prove detrimental to the best interests of the country. Theoretically, this right is universally acknowledged to belong to every nation, and in discussing the matter it is absolutely necessary to consider the future rather than the present. Take the case of a merchant who requiring a number of ships in his business, intends to gradually increase his fleet either by purchasing vessels from foreigners, or getting them built in the country. He hears that after the revision of the treaties, foreign ships, chartered by natives, will be allowed to participate in the coasting trade. Will he then carry into effect his present intention and acquire more vessels? He will most assuredly say, if such an alteration is made, I shall give up the idea at once, and not alone refrain from buying any more ships, but immediately sell what I now own and abandon the business. The same course would be pursued by all ship owners. Indeed if it is desired to perfect our mercantile marine for all time, complete protection should now be given to native vessels and although the restrictions may be removed when the foundations of the shipping trade have been firmly established so that we can compete with foreign vessels, yet if foreigners are now allowed to participate in the coasting trade, not alone will our mercantile marine be unprosperous but it will be utterly destroyed. Suppose, for the sake of argument, that we cannot avert the decline of our shipping trade and there yet remains a strong reason why we should not depend upon foreigners for our communication by sea. It is this; if freights rose a little in foreign countries, our coasting trade would be affected and we should have to pay excessive freights or else all the vessels, (except those regularly engaged to carry the mails) would at once leave and proceed where the high freights ruled. Look how freights have risen during the last week or two, actually over thirty per cent! If there was a number of Japanese ships engaged in the coasting trade, no inconvenience of this kind would be occasioned to their regular customers.

Foreign editors also say, that if individuals engaged in

the coasting trade, the opposition of the Mitsu Bishi Company would crush them and the government would aid the company in doing so. We firmly believe, not only that the government would refrain from any action of the kind, but that the Mitsu Bishi Company would gladly welcome individual enterprise. Even if the company should endeavour to monopolize the trade, the government would step in and prevent them from accomplishing their object. The memorial anticipating this objection says, "If at any future time the Mitsu Bishi Company should act in opposition to the interests of the public, the government will certainly curb them." We have always been of opinion that the true reason for the special support and protection given by the government to the Mitsu Bishi Company, was the regret felt at the non-development of our mercantile marine and the desire of the authorities to shew the public the advantages derivable from such an enterprise and at the same time provide a model for their example. No doubt great inconvenience was occasioned at the time of the south-western rebellion, through all the ships of the company being engaged as transports, but ever since the company have carefully studied the convenience of the public. This is of course only right, as the company is assisted by the government out of the revenue, which is equivalent to saying, that the company is assisted by the country generally. If what the foreign papers assert is true, the members of the company deserve punishment at the hands of the people and the company itself is gradually falling into difficulties which will cause its ruin. This is only another example of the misrepresentations of foreigners. We know perfectly well that there are able and competent men constituting the company. How then can we possibly place any confidence in such imputations?

Foreign editors assert, that it is only by means of this company, that the convenience of trade can be supplied; but the present state of our mercantile marine is very different to what it was formerly and a full account of the progress lately made is given in the memorial. For our part, we have already fully discussed this branch of the subject when criticising the report of the Yokohama General Chamber of Commerce and we consider the conclusions of the Tokio Chamber worthy of all credence as they have evidently only been arrived at, after careful consideration by thoroughly practical men.

When dealing with a subject, it is essential to consider whether it is for the benefit of the individual or the community. If this is neglected, it will be found impossible to arrive at a just conclusion. The memorial of the Tokio Chamber embraces the welfare of the whole empire and not the advantage of any particular section. It is therefore unavoidable, that the document should appear more like the production of officials than merchants. How is it that those extremely clever gentlemen, the foreign editors, failed to perceive this distinction? We really feel very sorry for them!

In conclusion, we have a few words of advice for the members of the Tokio Chamber of Commerce. We have given what we consider the meaning of their memorial on the subject of carriage by sea, but if they abandon the question, satisfied with having recorded their views and do not themselves follow out their own suggestions and encourage others to do the same, it is not at all improbable that the foreign editors' remarks will turn out to be correct and this once accomplished, it will be too late to seek a remedy.

PROPOSED AGREEMENT BETWEEN THE JAPANESE MERCHANTS IN GENSAN, KOREA.

(From the '*Hochi Shimbun*.')

THIRTEEN Japanese merchants residing in Fusan, Korea, recently accompanied the Japanese Envoy, Mr. Hanabusa to Gensan, to inspect the site for the new settlement. On their return to Fusan, these merchants prepared and forwarded to the Japanese Consul, a copy of an agreement which they suggested should be subscribed to by all Japanese merchants who might enter into business in Gensan. The following is a copy of the agreement in question.

SECTION I.

Buildings.

Art. 1.—For the purpose of buildings, each allotment of 1,200 *tsubo* into which the settlement at Gensan has been divided, shall be subdivided into four portions of 300 *tsubo* each, which shall be known as lots.

Note.—To suit the convenience of business, two lots may be amalgamated, or one lot divided into two parts, as circumstances shall require.

Art. 2.—Every lot must be surrounded with a wall or fence.

Note.—Although the wall or fence will be chiefly intended for the purpose of keeping out robbers and will therefore require to be substantially constructed, yet care must be taken to make them look as ornamental as circumstances will permit.

Art. 3.—All houses must be built specially with the view of protection against thieves and fire, but regard must also be had to the health of the inmates. The houses must all be plastered and kept clean.

Note.—When applying for a lease of land, the applicant should submit to the Consul and obtain his approval, of plans of the buildings proposed to be erected.

SECTION II.

Dress.

Art. 4.—The clothing to be worn by the merchants must be after the pattern of Western countries. The material and quality, will however, be left to individual discretion.

Art. 5.—Hats and boots must be worn out of doors, no matter how short the distance to be traversed.

SECTION III.

On the Conduct of Trade.

Art. 6.—In all business transactions coins of the Japanese legal tender must be used.

Art. 7.—The mode of exchanging coins cannot at present be finally decided, but either an associated exchange-office should be established, or the business entrusted to a bank, as may prove to be most convenient.

Art. 8.—The lending of money to Koreans with the ostensible object of purchasing goods for Japanese merchants is strictly prohibited.

Art. 9.—Goods must not be sold to, or purchased from the Koreans, in less quantities than those mentioned in the accompanying table.

Note.—All goods sold to Koreans shall only be delivered in the godowns of the Japanese merchants, and all goods purchased shall only be taken delivery of in the same godowns.

Art. 10.—In all transactions the measures to be used must be those lately adopted in Japan and the weights shall be of Western shape.

Art. 11.—A weekly return of goods sold to and purchased from Koreans, must be prepared and forwarded to the consulate every Monday.

Art. 12.—No business must be transacted on annual holidays or Sundays.

TABLE ABOVE REFERRED TO.

Quantities of merchandize to be sold to the Koreans, as mentioned in Article 9.

Shirtings and other kinds of cotton cloth of Japanese or Western manufacture, 50 *tan* (a *tan* is 28 feet in length).

Muslin.....100 *tan*.

Kaiki (Lustres)..... 10 *hiki* (a *hiki* is 52 ft. long).

Hōshōsumugi (a kind of Pon-

gee)..... 10 "

Woollen cloth..... 10 "

Red, green, and purple dyes... 20 *kin*.

Indigo..... 50 "

Copper slabs.....100 "

Tin.....100 "

Lead.....100 "

Old copper.....100 "

Copper ores.....100 "

Alum.....100 "

Glass..... 1 box.

Cotton yarn..... 10 coils.

Quantities of Merchandise to be purchased from the Koreans, as mentioned in Article 9.

Gold in dust and ingots.....	10 momme.
Silver	100 „
Bones	50 bales.
Tanmugi (a kind of Pongee)...	50 hiki.
Hides	50
Daidzu (large white beans)...	20 bales.

LAW REPORTS.

IN H. B. M.'S COURT FOR JAPAN.

Before R. T. RENNIE, Esq., Judge.

Tuesday, 4th November, 1879.

J. L. O. EYTON, vs. J. TURNER.

This was a claim for \$60.00 the alleged value of a sporting dog belonging to the plaintiff, which had been shot by the defendant who is employed by the committee of the Yokohama Jockey Club to take care of the race-course.

The parties appeared personally.

The plaintiff's case was, that on the 28th ultimo the defendant shot on the premises of the plaintiff situated near the race-course, a valuable sporting dog his property. The plaintiff and two Japanese servants gave evidence in support of his case, and Mr. Wagner was called to prove the value of the animal which he estimated as worth from \$50 to \$100. He also corroborated the evidence given by the other witnesses that the dog was not at all vicious.

The defendant admitted having shot the dog but pleaded that he acted under instructions from his employers. Two dogs belonging to the plaintiff, were continually running after the ponies in training and biting them. He had warned plaintiff several times to keep the dogs tied up, and at last told him that he would have to shoot them if they interfered with the ponies again. On the 28th ultimo, the Dutch Minister and his wife, were riding over the course and the dogs, as usual, rushed out barking and biting at the horses. Defendant went to plaintiff's and asked to see his wife but was told by a servant that he could not do so. He then told the servant to come and get the dogs off the course or he would shoot them. The servant did not appear to understand him, so defendant said that he would shoot the dogs as they were troubling the ponies of the Dutch Minister who was then coming round the race-course for the second time. The defendant stepped across the ditch separating the plaintiff's premises from the course and meeting the brown dog the subject of the action, returning towards plaintiff's, he shot him.

His Honour stated, that he was quite clear that defendant, whether authorized by the committee of the Jockey Club or anyone else, had no right under the circumstances, to shoot the dog, and read the law as laid down in *Addison on Torts* which showed that if the dog had been actually engaged in biting or barking at the ponies at the time he was shot, the defendant would have been justified in acting as he had, but defendant's own admission, that the dog was returning quietly home to his owner's residence when shot, was fatal. His Honour also said that he was not quite satisfied as to the evidence of the value of the animal and again questioned the plaintiff who stated that he gave \$10.00 for it two years ago, had trained and kept it since, and that the dog was three and a half years old and in perfect health when killed.

Judgment for \$40.00 and costs.

FRENCH CONSULAR COURT.

6th November 1879.

H. PIERRET Esq., Consul, President; Messrs. DEREZE and C. JUNIN, assessors H. DEGRON versus I. OPPENHEIMER.

This was a charge of defamation of character brought by plaintiff against defendant—both appearing personally.

The Chancellor of the Consulate read the following documents.

1st. The complaint of Mr. Degron setting forth that, shortly after the arrival of the French mail on the 25th October, a Japanese servant came to the Post Office, and presented a paper signed Blum p. p. Oppenheimer frères, asking for delivery of letters for the latter firm. That he was told that the letters could not be delivered to him. That

Mr. Oppenheimer then came personally and asked in a furious tone why they were not delivered. He was told that proof of Blums' authority to sign by procuration should have been deposited in that office. That the defendant replied that this was a *tour de brigand*, and said that he was being annoyed on purpose. That there were two witnesses to the conversation.

2nd. A further communication from Mr. Degron complaining of a letter published in the *Courrier du Japon*.

3rd. The order of the Consul fixing the hearing of the case.

Mr. Degron then proceeded to argue his case, setting forth that Oppenheimer had vowed a mortal hatred against him since the year 1877—he called Mr. Blum, who said that twice letters had been delivered to him on presentation of a similar paper, but that on the third occasion they had been refused.

A great deal of irrelevant conversation here took place between the plaintiff, the defendant and the witness. The plaintiff laying great stress on the damage he had suffered from the letter in the *Courrier*, going into a long explanation about the importance of the procuration for a firm being registered at the office.

Mr. Oppenheimer having taken the stand, stated that Mr. Blum had a general procuration for the firm—that he sent application for the letters, and Mr. Degron replied *ikakaranai* in his usually amiable manner—that if rules exist in the Post office, they must have existed on two prior occasions when letters were delivered; that Mr. Degron refused to deliver the letters out of spite; that it is singular that Mr. Degron does not post up at the office the rules referred to; that he went himself to the Post Office, and told him that he was well aware that Mr. Blum had the procuration, having received a circular to that effect,—and that he was playing the character of a *croquemitaine* with him. That it is a well known fact that Degron is employed in Consular court matters, and that he is well known to be a man of business, merchant, councillor and representative of numerous creditors of a firm in liquidation; that Degron mistakes if he thinks a Frenchman has not the right to complain of any functionary by whom he considers himself injured.

Mr. Oppenheimer concluded by remarking that he had only complained of the manner in which the business was conducted by defendant, and asked that the complaint be dismissed with costs.

The Court adjourned till this day, Saturday, when Judgment was delivered to the effect that the criminal charge was dismissed, but that Oppenheimer is not free from blame in having published the letter against Degron, for which he is condemned to pay costs of Court.

The following is the letter referred to in the above case.

Yokohama, 26th October, 1879.

Monsieur le Rédacteur du *Courrier du Japon*.

Vos lecteurs ne seront probablement pas étonnés de trouver dans votre journal le récit du fait suivant qui démontre avec quelle aménité Mr. Degron, Receveur des Postes à ses moments perdus, et faisant le reste du temps beaucoup d'autres métiers plus fructueux, traite le public en général et votre serviteur en particulier.

Hier samedi, un de nos employés Japonais se présentait au guichet de la Poste Française pour recevoir les lettres de la maison. Il était porteur d'un billet signé : par *procuration générale*, H. Blum.

Mr. Degron qui, ce jour-là, se trouvait au classement des lettres, ce qui n'est pas son habitude, ses autres affaires l'appelant souvent ailleurs, répondit tout simplement qu'il ne donnerait pas les lettres de notre maison, ne connaissant pas la signature dudit billet.

Or, non seulement les journaux le *Courrier du Japon* et le *Japan Herald* ont publié une annonce prévenant le public que nous donnions notre procuration générale à Mr. H. Blum, mais encore Mr. Degron en a été personnellement informé par une circulaire officielle en date du 25 Septembre, et portant la signature du dit Mr. Blum.

En face d'un fait semblable, je me présentai moi-même à la Poste, afin d'y demander pour quelle raison on refusait de nous remettre notre correspondance. Mr. Degron prétendit qu'il ne pouvait donner les lettres sur la signature de Mr. H. Blum qu'autant qu'un extrait de notre procuration serait déposé à la Poste.

Vous pressentez déjà la petite malice qu'entendait nous faire par là Mr. le Receveur des Postes.

Je veux admettre qu'il existe dans les réglemens de son administration un article antédiluvien qui exige que pareil dépôt doive être fait. Dans une communauté comme Yokohama, où Mr. Degron connaît tout le monde, et où, dans le cas présent, il devenait parfaitement irresponsable après les avis publiés par nous, les choses ne devaient pas se passer ainsi ? Nous n'en voulons pour preuve que la facile complaisance de Mr. Degron pour ceux qui ont un casier à la Poste.

Serait-ce donc pour la misérable somme d'une piastre par mois, prix de ce casier, que notre maison ne croit pas devoir payer, que nous devons supporter les ennuis causés par le caractère grincheux et méticuleux d'un employé des Postes ?

Il est fâcheux. Il est ridicule que le public, que les contribuables

soient obligés de souffrir ainsi les caprices ou la mauvaise humeur d'un fonctionnaire de cette administration, laquelle assurément, si elle avait ce qui se passe, ne le tolérerait pas.
Veuillez agréer, etc.

I. Oppenheimer.

CLOUDLAND COLLOQUIES.

IV.

THE STAGE.

INTERLOCUTORS: THE COMIC MUSE, ARISTOPHANES, AND A PLAYWRIGHT.

PLAYWRIGHT.—Hail, best-loved Muse! and chosen master, hail!
Shall inspiration flag, incentive fail,
Whilst you thus honour me?

ARISTOPHANES. Humph! Not too fast,
Not every botcher's windy bellows-blast
Is the divine anallus.

PLAYWRIGHT. Well, the stage,
I do assure you, now is all the rage.

ARISTOPHANES.—A ruling rabies may not mean as much
As some suppose. The Toothpick and the Crutch—
Insignia, as you say, of golden youth,
Your steadiest patrons—

PLAYWRIGHT. They are so, in truth.

ARISTOPHANES.—Well, have their wearers taste and critic sense,
Or merely foolish fopdom's appetite
For midriff titillation and the stir
Of those poor things it calls its passions!

PLAYWRIGHT. Sir!
Laughter and legs, I own, are what they ask
Who throng the stalls! and 'tis my anxious task
To scour creation for the wildest whims,
And pretexts fresh for fresh parade of limbs.
So you of old the Athenians regaled
With phantasies and flute-girls.

THALIA. Gauged or scaled
By Attic weight or measure, modern Art,
Tragic or comic, plays a sorry part.

ARISTOPHANES.—The comic mask is shamed by mountebanks.
Think you Thalia owns the satyr pranks
Of mere nude nullity, as coarse as crude,
With just sufficient meaning to be lewd!
Virile vitality in its hot course
May oft run wild; but what of manly force
Lives in the bastard birth you call Burlesque—
Mad medley of the gross and the grotesque!

PLAYWRIGHT.—You flout burlesque!

ARISTOPHANES. When brainless.

THALIA. Wild conceits
May veil shrewd sense, but these loose counterfeits
Of Comedy's more frolic phantasies
Are not the "grave impossible great lies,"
Pregnant with truth and quick with flashing wit,
That Athens loved, and whose keen radiance lit
Regions else left to duncedom's leaden gloom,
Which grave Melpomene might ne'er illumine.

PLAYWRIGHT.—Our work is wild enough!

ARISTOPHANES. Yes, as the dreams
Of crack-brain'd lunacy. You link extremes
And couple incongruities, debase
The loftiest themes by gabble and grimace.
But to what end? Does one satiric prick,
One gleam of golden wit as bright as quick,
Redeem the rubbish from inanity,
Or raise clowns' chuckling into manly glee?

PLAYWRIGHT.—Well, we wake mirth; at least our audience laugh.

ARISTOPHANES.—At monkeying as meaningless as chaff,
As void of brain-sap! You may measure men
By what they laugh at; guess their status then
Who grin at barren word-play, and guffaw
At bald buffoonery. Who that e'er saw
An idiot giggle, or a satyr grin
At tickling nonsense or at toothsome sin,
Will fail to recognise the facial twists
Of Fashion in the stalls!

PLAYWRIGHT. Swell'dom insists
On puns, and legs, and little skipping girls.
Why before swine cast pure dramatic pearls!

THALIA.—Girls! little girls!

PLAYWRIGHT. The drama's last decoys,
New from the nursery, with the nursery's toys,
Almost the nursery dress, though, to say sooth,
Naught else of childhood. These allure our youth
When riper circus pall upon their sense.

THALIA. Of humour!

PLAYWRIGHT (smiling).—Pardon me: that joke's immense!
Oh, dear me, no. The callow chits, of course,
Are void of fun as of dramatic force:
But—well there seems a charm in childish crudity
That wins our well-dressed amateurs of nudity.
And so we give them parts—easy enough
In that hotch-potch of incoherent stuff
Called a burlesque, which knows no law, no rule,
Save the necessity to play the fool:
That lends us freedom—licence, if you like—
To cram in aught that may allure or strike.
From Phœbus to the frills and shortened frock
Of a child Lais playing shuttlecock.

ARISTOPHANES.—Impotent winter wooing unripe spring
Is an old horror; but how name the thing
You hint at here! emasculate in truth
Must be the soul of infant-courting youth.

THALIA.—Enough! enough!

PLAYWRIGHT. Childhood well schooled in *chic*

Is quite the rage.

ARISTOPHANES. The jester's comic squeak
Is music, matched with the shrill treble pipe
Of babyhood as brazen as unripe;
And manhood eniggering at a mouthing mime,
Ignobly silly, shows almost sublime
Beside that manhood—how the name's defiled!
Grinning at the lewd capers of a child.

PLAYWRIGHT.—Well, tender years, touched by the stage's taint,
That fashion stoops to pet and art to paint,
May not look so idyllic as they seem
In Titan Hugo's soft poetic dream.
But then the world's the world, you know, and not
Arcadia or Cloudcuckooland, and what
Can comic caterers for the public be
But touters for its tastes?

THALIA. Poor Comedy!

ARISTOPHANES.—When ordure sparkled with satiric wit,
And the buffoon's most wild burlesquings bit
The back of blatant folly like a lash,
Coarseness might plead excuse; but empty trash
Flavoured with foul suggestion stains the stage,
And shames the sense and manhood of the age
With no redeeming vantage.

THALIA. No, not one.

Not e'en of fancy bright and buoyant fun!

PLAYWRIGHT.—Faith! that's hard lines! Have I, then, racked my

brain
For wild conceits and frantic jokes in vain
All these long years? No fun, no fancy? Oh!
By Terry's pranks and Farren's frieks, the blow
Is a severe one. Why the stalls will roar
At my worst pun, vote Yorick a dull bore,
And Puck a plodding drone compared with me,
The prince of wags and king of phantasy.

ARISTOPHANES.—Oh, be consoled! Client and caterer fit.

The audience is worthy of the wit;
The wit well earns his worship and his wage.

THALIA.—Only, whilst puns and postures witch the age,
One tribute to its taste I must refuse—
It does not comprehend the Comic Muse!

—*Whitehall Review*

THE TIMES OF THE TAIRA.

By CAPTAIN F. BRINKLEY, R.A., AUTHOR

OF THE "TIMES OF TAIKO."

CHAPTER XXIII.

AN ECCENTRIC NOBLEMAN.

Iné and the three men who formed her escort continued their route, as we have said, direct to Kiyoto after their separation from Yoshitsune and Saburo. It happened that the road they chose on reaching the suburbs led them close to the summer residence of Yasutsune, the Lord Treasurer: a noble place with gardens beautiful at all seasons and fair pavilions well worthy of its owner's wealth and position, but the travellers did not fail to remark, not only in the demeanour of the numerous servitors that came and went unceasingly, but even in the behaviour of the crowd summoned to the gates by some unwonted curiosity, an inexplicable element predicting less order than license within the trim enclosure.

Now although this journey was only connected with Yoshitsune's plans in so far as its object was to provide for Iné, while separated from her husband, an asylum with her uncle, the prior of Kinnano, Saburo's long deferred hopes were too intimately associated with his girl-wife's sympathies to render the prospect of complete inaction endurable to her. Seeing therefore in this accidental propinquity to Yasutsune's residence an opportunity of gleanings some information that might be serviceable hereafter, the wayfarers entered a neighbouring hostel, which by good fortune was admirably situated for the purpose they had in hand.

The landlord, if he had divined his guests' desires could not have exercised his natural garrulity with better judgment, for he proceeded at once to discuss the subject of their curiosity. He would have the pleasure, he said, of giving them a room from which they might presently get a good view of the Lord Treasurer and his escort on their way back to the city. No doubt the sight would be nothing novel to them, but one never could tell what diversion his lordship's progress might afford.

Across the sleek landlord's conventional decorum it was

easy to detect the same air of covert irony that had already surprised the travellers in the vicinity of those without. Was this then the mental attitude universally adopted towards the Lord Treasurer, and if so, what was its justification? Iné set herself to unravel a mystery of which her quick wit did not fail to appreciate the importance.

"You speak," she said, "as though his lordship was in the habit of encountering strange accidents. And indeed it struck us too as we came along, that the crowd collected at the gate yonder anticipated something of the sort."

"Oh! those idle varlets," sneered the host with a comprehensive sweep of his hand that seemed to designate as triflers with the sterner duties of life everybody not engaged in begetting a sleek appearance, or cultivating the art of cookery. "They are only waiting to feast their eyes on the sight of garnish and gawgaws."

"Then one better informed might look to see something stranger?"

The landlord's cunning little eyes took more careful stock of his visitors before he committed himself to the very guarded reply:—"Well that depends a good deal on the onlooker's disposition. The people, you see, fancy that his lordship's wits are wanting because he differs in most matters from those they count wise, but in my humble judgment, a fool following his bent is not so quaint a spectacle as a wise man playing the fool."

"But surely it cannot be possible that the Lord Treasurer is to be included in either of those categories?"

"Well, I should be sorry to answer yes or no to that, Ma'am. The neighbours din that into one's ears and one's own eyes tell one this, but neither, yon understand, may be safely credited when such exalted personages are concerned."

"Yet I suppose that uncertainty does not extend to what you have actually observed yourself?"

Peering mysteriously around and lowering his voice to a confidential whisper, the landlord, overcome by the charm of finding himself an unchallenged news monger, replied:—

"I certainly have seen things that seem to warrant the gossip of the quarter, but then after all we have no opportunity of observing his lordship except when he is pleasure-seeking, so that our evidence cannot be very conclusive one way or the other. At the same time when one sees a nobleman riding backwards and forwards from city to suburb all through a winter's day of snow and sleet, solely for the purpose of punishing half a dozen of his vassals who have objected to swim their horses over a swollen river for his amusement; or when one hears of his having a wood cut down because it sheltered a heron he had slipped his falcon at, one begins to think that his wits are somewhat warped."

"Not unnaturally indeed. But surely unless all this is of very recent date, such eccentricities cannot pass unbooded at Court?"

"As to that, Ma'am, it matters little I suppose what the world may say of a man, provided the Taira chief's breath is the breeze he sails by."

"His lordship is on good terms then with the great autocrat it would seem?"

"He is the only man within the four seas that dare say 'nay' to a Taira 'yea.' They do pretend indeed that a lackbrain's license is all he can claim, but whether drollery or dotage be the cause, he can do nothing that seems wrong in Kiyomori's eyes."

"It was the influence friendship gave him then, perhaps, that enabled him to obtain the hand of the countess of Harima."

"Ah! But do you really suppose that explanation is sufficient, Ma'am. They must be such a curiously ill-matched couple, you know."

"But does report say nothing about their present relations?"

"Well, the fact is, we are forbidden to speak of these things altogether, nevertheless those who are outside the ken of his lordship's factor, Kageyu, say that for all they live under the same roof, it would be hard to find a more divided couple."

This was evil intelligence for those who had conceived a hope of turning the Treasurer's influence to profit by the aid of Tokiwa's intervention. Yet in these three things: Yasutsune's idiocy, Tokiwa's inaction and the reported

estrangement of the two, Iné's quick intelligence detected some irreconcilable elements among which a remnant of hope was still discernible. The indistinct outlines of a scheme, bold as it was ingenious, began to be limned out by her busy brain.

"The unless then is not, I suppose, one of the party you have promised to let us see to-day, landlord?" She enquired.

"Surely not, Ma'am. Her ladyship is probably at the present moment absorbed in her favorite pastime of saloon archery. The factor's lady, Narnse, is her substitute on the present festivities."

Iné's involuntary start of surprise at the mention of a name that stood first among her memories of early friendships, well nigh betrayed the superficiality of her assumed unconcern. Feeling that upon this point she might not trust herself to be inquisitive, she hastened to elicit the details necessary for the construction of her purpose. A few questions more sufficed. It appeared that among the Treasurer's otherwise very fleeting fancies, the most permanent was a passion for dancing and pantomime. A performance including these amusements was indeed the motive of his present visit, one for the rest, of many instigated by a similar purpose. So completely did this pastime appear to engross his thoughts that his very gait, the landlord said, had a certain mincing minnet like aspect, so that amongst other quaint epithets he had received the title of the 'trotting Treasurer. At mid-night or midday, at home or abroad, the most trivial incident afforded a pretext for posturing and mummering, and the sound of a harp or guitar was at any time sufficient to divert him from the gravest duties.

Of Iné's three companions one only, Yoshioka Kijiro, would have been likely to prove a profitably ally in any undertaking that required the exercise of qualities more subtle than muscular. She had, however, neither leisure to take Kijiro into her confidence nor need of his encouragement to sustain her resolution. But a very few minutes after the landlord's stock of useful intelligence had been exhausted, a sudden commotion in the street before the hostel indicated the approach of the Lord Treasurer and his escort. Brief as the interval was, however, it had sufficed Iné to deck herself in whatever of rich raiment her wardrobe afforded, and as she stood thus attired at the inn door with the flush of excitement on her fair face and the light of resolve in her soft eyes, not a few of the townsfolk whom the rumour of the procession's approach had summoned to their portals, found their attention attracted by this beautiful apparition rather than by the more imposing spectacle they had come out to witness.

Kijiro, though not a little astonished by his mistress' action, was shrewd enough to understand that he had not been unwittingly left in ignorance of its object. He therefore refrained from fruitless questions, and merely whispering to Iné that she might count on his unconditional compliance whatever service her design required, awaited the issue in anxious silence.

The Lord Treasurer was on foot. It was one of his habits to seem dissatisfied with every form of equipage prepared for him, and his attendants had accordingly on this occasion conceived the idea of providing not only a horse, but also an ox carriage and a palanquin; thinking that since these methods of translation alone were permissible, the responsibility of selection would be thus shifted from their shoulders. But they deceived themselves. Yasutsune baffled their forethought by the undignified expedient of walking, if indeed his method of progression merited such a description, for it was neither a run nor an amble but a series of jaunty gambols, infinitely farcical in appearance and ineffectual in result. It was not easy at first sight to analyze the details of this performance, so overwhelmingly absurd was the entirety, but its greatest peculiarity perhaps lay in a certain subordination of all his muscles to an effort that only needed the exercise of a few. Thus while in the momentary intervals of his spasmodic antics, every faculty moral or physical seemed to be overtaken by an inane lethargy, so soon as he broke into one of his sudden gambols, not only would he agitate the flowing sleeves of his surcoat in accurate unison with his feet's tripping motion, but at the same time some action of his physiognomy, whether it were a mowing, a winking of his eyes

or a wagging of his chin, would be added to this eccentric concert.

Nevertheless, completely irconcilable with the presence of sound sense as all this appeared, it excited less mirth in the beholders than was consistent with a thorough faith in its sincerity. If the man were as utter an imbecile as his demeanour indicated, there was no just reason to refrain from laughter since ridicule could not have offended one so of decorum. But in these matters the instinct of the many is unerring, and one might have heard more expressions of surprise than amusement among the people that kneeled on either side of the street as Yasutsune passed.

Something of this reserve was no doubt due to the presence of a numerous escort, who not unnaturally anxious to hide their liege lord's eccentricities from vulgar eyes, surrounded him as closely as the disposition of the cortege permitted, and scowled upon the spectators with an excess of haughty dignity intended perhaps to supplement the Treasurer's deficiency in that respect. But Yasutsune's movements were too mercurial to be restrained by bounds of such a nature. Precisely when his escort's manœuvres seemed to be attended with most success, so that people saw less of the frolicking figure in the middle, than of the well ordered ranks on either side, he would frustrate all this care by suddenly changing the direction of a gambol and presenting himself at an interval of the line, as though he had a special desire to make his oddities conspicuous.

It was at just such a crisis as this that the cortege passed the hostel and a well timed movement of Iné's placed her kneeling almost at the Treasurer's feet.

Yasutsune drew back quickly and gazed at this sudden apparition with a frown half puzzled, half displeased, but those of the escort who found themselves nearest to Iné, seized her at once and began to thrust her roughly aside from the line of march. Before they could achieve their purpose, however, the Treasurer had caught sight of a beautiful face turned appealingly towards him, and heard Iné's cry of "a boon, my Lord, a boon!"

"Hold! hold!" he called out, ambling forward and thrusting his attendants aside. "Oh! a bonny face, a very bonny face indeed! But what a strange person, to be sure! Where may you have been born, my dear?"

Plainly as the Treasurer's escort showed their annoyance at this interruption and their master's interference in favour of the offender, they dared not interpose now that Yasutsune had taken the matter into his own hands. Iné knew this well, but none the less when, raising her eyes, she marked the scowling looks that were directed towards her from all sides, her heart well nigh failed her, and it was with a very tremulous voice that she replied:—

"I was born at Kumano, my Lord. The prior of the monastery there is my uncle."

"At Kumano, were you? She was born at Kumano, you observe," exclaimed the Treasurer addressing himself to his escort and emphasizing the proper name as though some mysterious importance attached to it. "And what do they call you, child?"

"Iné, my Lord, I am—"

But here Yasutsune interrupted her by clapping his hands and performing a rapid pirouette. "Born at Kumano," he cried, "and calls herself Iné. Most interesting this. *Kuma*, a bear and *Iné*, rice. Why a bear's a nasty black hairy, rough animal and she's particularly white and soft too, I'll be bound. But rice is a sweet thing. A very toothsome thing indeed. I dare say some of you lusty varlets wouldn't object to such a dainty mouthful as this 'Iné' either. Ho, ho, ho! what a solemn set of fellows to be sure! But come," he continued changing his tone suddenly to one of kind encouragement, as he observed the confusion and distress his words caused the blushing girl; "what is the boon you seek, child? It will surely not be unpleasant to grant it."

"My Lord," replied Iné timidly, "I am afraid you can never pardon my presumption, but I am ready to undergo any punishment you adjudge, if only I may see such a performance as your Lordship has just returned from witnessing."

"You want to see a minuet, child, do you?" exclaimed the Treasurer, his face beaming with delight at the notion of finding anyone as eccentric as himself; "but why do you apply to me in particular, I should like to know?"

"Ah! my Lord," Iné answered with a merry glance that dispelled the last remnant of Yasutsune's hesitation, "those that have a real love of the pastime cannot be in any doubt where to find it best pursued."

"Are you such a lover of the sport then, child?" cried Yasutsune gleefully. "If that be so, I'll be bound you can foot a measure right featly yourself. What say you to giving us a specimen of your skill?"

"Indeed, my Lord, I can do nothing worthy of a moment's consideration," returned Iné. "But if my clumsiness might give you any amusement, I should count myself only too fortunate."

Yasutsune did not pause for any further reflection. In a moment he had effected all the dispositions he deemed necessary, that is to say, the provision of some music and the selection of a reasonably level space in the street. It was in vain that Iné, overwhelmed with shame at this unexpected result of her device, pleaded the impropriety of posturing in the public thoroughfare like a strolling mummer; it was vain that the Treasurer's attendants protested against such a derogatory proceeding: Yasutsune seemed bent upon climbing that day to the very acme of eccentricity. He laughed at reluctance and remonstrance alike: not over-careful at the same time to hide some indications of a sterner mood, that warned his retainers to condone present misadventures for the sake of worse contingencies in the future.

For all its distasteful unseasonableness, however, this fashion of performance had an element of novelty which made it doubly attractive to the somewhat *blase* nobleman. Iné, on her side, too courageous to flinch from the consequences of her own act, was at the same time resolved that so irksome an effort should not, if possible, be less fruitful than it deserved. A title of the training she had received would have sufficed to bring excellence within the reach of one to whom nature had made unguiliness impossible, and now, stimulated by an incentive illimitable in the eyes of love, her movements seemed to interpret a harmony far sweeter than the music they obeyed, had ability to suggest. Some of the shrowder onlookers guessed that whatever effrontery Yasutsune's reputation might encourage, the unprecedented action this beautiful girl had taken, was prompted by no common motive. To them the almost faultless grace of her achievement was the less admirable since it appeared the more equivocal: but Yasutsune himself, oblivious of everything beyond the charm of what he saw, made no attempt to restrain his expressions of delight. For better ease of observation he had signified a desire to seat himself somewhere, and his attendants had unwarily attempted to turn this disposition to good account by proposing that he should enter his carriage. This would have been a slight amendment of the situation, but the Treasurer, disdaining all compromise, elected to witness the dance on horseback. The result was that at the more animated parts of the performance, becoming altogether oblivious of his position, he waved his arms and swayed himself to and fro with such sympathetic fervour, that but for the care of his attendants he must inevitably have fallen to the ground. To these accidents, however, he showed himself quite indifferent, for though each forcible restoration of his equilibrium, caused him no little flurry and agitation, his mind seemed incapable of any permanent impression, so that he would immediately resume his gesticulations as though they had been unjustly interrupted by some accident in no way attributable to their own violence.

Yet for all the applause her performance elicited, Iné's scheme had well nigh proved abortive. No sooner was the dance completed than the Treasurer rode leisurely off, still indeed humming the measure and imitating the motions he had admired, but taking no further notice of the pretty petitioner. Fortunately, however, Naruse, the factor's wife, had recognized her old friend, and knowing her master's peculiarities too well to mistake his apparent carelessness for unconcern, she persuaded Iné to accompany her to Yasutsune's residence in the city.

There the Treasurer welcomed her as though her visit were a matter of course, and remembered, not only that he desired to see more of her dancing, but also that there happened to be a vacancy at that very moment among Tokiwa's ladies in waiting. Thus Iné found herself successful beyond her utmost hopes, and had the pleasure of reflecting that in her present position she could not fail

to be useful to Yoshitsune and her husband on their arrival in Kiyoto.

But meanwhile, there were many mysteries that must needs be deciphered before any of the plans she had helped to discuss became feasible. First there was the condition of the Lord Treasurer himself. Was he in reality imbecile, or at any rate was he the irresponsible simpleton men gave him the credit of being? There were certainly no extravagances of which he was not capable, but at the same time his oddities never seemed to be the offspring of his own proper giddiness but always the suggestions of accidental circumstances. What he did, anyone might have done who had resolved to set aside conventionality and etiquette for the sake of securing shallow-brained. Moreover his vagaries were marked by a curious discrimination. The inconveniences they caused was never experienced by his own personal attendants or the members of his household. To them he was a kind, easy-tempered master; careless indeed and little worthy of respect, but always consistent and reasonable. It was only in the presence of his factor, Kageyu, or in any matters falling within the latter's province, that he became the perverse, witless person we have seen upon the road between the city and suburb. Now and then too, Iné fancied she detected in his face an expression of keen watchfulness, that betrayed an intellect very capable of such a subtle purpose as this eccentricity might be intended to conceal; and she could not but remark, that while he seemed to submit placidly enough to his reputation for irresponsibility, he neither suffered the conduct of his affairs to escape his control completely, nor omitted any occasion of gaining intelligence abroad or at home.

As for Tokiwa, her condition was even more inexplicable. Of the courageous affection that had already made her a household example in her own generation, not even a memory seemed to survive, and in truth the Tokiwa of sixteen years before might only have been identified by her beauty. This had lost little, if anything, of its wondrous attraction. Each year had apparently passed her by with a touch more tender than that of its predecessor, leaving no record of its passage save in the larger growth of a sympathy now apparently the only remaining bond between herself and the world around her. It was impossible to determine whether, seeing in the future nothing better than the end men love to think will bring reunion with the joys of the past and oblivion of its sorrows, her almost unnatural calm was the outcome of matured resignation, or whether it was simply the evidence of an apathy produced by hopelessness.

So far as her relations with the Lord Treasurer were concerned, the information Iné had gleaned from the landlord of the wayside hostel was to all appearances absolutely correct. The two never met, except on those rare occasions when some conventionality required their common presence, and at such times their mutual bearing was more formal than familiar. This was all the more noticeable in the case of Yasutsune, since in the society of friend and vassal alike, the one trait that most marked his simplicity was an *abandon* too often irreconcilable with dignity.

That this common coldness was assumed could only be credited by supposing a collusion inconsistent at once with the Treasurer's moral condition and Tokiwa's unvarying impassibility; while to admit its reality was to render the union of such a pair altogether inexplicable. What could have brought them together? Not affection, since they had always been estranged; not community of interest, since the lives of both were apparently purposeless, and surely not expediency, since they were each beyond the reach of such an influence. It had been said that when the superstitious fancies of sickness induced Kiyomori to put away the wife of his murdered enemy, he had craftily chosen to mate her with one incapable of understanding or fostering intrigue; but if this were so, he must have observed in Tokiwa some disposition since then completely annihilated. And yet that it might have been so, was seemingly proved by the letter the Lord Treasurer had written Yoshitsune, prompting the latter to action and suggesting the course most likely to lead to success. But for that letter, Iné might have ended by yielding credence to the reality of a condition in which many days of the closest watching failed to detect variation or inconsistency. Either the letter was a forgery—in which case it was an evidence of some plot directed against

Yoshitsune and therefore also against Iné's husband Saburo—or it was authentic—in which case both the Treasurer and Tokiwa were acting a role assuredly cardinal since its performance was so undeviatingly accurate.

Two points only in these hypotheses seemed to suggest that they might be simultaneously consistent. One was the disposition the Lord Treasurer's malady displayed to be augmented by association with his factor, Kageyu—a peculiarity which perhaps Iné alone had observed—the other was the disposition of Kageyu himself, which was certainly dangerous enough to warrant mistrust.

Could it be that there were two intrigues to be deciphered, and that the key to each lay in the solution of the other? This at least was the conclusion at which Iné arrived, but whether justly or erroneously, she had for a long time little means of determining.

(To be continued.)

C H E S S .

Our Chess Problem for this week, and solution of W. H. Taylor's problem of 1st instant, is unavoidably held over to our next issue.

DOUBLE ACROSTIC.

[The lights for this acrostic are easy French words.]

A school, 'tis odd, its aim is pleasure,
It has art and beauty beyond all measure.
And its lights have all. "Je vous assure."
An accent and meaning of French "le plus pur."

1.

It has helped to set a captive free,
'Tis free itself, how can that be?

2.

"Truly they had all gone mad,
The style itself was very bad."
So architects say in '79,
Though of old 'twas thought to be very fine;
But that was in '15 and '79.

3.

Though in its midst I would not be,
Yet 'tis a cheerful sight to see
Cluster'd round an old elm-tree.

4.

I'm a negative particle.
And yet not an article.
And I always want something to make me complete.

5.

My own dear duck it is not true;
'Tis but a story I tell to you.

6.

A name not much known in musical story;
'Twas only in France he'd his meed of glory.
But a curious fact in his life remained,
That he oft with his nose a note sustained.
A hint very useful to people with hands,
As few possess more than two in most lands.

METEOROLOGICAL REPORT

FOR WEEK BEGINNING FRIDAY, OCTOBER 31ST, 1879,
Observatory of Daigaku, Moto-Fujimicho Hongū, Tokio, Japan.

REMARKS.

Heavy line represents barometer.
Light continuous line—max. & min. thermometers.
----- represents velocity of wind.
.....percentage of humidity.
Max. velocity of wind, 24 miles per hour on Thursday, 1 p.m.
The barometer is reduced to the freezing point and to the level of the sea.

The record for this week is remarkable for the small range of the readings of the instruments, especially of the barometer. The highest barometer for the week was on Thursday at 10 p.m. being 30.238 inches and the lowest was on Sunday at 10 p.m. being 29.904 inches, the whole range being little more than one-third of an inch. It has been many weeks since so small a range has occurred. The weather during the week has been uniformly and exceptionally fair. The lowest temperature reached since last winter was on Wednesday, being 10.5 degrees.

SHIPPING INTELLIGENCE.

I N W A R D S .

- Nov. 2, Japanese steamer *Hugo Maru*, Moore, 896, from Kobe, Mails and General, to M. B. Co.
Nov. 2, Japanese steamer *Wakasa Maru*, Christiansen, 1,313, from Hakodate, Mails and General, to M. B. Co.
Nov. 3, Japanese steamer *Takasago Maru*, Young, 1,618, from Kobe, General, to M. B. Co.
Nov. 3, British gunboat *Swinger*, Lieut. & Com. O. P. Tudor, 430, from Takao via Chefoo and Kobe, 4 guns.
Nov. 3, Russian gun-boat *Abreck*, Captain Solanov, 1,000, 4 guns, from Vladivostok.
Nov. 6, Japanese steamer *Genki Maru*, Conner, 1,917, from Shanghai and ports, Mails and General, to M. B. Co.
Nov. 6, U. S. Sloop, *Alert*, Com. Huntington, 4-guns, 1,040, from San Francisco.
Nov. 5, H. B. M.'s S., *Iron Duke*, Capt. H. F. Cleveland, 6,034 tons, 14 guns, 4,268 w. r., from Kobe.
Nov. 7, Japanese steamer *Tokui Maru*, Hogg, 1,042, from Kobe, Mails and General, to M. B. Co.
Nov. 8, Japanese steamer *Meiji Maru*, Peters, 1,000, from cruise to Lighthouses around Japan, to Lighthouse Department.

PASSENGERS.

Per Japanese steamer *Hiogo Maru* from Kobe:—86 Japanese.
 Per Japanese steamer *Takasago Maru* from Kobe:—161 Japanese.
 Per Japanese steamer *Wakanoura Maru* from Hakodate:—140 Japanese.
 Per Japanese steamer *Genkai Maru* from Shanghai, and ports:—
 Sir Reginald Beauchamp, Mr. E. H. T. Wilson, Rev. A. C. Shaw,
 Messrs. Platt, O'Brien, Salvan, Shoda, Kamiyo, Sakamoto, Arima,
 Terahara, Tsuchiyama, Koniki, Yamagata, Chiasui, Daigo, Sugimura,
 and Yobibara in cabin; 379 Japanese and 7 Chinese in
 steerage.
 Per Japanese steamer *Tokai Maru* from Kobe:—69 Japanese.

O U T W A R D S .

Nov. 2, British steamer, *Lord of the Isles*, Folgate, 1,369, for Kobe, Portion of original cargo, despatched by Hudson & Co.
Nov. 3, Japanese steamer, *Suminoya Maru*, Frahm, 852, for Hakodate, despatched by M. B. Co.
Nov. 3, British barque, *Alex Newton*, A Newton, 308, for Nagasaki, Ballast, despatched by Jardine Matheson & Co.
Nov. 4, Japanese steamer *Tsuruga Maru*, Steadman, 681, for Kobe, Mails and General, despatched by M. B. Co.
Nov. 5, Japanese barque *Kanagawa Maru*, Eekstrand, 608, for Nagasaki, Ballast, despatched by M. B. Co.
Nov. 5, Japanese steamer *Takago Maru*, Young, 1,230, for Yokkaichi, General, despatched by M. B. Co.
Nov. 5, Japanese barque *Sumanoura Maru*, Speigolthal, —, for Nagasaki, Ballast, despatched by M. B. Co.
Nov. 5, Japanese steamer *Nyogyo Maru*, Wynn, 1,260, for Shanghai and ports, Mails and General, despatched by M. B. Co.
Nov. 5, British steamer *Oleagles*, McBain, 1,857, for Kobe, General, despatched by Jardine, Matheson & Co.
Nov. 6, French steamer *Tunis*, De la Marcelle, 1,735, for Hong-kong, Mails and General, despatched by M. M. Co.
Nov. 6, British steamer *Radnorshire*, Davies, 1,251, for Kobe, General, despatched by Adamson, Bell & Co.
Nov. 6, Japanese steamer *Iliya Maru*, Moore, 896, for Kobe, General, despatched by M. B. M. S. S. Co.
Nov. 6, U. S. gun-boat, *Itasca*, Capt. Boyd, 450, 4-guns, for San Francisco.
Nov. 7, American ship *Importer*, Shelburne, 1,270, for San Francisco, Ballast, despatched by Captain.
Nov. 7, British barque *Nimrod*, Clark, 694, for Nagasaki, Ballast, despatched by Jardine, Matheson & Co.
Nov. 7, Japanese steamer *Seiryu Maru*, Frauck, 480, for Yokkaichi, General, despatched by M. B. Co.

PASSENGERS.

Per French steamer *Tanais*, for Hongkong:—Messrs. Daudas and servant, Czukowski, Faengler, Vassier, Levasseur, Hemart and 1 Chinese.

Per Japanese steamer *Nagaya Maru* for Shanghai, and ports:—Mr. and Mrs. (oto. Dr. and Mrs. H. C. Ledyari, Dr. and Mrs. Perkins and two children, Mrs. Toriwo and two children, Miss B. Raymond, Dr. Harris, Lieut. K. Iacharim, Messrs. Tomura, Shinawarra, Joriya, H. Greey, McKellar, H. Mont, Hachisaka, Tanaka, Yanna, A. Dahlus, A. Stein, Oco, Aoki, Abbs, J. Arranger, H. N. Tileston, A. Milne, and Kojima.

Per British steamer *fileuques* for London:—Mr. C. Marica, and Dr. McBride. For Kobe:—Mrs. Copeland, and European maid servant, and 36 Japanese in steerage.

CARGOES.

Per Japanese steamer <i>Nagoya Maru</i> for Shanghai, and ports :—	
Treasure	Yen 2,800.00
Per Japanese steamer <i>Genki Maru</i> , from Shanghai and ports :—	
Treasure	\$100,000.00
" " " " " "	Yen 64,750.00
Per French steamer <i>Tunis</i> , for Hongkong :—	
Silk for France	243 Bales.
" " London	106 " "
Total	351 Bales.
Waste Silk	316 " "
Silkworm Eggs for France	157 Cases.
" " for Italy	303 " "
Total	462 Cases.

REPORTS.

The British gauboot *Seinger* reports: *Iron Duke* and *Grouler* at Kobe, strong N.W. gales off Quelpart and heavy sea. Gale from N.N.W. after passing through Kil Channel: remainder of passage fine with moderate N.W. winds.

The Japanese steamer *Winkunra Maru* reports: Left Hakodate on the 30th October at 4 p.m. Experienced light northerly winds with high glass and fine weather throughout. Arrived at 11 a.m. on the 2nd instant. Passage 55 hours.

The Japanese steamer *Geniki Maru* reports: Left port on the 29th October: had fine weather to Nagasaki, arrived at Nagasaki Oct. 31st. Left Nagasaki at midnight on 31st, had easterly winds and fine to Kobe, arrived at 3:25 p.m., 2nd inst. Left Kobe at 6:30 p.m. 4th inst. had fine clear weather and N. winds to Yokohama. Arrived on the 6th instant at 3 a.m.

The Japanese steamer *Meiji Maru* reports: Left Yokohama Sept. 20th, visited stations on the east coast to Hakodate, thence along west coast to the south of Japan and back through the Inland sea, experienced fine weather throughout.

The Japanese steamer *Tokai Maru* reports: Had northerly winds and fine throughout:

MISCELLANEOUS.

W. & A. GILBEY'S WINES AND SPIRITS.

W. & A. GILBEY have special facilities for carrying on an extensive Foreign Trade, having held for many years in their Excise Bonded Stores, for the purpose of their Home Trade, a stock of not less than 12,000 Casks of Wines and Spirits, which are equally available for Export. These stores are by far the largest private Duty Free Warehouses in the World, and are under the supervision of a staff of Excise Officers specially attached to these Warehouses.

THE EXTENT of W. & A. Gilbey's purchases enables them to give the best VALUE to the public, as a twentieth part of the Foreign Wines consumed in the United Kingdom is supplied from their stock. In the year 1876 W. & A. Gilbey paid duty on 1,881,049 gallons of Wines and Spirits, and the average quantity bottled and sent out by them daily was 3,050 dozens or 36,600 bottles.

QUALITY is guaranteed by W. & A. Gilbey, and is the same whether the Wines or Spirits are obtained direct from their Head Establishments or from any of their Agents. The purity and genuineness of every article in this list are guaranteed in accordance with Act of Parliament, 38 and 39 Vict., Cap. 63.

W. & A. Gilbey have always adhered to the standard of Bottle Measure recently recognised by the Government, namely—

6 bottles contain one gallon; 12 half-bottles contain one gallon.

SECURITY is ensured to the purchaser, each bottle bearing W. & A. Gilbey's seal and label guaranteeing quality and measure, and the strength also in the case of Spirits.

W. & A. Gilbey's Head Establishments:—

England.—(Offices) Pantheon, Oxford Street, London; (Warehouses, Duty Paid) Oval Road, Camden Town, London.

Ireland.—(Offices) Upper Sackville Street, Dublin; (Warehouses, Duty Paid) Upper Sackville St., Dublin.

Scotland.—(Offices) Haymarket, West End, Edinburgh; (Warehouses, Duty Paid) Haymarket, West End, Edinburgh.

France.—Principal Establishment, Chateau Loudenne, near St. Estephe, Medoc.

Excise Bonded Stores.—Warehouses, Nos. 1 to 5, North-Western Goods Station, and Bouny Street, Camden Town, London.

Distillery.—James Street, Camden Town, London.

Printing Department.—Poland Street, Oxford Street, London.

THE BEST REMEDY FOR INDIGESTION.

TRADE

MARK.

CAMOMILE PILLS are confidently recommended as a simple Remedy for Indigestion, which is the cause of nearly all the diseases to which we are subject, being a medicine so uniformly grateful and beneficial, that it is with justice called the "Natural Strengtheners of the Human Stomach." "Norton's Pills" act as a powerful tonic and gentle aperient; are mild in their operation, safe under any circumstances, and thousands of persons can now bear testimony to the benefits to be derived from their use, as they have been a never-failing Family Friend for upwards of 45 years. Sold in Bottles at 1s. 1½d., 2s. 9d., and 11s. each, by all Medicine Vendors throughout the World.

CAUTION.

Be sure and ask for "NORTON'S PILLS," and do not be persuaded to purchase an imitation.

KEATING'S COUGH LOZENGES,

COUGHS,
ASTHMA,
BRONCHITIS,

ACCUMULATION OF PHLEGM.

Composed of the purest articles. These Lozenges contain no opium nor any deleterious drug, therefore the most delicate can take them with perfect confidence. Their beneficial effect is speedy and certain. The old unfailing family remedy is daily recommended by the most eminent Physicians. (In use nearly 60 years).

MEDICAL TESTIMONY.

July 23th, 1877. 22, Cold Harbour Lane, London.

Sir,—Your Lozenges are excellent, and their beneficial effects most reliable. I strongly recommend them in cases of Cough and Asthma. You are at liberty to state this as my opinion, formed from many years experience.

J. DRINGLOE, M.R.C.S.L., L.S.A., L.M.

Mr. T. KEATING, Indian Medical Service.

Dear Sir,—Having tried your Lozenges in India, I have much pleasure in testifying to their beneficial effects in cases of Incipient Consumption, Asthma and Bronchial Affections. I have prescribed them largely, with the best results.

W. B. G.—, Apothecary, H. M. S.

KEATING'S COUGH LOZENGES are sold by all Chemists, in bottles of various sizes, each having the words "KEATING'S Cough Lozenges" engraved on the government stamp.

KEATING'S WORM TABLETS,

A PURELY VEGETABLE SWEETMEAT, both in appearance and taste, furnishing a most agreeable method of administering the only certain remedy for **INTESTINAL or THREAD WORMS**. It is a perfectly safe and mild preparation, and is especially adapted for Children.—SOLD IN BOTTLES BY ALL CHEMISTS.

Proprietor, THOMAS KEATING, London,

Export Chemist and Druggist.

THE GREATEST

WONDER OF MODERN TIMES!
HOLLOWAY'S PILLS.

Persons suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER,

in his work entitled "The Nile Tributaries in Abyssinia," says, "I ordered the dragoman Mahomet to inform the Fakay that I was a Doctor, and that I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as possessing unmistakable purgative properties they create an undeniable effect upon the patient, which satisfies him of their value."

SIMPLE, SAFE AND CERTAIN!

HOLLOWAY'S OINTMENT.

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

MR. J. T. COOPER,

in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls, butter, and horse-feed poured in upon us, until at last a tea-spoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining stock."

Sold by all Chemists and Medicine Vendors throughout the World

May 17th, 1873.

ARMY OR POLICE ?

IT has been reported in the native papers that an entire change is to be made in the organization of the Tokio Police; that the majority of that force is to be transferred to the army department, that those retained will, for the future, be under the orders of the town authorities, and that the Central Police Office will henceforth be abolished. This contemplated change, if indeed it has not already been consummated, effects an important modification in the system of maintaining order in the capital and the country, and it is also of considerable political importance. It destroys the power of a department which has gradually acquired great influence and which has wielded both a military and a civil authority not only in the capital but in the provinces. It is well known that under their late energetic chief, the police took a conspicuous part in the suppression of the Satsuma rebellion and, by many accounts, distinguished themselves even more than their brethren of the regular army: in fact their numbers, and the class from which they had been recruited, made them a formidable army corps of picked men. Entirely independent of the army administration, and of a class superior to the rank and file composing the army, the Tokio police under General Kawaji became a separate and a strong element in the country, wielding far more power than their name implied and (conscious of this power) barely disguising their sense of superiority over the soldier, whom they often had the opportunity of arresting or otherwise of humiliating. It is not to be wondered at that the special powers exercised by the police, and their independent organization, should have given rise to many jealousies between them and the regular army, and it is not surprising that after the death

of General Kawaji the Government should have determined to make an alteration in the constitution of the force.

The good policy of a change being effected cannot be gainsaid: the duties of a police force are those of support to the civil authorities in the prevention of crime, and the protection of the citizens against violence or theft in their everyday life. Beyond these limits the power of the police should not go. In time of war their place is not in front of the enemy, and internal troubles should no longer call for their interference after they have once assumed a stage of actual violence. Nor are they required for magisterial duties: those functions pertain to the judicial authorities of a country and the policeman is simply the executive of the magistrate. For these reasons we are glad that a change is being effected and we cannot doubt that both the people and the army will appreciate it; the former will henceforth be able to look upon the police as their natural guardians, and the latter will cease to look with a jealous eye upon a force which at times competed with their own.

We have given elsewhere the substance of the new conscription regulations for the army, which show that Japan has perfected a very complete scheme for the organization of a powerful force. All her young men, with very few exceptions, are now declared liable to military service and, subject to the number required at any time for the standing army or the reserves, may be called upon to take their place under the colours. These regulations specify the intended numerical strength of the standing army and we trust that no cause will arise to necessitate its increase; in fact we consider that Japan's army is already of greater strength than necessary and that it forms a heavier tax upon the country than, situated as it is, it should be required to support. Already, by far the heaviest item in the list of national expenditure is that of the War Department: this year's estimates allotted to it over seven millions of yen, which showed an increase of about one and a half millions over the allowances to the same purpose during the previous two years, and it has already been stated that the General Staff will, this year, require an additional grant to the one already devoted to it. We can but assume that the new regulations will entail a considerable outlay of money not yet provided for in the Estimates; and whilst we are disposed to concur in the advisability of Japan possessing a strong reserve of trained men, to be available in case of actual need, we think that the existence of such a reserve should be made the reason for diminishing the strength—and the expense—of her standing army.

Japan's political motto, and certainly her financial maxim, ought to be, and, we would fain believe is:—"defence, not defiance." Foreign conquests cannot be her mission; provocation must be a policy she has carefully to avoid, and in our opinion, the strain of a large army is the last thing necessary for her

wants. The only purpose for which Japan should require an armed and organized force is that of preserving internal order in the country, of maintaining peace within her dominions and of upholding the law amongst her own subjects. For such purposes the police, under ordinary circumstances, are ample. Emergencies certainly have arisen, and may possibly again arise, in which greater force may have to be summoned; but for these no large permanent army can be needed, whilst for foreign wars her military necessities should indeed be limited. Japan enjoys privileges possessed by hardly a single European state, which exempt her from many internal dangers affecting other countries, and from the necessities they have of maintaining large armies either to support a dynasty or to meet an enemy's invasion of their frontiers. The immemorial and faithful loyalty of the people to the Mikado admits of no aspirant to the throne of Japan, it permits no thought of a change of dynasty and it prevents the suspicion of any pretender existing to the supreme power. The history of the country is a record of the constant and unswerving attachment of the people to the sacred person of their sovereign. Such internal troubles as have arisen have been the outcome of family or provincial jealousies, of feudal ambition or of local strife. They have been made possible by the existence of a numerous armed and unsettled class—the samurai; but that class has lost its power, its rising generation can no longer be termed unsettled and thus the old source of danger has vanished or now only partially exists. Even with feudalism in its prime of ambition and with the samurai in the full vigor of their arrogance, no danger attached to the person or the authority of the Mikado and, in our time, no signs have shown themselves of such a risk existing. On the contrary, loyalty has increased; whilst the power of menacing the internal peace of the country has become limited to people who would now form but an unarmed and undisciplined crowd.

Again, Japan's frontiers require no standing army to defend them. Such defences as nature has not already made inviolable fall under the protecting care of her navy; whilst, in case of successful invasion by an enemy, the organized reserves and the *levée en masse*, provided for in the present army regulations, would have to be relied upon even were the standing army made double its present strength. Situated as happily as England is in this respect, she has far less need than England for maintaining an army: she has no large foreign possessions to garrison or defend, and she has no colonies or distant trade to protect.

IMPROVED LAND TRANSIT.

IN the memorial of the Tokio Chamber of Commerce on treaty revision the question of the land-tax is reviewed at considerable length, and its reduction is recommended. This is one of the respects in which the document has merited the praise conferred upon it by the author of the critique published by a native contemporary. It would not have been astonishing had an assembly of merchants discerned the connection of the tillers of the soil, through various links of communication, with the foreign trade of the country, less clearly than they have done. They state the case of the peasantry thus:—Brought into communication by post and telegraph with the rest of the community, and familiarized with the ideas which are rife in centres of trading and manufacturing populations: better educated

than of yore, and able to learn, from the cheap press which is now within their reach, a few simple lessons of political economy, and to apply the teaching to their own positions, they find that the burden of taxation still imposed upon them, lessened though it has been in recent years, weighs on their shoulders to an extent quite disproportionate to that borne by other classes of the commonwealth. The document asserts roundly that the farmers already complain of the amount of the land-taxes, and that, unless some measures are adopted to increase the profits of their business, they will become permanently disaffected, and a source of constant uneasiness to the authorities. For these reasons, it is suggested that the government should make every effort so to adjust the finances of the country that a reduction can be made in the tax on land, and the roads improved so as to facilitate the transport of produce from one part of the country to another. This is the only allusion, in the manifesto of the Chamber of Commerce, to internal traffic; and indeed more need scarcely have been expected in a treatise professing only to deal with the reasons why existing international conventions should be readjusted, and to set forth the objects to be striven for by Japan in participating in any new arrangement. This brief hint, however, serves our present purpose as indicating that real discontent exists among the agricultural classes; actually, and not only in the imagination of ephemeral writers, whether in the vernacular or European press. The fact is stated concisely by a commercial, deliberative, and influential body, occupied in the consideration of a scheme for the general amelioration of their country's condition in all grades of its society. The remedy which they propose is twofold; first, an adjustment of the import tariff on a scale which shall admit of a reduction in the contribution made by the agricultural classes to the revenue—a means which, from the point of view taken by the Chamber is in their opinion of the greater importance; and secondly, improvements in the existing system of land transit.

Now, whatever may be the result of the present endeavours of Japan to increase her sources of revenue, and however probable it may be that this end will ultimately be obtained, that does not constitute a reason why the effort should not now be made to improve the farmer's position in the interim by providing him with the means of adding to his income. This would best be effected by helping him to easier communication with markets for his produce. And, indeed, it seems to us that a large proportion of the taxes he now pays might satisfactorily be employed in improving the means of transit between districts, either already producing, or which might be brought under cultivation, and ports of export. If such a system were pursued, the whole country would be incalculably benefitted, and the farmer himself, earning more money, adding to the comforts of his home, growing in self-respect, would, even if he had to continue to pay taxes on the ground he cultivates at the same ratio as at present, be in better condition to do so, and experience less ill-feeling at the demands made upon him. Nor are these by any means, the only advantages that would be gained. In an article on "the jinrikisha," published in the *Japan Mail* of the 11th of October last, we spoke of the injury done to the state by the withdrawal from field pursuits of the flower of the peasantry, to follow the destroying and degrading work of carriage drawing. The disadvantages under which this class have laboured, is principally responsible for the harm now effected by the misapplication of their toil. Seeing the hopelessness of advancing, beyond the hand to mouth existence led for generations by their fathers and

forefathers; a life in which a to-morrow of unrelenting toil succeeds a like to-day; a continuous succession of labor, intermitted only by sleep; a treadmill task without progress now, or hope in the future: thousands of the present generation of should-be husbandmen have preferred an existence in which they can make larger gains than with the hoe, pay comparatively less to the authorities, enjoy greater freedom of action, and have more means and leisure for the dissipation which shortens their career and injures the nation in the lower strata of its future race. It would be an inestimable boon to Japan if the tens of thousands of young men who are now in the shafts of the *kuruma* were returned to the fields which they ought to be tilling: if the tens of thousands of boys and youths who seem to be destined to similar employment were prevented from embracing it, and compelled as they grow up, to work in bringing under culture the waste lands of the empire,—some few decimal parts of the eight or nine which, in great proportion of natural fertility, are now allowed to be unproductive. And this result would be gradually attained, without pressure and interference, if the highways and byways were made to resemble those in Europe and America: if steam and horse power were introduced wherever practicable. Such a cheap railway as we advocated in April last, between this port and Odawara, besides inciting the population of the plains through which it would pass to increased exertion in cultivation, would teach the *jinriki* coolies of that part of the Tokaido that their present occupation was gone, and the very existence of the new means of locomotion would find them other, more regular remuneration, and less demoralizing work. Again, if the routes between villages and towns were widened, so as to be rendered practicable for carriages drawn by horses, the men who now drag their jolting vehicles over cobbles and through ruts, occasionally varying the monotony of their day's pull by precipitating themselves and their fares into a mountain gully from the narrow and unstable surface of a bridge of planks, could first earn wages in the work of construction, and afterwards in half a dozen different ways according to their individual capacity. So far from the *jinrikisha* having been an advantage to Japan it has been a detriment. Its abolition would be a national benefit.

Railways and improved carriage roads will do much toward abolishing *jinriki* traffic, and gradually and imperceptibly absorb the labour now employed therein in other channels. Analogous means may be adopted in the towns. There an extension of the cab and omnibus traffic will tend to the same desirable result. As was natural, the number of *jinrikishas* formerly employed in Tokio has already diminished considerably since the introduction of a very imperfect public horse-carriage system two or three years ago. The case would be identical under similar circumstances in Yokohama; and we are astonished that a native company for conveyance of passengers in common vehicles, regularly plying to and fro on the most frequented lines of business, has not yet been formed. Better still, in the existing crude condition of notions concerning organization obtaining among Japanese, that the local government should initiate a scheme. It would also be desirable that the municipal authorities in the capital should take the present hack carriages of all descriptions under more or less control. The convenience of the public and the welfare of the poor brutes who are in harness would receive great benefit. It is true that the four-footed drawers are not much worse treated negatively than are the bipeds of draught employed by their countrymen. But to return to

Yokohama. A well devised scheme for street passenger carriage might well prove remunerative. As a commencement, one of the best plans possible would probably be to start lines of tram cars from or near the railway station:—running along the creek side to the Nishi Bashi: and via Honcho Dori to the Post Office, thence by the Bund as far as the Grand Hotel. The stations would suggest themselves to the constructors of the line; but, indeed, in this place it is not necessary to do more than merely indicate what might prove a useful, beneficial, and popular speculation.

Since the above was written, we have seen that the Osaka Chamber of Commerce, in their memorial on treaty revision, occupy a larger space than their Tokio brethren in discussing the subject which we have selected as the heading for this article. They propound that the most important step to be taken towards the development of trade is the opening up of facilities for communication with the interior. We shall be content if, with all the collateral issues which it involves, this matter commends itself to the authorities as it is, certainly, one of the most important questions now requiring to be considered carefully and solved promptly. The Osaka merchants hold that, unless easy communication between the ports and the interior is provided, the development of domestic industries must be cramped, and foreign trade proportionately restricted. They instance the waste that occurs in tea and silk growing districts through the expense and deficiencies of carriage, and they might have adduced rice and other bulky or heavy articles as suffering even more from the same cause. They also note the frequent impossibility of conducting what might be made, with cheap conveyance, a profitable trade in foreign goods in country towns and villages. We may expect to hear the same cry from other ports: and trust that the representations made will be sufficient to direct the energy of a patriotic government to reforms on which the advancement and future wealth of the empire so materially depend.

EMOTIONAL RELIGION.

ONE of the most interesting works that could possibly occupy the attention of a person qualified to undertake the task, would be a comprehensive history of the various religious manias which have from time to time startled sober minded christians from their propriety and provoked the derision of free-thinkers in all ages. When one reflects upon the vast field which would require to be gone over in a thoroughly exhaustive history of the kind we have suggested, it ceases to be matter of surprise that no one has as yet been found sufficiently courageous to undertake a labour so formidable.

The lunacy which instigated a vast army of fanatics, estimated at some three hundred thousand in number, to wend their weary way towards Palestine with the object of inducing the Saracens to release their hold upon the sanctuary of the christian religion, and the miserable fate of these pioneer crusaders who, almost without exception, perished on the road either from starvation or pestilence, would afford a fitting commencement for an essay upon "emotional religion."

Standing out in bold relief as another beacon of bigotry and fanaticism, may be mentioned the Flagellants who enjoyed, in common with the Hindoos of our own time, the pleasing belief that, by a sufficiently vigorous mortification of the flesh, they would be enabled to propitiate the Diety. It is hard to say whether pity or disgust is the predominant feeling when we read of troops of people, men,

women and children, rich and poor, noble and serf, travelling in a state of nudity, by day and by night, in heat and cold, through town and country and all the while scourging themselves cruelly in the vain idea that they would thereby find favour in the sight of the beneficent Creator.

By easy gradations the historian could bring his readers to our own time, touching lightly upon the extraordinary developments which have produced in America, the Mormons, Free-lovers, Shakers, Spiritualists *et hoc genus omne*. Then, in order to make the record complete, he would find himself compelled as an honest recorder of events, to touch upon the organization and exploits of the great "Salvation Army" which, under the command of Mr. W. Booth, formerly a minister of the New Methodist Connection, assisted by Mr. Jackson, erstwhile "the Coventry Bear," forms the latest fantastical outburst of "emotional religion" and at present attracts a considerable amount of attention in England.

From the accounts which appear in the home papers, it seems that Mr. Booth and his captains, colonels and knights in psalmody, have been much exercised in mind by the repulsive aspect of British manners in many of their characteristics. Beer, blasphemy and dog-fighting, according to these emotional Christians, make up the sum of existence amongst multitudes of English people and Mr. Booth and his officers propose to wean their fellows from these degrading recreations.

Coventry and Nottingham are apparently the two chief points which claim the attention of the "Army of Salvation," although a strong effort has also been made to reduce Whitechapel. The movement, however, commenced in Coventry and it is amongst the Coventry "Bears" and Nottingham "Lambs" that it has, so far, received its greatest development. Now, it appears to have been taken for granted that anyone who wishes to divert the Bears and the Lambs from the enjoyment of their old and habitual methods of amusement, must provide some substitute equally exciting. There is it seems only one form of spiritual excitement to which the Bears and Lambs are amenable. Like Dr. Johnson, they are "afraid of eternal damnation." Though the *idea* is familiar to them as a mere ornate form of expression and "a grand set-off to conversation" it has also to them a painful reality. All religious revivalists simply make people face this reality, then hold out the hope of escape, indicate the means and set up a chorus. The process is perfectly simple; it is the process of the flagellants (bar the flogging, which is un-Protestant and un-English, except in the army and navy) and of the *Piagnoni*. You produce all the desired emotions: alarm, reaction, hope, and all this in a crowd of friends and to a lyric accompaniment. There can be no doubt that the thing is exciting—as exciting as dog-fighting, and a capital substitute for rough and tumble pugilism. The Salvation Army then has recourse to these simple tactics, for the "Army" has some notion of military method. According to a correspondent of the *Daily News*, when the "capture" of a town is determined on, skirmishers are sent on in advance and a base of operations secured. A small band of brethren and two or more sisters or "Hallelujah lasses" are detached on service. Simultaneously the General borrows or hires a large empty building which he styles a "Salvation Factory." The skirmishers start early on a Sunday morning and take up a position in one of the squalid open spaces where the lower classes of "merrie England" pass the holy day in watching dog-fights and in heaving bricks. As soon as the lists are cleared for action, the skirmishers begin their hymns. Music hath

charms. The "Bears" or "Lambs" as the case may be, listen to some sacred melody and soon find themselves joining in the chorus. Then a few brief volleys of warning about their future state are fired into them, and a crowd having by this time assembled, they are ready to be guided to the Salvation Factory.

It is apparently a fact that good work has been done. In both Coventry and Nottingham "a very gratifying diminution of ruffianism has taken place" and it is this very ruffianism that society and the ordinary religious associations vainly seek to control. Under these circumstances Mr. Booth and his army have so far deserved well of the community.

But the question is: Will it last? We confess that, judging from our experience of former similar movements there can be but one answer to the query. This latest outburst of emotional religion will too surely fade away like the notable revivals in America and in Ireland, because all is neglected except the religious afflatus and when the permanent results are sought they will be found to be similar to those which have followed every former popular "awakening." When we reflect upon the good which has been effected, it is melancholy to think that the well intended efforts of Mr. Booth and his companions will, comparatively speaking, be wasted. But if the attention which has been directed to the Salvation Army be the means of forcing the authorities to take some active measures to put an end to the brutality and barbarism in which a great portion of the lower classes spend the day of rest, Mr. Booth can rest content that he has accomplished some good in his day and generation, although he may have fallen very far short of his original aspirations.

THANKS, principally, to the efforts of the United States Meteorological Department the time does not seem to be unattainable when, in the words of one of the greatest of living scientists, "ignorance of to-morrow's weather will be disgraceful." Already people in Europe are warned beforehand of storms coming across the Atlantic, and enabled to prepare against threatened danger. Since the meteorological congress held at Vienna in 1873 simultaneous observations have been taken daily at various stations in different parts of the earth's surface and communicated to Washington, where synoptic charts are drafted under the superintendence of General Myer, Chief Signal officer of the United States Army Department. The average number of daily observations now made simultaneously in foreign countries, Japan being one, is 293, and the total number of stations on land and on vessels at sea from which reports are regularly entered in the bulletin printed and circulated by the department is 557. Co-operation is asked for from the vessels of the navies and mercantile marines of all nations, and the necessary forms, instructions and even the loan of instruments, may be procured at the offices of the department. At present on one hundred separate vessels at sea, the necessary observations are taken and recorded. So much progress has already been effected that there is good reason to hope that the chief difficulties against which practical meteorology has to contend will be removed, and that atmospheric conditions and their variations can be accurately charted over any extent of the earth's surface. The *Times*, which devotes a long article to a review of this subject of international meteorology, says:—

"It seems not impossible that in the future questions of climatology, and perhaps others bearing upon the prediction of changes far in advance of the time at which they may happen, or questions of the character of coming seasons even, may be answered by the researches which these charts will render practicable. As a means of better combining the work

and the interests of the several nations concerned ; of certainly securing that co-operation at sea which will enable the lines of charting to be drawn as fully and as well over oceans as over continents ; and which will ultimately give the world as practical a knowledge of the movements of areas of disturbance in the midst of the seas as is now possessed of such movements on some continents, the undertaking is of vast importance."

THE *Graphic* of the 27th September, has an illustration portraying the four Chinese gunboats, recently arrived at their destination, off Malta ; and dangerous and spiteful looking craft they are. They form the third instalment of a fleet of unarmoured vessels which Sir William Armstrong & Co. are building for the Chinese government, or perhaps more correctly for the vice-royalty of Chihli. Primarily intended for coast defence, yet in the event of a naval engagement it is thought that they will be able to give an account of themselves, their fire being concentrated upon a huge vessel which would make a good target, while that of the enemy would be distributed and directed against a number of small objects which would be comparatively difficult to hit. The principal feature of these vessels is, that they are floating gun-carriages, their armament consisting only of one thirty-five ton gun each. This weapon is a muzzle-loader, worked by hydraulic machinery, so that only five men are required to serve it in action.

AFTER seven months war the belligerents in South America are much in the same position as they were at the commencement, although Chili, which was generally supposed to hold the superiority at sea, has now effectually secured it by the capture of the *Huascar* and destruction of the *Independencia*. From present appearances it seems not impossible that both Chili and Peru may continue their present inglorious struggle as long as they can raise enough money to do so. But, as we read in a late number of the *Times*—"Financial exhaustion is more likely to determine the duration of the war than the *Huascar* raids or the Chilean bombardments. Bolivia has already had recourse to a forced war loan. Chili, after a futile attempt to negotiate the issue of 6,000,000 pesos in paper money through the banks, published a decree by which the issue was made independently of these institutions, and only last month the Legislature authorized the issue of Treasury certificates to the amount of 10,000,000 pesos. Peru has been trying to raise a national loan, but subscriptions have come in so slowly that it is now deemed certain, resort will be had to a further issue of paper money ; and, considering that there is an enormous issue already in circulation and that silver is at 156 per cent. premium, the outlook for Peruvian bondholders is not promising. If the war becomes a question of resources, and the longest purse is to win, Chili stands the best chance of coming out victorious, although the longest purse in this case only means the exchequer whose credit is least bad. Chili, Peru, and Bolivia were saddled with national debts of thirteen, fifty, and three and a half millions sterling respectively before hostilities broke out ; and what with a protracted war expenditure, the check upon production, and the destruction to property, the people of these countries must soon discover that they are adding enormously to burdens already too heavy to bear. Peru, by its secret treaty with Bolivia, really forced on the war, yet it is the most impetuous of the three ; but perhaps those who guide its policy are of Dick Swiveller's way of thinking—that it is no use for a man to live cheaply when he has got no money."

The United States have we learn offered their good offices to put an end to the suicidal struggle in which these three rival republics are engaged, and it is sincerely to be hoped, in the interests of all concerned, that the friendly mediation of the great Northern Republic of the same continent will be crowned with success.

THE NEW ARMY REGULATIONS.

A NOTIFICATION from the Prime Minister has lately announced the establishment of a new code of regulations for army recruitment which is of considerable interest to those desirous of following the changes gradually taking place in Japan and which we cannot fail to take a note of in this journal for the present and future reference of our readers.

The whole of the regulations are hardly of sufficient interest to foreigners to require their reproduction in detail, but our friends of the *Courrier du Japon* having furnished a complete translation of the document, we now extract from its columns such of the articles as appear to us of the greatest moment.

By this new code the army is divided into four great divisions : the standing or active army, the reserve, the territorial reserve and the *levée en masse*. The 'standing army' consists of men enrolled at the age of twenty, drawn by ballot at the head quarters of each military division. The length of service is three years ; but in time of peace men who have sufficiently learnt their drill may be allowed to return to their homes before that term has expired. Young men aspiring to become officers or subalterns must join the Military School or the School of the *Kiodokan* and then pass the prescribed examinations. Men belonging to the standing army will receive daily pay during the whole of their service, and will be fed and clothed at the expense of the state. The 'reserve' consists of men who have served three years in the standing army. They will have to perform a fresh service of three years after which they will be dismissed to their homes. In case of war, or under other fixed circumstances, they will be recalled and reinstated in the standing army. Once a year they will be assembled at the head-quarters of their military division for drill and exercise. The 'territorial reserve' is composed of men who have served three years in the ordinary reserve. They will remain for four years in this category. In time of war they will be called out after the ordinary reserve. They will be assembled once a year for exercise. The length of service can be extended according to war necessities, or by other fixed eventualities. The '*levée en masse*' is composed of men from seventeen to forty years of age inscribed in the civil registers. They will only be called in case of a great war or if the country is seriously menaced.

The following are exempted from military service in time of peace : The eldest sons or grand-sons of fathers who have commenced their fiftieth year ; scholars of military or naval schools ; workmen in arms' manufactories and in naval arsenals ; a man whose brother may have died in active service or who may have been discharged for infirmities contracted in the service of the state ; doctors provided with a professional diploma ; lads who have left the Government schools ; those who have studied two years in a foreign university ; young men holding a master's or engineer's certificate and stokers who have served over three years on board a government ship. And in time of peace a reprieve from conscription of one year may be granted to, those desirous of entering a naval college ; brothers called to the same ballot ; brothers of subalterns serving as soldiers or sailors ; brother of scholars in naval or military schools ; sons supporting a family in consequence of the absence or illness of its chief ; those who are abroad for study or commerce ; those who are under height or are too weak for active service ; and those who are under trial for criminal offences. Ballotting for military service will take place after the examination of those called up. Each person will draw his own ticket, but villages may appoint three men to draw for their neighbourhood. The names of all those who have been called for ballot will be announced at each place where it is to occur. The ballot will be conducted as follows : As many tickets, each with a number affixed, as there are men for ballot will be placed in an urn whence they will be drawn by the individuals and handed to an officer who will declare the number drawn and register the number against the name of the individual. Depending upon the number of recruits required for the army, so many will be enrolled from the first numbers drawn ; for instance if 300 men are required and 500 tickets are drawn, the numbers from 301 to 500 will return to their homes. Young men who have been drawn and selected for service will join their regiments between the 20th April and the 1st May. In case the parents of those serving in the ranks change their

domicile they must declare their change of residence to the authorities.

Every father of a family is bound each year to furnish the mayor of his district with a list of all his sons who have reached their seventeenth and twentieth year; the former being required in event of a *levée en masse*, and the latter for ordinary military service. Young men who have drawn numbers requiring them to serve in the active army may be exonerated from service by the payment of 270 yen, and those who have been exempted from service during times of peace only can insure their immunity from service by the payment of 135 yen, but they will always belong to the class available as a *levée en masse*. Any lads attempting to exonerate themselves from service by false declarations of age, by invalid excuses, by fictitious maladies, or by inflicting on themselves any mutilation whatever will be prosecuted according to law. The mayors of districts conniving at such frauds will be liable to the same punishment as the actual delinquent.

The final article of the new regulations fixes the number of recruits required as part of the standing army for each of the six great divisions, or garrisons of the empire, as follows:—

THE TOKIO GARRISON (*1st military division*).—Total effective force 7,020 men, of whom 2,340 or one-third are to be furnished by annual recruitment in the neighbouring Fu and Ken. THE GARRISON OF SENDAI (*2nd military division*).—Total effective force 4,260 men of whom 1,420, or one-third will be furnished by the annual recruitment. THE GARRISON OF NAGOYA (*3rd military division*).—Of the same force as that of Sendai. THE OSAKA GARRISON (*4th military division*).—Total effective force 6,700 men, of whom 2,233, or one-third will be furnished by the annual recruitment. THE HIROSHIMA GARRISON (*5th military division*).—Total effective force 4,350 men, of whom 1,446, or one-third will be furnished by the annual recruitment. THE KUMAMOTO GARRISON (*6th military division*).—Total effective force 4,770 men of whom 1,593 or one third, will be furnished by the annual recruitment. A seventh military division, but actually forming part of the second, consists of a battery of coast artillery formed of eighty men of whom one third are to recruited annually. They are to be drawn from Hakodaté.

The total effective force of the standing army of Japan consists of 31,410 men, of whom one third are to be recruited annually. This number does not include those required for special corps, artillery and waggon trains, workmen &c. which have not yet been determined; nor does it include the effective force of the *hojokei* (men called to supply vacancies in the standing army). The regulation height for the different services of the army is fixed as follows: For the artillery and coast artillery, a minimum of 5 feet 5 inches. For the cavalry, engineers and sappers, a minimum of 5 feet 3½ inches. For the infantry, a minimum of 5 feet.

Such is the gist of the new regulations which, briefly summed up, makes the whole population liable to a military service of ten years; three with the 'standing army,' three with the 'reserves' and four with the 'territorial reserves.' Their duties, however, after passing the first three years with the standing army cannot be said to be heavy, as after passing to the reserves the men will only be called but once a year for drill and exercise. And if the total number of annual recruits does not exceed the 10,480 men now declared as wanted to maintain the present effective force of the army, the proportion of those called for duty each year can not be considered as bearing too heavily upon the total male population of Japan.

THE IMPERIAL COLLEGE OF ENGINEERING, TOKIO.

The first Graduation Ceremony of the Imperial College of Engineering, took place in the large hall of the college during the forenoon of Saturday, the 8th instant.

Amongst the company present were: Their Imperial Highnesses Arisugawa, Higashi Fushimi, Kita Shirakawa and Kwacho no miya. Their Excellencies Saijo, Prime Minister; Okuma, Finance Minister; Terasima, Minister of Education; Kawamura, Minister of Marine; Saigo, Minister of War, and Yamada, Minister of Public Works, *Sangis*. Their Excellencies

the American, Russian, and Chinese Ministers, and the English and French Chargés d'Affaires, and the principal Japanese and Foreign employés of the Public Works Department.

The graduates, prizemen and students occupied the body of the Hall. The principal guests occupied seats on the right of the dais, the left being reserved for the Professorial staff.

The general company having taken their places, the Principal and the Professors, wearing their academic robes and the hoods of their degrees, entered in procession and took their seats.

H. E. the Minister of Public Works presided, supported by Mr. Otori, Director of the Kosakukiyokn, and by Mr. Dyer, the Principal of the College. H. E. opened the proceedings in a short speech (in Japanese) stating the reason of the assembly, the Principal then introduced the several graduates, and the Minister handed them their diplomas, (the diplomas were neatly engrossed in the form of a small scroll, having a gilt covering for the outer part of the roll.)

Mr. Otori then delivered in Japanese a speech of which the following is a translation:—

Mr. President and gentlemen. In January, 1872, the foundation stone was laid of this Institution and in August of the following year, the building was sufficiently advanced to permit of the reception of students, thirty of whom then entered the college. The college course extends over six years, the two first of which are devoted to the study of general subjects. When this preliminary period has been passed, the students are admitted to the scientific classes in which they remain for two years more, every alternate half year being spent in the college and the workshops. The last two years of the course are exclusively occupied in the acquisition of the purely practical branches of the profession.

Out of the thirty students who entered the college when it was first opened, some have died and some retired, leaving twenty-three out of the original number who have passed through the whole term of study and preparation for the noble profession of an engineer. To these students we have now the pleasure of presenting diplomas recognizing the successful result of their industry and application. No doubt the success of the students is in a great measure due to their own exertions, but they must not forget the gratitude they owe to the professorial staff for the assiduity of their instruction and the encouragement they afforded them under their numerous difficulties.

The diplomas which we this day distribute are of three kinds. The first is awarded to those who have passed the highest examination with distinction, the second to those who have succeeded in passing, and the third merely certifies that the recipient has gone through the college course for the required period. It is a pleasing fact, that out of the twenty-three students no less than eight are entitled to the highest diploma the college can grant. Fourteen have successfully passed the examination and will receive second class diplomas, while to the remaining student, who was unfortunately prevented through illness from attending the final written examination, a certificate of having studied during the college term will be granted. These diplomas have been awarded after a most careful comparison of the marks obtained in both the practical and theoretical branches, and although I am inclined to think that some of those students who will receive second-class diplomas are quite equal in theoretical knowledge to some who will receive those of the first-class, still they fell short in the practical branches and thus failed to attain the higher rank. This college was established for the purpose of turning out thoroughly practical civil engineers and I sincerely trust that the future career of the students will be creditable to themselves, the college which has educated them for their high functions, and the nation which has provided the means for that education. In conclusion I wish to make a few remarks specially intended for the students. Now that they are entering upon their career in life they should bear in mind that no matter how able a man may be if he neglects further study he cannot help proving unsuccessful in the great battle of life. Those students who to-day receive second-class diplomas should continually bear in mind that by persistent study they may yet surpass those who now stand before them. The knowledge already gained is only the result of six years study, the future depends entirely upon the students themselves.

The Principal of the college then gave the graduates an interesting and instructive valedictory address. He first pointed out to them the difference of opinions held by the French and English schools; the former going deeply into theory and greatly neglecting practice, whereas in England the general habit had been to greatly neglect theory and devote the most attention to practice—both means were deficient, and he strongly recommended for Japan a judicious mixture of both. He then

pointed out that a good elementary education for engineers should include at least one modern language in addition to their own, indeed in Japan it was absolutely necessary, as few books on scientific subjects or applied mechanics existed in the Japanese language. He told them that in carrying out their practical duties they ought not to neglect their literary reading and studies. He then pointed out the distinctions existing between information, knowledge and education, explaining the differences between them, and mentioned the aptness of Japanese youths to mistake one for the other. Further, He shewed that to make education thoroughly practical, care must be taken for a good foundation of the mind, especially having reference to the future career to be selected. Mathematics, so he remarked, discipline the reasoning faculties, physical science gives distinctness and strength to the reasoning of cause and effect, and the study of drawing gives a definiteness to ideas which are otherwise hazy. These studies occupy the students during the first two years of the course. He then proceeded to give a short sketch of the college course, shewing how theory was combined with practice. The final examination for diplomas differs from ordinary examinations. The students are placed under the same conditions as they would be in an engineer's office, and are given a certain amount of work to do, and then examined upon the principles and practice of the work. The diplomas of the first class are confined to those who pass an examination not only in their own special branch, but are also well up in subjects of general interest. The diplomas of the second class are for those who have more especially devoted themselves to their own branch, not giving so much attention to other subjects. The speaker then pointed out to them that, although the college course was finished they must not consider their education complete, but that they had simply got sufficient to give them a start and a power which must bear them through life, and he hoped that in the future, when he trusted that an Institute of Engineers might be founded in Japan, they would be found coming to the front with interesting and valuable papers on their several subjects. He concluded by giving them a kindly and graceful farewell on the part of himself and his colleagues, at the same time hoping they would not forget their connection with the college, and impressed upon them that their future conduct would not only credit or reflect upon their own reputation, but also on that of the college.

The distribution of prizes for the general courses then took place, the prizemen being introduced by the several Professors.

After the termination of the proceedings a sumptuous lunch, served in the general drawing offices, and to which the graduates were invited, was offered to the guests. A special gala lunch was also provided for the students in their own dining hall.

SHANGHAI LETTER.

SHANGHAI, November 5th, 1879.

The departure of the Japan steamer at noon to-day prevents me giving you a complete account of the Autumn Race Meeting, but I am enabled to give you the result of the first and second days' racing. Fortunately for us the weather was beautiful, though a trifle cold and as the course was in good order some fast time was made, and the races generally were such as might have been expected from the splendid ponies that appeared on the turf.

There was less delay than usual in starting the races, in a great measure owing to a new rule made by the Committee, which I give in full, as it might with advantage be adopted by your Jockey Club. It is thus:—"After a second bell has been rung a flag will be hoisted at the Judge's box, after five minutes have elapsed the flag will be lowered, the gate of the course locked, and the starter will proceed to the post and start such ponies as are ready on the course."

The first race of the day was the Malou Plate, for half-a-mile, which brought out a field of nine. Of these Mr. John Peel's *Lalmahal*,—one of the ponies that did so well at Chefoo lately,—was the favourite, but disappointed his backers, as he was nowhere in the race. Mr. Kerevo's *Reichsfurst* surprised every one by winning in a fine style, but the time, 61½ seconds,

was not so good as it would have been had not a strong northerly wind been blowing.

The Criterion Stakes, for one mile, was the next race, which brought out eight of the old cracks, the veteran *Black Satin* being the favourite, but closely run by Mr. Risk's *Stratharon*. It was a capital race throughout, but coming down the straight it became an exciting match between the above two ponies, ending in a victory for *Stratharon* by three lengths in 2 min., 9 secs.

The Maiden Stakes, for three-quarters of a mile, was of course the race of the day, and created the usual interest as it was impossible to name any one pony out of the 47 entrants as being a decided favourite. The fancy was for the German stables, and one pony, *Grimbart*, was thought capable of running away from all his opponents, but after all did not run, while Mr. Bill's lot were considered as very likely and Mr. Kremor's *Precedent* as being hard to beat. Mr. Troy's *John Dunn* had for some time been in public favour, but it was not until the eleventh hour that *Wild Surf* was considered dangerous, as his owner had kept him very dark. Mr. John Peel's *Hark Forward* and Mr. Fungus' *Tom Thumb* were well spoken of, as were also Mr. Chouffeur's *Flick* and *Fluke*. Sixteen ponies faced the starter and got off at once, but not well together. *Flick* had the best of it until well down the straight, being hard pressed by *Precedent* and *John Dunn*, but *Wild Surf* was set going and came ahead with his owner up in the rider's usual style, and with a rush went ahead at the distance, winning easily by half a length, with *Precedent* second and *John Dunn* a good third. Time, 1.33½.

The next race, the Club Cup for 2 miles, was looked upon as a moral for *Isgrim*, but to the astonishment and delight of the majority fell an easy victory to the little favourite *Red Robin*, belonging to Mr. Fernando. The race was ridden with great judgment, and was won in a canter, *Isgrim* being second, and the time it was done in, 4m. 32½ secs. was the best ever made for the distance on this course.

The Jockey Cup, for one mile, was an amusing race, as, though the ponies were good the riders were far from being first-rate, as the race was confined to ponies and jockeys who had never won a race. The great *Grimbart* had been kept out of the Maidens for the purpose of winning this, and his owner rode him, but he did not make the show against his six competitors that was expected, as he only just secured third place. Mr. Risk's *Strathpeff* was fancied and coming down the straight got shut out by Mr. Bill's *Lupardies* and Mr. Edmund's *Gossoon*, the riders being all so excited that they hardly knew what they did, and certainly left the race to be decided by the pony that could stand most swaying about and "the graceless action of a heavy hand." A general foul took place almost from start to finish, which had one advantage, however, as it gave every jock an excuse for elaborately explaining how the field was won—or lost. Time, 2.11½.

Hack Stakes, once round, was considered with good reason as a moral for Mr. Mat. Dawson's *Danntless*, whose owner guided him to an easy victory in 2 min., 41 secs.

The last race of the day, the Racing Stakes, for a mile and a quarter, was the best of the lot. Mr. John Peel's *Jolly Friar*, the winner of the Griffins and Derby last Spring, made his first appearance this meeting, being pitted against five cracks, of whom his most dangerous opponent was Mr. Risk's *Stratharon*. *Wild Eddy* was in the race until the last quarter was reached, but from that point it resolved itself into a match between *Jolly Friar* and *Stratharon*, the two favourites racing down the straight neck and neck. The Judge gave the race as a dead heat, against popular opinion, which assigned the win to *Stratharon*, and being the last race of the day the stakes were divided. Time, 2 min., 42 secs.

The second day opened with another half-mile race, the Northern Cup, for which *Wild Gift* was the favourite, and would probably have won but for the over-confidence of his owner and rider, who coming with his usual rush near the post waved his hand to the rider of *Strathflect* who had been leading down the straight, and began to chaff him about not winning before the post was reached. The attention of *Wild Gift's* rider was thus taken from his pony a trifle too soon, and being eased a little *Strathflect* shot ahead and secured the race by a head in 68½ secs., leaving the rider of *Wild Gift* for his consolation nothing but

"The quiet sense of something lost."

Then came the great race of the day, the Shanghai St. Leger, for one mile and three-quarters, which brought out nine cracks. Mr. John Peel's *Jolly Friar* was a decided favourite, but the "Wild" stable had built their hopes on *Wild Rake*, and were confident of winning. *Jolly Friar*'s stable companion *Driving Cloud* made the running for him, the favourite being kept back until the half mile was reached when he was set going in earnest, and from that time there was no doubt about the race, as he beat off the field with ease and won by several lengths hands down, time 3 min. 57 secs.

For the Autumn Cup, three-quarters of a mile, only five ponies started, the veteran *Black Satin* being the favourite and his most dangerous opponents being *Wild Eddy* and *Dun Edin*. *Wild Eddy* started off with the lead but was challenged by the *Black* at the monument, and soon after the old pony went to the front and then raced clean away from the others, and his rider brought him in a winner, patting his neck as he passed the stand. Time, 1.33½; first quarter 31 secs.; half mile 59 secs.; the second quarter being done in 27 secs. This is really wonderful work for an old pony, who thus counted his thirty-first win.

The usual interval for tiffin took place between the third and fourth race, which enabled the staunch old pony *Black Satin* to appear amongst a field of seven for the Cosmopolitan Cup, once round. The *Black* made his effort on entering the straight and had a very fine race with *Expectation*, ridden in this race by a crack jockey, still the black was not to be beaten and when finally called upon sprang past *Expectation* and won by half a length in 2 min., 42½ secs., giving additional proof of his sterling qualities.

The Llama Miao Stakes, for one mile came next, and was remarkable as being the great upset of the meeting. Nine ponies started, *Strathpeffer* being favourite at 5 to 2, and Mr. Kremor's *Precedent*, and Mr. Siwel's *Anticipation* next at 3 to 1 against each. *Wild Eddy* and *Driving Cloud* were fancied by some, but Mr. Edmund's *Gossoon* and *Aranti* and *Icicle* were looked upon as rank outsiders without the ghost of a chance of winning. Nearly throughout the race seemed to lie with the first three favourites, and down the straight all had eyes for the gallant struggle between *Strathpeffer* and *Wild Eddy*, without taking notice of the despised *Gossoon*, who came up to the leaders at every stride and eventually passed them just at the post, winning by a head in 2 min. 9 secs. The owner of *Gossoon* was riding *Icicle* in this race having given his own pony to the guidance of a more experienced jock, and it was owing to this circumstance that the race resulted as it did.

The Mongol Cup, for a mile and a half, brought out eleven ponies, *Wild Surf*, the winner of the Maidens, being favourite and *John Dunn*, who was third in that race, being fancied. *Grimbert* who had been ridden by his owner in the Jockey Cup, when he disappointed his backers, had now the advantage of Mr. Siwel's good jockeyship, and taking the lead from the favourite at the half mile came along at a slashing pace and won in a canter by any number of lengths in 2.14½. This race again showed how little chance even a good pony has with a bad rider, and how a first-rate jockey can do his work properly and do justice to the animal he is riding.

Only five ponies started for the Whangpoo Stakes, one mile and a quarter, but they were all cracks—*Stratharon*, *Red Robin*, *Tajmahal*, *Isegrim* and *Flick*. *Stratharon* came to the front only at the quarter mile, but the race was his without doubt from that point, and he won easily by two lengths, while *Red Robin* and *Isegrim* were having a very exciting tussle for second place, the little chestnut securing it by a head only. Time 2 min., 44 secs.

The last race of the day was the Welter Cup for one mile, when *Jolly Friar* again appeared, *Wild Boer* being the best of his four opponents. The Friar took the lead soon after passing the half mile and was never headed, though *Wild Boer* made him gallop. Time 2 min. 11 secs.

To-day the great race is of course the Champions, and with so many first rate ponies as the Shanghai course can boast is bound to be a capital race. As yet events have not favoured the German and "Wild" Stables as was expected, but Messrs. John Peel, Risk and Paul ought to be well satisfied.

The fourth day's racing takes place on Saturday next. On the first day we were favoured with the band of the *Richmond*,

which was quite a treat, and yesterday our own Town Band was in attendance.

We had a most amusing cricket match last Saturday, when an Irish eleven challenged a team of Americans from the fleet and settlement. The enthusiastic Patlander who was energetic in getting his countrymen together did not fail to betray his nationality in print, as the notice he sent round was worthy of Sir Boyle Roche. He had seventeen Irishmen from whom to select his eleven, but found somehow that he was one short. However, old Ireland did well at the wickets, making 135 runs against 30 for the first innings of the Americans and 30 for their second. It is but fair to say, that several of the Americans had never handled the willow before, and only two or three of them had any serviceable knowledge of the game. But the *Richmond's* fine band was on the ground, and the afternoon was a most enjoyable one, which was the great thing, though the play was more remarkable for its novelty than skill, on one side at least. At the conclusion of the match a Club Eleven challenged the united Irish and Americans, and seemed in the way of winning the match, had not darkness put a stop to the game.

I see that you have published a list of the vessels composing the Chinese Navy and credited the source of it to the *Hingoo News*. This is hardly fair, as that paper took its information from the *Shanghai Mercury* without acknowledgment, which was rather a shame, as such information can only be compiled with great trouble, as there are no official returns to refer to as in Japan. The list, as published by the *Mercury*, is incorrect, as may well be imagined considering the difficulty of obtaining reliable information, but on paper presents rather a formidable list of war vessels. Many of them, however, are of little effective use, and, indeed, the Chinese can only count among them three or four really serviceable vessels. It is reported that some of their men-of-war are so badly built that the bolts fly out of the plates when the guns are fired, and it is certain that those apparently the most formidable are not sea-going vessels, but are only adapted for coasting and effective but for the suppression of local piracy—when the crews are in the humour for such work. The *Mercury* promises to furnish as with a more accurate list by and bye.

NOTES OF THE WEEK.

DEATH.

At Blackheath, on the 23rd September, Captain HENRY JONES, Nautical Assessor, formerly of the *Ballarat* and *Far East*, aged 57 years.

On Monday morning last the M. M. steamer *Tibre* arrived with European Mails, followed by the P. & O. steamer *Malacca*, on Friday morning, with London dates to 26th September. The P. & O. steamer *Chiao* left with home despatches on Thursday morning at daylight. The Shanghai steamers have arrived and departed as usual.

The P. & O. steamer *Australia* was towed into Plymouth with a broken shaft. The *Pekia* was to leave with the mails on the 25th ultimo.

H.M.S. *Vigilant* will shortly be docked at Hongkong for the purpose of having a new shaft put in.

The s.s. *Glenoe* left Amoy for Singapore and New York on the 22nd ultimo.

The M. B. steamer *Sumida Maru* arrived in Hongkong on the 26th October; five days and fifteen hours from Kobe.

The *Malacca* arrived on Friday morning after the unusually long passage of ten days from Hongkong. A reference to our shipping report will show that she experienced very heavy weather and sustained considerable damage to her deck gear. We regret to notice that Mr. Pistorius, who was a passenger by her, died at sea on the 4th instant. This gentleman was for many years a resident in Japan in connexion with the Netherlands Trading Society, and his death will be mourned by many friends.

We hear that information has been received by the Agent of the P. & O. S. N. Company to the effect, that commencing with the 8th December next, the Mail steamers are to be despatched from Yokohama at daylight on Monday mornings. This news will be received with the greatest disappointment, as it not only destroys the present boon of a Saturday half-holiday, but will necessitate frequent Sunday work, which, we had all hoped, was definitely done away with. Representations have been made to bring about a change in the proposed departures, (which are intended to apply to the French as well as the English Mail Steamers), and we trust that they will succeed in inducing the Postal authorities to ensure our 'day of rest' not being converted into a mail day.

During the blow of yesterday afternoon, a police boat was capsized off the entrance to the creek near the Grand Hotel. Three or four natives were in the boat at the time and were

thrown into the water. They were all picked up, after some difficulty, by one of the compradores' boats.

The *Nichi Nichi Shinbun* states that the greatest activity prevails at the Foreign Office in the preparation of documents connected with a revision of the treaties and the tariff, H. E. Uyeno, the Junior Vice Minister, being busily engaged in that work at the head of the officials carrying it out. The occasion of this extra pressure of work is said to be the necessity of having the necessary documents finished before H. E. Mori's departure for England, which is expected to take place next week. Are we to gather from this that the negotiations as to treaty revision are to be removed from Tokio to London?

We extract from our Indian files a reprint of the most important of the new Telegraph Rules, which will doubtless prove of interest to our readers. Public opinion in every part of the world is against many of the intended changes and the general feeling undoubtedly is, that the public come off second best in the new convention, which comes into force on the 1st of April, 1880. The rules are as follows:—

3. Telegrams may be written in plain language, in code language or in secret language (*langage chiffré*).

4. Telegrams in plain language must present a clear meaning in any one of the languages allowed to be used for telegraphic purposes.

5. By code language is understood the employment of words which are to be found in vocabularies, but not arranged to form intelligible phrases.

6. For European correspondence, telegrams in code language must contain words belonging to *only one* language.

7. For extra-European correspondence, telegrams in code language may contain words belonging to any one or to all of the following languages, but to no other, viz.:—English, French, German, Italian, Dutch, Portuguese, Spanish, and Latin.

8. Proper names of persons and places in the text of Code messages must be used only in their natural sense.

9. The Company has the right to ask for the production of Code Vocabularies, should any word in a telegram appear open to question.

10. Secret language telegrams may be composed of ciphers or secret letters, or they may contain series or groups of figures or letters, the signification of which shall be unknown to the sending station, or they may be written in languages not admitted under paragraphs 6, 7, and 8.

11. The text of secret telegrams may be wholly secret or partially so. In the latter case, the secret passages must be placed between two parentheses, separating them from the ordinary text which precedes or follows. The secret passages must be composed exclusively of letters of the alphabet, or exclusively of "figures."

12. For extra-European correspondence secret letters are not admitted.

13. Messages are charged according to a tariff per word, including the names and addresses of the sender and receiver.

20. Proper names of places and persons, names of places, streets, boulevards, and titles, as well as numbers written in words, are counted according to the number of words used to express them, the limitation as to the number of letters in words being always applied.

23. Illegitimate compound words—that is, words combined in a manner contrary to the usage of the language—are not accepted; abbreviated and misspelt words are inadmissible.

28. Every separate character, whether figure or letter, or underline, must be counted and charged for as one word.

In European messages every group of five figures, and in extra-European messages every group of three figures, or less, must be counted and charged for as one word. Larger groups must be charged for in European messages at the rate of five figures to a word, and three figures per word in extra-European, plus one word for any excess. Groups of letters, when accepted, as well as words or names not admitted under paragraphs 6, 7, and 8, will be counted and charged for in the same way as groups of figures.

29. Bars of division, decimal points, commas, and stops used in the formation of numbers will each be counted as a figure.

30. Letters added to figures to form ordinal numbers will each be counted as a figure.

40. The reply to a message can be prepaid, the sender determining its length which must not exceed thirty words. The indication "reply prepaid" or "R. P." will have to be inserted after the receiver's address and paid for; this indication will represent the prepayment of a reply of ten words. If a longer reply be expected the number of words prepaid for the reply must be added thus, "R. P. fifteen words": this instruction counting as three words,

50. Telegrams composed of secret letters (such as b x k i m) cannot be taken from the public for extra-European places.

The *Echo du Japon* reports that M. de Geofroy, now absent on leave, has resigned his post as French Minister to Japan, and that he will be succeeded by M. Tricou, the present French Consul General at Alexandria.

Telegraphic communication between Nagasaki and Shanghai has been interrupted since yesterday.

It deserves notice that the Japanese Government are determined not to leave their notifications as to shipping a dead letter, and that when the occasion arises they will carry out the regulations laid down. We publish elsewhere the decision of the Court of Inquiry upon the late collision between the Japanese steamer *Takaago Maru* and the British brig *Junna*, which we understand is the first investigation that has been held under Notification No. 82, of June, 1876. It will be noticed that the certificate of the chief officer of the *Takaago* has (under Section 10 of those regulations) been suspended for six months.

One of our extracts, this week, from the native press refers to the use of sandals (*waraji*) by the army in preference to the foreign made boot. Our contemporary justly praises the decision of the military authorities in this matter, but we think he might have gone further and urged the use of sandals as much in time of peace as in time of active service. All pedestrians and sportsmen appreciate the fact that the boot in the principal part of their equipment, and many a day's misery has been passed from inattention to that important matter. And where such discomfort can be felt by men who have their boots made to measure, how constant must be the pain experienced by others who have to take them at haphazard? The sandal, to which the Japanese has been accustomed from his childhood, is by no means an uncomfortable protection to the foot of a foreigner, and we can strongly recommend it (with a few simple improvements) to any person undertaking a walking tour. But to confine a foot, always used to the freedom of *waraji*, into the tight vice of a 'Blucher' must indeed be a torture—and to few people more so than to the soldiers. With a leather protection to the sole of a Japanese sandal no better equipment could, we think, be found for the military class, and the authorities would do well to have it adopted for constant use.

Mr. B. Fairclough gave a Shakespearian entertainment at the Gaiety Theatre, on Tuesday night last, assisted by some of our amateurs, which although advertised as a 'farewell performance' will, we hope, not prove to be the last time he will gratify a Yokohama audience. The programme consisted of scenes from *Richard III*, *Romeo and Juliet*, *Othello* and *Taming of the Shrew*, and attracted a very appreciative audience, although not such a numerous one as welcomed his appearance in *Richelieu* during the previous week. It is a formidable task for an actor to perform four rôles of entirely different characters in less than as many hours, and it is nearly an equally formidable task for an audience to follow with sustained interest the delineation of four distinct portraits of villainy, love, jealousy and conquest, even when given by such a consummate actor as Mr. Fairclough. With the influence still fresh upon our minds of the emotions caused by his superb acting as *Othello*, we are apt to forget those created by his *Duke of Gloucester* earlier in the evening; we are inclined actually to regret that such an honest and unselfish love scene as the one between *Romeo* and *Juliet* should have broken the spell of selfish ambition and violent passion which immediately preceded and immediately followed it. After *Richard III*, *Romeo* and *Juliet* was disappointing; honest love seemed marvellous after the excitement of crafty licence; but even if *Romeo* had been his sole part in the evening our recollections of Mr. Fairclough would have been unsatisfactory: the rôle is not suited to his powers. And after seeing *Othello* it was difficult properly to appreciate *Petruchio* in his conquest of the shrew *Katherine*. But Mr. Fairclough's *Othello* was perfection; his confiding love to *Desdemona*, gradually undermined by the dark hints of *Iago*, changed rapidly to the intensest play of jealous passion, and each flash of his eye, each quiver of his muscles showed how thoroughly he realized the character.

In this piece the accomplished actor was ably supported by Mr. Herbert who knew his part well, and showed that with a little more practice he would attain all that freedom of stage action which an amateur so often fails in. Mr. Townley did well as *Henry VI*; *Mercutio* was placed in good hands when confided to Mr. Bayne, but we confess that we expected more would have been made of the character and that the prompter's voice would have been less audible. Mr. Russell, as *Brucoli*, laboured under the disadvantage of timidity and of having had short time to learn his part. A very pleasant evening was brought to a close shortly after midnight.

A visit was paid to the German frigate *Prinz Adalbert* on Tuesday, by Prince Arisugawa no Miya and another of the Imperial Princes. The Japanese Royal Standard was hoisted on board and saluted by the men-of-war in harbour. The *Prinz Adalbert* left for Kobe the following afternoon, in order that Prince Henry may pay his long promised visit to Nara, &c.

In a cursory mention of the different courts at the Sydney Exhibition, the *Sydney Mail* of the 20th September says:—

"In marked contrast with the practically useful objects in the American Court is the highly ornamental and artistic collection shown by Japan, who occupies the extreme northern portion of the building, on the eastern side of the north tower. Here is a splendid collection of pottery, including all kinds of articles, of all sorts and sizes, up to vases of prodigious dimensions, ornamented exteriorly with the most elegant and fantastic devices, many of which exhibit great artistic skill. Many other curiosities of novel design and delicate workmanship are on view, and the Japanese, yesterday afternoon, had the gratification of seeing their court made an object of interest second to none in the whole of the Garden Palace."

A Vocal and Instrumental entertainment was given on Thursday night, by "The Ducal Troupe," Negro Minstrels of H.M.S. *Iron Duke*, at the Temperance Hall, for the benefit of that establishment. The programme, consisting of songs, dances, etc., was quite a lengthy one, and with the exception of a few of the former, omitted for want of time towards the end—was successfully rendered; the chorus of each song being noticeably effective. There was a large attendance of both ladies and gentlemen, and the performance not only afforded an excellent evening's entertainment to those present, but must also have augmented considerably the funds of the institution for whose benefit the proceeds of the evening were appropriated. The Temperance Hall, by furnishing respectable board and lodging, a free reading-room, and various other conveniences to sailors sojourning at this port, has done a vast amount of good work since its establishment in Yokohama; but we think we err not in saying that its founders have repeatedly found—that in common with most institutions of its kind established in small communities—its sphere of usefulness has been often restricted for the want of the necessary funds wherewith to carry out the projects of its directors and patrons.

Another fire occurred on Sunday morning last, at about half-past four o'clock. At that hour flames were perceived issuing from a small house on lot 106, occupied by a Chinaman, which quickly spread to the adjoining premises, a coal godown belonging to Messrs. J. Martin & Co. The absence of wind on this occasion was as fortunate as lately at the fire in Bentendori, and in about an hour the firemen succeeded in subduing the conflagration. At one time fears were entertained that the coal in the adjoining yard would be destroyed, but the exertions of the firemen kept a constant flow of water directed upon the pile and it escaped with little more than a slight amount of damage. The adjacent creek gave an unlimited supply of water, and to the good working of the Steam Engine, we owe an escape from what might have been a severe calamity to the settlement.

The *Courrier du Japon* informs us that out of 650,000 silk worm's egg cards brought to market only 250,000 have found purchasers at prices ranging from 20 to 60 cents. It adds that business is very restricted and that the Japanese dealers are anxious and discouraged at the prospects of their trade this season.

From week to week we have welcomed the news that cholera was extinct, but we regret to say that it is impossible yet to

announce the disease as entirely past. The returns for the whole Empire up to the 8th instant still show some increase on the previous statistics. The figures now are: Total number of cases 163,256; deaths 94,848; recoveries 42,577.

A friend writes to us from Osaka that it is contemplated to establish special schools there for the encouragement of manufacturing arts, agriculture, commerce, drawing and book-keeping. We understand that a similar school has for some time existed in Tokio, or rather one of which the scope does not extend beyond commerce and book-keeping and that it has already found many pupils. The difficulty, however, with the Tokio school is, that the Government are unable to give it a grant to extend its usefulness and that its present promoters find themselves rather hampered for want of more support to carry it on as a private school. The tradespeople of Osaka, our correspondent also informs us, have been officially warned against selling spurious or damaged articles when knowing them to be so—a very virtuous and proper notification. The Mikado's birthday was loyally kept in Osaka and as many as 4,000 different kinds of fireworks were let off on the occasion. But a discouraging piece of news from the same place is, that cholera has not ceased to exist there. In about eight days there had been 17 deaths out of 27 new cases.

YOKOHAMA LOCAL BOARD OF HEALTH.

The twenty-second meeting was held on the 22nd October, 1879, at the Machigaisho, at 10.30 a. m.

President, Mr. Kawano, Secretary of the Kanagawa Ken.

The following subjects were brought before the meeting:

- 1.—Communications by the President.
- 2.—The existing regulations upon the sale of drinking water.
- 3.—Communication by Mr. Mita, engineer to the Kencho, containing details of a prepared scheme for drainage of a part of the town.
- 4.—Report by Dr. Gütschow of the chief results of the house to house visitation made by him, Dr. Kinoshita, Mr. Kawai and Mr. F. Koiso.
- 5.—*Résumés* of the minutes of the 20th and the 21st meetings respectively, held on the 8th and 15th October.

I.—The President stated that the committee for house to house visitation for that part of Yokohama situated west of the Nakamura canal and east of the Okagawa, and consisting of Drs. Geerts, Nagashima, and Messrs. Isogai and Matsuzaka, had finished their task and would send in their report at next meeting.

The President wished to ask the opinion of the Board whether the temporary branch offices of the sanitary office, which were erected in several parts of the districts of upper and lower Ashigara-gori of this ken could now be closed. There were now no more cholera patients in the cottage-hospitals of these places.

Dr. Shima was of opinion that these additional offices were at present no more needed. He wished therefore to bring the matter on the same footing as at other places within the ken.

Dr. Geerts also approved of the closing of the temporary offices, but advised, in each larger village or town, the formation of local sanitary committees, which might consist of two or three respectable citizens of the place, one or two priests, the physicians and the schoolmaster, under the presidency of the Kucho or Kocho. Guided by the advice of the Kencho sanitary office, or of the district Board of Health, such local committees could be extremely useful in carrying out preventive and repressive sanitary measures.

Resolved to close the additional offices in Ashigara-gori.

II.—The President wished to communicate the existing local regulations for the sale of drinking water by the water-vendors, but as Dr. Simmons, who had asked for an investigation of this matter, was not present, it would seem preferable to adjourn this question until next meeting.

III.—Mr. Mita, Engineer to the Kanagawa Kencho, communicated to the Board some further details of his proposed drain-sewer-system for a part of the town:—1st, as to the extent of the ground; 2nd, as to the exact height above ordinary high-water mark; 3rd, as to the position of the main sewer and of the sub-sewers and drains; 4th, as to the quantity of sewage and drain-water to be carried off into the sea; 5th, the inclination for the larger sewers, for the branch sewers and for the

round pipes respectively; 6th, the form and dimensions of the three kinds of sewers; 7th, the materials to be used in the construction of the sewers and pipes.

Dr. Geerts suggested that Mr. Mita might first work out his plan and make an estimate of the probable cost of his water-carriage system, per house and per inhabitant, and that afterward an estimate and plan be made of the tank-system, in order to compare the cost of both.

Upon the proposal of the President it was carried to thank Mr. Mita for his communication and to request him to furnish some information about the probable cost of the meter-tank-system.

IV.—Dr. Gütschow reported that the committee for the house to house visitation, in the district east of the Morikawa and Nakamura-gawa, consisting of the members Dr. Kinoshita, Mr. Kawai and Mr. Koiso and Dr. Gütschow, had finished the inspection, with the exception of the foreign premises on the Bluff.

The chief results of the inspection were read and it was resolved to publish them when the visitation of the Bluff shall also be completed.

V.—The *résumés* of the 20th and 21st meetings were read and adopted for publication.

Meeting adjourned at 12.30 p.m.

The twenty-third meeting was held on the 29th October, 1879, at the Machigaisho at 10.30 a.m.

President: Mr. Kawano, secretary of Kanagawa-ken.

The following subjects were put on the order of the day.

- 1.—Communications by the President.
- 2.—Report of the committee for house to house visitation in that part of the town situated west of the Nakamura-canal and east of the Okagawa.

I.—The President informed the meeting that the committee for inspection in that part of the town situated south of the Sakuragawa and west of the Okagawa had finished their inspection. A short *résumé* of the results would be read, but the full report would be handed over at next meeting.

The President further stated that the committee for the house to house visitation for that part of the town, situated north of the Okagawa and Sakuragawa, had also finished their work and would send in a report at next meeting.

The President proposed to fix the hours for cleaning closets as soon as possible, and not wait until the proposed new surveying regulations have been discussed and adopted. The contractor wished much to have more time at his disposal.

Resolved that the hours for closet cleaning shall be from 10 p.m. to 6 a.m. and that the order for this shall be immediately given.

II.—The committee for the house to house visitation in that part of Yokohama situated west of the Nakamura-canal and east of the Okagawa hand over the report of their inspection for publication, together with the *résumé* of this meeting.

It was adopted that each report should be published as it came forward and that afterwards all the reports of this house-to-house visitation should be joined together for reference:—

REPORT OF THE COMMITTEE FOR THE SANITARY HOUSE-TO-HOUSE VISITATION FOR THAT PART OF YOKOHAMA, SITUATED BETWEEN THE TWO CANALS NAKAMURA-GAWA AND OKA-GAWA.

The committee appointed at the 12th meeting of the Yokohama Board of Health, held on the 5th Sept., 1879, for the purpose of sanitary inspection of that part of the town situated between the canals, Nakamura-gawa, begs to hand the following report, containing the general results of their inspection. The inquiry embraced the following:—the name of the street, number of each house, names of occupier and owner, the number of privies or closets and the condition of the same; the water supply and situation of the wells; the clean or filthy state of the premises; the condition of drains; and, finally, general remarks as to measures of improvement necessary.

Situation and condition of the ground (Topography).—This part of the town of Yokohama is formed by the valley between the range of hills at Ishikawa and the hills of Ota-Nogé. The ground was formerly a swamp and is still, for a considerable part, of a marshy nature. Not less than 33 streets with 6,224 houses and 18,325 inhabitants are found in this part of Yokohama.

Many of the streets are so low-lying that the sea water stands, with high tide, on the premises and in some places even on the street.

The names of the streets inspected by us are:—

Yanagi-cho.	Naniwa-cho.
Yoshida-cho.	Choja-machi.
Fukutomi-cho.	Sneyoshi-cho.
Iséaki-cho.	Wakaba-cho.
Sugata-cho.	Nigirai-cho.
Hagoromo-cho.	Hiakata-cho or Kubo-cho.
Horai-cho.	Ashibiki-cho.
Bandai-cho.	Kumoyi-cho.
Furo-cho.	Yamabuki-cho.
Okina-cho.	Fujimi-cho.
Ogi-cho.	Yamada-cho.
Kotobuki-cho.	Chitose-cho.
Matsukagé-cho.	Miyoshi-cho.
Yoshihama-cho.	Nagashima-cho.
Matsugai-cho.	Yoshioka-cho.
Wakatake-cho.	Suruga-cho.
Mumegai-cho.	

The whole district lies too low and ought to have been raised at least two feet more with the clayish rock of the neighbouring hills, before being used as place of habitation.

It is quite easily understood that in such a wet and marshy ground, which is moreover surrounded and intersected by not less than seven salt water-canals, which are subject to the rise and fall of the tide, not a single well of drinkable water exists; but this would not be better even were the ground raised several feet more. The people would always be obliged to buy drinking water from the boats or the aqueduct.

It is, however, not, on account of the drinking water that the district must be called an unhealthy one, but it is the marshy, wet condition of the ground which causes this part of the town to be far inferior as to healthiness to the other parts of Yokohama, which have been raised sufficiently above high water mark.

The worst streets as to the low, swampy, and alluvial nature of the ground, are the following:—

Fukutomi-cho	with 35 saltwater marshes or pools.
Sugata-cho	" 2 " " "
Yoshida-machi	" 6 " " "
Furo-cho	" 2 " " "
Choja-machi	" 13 " " "
Yoshihama-cho	" 1 " " "
Miyoshi-cho	" 11 " " "
Wakaba-cho	" 1 " " "
Horai-cho	" 1 " " "
Hagoromo-cho	" 1 " " "

total 73 " " "

It is of no use draining these streets as they are now. The only way of making them fit for being inhabited is, first to raise the ground artificially and to provide for drainage and removal of sewage afterwards. As this valley will, in the future, doubtless become the direction in which Yokohama will extend further, it seems to us very desirable, if not a necessity to raise the ground there in time, before allowing the people to build houses on the same.

If once houses are built and streets made, raising of the ground becomes very difficult and far more costly.

The local government have now commenced in several streets to raise the ground of the streets considerably, but this has the disadvantage of bringing the rainwater from the raised streets into or under the houses, which remain for the greater part at their former low level. The dampness of the houses will in such cases rather augment than diminish.

General condition of the habitations.—This part of the town contains 6,223 houses with 18,325 inhabitants and is chiefly inhabited by artisans, carpenters, joiners, workmen, coolies, shopkeepers of second hand articles, actors, etc., and contains relatively few houses of the better class. This gives an average occupancy of not yet full 3 persons for each dwelling. Most houses are merely cottages, very lightly built of wood and plaster. *Nagayas*, or long blocks of dwellings under one roof, are found frequently and are often kept in very bad repair. It cannot be said that the population in this part of the town is too dense. Most houses have at the back a common yard or empty space, so that it cannot be said that there exists over crowding or that the dwellings are crammed within too small an area. Generally speaking there is space, air and light in sufficient quantity, but sanitary arrangements as to the material of which and the manner in which the houses are constructed, dryness of the soil, purity of the air, cleanliness etc. are very deficient and often wholly wanting.

With a very few exceptions all habitations are built too low, the floor nearly resting upon the porous, wet, marshy soil, so as not to admit any fresh air under the houses. Damp foundations are found with nearly all the houses in this district. Only very rarely the grounds under the basement floors was found to be cemented or covered with concrete. Apparently very many people in this district are too poor to make their houses more comfortable, more substantial and more healthy than they now are. We cannot refrain therefore from recommending here the great utility of societies, founded either on a commercial or on a charitable basis, for the improvement of workmen's dwellings. The success of undertakings of this kind in very many European towns and cities would certainly warrant the formation of similar companies in Japan, with the object of providing better, cheaper and more healthy house-accommodation for the workmen and the poor, who are now at the mercy of greedy owners of *Nagayas*. Several empty habitations were found by us to be in such a ruinous and dilapidated, sloping condition as to become dangerous for the neighbours. Such houses ought to be demolished by order of the local sanitary inspector, unless the owners are willing to repair them in such a way as to be inhabitable and to be no more a danger or a nuisance.

The theatres, ten-houses and miyomono in the streets of Iséaki-cho and Hagoromo-cho call also for the special attention of the local sanitary officers as to the bad hygienic arrangements of these buildings, especially the latrines, urinals and closets, most of them giving a horrible smell and poisoning the air inside the theatres. Also greater facilities for subduing fire ought to exist, and more substantial seats ought to be constructed.

The coolies lodging-houses in Ura-Yoshida-machi require more sanitary supervision and control as to the number of lodgers, the registering of the lodgers, cleanliness, order, gambling, food, the water-supply privy accommodation, etc.

Fish and meat shops, intoxicating liquors, drugs and medicines require more control of the local sanitary inspectors, who should seize putrid, unwholesome or adulterated matter. More cleanliness ought generally to be observed in all shops where any article of food is sold.

Condition of premises, public cleanliness.—The scavenging or proper removal of refuse is, as a rule, defective, many people simply throwing away the cabbage-stalks, daikon-refuse, potato-parings, ashes and other solid debris in the back-yard and leaving it there. Proper places for temporarily storing the refuse until scavengers come and take it away, we did not see in this part of the town. The erection of public refuse receptacles and the appointment of more scavengers to remove all sorts of filth and garbage is in our opinion highly necessary, in order to promote a healthy state of the premises and public cleanliness in general.

The streets which had the most filthy places were:—Choja-machi, Fukutomi-cho, Sneyoshi-cho, Sugata-cho, Wakaba-cho, Furo-cho, Yoshihama-cho, Miyoshi-cho, and Yoshida-ura-machi.

Of the 6,223 houses and premises which we inspected, only 7 could be testified to answer all sanitary conditions as to cleanliness, closets, and drainage.

Condition of closets. Removal of excreta.—In the 6,223 houses we found 4,115 closets, most of them very badly constructed and in an unclean state. Old wooden oil-tubs were in nearly all cases the reservoirs for receiving the excreta and as the seawater is in many places at a depth of six inches, it enters during high tide from below the leaky tubs and raises the excreta so as to let it overflow round the tubs. Only 14 closets were constructed with earthenware pots, 4,101 being made with wooden tubs or in some cases with square wooden boxes.

The total number of tolerably clean closets was not more than 30, nine of which had jars and 11 wooden tubs some of them being covered with concrete.

Our inspection fully proved the necessity of providing the inhabitants of this town with better closets and also to exercise a better control and sanitary supervision over the scavenging of the closets.

In order to introduce an efficient system of scavenging, it seems to us that the local authorities ought to take this matter in their own hand by the medium of a contractor and not to leave this to the voluntary action of the people. The latter are very careless and do not understand the great importance of clean, water-tight closets, not even now, after 291 persons have been attacked by cholera in this part of the town. We encountered not a few times the people laughing with astonishment at us looking after such dirty things as closets.

Still after such house to house inspections shall be done more frequently and kept up the local sanitary officers, we may expect some amelioration in this matter, especially after a new and efficient system of scavenging shall have been introduced in this town. For it must be said that, although the peasants eagerly use in Japan the human excreta upon their fields, we found many closets over-filled and the strongest proofs that there was an utter neglect in emptying and cleaning the tubs. This was especially the case with the closets of the Nagayas.

Condition of the water supply.—The whole district inspected by us does not contain one single well of drinkable water. Happily the water is so very brackish and so very bad, that the people do not think of using it as "drinking water." All the houses are provided with drinking water by water-vendors. The water is carried by boat from a branch of the Tamagawa river, near Tsurumi, or from the aqueduct, and brought into the houses by closed wooden buckets. The aqueduct has not yet been extended to this part of the town, though 18,325 people must be provided with drinking water in a very costly and difficult manner. A great boon will it be when the pure Tamagawa water is also brought to this part of the town, either by iron tubes or by the cheaper American Wyckoff pipes. As the ground is so marshy and filled with brackish or salt water, the tubes must be perfectly water tight.

The number of 807 very shallow wells were found in this district, the water of which has to serve for the purpose of cleansing only. The water of these saltwater wells is in most cases of a yellowish colour and so dirty that even, for cleansing or washing purposes, it has to be filtered beforehand.

Some people wash their rice and vegetables with it which practice we have condemned and advised them to use for their food only good drinkable water.

Condition of the drains.—The drainage is in the whole district of the worst description, consisting of wooden gutters but they are so badly constructed or kept in such bad repair that they are valueless.

Many houses have only a short wooden gutter ending in a tub without bottom, the so called *du-bu* (cesspit), which gives often stench of the worst description. Some houses go so far as to bring this tub without bottom (*du-bu*) within the house and live thus constantly in the air rendered poisonous by the foul gases which escape from the blackish-blue sediment produced by these filthy, fermenting slopwaters. The number of 4,872 wooden gutters had no flow at all or were filled with a dirty blackish sediment, only 844

gutters having a tolerable flow towards the cesspits or kept in a clean state.

As we have stated before, an efficient system of drainage and sewerage of this part of the town will at present be impossible. The ground must first be raised or the sea-water excluded by dykes and then a better system of drainage and of removal of slopwater ought to be carried out, what system of drainage this should be is a matter open for discussion, but we for our own part should prefer a separate system of drainage (i.e. drying the soil) and of removing the refuse-water. Summarising the result obtained by our inspection we beg to make the following conclusions:—

- 1.—That this section of the town inspected by us is lying too low and that the ground must be raised at least 2 feet, so as to be 3 feet above common high water-mark.
- 2.—That 73 saltwater marshes have to be removed.
- 3.—That the *nagaya*s ought to be better constructed and kept in repair.
- 4.—That the houses must have higher foundations and basement floors, under which the air is allowed to enter.
- 5.—That erection of charitable or commercial companies for the improvement of workmen's dwellings is very desirable.
- 6.—That ruinous, dangerous houses in a sloping condition must be demolished, unless repaired.
- 7.—That the theatres, *wishimono* and tea-houses must make better hygienic arrangements, especially as to urinals and closets.
- 8.—That the lodging houses in Yoshida-noa-machi must be kept under better sanitary supervision.
- 9.—That the fish and meat shops, intoxicating liquors, drugs and medicine must be better and more rigorously inspected as to the quality of food and drugs sold.
- 10.—That the removal of house refuse must be better regulated, and more strictly enforced.
- 11.—That the closets must be built after the pair or pot system, and that a regular scavenging of closets is introduced by the local authorities.
- 12.—That extension of the Tamagawa aqueduct into this part of town, by means of iron or American Wychoff pipes is very desirable as the drinking water supply now is very troublesome.
- 13.—That the present drains have little or no value and that an efficient system of drainage and scavenge will only become of use after the soil in this section of the town has been sufficiently drained.
- 14.—That a better regulation of the duties of the local sanitary officers is highly necessary and that more well qualified men ought to be nominated as local sanitary inspectors.
- 15.—That the committee have found the following

Number of houses	6,223
" of inhabitants	18,325
" of closets	4,115
Unclean closets 4,005 { with jar.....	5
with wooden tub.....	4,000
Clean closets 20..... { with jar.....	9
with wooden tub.....	11
Wells of drinking water.....	none.
Wells of brackish or salt water for cleaning purposes..	807
Marshy salt-water pools.....	73
Clean houses and premises.....	7
Defective premises and closets, drain.....	6,216
Gutters or drains without flow, dirty or defective.....	4,872
Clean drains	844
Cholera-patients	291

16.—That no effective means of preventing cholera or other epidemic disease can be taken, unless the foregoing conclusions are attended to and followed by their practical execution.

JAPAN NEWS.

[The following Notes on various Japanese matters are chiefly derived from the native papers, occasionally supplemented from original sources of information, and are carefully collated and edited, so as to make them readable and intelligible.]

COURT, POLITICAL AND OFFICIAL.

As the 6th of December, will be the one hundredth anniversary of the death of Gomomoso Tenuo, the one hundred and seventh Emperor of Japan, the religious ceremonies usual on such occasions will take place in the Imperial palace.

His Majesty the Emperor, visited the Fukiage Gardens on Tuesday.

The meeting of the members of the Patriotic Society (*Aikokusha*), commenced at Osaka on the 7th instant. The outside public are not admitted but the *Choya Shinbun* states, that the following resolutions were proposed by a member of the *Risshisha* Society of Tosa:—

- 1st.—That a petition be sent to His Majesty the Emperor urging the establishment of a National Deliberative Assembly.
- 2nd.—That in order to carry out this object each of the Societies in the provinces shall prepare a draft of the petition to lay before the meeting of the Society to be held in March,

1880, when both drafts can be fully considered and one of them adopted.

3rd.—That in order to increase the influence of the Society, each member shall use every legitimate means to induce his friends to join its ranks.

These resolutions were adopted and the petition will be made out in the names of the *Aikokusha* and *Rengokusha* Societies.

The *Hochi Shinbun* states, that Messrs. Inonye, Matsuda, Imanaura and Oki, the Secretaries of the Home Department and Mr. Yoshiwara, a Secretary of the Finance Department have been appointed members of the committee to prepare the draft bills to be laid before the meeting of Provincial Governors next March. The committee are located in a portion of the building occupied by the Home Department and its meetings are presided over by Mr. Kono the first being held on the 10th instant. It is reported that two of the measures to be submitted to the gathering of Governors, will be a scheme for the establishment of a National Deliberative Assembly, and the revision of the rules of the Provincial Assemblies and the mode of levying taxes.

On the 1st instant the Decoration Bureau granted permission to the undermentioned officials to wear the decorations appearing after their names:—

Mr. Awoki, Envoy Extraordinary and Minister Plenipotentiary to Germany, the insignia of the order of "Alfred" of the first class, conferred upon him by the King of Saxony.

Mr. Uyeno, holding similar rank, the Grand Cross of the Order of "Isabella Catholica," conferred upon him by the King of Spain and the Grand Cross of the Order of "the Conception" conferred upon him by the King of Portugal.

Mr. Tokito, the first Secretary of the Colonization Commission, the insignia of the order of "St. Anne" of the second-class, conferred upon him by the Emperor of Russia.

Mr. Fukase, of the same Department, a similar decoration of the third-class.

Mr. Onodera, the insignia of the order of "St. Stanislaus" of the third-class.

Mr. Mori, the newly appointed Minister to England, will give a farewell entertainment in the Branch Palace, at Shiba, on the 16th instant. He will proceed to London immediately afterwards.

The *Hochi Shinbun* states, that the salaries of Japanese Envoys, accredited to more than one country, will be supplemented by one-third when they visit any country other than that to which they are primarily appointed.

Mr. Okuma, the Finance Minister, was entertained at dinner by the Italian Minister, on the 10th instant.

Mr. Sanjo, the Prime Minister, will entertain the Imperial Princes, Councillors of State, &c., about the 17th instant. Mr. Tanaka, the Senior Vice-Minister of Education, entertained the Councillors of State, &c., on Thursday.

Mr. Nomura, the Governor of Kanagawa *Kan*, entertained the native and foreign members of the local Board of Health, at the Grand Hotel, on the 12th instant.

Mr. Ito, the Home Minister, will return to Tokio from the north, on the 16th instant.

Mr. Inonye, the Minister for Foreign Affairs, visited the German frigate *Prinz Adalbert*, on Saturday last.

Mr. Kobayashi, the Japanese Vice-Consul for Kolaekoff, returned to Tokio on the 9th instant.

Mr. Ikeda, the Japanese Consul for Tientsin, returned here in the Mitsa Bishi steamer *Hiroshima Maru*, which arrived on Thursday.

Mr. Shimada, an official of the Foreign Office, has been appointed under-Secretary of the Japanese Legation in England.

As a reward for his long services, the late Governor of Oita Ken, has recently been advanced one degree in social rank.

The construction of the new building for the Department of Foreign Affairs is rapidly approaching completion. Nearly three-fourths have already been finished and the whole place will be handed over at the end of next month. The Department will move in as soon as possible, so that business will be conducted there on and after the first of January next.

The *Choya Shinbun* states that, when the cultivation of the Bonin Islands has further advanced, they will be formed into a province and amalgamated with the Naukaido. The name of

Loochoo will also be changed and the Islands amalgamated with the Saikaido; there will then be eighty-six provinces in Japan.

The same paper reports, that a telegram has been received from Hakodate, announcing that the Duke of Genoa left there on the 12th instant, and is not expected to arrive here until the 22nd instant, as he will visit several ports on the way.

The same paper mentions that it has been informed that the officials of the late *Han* of Loochoo, who have discharged their duties faithfully since they were appointed attachés of the Okinawa *Ken*, will shortly be prevented with in social rank.

About 10,000 *yen*, is said to have been distributed amongst 600 of the police of Nagasaki *Ken*, who distinguished themselves in the Satsuma rebellion.

The Japanese authorities have applied to be allotted 792 square feet of wall space, and 972 square feet of floor space, at the exhibition of fish and fishing apparatus to be held in Berlin next year.

At a meeting of the Tokio *Fu* assembly, held on the 13th instant, it was resolved that a recommendation be sent to the Governor of Tokio *Fu* to establish a Town Hall in Tokio, and to devote to the purpose a portion of the money, the joint property of the citizens.

A meeting of the committee for entertaining the Emperor and General Grant was held in the assembly room of the Tokio *Fu*, on the 12th instant. Messrs. Shibusawa and Fukuchi, the Presidents of the committee, laid before the meeting an account of the receipts and expenditure, from which it appeared that about 42,700 *yen* had been collected and 42,400 spent. The Governor of Tokio *Fu* gave a banquet to the committee and thanked them for their services, without which the entertainments would not have proved the great successes they had. Mr. Shibusawa made a suitable reply on behalf of the committee.

NAVAL AND MILITARY.

The *Heiji Shimbun* states, that the man-of-war *Iwaki Kan*, now building at Yokosuka Dockyard, is almost finished. When commissioned her complement of officers and men will be:—captain, 2 lieutenants, 2 sub-lieutenants, 1 doctor, 1 paymaster, 1 assistant paymaster, 1 engineer, 1 chief gunner, 1 boatswain, petty officers and 55 seamen. Captain Tenboi and about half of the remaining officers have already been appointed and the whole number will be made up before the launch of the vessels in January next.

Prince Arisugawa, who is serving on board H. M. S. *Iron Duke* which arrived here on the 7th instant, obtained one week's leave to visit his relations in Tokio. H. R. H. was dressed in the uniform of a sub-lieutenant when he landed at the admiralty pier.

About eight hundred men, who have lately enlisted as marines on board the Japanese Navy at different places, have arrived in Yokohama.

A regiment of the Tokio Garrison, marched to Yamashiro on the 14th instant.

Dr. Yoki, of the Military Department, has been appointed an attaché of the Japanese Legation, at Peking, and will proceed to his post shortly.

It is rumoured that the Tokio Woollen Factory will shortly commence to manufacture cloth for the use of the army and navy. The number of hands will therefore be largely increased.

The Military Department are said to be about to send forty students above the age of 17 years, from the Tokio University to Nankin and Peking, to study the Chinese language. Each student will be paid twenty-five *yen* per month.

INDUSTRIES, TRADE AND FINANCE.

It has been decided that the presentation of the prizes in connection with the competitive exhibition of raw silk and cocoons, will take place on the 25th instant. The ceremony will be similar to that on the occasion of the prizes at the Tea Exhibition, except that it is probable a temporary building will be erected in the public gardens for the purpose. During the last ten days, over 900 people have visited the exhibition and the sales during the same period have been 132 of raw silk and 106 of cocoons.

An application has been made to hold a Provincial Industrial

Exhibition at Sendai, for two months commencing on the 10th August, 1880.

A journal is intended to be shortly published in Tokio, containing accounts of the proceedings of the various industrial exhibitions held in different countries.

The work of bricking the Osakayama tunnel is going on rapidly, and is expected to be finally completed next February.

Telegraph stations will shortly be established at Hachinohe, in Mutsu and Sakai, in Yechizen and the authorities are said to contemplate establishing offices at the various lighthouses along the coast.

A lease having been granted by the Colonization Commission to the *Hokkaido Kaishin Kaisha* (Association for the Cultivation of the Hokkaido) on the 30th ultimo, the members commenced operations the same day and on the 2nd instant a banquet, at which about eighty students of agriculture were present, was given to celebrate the occasion. The land leased to the Association contains about 230,000 *tsubo* and is situated in the midst of a large plain. Agricultural implements have been lent from the government experimental farm at Nanaye and 2,300 *tsubo* are reported to have been ploughed up from 9.03 a.m. to 3.50 p.m. in one day.

About four hundred emigrants from Awa to Yeso, left in the *Suminoye Maru*, on the 3rd instant. These people are to introduce the cultivation of the indigo plant.

The authorities of Miyagi *ken*, have applied for a grant of 80,000 *yen* to assist in repairing the embankments, &c., damaged during the recent floods.

Advices from Korea state, that the rice crop throughout the country is all that could be desired, and that a full crop is expected. The bean crop in some districts however, is reported to be in an unfavourable condition.

The consumption of matches manufactured by the *Shindzisha* (match) company of Tokio, has increased from 120,000 dozen boxes per month to 360,000 dozen boxes. The consequence is, that imported matches have fallen in price from \$27 or \$28 per 600 dozen boxes to \$18.25.

The Board of Trade have lately forwarded to France several barks of silk, prepared at the Government Filature, in Tomioka, Joshu.

The leading native merchants of Yokohama, are agitating amongst themselves for the establishment of a local Chamber of Commerce.

The *Akebono Shimbus* states, that in consequence of the suspicions lately raised in connection with the Kinsatsu now in circulation, the authorities have determined to gradually withdraw the whole of them and issue fresh Kinsatsu in their stead. Paper money representing half a *yen* and under, will be exchanged for silver or copper coin, for which purpose the Mint is busily engaged in coining those descriptions of currency. The new paper money will be manufactured entirely by natives and be of a superior description to that now in use.

Mr. Tokugawa, ex-daimio of Kishiu and Mr. Nabeshima, ex-daimio of Hizen, are reported to contemplate establishing a bank in Yokohama with a capital of 3,000,000 *yen*.

The *Mainichi Shimbus* states, that the foreign firm who objected to the non-removal of the iron hoops from bale goods are gradually consenting to the request of the Japanese merchants. Two more foreign merchants have expressed their intention of not removing these hoops in future.

The number of cartoons which have arrived in Yokohama up to the 12th instant, is stated in the *Nichi Nichi Shimbus* to be 660,583. The native dealers have lowered the price since the 13th.

MISCELLANEOUS.

A meeting of the Tokio General Racing Association, was held on the 5th instant, in the Nobles' Club, in Tokio. Mr. Matsukata Masayoshi, was appointed President of the Association, and the various other officers were also appointed. It was arranged to hold a meeting on the T. Yama course, on the 30th instant, and it is contemplated to have another meeting subsequently at Mita.

The contractor for the erection of the German Legation buildings in Tokio, a German resident of Yokohama, has given fifty *yen* to the Tokio Work-house.

For some reason, at present unknown, the further publication

of a Japanese periodical printed in Chinese, has been stopped by Government.

The new theatre in Kiyoto, will be built on the model of the Shintomiza theatre in Tokio, at an estimated cost of 30,000 yen. The work will be commenced next January.

A heavy gale of wind was experienced on the 28th ultimo at Horodzumigori, Hidaka, in Yezo. The police station, school, ward office and hospital, received considerable damage and about fourteen farm houses were blown down, over twenty others being greatly injured. Two or three junks in the offing were also damaged seriously.

As the Government forests in Nakatsugawa, Tosa, furnish excellent timber, a number of the trees will be felled to supply what wood may be required for the new Imperial Palace in Tokio.

It is reported that Cholera is still prevalent in the Loochoo Islands. A return from the authorities of Okinawa Ken shews that during the period from the 5th ultimo to the 8th instant, there were 8,435 new patients; of whom 3,656 died, 4,764 recovered, and 425 were still under treatment on the latter date.

The *Choya Shimban* states, that Itani Sohichi of Kagoshima, has commenced proceedings in the local Court of Tokio against Mr. Shotai, the ex-King of Loochoo to recover money lent by an ancestor of his to a predecessor of Mr. Shotai, in the years of Kansei and Tenmei (1781 to 1799). From this it would seem, that there is no such thing as a statute of limitations in Japan.

About twenty *Kawazoku*, who have hitherto resided within the palace grounds at Kiyoto, have been ordered to remove. They have each received 200 yen to cover the expense of moving.

IMPERIAL GOVERNMENT RAILWAYS.

YOKOHAMA STATION.

Statement of traffic receipts, for the week ending Sunday, 9th November, 1879.

Passengers, parcels, &c.	\$8,136.03
Merchandise, &c.	\$1,156.82
Total.....	\$9,292.85

Miles open 18.

Corresponding week last year.

Passengers, parcels, &c.	\$5,867.79
Merchandise, &c.	\$ 838.47
Total.....	\$6,706.26

Miles open 18.

KOBE AND OOTSU SECTION.

Statement of traffic receipts, for the week ending Sunday 9th November, 1879.

Passengers, parcels, &c.	\$12,492.97

Total..... **\$9,399.62**

Miles open 47.

THE TAKETORI MONOGATARI.

A paper read before the German Asiatic Society.

By DR. R. LANGE.

(Continued from last week.)

When the Chinnagon found that he was not possessed of the shell he had a relapse and he could not be put even on the cover of a long box,¹ his limbs being so sore. He tried to avoid letting people know that he had become sick by engaging in such a foolish piece of business but did not succeed for the fall had rendered him very weak. As time passed he thought that it would be worse even than not getting the shell if people knew of his mishap and were to laugh at him and he determined to die rather than be humiliated before the

public. When Kaguyahime heard of this she sent a verse inquiring after his health:

"The years roll on and yet no tidings come.
Wail I in vain! It must be truth I hear."

When this was read to him the Chinnagon in his deep melancholy raised his head and wrote in reply, although it cost him great exertion, the paper even having to be held in position before him:

"Since thou hast heard, 'tis well—Oh I rejoice.
Thy kindly ruth will ease my dying hours."

When he had finished writing, he was overcome by the exertion and his breath had already nearly left his body. Kaguyahime hearing of this felt pity for him. Since that time people say of a matter where there is some slight cause for congratulation:—*Kai ari*.²

When the emperor heard that the equal of Kaguyahime's loveliness could not be found, he spoke to Nakatonu Fusako one of the ladies of the Court. "Kaguyahime has been the cause of ruin to many and to none of them has she betrothed herself. Go and see what sort of a maiden she is." Fusako listened to the imperial command and went to obey it. Coming to the house of the bamboo gatherer she was conducted within and her visit was looked upon as a great honor. She addressed herself to the wife of the old man. "The emperor has commanded me saying, 'Kaguyahime is a charming and lovely woman, go and look at her. This is the reason that has brought me here.' The other replied 'I will report this at once.' She then went in and informed Kaguyahime asking her to admit the messenger at once but the maiden said in response. 'I possess no beauty of body, how then can I go to meet her.' "How canst thou speak such silly words and how canst thou thus make game of one who has been sent by the emperor" said the wife. Kaguyahime then continued "I own to no feelings of thankfulness to the emperor for having sent to call me to him" and she could not be prevailed upon to show herself. The old wife looked upon the maiden as if she had been her own child borne by herself, yet she refrained from chiding her silly speech and returning, she said to the Court lady: "The young maiden is modest and diffident and therefore she is frightened at letting you go and see her." The Court lady replied: "I have strict orders to go and look at her. How then can I return without having done so. The commands of the ruler must be obeyed. Be careful not to do aught which I would have to be afraid to report." She spoke thus to make the girl feel ashamed of her conduct, but the latter upon hearing of it only became more persistent in her refusal, saying that if they wanted to "they might kill her at once for refusing to obey the imperial mandate." The Court lady returned and reported this. The emperor hearing of it thought that Kaguyahime acted thus because she had already been the cause of the death of so many people and he desisted for the time (from open demonstrations) but his thoughts reverted more and more to her and he pondered whether he ought to submit to the girl's stratagem. At last he sent word to the old bamboo gatherer. "Have Kaguyahime brought to me. Hearing of her beautiful countenance I sent a messenger but the latter met with no success for Kaguyahime would not admit her. The girl's waywardness ought not to be humored in this manner." The old man listened to this command in deep respect and said. "The child positively refuses to serve in the palace which is a cause of great grief to me. But I will go and command her." When this was reported to the emperor he asked. "Why does the girl not obey the wishes of the old man who has brought her up? If he brings the maiden to me I will give him an official position and endow him with many other things besides." The old bamboo gatherer joyously returned home and addressed Kaguyahime. "If the emperor commands in this way, will thou still refuse?" "Under no condition will I consent to serve in the Imperial palace," replied the maiden. "If I am forced to do so I will die. You may be rewarded by receiving rank but it will cause my death." The old man said: "Do not act in this way. What should I do in any position if I cannot see my child any more. But why shouldst thou not serve in the palace. Is there any reason why doing so should cause thy death?" "Well," was the response she made "If you think that this is mere pretence on my part send me

2. Because she had written to him.

1. The cover of a long box (*nagamachi*) was probably used as a stretcher to convey sick and disabled people on. (Translator's note.)

3. This remark of the author refers to the words of the poem: *Kai ari*, there is some use in it, (translated: I rejoice.)

there and see if I do not die in consequence of it. I have refused to respond to the deeply felt passion of many people and now I would stand shamed before the world if I were to yield to the emperor whose commands, it may be said, date only from to-day or yesterday."

When she had thus spoken, the old man said. "There are two sides to be considered in everything in this world. If thy life is in danger then this is a most serious obstacle. I will therefore go there and report thy refusal to serve the emperor." He did as he had said and thus he delivered himself: "Full of respect for the command of the emperor I wished to send the maiden, but she says she will die if brought to the Court. She is not the child of Miyatsukomaro who has only found her on the mountain. Her wishes and desires differ from those of other human beings."

The emperor replied. "The house of Miyatsukomaro is situated near the foot of the mountain, I will make a pretence of going out there hunting and then, I suppose I will be able to see her. The bamboo gatherer thought that this was an excellent expedient. She would expect nothing of the kind and might therefore be seen by one who came thus suddenly."

The emperor thereupon soon fixed upon the day and went out hunting. When he came to the house of Kaguyahime it was filled with brightness and within there was a beautiful being. As the latter attempted to escape he caught hold of it by the sleeve supposing it (rightly) to be Kaguyahime whereupon the latter hid her face. But the first look had been sufficient and he knew that her face was of incomparable beauty. He said he would not part with her any more and made preparations to take her with him but Kaguyahime replied: "Were I born in this country I would serve you, but as it is, you cannot take me with you." When the emperor asked why it could not be done and said that this would only confirm him in his determination to take her, she suddenly disappeared just as the emperor's chair, which the latter had ordered, was brought up. Her disappearance caused the emperor to become sad and knowing now that in truth she could be no ordinary mortal being and would therefore not allow herself to be brought to his palace he prayed that she might again resume her former shape. If he could only see her, he said he would be willing to return. Kaguyahime upon this resuming her former figure the emperor's love for her became even deeper than it had been before and he was joyful that Miyatsukomaro had enabled him to see her.

The officers composing the retinue which had accompanied him had been splendidly fêted. The emperor returned in spite of the pain which it cost him to leave Kaguyahime and although he departed he left his heart behind with her. Getting into his chair he made the following poem.

"Cruel the pain to homeward wend alone,
My prayers unheeding, she does stay behind."

In reply she sent the following:

"Here in this vine-clad cot so humbly living,
How can I venture to your jewelled terrace?"

The emperor's disinclination to return became even greater upon reading this. Still, although his heart spoke to him to stay he left and went back knowing that he could not remain there overnight. When he looked at the women in his palace, there was none who could stand by the side of Kaguyahime, nay, even comparing the latter with that woman whom every one spoke of as being the most beautiful she to his mind hardly looked like a human being. Kaguyahime only reigned in his heart and he lived alone by himself refraining from all intercourse with his mistresses. He wrote a letter to the maiden to which he received an answer. Kaguyahime had no objection to keeping up a correspondence sending her replies in the form of poems, neatly tied to a flower or the branch of a tree. Their correspondence thus lasted for about three years.

With the beginning of spring Kaguyahime became sad when looking at the moon rising in all its glory. They tried to keep her from doing so saying that it was not good to look into the moon,⁴ but when nobody was present she kept on doing so, weeping bitterly. When the moon rose in the middle of the seventh month she was in a very sad state of mind. The servant girls reported it to the old bamboo gatherer saying:

4. The "Jewelled terrace" *hama no natsu*, is a poetical name for the Imperial palace. It is also called *tamashiki no nima*, the garden covered with precious stones. The above poem is an adaptation of a very old poem.

5. It was a very general belief that one ages prematurely by looking often into the moon.

"Kaguyahime always loved the moon but there must be some special cause moving her now. It must be something very sad which causes her to weep like this. Go and see what this may mean." The old man being thus spoken to addressed Kaguyahime: "Why dost thou always look in the moon and while the world is so beautiful why dost thou indulge in such gloomy thoughts?" She made answer saying. "Looking into the moon naturally causes one to feel sad and sombre. I have no cause to complain." But once finding her in yet a sadder mood and even more downcast than she had been, he told her: "Why dost thou grieve my little idol? What makes thee so pensive?" She however gave the usual reply that there was nothing the matter with her and that she only felt dispirited. "Do not look into the moon," he continued "it is this which makes you sad?" She answered "How can I live without looking at the moon" and whenever the moon rose she persistently went out to gaze at it in deep sadness and with lamentations. In dark moonless nights she was cheerful but as soon as the time for the rising of the moon approached, she broke into tears and lamentations. The servants whispered amongst each other that her sadness constantly increased, but neither they nor her parents knew the reason. Towards the middle of the eighth month whenever the moon rose she cried bitterly without trying any longer to hide her tears from the eyes of those who surrounded her. When her old parents saw it they pressed her with questions as to the cause of her sadness. She replied, with tears in her eyes; "I wished to tell you of this before, but being afraid that it would grieve you, I have refrained until now. But this state cannot continue so I had better speak out. I am not of this world but I come from the capital of the moon, and from there, according to an old law I was sent upon this earth. The time for my return being now at hand, they will come to take me back on the day of the full moon. You will be sad and will weep because the day for my return is so near and the thought of this has also saddened me and has caused me to give way to lamentations since the beginning of this spring." After having spoken these words, she again cried bitterly. The old bamboo gatherer replied. "What is this thou sayest? It is true that originally I found thee in a piece of bamboo, but I will allow no one to take away my child which I have brought up to its present size from the time when it was no bigger than a rape-seed seedling; should such a thing happen it would cause my death." Thus he continued unceasingly to give way to plaints and sorrowful exclamations. Kaguyahime spoke further: "My father and mother reside with the people in the capital of the moon. Although I have passed many years down here, still this is looked upon as a short time up there. Mindless of my parents in that country, I have lived here during this time and have attached myself to you. I have no desire to return and this is the cause of my sadness, yet I am ready to submit to necessity and to return against my inclination." When she had thus spoken she joined with her parents in giving way to grief and sorrow. Even the servants who had been with her for many years could not conquer their sadness. Her pleasant and amiable ways had so gained upon them that they could not realise the possibility of being separated from her. They were unable to drink either hot or cold water⁷ and were as loud in expressions of their grief as her parents.

(To be continued.)

THE JAPANESE PRESS.

THE MEMORIAL OF THE OSAKA CHAMBER OF COMMERCE ON THE SUBJECT OF TREATY REVISION.

(From the *Mainichi Shimbun*.)

BEFORE giving expression to the views of this Chamber on the important subject of the revision of the existing treaties, it will first be necessary to furnish a brief sketch of the progress of Japanese trade since the opening of the ports, to consider what prospects there are of a future development of that trade and finally, to examine the treaties with a view of ascertaining whether or not they are suitable and convenient having regard to the circumstances of this country.

6. On the 15th of the eighth and ninth months the festival of *takimi* (looking at the full moon) was celebrated.

7. Even now the same is said of one who is very dejected *Yū mo miden mo toranai*.

Although both the imports and exports annually increased during the ten years from the first year of Meiji (1868) and remained without any material change during the tenth year, yet in the eleventh year a very marked change has been experienced and what may result in the future decline of our trade has been disclosed. If the cause of the apparent increase of our foreign trade is considered, it will be found to consist not so much in the prosperity of the trade itself, as in the steady efflux of the precious metals which were gradually accumulated in this country in the course of ages, and which, during the period under review, have been paid away for importations from foreign lands. Examine the returns of exports and imports from 1868 to 1879. The imports have almost invariably exceeded the exports and the amount of this excess—which includes purchases on behalf of the Government—reaches the enormous sum of over 69,000,000 yen. This large amount has, as we have remarked, been paid out of the old accumulations of bullion. Now however that the specie has been pretty well drained out of the country and we are without means to pay for imported goods in coin as heretofore, trade has declined and the experience of last year is a sure precursor of what will follow with probably greater intensity. It would therefore appear that the apparent prosperity of trade was entirely superficial and not at all dependent upon any profit which the country derived from it.

Such being the actual state of our foreign trade, it is evident that unless measures are taken to place it upon a more satisfactory footing, a continual decline must unavoidably take place.

Certain foreign merchants, in a memorial which they addressed to the British Minister, gave it as their opinion that the existing tariff and treaties are practically advantageous in every respect and that the wonderful development of both the import and export trade is altogether due to their fitness for the circumstances of the country. This opinion, is however, totally opposed to the conclusions arrived at by this Chamber, after careful observation and much practical experience.

The great increase in imports we attribute to the circumstance of foreign goods being cheap, pleasing to the eye and very serviceable. These qualities naturally attracted our countrymen who invested largely, without considering whether they would be able to export native productions to an equal value. As we are aware, the exports have not equalled the imports and the difference has been made up in bullion, how then can the increase of trade be said to have arisen from the fitness of the tariff and treaties? If, as has been said, the tariff and treaties caused the increase of trade, we would have participated in the profits and our capital have increased, instead of this being the case, we find almost all the specie drained out of the country and trade declining. These facts speak for themselves and upon them this Chamber must contradict the statement of the foreign merchants, that the existing tariff and treaties are suitable to the present circumstances of Japan. As those persons who entertain an opposite opinion are foreigners and only superficially acquainted with the real state of the country, we must not blame them for their ignorance, we prefer to believe that if they were as well acquainted with the subject as ourselves, their opinion would coincide with our own.

Although it may be said that as trade has prospered in the past, it will do so again in the future, yet we have no hope of its doing so under existing circumstances and will now proceed to give our reasons for arriving at this conclusion. Suppose, for the sake of argument, that the former prosperity of trade has been due to the suitability of the tariff and treaties and that such being the case they are continued in force, then the balance of trade will year after year be still against Japan, our capital will be exhausted and we will no longer be able to purchase foreign goods, no matter how great may be our desire to do so. Indeed how can we purchase, when the very fountain of our wealth has almost dried up? If our financial position is ever reduced to so pitiable a condition, not only will the result be disastrous to natives, but foreigners will be involved in the general ruin and then it will be almost impossible to restore prosperity to trade.

There is one particular thing, which if the present state of matters are continued, will inevitably cause a decline in

our foreign trade. It is this. In foreign countries there is always a reserve of specie against any paper money that may be issued, and paper money is readily converted into coin at par. Now no such system of exchange exists in Japan, but the people have as yet just as great confidence in the paper money as if there was, and all business transactions in the interior are carried on in paper currency. With the exception of coins of small denomination, coin is almost like merchandize and does not circulate in the country. But in order to make good the balance of trade which falls against us, this coin has to be made use of and it is growing perceptibly scarcer. This will react disastrously upon the paper currency and as the scarcity of coin becomes more and more felt, the depreciation of the paper money will be even greater than that of the United States during the war between the North and South. The cost of everything will also rise, and the result to trade will be ruinous. Although it will be necessary at some future time to arrange for the conversion of the paper currency into coin, yet the most urgent necessity at present, is to devise some means to prevent our falling into the miserable state of distress we have shadowed forth.

The scarcity of coin would probably have been observed some time since, were it not for the abnormal success of the silk trade in 1876 when, owing to the large export of that staple, the exports of Japan exceeded the imports by 2,380,000 yen. This delayed the exhaustion of the old accumulation of bullion for the time, but such long continued evils were not to be remedied by any temporary stroke of good fortune and the following year showed an excess of importations to the value of over 5,000,000 yen, thus finally indicating a great change in trade to our disadvantage.

In what does this "great change" consist? It is that the old accumulations of bullion having become exhausted the price of Mexican dollars is affected. So much is this the case that last spring they were at 38 per cent. premium over our paper currency. We have already mentioned that inconvertible paper money constitutes the currency of Japan. In order to pay for imported goods, we have first to purchase dollars with our paper money, and when we get paid for our exports it is generally in these foreign coin which we have then to change into paper currency for use in the country. When the expressions are used that coin is rising or paper falling in price, they are both due to the same cause, the scarcity of bullion which is the medium used in our foreign trade.

In former years there was still plenty of specie in the country and consequently Mexican dollars were not subject to very excessive fluctuations. The reason why the value of that coin rose so much last spring was principally owing to the fact that, we had insufficient bullion in the country to make good the excess of imports over exports. Such being the case, if imports increase and exports decrease the price of dollars will rise, but if the reverse happens dollars will at once decline in value. When the price of dollars falls, large purchases of foreign goods are made which causes an immediate increase in the value of these coins and then purchases cease. The effect of these fluctuations is pretty much what would happen if a prohibitive duty was levied in the morning, thereby raising prices, and abolished in the evening and lowering them. The utmost care is necessary in conducting business under present circumstances, the slightest oversight in calculating the value of dollars or goods will inevitably cause a loss and as these transactions are gradually becoming more dangerous, in a short time there will be great difficulty in carrying on the foreign trade at all. Look at last spring with Mexican dollars at 38 per cent. premium over our currency! The reason native merchants then declined to purchase more imported goods than they could possibly avoid, was not because the goods were too high priced, but because if Mexican dollars had fallen in value they must inevitably have sustained serious losses.

Many native merchants say that it is better to trade in Mexican dollars and risk obtaining a casual profit than to engage in foreign trade by which such constant losses are sustained, because in the latter case traders are exposed to two risks, the natural chances of trade and the fluctuations in dollars. Moreover, carrying on business in imported goods requires large capital, while in speculating with dollars a small deposit as security enables the speculator to deal in

hundreds of thousands of dollars and the chances of loss are not greater than in legitimate business. If this state of things continues much longer the number of merchants will decrease and the speculators increase. We are very strongly of opinion that the great success of the "Mexican Dollar Exchange Office" in Yokohama, is entirely due to the circumstances we have referred to.

We have now explained the present state of trade in this country and given our reasons why some modification of the tariff and treaties is absolutely essential. The national finances will next claim our attention and then we will deal with the tariff and treaties. To those subjects we have devoted great attention as it is the sincere wish of this Chamber, that the foreign trade of the country may be permanently prosperous and that both the native and foreign merchants engaged in it, may at all times hereafter find the business safe and profitable.

What we are anxious to see accomplished with reference to the national finances, is the exhaustion of the specie of the country prevented and the exports increased. The greater the exports, the greater will be the imports and the increase of exports is accordingly the only hope we have for a prosperous trade in future. The most important step to be taken towards developing trade, is the opening up of facilities for communication with the interior. Japan is naturally a mountainous country, and the principal object kept in view in road making during the time of the feudal system, was to lead the roads over as difficult country as possible in order that they might afford numerous places easy of defence in time of war. So far indeed was this principle carried, that the highways in flat country were purposely made winding. This plan was uniformly followed for over five hundred years or until the abolition of the feudal system in 1871 and the formation of the provinces into prefectures. Since then, several of the principal roads have been improved, but the time has been so short and funds so scarce, that nothing of much consequence has as yet been done. Now unless easy communication with the interior is provided, the expense of transporting all produce is materially increased and this is especially noticeable in the case of bulky articles such as raw silk, tea, &c. It is evident therefore, that this want of communication exercises a very serious effect upon the development of our industries and thus checks the increase of foreign trade. To give one instance of the prejudicial result of this want of proper roads, we may mention the vast quantities of tea growing wild in the mountains of Shikoku, Kiusiu, &c. As the roads (or rather tracks), are only accessible for men and pack-horses, the produce can only be obtained at an enormous expense for transit which leaves no profit, and all this vast quantity of tea is therefore allowed to go to waste. It must also be evident that when an article produced spontaneously, without care or cultivation, cannot be utilised, it is ridiculous to talk of expending capital in establishing industries which would be subject to the same drawback. It seems to us questionable if the government is not to some extent to blame for not devoting more of the public revenue to the improvement of the country roads. The same state of things exists in the silk producing districts—except perhaps Kodzuke and Shimotsuke—they are all crying out for better means of communication and complaining of the high price of carriage. The exports of Japan are almost entirely natural products, but few of them being the result of manufacture. Natural products are almost always bulky and when, as here, a very high price has to be paid for carriage, the profit of the native producer is lessened and the price to the foreign purchaser materially increased. This want of good roads also affects imports. About seven or eight-tenths of the articles now imported are intended for the lower classes who principally reside in remote places. The difficulties of transit from the port to the consumer increases the price and lessens the consumption. It is therefore apparent, that if good means of communication were provided, the price of imports and exports would decrease and both natives and foreigners derive a great benefit. This is especially the case with imported goods. Their beauty, utility and comfort, already recommend them to the people and if the price was only reduced, an enormous increase in the consumption would inevitably follow.

(To be continued.)

THE USE OF SANDALS IN THE JAPANESE ARMY.

(From the *Kinji Hiron.*)

THE Military Department some short time since issued a regulation that two pairs of Japanese sandals (*waraji*) should in future form part of the equipment of every Japanese soldier. We now learn that the men have eagerly adopted the idea and manufactured the sandals themselves, out of cotton cloth. This they have done so well, as to elicit the unqualified approval of the military authorities.

We consider this new regulation a most excellent one, and indeed feel so gratified in consequence that we cannot allow it to pass over without a few words of comment. Ever since the autumn of the 6th year of Kayei (1853) when foreign flags first floated on the breeze in the Bay of Uraga, the desire of the people to remain secluded from the outer world melted away at the thunder of the salutes like morning mist before a summer sun and disappeared with the smoke from the foreign steamships. A strong reaction to the former conservatism at once set in and everything, from the mode of government to the method of living, began to be formed upon foreign models. This admiration for anything from abroad increased in intensity until at last we were not satisfied unless every single article of luxury or necessity was imported, wholly regardless of the fact that better things in many instances actually existed amongst ourselves. This neglect of native industries naturally resulted in a great decline in those manufactures for which Japan has from time immemorial been so highly and justly celebrated.

This eagerness to adopt foreign models may, under the peculiar circumstances, have been unavoidable; for ourselves we attribute it principally to the sudden love developed in our countrymen for what was new and strange.

Amongst the first things introduced into the country, was the European military system and practice of medicine; these were substituted by the "Restoration" government for what had formerly existed in Japan. As regards the army, it has been entirely organized upon foreign models, both as regards recruiting, drill, clothing and equipment. Now although foreign-army organization is the result of long practical experience and may be far superior to our old system, in a country where the people and their customs are different from ours, yet here in Japan such is not the case; for instance, the clothing and boots are wholly unsuited to the habits of the people. Foreign woollen cloth may have the advantage of being better able to keep out rain, but our *kokuraori* (a description of cotton cloth) is preferable in many respects, as it lasts far longer and (another great consideration) the price is much less. As regards boots, no doubt the foreign article looks very well, but our *waraji* (sandals) are infinitely superior on account of the ease with which the wearer can move about over rough ground and in mountainous country.* This superiority was demonstrated in the Formosa Expedition and the South-Western rebellion; notwithstanding the fact of all the soldiery being supplied with clothing of foreign pattern, yet from general to private they abandoned the strange garb for our old fashioned *momohiki*, *kiyakan* and *waraji* (drawers, leggings and sandals).

We have also heard, although we cannot vouch for its truth that in France, which is the foremost nation in military matters, it has been suggested to use our drawers, leggings and sandals in actual warfare and if the experiment prove successful to introduce them into the whole French Army. The use of sandals may not be altogether suitable in time of peace, yet in this and many other matters there must not be a distinction made between war and peace, especially in those matters in which our old system has proved itself superior. This ought not to be overlooked, now that France is said to contemplate

[* The writer of this article is apparently unaware that at the present day, the Spanish infantry soldier, although supplied with leather shoes, does all his real work in *Alpargatas* or sandals made of plaited hemp, held to the foot by a strong cotton braid, which goes from the toe to the heel of the sandal, crossing over the instep leaving the side of the foot naked and perfectly free, the only part protected being the sole and part of the heel. The well-known wonderful staying power of the Spanish infantry soldier is attributed to the use of these *Alpargatas*.—Translator.]

adopting our style of clothing for her army. Indeed we have been assured that several very observant gentlemen have strongly recommended our authorities to re-introduce our ancient style of dress, but in consequence of the rage for foreign fashions they were not listened to.

However, as the drunkard sooner or later becomes sober and the sleeper wakes from his slumbers, so are the evils of errant fancy removed after experience is gained, sometimes unfortunately, at great expense. This is the case with our Military Department, they have now taken an excellent step in the right direction and are to be congratulated upon it.

It is the natural disposition of all men when they attain one object they desire, to wish for another and it is the same with us. Approving of the step taken in the matter of the sandals, we now desire further progress in the same direction. But stay—there are able men connected with the Army Department and even if we had remained silent we feel convinced that we should have witnessed similar excellent measures shortly adopted. We will now rest content with awaiting results.

DEVELOPMENT OF SILK INDUSTRY.

(Abridged from the 'Mainichi Shinbun'.)

WE have consistently advocated the establishment of fresh industrial undertakings. We consider that it is only by increasing the wealth and importance of the country that we shall advance in the scale of civilization and obtain all the rights and privileges of an independent nation and the only way to accomplish these objects is to encourage and foster those industrial undertakings which lay the foundations of a prosperous commerce.

Although many writers on the subject agree generally with our views, yet there are some who are very anxious to see Japan develop her resources immediately and therefore advocate the introduction of foreign capital, while others again, considering that the attempt to make Japan a great manufacturing country must inevitably prove unsuccessful, actually suggest the reduction of the price of produce and a consequent diminution in the specie of the nation. If either of these recommendations are adopted how can the wealth of the country be increased? No doubt industries cannot be easily made successful in the face of the rivalry which exists, nor can a nation acquire great wealth and power in a day, but those who feel despondent should reflect upon the past state of many countries in Europe, and compare it with the prosperity they now enjoy. These countries were not always so wealthy and powerful as at present, indeed, not so very many years since, some of them were in a more backward state than we are. Under these circumstances we should not despair of achieving the same success in the course of time.

Many people allege that the industrial resources of Japan are not developing, and yet we find on examination, that numerous industries have been established since 1877. Prominent amongst these are the silk-reeling establishment at Tomioka, the *Shindzuishi* (match factory) of Tokio, the ship-building yards of Messrs. Kawasaki, Hirano, Shiramine, and tens of others, the cotton mills of Sakai, Hiroshima, and Kanazawa, the black tea factories in Shidzuoka and Osaka, the sugar factories in Kishiwada, Matsuyama, and many other industries, all of which have been but lately established.

Far beyond all others has been a remarkable increase in the development of the silk trade and we will here furnish our readers with a list of the different filatures, the localities where they are situated, the number of work-people employed in each, and the annual production of the different establishments. (Here follows the table.)

It will be seen that this industry has been commenced in 27 different prefectures and that 702 filatures have been established, employing no less than 11,135 work people. About one or two per cent of these filatures have closed for the present or are not yet finally completed and although the first started began operations in 1865, and the latest this year; the majority were established in 1876-7-8. The motive power in these factories is supplied by steam, water-power and manual labour, eighty or ninety per cent. of the filatures being worked by water-power and only three by steam.

Our readers will now perceive that industrial undertakings are steadily increasing year by year in this country. Silk being the principal product of Japan it is only natural that this particular branch should experience the most rapid development, but even then it is remarkable to find no less than over 700 different filatures established in a very little over ten years, the vast majority being within the last three or four years. Silk affords the best example of what may be done in other branches of business and who, in the face of the examples we have quoted, can assert that industrial undertakings will not flourish in Japan?

We trust that our countrymen will ponder over what we have brought forward and strive to increase the national wealth and power by the establishment of industries and thus, in course of time, bring Japan on a level with the countries of Europe and America.

LAW REPORTS.

IN H. B. M.'S COURT FOR JAPAN.

Before R. T. RENNIE, Esq., Judge.

Friday, 14th November, 1879.

John Will (defendant) appellant and Mathew Catlin Adams (plaintiff) respondent.

This was an appeal from H. M.'s Court at Hakodate and the hearing had been adjourned from the 22nd ultimo.

Mr. Denison again appeared for the appellant and Mr. Litchfield for the respondent.

The facts of the case as disclosed by the pleadings were, that the appellant hearing that proceedings were likely to be taken against him by the respondent and another of his creditors deposited on the 1st September, 1878 with H. M.'s Consul at Hakodate, Japanese yen sufficient to answer their claims in Mexican dollars at the exchange of the day, and gave notice to the respondent's agent on the 6th September of his having done so. Mr. Blackiston, respondent's agent, refused to accept what he termed "the irredeemable currency of Japan" and the matter remained in abeyance until shortly afterwards when appellant returned to Hakodate, having lost his vessel and with it the means of paying his other creditors. Learning that the money was still in the hands of the Consul he wrote to him not to pay it over to respondent as he (appellant) was virtually bankrupt and the money belonged to his creditors. The appellant was subsequently adjudicated bankrupt, Mr. Eusden, the Consul being appointed trustee. The respondent then brought an action against the bankrupt for the money in the hands of the Consul, who seems to have permitted the proceedings to be taken in that form, as he himself filled such various capacities in the transaction, judge, stake-holder, trustee, registrar, etc., that it would have been rather inconvenient to have added another, that of defendant, in an action he would have to try himself. On the case coming on to be heard, the Consul decided in favour of Adams, the plaintiff and present respondent. The amount involved is now about \$700.00.

From that decision Will now appealed.

Mr. Litchfield objected to the proceedings on the ground that there was no petition of appeal before the Court, the document which purported to be a petition being defective in form.

Mr. Denison replied that under rules of procedure 168-9 they could now only deal with the merits of the case. The objection sought to be taken now, should have been taken in the answer.

His Honor over-ruled the objection, but took a note of it at Counsel's request.

Mr. Denison then addressed the Court in support of the appeal as follows:—

May it please Your Honor:

This is an appeal from the judgment of H. B. M.'s Provincial Court at Hakodate, in the cause *W. C. Adams v. John Will*, rendered in favour of the plaintiff and respondent, and the defendant being dissatisfied with the judgment has appealed therefrom. The grounds of the appeal are set forth in the appellant's petition, and are in effect that the judgment of the lower Court was contrary to the law and evidence and he asks that the judgment be reversed. The facts as disclosed by the record of appeal are with one single exception identical with those in the cause of *Blackiston v. Will*. That exception I shall hereafter attempt

to show, does not affect the merits of the case. In this latter case the Provincial Court at Hakodate gave judgment in favor of the defendant, and the plaintiff appealed. The appeal was dismissed by this Honorable Court, upon the ground that the appellant had failed to establish his right to the money claimed. That judgment disposes of this case with one exception. The money was in both cases voluntarily lodged with H.B.M.'s Consul at the same time and in the absence of Messrs. Blakiston and Adams; notice of the fact was given to Mr. Blakiston and the respondent at the same time, in one instance to Mr. Blakiston direct, and in the other to Mr. Blakiston as the attorney in fact of the respondent and in both cases the Consul offered to hand over the money lodged with him upon the production of proper receipts. Mr. Blakiston on the 6th of November, for himself and on behalf of the respondent expressly declined to accept the money lodged by the appellant with the Consul. The record of appeal shows that the respondent was in Hakodate on the 30th of November, 24 days after his attorney had declined to accept the money and that he took no steps whatever to repudiate or disavow the acts of his attorney. This, I submit, amounts to an express ratification of the course pursued by his attorney. But even without such express ratification, the respondent was undoubtedly concluded by the acts of his attorney and the lower Court in dealing with the question of costs so held. On the 24th of December following, the appellant, as his evidence and answer show, and that evidence is uncontradicted, finding that the money lodged with the Consul had been refused by the respondent, countermanded the application of the funds lodged by him with the Consul for the purpose of paying the respondent's claim, and directed that they be held for the benefit of his general creditors, and assigned as a reason therefor that he was no better than a bankrupt. Exactly the same course was pursued in the case of Blakiston v. Will, and your Honor in delivering judgment in that case, stated it to be a rule of law, "that a principal may countermand the application of money entrusted by him to an agent for any specific purpose at any time before the money is so applied." It was claimed in the former case and is repeated in this that the deposit made by the appellant was a payment into court under the 54th Rule of Procedure of H. B. M.'s Supreme Court for China and Japan. Your Honor disposed of that allegation in the judgment already cited and at the same time expressed the opinion "that the Consul accepted the money in question from the respondent, as his agent, to pay over the sum to the appellant, and it is clear that he offered the appellant the money, that the appellant refused to accept it, and that the respondent countermanded the Consul's authority to pay the money over to the appellant on the 24th of December, whilst it was in the Consul's hands." This case comes directly within the rule laid down by your Honor. The money had not only not been applied for the specific purpose for which it was entrusted to the Consul, but had been expressly refused by the respondent, and the appellant thereupon countermanded the application of the funds, as he undoubtedly had a perfect right to do. To all intents and purposes he withdrew the deposit and redeposited the money with the Consul for the benefit of his creditors. I have stated that this case is identical with the case of Blakiston v. Will with one single exception the difference is that in the case of Blakiston v. Will the plaintiff did not demand the money until after the defendant had been adjudicated a bankrupt, while in this the respondent consented to accept the money prior to adjudication, although the destination of the funds had at that time been changed by the act of the appellant. While the Provincial Court in this case bases its judgment upon Sec. 94 of the Bankruptcy Act of 1869, it is quite evident the judgment rests entirely upon the fact that demand was made before adjudication, otherwise it must have accorded with the judgment in the case of Blakiston v. Will. Sec. 94, of the Bankruptcy Act of 1869, simply renders valid under certain circumstances payments made to a bankrupt, after an act of bankruptcy but before adjudication. The only application this section has to the present cause, is, it justified the Consul in not handing over the money in his hands to the appellant, after the 24th of December, because on that date the appellant committed an

act of Bankruptcy, by making a declaration of his inability to pay his debts, and the Consul having notice of the fact, was bound to hold the funds in his hands for the benefit of all the appellant's creditors. Aside from the appellant's undoubted right to countermand the application of the funds in the hands of the Consul, the fact that he had prior to the date of demand committed an act of bankruptcy, would under the Section of the Bankruptcy Act already quoted, have rendered invalid any payment to the bankrupt himself, and as a consequence any payment by the bankrupt's agent, the Consul, on his account. Sec. 11, of the Bankruptcy Act of 1869, provides that the adjudication shall have relation back to the date of the act of bankruptcy. If therefore the bankruptcy of the appellant had relation back to the time of the act of bankruptcy, viz: the 24th of December, it is a fact that he was just as much a bankrupt on the 11th of January, as he was when Mr. Blakiston demanded payment after adjudication. So both cases stand upon exactly the same footing, and what your Honour has laid down as the rule of law governing in the one case, I submit is the rule that must control in the other. I ask, therefore, that the judgment of the lower Court be reversed, and that judgment be entered in the lower Court for the defendant with costs of appeal.

Mr. Litchfield, for the respondent, contended that the judgment of the Court below was right and should be confirmed. The grounds relied upon to support the appeal were, that the respondent had been in Hakodate and had abundant opportunity of either accepting the money in the hands of the Consul, or ratifying the act of his agent who had declined to receive it, and that the so-called act of bankruptcy committed by Will, had the effect of vesting the money in the trustee of his estate. The learned Counsel proceeded to argue, that there had been no act of bankruptcy at the time referred to, as the requirements of the "Bankruptcy Act of 1869" had not been complied with, and on the other ground, as the agent of respondent had no authority to receive payment in the form it was tendered by the Consul (whose position was analogous to that of a stakeholder) namely *yes*, time should have been allowed him to communicate with his principal before the appellant was justified in stopping the Consul from handing over the money, if the respondent on being communicated with elected to accept payment in *yen*.

His Honour remarked that, supposing all that Counsel alleged to be facts were taken as proved, he did not see how it would influence his decision, having in view the law on the point involved.

Mr. Litchfield urged that the Consul was actually in the position of a banker for the respondent. When he received the money it was on account of respondent and the property in it actually passed to respondent for whom the Consul might be treated for that purpose as a mere agent.

His Honour; I should like you, Mr. Litchfield, to show me some authority bearing upon the point. I have already decided against your contention in another similar case but I am, of course, open to conviction if you can show me any authority in your favor. Failing your doing so I must decide as I have done before. I consider your argument, although ingenious, requires some authority to support it.

Mr. Litchfield concluded by stating that the judgment of the Court below was right, as the money deposited had passed out of the custody of the appellant Will, and under the control of the respondent, Adams and that the Consul at Hakodate was correct when, after mature consideration, he gave the decision he had.

His Honour stated that he would take time to consider his judgment, which would be delivered in a few days.

IN THE IMPERIAL GERMAN CONSULAR COURT.

Before E. ZAPPE Esq., Consul.

Messrs. A. MEYER and F. GRÖSSER, Assessors.

Thursday, 13th November, 1879.

H. B. WALKER, by C. BLAND his attorney, *vs.* STILLFRIED AND ANDERSON,

This was a claim for 41 yen balance of rent alleged to be due for June last for the premises No. 17 Bund occupi-

ed by defendants. The defendants resisted payment on the ground that plaintiff had failed to perform his covenant in the lease under which he bound himself to keep the exterior of the premises in repair. A dispute on this point between the parties, had been referred to arbitration and decided adversely to plaintiff. After hearing a considerable amount of evidence and suggesting that some amicable arrangement should be made, the President of the Court adjourned the case *sine die* to allow a survey of the premises to be made by an expert.

IN THE ROYAL ITALIAN CONSULAR COURT.

Before S. CARCANO, Esq., Consul.

Messrs. RICA and ARMONI, Assessors.

Tuesday, 11th November, 1879.

H. SARDA vs. P. SACCONI.

This was a claim for frs. 12,375 the value of 5,500 cartoons; 3,000 of which had been sold by plaintiff to defendant and the remainder of which had been consigned by the plaintiff to defendant for sale in Europe.

Judgment was now delivered and defendant ordered to pay plaintiff frs. 6,750 the price of the 3,000 cards at 2.25 per card, with interest at 6 per cent from the 7th November instant, the date of filing petition. The defendant was also ordered to render accounts as to the 2,300 cartoons consigned to him for sale within 8 days from Notification of judgment.

Costs to be borne equally.

INVESTIGATION into the circumstances connected with the collision between the Mitsui Bishi Co.'s steam-ship *Takasago Maru*, and the British brig *Junna*, on the night of Thursday, the 9th October last.

DECISION.

From the evidence adduced we are of opinion that this collision was at least in part caused by the fault of the *Takasago Maru*, but whether or no the other vessel, when a collision appeared inevitable, did all in her power to avoid the same, there has been no evidence taken to shew, neither was the same necessary for the purposes of this investigation.

So far as the *Takasago Maru* is concerned the blame attributable to that vessel appears to be due entirely to the default of Mr. August Ludwig Dall, first mate, he being officer of the watch at the time the *Junna's* lights were sighted, inasmuch that:—

1st. He could not have been keeping such a look-out as is incumbent on every officer in charge of a vessel, or he must on such a clear night have sighted the *Junna's* lights long before he did.

2nd. That he neglected on sighting a vessel in such close proximity to call the master, as he should have done.

3rd. That when the lights were sighted he shewed a great want of decision and judgment in not ordering the helm at once to be put "hard-a-port," instead of "port" only.

4th. That he disregarded that portion of the Regulations for preventing collisions at sea which requires every steamship when approaching another ship so as to involve risk of collision to slacken her speed, or, if necessary stop and reverse.

Taking Mr. Dall's past services and character into consideration, it will, we think, be a sufficient punishment, to suspend his first mate's certificate of competency for a period of six months from date, but recommend that a second mate's temporary certificate be granted him for that period.

We do not attribute any blame whatsoever to Captain Young and therefore consider his master's certificate of competency should be returned to him forthwith.

We severely censure the midshipman, Katsura Yonzaburo, and the seaman, Yamagami Monjiro, who were on watch at the time the lights were sighted, for the bad look-out they evidently had been keeping.

We would remark on the necessity of standing orders for every steam-vessel being either written or printed, and so placed on board the vessel as to be at all times available, that the officers be well acquainted with the same.

(Signed) A. R. BROWN.
" E. KNIPPING.
" JAS. ELLERTON.

I hereby approve of this decision and direct that it be carried into effect.

(Signed) T. HAYASHI.

Vice-Minister of Home Department.

November 12th, 1879.

THE ENGLISH MAIL.

The P. & O. Co.'s steamer *Malacca*, Captain Smith, from Hongkong 4th, with dates,—Bombay 14th, Galle 18th, Penang 24th, and Singapore 26th ult., with the London mail of the 26th September, arrived here on Friday morning at 6 a.m. The subjoined telegrams are taken from the *Straits Times Extra*:—

Bombay, 9th October.

Sir Richard Temple and Staff embarked this evening on board the *Ethiopia* for Kurrachee, en route to the frontier. The Commander-in-Chief, with a large crowd of the leading European and native inhabitants of Bombay, witnessed his departure. A guard of honour consisting of 100 rank and file of the 21st Native Infantry was present. Sir Richard Temple was loudly cheered by the spectators as he left the shore.

Allahabad, 10th October.

Although on the 6th, General Baker and Major White did not effect a junction until 10 p.m., General Baker at 3 o'clock was able to signal General Roberts that the heights overlooking the Chardeh villages had been crossed and cleared of the enemy, who held the ridge in front and to the left in large force. They were driven back and fled across a plain into the Chardeh villages. All our Artillery poured in a withering fire into their broken ranks. Their loss must have been considerable.

The Russian defeat by the Turcomans magnifies daily, and now we hear that the Russians admit the loss of 1,200 men and two guns. Both sides are expecting reinforcements.

Private attempts to start a subscription for the benefit of the families of the native officers and sepoy killed with Sir Louis Cavagnari is unnecessary. Positive assurances are given that the Government will make ample provision.

Rangoon, 13th October.

The Mandalay Political Officer arrived yesterday. His steamer was stopped by the Governor of Manbla at a frontier fortified town for half an hour, until orders were telegraphed from Mandalay. It was an anxious time, as the fort guns were pointed, while the river bank was lined by Burmese soldiers. Our sixty sepoy were drawn ready to repel any attack. At the end of half an hour the Governor came on board and intimated that orders for the steamer to pass had been received.

The *Rangoon Gazette* has published a telegram from Mandalay stating that a Royal order has been issued ordering the interests of British subjects to be carefully looked after. All is quiet since.

London, 16th October.

The Marquis of Hartington will visit Lord Derby at Knowsley on the occasion of his electoral visit to Lancashire. The *Daily News* regards this as evidence that Lord Derby has joined the Liberals.

In consequence of the representations of the great Powers, Greece has agreed to continue the negotiations in reference to the frontier question.

Aden, 15th October.

The *Nepaul*, with the outward English mails of the 3rd inst., sailed for Bombay at six this morning.

Bombay, 16th October.

A special telegram to the *Bombay Gazette* from London states that Mons. Vambéry writes in the *Pesther Lloyd* that nothing short of the establishment of permanent garrisons at Kaudahar, Herat, Balkh, and Kabul will effectually secure India from Russian intrigues. Such a measure was necessary if England wishes to keep Russia at bay in the East. This expression of opinion from one so well qualified as M. Vambéry is attracting considerable attention.

Galle, 16th October.

The Queen returns to Windsor in November. The Prince of Wales has gone to Copenhagen to bring back the Princess. The Emperor and Empress of Germany have visited Alsace. The schism in the ranks of the Home Rulers caused by the national convention scheme is widening. The agitation against land laws continues in Ireland. An attempt to upset the Indian mail train has been made at Foggia, Italy. The Relief of Lucknow was celebrated by a dinner by the surviving officers. The *Globe* newspaper discusses the probability of a Russian attack on India being not far distant. The German quarrel with Japan is getting serious—American sides with Japan, England supports Germany. The Queen has sent a message of condolence to Madame Cavagnari on the death of her son. The 18th centenary of the destruction of Pompeii has been celebrated. The negotiations between Turkey and Greece

on the boundary question make no progress. Archibald Forbes has lectured on the Zulu War at St. James' Hall. Lord Gifford, who was entrusted with despatches announcing the capture of Cetewayo, is entitled to an allowance of £500 and a brevet majority. Sir Wilfrid Lawson spoke at Newmarket, and denounced the administration in connection with the Afghan war. Louis Blanc has visited Marseilles, and has been received there in triumph. The Governor of Smolensk reports a great conflagration at Vjasma, at which 200 buildings were burnt.

Madras, 9th October

Colonel Macquoid, of the Hyderabad Contingent, started on the fourth instant for Rekapilly, with four hundred men of the third Contingent Infantry. Mr. Herbert Wood, Royal Engineers, died yesterday.

Simla, 9th October.

The Afghan troops came out from Kabul in great force on the 6th, occupying the heights opposite General Roberts' camp. A wing of the 92nd advanced on their right flank with a miscellaneous force of about 700, who defeated the enemy, capturing 12 guns, with a loss of four killed, nine wounded, and no officers. Baker with about 2,000 men, attacked the left flank of the enemy, who fled in disorder, losing considerable numbers. The resistance was very obstinate. The forces engaged were 72nd; a wing of the 92nd; a squadron of the 9th Lancers the 23rd Pioneers; a wing of the 5th Gurkhas; two squadrons of the 5th Panjab Cavalry; a battery of Royal Artillery, a Mountain Battery and two Gatlinga. Baker's loss was about 70 killed and wounded. Amongst the wounded are, Captain Young, of the 5th Panjab Infantry; Lieutenant Ferguson 72nd; Dr. Duncan, 23rd Native Infantry. The chief men of the village are reported as coming in to pay their respects to General Roberts.

Simla, 11th October.

It is reported here that the Viceroy will probably go into camp about the middle of November either at Ambala or Agra for three weeks, thence going direct to Calcutta.

General Roberts telegraphs from outside Kabul on the eighth October. Hearing that troops from Kohistan were entrenching themselves on a high hill beyond the Bala Hissar immediately overlooking Kabul City, General Roberts sent General Massey, with eight squadrons of Cavalry, round by the north of the city to watch the roads leading to Bamian and Kohistan, and cut off their retreat. Simultaneously General Baker was sent to attack the enemy from the high hills above the Bala Hissar. By sunset General Massey had reached Aliabad on the Bamian roads. He found the Sherpur cantonment deserted, and in it seventy-eight guns. At sunset General Baker was about to attack the enemy's position. General Macpherson rejoined General Roberts on the evening of the eighth with stores and reserve ammunition. Information having been received that the regiments from Ghazni were trying to join the force opposed to General Baker, General Macpherson was sent with a force to strengthen General Baker. It has been ascertained that large numbers of Ghilzais assembled to join the force opposed to us on the sixth, but arrived too late. Some have returned to their homes.

From Thayetmyo Mr. St. Barbe reports that he reached the frontier on the tenth. His departure from Mandalay took place as arranged, without opposition. A number of people have left Mandalay, and all the Flotilla steamers have come away, accompanying Mr. St. Barbe.

By order of the Queen-Emress, the Viceroy has requested the Commander-in-Chief to convey to General Roberts and the troops engaged under his command the expression of Her Majesty's warm satisfaction with their noble conduct in the very successful and important action at Charasiyah, which the Viceroy lost no time in reporting to Her Majesty. The Queen-Emress desires to express to her gallant troops her sorrow for those of their comrades who fell in this action and in the recent brilliant exploit at Shuturgardan, and the Viceroy is commanded to make known to the Commander-in-Chief Her Majesty's anxiety for further information as to the condition of the wounded.

From the Shuturgardan it is stated that the bearer of the last message from General Roberts said that Mahomed Khan and Gholam Hyder Khan, with the three Herat Regiments, had shut themselves up in the Bala Hissar and intended to die fighting. The Bala Hissar is said to have two large breaches in its walls.

The number of guns captured on the sixth was twenty, not twelve as first reported, making 98 guns, in all, already taken before Kabul.

London, 11th October.

Consols for account, £97½. Rentes, Five per Cent. (1872) 118½. Bar silver, 52d. Bank shares: Oriental Bank £20, Chartered Bank £21, Chartered Mercantile Bank £21, Hongkong and Shanghai Bank £36. Discount, market rate, 3 months' Bills, 1 per cent. Ditto, 6 months' sight Bills, 1½ per cent.

Simla, 12th October.

General Roberts was to have delivered his attack on Kabul on the night of the 8th, but, owing to darkness coming on,

postponed it. The next morning General Macpherson's column came up, when it was found that the enemy had abandoned the city during the night, leaving 12 guns. Generals Gough and Massey pursued with Cavalry, overtaking small parties. Up to the present time 110 guns have been captured, and there are some 30 more in the Bala Hissar and city. General Roberts, who was encamped at Siah Sang, 1,300 yards from the Bala Hissar, intended publicly entering Kabul on the 11th.

Barikab, 11th October.

General Gough's advance force march on Jelalabad to-morrow, the 12th October.

Beni Hissar, 11th October.

The force, two miles from Kabul, had severe fighting yesterday. Baker's brigade beat seven thousand Afghan regulars from strong positions, and took twenty guns. We lost twelve men killed and sixty-eight wounded. All our troops fought splendidly. It is probable we shall have more fighting to-morrow and enter Kabul then or the next day. Dr. Duncan severely, also Captain Young, 5th, wounded; Ferguson, of the 72nd, slightly wounded.

Simla, 12th October.

General Roberts telegraphs from outside Kabul on the 10th. General Baker could not attack on the 8th, darkness supervening. Before daylight on the 9th General Macpherson joined with reinforcements. The enemy had fled during the night leaving twelve guns. The Cavalry pursued them for several miles but the enemy had so completely dispersed that only small parties were overtaken. Thus 110 guns were captured and 30 more are reported to be in the Bala Hissar. General Roberts' camp is pitched on Siah Sang within 1,300 yards of the Bala Hissar and city. General Roberts intended to make a public entry and take possession of the Bala Hissar on the 11th or 12th. The troops have worked splendidly without tents. Rations are carried for want of transport.

Kabul, 12th October.

The force which General Baker engaged yesterday managed to escape during the night. Cavalry and horse artillery are in pursuit twenty-one miles off. Our force captured six field guns and six mountain guns, some elephants, camels, and horses, and a few prisoners. Returning to camp a mile from Kabul, we passed through the outskirts of Kabul. The population appeared at times, but not many showed. No more fighting here is expected, but there may be a little in the country later on. The expedition has been entirely successful. The troops worked splendidly without tents and carrying their rations. General Roberts deserves well for his great energy and for successfully combating grave transport difficulties.

Simla, 13th October.

General Roberts, from outside Kabul, on the 11th October, telegraphs:—All accounts agree that the Afghan troops have been completely routed, and the Ghilzais, Kohistanis, Logaris and other tribes, who were assembling to fight against us, have returned to their homes. The Kazilbashis and most of the influential men of the city had come to the camp and paid their respects.

General Roberts telegraphs from outside Kabul, on 12th October, that he would enter the Bala Hissar with the Amir at noon. The troops would line the road from the camp to the Bala Hissar and a royal salute would be fired by the Horse Artillery Battery. The British standard would be hoisted over the main gates as General Roberts and the Amir enter the gateway. The 67th Foot and the 10th Goorkhas will occupy the Bala Hissar and the hill on which it is situated. Supplies are coming in fairly. The wounded are doing well.

London, 13th October.

Consols for account £97½. Rentes, Five per Cent. (1872), 118½. Bar silver, 52d. Exchange on India, 50 days' sight, 1s. 8d. Discount, market rate, 3 months' sight. Bills, 1 per cent. Discount, market rate, 6 months' sight. Bills, 1½ per cent.

Constantinople, 13th October.

The Sultan has disbanded ninety thousand of his regular troops.

Rangoon, 14th October.

The *Rangoon Gazette* reports all quiet at Mandalay. A Royal Order has been issued that the interests British subjects are to be carefully looked after. The departure of the Residency people, of the nature of a stampede, the short notice, and the hurry, have impressed the Burmese and every one with the idea that immediate hostilities are intended. British subjects consequently have abandoned much valuable property. The general opinion now is that there was no need of such a precipitate retreat.

Allahabad, 14th October.

A message dated Kabul, 9th says:—Yesterday morning news was brought that the fortified camp at Sherpur had been evacuated, but the enemy held a strong position on the ridge running to the Kabul river. General Massey, with the 5th and 12th Lancers, and 5th Panjab Cavalry, was sent to cut off their retreat along the Bamian road, while General Baker pushed along the ridge facing that held by the mutineers. General Massey, on crossing the Siah Sang ridges, sighted the enemy on the hills to the left. He halted at Sherpur

finding the camp empty, save 78 guns and ammunition. A squadron was detailed to watch the camp; the rest worked round into the plain of Chardeh, sighting the enemy's camp. Here they formed up to await the order for attack. The 5th Panjab Cavalry were despatched to block the Bamian road. Meanwhile General Baker with 320 of the 92nd, two companies of the 72nd, seven companies of the 23rd Pioneers, two mountain guns and one Gatling, left Beni Hissar and with difficulty got to the top of the Bala Hissar ridge and shelled the enemy, who answered. But nothing else occurred, and night fell before reinforcements arrived. The attack was thus useless, so the troops slept under arms. At midnight the enemy fled, leaving their tents and guns in position. General Massy pursued; but only twenty of the enemy were overtaken and killed. The cavalry proceeded twenty miles from Kabul and returned at nine at night on the 9th. The villages round are hostile. No quarter was given to those found firing at us. The prisoners taken in the fight were shot. The leaders of the mutineers are the Amir's trusted friends. Kushdil Khan, who was sent specially to meet Cavagnari at the Shurtargarden, was a prominent leader at Charasia and yesterday. There is no doubt that it was the concealed action of the Amir's officers. The enemy throughout were well informed of the British movements. It is difficult to fix their source of information, but it is probable that it was the Amir's retainers now in camp. The flight of the mutineers makes the sacking of Kabul unnecessary. The Amir coincides with all that has been done. The strictest orders have been issued against any one entering the city, which probably yet harbours mutineers.

Jelalabad 14th October.

General Gough occupied Jelalabad on the 13th October. The country is quiet.

Simla, 14th October.

The Camp of Alikheyl was attacked boldly at daybreak on the 14th by large numbers of Mongals, Spingwars, Hussan and Ahmed Bheyla. They were well met by the 29th and 8th. A counter attack was made by Cavalry and Infantry, with complete success; 23 dead of the enemy are in our hands and more are coming in. Our casualties are five slightly wounded. Our parties are returning unmolested.

London, 14th October.

The Duchess of Edinburgh has been confined, prematurely, of a stillborn child. Her Royal Highness is progressing favourably. *Consols 97½.*

CHICKENS IN COURT.

We take from the *San Francisco Chronicle* the following amusing account of a case which lately occurred in the County Court of that city. It will be noticed that even the decapitation of a live chicken was insufficient to refresh the memory of a Chinese witness:—

THE CHINESE OATH ADMINISTERED IN THE COUNTY COURT.

A WITNESS MADE TRUTHFUL

By the Decapitation of a Live Chicken—A "Sinuositated" Interpreter—An Obstinate Chinese Female.

For the first time in this country the Chinese form of administering a Court oath, by the decapitation of a live chicken, was on Tuesday observed in the County Court, before Judge Wright. The observance of this unusual ceremony was the outgrowth of the manly love of Ah Pak for the gentle Sing Fung being thwarted by the abduction of the aforesaid Fung by a fractious female known as Si Que. The case is only one of a recognized class wherein the crafty or love-lorn heathen applies the machinery of our Court, for the accomplishment of his purposes, righteous or otherwise. The present case has occupied the attention of Judge Wright upon several former occasions, and upon each the versatile Si Que has been so erratic in her observations on the points at issue that on Saturday last Judge Wright, in the hope of bringing Si to a proper comprehension of the solemnity of an oath, and at the earnest behest of the anxious Ah Pak, ordered all parties in the case to appear yesterday with the requisite paraphernalia for the sanguinary proceedings. The Court-room was filled with curious whites and interested Chinese when the clerk announced, with a noticeable lack of monotone, "the matter of Ah Pak."

A DIVERTISEMENT.

Proceedings were opened by Pat Cummins, counsel for Si Que, who attained a standing with difficulty and informed the Court that upon this solemn occasion he wanted no nonsense, no theatrical display, no farcical business by the Court. Mr. Cummins' remarks were brought to an abrupt termination by the Court, who sternly inquired the exact intent and purpose of the counsel's use of the word "farce." At this point it suddenly became apparent to the spectators that the interest of the occasion would be greatly increased by the peculiarities of Mr. Cummins, who seemed to be laboring

under the palpable disadvantage of not infrequent fractures of the requirements of his blue-ribbon badge, and a too long divorce from Morpheus. In reply to the Court's stern interruption Mr. Cummins meekly replied: "Commit me for contempt, your Honor, if you please, but know that contempt was furthest from me mind." It then occurred to Mr. Cummins to become sarcastic, and he said: "Before the Court proceeds with this interesting ceremony of beheading forty or fifty thousand innocent chicks to satisfy the gory-minded counsel on the opposite side, allow me to enter an objection. The objection I shall enter is founded on what I happened to find in 'Chambers' Encyclopedia touching this case. Permit me to read from the volumes which I have here, from 'O' to 'Z.'" The Court appalled at the prospect of so lengthy an objection, strictly enjoined Mr. Cummins to read only what he found under the head of "Oaths," and to indulge in no comments.

MR. CUMMINS IS FINED.

Mr. Cummins proceeded: "My old friend, Chambers, the author of this book, remarks that according to Genesis iii, 17, kings and queens are the greatest of beings. I fail to agree with friend Chambers, having found the ace a useful—"

The Court—Adhere to the text, please.

"All right, your Honor. As found in Deuteronomy xvi, 23, the pagan oath, which, allow me parenthetically to remark—"

The Court—Please dispense with parentheses.

Cummins—Your Honor, it is a fault of my education that I can't ring in an abstract proposition directly, so that it appears to proceed from Chambers, which, by the way, I purchased at a bargain.

The Court—Mr. Cummins, if you are unable to read that I will do so for you.

Cummins—Perish the thought! I proceed: We find in Ezekiel v, 42, that the Court oath, which your Honor well knows to be an extension of the hand heavenwards—

The Court—Mr. Clerk, make an order of fine against Mr. Cummins for \$50.

This announcement fell like a thunderbolt on Mr. Cummins, who sank back into his chair overcome. He then became pathetic, and turning to the spectators exclaimed, in curious imitation of Alice Dunning Lingard when in the caste of the *Two Orphans*, "Is there no gentleman heah?"

As no one responded to the appeal, Mr. Cummins turned to the Court and said: "While I am thus purgatorially disgraced I cannot proceed with this case, and as I find no gentleman willing to relieve me, I ask the Court to stay proceedings until I can obtain assistance."

A REFUSAL TO GUILLOTINE THE CHICKEN.

The Court did not choose to stay matters, and in compliance with his order, Ah Pak and another Chinaman entered, carrying a bucket, a piece of matting, a cackling chicken and a knife. The matting was spread on the platform in front of the witness stand, the bucket placed on it, and the counsel for Ah Pak announced everything ready for the administration of the oath. The Clerk, through an interpreter, then attempted to have Si Que take the following oath:

I do not solemnly swear that the evidence I will give in the issue now pending shall be the truth, the whole truth; and if I tell a lie, may my life be as this chicken's.

Si Que, however, displayed a most active objection to entering fully into the spirit of the occasion. She took the vicious-looking butcher-knife, and flourishing it around declared her belief that there was some "job" on hand which would result in no good to her. Clerks, spectators, reporters and Chinese crowded around Ah Pak and Si Que, who were discussing the whole affair in a highly excited manner. The interpreter, Ah Pak, the Court Clerk and the counsel for Pak all earnestly urged the defiant Si to proceed, but to no purpose.

At this point Mr. Cummins addressed the Court again, saying, "Being purgatorially under a cloud, your Honor, I, of course, can take no part in this interesting proceeding, but if your Honor will but for a moment let the gentle breeze of your benignant charity lift from me this dampening cloud, as from the Mission hills the fog-banks disappear before a summer morn's wind, and then again replace the cloud o'er my penitent head as do the evening zephyrs renew the fogs on Nob Hill, I will successfully cope with the objections of my fair client."

THE DECAPITATION.

Judge Wright inquired if the counsel's remarks were intended for an apology.

Mr. Cummins replied: "No, sir. For my sins I wish to suffer. If I have offended the Court I beg its pardon."

The Court—Very well, I remit the fine.

Mr. Cummins, relieved from the overhanging purgatorial cloud, spoke to the rebellious Si, who, after a vast deal of preliminary talk and gesticulation, finally repeated the oath and raised aloft the murderous knife. Ah Pak stretched the neck of the unwilling

fowl, which in no way seemed impressed with the solemnity of the occasion, across the edge of the bucket and the knife descended. The agitation of the fair Si foiled the purpose of her arm, and the knife, barely escaping the fingers of Ah Pak, buried itself in the wood of the pail. Spectators, witnesses, lawyers, clerks and chickens—for there was a reserve force of the latter—all joined in a babble of comments and cackles as the knife was again raised with murderous intent. Again the knife descended, and this time to better purpose, for the chicken's neck was half severed, the blood spurting over the hands of the now frantic Ah Pak. One more blow was delivered and the headless bird fell kicking into the pail. With the necessity of truth thus thoroughly impressed upon her, Si Que took the witness stand and the examination was commenced.

THE LOVELY SI IS OBSTINATE.

G. W. Chamberlain, counsel for Ah Pak, through an interpreter asked Si Que if she had ever hidden Sing Fung. The question, simple as it was, called forth a lengthy and excited flow of Chinese from Si. The interpreter finally informed the Court that Si would not answer. The question was put again, when Mr. Cummins objected to the interpreter. That individual, Mr. Cummins claimed, was a sleuth-hound in the employ of Ah Pak, and instead of simply putting the questions asked by the counsel, delivered them to Si "sinuously and serpently." The Court, to relieve Si from such an awful mode of questioning, asked her in English if she had ever hidden Sing Fung or had hired others to do so. The latter portion of the question evidently brought to Si's mind a realization of the full force of possible consequences if she should falsely testify. The decapitated chicken meant more to her than the Christian oaths under which she had previously testified with cheerful promptness to having never hidden or had hidden Sing Fung. After quietly considering the question for some time she turned to the Court and ingenuously remarked: "I cuttee off chickee's headdee; I tell truth. Sing Fung, chickee, headdee. Ah Pak, you sabe? Me no lie, Si Que. Heap follee chickee cuttee; I no sabe; you sabe?" She finished this lucid speech with a sweet smile, which clearly expressed her unalterable determination to never "sabe" unless testifying under a Christian oath.

Seeing no way by which the witness could be made to answer, as she smilingly refused to comprehend threats of fine and imprisonment for contempt, the Court adjourned the case for two weeks, in order to give all parties concerned a further chance to bring about a more successful plan of action.

THE TIMES OF THE TAIRA.

By CAPTAIN F. BRINKLEY, R.A., AUTHOR
OF THE "TIMES OF TAIKO."

CHAPTER XXIV.

THE LORD TREASURER'S DANCE.

In spite of the unexpected delay caused by their detour to Owari in search of the 'Beard-divider,' Yoshitsune and his companion reached Kiyoto before Iné had been able to satisfy herself that she had unravelled even a fragment of the mystery which engaged her attention. Her establishment in the Treasurer's house, however, and the means of communication thus afforded between Tokiwa and her son were no trivial advantages, though Yoshitsune might not immediately avail himself of them. His position was indeed beset with perplexities. At no time had he proposed to seek immediate access to his mother on his arrival in the capital. To be the means of attaching suspicion to her, and thus exposing her to the persecution of her enemies before he was himself capable of offering her an asylum, was an intolerable idea. Yet had it been certain that the Lord Treasurer's letter was authentic, his connivance would so materially have diminished the difficulty of observing due precaution, that no lengthy delay would have been necessary. As it was, however, the doubts raised by Iné's narrative seemed almost hopelessly deterrent. With the Lord Treasurer incapable of assistance or even discretion, and Tokiwa indifferent or at best resigned, an appeal could scarcely be successful and might be pernicious.

Such at least was the conclusion suggested by a superficial view of the facts, though not the conclusion accepted by either Iné or Yoshitsune. The former, as we have seen, believed that these conditions were capable of an explanation very different from that which they were intended to offer, and the latter could not persuade himself to ascribe his mother's attitude to either resignation or despondency. Indeed in the first flush of indignation excited by such an imputation, he had almost forgotten prudence and attempted

to obtain an interview with Tokiwa forthwith, but in the end the consideration that he might thus be falling into the very trap laid for him, prevailed, and he consented to leave the matter in Iné's hands; a course which was recommended the more strongly not only by the courage and address the girl had already displayed, but also by his own desire to achieve the quest of the second sword before engaging in any other enterprise.

The chance encounter with Benkei at the fane of Tenjin and the circumstances which arose out of that meeting, at once gave Yoshitsune a new ally and, as we have seen, placed him in possession of the object of his search, but this was many days after his arrival in Kiyoto, and meanwhile his old friend, Shomon, had discovered an apparently facile means of obtaining access to the copy of the 'Six Military Canons' which was in the chief astrologer's keeping, and which, it will be remembered, Yoshitsune had been prevented from perusing by the sudden interruption of his intercourse with the 'Old man of the Shrine.'

We shall not describe the device, perhaps not altogether irreproachable, by which this much coveted manuscript at last came into Yoshitsune's hands, nor yet the dangers he incurred in the undertaking. He may have held that an object so important justified the sacrifice its pursuit entailed, but it seems more reasonable, and it is certainly more consistent with the whole story of his life, to conclude that inevitable circumstances prevented him from requiring the affection he had inspired and encouraged in the Astrologer's daughter: an affection to which he really owed his success in the matter. At any rate it were unjust to assume that the promise on which she relied was either deliberately false or even provisionally true, since an opportunity of claiming and redeeming it alike was denied to both. That the unhappy girl's death anticipated her lover's perfidy is a mere hypothesis: that his enforced absence and the very faint possibility of their reunion hastened her end, is an unfortunate certainty, but beyond this we can only say that love is not more often prudent than prosperous.

Some two months after Iné's admission to the Lord Treasurer's household, she began to believe that circumstances were tending at last to a partial elucidation of the enigma she studied. Tokiwa, it is true, still preserved the same imperturbable demeanour and followed the same unvarying routine of life, in which one point alone was salient, her strange love of archery. In the pursuit itself there was nothing extraordinary, for it was the favorite pastime of many a noble lady who had less reason for ennui, but Tokiwa's practice was distinguished both by its method and its pertinacity. Nothing was ever permitted to interfere. If the day were otherwise occupied, any hour of the night from darkness to dawn was made available, and it was related that even the prostration of sickness had on one occasion failed to interrupt this imperative habit. With so ardent a passion for the pursuit it might have been expected that she would have invited the ladies of her household to witness or rival her skill, but such was not the case. She invariably chose to be alone during the performance, and even the setting up and taking down of the miniature target was always the work of her own hands. These peculiarities had at first excited considerable curiosity, but by degrees the thing had come to be regarded as an aimless habit, for neither listening nor prying discovered anything more than that the number of arrows discharged was fixed and the method of shooting always the same: that is to say, three in rapid succession, then an interval, and then three more, until a total of one hundred and seventeen was reached. The most ingenious speculations having completely failed to furnish any reasonable explanation of this constant aggregate and its subdivisions, the question had long ceased to form an item of household gossip when it first excited Iné's surprise, but with her, inability to comprehend was by no means productive of indifference. That her vigilance was unfruitful did but render her the more watchful, and there are few mysteries impenetrable by such perseverance and acumen.

It was not in this direction, however, that the first light began to be discernible, but rather in the relative attitudes of the Lord Treasurer and his factor. Here there was a change that did not escape Iné's attention; on the one side an increase of waywardness and seeming simplicity, on the other an excess of suavity and deference which in such a man was not likely to be gratuitous. Could it be that the

former was assumed to foster a design which the latter was intended to conceal, or was Kageyu successfully essaying to bring his master's malady to a crisis that might warrant his own assumption of independent authority? Neither of these conjectures fell so far short of the truth as the result exceeded Iné's worst suspicions.

Yoshitsune had determined that he might no longer await the advent of clearer knowledge or a better opportunity. Certain circumstances that had arisen in connection with his visits to the chief Astrologer's, and an unsuccessful attempt made by the latter to compass his death, led him to anticipate that his presence in the capital might at any moment become known to his enemies. It was necessary therefore that some resolute attempt to achieve the object of his journey southwards should be made before such a misadventure put an enforced period to his stay.

It remained therefore for Iné to contrive a method of procuring him an interview with Tokiwa without either forewarning her or attracting the attention of possible spies. To this end it was arranged that Yoshitsune should come to the Treasurer's house after night-fall, and concealing himself in the garden, await Iné's summons to enter. In the event of discovery he was to be represented to the Treasurer as Iné's husband, in which character he proposed to be introduced to Tokiwa also, so that if her indifference proved to be real, she might be spared the humiliation of confessing it to her own son.

It happened that on the very day selected for the execution of this scheme the Treasurer projected one of his favorite performances, of which the main feature was a dance known as the 'Monkey and Quiver.' In this secondary roles were allotted to the factor Kageyu, and Nakatsuna, son of the Lord Senchal, Yorimasa; but at the last moment Nakatsuna sent to excuse himself, so that to the Treasurer's great disappointment the affair seemed on the point of falling through.

Just then, however, arrived one Hiromori, an intimate friend of the factor's, and a man for whom Iné had conceived an instinctive aversion, partly because he was believed to hold a leading position in Kiyomori's band of spies, partly because of his undisguised and somewhat rudely expressed admiration of herself. Hiromori was perhaps no great favourite of the Treasurer's either, for he was a supercilious and ungentle upstart who lost no opportunity of railing at the amusements that engrossed so much of Yasutsune's attention. In those days, however, knight or noble, whatever might be his inclination or aptitude, necessarily included among his polite accomplishments ability to take part in the private theatricals that constituted the recognized pastime of the upper classes. To understand this it must be remembered that these performances were nothing more than pantomimic dances representing celebrated scenes from history or tradition. Thus the dresses and accessories being provided and the subject chosen, a general knowledge of the dance steps and postures was sufficient to qualify the actors, whose renderings of the characters they personified, though they might differ in conception, were at once subordinated to the musical movement and limited to the recognized incidents of the story.

The Treasurer then, seeing in Hiromori's opportune arrival a means of escaping the threatened failure of his project, welcomed him with a delight not a little augmented by his knowledge of the man's proffered aversion for these effeminate mummeries. Hiromori at first positively declined to take the place of the absent performer, not even troubling himself to temper his refusal by such amenities as his host's rank demanded. His negatives indeed became more curt and unceremonious as the Treasurer's instances grew more pressing, and the ladies in waiting—of whom Iné happened to be one—looked every moment to see Yasutsune's anger overcome his forbearance, when to the surprise of all, Hiromori suddenly changed his tone and declared his willingness to comply with the Treasurer's desires. To most of those present this consent seemed inexplicable, but Iné, not having lost sight of the factor Kageyu during the progress of the debate, had not failed to intercept a signal which passed between the two friends and to which Hiromori's change of purpose was evidently attributable. In the eyes of one so long beset by doubts and suspicions this action of the factor's signified something more than a mere desire to humour his master's caprices. It signified collusion between the two men and

therefore some consequent peril for the Treasurer, perhaps also for Tokiwa.

Yasutsune on the other hand gave no indication of having observed anything noteworthy. Scarcely waiting to acknowledge his guest's somewhat tardy compliance, he hastened off to prepare for his rôle, followed by his pages and the ladies in waiting.

The Factor and Hiromori were thus left alone, and one might almost have thought they had been awaiting this opportunity so quickly did they avail themselves of it. Whatever mutual explanations the execution of their scheme required had been demanded and imparted before Iné, stealing into the adjoining chamber, had posted herself behind the silk partition almost within arm's length of the two men. All that she succeeded in overhearing was Hiromori's final injunction as the Factor left him. "There must be no bungling Kageyu," he said, "I am persuaded that if he be left the power of speech he will have both the wit and the will to spoil everything. Let it be but neatly done and I can promise you we shall have no difficulty in establishing our case. His fate has impelled him to insist upon this farce which cannot fail to furnish us an opportunity."

Never were ears strained to keener attention than those of the trembling girl who listened in vain for some further utterance that might render her mistrust sufficiently explicit to be useful. Here surely were ample grounds for the most disquieting conjectures, yet nothing that could be employed either as a warning or an accusation. The few words she had heard shewed simply that some design was on foot, but though her previous prejudices supplied the interpretation of that design, she was not one to strengthen an enemy's hands by an accusation he might easily refute. The not unequivocal motive of her own presence in the household made it necessary that she should be doubly cautious in her action, more especially since certain indications led her to believe that she was already an object of suspicion to the Factor. Again who could tell with what mood the Treasurer might receive her interference? His extravagance was no less likely to prejudice him against the accuser than the accused, while to give such a matter the calm scrutiny it deserved, would require an exercise of intelligence his general conduct proved to be either impossible or inexpedient.

These perplexities were too many to be resolved in a moment, and before she had arrived at any determination, the performance of which she was a most unwilling spectator had commenced.

The Treasurer, dressed with the extravagant magnificence these occasions permitted and having no arm except a short sword thrust into his girdle, carried in his hand a toy bow, while at his back was slung a quiver, the dilapidated appearance of whose skin covering offered a marked contrast to the gold embroidery of the robe beneath. The scene was laid in the plaiance outside a nobleman's castle, and Kageyu, who performed the same rôle as that of his everyday life, was supposed to be accompanying his master home, when the attention of the two was attracted to a strolling musician who passed, strumming a guitar and leading a quaintly caparisoned monkey. The musician—whose part was performed by Hiromori—becoming suddenly conscious of the illustrious personages in his neighbourhood, dropped his instrument and bowed his head in the dust, an obedience which was imitated by the monkey with such accuracy and demureness, that the nobleman, scrutinizing it more closely, exclaimed:—

"You have a fine monkey there, kuave. Know you that I have need of such an one myself at the present moment?"

The man, not venturing to make any reply, again bowed his head humbly to the ground.

"You fellows," continued the nobleman, "have a fauzy for putting things to extraordinary uses. No doubt you find the result profitable, but the fitting end of a monkey's existence is to furnish a covering for the warrior's quiver, not to simulate the action and gestures of men."

Here the minstrel, as if by an involuntary impulse of horror, drew the animal towards him and covered it with the skirt of his robe.

"That notion seems to be somewhat distasteful to you," sneered the nobleman, "no doubt because it touches your pocket, but on that score you need not be uneasy. You shall have a parcel of gold to pay for the pains you have be-

stowed on the training of your vermin, and because my quiver may not be covered without cost. If that irks you I will not insist upon your assent. We can save your conscience and our own purse by the exercise of a little force."

Here the monkey, as if to intimate the consent his master could not induce himself to pronounce, hopped forward and saluted the speaker respectfully.

"Ha!" cried the nobleman. "The beast has more wit than his master, I see. He shall be rewarded by dying a not ignoble death."

So saying he fixed a shaft to his bow and took aim at the monkey, but just as the arrow was on the point of flight, the musician sprang forward so as to shelter the animal with his own body.

"My Lord," he cried, "I may not gainsay your will, but I may be permitted to remind you that the method you propose is not without its disadvantages. However just your aim may be, the blood your arrow draws must render the monkey's skin useless for your purpose. If my dumb friend is doomed to die, let it be by my own hand. One blow delivered in the right place will accomplish the deed, without causing injury to the skin or unnecessary suffering to the monkey."

"Strike then," said the other, lowering his bow; "tis after all a shrewder knave than I had fancied."

Then followed a long scene in which the reluctance of the minstrel to kill his favorite was augmented by the latter's supplicatory gestures and combatted by the man's own sorrowful sense of the necessity, until the nobleman, who had at first sought to expedite the affair by sundry expressions of impatience, was finally overcome by pity, and added his tears to those of the weeping musician.

So far the performance had not deviated from the usual programme, but in the subsequent part, the Treasurer's eccentricity introduced a novel variation, for when, to test the monkey's sagacity, he had danced a measure himself to be imitated by the animal, instead of waiting to observe the latter's attempt, he joined in it himself, making the affair doubly absurd by following the monkey's antics with a precision that entailed two or three most ungraceful somersaults.

If Iné's fears were not ill founded, surely this was the time to look for their consummation. The Treasurer was completely in the power of the two men and as yet to all appearance without the slightest suspicion of their design. Were they then prevented from availing themselves of their opportunity by the fact that it had occurred unexpectedly soon, or had something intervened to make them defer their project? These were the only explanations that presented themselves to Iné at first, but presently they were supplemented by another and a more perplexing perception.

Whether by unaccountably fortunate accident or most subtly concealed design, the Treasurer was manœuvring so that not only was unity of action impossible to Hiromori and the Factor, but also at no time did either of them find himself within arm's length of Yasutsune's back. Thus if he fell down—which he did more than once—though the two men hastened towards him with an eagerness that almost wrung a shriek of horror from Iné, he would contrive to rise and dance away just before they reached him; while if on any pretext they approached him from behind, he would pirouette about, and without any semblance of intention, keep them always within range of observation.

This vigilance, slight a barrier as it seemed to place between an illarmed man and two resolute enemies, was nevertheless thoroughly valid under the circumstances. For in the first place, whatever might be the conspirators' inducement, neither of them was willing to take the initiative in such an act; and in the next, however speedy might be the effect of a dextrous sword-cut, it was by no means easy to find an opportunity of striking with certain success so long as the Treasurer persisted in keeping his face to his foes. If only he might gain time to draw his short-sword before a completely disabling blow reached him, the Factor and Hiromori were both too cognizant of his skill in fence to doubt that he would be able to hold his ground for the very brief space necessary to bring him succour, and though they knew there would be no difficulty in silencing his retainers if his death were once accomplished—prepared as they were to allege Kiyomori's authority—they were not less

certain that the slightest failure at the outset would suffice to seal their own fates.

But while they were thus momentarily deterred from an uncertain attempt, the great danger remained that they might detect the Treasurer's suspicion of their design. Then indeed the question of assured or precarious success would become altogether secondary to the necessity of anticipating worse evils, and Iné watched for this contingency with an awe that made ages of the minutes. But from first to last Yasutsune so admirably preserved his air of silly happiness that it was impossible to discover any evidence of intention in his proceedings, and when at the conclusion of the dance, Iné saw him seated safely in his place and the two men kneeling below the dais, the feeling of intense relief she experienced was mingled with a doubt whether all this might not have been the result of a well nigh miraculous accident.

If so, she might no longer keep silence. Chance was little likely to be again so kind, neither was there now the faintest shadow of uncertainty as to the Factor's designs. The only question was, what respite might this late failure be expected to procure. The Treasurer had invited Hiromori to defer his departure till the following day, and though a repetition of the dance was the pretext for this invitation, Hiromori had at once consented to remain. Plainly therefore that one night was the limit of time certainly available for precautionary measures, and under those circumstances Yoshitsune's projected visit to his mother was most opportune, since it seemed to promise the best, if not the only means of exposing the Factor's treason.

But how unpropitious for Yoshitsune's own designs were all these conjunctures! Instead of directing his mother's influence towards the object which had brought him to Kyoto, he would be involving her in the peril of setting up an accusation, difficult to establish, against the Treasurer's most influential vassal, as well as risking his own life by assailing one of Kiyomori's favorites. So thinking, Iné almost wished she had never succeeded in entering the Treasurer's household, for of a surety more evil than good seemed likely to result from her presence.

Let these things, however, be as they might, there was now, she felt, no choice. The Treasurer must not be left without at least the aid of promouition, and so with a sinking heart she recounted all the events of the day to Yoshitsune on his arrival at the place of tryst.

Yoshitsune, so far from expressing the dissatisfaction she had anticipated, received her account with an unmistakable air of content.

"Do you know, Iné," he said, "I have occasionally thought that a freak of prospering my purpose must have entered the head of some good fate, for all the accidents of my life seem to adapt themselves to its end."

"Can it be possible that in these evil chances you see any reason to think so?" asked Iné, astonished.

"I will tell you what I see," replied Yoshitsune; "the bravest and sagest girl the gods ever dowered with a heart as fair as her form, and one without whose aid neither Saburo's loyalty nor Benkei's strength could have saved us from utter failure ere now."

Half persuaded that these unwonted words of praise were designed to soften the pain of mischance, and wholly unnerved by long watching and terror, Iné's tears were her only reply.

"Nay, nay!" Yoshitsune gently remonstrated. "That evidence was not needed, Iné, to prove what your care for us has cost you. But why should the sight of success bring tears to your eyes, for I may not think that your heart fails you now when the worst is over?"

"It is not my heart that fails me but my hope," replied Iné. "I have as yet no share in the confidence your words seem to imply."

"Can it be then that I judge hastily?" Yoshitsune said, with some show of disquiet. "And yet it may not be gained that this plot of Kageyu's once proved, the Treasurer will owe little allegiance to Kiyomori. Ha! Iné, I perceive a light in your face that helps me to look farther ahead, and I can discern a powerful ally setting himself to compass the end we deemed of late so far from attainment. Come then, let us test the value of this faith at once. But a very little delay may mar the opportunity."

It was easy to kindle Iné's enthusiasm, more especially as her own discrimination told her that Yoshitsune's hopes

were not ill-founded. She led the way at once from the garden towards the north wing of the castle, and so well had her experience enabled her to time this visit, that they reached the threshold of Tokiwa's apartment unchallenged and unobserved.

Just as Iné was about to draw back the sliding door, however, Yoshitsune grasped her wrist with a hand that trembled perceptibly.

"Hold a moment," he said: "In all these years I have had but one memory of her. Let me recall it once more lest it should be for the last time."

This was the first and only doubt of his mother's constancy he ever suffered himself to express, and there were not wanting tokens that enabled Iné to divine how bitter was the pain of that misgiving.

While they stood thus hesitating, there came to them, thrice repeated, from the chamber within, a sharp sound, well known to Iné, but which seemed to astonish her companion not a little, for his grasp tightened painfully about her wrist.

"It is the sound of the arrows striking the target," she whispered. "You remember, I told you that her ladyship often practices at night."

"Yes, yes," replied Yoshitsune, "but you never told me the arrows were pointed. This is no common archery, and I begin to fear that my visit has been ill deferred until now."

(To be continued.)

DOUBLE ACROSTIC.

If *this* you do, when *that* you see;
A soldier you can never be,
My whole, a bright and shining light,
Get lights from him, and you'll be right.

1.

"He, who bates my honor, shall not see my coin,"
Wealth and sordid avarice here together join.

2.

Initials of a warrior rash,
Who fell on rebel field,
The sword, that gave the fatal gash,
A namesake's arm did wield.

3 & 4.

My third light loved her lord and warned him from the fray,
My fourth was forced to yield, though loving her own way.

5.

"He did confound the best part of an hour
In changing hardiment with great Glendower."

OYAMA.

DOUBLE ACROSTIC.

There's a tree by the garden gate
Where the birds sing all day long,
And a seat where fond lovers wait
When the tranquil eve grows late
For the nightingale's lovelier song,
And beyond a meadow slopes gently away,
Where the laugh is heard of children at play.

There peeps from the windows bright
A spirit of heartfelt joy,
And winter and summer, and day and night,
It blesses the household with calm delight,
And pleasures that never cloy;
'Tis the pure home love that hallows the spot,
And sheds its light o'er that peaceful cot.

1.

We gauge by this standard a friend's usefulness,
Or by it contempt for misfortune express.

2.

A despot's mandate this, with power to free a slave
Or doom a patriot brave to prison or the grave.

3.

The immortal exile's honoured dust here lies
For which his native city vainly sighs.

4.

The harmless pleasures of the world he dies,
And Nature's bounteous gifts himself denies.

5.

A reptile of its covering was shorn
And harmony divine of this was born.

METEOROLOGICAL REPORTS

FOR WEEK BEGINNING FRIDAY, NOVEMBER 7TH, 1879.
Observatory of Daigaku, Moto-Fujimicho, Hongō, Tokio, Japan.

REMARKS.

Heavy line represents barometer.
Light continuous line—max. & min. thermometers.
.....represents velocity of wind
.....percentage of humidity
Max. velocity of wind 17 miles per hour on Monday, 4 p.m.
The barometer is reduced to the freezing point and to the level of the sea.
The steadiness of the barometer which existed during last week was, unfortunately, not continued during this. Instead, there is shown a wide range, from 30.392 inches for the maximum to 29.402 inches for the minimum, being but a trifle less than one inch. The maximum barometer occurred at the beginning of the week, and the minimum, as will be observed, at about the middle. This minimum was accompanied by much rain and a high wind. The lowest temperature for the season thus far was 35.°5, on Saturday.

SHIPPING INTELLIGENCE.

INWARDS.

Nov. 8, American ship *City of Boston*, Crosby, 1,062, from Newcastle, N.S.W., Coals, to Walsh, Hall & Co.
Nov. 9, Japanese steamer *Kumamoto Maru*, Drummond, 1,240, from Hakodate, Mails and General, to M. B. Co.
Nov. 10, French steamer *Tibre*, Reynier, 1,726, from Hongkong, Mails and General, to M. M. Co.
Nov. 11, Japanese steamer *Hioyo Maru*, Moore, 896, from Kobe, Mails and General, to M. B. Co.
Nov. 11, Japanese steamer *Tsuruga Maru*, Steadman, 661, from Kobe, Mails and General, to M. B. Co.
Nov. 12, Japanese steamer *Sumida Maru*, Hubenet, 896, from Kobe, Mails and General, to M. B. Co.
Nov. 13, Japanese steamer *Hiroshima Maru*, Haswell, 1,869, from Shanghai and ports, Mails and General, to M. B. Co.
Nov. 13, Japanese steamer *Scirio Maru*, Frank, 486, from Hakodate, Mails and General, to M. B. Co.
Nov. 13, Japanese steamer *Tagonoura Maru*, Williams, 448, from Kobe, Mails and General, to M. B. Co.
Nov. 14, British steamer *Malacca*, Smith, 1,709, from Hongkong, Mails and General, to P. & O. Co.
Nov. 14, American ship *R. R. Thomas*, Nichols, 1,589, from New York, Kerosene to C. & J. Trading Co.

Nov. 14, British ship *Prince Frederick*, Claque, 1,490, from New York, Kerosene, to C. & J. Trading Co.
Nov. 14, American ship *Great Surgeon*, Kingman, 909, from New York, Kerosene, to C. & J. Trading Co.
Nov. 14, American ship *Grantee*, Jacobs, 1,295, from New York, Kerosene, to C. & J. Trading Co.

PASSENGERS.

Per Japanese steamer *Kumamoto Maru*, from Hakodate:—Mr. Bonger, Mr. Kochler, 1 Chinese and 49 Japanese.
Per French steamer *Tibre*, from Hongkong:—Mr. and Mrs. Durant, Mr. and Mrs. Nishigawa, and two children, Messrs. W. Asano, R. Asano, Shand, Chirono, Krien, Durant, N. Adachi, Yamasaki and Fréze.
Per Japanese steamer *Hioyo Maru* from Kobe:—Capt. and Mrs. Cotter.
Per Japanese steamer *Tsuruga Maru* from Kobe:—Mr. Neil.
Per Japanese steamer, *Sumida Maru* from Hongkong via Kobe:—Mr. F. Scheffmann, and one European in steerage. From Kobe: 1 European, 2 Chinese, and 146 Japanese in steerage.
Per Japanese steamer *Hiroshima Maru*, from Shanghai and way ports:—Dr. and Mrs. Perkins and 2 children, Mr. and Mrs. Taylor and child, Mrs. Hasegawa, Miss Hasegawa, Mr. and Mrs. Nagasaki, Mrs. T. Nagasaki, Mrs. N. Nagasaki, Mrs. Nakamura and child, Messrs. T. Middleton, C. Braess, E. C. Kirby, H. N. Tileston, A. Milne, H. Greey, B. Telge, Bernard, Ikeda, Obata, Hirano, Fujiyama, and Tamiwaki, in cabin. 4 Chinese and 372 Japanese, in steerage.
Per British steamer *China* for Hongkong:—Messrs. Baron Von Gutte, A. Hagne, 6 Chinese and 1 Indian.
Per British steamer *Malacca* from Hongkong:—Mrs. Nelson, Mr. Yoshie, Mr. F. H. Hocke, Mrs. Allen Amala, and 1 Chinese. (Mr. Pistorius, passenger died at sea, Nov. the 4th.)

OUTWARDS.

Nov. 9, British brig *Jumna*, Bissett, 316, for Nagasaki, General despatched by Frazer & Co.
Nov. 9, German barque *Guatav & Murir*, Bartsch, 355, for Nagasaki, Ballast, despatched by Jarline, Matheson & Co.
Nov. 10, German brig *Maid Marian*, Holm, 298, for Nagasaki, Ballast, despatched by P. Bohm.
Nov. 9, Japanese steamer *Hakamurra Maru*, Christensen, 1,346, for Hakodate, Mails and General, despatched by M. B. Co.
Nov. 11, U. S. Sloop-of-war *Alert*, Comd. Huntington, 1,020, 4-guns, for Shanghai.
Nov. 11, British steam-yacht *Albion*, J. L. Beasley, 38, for Kobe.
Nov. 12, Japanese steamer *Genkai Maru*, Conner, 1,917, for Shanghai and ports, Mails and General, despatched by M. B. Co.
Nov. 12, German frigate, *Prinz Adalbert*, Captain McLean, 3,500, 15 guns, for Kobe.
Nov. 13, Japanese steamer *Tokai Maru*, Hogg, 652, for Sabasawa, Mails and General, despatched by M. B. Co.
Nov. 13, British steamer *China*, Alderton, 1,030, for Hongkong, Mails and General, despatched by P. & O. Co.
Nov. 13, Japanese steamer *Hioyo Maru*, Moore, 896, for Kobe, General, despatched by M. B. Co.
Nov. 15, Japanese steamer *Takasago Maru*, Young, 1,618, for Hongkong, Mails and General, despatched by M. B. Co.

PASSENGERS.

Per Japanese steamer, *Genkai Maru* for Shanghai and way ports: Mr. and Mrs. Enouye, Mrs. Hachisuke and child, Mrs. Yamamoto, Mrs. Tajiri, Mrs. Nirei, Capt. and Mrs. Fukui, Mr. and Mrs. Eschewing, Dr. E. Baelz, Messrs. J. R. Haggitt, R. Kohler, T. Jenkins, D. Reynolds, Mamura, Nakamura, Mocheyashii, Ahazaki, E. Grob, C. H. Macy, Kerkovius, Suo Ching, Machida, Awoki, Gode, Kojima, Katanta, Nogawa, H. Broadhurst, Matsumoto, Asaki, Karasubuchi, Habel.
Per Japanese steamer *Takamago Maru* for Hongkong:—Mr. and Mrs. Cryder, Mr. and Mrs. Taylor and infant, Mr. and Mrs. Mannick, Dr. Von der Hack, Dr. Focke, Mr. G. W. F. Playfair and Capt. Arai

CARGOES.

Per Japanese steamer *Sumida Maru* from Hongkong:—
Cargo for Yokohama 260 tons.
" " Kobe 250 "
Per Japanese steamer *Genkai Maru*, for Shanghai and ports:—
Treasure \$60,000
Per Japanese steamer *Hiroshima Maru*, from Shanghai, &c.:—
Treasure \$207,413.60
Per British steamer *China* for Hongkong:—
Silk for London... .. 581 Bales.
" France 136 "
Total 717 Bales.
Silkworm eggs 43 Cases
Per British steamer *Malacca*, from Hongkong:—General from Europe, 1,265 packages; general from Hongkong, 2,074 packages; ugar from Hongkong, 3,902 packages; total, 7,241 packages.

REPORTS.

The American ship *City of Boston* reports: Left Newcastle, on the 1st September, had light variable winds and calms in South Pacific and moderate north and east winds from the Equator to port.

The Japanese steamer *Kinamoto Maru* reports: Left Hakoda's 7th instant. Moderate weather to port.

The French steamer *Tibre*, reports: Leaving Hongkong on the 1st instant, had strong N.E. winds throughout. signalled American ship *J. M. W. R.* in latitude 32.15, longitude 123.20.

The Japanese steamer *Hiogo Maru* reports: Left Kobe at 1 a.m. 9th inst. Experienced light variable winds with thick rainy weather to Rock Island; thence to port strong N.E. winds.

The Japanese steamer *Tsuruga Maru* reports: Left Kobe 9th instant; first part, rain and variable winds; latter part, clear weather and northerly winds.

The Japanese steamer *Sumida Maru* reports: Left Hongkong 1st instant at 5 p.m. Experienced strong E.N.E. gale with high confused sea which lasted five days, afterwards strong monsoon. Arrived at Kobe at 8 a.m. 10th instant. Left Kobe at 3 a.m. 11th instant light N.W. winds to Rock Island; thence to port N.E. winds with fine weather throughout. Arrived at Yokohama at 11 a.m. 12th instant.

The Japanese steamer *Itohashima Maru* reports: Left Shanghai 6th, arrived at Nagasaki the 8th. Left Nagasaki same day, arrived at Kobe 10th. Left Kobe 11th, arrived Yokohama 13th, 2 a.m. Had fine weather throughout.

The British steamer *Malacca*, from Hongkong reports: Leaving Hongkong the 4th instant, whence had first N. E. monsoon to Yokohama during which time had mountainous sea washing away figure head, portion of bulwarks and smashing in all the forward houses also staving in the captain's cabin; from Yokohama had fine weather to port.

COMMERCIAL INTELLIGENCE.

IMPORTS.—YARNS AND PIECE GOODS.—A fair business has been done in *Cotton Yarn* during the past week. Most, if not all, of the purchases are said to have been made 'with hoops,' and, not so much for actual requirements as, with the idea of stirring up jealousy in the adherents of the *tuga nashi* ('no hoops') policy, one or two of whom are already reported as succumbing to the machinations of the wily dealer. *Grey Shirtings* continue very quiet. Some *Indigo Shirtings* have been placed for early arrival at full prices, also a few *Italian Cloths* on the spot at comparatively low rates.

COTTON YARNS:—

Nos. 16 to 24 Common to Medium ... per picul	\$26.00 to 32.25
" " " Good to Best ... "	\$32.50 to 33.50
Bombay, No. 20 " " " " " "	\$28.25 to 30.25
Nos. 28 to 32 Common to Medium ... "	\$35.50 to 36.50
" " " Good to Best ... "	\$37.00 to 38.00
" 38 to 42 ... " " " " " "	\$38.00 to 39.50

COTTON PIECE GOODS:—

Gray Shirtings:—7 lb. per piece 28½ yds. 39 in.	\$1.62½ to 1.92½
" " " 8½ lb. " 38½ " 39 in.	\$1.92½ to 2.27½
" " " 9 lb. " 38½ " 45 in.	\$2.25 to 2.62½
T. Cloths:—7 lb. " 24 yds. 32 in. per piece	\$1.40 to 1.65
Drills, English: 14-15 lb. 40 " 30 in. "	\$2.50 to 2.75
Indigo Shirtings:— " 13 " 44 in. "	\$1.85 to 1.95
Prints:—Assorted... " 24 " 30 in. "	\$1.60 to 2.20
Cotton Italians & Satens Black 32 in. "	\$0.11 to 0.14½
Turkey Reds: 2 to 2½ lb. 24 yds. 30 in. "	\$1.40 to 1.55
Do. 2½ to 2½ lb. 24 " 30 in. "	\$1.60 to 1.70
Do. 3 lb. " 24 " 30 in. "	\$1.80 to 2.00

COTTON PIECE GOODS:—Continued.

Velvets:—Black ... 35 " 22 in. per piece	\$8.25 to 9.25
Victoria Lawns:— " 12 " 42 3 in. "	\$0.75 to 0.80
Taffeta:— " 12 " 43 in. "	\$1.75 to 2.05

WOOLLENS:—

Plain Orleans ... 40-42 yds. 32 in. ...	5.50 to 6.75
Figured Orleans ... 29-30 yds. 31 in. ...	4.00 to 5.10
Lastings ... 29-30 yds. 31 in. ...	10.50 to 11.00
Italian Cloth ... 30 yds. 32 in. ...	0.23 to 0.31
Camlet Cord ... 29-30 yds. 32 in. ...	4.00 to 5.00
Mousseline de Laines:—Crape 24 yds. 30 in. ...	0.17½ to 0.18
do. Itajime 24 yds. 30 in. ...	0.23 to 0.26½
do. Yuzen 24 yds. 30 in. ...	0.35 to 0.45
Cloths, all wool plain or fancy... 48 in. to 52 in. ...	0.80 to 1.50
Pilots ... 54 in. to 56 in. ...	0.45 to 0.55
Presidents ... 54 in. to 56 in. ...	0.60 to 0.70
Union ... 54 in. to 56 in. ...	0.35 to 0.60
Blankets, green 6 to 8 lbs ... per lb. ...	0.35 to 0.40

SUGAR.—Since our last report the market is somewhat lower, with little doing.

Sugar:—Taka in bag ... per picul...	\$5.70 to \$5.80
" " in basket ... " " "	\$5.20 to \$5.35
Taiwanfoo in bag ... " " "	\$5.70
do. in basket... " " "	\$5.50
Ching-pak and Ke-pak ... " " "	\$8.00 to \$9.00

China No. 4-5 Kongfun & Kook-fah... per picul...	\$6.25 to \$8.00
Daitong ... " " "	\$4.00 to \$4.40
Japan Rice ... " " "	\$2.60 to \$3.00
Kerosene Oil ... " " "	\$1.75 to \$1.80
Newchwang Pass ... " " "	\$2.20 to \$2.25

KEROSENE.—Business having been of late much restricted, an attempt to force sales has been followed by a considerable fall. The arrival of the *R. R. Thomas*, *Prince Frederick*, *Great Surgeon* and *Grandee* has not tended to enliven matters. The latter vessel goes on to Kobe with part cargo.

EXPORTS.

SILK.—The market in general has been much quieter during the past week. Hanks and Kakedas have attracted but little attention as dealers concessions have not been large enough to induce buyers to operate, so that only very few parcels have been disposed of. Filatures, on the contrary, have been in good demand and full sized descriptions have been in special request.

Settlements:—60 Kakedas and Oshius, and 350 Filatures, total 410 bales. The rejections of Hanks balance purchases.

Total export 7,132 bales, against 8,297 bales last year.

The following are the closing quotations:—

	In London at 3/10½. per lb.	In Lyons at fr. 4.90. per kilo.		In London at 3/10½. per lb.	In Lyons at fr. 4.90. per kilo.
Hanks,—Superior, nom.			Kakeda,—Extra		
" Best.....	\$565 to 590 19 7	to 20 5 fra. 57½ to 57	" Best	\$670 to 690 23 1	to 23 8 fra. 64 to 66
" Good			" Good	\$640 to 660 22 1	to 22 9 fra. 61½ to 63
" Good Medium.....	\$345 to 555 19½	to 19 3 fra. 52½ to 53½	" Medium.....	\$560 to 610 19 5	to 21 1 fra. 54 to 55½
" Medium	\$320 to 530 18 6	to 18 6 fra. 50½ to 51½	" Common ...		
" Common, Inferior.....	\$490 to 510 17 3	to 17 10 fra. 48 to 49½	Filatures,—Extra		
Oshius,—Good			" Best	\$660 to 720 22 9	to 24 8 fra. 63 to 68½
" Medium			" Good	\$600 to 640 20 9	to 22 1 fra. 58 to 61½

TEA.—The market continued firmly supported during the first week under review, although on account of the scarcity of stocks, business was restricted to the fulfillment of small orders on commission. During the week just past our market remained quiet and little or no business has been done. Arrivals, considering the advanced stage of the season, have been liberal and stocks in native merchants hands amount to about piculs 4,500. The Season 1879-80, may be virtually considered as closed.

Common ...	\$24 to 27	Fine ...	\$36 to 38
Good Common ...	\$25 to 28	Finest ...	\$40 & upwards
Medium ...	\$29 to 32	Choice ...	Nominal.
Good Medium ...	\$33 to 35		

EXCHANGE AND BULLION.

EXCHANGE.—A day or two after the despatch of our last circular, considerably higher rates ruled for Sterling, Bank bills having been placed at 3/10½ for 4 m/s.; a slight drop has, however, since taken place, but with the exception of some slight fluctuations, rates have not varied much, no very large business having been reported, in spite of some large settlements of Silk.

Rates close as follows:—

SPRINGING—Bank 4 months' sight.....	3/10

KEATING'S COUGH LOZENGES,

COUGHS,
ASTHMA,
BRONCHITIS.

ACCUMULATION OF PHEGM.

Composed of the purest articles. These Lozenges contain no opium nor any deleterious drug, therefore the most delicate can take them with perfect confidence. Their beneficial effect is speedy and certain. The old unfailing family remedy is daily recommended by the most eminent Physicians. (In use nearly 60 years).

MEDICAL TESTIMONY.

July 25th, 1877. 22, Cold Harbour Lane, London.

Sir,—Your Lozenges are excellent, and their beneficial effects most reliable. I strongly recommend them in cases of Cough and Asthma. You are at liberty to state this as my opinion, formed from many years experience.

J. BRINGLOE, M.R.C.S.L., L.S.A., L.M.

Mr. T. KEATING, Indian Medical Service.

Dear Sir,—Having tried your Lozenges in India, I have much pleasure in testifying to their beneficial effects in cases of Incipient Consumption, Asthma and Bronchial Affections. I have prescribed them largely, with the best results.

W. B. G —, Apothecary, H.M.S.

KEATING'S COUGH LOZENGES are sold by all Chemists, in bottles, of various sizes, each having the words "KEATING'S Cough Lozenges" engraven on the government stamp.

KEATING'S WORM TABLETS,

A PURELY VEGETABLE SWEETMEAT, both in appearance and taste, furnishing a most agreeable method of administering the only certain remedy for **INTESTINAL** or **THREAD WORMS**. It is a perfectly safe and mild preparation, and is especially adapted for Children.—SOLD IN BOTTLES BY ALL CHEMISTS.

Proprietor, **THOMAS KEATING, London,**

THE GREATEST

WONDER OF MODERN TIMES!

HOLLOWAY'S PILLS.

Persons suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER,

in his work entitled "The Nile Tributaries in Abyssinia," says, "I ordered the dragoman Mahomet to inform the Faky that I was a Doctor, and that I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as possessing unmistakable purgative properties they create an undeniable effect upon the patient, which satisfies him of their value."

SIMPLE, SAFE AND CERTAIN!

HOLLOWAY'S OINTMENT.

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

MR. J. T. COOPER,

in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls, butter, and horse-feed poured in upon us, until at last a tea-spoonful of Ointment was worth a fowl and any quantity of pear, and the demand became so great that I was obliged to lock up the small remaining stock."

Sold by all Chemists and Medicine Vendors throughout the World
May 17th, 1873. tf.

SLAVERY IN HONGKONG.

TWO kinds of servitude have quite recently been found to exist in the British possession of Hongkong as well as in the territory of the same empire in Singapore and other settlements of Malayan India. As, however, the fullest and most recent disclosures of the custom have been made in Hongkong, and as it is there that initial steps have been taken towards its suppression, we will here deal only with the institution in that island. That it has prevailed since the very earliest days of English settlement and government is now apparent, as are the facts that it is an institution almost as extensive as the Chinese population itself; and that it will be a task of tremendous difficulty to eradicate it. Apologists for its continuance on the ground of expediency, as well as those who deliberately extenuate its evils and defend its morality, say that it has been not indirectly fostered and encouraged by English rule. When that was first inaugurated Chinese settlement was courted by more than one royal proclamation, providing that the natives of the Celestial empire coming to inhabit the island should be guaranteed in the practice of their social and domestic customs and religion. It is ridiculous to suppose that the country which, at enormous sacrifices of money, and at the risk of incurring the disaffection of a large and influential class of its subjects both at home and in the colonies, formally abolished slavery in every form throughout its dominions: that a nation which, after drawing the whole of the civilized world to admire and endeavour to follow its example, took upon itself the cost, work, and frequently worrying complications involved in keeping the police of the sea for the prevention of the slave trade;—it is, we say, ridiculous to suppose that, after attaining glory and success in this toil for humanity, England should have deliberately winked at the existence of slavery, with its odious marts and traffic,

in any portion of her empire. If she finds that it does exist and has struck deep root in any class of her society, beyond the ken of her officials, it is more clearly an imperative duty to eradicate it than it was to emancipate the workers upon West Indian estates, or than it is to maintain a fleet of cruisers in African waters to prevent traffic in black flesh. We think that this is the only tenable ground to take, as it is the best and highest, in the matter. At the same time we are by no means astonished that the Chief Justice of Hongkong, fully recognizing the great scope of the difficulties which lie in the way of success in destroying the institution against which it is his duty and intention to wage war, should with legal instinct be glad to seize upon any other plea. Probably, however ingenious his reasoning that slavery, as it exists in Hongkong, is not a Chinese "custom" in the true sense of the word, it does not hold altogether good. The same form of servitude may even be opposed to Chinese law, but there is every reason to suppose that it is, in proportion, quite as extensively practised upon the mainland as it is in the British dependency. Opium smoking is prohibited by Chinese law; but all the world now knows to what a tremendous extent the demoralizing vice obtains in the Middle Kingdom. We should be glad to learn, however, that this theory of Sir John Smale's, or any other which will assist him and the Government of the colony, in the crusade upon which they have entered, should be found to be valid. At the same time, though it may assist effort, yet it is practically unnecessary. We repeat that the one principle, that upon British ground no individual may possess any proprietary rights in the person of any other, is quite sufficient to justify any measures which may be taken to extirpate instances of its violation.

Frequent arrests and trials of people charged with kidnapping children, generally girls, have been the means of disclosing that a very considerable traffic of the kind is carried on. A great number of young women have been decoyed, or deliberately stolen, and perhaps have changed hands, hard money being each time paid for them, half a dozen times before they have fallen into their present employment. The remainder of those sold have, almost without exception, been sold into the worst form of servitude by their parents directly, or by themselves in the exercise of what they conceive a filial duty. The other and lighter kind of serfdom is purely domestic. Of course it has its grades of comfort and oppression. A child of either sex may be bought into a rich man's house for purposes of adoption; or circumstances, such as its own attractions or agreeability, may lead to such a result. Another may be employed in domestic or industrial pursuits which are not in excess of its strength and tend to fit it for a future career of usefulness. A third may fall into the hands of exacting, passionate, tyrannical or deliberately cruel taskmasters, who starve, drive, and torture it till it is driven to suicide or escape. It is from this latter class, naturally, that are principally derived those complainants;

who have served to expose the system under which they suffer. At the first October sessions of the Hongkong Supreme Court, five persons were sentenced to terms of imprisonment varying from eighteen months to two years. On the 27th of the same month, two other prisoners were also sentenced. On the former occasion the Judge, in a lucid exposition of the condition of affairs, gave his own views and English law upon the subject, and while emphatically stating that slavery in every form must be abolished, knocked the ground from under the feet of those to whom we have above alluded as pleading sundry royal proclamations as an excuse for the existence, and reason for the continuance, of the institution. When the island became a British colony in 1841, slavery had already been interdicted by both common and statute law; and, if that were not enough, in 1845 a proclamation promised that the English laws should operate against it. As this question must always be one of interest to Englishmen, and should be so to subjects of every nation, and as recent events in the nearest English possession have again brought the subject under lively discussion, it is not amiss to give Sir John Smale's summary of his own first statement of the case, which he reduced to eight propositions:—

"1.—That in England, by the common law, slavery in every form has always been and is prohibited, that no one can acquire any right over the person of another, that no man can sell his own person into slavery, that a parent has no saleable property in his child; moreover, that every such sale is *nudum pactum*—absolutely void, that money paid on any such sale cannot be recovered back; but that the man bought must be restored to liberty, and the sold child to his parents as if no money had been paid, and that the crime in buyer and seller must be punished. 2.—That slavery has never been introduced into any British colony except by positive law; so said Lord Mansfield. 3.—That all slavery was abolished throughout the British colonies in 1833, when England nobly made a present of £20,000,000 as a boon to the slaveholders. 4.—That Hongkong became a British colony not until 1841, and then slavery had been absolutely prohibited by force of both the common and the statute law then existing. 5.—That by the proclamation of the 24th of January, 1845, the Queen promised and undertook that the English laws against slavery will be enforced by all Her Majesty's officers, civil and military, within the colony. 6.—That the obligation to enforce these laws is, therefore, absolutely imposed by the Queen on every civil and military officer here as if the obligation had been especially written at length in his commission or warrant of office. 7.—That these laws not having been enforced, each officer has failed in his duty to the Queen, and that the only excuse that any one of us can urge for such failure in duty is ignorance of existence of the extent of slavery here. 8.—That it being now patent that there is now a very great number of slaves (say 10,000: the number has been estimated at even 20,000) in this colony, ignorance can no longer be our excuse, but that all officers of the Queen in this colony, each in his department and to the best of his ability, must henceforth effectually enforce these laws or fail in the duty imposed on him by the Queen."

After thus tersely putting the case, and showing how past duties had been neglected, His Lordship went on to show that there was but one course open to the executive. He said that he felt assured, from the previous acts of His Excellency, that the governor would actively promote all such proceedings as might tend to enforce the laws against slavery, so that the colony might become as free from that taint as any other possession of the British Crown, by enforcing laws already in existence and, if necessary, by passing others, however stringent. In his more recent enunciation the learned Judge remarked that on those eight propositions he still rested; and that, having considered and reconsidered all that he had previously stated, he found nothing that he could retract. He had seen that it was his duty to call official

attention to prevalent abuses. He would not add to what he had already said, unless he felt morally compelled to do so; but he would administer without fear or favor the law which he represented.

In the course of his address he alluded to a very remarkable document—a petition to the Governor from the Chinese gentry, traders, and people of Hongkong, which had been evolved from the prominence given to the question under consideration. It is beyond our space or object to give even a *resumé* of this memorial, very carefully translated in the *Hongkong Daily Press*, stating the case of the Chinese residents. As Sir John Smale remarks, though one-sided and coloured, it is fairer than is usual with the representations of persons who think they have grievances. This virtue, however, and the moderation of its tone, while entitling it to a consideration it would not otherwise merit, do not redeem it from being a string of sophistical fallacies; as for instance, when it argues that the abolition of slavery, one Chinese custom, will bring about an increase in infanticide, another Chinese custom. Stern judicial logic tears this proposition to shreds. Quoting from the document Sir John says:—

"I cannot help alluding to one passage. 'Amongst the Chinese there has hitherto been the custom of drowning their daughters. If a stop is put to the sale the custom will be yet more observed.' And again to the third of the ten arguments used, which says:—'In China among the evils heretofore existing is the custom of drowning female infants, in the Kwangtung province more especially so; numbers of the extreme poor cannot supply even themselves with raiment and food. The added cares brought by children ensue; these people having no one to receive their progeny from them will immediately on bringing them forth destroy them by drowning;' and the petitioners threaten the increase of this 'custom' of drowning children if their sale is put down. . . . Now this petition claims the liberty to continue buying and selling children and women because it is a Chinese custom expressly protected by Governor Elliot's proclamation; but the petitioners call drowning female infants also a Chinese custom. They place the two crimes according to the English law under the same category 'custom,' and therefore in effect claim for infanticide that it is free from criminality in Hongkong. I can only say that in case father, mother, or relative were convicted of infanticide, Chinese custom would be no protection, and, unless I am grievously mistaken, the presiding Judge would have no alternative but to sentence the perpetrator to death, and the only possible hope would be in the mercy of the Crown if exercised by H.E. the Governor."

Infanticide and slavery, Chinese "customs" though they are, happen each to be, in a different degree it is true but in the same sense, crimes against English law. The arguments of those British subjects who would justify the latter, under any pretence,—who would desire its continuance on any pretext of expediency or prescription,—may be dismissed as beneath contempt. Not so the honest but mistaken utterances of those Chinese who realize the sense of a position into which lax administration of the law under which they live, more blamable than their own compliance with tradition, has placed them. Slavery must be abolished, as surely as Carthage had to be destroyed. Mercy and consideration must, however, be tempered with justice. The whole stronghold is not to be captured and reduced, and its garrison of comparatively just and wholly unjust, put to the sword, in one fell assault of legal arms. That this is acutely felt by the Chief Justice himself is evident from his remark that "if it be decided the evil is to be abated, as he expects will be the decision, he does not desire any sudden or violent intervention with such of the transactions in the past as are within the favourable colouring of the petitioners. Such a course would on many grounds be objectionable." Under the circum-

stances a mild but constant pressure will probably be sufficient to suppress the evil, if not altogether, at least to the extent to which other offences are kept in subjection by the law. Or, in the words of the *Daily Press*;—"To at once make criminals of all Chinese holding slaves in Hongkong would be most inadvisable. While insisting on the absolute necessity of dealing with what, from an English point of view, must be considered an undoubted evil, we think some less drastic means of coping with it may be devised than the prosecution by legal process of the bulk of our Chinese residents. What course the Government intends to adopt we have no means of knowing, but the simplest plan which presents itself appears to be the issue and wide distribution of a proclamation informing the Chinese that the holding of property in human beings in any shape or form is illegal, and that after the date of the proclamation all offences against personal liberty will be punished with the utmost rigour."

A SAN FRANCISCO BALL.

THE reception of General Grant in San Francisco was of the most enthusiastic description, and the extracts published in our local newspapers show that the American journalists were quite equal to the occasion. They appear, however, to have reserved their best energies for a supreme effort when describing the entertainment given in honour of the General by Mr. Senator Sharon. The *Weekly Post* devotes no less than eighteen and a half columns of its space to this banquet, while the *Chronicle* has thought four and three-quarters sufficient for all practical purposes. The *Post* commences its account of the affair with those sensational headings so dear to the American paragraphist when describing a first-class atrocity or the tergiversation of a political opponent. The subject is introduced thus:—"PRINCELY—OLD WORLD SPLENDORS ECLIPSED—BELMONT IN A BRILLIANT BLAZE OF GLORY—* * * THE CREME DE LA CREME OF THE SOCIETY OF THE PACIFIC COAST UNDER ONE ROOF—* * * EXTERIOR AND INTERIOR SCENES—HONOR TO WHOM HONOR IS DUE. THE RETURN TO THE CITY." After this for a "starter" the reader will probably be prepared for anything. The early history of the house, which was built by Mr. Ralston, is given with great minuteness and a floor plan is added to aid the letter-press in conveying to the reader an adequate idea of this charming residence where, as we are told, "Art contributed to the beauty of winding walks and embowered shades. Taste made lovely what before was rugged. Marble terraces and flights of steps made the surroundings of the building richly ornamented. From the tropics were brought exotics which were worth their weight in gold. Under glassed arches delicate flowers and sensitive plants expanded their beauties under the genial influence of a softened atmosphere. Fruit, which is tenderly nourished where birds of paradise spread their brilliant plumage, ripened in the conservatories and phenomenal colors which baffle the finest descriptive powers caressed leaf and stem. The scene when completed was beautiful. As Manfred exclaimed when he saw the gorgeous sunset, when he called so vainly on Astarte, "most beautiful," and to the then living and enjoying Ralston probably.

"The scene reminded him of other days,
Of skies more cloudless—moons of purer blaze,
Of nights more frequent—hearts that now—
No, no, the storm might break upon his brow
Unfelt, unparing, but a night like this—
A night of beauty, mocked such breast as his."

It is of course impossible for even an American journalist to continue in that strain at any very great length and after a few columns of it we are delicately introduced to

the culinary arrangements made for feeding the two thousand invited guests. In this department the reporters appear to have entered upon a true labour of love, although it is due to the representative of the *Post* to add that while he has passed on to describe the toilettes and personal appearance of the ladies present at great length, his *confrère* of the *Chronicle* lingered affectionately over the victuals in this style:—

"THE SUPPER—What it consisted of and how it was enjoyed—

'All day long the billows of war
Thundered'

From kitchen below to supper-room above. Jules Harlier, *chef de cuisine* of the Palace, was early on the scene and under his able leadership a small army of cooks, stewards, waiters and underlings filed in endless march and counter-march around and about the kitchen range, up and down stairs, to and from the supper-room. In the rear of the latter apartment, two commodious buildings had been utilized as pantries and store-room. Here the massed profusion of the banquet stores lay piled and filed and compiled in the masterly disorder of preconceived arrangement. The Barmecide feast in the Arabian Nights was recalled in a hundred incidents, traceable to the kitchen and its stanch commander. A glance through the kitchen-in-chief, on the main floor, was a picture for the illustrator of *L'Ile des Mirmidons*. Supper was served in the picture gallery and additional rooms built for the occasion at either end. The main room was elegantly decorated with festoons of laurel and ivy, which curved gracefully about the ceiling and chandeliers in all directions. The tables bore probably the richest, most diffuse and costly burden of delicacies ever gathered for the delectation of hosts of dancers. The *chef-de-cuisine* triumphs in the shape of boned capons and turkeys, ornate with all the various decorations known to the profession, rose in pyramids, arches and various architectural 'scapes unknown to any era, side by side with cathedrals, churches and structures of unique character in the richest of confectionery and the most elegant of shapes. The supper was served to the guests, who occupied scattered seats throughout the three rooms away from the tables. The entrée began soon after 11 o'clock. The press was something frightful, and though there were refreshments for 2000 it was long before any considerable fraction of that number obtained the desired opportunity. The lavishness of the spread &c."

After this let us pass on with the enterprising historian of the *Post* and visit the "*crème de la crème* of the female society of the Pacific Coast." We cannot understand how the *Chronicle* reporter could have remained with those "boned capons and turkeys" when in an adjoining apartment were to be found ladies described as, "pleasant and petite," "stylish," "queenly looking," "charming brunette," "winning brunette," "handsome and dark-eyed," "radiant blonde," "graceful blonde," etc., etc. A short time occupied in admiring these ladies would have made us reluctant for the—"GOOD NIGHT—A MOON LIGHT RIDE ON THE RAIL" back to the city. But all things, including Senator Sharon's "hop" and the *Post's* description must come to an end, so we now take leave of what must have been the greatest social success that San Francisco has ever witnessed.

MESSRS. SANO & Co. of Fukushima Ken have published a small brochure on the silk industry, intended for visitors to the silk exhibition now being held at the Town Hall, which contains some matters of general interest to others than those specially engaged in the silk trade, and from which we willingly make a few extracts. The pamphlet is written in very good English and is a striking contrast to many Japanese publications in our language; its compilation having evidently been entrusted to a foreigner. The author commences by acknowledging that the extraordinary profits realized by the silk producers when foreign trade first com-

menced in Yokohama, induced a most reckless production of silk and excessive adulteration in its quality. Whereas the provinces now comprising the Fukushima Ken were celebrated for the superior quality of their silks produced from the white cocoons of the spring crop, in the course of a few years more than half the product became of an inferior sort of pale cocoons—a mixture of spring and summer breeds. The mode of reeling was also changed, which resulted in obtaining nothing but apparent 'fineness,' at the sacrifice of other qualities. The old banking firm of Ono & Co. is credited with having been the first to introduce an improved method in 1873 and with having advanced some 40,000 yen to establish a new filature establishment at Nihonmatsu, also to have distributed newly devised hand-machines to the producers and to have supplied them with the best selected eggs. Ono's failure was a great loss to the district and many producers were disheartened, but in June, 1875, Sano & Company took up the business and they claim to have regained what had been lost in the way of improvement and progress owing to the bankruptcy of Ono & Co. They specify the silk prepared by their means and having their 'chop' as having a great reputation, (a point, by the way, which all advertisers do not fail to make of their own wares) and we are told that they now export all their silk direct to Europe and America: "In this we have aimed, 1stly, to get proper information in regard to the foreign requirements of our silk, and 2ndly, to get rid of the many inconveniences and disadvantages of depending upon the foreign merchants at Yokohama. The experiments have been tried at New York during the years 1876-77 through the aid of the late Kuanshōkiyoku (Bureau for promoting Commerce). In December 1877, an agent was dispatched to the same place by us, concurrently, with the Nihonmatsu Filature Company; and ever since that time all the silks produced by the Company have been directly exported to New York. According to the reports of the manufacturers of both Europe and America our silks are only surpassed by the best filature silk."

Such are Messrs. Sano & Co.'s opinions of their own trade and they further add: "Let us now turn our attention to the difference between the profits of the two kinds of silks—that of the old fashioned reeling and of the new. The silk of the new fashioned reeling commands at Yokohama, a price of \$150 per picul above that of the old. Taking then the whole amount of the products of this Ken alone at 400,000 lbs. per annum, the extra profit will amount to 600,000 dollars,—a magnificent reward for the efforts we have made in the course of but a few years!"

The writer of the pamphlet does not inform us whether a corresponding profit has been made by direct shipments to the 'magnificent reward' which would have resulted from a sale of the new fashioned reeling in Yokohama, but we will hope that no disappointment has occurred to mar his calculations. By conducting this trade, however, through their own agents, Sano & Co. will at least have gained the important profit of experience.

The Nihonmatsu Filature is worked by a water-wheel 8½ feet in diameter, it contains 168 basins and reels 2,300 kokus of cocoons per annum. It employs 200 female and 27 male workers many of whom are evidently unpaid, as the monthly wages amount only to 288 yen according to the pamphlet, or less than an average of 1.50 yen each per month! The cost of reeling one picul of raw silk in 1878-9 was 134 yen; the total production of the factory was 103 piculs, and the amount realized in New York was 98,798 yen.

Direct business with foreign countries is now the favorite theory with Japanese merchants, and an article we reproduce elsewhere again urges the same subject. The *Chiugai Bukka Shimpo* is not wrong in saying that the experiences derived by losses will prove of value to those incurring them, and

there can be no doubt that the Japanese merchants will not fail to gain their experience in that manner.

A NEW factor in diplomacy is suggested by the *Mainichi Shimbun* in an article we translate this week, headed "The Spirit of Union." Our native contemporary argues for an alliance between Japan, China, Corea, India and other nations of the East to withstand the power of Western nations 'however courageously they may exercise it' and, if we correctly understand the meaning of part of the article, the writer suggests that Japan is the only country capable of drawing a line of division on the top of the Himalaya mountains and equalizing the power possessed by the nations on either side of it! We must indeed congratulate our contemporary on the broadness of its views if not upon the common sense of its arguments. One simile, however, it adduces is not a bad one: "The public opinion of a nation is its substance; whilst the system of its government, manners, and customs is its shadow;" but we must remind the *Mainichi* Editor that every scientific law obliges a substance to change before its shadow can be affected; a point which, in his next sentence, he appears to overlook. It must remain a matter for regret that the native press continues to write so ignorantly and at the same time so abusively of foreign intercourse and foreign intentions in the East, but our object in reproducing these effusions of ignorance and abuse is gained by showing what some of the present public writers say, and in hoping that ere long we shall be able to point to a difference in their opinions with those they now profess.

THE series of articles which lately appeared in this Review under the heading of 'Extra-territoriality in Japan' have now been published by the author, Mr. E. T. Sheppard, in pamphlet form, with some addition to the text of the concluding article since it appeared in our columns. We are glad to have been the means of giving publicity to arguments on this important subject which cannot fail to commend themselves to all impartial students of the question as closely stated and logically arranged. The position taken up by the author is very plain, and he has justly made it a strong one by copious reference to authorities upon each point adduced. The question is not one that can be decided by assertion or even eloquence, still less by personal abuse or invective. Argument must be met by argument, and we feel convinced that no sensible person will be satisfied that the position we have taken by the publication of Mr. Sheppard's articles is untenable until the arguments and authorities stated by him have been shown to be wrong. An attempt has been made to throw discredit upon these articles from the known fact of their author's professional employment under the Japanese Government. Neither more nor less than this could have been expected from the paper which contained this criticism; but we are convinced that all thoughtful people will be able better to discriminate the honest purpose and sincere conviction of a writer who has studied the subject; they will be able to appreciate when a man's heart is engaged in his work and they will not be misled by any insinuations from treating his essay upon its own merits.

THE late Lord Lytton wrote a novel known wherever English literature has penetrated having for its title "What will he do with it?" In England at present one of the great questions of public interest is, "What shall we do with him?" The him referred to being ex-King Cetewayo, who, now that he has been "hunted down" and captured appears to be quite as much a bone of contention amongst the opposing political parties as he was when, in the field, and in the full exercise of his sovereign power, he successfully defied the

efforts of Lord Chelmsford and the strong army under his command. To use the language of one writer on the subject "English opinion will not endure any harsh treatment of the captured King beyond what is absolutely necessary. Cetewayo is no revolted subject of ours; he has been guilty of no treachery or breach of faith, and his subjects have carried on war against us in a manner (according to the accepted principles of such warfare) strictly legitimate. They may, indeed, have given no quarter, but that is all in the day's work of savage warfare, and, to speak without cant, it is probable that our men showed themselves quite able to play the same game. To exact vengeance for Isandlwana by punishing Cetewayo would be, to put the matter shortly, a cowardly and abominable crime. Almost all Englishmen feel very great doubt whether the war itself was not wholly unnecessary and unjust. There is not, we trust, a single Englishman, except, perhaps, a Innatic at large, who does not feel that Cetewayo deserves respectful and favourable treatment." It has been proposed amongst other suggestions to send the ex-King to the Mauritius and there keep him in honourable detention with his family and attendants on a moderate pension, and he could then be restored, whenever circumstances would permit, to his native land. Another idea is to imprison him in Robben Island off the Cape, after the example of Langalibalele the Natal chief, but it seems to be very generally conceded, that it would be bad policy as well as extremely unjust to make his imprisonment rigorous and so force every South-African chief to the conviction that when once he placed himself in armed opposition to England, his only alternative was victory or death.

FROM a recent number of the *Indian Agriculturist* we learn some interesting details of the cultivation of tea in the north-western provinces of British India. The industry was first established in the year 1844 and has attained large proportions, the principal consumers being the natives of Thibet, Turkistan and Cabul, all of whom are sufficiently wealthy to afford the luxury being great patrons of green tea the description principally made. The business has hitherto been carried on by Cabulee merchants who trade between the north-western provinces of India and the vast countries of Central Asia. The caravans come down laden principally with wool and return with tea and general merchandise. The manner in which the trade is conducted is thus described:—

"During the first week of Tea-making the Cabulee merchants—who have established their head-quarters at Umritsur—visit the gardens to make their bargains for the season. They ask the manager to make samples of the several classes of Green Tea, viz Young Hyson, Hyson, No. 1 Gunpowder, and No. 2 Gunpowder. These are the classes they want to buy. There are however usually two other classes which may be called the accidents of production; they are, Hyson Skin, and Dust—Hyson Skin corresponding to the Boba of Black Tea. These two latter are also purchased, but at half price.

The usual percentages made are a 75 per cent. of the best four classes, and 25 per cent. of the others. We will suppose that, after a couple of day's discussion fourteen annas is fixed upon as the price, the samples are halved, the merchant keeping one set, and the manager the other, they are sealed by both parties, and are kept in bottles to keep out the effects of damp. We have now got fourteen annas as the price with 75 per cent. of good Tea, and 25 per cent. at half price: this represents an average of twelve and a quarter annas per pound, in bulk. It is estimated that the garden will produce that season, say one lakh of pounds, the total price will therefore be about Rs. 76,500. The merchant on signing the agreement to take the entire season's crop deposits with the manager 10 per cent. of the above amount, as security, which sum lies with the manager till the close of the contract when it is credited to the last payment.

When a quantity of Tea is ready,—such quantity being stipulated in the agreement—the manager gives the merchant notice that so many thousand pounds are ready, when he must take delivery of the same within seven days. The merchant comes, bringing his own carts, canvas bags and men. The Tea is weighed out, and packed in cloth bags containing 200 lbs. each; these are encased in strong gunny bags carefully sewn up and packed on the carts; before the departure of which, all the

Tea is paid for on the nail, and thus the business goes on. The merchant sends these bags to Umritsur, where the Tea is unpacked and carefully refired; during the refiring we are sorry to say, they usually add colouring matter, as sulphate of copper and gypsum. The Tea is then packed in small water-proof bags, each containing 20 pounds. Two of these are slung like panniers across the back of a sheep or goat, and in this fashion the Tea is conveyed across the Himalayan passes."

THE Hongkong papers of the 7th instant, contain a full report of an important meeting of the Legislative Council of the Colony, held on the previous day. The proceedings were of special interest as thoroughly discussing a question which for some time has caused a divergence of opinion between the Governor and an important section of the Council, and which has been the cause of no small amount of angry discussion in the Colonial press—the question of 'Deportation.' The subject was brought forward by the Hon. W. Keswick who referred at length to the various cases in which he considered that undue leniency had been shown towards Chinese criminals, and recapitulated what may be termed the causes of complaint of a large section of the Hongkong community against the policy of the Governor. His Excellency replied at length upon the subject, after which the debate was closed by the following two speeches, which we reproduce at length as forming the termination of this discussion and, we trust, the termination of what has been an unpleasant dispute in the Colony:—

Hon. W. KESWICK.—It is a source of great satisfaction to me that I have brought forward this subject to-day. It has enabled your Excellency to make a statement which I am sure will be received with much pleasure. My object in bringing forward these documents was to correct any misapprehensions I might have as to the way in which the cases had been dealt with and the statement of your Excellency at the last meeting. Your Excellency appears to consider that my views with regard to many of the subjects in connection with punishment in Hongkong are of a character different from your own. I am happy to say that in most of them, though your Excellency is of a different opinion, my views and support have been with you. It is not often I make remarks on subjects like this. When I do make them it is with the object of obtaining information and correcting misapprehensions. I am not aware I have said anything but what was reasonably to be concluded from the reading of the papers which were laid upon the table. With regard to deportation, I have the strongest possible feeling it should be used most carefully. I don't for one moment wish to differ from the remarks your Excellency has made, with somewhat of a personal feeling, to myself. There is no doubt that many criminals are transported to the Kowloon shore and there plot plans to the injury of the colony. In making the remarks I did in introducing this subject, I did so with no desire to cast censure, but with a view of showing I thought there was a discrepancy between the acts and the words used when we last met. Much that has been said has dispelled that opinion—(hear, hear)—and I think further the change of system in the Police is one altogether to be approved of; and if your Excellency thinks I prefer deportation and the punishment of crime to its prevention it is a great error. There is no more loyal supporter of law and order in the colony than myself, though I myself say it, and I am sure no policy advocated by me will have the effect your Excellency suggested of depreciating property, diminishing population, or increasing crime. On the contrary, I would have such sanitary improvements as are required carried out, and that splendid balance which your Excellency referred to—and which it is very satisfactory to know exists—I should spend, because far more than \$20,000 would be gained by having that money judiciously spent in improving the Colony, bringing water, and providing for other sanitary necessities. My policy, your Excellency, if I have one, is not that of interfering with the legitimate action of men, be they Chinese or Europeans, but I should like to see pursued a policy of firmness, of perfect disinterested punishment when punishment is due, that there should be no leniency shown to criminals when carrying out sentences; and when I alluded to some of the cases in which criminals have been cast adrift on the colony I thought, as I think now, there might have been devised—devised, perhaps, is not the correct word—but that laws might have been put in motion by which the men could be deported under a proper system—(Hear, hear.)

The CHIEF JUSTICE.—This debate has certainly terminated in a way on which, I think, I may congratulate this assembly. That questions should be raised is, I believe, the healthiest thing that can happen in any Colony or any State, when they are raised in the way in which the hon. member (Mr. Keswick)

has now raised them. I did not catch a word which I think ought not to have been used in fair debate, and I must say, on the other hand, that I think His Excellency the Governor, though the subject certainly in some respects touched him pretty closely, has avoided any language stronger than the occasion should call for.—(Hear, hear.) I will not myself go into any of the questions that have been raised, except to say that I believe that, with regard to the question of the legality of deportation, I am responsible; but it is my business, sitting where I do in that Court, to take care that, punish men how you will, they shall only be punished according to law. And if I cannot punish them as I think they deserve, if I think the law will not allow it, I have only to regret it, and say they must go unpunished. It is for this Council afterwards to say whether or not remedies shall be devised for any insufficiency of the law, though I believe, on the whole, the law pretty clearly provides for every wrong, a remedy. I don't go into any of the questions but I believe I am responsible for a good deal that has come out.—(Hear, hear.) In the decision that the Court took I was certainly annoyed to find that deportation in the way it had been carried out was most illegal, and when it came before me I did not hesitate to say so. I am perfectly satisfied with the way in which the matter is dealt with now. I don't say there are not exceptional cases, but I must say there is no exceptional case on which the Governor does not do me the honour to ask the opinion of the Court. But it is no part of the business of the Judge to give advice, though he may do so if asked. If a man is sent to prison the responsibility of keeping him there, or the responsibility of letting him out early or late rests with the Executive. The Judiciary ought never to express an opinion upon the propriety or impropriety of any conduct of the Executive. This is not my opinion; I don't in these questions generally give my own; I generally rest my opinion on that of eminent men; and though I go to a Colony for it, a Colony is perhaps the best for the purpose, and in Melbourne that was said by one of the best Judges I know. Ever since I read what he said I have felt it is not the place of the Judicial Department to pass an opinion upon the acts of the Executive. They have various reasons for what they do, as to which the Judiciary ought not, after having passed sentence on a prisoner, to pass a sentence on the changed sentence which the Executive may pass. A Judge may be asked what reasons there are why mercy should not be shown, where there are reasons presented why mercy should be shown, and I am sure His Excellency will always find me ready to give advice to the Executive in such cases.

REUTER'S TELEGRAMS.

LONDON, November, 20th.

The *Golos* announces, that the Porte has empowered vessels of those powers opposed to British domination in Turkey, to enter the sea of Marmora.

LONDON, November 18th, 1879.

YOKOHAMA: SATURDAY, NOVEMBER 22nd, 1879.

JAPANESE ERA 2539, MEIJI 12TH YEAR, 11TH MONTH, 22ND DAY, DO-YO-BI.

NOTES OF THE WEEK.

BIRTH.

November 22nd, 1879, at the Folly, No. 109 Bluff, Yokohama, the wife of Mr. CHARLES D. MOSS, of a son.

DEATHS.

At Yokohama, on the 18th November, Captain H. E. Smith, Commander, P and O. S. N. Co.'s steamer *Malacca*.

At Yokohama, on the 20th instant, WILLIAM GEORGE GALDIE, Chief Officer, P. and O. S. N. Co.'s steamer *Malacca*.

The *Belgie* arrived from San Francisco on Sunday last, at 2 a.m., with American dates to 25th ultimum; she left this port for Hongkong on the Tuesday following, at daylight, and two days afterwards the M. M. steamer *Volga* proceeded on the same voyage, with the English and European Mails. The Shanghai and way port steamers have arrived and departed as usual.

The M. M. Str. *Tanais*, with the Marseilles mails of the 5th October, left Hongkong, on Saturday, the 15th instant, at 6 p.m.

We learn that the *Sunda*, with the European mails of the 10th October, left Hongkong for this port on Tuesday, the 8th inst., at 5 p.m., three days in advance of contract time.

Captain Taylor, late of the Japanese steamer *Hodji Maru*, reports that on the passage from Hiogo to Kagoshima, the vessel touched on a sunken rock, not laid down on any of the charts, in lat. 31.38, about half a mile from the shore of Hiogo.

The *Hiroshima Maru* was towed to Yokosuka on Monday last, where she will undergo an overhaul. The *Sumida Maru* has taken her place on the Shanghai line for the present.

From the different accounts which have appeared, very heavy weather seems to have been experienced down South. The *Hongkong Daily Press*, referring to the passage of the British steamer *Glenfalloch*, Captain Taylor, which arrived there on Monday night (10th instant) from Singapore, reports from that place to lat. 11.22 she had fine weather with heavy cross sea; thence to arrival heavy gales varying from the north-east to north-north-west, accompanied by much rain and high confused sea. Also had very strong south-west current for the last week. For one week the sun was obscured. Between the 5th and 9th instants the sea carried away the after wheel gratings, compass and standards, port life boat, with all the checks, side light screens, steam pipe casing fore and aft the deck, standard side light, all the weather cloths on the bridge, and completely demolished the port cutter and gangway ladder.

A feeling of universal regret has been experienced during the week by the receipt of a telegram announcing the death of Lady Parkes, on the 12th instant. This news has been received with the greatest sorrow by the communities of Yokohama and Tokio, with whom Lady Parkes had for so many years identified herself, and with the greatest sympathy for Sir Harry Parkes and his family in their present bereavement. It is exactly one year since the residents here and in the Capital showed, in a public manner, their appreciation of Lady Parkes' amiable character when wishing her God-speed on a voyage which every one then hoped would soon again be repeated. The sympathy for Sir Harry Parkes is intensified by the know-

ledge that he could not have reached England before this sad event took place.

As a token of respect to the memory of her ladyship the flags of all the Legations and Consulates were at half-mast during the whole of Wednesday.

The last voyage of the P. & O. steamer *Malacca* from Hongkong was indeed a disastrous one, and the death of her Commander and Chief Officer, within a week of their safe arrival in port, will leave a painful record of the severity of the gale which kept her ten days at sea. Captain Smith had been suffering from ill health for some time and, acting upon an already enfeebled frame, the exposure experienced during the voyage finally induced apoplexy, from which he died on the 18th instant. Mr. Gallie, the Chief Officer, had, it appears, contracted fever in Hongkong but was enabled to carry out his severe duties during the voyage and only invalidated after the steamer had been brought safely to anchor under his charge. His symptoms were not for some time considered dangerous, but he also succumbed on the 20th instant. We have already recorded the death of our former fellow resident, Mr. Pistorius, on board the *Malacca*, immediately after her departure from Hongkong, and we now add the result of the inquiry which was held by H. M. Consul into the circumstances:—

"I find that Peter Edward Pistorius, a Dutch subject, died at sea on the 4th November, 1879, on board the P. & O. steamer *Malacca* of London (official No. 54,693) during the voyage from Hongkong to Yokohama, and that the cause of death was the bursting of an abscess on the liver."

M. DONMEN,
Acting Consul.

His Excellency Mori Arinori, the Japanese minister to England, accompanied by Madame Mori, left for his post in the French mail steamer *Volga*, on Thursday last. It is understood that the Ambassador takes with him to London all the necessary details to enable him to negotiate there the revision of the British treaty and tariff. The newspapers have also informed us that Mr. Sameshima has proceeded from Paris to Berne in order to arrange the Swiss treaty, and that it is contemplated sending a Minister to Vienna and Rome to conduct similar negotiations at those Courts.

With the last few months we have been accumulating great store of knowledge on Archaeology. Professor Morse and Mr. von Siebold have both added to our stock of information, and now Professor Milne caps all previous discoveries of stone implements, shell-heaps and *tibia*, to say nothing of signs of pre-historic cannibalism, by telling us (through the Asiatic Society) of some runic characters discovered by him in the North. It is evident that the learned professor has not made up his mind whether to treat the discovery as a joke perpetrated by some fan-loving sceptic upon the credulity of science, or to announce it as the most important archaeological discovery yet made in Japan. One or the other it must be, and we hope that we shall yet hear more of these 'runic' characters at Otaru now that Mr. Milne has drawn attention to them. The learned societies, both foreign and native, should at once charter a Mitau Bishi Steamer to make an excursion to the place and hold a formal inquest upon these remains. Either we are on the threshold of a great scientific discovery, on a par with that of the 'Rosetta stone,' and have here signs of the passage through Japan of the Indo-Tenton tribes, or a relic of Roman or Phœnician life—or we have the prospect of a joke which has been unsurpassed since the time of the immortal Pickwick.

Reuter's telegrams during the past few weeks have been most conflicting, but they must be taken as being the index of no slight political complication at home. Doubtless the report as to the occupation of Merv by a Russian force held as good in London for a few days as it did here; doubtless a change of Russian Ambassadors at the English Court was at first construed into the serious portent of a recall; and doubtless events have occurred in Europe which have made this uneasiness possible, the full nature of which will not, however, be known to us for some time longer. In the meantime, conjecture must take the place of facts whilst we can not be without alarm at the prospects apparently existing of the peace of Europe being again disturbed. Alliances between Emperors have not as a rule been conducive to the peace of the world; and diplomatists will scarcely consider that the pact lately concluded between

Austria and Germany, to the exclusion of Russia, will have a more peaceful tendency than the former famous alliance of the three Emperors. Nor can the course of events in Central Asia and in Asia Minor be looked upon as hopeful that the 'Eastern question' has yet met its final solution. The advance of a large Russian force in the direction of Merv and the outbreak in Cabul and Herat before it was known that any serious check had been experienced by the Russian army, has justly or unjustly led to the conclusion that the hope, if not the promise, of Russian support had induced the Afghans to rise against the English power. And we must gather from the telegrams already to hand, that the explanations which have been exchanged between Russia and England on the subject of their mutual interests in that part of the world have not been satisfactory. The present position of affairs in Central Asia alone is, therefore, sufficient to cause anxiety that England is likely to have more upon her hands than the mere punishment of the Afghan mutineers. Again, although the despatch of the fleet to the Gulf of Smyrna has been countermanded and we have not yet actually heard of an Austrian fleet reaching Salonica, the cause of the orders was clearly that a crisis had again occurred in Turkish Affairs.

Five of the Great Powers are now known to be taking part in the present tension of European politics: Turkey as the centre of these complications; Russia as her nearest and most attentive neighbour; Austria jealous of any increase to Russia's power; Germany as the new ally of Austria; and England with her own independent policy of maintaining the integrity of what has been left to Turkey and of upholding her own Indian Empire. It is difficult to think that a quarrel now between either two of these Powers can fail to involve the others in the same dispute, whilst the main hope of any such quarrel being avoided must rest solely upon the formidable alliance of England, Germany, Austria and Turkey whose separate interests would make them combine against Russia. In face of such a combination we cannot think that Russia would provoke a war, and did those five Powers comprise the whole of European influence, we might look upon the peace of Europe as secured for the present; from the mere circumstance that four of them were in alliance. But France and Italy have yet to be considered and the question is, would they remain neutral, and if not neutral which side would they take? Upon the answer to this question and the knowledge Russia may have of the intentions of these two Powers, depends the prospects of war or peace during the coming year.

We are glad to notice that M. Harmand, the editor of the *Courrier du Japon* is publishing as a brochure the excellent descriptive account of the *Vega's* voyage of discovery which has lately appeared in the columns of his paper. Many people will be glad of this opportunity of preserving in a permanent form a well-written record of Professor Nordenskjöld's memorable expedition.

We read in the home papers, that Mr. W. W. Cargill, formerly Director of Railways in Japan, has proposed himself as candidate for Parliamentary honors as the representative of Barnstaple.

The *Philadelphia Weekly Press* relates the following incident connected with the *Vega's* arrival in Yokohama:—

"Professor Nordenskjöld is a man of few words. When he got to Yokohama the other day he telegraphed his congratulations to the patron of his expedition, the King of Sweden; then he sent this pithy little message to his proud wife: 'Anna Nordenskjöld, Stockholm—All well. Adolph.' Curiously enough, both telegrams arrived at Stockholm at exactly the same hour as they were handed in at Yokohama, the seven hours which the transmission occupied representing exactly the difference of time at the respective places.

A serious riot took place in Fushimi, on the 9th instant, between some of the soldiers of the garrison stationed there and the police. The temple celebration was being held and some twenty police inspectors and two hundred police were on duty to preserve order. About four o'clock in the afternoon, a party of five or six soldiers commenced annoying one of the policemen and although the latter refrained from giving any provocation, four or five hundred soldiers who were at the temple, formed into a body and made an indiscriminate attack

upon the police. News of the affray soon reached the barracks and two companies of men were got under arms and marched to the scene. They quickly quelled the disturbance, but not until four soldiers and eighteen policemen had been injured, three of them severely.

A native paper states, that the Colonization Commission contemplate establishing a system to form a check upon the present indiscriminate slaughter of seals at the Kurile Islands. It is proposed to have premises for preparing the skins in Yezo and for selling them in Tokio, and to allow no seals to be killed, except by hunters employed by Government.

Past experience has not led the public to expect invariable discretion and good taste in all the editorial comments of the *Japan Gazette*; but they were probably not prepared for so great a violation of both those principles as was displayed in one of its 'Notes' yesterday evening. If Hongkong and Shanghai have been 'shocked' as we are now told, we are convinced that a still stronger feeling will exist here against the publication of indefinite and vague allusions to 'serious and scandalous rumors' which are so worded as to create them. If the writer could not say more 'twere better he had held his peace.

"An object of curiosity and amusement to visitors" writes the *Sydney Mail* in an account of the Tasmanian Court at the Sydney Exhibition, "is the original proclamation issued to the natives of Tasmania by Governor Davey in 1816. It is a board about the size of an ordinary school slate, illustrating, by means of a few rude sketches, the intention of the new comers. First, in order to express the desire that the natives and all the white men should live in peace and amity, a white man and a native are linked together, a native child is in company with a white child, a white woman is nursing a black child, and a black woman is nursing a white child. Below this sketch there is another showing a native spearing a settler, and the native hanging by the neck to a tree, in consequence, with the Governor and two or three soldiers standing by. Last of all, a settler hangs upon the tree, thus showing that it was intended to mete out justice to white and black alike."

The Sanitary Bureau of the Home Department has issued its usual return of cholera statistics. The present compilation embraces the period from the commencement of the epidemic to the 15th instant, and shows that in the whole empire 163,422 persons have been attacked by cholera, 95,510 had died, 44,015 recovered, and that there were, on the 15th instant, 23,897 patients still under treatment in the various hospitals and lazarets throughout the country. As compared with the return up to the 1st instant, it is pleasing to notice a considerable decrease 2,737—in the number of patients; the death rate also is slightly less, 58.44 against 58.49.

We are glad to notice that another opportunity will be afforded us of seeing Miss Elcia May and Mr. Fairclough before their departure from Yokohama. An attractive programme has been prepared for Friday night next, the 28th instant, when Miss May's great powers as a vocalist will have full scope in two songs and in the *Miserere* scene from *Il Trovatore*. Mr. J. R. Black gives his valuable assistance to the entertainment, as do also the 'favorite amateurs of the Amateur Dramatic corps.'

The mysteries of a lady's toilette are thus revealed by the lady reporter to one of the San Francisco newspapers:—

"Yesterday the reporter called upon a lady with whom she had been acquainted some time, and explained that she had heard she was going to a matinee, and that she desired to witness the modus operandi to which a lady was subjected before appearing among the fashionables. Consent was accorded, provided the name of the lady was withheld from publication. After a few moments of pleasant and friendly chat upon subjects always welcome to the female mind—dress and the newest fashions—the process was commenced.

THE FACE

Was first bathed in some warm water, into which had been infused a few drops of atropia—commonly known as belladonna. This is used to dilate the pupils of the eyes. After this a pearly-white liquid was applied to the face with a fine, soft sponge. This preparation contains flake-white, glycerine, bismuth, benzoin, gum arabic, drop chalk, chrome, carmine, alcohol and water. When this application was dry, some *blanc de perle* powder was put on with a fine piece of chamois leather, and a slight touch of rouge was applied over the eyelids and upon the temples and upper part of the cheeks. Then the vicinity of the temples was touched up with a yellowish pigment, the eyelashes and eyebrows were blackened with India ink, applied with the smallest

imaginable brush; brows which are not originally of a classical shape are beautifully arched with the brush so as almost to defy detection, except upon the closest scrutiny, and a slight flesh-tint was artistically applied to the nostrils and around the ears, producing a shell-like appearance. Next in order of attention came the lips, whose naturally red tint was heightened by an application of vermeil. A small camel's-hair pencil, filled with a bluish coloring matter, then heightened the effect of the delicate, blue veins showing through the semi-transparent skin. The finishing touch was then put to the face by placing a piece of court-plaster about an eighth of an inch square near one corner of the mouth. The arms were now looked after. They were covered with a French cream, then delicately powdered. Next in order were

THE HANDS,

Naturally so delicate and beautiful as to seem to preclude the possibility of anything being done to heighten their charms. Not so. They had been eased in cosmetic gloves over night. *Crème de rellentine* was then softly rubbed over them. The nails were pared with a peculiar cutter; they were filed and scraped and a polishing powder applied to them. As in the face, the effect of the veins was increased by the application of the blue brush. Next came *poudre de rellentine*, and the work upon the hands was completed. As the hat was to be worn, comparatively little attention was paid to the *coiffure*—a simple dressing of braids in front of the hat and crimps over the forehead being deemed sufficient. But as a few gray hairs had made their appearance, an application of brown cosmetic caused them to disappear for the time being. Elegant ear-pendants were inserted in the lobes of the ears, and the lady was now ready to be enrobed in the tight-fitting princess walking costume, which operation was finally after no little difficulty accomplished by the efforts of her indefatigable maid. The high-heeled French buttoned boots encased the tiny feet—whether naturally narrow or otherwise the reporter is not able to say, as the beautiful silken hose had already been donned prior to her arrival. The hat was adjusted, and the six-buttoned gloves, after much difficulty, were drawn on, leaving the two lower buttons unfastened, for though they were No 6½, 6½ would have been a better fit. The wrists were encircled by rich bracelets over the long gloves. The costly bit of lace y. kept a *mouchoir de poche* was then perfumed with one of Lubin's most delicate extracts, a few cardamom seeds and petals of cashew to sweeten the breath were dropped into the porte-monnaie; the silver *pinignetta* with smelling-salts was suspended to the *chateleins*, and the feather-tipped ivory fan attached to the bead chain and hung around the waist. The parasol was then taken in the hand, but more as an ornament than for use, and as a means of occupying the hands gracefully, for it was a cloudy day. She was now all ready to ally forth to "see and be seen." But before departing a glass of *crème de cognac* was imbibed to make the eyes sparkle and exhilarate the spirits."

ASIATIC SOCIETY OF JAPAN.

TOKIYO MEETING.

A General Meeting of this Society was held at the Shôheikwan, Seidô, Tôkiyô, on Tuesday, November 11th, Dr. Divers, President, in the chair.

The recording secretary reported that Dr. Edward Divers, formerly Vice-President for Tôkiyô, had been elected President of the Society, to fill the vacancy caused by the resignation of Dr. Syle; and that Mr. W. G. Aston had been elected Vice-President for Tôkiyô, in room of Dr. Divers; also that Dr. Joseph Edkins, of Peking, had been elected an Honorary Member.

The librarian reported the donation to the Society, by the Rev. J. L. Amerman, of a copy of the "Narrative of Perry's Expedition to Japan."

Dr. H. Faulds contributed a "Note on the Ningiyoseki of Nishikigawa," and laid some specimens on the table. These are little stone 'images' sold to pilgrims in boxes containing seven of them to represent the seven Japanese gods of prosperity. They are believed by the superstitious to be produced spontaneously but have been found to be the lava cases of a yet undescribed insect whose habitat is on the river Nishikigawa. Priestly hands had added to the likeness by sticking little stones, to represent the head, on the upper and open ends of these cases.

A "Note on a proposed new arrangement of the Korean Alphabet" was read by Mr. W. G. Aston. The Korean letters are formed systematically, those pronounced by the same organ containing a common element, all the labials for instance having a square for base, all the dentals an angle opening upwards and to the right, etc. The order suggested by Mr. Aston is based on this system, which was evidently present to the mind of the original inventor. He believed that it would be found more convenient in many respects, and hoped that other students might be able to adopt it.

Mr. John Milne then read a paper "On Prehistoric remains from Hakodate and Otaru, with general remarks on the Stone Age of Japan," of which the following is an abstract, furnished by the author. During the reading of his paper Mr. Milne exhibited a large number of the objects he had discovered.

Mr. Milne commenced his paper by giving an account of the various prehistoric relics which he had discovered at Otaru and Hakodate during the preceding summer.

The remains which were obtained at Otaru were as follows.

Arrow Heads	135
Scrapers	3
Awls	1

Axes.....	9
Grinding stones.....	1
Vases.....	1
Flakes of Obsidian and other stone, together with fragments of Pottery,—several hundreds.	

At Hakodate a large number of similar objects were obtained. Looked at generally the remains from Hakodate appeared to be much older than those from Otaru. This was testified by the great roughness of the Hakodate implements, their glossy surface which is so indicative of age, and also by the depth at which they were found,—the implements at Otaru being found almost in the surface of the ground, whilst those at Hakodate were buried at a depth of several feet. Such a conclusion was borne out by the fact that the aborigines of Yezo were probably driven away from Hakodate long before they were compelled to leave Otaru, and it is therefore at this latter place that the more recent work has been found. Besides the implements and pottery which were found, a number of pits were examined, which the present inhabitants of Otaru believe once to have been the tenements of a race of dwarfs. Although there are in Yezo many collections of pits which were without doubt at one time used as habitations, these pits at Otaru Mr. Milne is inclined to regard (until some signs of their former occupants has been discovered), as nothing more than holes which have been formed during agricultural processes, perhaps for example, by the digging out of large stones, or taking out the stumps of old trees. The most interesting objects however at Otaru are some inscriptions cut upon the cliffs upon the N.W. side of the bay. These inscriptions which must have once been very extensive, but which have been reduced by the breaking down or cutting away of the cliff, cover a slab of rock about 8 feet long and 2 feet broad. Several of the characters have a general likeness to Runio, for example one triangularly shaped figure looks like a Runic M. It has been suggested that they might perhaps be ancient Chinese. Mr. Milne however thinks that if they do not prove to be of greater antiquity than the stone described by the Archaeological Society in the *Pickwick* papers, which proved to be the calligraphy of an illiterate named Bill Stumps, they may perhaps be traced to the people who have left so many indications of themselves in the form of flint implements, shell heaps, and fragments of pottery, in the neighbourhood,—which people in every probability appear to have been the Ainos. The grinding stones which are referred to in the list of the discoveries at Otaru are repeated amongst the collections from Hakodate. These are simply blocks and boulders of rock which have been rubbed away into concave surfaces, as if by the sharpening of some implement upon them. On a piece of ground at Hakodate, where during the last year large excavations had been dug whilst making the public garden, a large number of these stones have been discovered. Looking at the remains which have been found in Yezo, from a general point of view, they appear to be both newer and more numerous than similar remains which have been found in various parts of Nippon.

The latter portion of Mr. Milne's paper was for the most part a summary of a longer paper on a similar subject which he had previously written and which was read at the last meeting of the British Association. The object in giving this epitome was to correlate the Yezo discoveries with those of Nippon and at the same time to found thereon several general conclusions. This epitome consisted of a brief enumeration of the principle facts which were known about Shell-Heaps or Kitchen-Middens, Tumuli, Caves, and Pit Dwellings. From some long extracts taken from a modern book called the "*Kekkioko*" a number of facts were brought forward about the cave dwellers who in early times seem to have inhabited Japan. These people, if the extracts which are taken from the *Kojiki* and other ancient books are true, must at one time have even covered Kiuohiu. They are described as being very-barbarous and to have been almost continually at war with the Japanese. The pit dwellings are collections of pits which Mr. Milne examined at Nemoro. Their existence was first indicated by Mr. Thomas Blakiston, of Hakodate, who has met with many similar collections in various parts of Yezo. From the similarity of these pits to pits with roofs on, which Mr. Milne saw in the Northern Kuriles and which a few years ago were inhabited by Alutes, it is probable that these Alutes or Kamschadles once extended further south and perhaps inhabited Yezo. One general conclusion which Mr. Milne appears to have come to is, that the Kitchen-Middens, which are found in many parts of Japan, are of Aino origin and not pre-Aino as has been supposed by Prof. Morse, the careful investigator of the shell heaps at Omori. One objection to the conclusion that these heaps are of Aino origin which Prof. Morse has brought forward, is that the Ainos are *not* potmakers and if they ever were, it is difficult to understand how they ever lost such an art. From old books, however, it would seem that the Ainos once *were* pot-makers, and drawings of their pots and detailed descriptions of their manufacture, even so late as the year 1,800, are to be seen and read about. From the observations

of Mr. Charles Maries, who spent several months amongst the Ainos on the east coast of Yezo, it is not at all improbable that some of the Ainos of the present day still continue this manufacture. This observation, however, needs further confirmation. When it is remembered that the Ainos have been coming day by day into closer contact with the Japanese from whom they could obtain pots which were both cheaper and of better manufacture than those which they produced themselves, it is easier to imagine how they lost the art of pottery than it is to imagine how the Venetians lost the art of making glass. Another of Prof. Morse's arguments that the shell heaps were not of Aino origin is that they contain traces of cannibalism and as the Ainos appear always to have been so gentle in their character it is almost impossible to suppose them to have been ever guilty of so gross an act as eating their brethren. Mr. Milne however thinks that if Prof. Morse had consulted some of the numerous works in which the Ainos are described, he would have formed a very different opinion of what the former character of the Ainos may have been. Mr. Henry von Siebold tells us how, by way of punishment, the Ainos would boil the arms of their victims, slice their noses, &c. When we read this and then when we remember that we are speaking of the Ainos who lived in "those early ages of the world when the first impulse of man," as Prof. Huxley says was "not to love his neighbour, but to eat him," we see we have not to carry our imagination very far beyond the depths to which written histories take us, to see the Ainos as happy over a dainty bit of human leg as Europeans are over a slice of chicken. Shell heaps in many other parts of the world show traces of cannibalism and the traces which the Ainos appear to have left behind them are not a bit more suspicious than some of those which are to be found in "Bonny Scotland," where now-a-days it would be sin enough to kill a crow on Sunday, never name to eat a man. The pottery found in the shell heaps in Japan is similar to that found in them in Yezo and from the similarity of the markings on it to the markings and designs made by the Ainos of the present day upon their implements and utensils, it might be of Aino origin. That flint implements should be found with pottery does not militate against its being of Aino origin, as the Ainos, even so late as the commencement of the 19th century, appear to have still manufactured similar weapons. From history it would seem that certainly even so late as the 7th and 8th century and in the north even still later, Ainos have been living in Nippon. It may also be remarked that many traces of them are left on the names of places terminating the words *betsi* and *nai*. By comparing together a number of old maps of the years 1028, 1459, 1538, 1629 depicting the bay of Yedo, and then comparing these with a modern map of Yedo, the rapid rate at which the bay has been silting up is to be seen. For example in the year 1459 Anakusa was on the sea shore. In some places the coast line seems to have been advancing at an average rate of 30 feet per annum, at other places it has been only 8 feet per annum, whilst at others only 3 feet per annum. On the Tamagawa delta the rate of advance would appear to have been even still more rapid than it has been at Yedo. If now the Omori shell heap be taken, and it be imagined that it was formed like other shell heaps upon the sea shore, as it is only about 800 yards from the sea of the present day, if the rate of advance has been 3 feet per annum the heap can not be much more than 800 years old. If the rate of advance has been only 1 foot per annum the age will be about 2,400 years. That the heap is 800 or 1,000 years old is, however, the more probable and it is thus seen that geological reason supports the facts of history, namely that about 800 or 1,000 years ago, when the Omori heap was formed, Ainos or their representatives were living in the land.

The President, in thanking Mr. Milne for his very valuable communication, asked for more information as to the evidence of land upheaval and silting which had been mentioned in the paper, and whether there was any evidence that up-heaval was now going on in this part of the island.

Mr. Aston expressed his gratification that so much attention had been paid during the last few years to the important subject of the Prehistoric remains found in Japan. He was glad to observe a tendency to diminish the antiquity which had been earlier assigned to these remains by some of the writers on this subject. Civilization is in Japan a product of much more recent growth than in Europe, and we do not require to go so far back in order to meet with tokens of a primitive degree of advancement. In connection with the question of the date of the Aino occupation of the main island of Japan, Mr. Aston exhibited a rubbing from a stone which may still be seen at Taga near Sendai. This stone has an inscription of which the following is a translation:—

WEST.

Castle of Taga.

Distant from the capital,	1,500 ri.
" " " frontier of Yezo,	120 ri.
" " " " Hitachi,	412 ri.
" " " " Shimotsuke,	274 ri.
" " " " Makkatsu,	3,000 ri.

upon the police. News of the affray soon reached the barracks and two companies of men were got under arms and marched to the scene. They quickly quelled the disturbance, but not until four soldiers and eighteen policemen had been injured, three of them severely.

A native paper states, that the Colonization Commission contemplate establishing a system to form a check upon the present indiscriminate slaughter of seals at the Kurile Islands. It is proposed to have premises for preparing the skins in Yezo and for selling them in Tokio, and to allow no seals to be killed, except by hunters employed by Government.

Past experience has not led the public to expect invariable discretion and good taste in all the editorial comments of the *Japan Gazette*; but they were probably not prepared for so great a violation of both those principles as was displayed in one of its 'Notes' yesterday evening. If Hongkong and Shanghai have been 'shocked' as we are now told, we are convinced that a still stronger feeling will exist here against the publication of indefinite and vague allusions to 'serious and scandalous rumors' which are so worded as to create them. If the writer could not say more 'twere better he had held his peace.

"An object of curiosity and amusement to visitors" writes the *Sydney Mail* in an account of the Tasmanian Court at the Sydney Exhibition, "is the original proclamation issued to the natives of Tasmania by Governor Davey in 1816. It is a board about the size of an ordinary school slate, illustrating, by means of a few rude sketches, the intention of the new comers. First, in order to express the desire that the natives and all the white men should live in peace and amity, a white man and a native are linked together, a native child is in company with a white child, a white woman is nursing a black child, and a black woman is nursing a white child. Below this sketch there is another showing a native spearing a settler, and the native hanging by the neck to a tree, in consequence, with the Governor and two or three soldiers standing by. Last of all, a settler hangs upon the tree, thus showing that it was intended to mete out justice to white and black alike."

The Sanitary Bureau of the Home Department has issued its usual return of cholera statistics. The present compilation embraces the period from the commencement of the epidemic to the 15th instant, and shows that in the whole empire 163,422 persons have been attacked by cholera, 95,510 had died, 44,015 recovered, and that there were, on the 15th instant, 23,897 patients still under treatment in the various hospitals and lazarets throughout the country. As compared with the return up to the 1st instant, it is pleasing to notice a considerable decrease 2,737—in the number of patients; the death rate also is slightly less, 58.44 against 58.49.

We are glad to notice that another opportunity will be afforded us of seeing Miss Elcia May and Mr. Fairclough before their departure from Yokohama. An attractive programme has been prepared for Friday night next, the 28th instant, when Miss May's great powers as a vocalist will have full scope in two songs and in the *Miserere* scene from *Il Trovatore*. Mr. J. R. Black gives his valuable assistance to the entertainment, as do also the 'favorite amateurs of the Amateur Dramatic corps.'

The mysteries of a lady's toilette are thus revealed by the lady reporter to one of the San Francisco newspapers:—

"Yesterday the reporter called upon a lady with whom she had been acquainted some time, and explained that she had heard she was going to a matinee, and that she desired to witness the *modus operandi* to which a lady was subjected before appearing among the fashionables. Consent was accorded, provided the name of the lady was withheld from publication. After a few moments of pleasant and friendly chat upon subjects always welcome to the female mind—dress and the newest fashions—the process was commenced,

THE FACE

Was first bathed in some warm water, into which had been infused a few drops of atropia—commonly known as belladonna. This is used to dilate the pupils of the eyes. After this a pearly-white liquid was applied to the face with a fine, soft sponge. This preparation contains flake-white, glycerine, bis-muth, benzoin, gum arabic, drop chalk, chrome, carmine, alcohol and water. When this application was dry, some *blanc de perle* powder was put on with a fine piece of chamois leather, and a slight touch of rouge was applied over the eyelids and upon the temples and upper part of the cheeks. Then the vicinity of the temples was touched up with a yellowish pigment, the eyelashes and eyebrows were blackened with India ink, applied with the smallest

imaginable brush; brows which are not originally of a classical shape: are beautifully arched with the brush so as almost to defy detection, except upon the closest scrutiny, and a slight flesh-tint was artistically applied to the nostrils and around the ears, producing a shell-like appearance. Next in order of attention came the lips, whose naturally red tint was heightened by an application of vermeil. A small camel's-hair pencil, filled with a bluish coloring matter, then heightened the effect of the delicate, blue veins showing through the semi-transparent skin. The finishing touch was then put to the face by placing a piece of court-plaster about an eighth of an inch square near one corner of the mouth. The arms were now looked after. They were covered with a French cream, then delicately powdered. Next in order were

THE HANDS,

Naturally so delicate and beautiful as to seem to preclude the possibility of anything being done to heighten their charms. Not so. They had been eased in cosmetic gloves over night. *Crème de rehautine* was then softly rubbed over them. The nails were pared with a peculiar cutter; they were filed and scraped and a polishing powder applied to them. As in the face, the effect of the veins was increased by the application of the blue brush. Next came *poudre de rehautine*, and the work upon the hands was completed. As the hat was to be worn, comparatively little attention was paid to the *coiffure* a simple dressing of braids in front of the hat and crimps over the forehead being deemed sufficient. But as a few gray hairs had made their appearance, an application of brown cosmetic caused them to disappear for the time being. Elegant ear-pendants were inserted in the lobes of the ears, and the lady was now ready to be enrobed in the tight-fitting princess walking costume, which operation was finally after no little difficulty accomplished by the efforts of her indefatigable maid. The wrists were encircled by rich bracelets over the long gloves. The costly bit of lace y. kept a *mouchoir de poche* was then perfumed with one of Lubin's most delicate extracts, a few cardamom seeds and petals of cachou to sweeten the breath were dropped into the *porte-monnaie*; the silver *rainette* with smelling-salts was suspended to the *chalcidier*, and the feather-tipped ivory fan attached to the bead chain and hung around the waist. The parasol was then taken in the hand, but more as an ornament than for use, and as a means of occupying the hands gracefully, for it was a cloudy day. She was now all ready to saunter forth to "see and be seen." But before departing a glass of *crème de coganac* was imbibed to make the eyes sparkle and exhilarate the spirits."

ASIATIC SOCIETY OF JAPAN.

TOKIYO MEETING.

A General Meeting of this Society was held at the Shōheikwan, Seidō, Tōkiyō, on Tuesday, November 11th, Dr. Divers, President, in the chair.

The recording secretary reported that Dr. Edward Divers, formerly Vice-President for Tōkiyō, had been elected President of the Society, to fill the vacancy caused by the resignation of Dr. Syle; and that Mr. W. G. Aston had been elected Vice-President for Tōkiyō, in room of Dr. Divers; also that Dr. Joseph Edkins, of Peking, had been elected an Honorary Member.

The Librarian reported the donation to the Society, by the Rev. J. L. Amerman, of a copy of the "Narrative of Perry's Expedition to Japan."

Dr. H. Faulds contributed a "Note on the Ningiyoseki of Nishikigawa," and laid some specimens on the table. These are little stone 'images' sold to pilgrims in boxes containing seven of them to represent the seven Japanese gods of prosperity. They are believed by the superstitious to be produced spontaneously but have been found to be the lava cases of a yet undescribed insect whose habitat is on the river Nishikigawa. Priestly hands had added to the likeness by sticking little stones, to represent the head, on the upper and open ends of these cases.

A "Note on a proposed new arrangement of the Korean Alphabet" was read by Mr. W. G. Aston. The Korean letters are formed systematically, those pronounced by the same organ containing a common element, all the labials for instance having a square for base, all the dentals an angle opening upwards and to the right, etc. The order suggested by Mr. Aston is based on this system, which was evidently present to the mind of the original inventor. He believed that it would be found more convenient in many respects, and hoped that other students might be able to adopt it.

Mr. John Milne then read a paper "On Prehistoric remains from Hakodate and Otaru, with general remarks on the Stone Age of Japan," of which the following is an abstract, furnished by the author. During the reading of his paper Mr. Milne exhibited a large number of the objects he had discovered.

Mr. Milne commenced his paper by giving an account of the various prehistoric relics which he had discovered at Otaru and Hakodate during the preceding summer.

The remains which were obtained at Otaru were as follows.

Arrow Heads	135
Scrappers	3
Axles	1

Axes.....	9
Grinding stones.....	1
Vases.....	1
Flakes of Obsidian and other stone, together with fragments of Pottery,—several hundreds.	

At Hakodate a large number of similar objects were obtained. Looked at generally the remains from Hakodate appeared to be much older than those from Otaru. This was testified by the great roughness of the Hakodate implements, their glossy surface which is so indicative of age, and also by the depth at which they were found,—the implements at Otaru being found almost in the surface of the ground, whilst those at Hakodate were buried at a depth of several feet. Such a conclusion was borne out by the fact that the aborigines of Yezo were probably driven away from Hakodate long before they were compelled to leave Otaru, and it is therefore at this latter place that the more recent work has been found. Besides the implements and pottery which were found, a number of pits were examined, which the present inhabitants of Otaru believe once to have been the tenements of a race of dwarfs. Although there are in Yezo many collections of pits which were without doubt at one time used as habitations, these pits at Otaru Mr. Milne is inclined to regard (until some signs of their former occupants has been discovered), as nothing more than holes which have been formed during agricultural processes, perhaps for example, by the digging out of large stones, or taking out the stumps of old trees. The most interesting objects however at Otaru are some inscriptions cut upon the cliffs upon the N.W. side of the bay. These inscriptions which must have once been very extensive, but which have been reduced by the breaking down or cutting away of the cliff, cover a slab of rock about 8 feet long and 2 feet broad. Several of the characters have a general likeness to Runic, for example one triangularly shaped figure looks like a Runic M. It has been suggested that they might perhaps be ancient Chinese. Mr. Milne however thinks that if they do not prove to be of greater antiquity than the stone described by the Archaeological Society in the Pickwick papers, which proved to be the calligraphy of an illiterate named Bill Stumps, they may perhaps be traced to the people who have left so many indications of themselves in the form of flint implements, shell heaps, and fragments of pottery, in the neighbourhood,—which people in every probability appear to have been the Ainos. The grinding stones which are referred to in the list of the discoveries at Otaru are repeated amongst the collections from Hakodate. These are simply blocks and boulders of rock which have been rubbed away into concave surfaces, as if by the sharpening of some implement upon them. On a piece of ground at Hakodate, where during the last year large excavations had been dug whilst making the public garden, a large number of these stones have been discovered. Looking at the remains which have been found in Yezo, from a general point of view, they appear to be both newer and more numerous than similar remains which have been found in various parts of Nippon.

The latter portion of Mr. Milne's paper was for the most part a summary of a longer paper on a similar subject which he had previously written and which was read at the last meeting of the British Association. The object in giving this epitome was to correlate the Yezo discoveries with those of Nippon and at the same time to found thereon several general conclusions. This epitome consisted of a brief enumeration of the principle facts which were known about Shell-Heaps or Kitchen-Middens, Tumuli, Caves, and Pit Dwellings. From some long extracts taken from a modern book called the "Kekkioko" a number of facts were brought forward about the cave dwellers who in early times seem to have inhabited Japan. These people, if the extracts which are taken from the Kojiki and other ancient books are true, must at one time have even covered Kinshiu. They are described as being very-barbarous and to have been almost continually at war with the Japanese. The pit dwellings are collections of pits which Mr. Milne examined at Nemoro. Their existence was first indicated by Mr. Thomas Blakiston, of Hakodate, who has met with many similar collections in various parts of Yezo. From the similarity of these pits to pits with roofs on, which Mr. Milne saw in the Northern Kuriles and which a few years ago were inhabited by Alutes, it is probable that these Alutes or Kamschadles once extended further south and perhaps inhabited Yezo. One general conclusion which Mr. Milne appears to have come to is, that the Kitchen-Middens, which are found in many parts of Japan, are of Aino origin and not pre-Aino as has been supposed by Prof. Morse, the careful investigator of the shell heaps at Omori. One objection to the conclusion that these heaps are of Aino origin which Prof. Morse has brought forward, is that the Ainos are not pot-makers and if they ever were, it is difficult to understand how they ever lost such an art. From old books, however, it would seem that the Ainos once were pot-makers, and drawings of their pots and detailed descriptions of their manufacture, even so late as the year 1,800, are to be seen and read about. From the observations

of Mr. Charles Maries, who spent several months amongst the Ainos on the east coast of Yezo, it is not at all improbable that some of the Ainos of the present day still continue this manufacture. This observation, however, needs further confirmation. When it is remembered that the Ainos have been coming day by day into closer contact with the Japanese from whom they could obtain pots which were both cheaper and of better manufacture than those which they produced themselves, it is easier to imagine how they lost the art of pottery than it is to imagine how the Venetians lost the art of making glass. Another of Prof. Morse's arguments that the shell heaps were not of Aino origin is that they contain traces of cannibalism and as the Ainos appear always to have been so gentle in their character it is almost impossible to suppose them to have been ever guilty of so gross an act as eating their brethren. Mr. Milne however thinks that if Prof. Morse had consulted some of the numerous works in which the Ainos are described, he would have formed a very different opinion of what the former character of the Ainos may have been. Mr. Henry von Siebold tells us how, by way of punishment, the Ainos would boil the arms of their victims, slice their noses, &c. When we read this and then when we remember that we are speaking of the Ainos who lived in "those early ages of the world when the first impulse of man," as Prof. Huxley says was "not to love his neighbour, but to eat him," we see we have not to carry our imagination very far beyond the depths to which written histories take us, to see the Ainos as happy over a dainty bit of human leg as Europeans are over a slice of chicken. Shell heaps in many other parts of the world show traces of cannibalism and the traces which the Ainos appear to have left behind them are not a bit more suspicious than some of those which are to be found in "Bonny Scotland," where now-a-days it would be sin enough to kill a crow on Sunday, never name to eat a man. The pottery found in the shell heaps in Japan is similar to that found in them in Yezo and from the similarity of the markings on it to the markings and designs made by the Ainos of the present day upon their implements and utensils, it might be of Aino origin. That flint implements should be found with pottery does not militate against its being of Aino origin, as the Ainos, even so late as the commencement of the 19th century, appear to have still manufactured similar weapons. From history it would seem that certainly even so late as the 7th and 8th century and in the north even still later, Ainos have been living in Nippon. It may also be remarked that many traces of them are left on the names of places terminating the words *etsu* and *mai*. By comparing together a number of old maps of the years 1023, 1429, 1558, 1629 depicting the bay of Yedo, and then comparing these with a modern map of Yedo, the rapid rate at which the bay has been silting up is to be seen. For example in the year 1439 Asakusa was on the sea shore. In some places the coast line seems to have been advancing at an average rate of 30 feet per annum, at other places it has been only 8 feet per annum, whilst at others only 3 feet per annum. On the Tamagawa delta the rate of advance would appear to have been even still more rapid than it has been at Yedo. If now the Omori shell heap be taken, and it be imagined that it was formed like other shell heaps upon the sea shore, as it is only about 800 yards from the sea of the present day, if the rate of advance has been 3 feet per annum the heap can not be much more than 800 years old. If the rate of advance has been only 1 foot per annum the age will be about 2,400 years. That the heap is 800 or 1,000 years old is, however, the more probable and it is thus seen that geological reason supports the facts of history, namely that about 800 or 1,000 years ago, when the Omori heap was formed, Ainos or their representatives were living in the land.

The President, in thanking Mr. Milne for his very valuable communication, asked for more information as to the evidence of land upheaval and silting which had been mentioned in the paper, and whether there was any evidence that up-heaval was now going on in this part of the island.

Mr. Aston expressed his gratification that so much attention had been paid during the last few years to the important subject of the Prehistoric remains found in Japan. He was glad to observe a tendency to diminish the antiquity which had been earlier assigned to these remains by some of the writers on this subject. Civilization is in Japan a product of much more recent growth than in Europe, and we do not require to go so far back in order to meet with tokens of a primitive degree of advancement. In connection with the question of the date of the Aino occupation of the main island of Japan, Mr. Aston exhibited a rubbing from a stone which may still be seen at Taga near Sendai. This stone has an inscription of which the following is a translation:—

WEST.

Castle of Taga.

Distant from the capital,	1,500 ri.
" " " " " frontier of Yezo,	120 ri.
" " " " " Hitachi,	412 ri.
" " " " " Shimotsuke,	274 ri.
" " " " " Makkatsu,	3,000 ri.

This castle was built in the first year of Shunki, Kinoye-Ne, (A.D. 724) by Ono Ason Adzunado, Azesli (Commissioner of Police) and general for the maintenance of order, upper grade of the junior division of the 4th rank and Fourth rank of the Order of Merit. It was repaired by Yemi no Ason, Fujiwarano Asakari, Nangi (Councillor) Setanlosli (General) of the Tōsandō. Upper grade of the junior division of the 4th rank, Minister for Home Affairs, Azesli (Commissioner of Police), and General for the maintenance of order, in the 6th year of Tempei Hōji, Midzunoye-Tora, A.D. 762.

1st day of 2nd month of the 6th year of Tempei Hōji, (762.)

The *ri* mentioned here are evidently not the ordinary Japanese *ri*, but the ancient *ri* of six *cho*, or somewhat less than half a mile. This would place the Yezo frontier rather more than fifty miles north of Sendai, thus leaving a large tract which was then known as Yezo, and which we may presume was still inhabited by Ainos. Of course this inscription is only one of a number of evidences of a similar character.

Dr. H. Faulds concurred in the President's estimate of the valuable contribution which had just been listened to. Prof. Milne had spoken of one of the vessels as showing a cord mark. Undoubtedly the jar spoken of had a raised pattern of cord-like shape running in a wave around its neck. Archaeologically, however, it must be noted that the so called cord-marks in primitive pottery were something quite different from this. They are simple, rough, inartistic indentations in the clay, made before drying. The simplest, and presumably earliest, specimens seem to have been the result of pressure from bandages of rough open mat or cloth made from grass ropes. These bandages were probably wound around the soft vessel in order to enable it to retain its shape while drying. Such an appearance is often seen in the large lumps of clay taken out of Tokio canals for the undercoat of plaster, and the impressions are made by the grass rope bags in which the mass is carried, but the meshes are much less open in early pottery. The ordinary cheap domestic earthenware hitherto so despised by connoisseurs is full of striking reminiscences of this rude art now so generally supposed to be lost. The black braziers in common use in Japan are covered with stumped impressions which can be traced back, the speaker believed, through many slight modifications to this early character. The desire to conform to a conventional type which has become deeply rooted in the domestic habits of a people gives rise in art to many such examples. The 'mat' impressions figured by Prof. Morse in plate V. fig. 1 are to be found repeated in the most recent pottery and the speaker had seen and examined a piece of the most primitive grass rope kind which had certainly been made in Japan within the last seven hundred years. Those found in the shell heaps studied by Professors Milne and Morse were all of a more highly developed and differentiated type than that, and the fragments now shown by the essayist were almost identical with more found in Omori. The types hitherto found in these shell heaps did not seem to the speaker to be separated by any one well-marked character from contemporary pottery of a low grade. Indeed the shell heaps scattered along the old and recent coasts of Yezo Bay presented in their fragments of pottery a series of modifications leading up to recent times and some of the heaps may be seen in actual process of accumulation. People not accustomed to such enquiries naturally perhaps tended at first to exaggerate a little the antiquity of their discoveries and hence cautious criticism was useful. What was the greatest antiquity which could be allowed to them? Looking at all the facts, he had ventured publicly to assign 600 years as the probable antiquity of the Omori heap and was glad now to announce that Mr. Ninagawa, of the Tokio Museum, and the principal authority on the subject of Japanese pottery decides that the remains of earthenware cannot be older than about 1,000 years, for at that time, it was known that the methods of working which had been adopted were first introduced into Japan. It thus remained therefore for him (the speaker) to point out that the "almost infinite" varieties represented there as alluded to by Prof. Morse in his work, and the notable fact of their being spread so widely along the old coast of Japan, would probably necessitate their being dated a century or two later than that period, which came very near indeed to his original published estimate of 600 years. A definite rise of the beach had been historically recorded and there were several facts to show that even in the present century a very noticeable elevation had taken place. It would be fallacy however to assume generally that any shell heap had necessarily been formed on the actual coast line. Cases had been recorded in a Scottish newspaper, during the Queen's recent tour in the western Highlands, where struggling croft farmers had lived on shell and other fish largely, and although their farms were at a long distance from the shore and high above it, their homesteads were surrounded by heaps of empty shells, doubtless with fragments of contemporary pottery strewn amongst them. A future geologist

looking simply at such a fact might readily err in his deduction. In the elaborate work of Professor Morse, published by the University, he had carefully given us a description of the markings of the prehistoric pottery found by him. He (the speaker) now begged leave to show some interesting but unpretentious specimens of the "prehistoric" pottery of this nineteenth century. The first is a tea-pot of unglazed earthenware. It has been entirely moulded by the fingers and has in many places been indented all over with a rough cloth pattern, its ornamentation consists of the simplest and most childlike whirls and scratches, while its handle is struck on in the most primitive fashion. It is in quite common use in Tokio, the capital of Japan, at the present day. The next article is still more strikingly 'prehistoric.' It cannot have been turned on the wheel, but is an imperfect cone made of a sheet of rolled-out clay folded on itself like a grocer's poke. Its neck has been narrowed and then the rim everted by the pressure of fingers, the markings of which are retained. It has a somewhat amphorike appearance and resembles also the ancient lacrymatory or tear-bottle but is much cruder in design than any the speaker had seen in museums and much larger than the latter. They are used for keeping warm the *sake* of the Japanese night policemen chiefly, the cone being thrust into the hot ashes of the brazier. Such examples ought to suggest more caution in making deductions than had sometimes been displayed in our day. A curious example of the conventional reproduction of such primitive scratchings and indentations as adorn one of the fragments (No. 3) shown by Prof. Milne was on view in a curio shop in Asakusa a few weeks ago. The vessel was of iron and not of very ancient date. It was an exact imitation of a clay one of the same type which must have existed as a model. Any one would have admitted that. Another type of pottery which is now in common use and is glazed, reproduces the iron conventional one—the staining of rust being very well imitated. The original type has here undergone at least two transmutations and the first batchings seem to be conventional 'reminiscences' of an expiring cord-marked pottery. Such facts, and they are exceedingly numerous, tended to show that a tradition of the oldest shell-heap pottery still lives in the lower strata of contemporary art in Japan, which in itself is corroboration of the newness of these oldest known shell heaps and their continuity in historical evolution with present Japanese progress. The late survival of 'prehistoric' pottery and other arts is the rule rather than the exception under certain condition of social progress. The speaker was not prepared as yet to accept finally the belief that the Ainos were the founders of these heaps. To show that they now have similar pottery &c. might perhaps in itself not show more than that, as gypsies in Europe do, they had slowly adopted the arts of the more civilized race surrounding them. But other evidences may yet be found to settle this question. When we look back to primitive man struggling to reach a higher level we are glad to avail ourselves of every feeblest aid to get a glimpse of him, but the records he has left are very few and not very expressive at the best. Attempts had been made to determine whether ancient men were not sometimes left handed and the direction of the pressure in making arrow heads had been thought to demonstrate the fact. It had occurred to him that the finger markings in primitive pottery might be made to contribute some faint ray of light. The furrows on the tips of one's fingers form a very distinct pattern. All the fingers of one's hand might be found to run downwards obliquely from left to right. In another the thumb only might show another pattern. In another still, all the fingers might be different from this and so on, so that it was not possible that a new means of reaching some legible race marks might be added to science by a careful comparative study of these familiar finger point patterns. At present the facts known to him in this connection were simply puzzling, but law must underlie them.

In reply to the discussion Mr. Milne observed that with regard to the suggestion of Dr. Faulds that a mistake might arise by assuming that the Omori shell heap was on the sea board at the time of its formation, it must be remembered that all the shell heaps which have been discovered in the same neighbourhood lie round the edge of an ancient coast line on the borders of a delta, and that the position of the Omori heap was not an exceptional one like the position of the shell heaps which has been referred to by Dr. Faulds. The pit dwellings which Mr. Aston spoke of also appeared to be of an exceptional nature, whereas from the number of those which are to be found round Yezo, it would seem that they represented ordinary everyday dwelling places and not places which had been dug out in cases of emergency. They were in fact like the groups of regular dwelling places which are at the present day excavated in Kamchatka. The best proofs of elevation having taken place round Yezo bay appeared to be the *Pholas* borings which are to be seen at several places in the cliffs almost 10 feet above the present high water mark—and this rise of land, taken in conjunction with the vast deposits of silt which are brought down by the various large rivers

which flow into the bay, would make the changes in coast line exceedingly rapid.

The Meeting was then adjourned.

PARIS LETTER.

PARIS, September 27th.

It has been calculated, that were all the speeches of Louis Blanc, and all his writings, put into an ordinary newspaper column form, they would equal the diameter of the earth in length and that if distilled, they would not yield a single practical idea. The proof is, that since the half century Louis Blanc has kept pecking away at his socialism, he has never formulated a panacea in the shape of a short bill, for parliament to discuss. A philosopher observed, that if he had his hand full of truths, he would only open it to allow one to escape from time to time. Now Louis Blanc keeps his hand continually shut, so his plans resemble those of General Trochu for the defence of Paris in 1870-71, and which were locked up in the safe of his notary. The arch-priest of radicalism is making the tour of southern France, announcing that the present Republic will "never be seated till swept away;" that we have no want of an executive, a senate, an army, or a magistracy. He would clear these gewgaws away, and leave the nation to be governed by a press in the enjoyment of unrestricted liberty, and by public meetings without control. Rochefort in the days of his first *Lanterne*, anticipated this millennium, when he proposed to reform French Society by the following decree: "Nothing exists, and nobody is delegated to execute this decree." Louis Blanc would reform us into pure nihilism; it is not the majority of France, as represented in their constitutional chambers, that know what reforms the country requires; it is the medicine-man Louis Blanc, that alone possesses the elixir. It is his "doxy" that ought to prevail, hence why he makes himself as the poet says, the "god of his own passion." It is still a weakness with Frenchmen, that when free to write and to speak, their first work is to demolish all that exists; they are total strangers to that freedom as understood by other peoples, and which is ever exercised under an intuitive moral discipline.

The monarchists in the opposite extreme, are as incoherent as the radicals. They forget France can never be other than a tomb for kings, and that while unfettered universal suffrage reigns, the restoration of a monarch is impossible. The Bonapartists know they are decapitated, and begin to accept their fate; the royalists are equally as moribund, and trust to gastronomy, rather than to politics, to have their king anointed at Rheims. There is one section of the loyalists that wish to elect Don Carlos to be heir to the Comte de Chambord, in place of the Comte de Paris who is not considered "sound corn," despite the recantation of all his liberal opinions. There is no doubt Don Carlos, following the treaty of Utrecht, will after the death of Henri V. become head of the house of Bourbon, and so heir-direct to the French crown, but he does not want this thorny bangle, though Spaniards recommend him to pretend to that, rather than the crown of Leon and Castille. In the mean time the Republic wins its way in silence, and its real supporters are determined to sustain it in its conservative course, and so secure its longevity. The destiny of all French pretenders is fatally doomed to remain at the door, like those indolent souls that Dante places in the ante-chamber of purgatory, and who cannot find a place either in Paradise or Hades.

The home, or local trade of France, is neither very good nor very bad; commercial convalescence continues to set in slowly. Colonial business is not flourishing, shipowners complain they cannot compete in the carrying trade to their own colonies, with the mail boats subsidized by their own government, and the low rates of freight taken by English brokers. Indeed they have a standing grief in the fact, that wherever they go they find themselves opposed by Englishmen. Soon they will have to count with the ubiquity of Americans. It is with the consciousness perhaps of this reality, that France does not throw herself into the free trade, or commercial contract movement between the States and this country. The agitators here have just held a banquet, but they suggest a staff without an army. If America would lower her tariffs for French silks, wines, and *objets de luxe* and ask nothing in return, the Franco-American treaty could be signed to-morrow. Resident Americans here, and who are not "in the ring," display no marked enthusiasm for free trade with old Europe, so long as the latter does not clap on prohibitory duties on American exports. Uncle Sam cannot see he is losing under the present arrangement, and boasts, that in the course of a few years, he will be able to export silks and velvets to Lyons and St. Etienne; champagne to Rheims, brandy to Cognac, woollens to Roubaix and cottons to Rouen, not forgetting claret for Bordeaux, just as he inundates the land at present with grain, canned meats, tools and farming implements. It is laughable but true, an American citizen waited on his Consul

in this city last week, to take his opinion as to exporting frogs to France, he could ship them just as fresh as he does his oysters. The accounts from Burgundy are very unfavourable respecting the vineyards: the vines are still green, and growers are looking forward to "St. Martin's Summer"—"three glorious days," generally in early November, to gather the fruit.

It is not certain if the swallows have left us, but the chimney sweeps have taken possession of the city on their own account; smoke is more generally curling; squirrels are laying in supplies; the shops are full of furs and worsted underclothing; and drapers are selling off the *fin de saison*—all this is indicative of winter. Sportsmen cannot make a bag and the real sons of the gun feel this more acutely, as it reduces them to a level with those utterly strange save in fit out, to field sports. One gaitered and chest-canvassed John Gilpin, from the rue St. Denis, was escorted from the northern railway station to his home by a crowd of St. Hubert sympathisers; he had shot a dog-fox, and carried it slung from the barrel of his gun with all the tantalizing feelings generated, that a leg of mutton on the summit of a *mont de coqagne* might provoke in the Parisians the day after the end of their siege.

I believe the visitor can learn more practical knowledge at the Exhibition in the Palace of Industry, than he could at last year's cosmopolitan show, where immensity was a barrier. Here, the pursuit of knowledge takes place under no difficulties. There has been a monster pigeon match, not attended with any slaughter; the birds to the number of 1,600, were set free, and those that found their way first to Brussels won a prize. One gentleman in that city owns a pigeon, called "Vatican," that can fly to Rome in less than a week, thus conquering the great difficulty for carrier pigeons, the Alps. He has declined fr. 2,000 for the bird—it is too valuable as a trainer. The Exhibition has a collection in India wax, of Mexican and other Indians, dressed and colored to life; the figures are small but expressive. Thus we assist at a scalping scene, which is positively refreshing in its horror, after the illustrated papers that gave us all the details of the policeman Prevost, cutting up and skinning his victim. The gallery of machines is attractive—it is in movement, and life sympathises with life; there is a machine for polishing boots and shoes, and that for manufacturing chickens is as ever, a marvel. The hatching apparatus can be made so tiny, that any lady can have one in her boudoir, like a collection of silk-worms, or a sewing machine; perhaps it might be the means of earning the fr. 1,000 a week, that the papers advertise, a project, "requiring no special education and involving no fatigue;" there is a curious machine for making lace, and an apparatus is exhibited for boring tunnels; a diamond pointed stylet works its way through a block of granite, as quietly as a gimlet in a morsel of wood. There is a new kind of grinding mill, intended to supersede wind. Only Don Quixote would deplore the novelty, but he would have his shy at it all the same, were even all the Sancho Panzas in the world to advise him to the contrary.

Doctors here have been advising tar-water, as superior to all others, no matter from what mineral spring. It has the advantage of being given gratis in the restaurants, and contributes not a little to lay offensive odors. It is now the turn to anathematise cheese—a sad blow for vegetarians, and those compelled to resemble them, from want of money to buy the article. Cheese, even the best, provokes indigestion—and if it does not, what then, and when high, may be toxic, like some smoked meats and decomposed game. It was not in this stage that Virgil sang its charms, or Brillat-Savarin, when the latter said, "dessert without cheese, was like a beauty wanting an eye."

No serious crimes to record, save that the *Figaro* is to be indicted for bribing prison officials to obtain the memoirs of murderers lying under sentence of death, and publishing them. A cobbler has died in an hospital, the result of unrequited love: he repaired the cinderella boots of a housemaid for nothing, and expected she would reward him by love; she only laughed at him: then he rose, took off his leather apron, and following her into the street, cried, "Adèle, I die for you!" plunging at same time an awl several times into his stomach. *Ne autor ultra crepidam.*

The total taxes per head in Switzerland are fr. 22½: the total of the budget fr. 62½ millions, and, *à tout seigneur tout honneur*, the army absorbs fr. 14½ of this sum.

In Brazil, the souls of freemasons are never prayed for; it is rumored the clergy here may yet do the same.

The commissaries of police in attendance at the theatres, instead of being in uniform, are to be dressed in cod-fish tail coat and white neck tie. The theatres have adopted an excellent plan; during the closing scene of the evening's performance, for the sum of four sous the box-keeper will engage a cab for you, paying in addition, the fare if so desired. You can thus have your "carriage" called, with all the pomp and circumstance of a Rothschild, an Aguado, or an ex-monarch.

In the French Dead Letter Office, articles of value that cannot be delivered, owing to insufficient address of letters, are preserved for

eight years. The head clerk employed to decipher badly written addresses is called "The Blind Man."

The Peruvian ladies resident in Paris, are to present Captain Grau of the *Huancur*, with a sword of honor. It is to be hoped he will not employ it as M. Proud'homme did his: "to protect our institutions, and if necessary to attack them."

SHANGHAI LETTER.

Shanghai, November 11th, 1879.

For the third day of the races on the 5th instant, we were again favoured with fine weather, so that the attendance at the Grand Stand was very good, while the Chinese lined the roads round the course in larger numbers than usual.

Proceedings opened with a mile and a half race for the Shanghai Club Cup, when ten ponies faced the starter, Mr. Paul's *Tajmahal* being the favourite on the strength of his performances on the two previous days. *Driving Cloud* cut out the running, but not at a very hot pace; but after going half a mile *Wild Eddy* got level with him and led at a better speed from that point, allowing none of the other ponies to get on even terms with him. On coming into the straight the favourite made a game effort to reach the leader, but *Wild Eddy* had the race quite within his power, and when called on increased his lead by several lengths, winning hands down, with the favourite second. This race was rather a surprise to the knowing ones. Time, 3 min. 24 secs.

The Flyaway Plate for seven furlongs brought out *Black Satin* again, he being the favourite at 2 to 1. The pace was made very hot indeed by the "Wild" jock on Mr. Molloy's *Expectation*, a course that favoured *Strathpeffer's* running against the favourite, and at the time it was apparent that the other four ponies running would leave the race as a match between the old pony and the Strath. The latter was splendidly ridden, and had enough in him to respond to his rider's call when *Black Satin* became dangerous, winning by a couple of lengths in the good time of 1 min. 50 secs.

The Stirrup Cup for one mile and a quarter brought out only four ponies, but those very good ones, viz: *Tajmahal*, *Red Robin*, *Wild Gift* and *Lincoln*, all, of course, ridden by crack jockeys, the little chestnut being the favourite. *Wild Gift* led, closely followed by *Red Robin*, the other two lying back, and this order was maintained until the half-mile post was reached where *Red Robin* had a slight lead and the two rearmost ponies were close together, and on entering the straight *Tajmahal* and *Red Robin* singled themselves out for one of the finest struggles home that had been witnessed, the former only beating the little favourite by a neck. When the race was hopeless for *Wild Gift* he was pulled up, leaving *Lincoln* the honour of making a bad third. Time 2 min. 11 secs.

After the above race there was an interval of an hour and a half for tiffin before the next race, the Sycees Stakes, for two miles, was run, and this rest enabled that game little pony *Red Robin* to appear at the post once more, against Mr. Bill's *Jargrim* and Mr. Chouffier's *Flock*. After going once round the course *Red Robin* passed *Jargrim*, who had led to that point, and then ran in as he liked despite all the efforts that Mr. Bill's pony made, winning in 4 min. 29½ secs. This was a most popular win and besides showed what a wonderfully good little pony *Red Robin* is. Last spring he was most unfortunate, being placed always in fast races, but not succeeding in winning, and at this meeting he at first seemed likely to repeat his bad luck until it was demonstrated that his strength lay in long distances, for his first two mile race was won with ridiculous ease in the fastest time for that distance ever done on this course, and his second two mile race was run just after he had been a capital second for a mile and a quarter.

The next race, the Chan-Shang-Kiuk Cup, for one mile, brought out a field of thirteen ponies, being, in fact, a supplementary Griffin's race, the favourites being *Wild Surf* (winner of the Maiden), with the owner up, and Mr. Siwel's *Anticipation*, also with owner up, and the result showed that this judgment was correct, for though several of the others ran well together, and Mr. Funge's *Tom Thumb* was only beaten for third place by a head and Mr. Troy's *John Dunn* for fourth place by the same distance, the race was decided, after a most exciting struggle, by a dead heat between the leaders in 2 min. 10 secs., this being one of the most interesting contests of the meeting. The Chau-Shang-Kiuk Cup is a very large, ugly and inartistic silver bowl presented by the employés of the China Merchants S. N. Company, and must be won at two consecutive meetings by ponies the *bona fide* property of the same owner or owners, and has already passed through many hands. The terms connected with it prevent it being a prize much sought after, so the owners of *Wild Surf* and *Anticipation* agreed not to run off the

dead heat, and the possession of the bowl is in abeyance for six months, being left to the keeping of the Stewards.

For the Consolation Cup, once round, five ponies started, for which *Wild Eddy*, who had only run once before during the meeting, was favourite at 2 to 1. In fact, this pony had all along been intended for this race, and won it as he liked, *Jargrim* being second and *Reichsfrieder* third. Time 2 min. 42½ secs.

Then came the race of the day, the Champion Sweepstakes for one mile and a quarter, for which seven good ponies ran, of which five were unquestionably first rate, viz: *Strathavon*, carrying 10 st. 3 lbs.; *Jolly Friar*, 11.3; *Tajmahal*, 10.11; *Black Satin*, 10.12; and *Wild Rake*, 10.11. *Strathavon* was the favourite being very freely backed against the field, and only a few preferred *Jolly Friar*, while *Black Satin* and *Wild Rake* had still less admirers. *Jolly Friar* obtained the lead soon after starting and kept it easily until nearing the half mile where *Strathavon*, followed by *Wild Rake* began to come up, *Tajmahal* and *Black Satin* also improving their positions. On entering the straight *Strathavon* challenged the Blue and Silver, and from that point the race lay between them, neither being able to obtain any advantage, and so they reared neck and neck to the post, finishing this splendid criterion race almost together, so that the general public were uncertain who had won until the numbers showed that the Judge's decision was in favour of *Jolly Friar*, *Tajmahal* being a bad third and *Black Satin* fourth. Time 2 min. 44 secs.

The Steeplechase closed the day, only four ponies appearing, Mr. John Peel's *Black Cloud*, Mr. J. S. Fearon's *Spalpeen*, Mr. Ilbert's *White Velvet*, and Mr. Bill's *Bella*, the two former being favourites, with the owner up on *Black Cloud*, and Mr. Ilbert—who had trusted his own pony to another rider—on *Spalpeen*. *Bella* would not jump at all, but contented himself with knocking down the wall facing a ditch which has taken the place of the double water jump facing the Grand Stand, and subsequently a hurdle at the next jump, thus clearing the way for the other ponies the second time round, but doing no good for himself, as he tried no more jumps. *White Velvet* soon got rid of his rider through the bridle breaking, thus leaving the race to *Black Cloud* and *Spalpeen*, the first and second ponies at the spring steeplechase. The former had the lead and kept it throughout, both ponies going at a rattling pace and taking the jumps beautifully without any mishap, thus finishing the regular events of the meeting.

It is so seldom that fine weather can be counted on for all three days at the Autumn races, that such luck as we had in this respect this November would alone ensure a successful meeting, but besides this the racing has been extremely good, though your readers should bear in mind that the time made at the Autumn meetings is never so good as at the Spring meetings when making any comparison. Before the races the German stables were much feared, and Mr. Bill's lot, *Precedent*, *Aranti* and *Grimbart* were thought to have it all their own way in the Griffin's races, but the result proved that this fear was unfounded. *Grimbart* is undoubtedly a good pony, and so is *Precedent*, but the former was badly managed, as his owner is a novice. During the training the 700 were offered for *Grimbart* and refused. His owner may whistle for that sum now.

Heavy rain caused the postponement of the fourth day's racing from Saturday, for which day it was originally fixed, until Monday, the 10th instant, and there can be little doubt but that this change robbed the off day of its usual interest. The attendance at the Stand was not very good, though entrance was free, and the Town Band was in attendance to relieve the weariness of the intervals between the races.

A Half-mile for all ponies that had run at Shanghai races opened the ball, winners at this meeting having to carry 10 lbs. extra for one race and 4 lbs. for each additional one. This brought out ten of the second-class ponies, *Flick* proving himself an easy winner in 1 min. 2 secs., and bringing Mr. Chouffier's colours to the front for the first time this Autumn.

Then followed the "Wild Surf" Cup, for three-quarters of a mile, won by Mr. Alvy's *Daylight* in the bad time of 1 min. 37½ secs., he having the advantage of the jockeyship of the "Straths" experienced rider.

Next came the "Strathavon" Cup, for one mile, for which there was a very good race, *Flick* appearing again, and finishing a dead heat with *Expectation* having *Jargrim* third. Time 2 min. 12 secs.

Then came the Mafoo's Race, once round, for which nine ponies started, Mr. Ten Broeck's *Wild Gift* being the winner, and Mr. John Peel's *Driving Cloud* second, in 2 min. 42½ secs., and was succeeded by a very good race for two miles for the "Jolly Friar" Cup, for which *Wild Rake*, *Flock*, *Cardinal* and *Egmont* contended. *Wild Rake* seemed to be certain of the race throughout, and won easily in 4 min. 44 secs., *Flock* being second.

The Great Northern Steeplechase, for all ponies that had not been placed in a steeplechase was to have followed, but as only one entry was made did not come off, but gave place to the Champion Mafoo's race, once round for which six ponies ran, the favourite being *Red Robin* and his most dangerous opponents *Wild Glen* and *Tajmahal*, the favourite carrying the top weight of 10st. 4lbs. against 9st 7lbs., for all the others. The chestnut came to the front shortly after passing the half-mile, and made a good race with *Wild Glen*, winning by a length in 2 min. 40½ secs.

The 'Oklaters' Sweepstakes, for three-quarters of a mile, was to have concluded the sports, but as it was not filled, the Autumn races of 1879 closed with the above described race, and may be looked upon as a very successful meeting, though to the old ponies must be ascribed all merit of this success as none of the griffins showed themselves to be animals of any note.

Mr. John Jack's theatrical company have been giving us several performances at the Lyceum and have been well received on the whole, their most successful representation having been "Our Boys," which is certainly a most amusing piece and was very well rendered by all the members of the company. The emotional pieces "East Lynne" and "Mercy Merrick" were not so well received, they being not so well adapted to the tastes of a Shanghai audience.

The former abounds in pathos and is besides a very badly constructed play, being a thorough libel on the novel. Besides Mr. John Jack did not look the part of the English well-to-do country solicitor, and chose, rather incongruously, to dress the part in a tail coat and with necktie. The Company's next best success to "Our Boys" has been in the representation of "Pink Dominoes," a piece that had a lengthy run at home. The house was well filled on its first representation on Saturday last, and the piece caused immense amusement to the majority of the audience, but it is of rather a doubtful character, and while finding favour with the rougher sex is generally voted by the ladies to be vulgar. Still there will be a good audience again to-night, I have no doubt, to witness the repetition of the piece. The Company promise us the acting of two or three more important plays before their *repertoire* is exhausted.

A most important meeting of Ratepayers is convened to-morrow to take into consideration a proposition to abolish Wharfrage Dues and substitute in their place some other means of raising the revenue required for the working the Settlement. This is brought about by the secession of the largest opium importers from the English to the French Settlement in order to escape these dues, of which I wrote you some short time ago. I then stated that the loss to the Council by this movement would be Tls. 20,000 per annum, but it appears that I over-estimated the sum, as close calculation shows it will only amount to about Tls. 15,000 per annum. Still this is a large amount, and added to that derived from the levying of dues on other articles will make such a serious diminution in the income of the Council that some other means of taxation must be resorted to in order to supply the deficiency. Keeping up this settlement is a costly matter, but then the machinery is perfect of its kind; we have effective police, good roads and perfect order, a state of affairs that you in Yokohama can hardly realize as you are content to go on year after year with streets unlighted and unwatered and generally in a wretched state of disrepair, doubtful drains and a police force next to useless. Yet it must be acknowledged that enormous sums are annually spent by our Council, and it is more than likely that some serious effort will be made to-morrow towards introducing some wholesome economy into the disbursement of the public money.

We have quite an unusual number of men-of-war in port at present, viz: the U. S. Flagship *Richmond* and the *Ashcroft* and *Monoway*; H. M. S. *Moderate* and the *Maggie* returned for a few days from their surveying work at the mouth of the Yangtze. Besides we have the German men-of-war *Luise*, *Cyclop* and *Wolf*, and the French corvette *Kerguelan*.

JAPAN NEWS.

[The following Notes on various Japanese matters are chiefly derived from the native papers, occasionally supplemented from original sources of information, and are carefully collated and edited, so as to make them readable and intelligible.]

COURT, POLITICAL AND OFFICIAL.

Great festivities will take place throughout the country on 11th February next, which will be the 2540th anniversary of the ascension to the throne of Jimmu Tenno, the first Emperor of Japan. It has been decided that similar rejoicings shall take place hereafter, once in every ten years and that the reigning Emperor shall then visit the grave of his predecessor in Yamato.

The foreign Ministers and the principal officers of all the

Government departments, accompanied by their wives and families, visited the Imperial Gardens, in Awoyama, on Tuesday, in order to see the chrysanthemum flowers which are now in full bloom. They were afterwards entertained with refreshments in the pleasure house, situated within the gardens.

His Excellency Mori Arinori, the Japanese Minister to England and Mrs. Mori Arinori, were admitted to an audience with His Majesty the Emperor on the 18th instant, to take a formal leave of His Majesty, who presented Mr. Arinori with two rolls of red and white silk crape. They left on Thursday morning by the French mail steamer.

Mr. Iwakura, the Vice-Prime Minister, arrived from Kiyoto in the *Tokio Maru* on the 20th, and left for the capital by the 8 a.m. train.

Mr. Ito, the Home Minister, has returned to Tokio from the North.

Mr. Oki, the Minister for Justice visited Yokohama on Wednesday, to transact some important government business.

General Oyama, the Chief Superintendent of Police, accompanied by several assistant superintendents, inspected all the Police Stations in the 1st Division of Tokio, on the 18th instant. He will inspect the stations in the other Divisions shortly.

Mr. Ishie, the director of the Prison Bureau, is expected to arrive in Tokio shortly from a visit of inspection to the prison in Sendai. It is rumoured that on his return the existing prison regulations will be thoroughly revised.

We learn from native sources that Mr. Tamao, who was recently appointed to the post of the Senior Vice-Minister of Justice, has been ordered to act also as a Councillor of the Senate House.

Vice-Admiral Yenomoto, the Senior Vice-Minister for Foreign Affairs, was on the 18th instant, appointed a councillor of the Decoration Bureau.

The *Akrebno Shimbun* states, that Mr. Nabeshima, an official of the Foreign office, will be shortly appointed Japanese Minister for Austro-Hungary, also that a Japanese Minister will be sent to the court of Italy. These appointments are said to be made in connection with the forthcoming treaty revision.

Mr. Awoyama, who recently resigned the office of Chief Secretary of the Judicial Department, has been raised one degree in social rank and presented with 700 *yen*, as a reward for his long and faithful services to the Government ever since the restoration.

It is reported that the provincial Governors are to assemble in Tokio not later than the 1st February next. The meeting will commence fourteen days afterwards.

Some disagreement is said to have taken place among the members of the Kochi Ken Assembly, in consequence of which Mr. Kataoka, the President and five of the members have tendered their resignations.

The *Nichi Nichi Shimbun* states, that the Governors of the Prefectures of Miyagi, Fukushima, Yamagata, Akita, Iwate and Awomori, will shortly meet in Sendai. Their ostensible object is for the purpose of becoming mutually acquainted, but the real reason for the meeting is said to be in order to consult upon—1st, opening of roads; 2nd, the system of cultivating waste lands; 3rd, classification of various enterprises; 4th, encouragement of industries; 5th, how to encourage the prosperity of trade; 6th, to arrange one uniform system of government and 7th, to endeavour to raise capital for establishing enterprises and to carry them out in the same manner throughout the whole six Prefectures of the north.

Mr. Matsuhara Shunnosuke, an official of the Agricultural Bureau of the Home Department, has been appointed Japanese Commissioner at the Exhibition of fish and fishing appliances to be held in Berlin next year. Four of the students who lately completed their studies at the Medical Department of the Tokio University, have been ordered to Berlin to perfect themselves in the higher branches of their profession. They all left here in the French Mail steamer *Volga* on Thursday.

Before leaving Hakodate, H. R. H. the Duke of Genoa, entertained the principal officials of the Colonization Commission, the President of the Court, Major Sakamoto, the Superintendent of Customs, &c., at a dinner given on board the *Vittor Pisani*, on the 10th instant.

The *Akrebno Shimbun* says that a Dutch engineer, in the employment of the Japanese Government, has lately been sent to

survey the port of Sakai in Yechizen, to report if it is suitable for opening to foreign trade, but he having expressed his opinion to the effect that the position is unsuitable, the idea has been given up. He returned to the capital on the 17th instant. Another Dutch Engineer has been sent to the port of Mogi, in Nagasaki Ken, for a similar purpose. But he fell sick during the course of his survey and applied for permission to return to Tokio, so that nothing will be decided as to this port for the present.

The *Choya Shimbun* says that Okazaki Sanpei and another resident of Chikuzen, recently arrived in Tokio and on the 14th instant, presented to Mr. Okuma, the Minister for Finance, through the Governor of Fukuoka Ken, who is now in the capital, a memorial upon the subject of treaty revision. Mr. Okuma highly approved of the contents of the memorial, and informed the memorialists that Mr. Mori, the Japanese Minister for England, would take a translation of the document with him.

The trial of Nakamura, Furnisho, Okazaki and the other men charged with complicity in the assassination of the late *Sangi* Hirose, having now been completed, the depositions have been forwarded to the Minister for Justice. The judgment of the court may therefore be shortly expected.

The authorities of Tokio *Fu* are about to publish a pamphlet, containing a full account of the different methods of treatment adopted in cases of cholera in the various hospitals of the capital, during the recent epidemic. This publication ought to prove extremely useful in the provincial hospitals.

The Tokio High School was opened on the 19th instant. The Governor and principal officials in Tokio were present and several speeches were delivered. In the evening, the Governor gave a banquet to the company.

NAVAL AND MILITARY.

The preparation of the revised code for the Japanese Navy having been completed, the draft will shortly be submitted to the Council of State for approval.

The ceremony of launching the *Yokosuka Maru No. 2*, took place in Yokosuka on the 17th instant. The ceremony was similar to that performed on the occasion of launching the *Jacuki Kan*.

The Japanese man-of-war *Kongo Kan*, has been ordered to Boshu, to escort the Duke of Genoa to Yokohama.

The week's leave granted to young prince Arisugawa Sawa no miya, to visit his parents having expired, he returned to his duty on board the *Iron Duke* on the 14th instant.

Lieut.-Colonel Kuroda and Captain Nakamura of the Navy, with several assistants are at present engaged in surveying the site for the proposed fort at Futaba, Boshu.

Mr. Kurokawa, the President of the military Court, has been entrusted with the task of examining and reporting upon the proposed new military code.

The commanders of the reserve troops in the neighbouring provinces, are said to have been ordered to Tokio to hold a meeting in connection with the recent notification respecting the recruitment of the army.

Lieut. General Miyoshi, the military inspector for the western division, arrived in Kumamoto on the 3rd instant, in the course of his tour of inspection. After inspecting the troops stationed there, he will proceed to Kagoshima and Okinawa Ken.

The *Osaka Shimpō* gives as a rumour, for the truth of which it will not be answerable, that when Lieut.-General Nodzu, the military inspector for the central division examined the contents of the military chest in Osaka, he discovered that the packages which ought to have contained 100 two *yen satsu* had two *yen satsu* on the outside, the remaining 98 being one *yen satsu*. Further investigation showed that about 1,000 *yen* in all are missing and after a searching enquiry Mr. Ando, an Assistant Paymaster was marched to the military prison, under a guard of eight soldiers. The house of the suspected officer was then examined and some three hundred *yen* found secreted in a desk, &c.

The students of the Military College, who have recently been undergoing a course of drill at Narashino plains, returned to the capital on Friday.

A grand review of the cadets of the *Kyōrōdan* (military college), will take place in the Hakone mountains, in February next.

The original estimate for building the offices of the Military Staff Bureau was 150,000 *yen*, but it is stated that the Bureau has applied to the Treasury to have the amount increased, as the expense will be greater than was at first contemplated.

It is proposed to establish fencing schools in all the barracks throughout the country, so that the soldiers may be able to employ their leisure time in that healthy exercise.

INDUSTRIES, TRADE AND FINANCE.

We notice that a temporary building is in course of erection in the Swamp Gardens, which will be used on the occasion of presenting the prizes to the successful exhibitors at the competitive exhibition of raw silk and cocoons on the 25th instant. It has been decided that a competitive exhibition of cotton and sugar, will be held in Osaka in the months of February and April next year.

The local authorities at Nagasaki have applied for permission to establish an exhibition there early next year. It is proposed to keep the exhibition open for fifty days.

An extensive Woollen factory is to be shortly established in Hakodate by the Colonization Commission. The necessary workmen will be supplied from the Tokio factory.

About 1,500 coolies are, says the *Choya Shimbun*, engaged in excavating a canal to lead the waters of Lake Onawashiro to the arid plains in Fukushima Ken, but as the number of men employed is found to be insufficient, the *Choya* states that ten thousand extra-hands are to be at once engaged for the work in Kiushiu and Tokio. If this be true the canal should soon be completed.

As the road from Yumoto to Kiga, via Miyanoshibi, in the Hakone mountains is very steep and impassable for *jirikisha* thus causing great inconvenience to visitors to the Hot Springs, and as the Emperor and other members of the Imperial family occasionally visit these, some seven or eight of the residents of Kiga have commenced to put the road in good order at their own expense. The Household Department when they heard of the undertaking assisted with two hundred *yen*.

Some of the leading merchants of Miye Ken, are inviting subscriptions, for the formation of a harbour of refuge at Totomi-nada, where there have been constant wrecks for the want of some protection for shipping. The estimated cost of the necessary works is 200,000 *yen*.

A few days ago the native papers stated that, "the foreign merchants in Yokohama were gradually yielding to the request of the native merchants to deliver bale-goods with the hoops on," but they now report that some of the Japanese are failing to carry out the agreement entered into amongst themselves and that serious business complications are in consequence likely to arise at no distant date.

The *Hochi Shimbun* states, that a rumour is current that as the term of five years for which the Tokio *Beisho Kaisha* (Rice Guild), was incorporated will expire next year, the Senate will consider the advantages and disadvantages of the system before granting any extension of the term. The *Choya Shimbun*, writing on the same subject says, that the directors of all the *Beisho Kaisha* have lately held a meeting and memorialized the government to grant them five years extension after the expiration of the existing term.

The *Nichi Nichi Shimbun* says that in America, Chinese rice only has hitherto been used for making starch, but as it has been found that Japanese rice is better suited for the purpose, a certain foreign firm in Yokohama is about to export 50,000 *kin* to America. The rice has been sold at \$3.90 per 100 *kin*.

The regular meeting, of the Tokio Chamber of Commerce took place in their Hall on Wednesday night. The subjects for debate were: first, the question of the fish and vegetable market in Tokio, upon which the opinion of the Chamber has been invited by the Tokio *Fu*; and secondly, the draft of the proposed memorial to the Government requesting a revision of the rules for the examination of Masters of merchant ships of over 500 tons burden.

MISCELLANEOUS.

A rifle match between the officers of the navy, army and police, will take place at the rifle-range at Mukogaoka, Tokio, on the 30th instant. General Oyama, the Chief Superintendent of Police, will supervise the shooting and the native and foreign

public will be permitted to take part in the match. A number of prizes are offered for competition.

The *Yomiuri Shimbun* states, that Kōmura Tamotsu, a *shizoku* of Ibaraki Ken, gave himself up, at the police station in Kawasaki, four or five days ago. He is said to have confessed that he was on friendly terms with Shimada Ichiro, one of the assassins of the late Minister, Mr. Okubo and had undertaken, that should Shimada fail to murder the Minister he would attempt it himself. But as Shimada and his other accomplices succeeded in their object, he determined to assassinate Mr. Iwakura, and obtaining a situation as a fourth-class constable in the Yokosuka Arsenal, waited for a favourable opportunity to carry out his nefarious design. He failed however in approaching Mr. Iwakura when the latter visited the dockyard on the occasion of the launch of the *Iwakura Kan*, and he then followed him during his tour of the northern provinces in company with the Emperor, but was unable to accomplish his object. Returning to Yokosuka, he was arrested and sentenced to thirty days' imprisonment for desertion and has only lately been released from prison. During his incarceration, Komura appears to have become impressed with the enormity of his contemplated crime and has given himself up to the authorities and made a full confession.

The *Mainichi Shimbun* reports that "Ozawa Seibei, employed in the *Japan Gazette* office, was on the 19th instant, sentenced by the Yokohama Saibansho, to one year's penal servitude for having stolen a copy of the *Gazette* every day from the 1st August 1878, to the 24th October last, and sold it to his former foreign employer at the price of one yen per month."

The villagers of Imamura, in Chikugo, have lately petitioned the central Government to be allowed to make use of the christian burial service, when burying those who have died in that faith. The native papers say that the people of Imamura and the surrounding villages have long been noted for their belief in the christian religion, and that an attempt, made some years since by the *Meiji* government to prohibit religious worship, proved a failure.

The *Mainichi Shimbun* is again to the front with a rather doubtful statement. It says that "foreigners," but whether meaning Europeans, Americans or Japanese is not stated "have frequently visited the interior of Korea lately. In order to do this they are reported to have dressed themselves in the white mourning costume of the natives, as it is the custom of Koreans not to take any notice of persons who wear white clothes and large rattan hats."

According to the census recently taken by the Authorities of Kanagawa Ken, the number of houses and inhabitants in the native town of Yokohama, are as follows:—

Males	24,135
Females	20,127
Total	44,262
Their houses	13,006
Temporary residents	23,237
Their houses	7,047

Several fires have occurred recently in different parts of the country. There was one in Higakubo, Azabu, Tokio, on the 14th instant, when some 100 houses were destroyed. In Minami-Horiyodori, Osaka, on the 15th, 41 houses were totally burnt, and 8 damaged. On the same day there were two small fires, one in Hagi and another in Kanagawa. Early yesterday morning a very destructive fire occurred in Fukiyacho, Tokio: 131 dwellings and 1 godown were wholly burnt and 18 dwellings damaged, before it was finally extinguished. Various sums of money have been given by the *Kiasaku* and leading merchants of Tokio, to those who are rendered homeless.

A fire occurred on the 13th instant, at Aburakawa-mura in Awamori Ken, and destroyed thirty-six houses and several of the telegraph poles. Telegraphic communication with Fukuoka was consequently interrupted for a short time.

A fire broke out in the town of Fujisawa, on the Tokaido, at 1 a.m. on the 17th instant. As a high wind was blowing at the time, the flames at once extended in all directions and destroyed about two hundred and thirty buildings, including two temples, a police station, and ten godowns, besides six or seven telegraph poles. Several men were killed and wounded, but the

number is as yet unknown. The conflagration was finally extinguished at 5 a.m.

A fire which broke out in Toiya-machi, Osaka, at 1 a.m. on the 19th instant, destroyed 15 houses. Another, in which one person lost his life, broke out in the town of Matsuyama at 5 a.m. on the same day and destroyed 60 houses.

THE TAKETORI MONOGATARI.

A paper read before the German Asiatic Society.

By DR. R. LANGE.

(Continued from last week.)

The emperor heard of this and sent a messenger to the house of the bamboo gatherer. The latter went out to meet him with seemingly never ending tedious lamentation. The grief which this matter had brought upon him had caused his hair to turn white, his back was bent and his eyes were inflamed. He was only just fifty years old this year,¹ but sorrow had in a short time caused him to look much older. The messenger after stating that he had been sent by Imperial command said: "The emperor wishes to know whether it is true that such deplorable grief has come upon you." The other replied, while his eyes were streaming with tears:—"On the fifteenth of this month people will come from the capital of the moon to take Kuguyahime with them. It is a great honor to us that the emperor has sent here to enquire. Ask him to send men here on the fifteenth of this month to arrest those who come from the capital of the moon." The messenger returned and reported in what a state of mind he had found the old man. When the emperor listened as to what means the other desired to have adopted to prevent the girl from being taken away he said: "I have only seen Kuguyahime once, but she has lived ever since in my heart, how then would those feel who have been blessed by being with her from morning to evening, if she were to go away forever. On the fifteenth he thereupon sent two thousand men to the house of the bamboo gatherer, having previously given orders to his guard that these men should be placed under the command of Takano Okuni, the Lieutenant-General and chief of the Imperial chamberlains. When the troops came to the house a thousand were ordered on to the roof, while the other thousand were set to guard the fence. The numerous servants of the house were also impressed so that there was not the slightest opening. The guards were all armed with bows and arrows. In the principal inner chambers the female servants kept guard. The wife of the

1. There is a contradiction here with what has previously been said, where the bamboo gatherer is described as an old man who does not know whether he will live from to-day till to-morrow, and who says of himself that he is over seventy years old.

old man sat in the fireproof room² holding Kaguyahime firmly in her embrace while he himself, having closed the door, posted himself at the entrance. He then pondered. If we keep guard like this, are we likely to be defeated by the angels? To the men on the roof he said: "The least thing that shows itself in the air, fire at it and kill it at once." The guardsmen replied. "Watching as we do even a bat if it came would be killed and thrown out." The bamboo gatherer at this felt greatly reassured, but Kaguyahime when she heard it said: "You may close the doors and prepare yourself for combat but the people of that world do not battle, and bows and arrows are useless when directed against them; you may close all the doors, but when those people come the doors will open of themselves. However eager you may be to fight, as soon as they appear every one of you will lose courage." The old man replied: "If any one comes to fetch you I will tear out his eyes with my long nails, I will grasp him by his hair and hurl him down on the ground, I will tear the clothes from off his body and show his nakedness to all the people here." Thus his fury caused him to speak, but Kaguyahime again addressed him: "Do not talk so loudly, it is not meet that the people on the roof should hear it. It gives me great pain to be obliged to return now regardless of your wishes. The thought that the time for it drew so near and that the tie which united us was so soon to be broken is the cause of my sadness. To contemplate going back without making some return for the many kindnesses shown by my (now) parents has been a hard matter for me and so I went out whenever the moon rose, asking permission to stay one year longer, but no respite has been granted to me. Therefore I am sad and sorrowful and I can hardly bear up against the thought of leaving you in your present despair. The people of that world are very beautiful, they never grow old, and suffer from no sorrow, yet I have no feelings of gladness at going to such a place, and will always wish to come to you whom I have seen before you were bent by age." "Do not speak thus to rend one's heart," said the old man. "I will not permit the messengers from above to touch thee, however beautiful they may be."

The evening passed and at about the hour of the mouse³ it became lighter around the house than if it had been day. It was as if ten moons were shining at once, and so brightly that the pores even in the human skin could be plainly seen. People came down from heaven floating on clouds and remained stationary in regular order five feet from the ground. Those within as well as those without the house seemed to be as if under a spell and had lost all their martial ardour. Bracing themselves up with great exertion to grasp their bows and arrows, they found that their hands were almost paralysed and that all strength had departed therefrom. Some, by a desperate effort, succeeded in firing, but although they aimed at the heavenly beings the arrows took quite a different direction. In place of the expected impetuous charge there reigned only listless, foolish apathy. The beauty of the people who had come down and were standing there was incomparable. They had with them a flying carriage covered with a baldachin composed of thin, light material. One of the men seemed to be their king and he called into the house: "Miyatsukomaro, I call upon you to come out here." Miyatsukomaro, who previously had been so brave, lay with his face on the ground like a man overcome by liquor. The other continued: "You have done some good actions and so to confer a benefit upon you the maiden has been sent to your house. For many years we have sent gold and your circumstances have thereby become considerably better. Kaguyahime had committed a fault and thus she came to live at your home, in spite of its humbleness; the time for expiation has now expired and we have therefore come to take her with us. Wailing and weeping will serve no purpose. Let her come at once." The old bamboo gatherer replied to this: "I have brought up Kaguyahime during twenty long years and it is curious to hear you speak of a short time. The maiden whom you seek, will probably be at some other place; she who is here is sick of a severe malady and cannot make her appearance." The other one gave no immediate reply to

this speech, but ordered the carriage to be brought to the roof of the house. "Kaguyahime can no longer remain in this lowly house" he then said. The doors of the closed house at once opened of themselves, and although no one was near, even the latticed doors⁴ became unclosed. The old wife held the maiden embraced, but still the latter (leaving her) passed outwards and finding she could not restrain her, the old wife burst into tears with her face turned up. The bamboo gatherer was in despair and lay weeping on the floor. Kaguyahime went up to him and said: "I leave against my will; will you not look at me when I rise upwards?" He replied: "How, with my heaviness of heart can I witness this? how canst thou thus leave, regardless of me? Oh take me with thee." When he spoke like this while he lay weeping on the floor Kaguyahime said with despair in her heart: "I can at least leave a letter with you and whenever the thought of me strongly moves you then take and read it." She then wrote, while sobbing and crying: "If I had been born in this country, I would have remained with you and would not have been the cause of your shedding tears. Again and again I can only repeat that it is not my wish which makes me leave you. Accept the dresses which I take off as my legacy. In clear moonlit nights, look at the moon; I have a feeling as if after leaving you, I am going to fall down from heaven."

Amongst those who had descended from above there was one who carried a chest containing heavenly flying dresses, and they had also with them a box containing the elixir of immortality. One of the angels said to the maiden: "Take a little of this elixir: it will counteract the bad feeling of having eaten unclean food." She took and ate a little of what he thus offered to her, but when she was about to put some of it into the dress which she was taking off, one of the angels interfered and taking one of the heavenly dresses wished to clothe her at once with it. Kaguyahime thereupon asked him to desist saying: "When this dress is put on the feelings change. There is still something which, before that, I have to say." Then she wrote a letter. It was getting late and the angels became impatient, but Kaguyahime told them not to speak or interfere in a matter which they could not understand, and she wrote very slowly and deliberately to the emperor: "Thou hast sent many men to prevent my return, it is true, but their help is of no avail, and those who have come to fetch me are now here. I feel greatly grieved. Knowing that this lot would befall me I refused to become thy bride. Thou hast probably misunderstood my motive, and in my heart I always feared that having continually refused to accede to thy desires thou wouldst consider me rude and ungrateful. Now when it is time to put on the heavenly dress I think of thee with longing desire." She added the elixir from the box to the letter and caused both to be given to the Lieutenant-General and chief of the Imperial chamberlains. Then she at once donned the heavenly dress. In this dress her thoughts reverted no longer to matters of this earth, and stepping into the carriage with about a hundred of her new companions who followed her, they rose upwards. The old bamboo gatherer and his wife shed tears of blood, but their despair availed them naught. They read the letter which Kaguyahime had left to each other, but still derived no comfort. Life had become valueless to them. "Why should we live and for what object?" they said, and refusing to partake of the elixir they soon lay down on a sick bed never to rise again.

The Lieutenant-General led his people back and gave an exact account how they had been unable to give battle in order to retain Kaguyahime. He then delivered the letter and the elixir. When the emperor unfolded and read the former he was deeply moved, fasted for a time and gave up everything like pleasure.

Calling his ministers and nobles he asked "Which mountain is the nearest to heaven?" One of them replied. "There is a mountain in Suruga, not far from the capital and near to heaven." When the emperor heard this he made the following poem:

"Now seeing her no more I ever weep.
Of what avail to me the potent draught?"

He then gave orders to call a certain Tsuki Iwakasa, and having placed the letter and the elixir in the latter's hands,

2. Every Japanese house of any pretension has a fireproof room or warehouse attached to it, into which, in case of fire, valuables, etc are removed.

3. 12 o'clock p.m. Midnight.

4. The doors of lattice work on the outside of the house.

he ordered him to take them to the top of the mountain to fulfil the command. Since that time this mountain is called Fujiyama. It is said that the smoke of those things burnt there is even now rising up into the clouds.

5. There is a play upon the word "Fuji" as if it were derived from fushi (with nigori fuji) immortal.

AMERICAN MAIL TELEGRAMS.

Berlin, October 23rd.—Rumors that while one Russian detachment has penetrated to Merv another is nearing Herat, continue to prevail in St. Petersburg.

London, October 23rd.—A despatch from Rangoon says that an embassy has left Mandalay for Simla. The Viceroy of India will probably decline to receive it.

St. Petersburg, October 23d.—It is evident that the state of siege in disturbed districts will be maintained for another year at least.

Paris, October 23d.—The prosecution of Humbert, the annexed Communist, has made him a popular hero. He will certainly be elected a member of the Chamber of Deputies for one of the first vacancies in Radical constituencies.

London, October 23rd.—It is estimated that England will require 17,000,000 quarters of foreign grain during the ensuing year.

Berlin, October 22nd.—Russian journals regard the conquest of Merv improbable before 1880, owing to the death of camels and the scarcity of provisions.

Brussels, October 22nd.—The miners of two of the largest collieries in the neighborhood of Mons have renewed the strike. No disturbance yet.

Madrid, October 22nd.—The authorities say the loss of life by the floods in the Districts of Murcia, Alicante, Almeria, and Carthage, will exceed 2000.

London, October 22nd.—A despatch from Constantinople says: The Porte has news that the Austrians have not suppressed the revolt at Nevesinske. The Austrians lost 400 killed and wounded. The insurgents are entrenched among the mountains.

Vienna, October 22nd.—The state of affairs in Herzegovina is becoming serious. Christians refuse to pay rent to Turkish landholders, and threaten to shoot them if they try to collect. It is believed that the Christians are being supplied with money and arms from Montenegro.

London, October 22nd.—The Criterion Nursery stakes for two-years-olds, at the Newmarket Houghton meeting, was won by a wean by "Chipolata," "Brother to Cradle" second, "Maniasicheno" third. Seven youngsters ran. Lorillard's "Gerseldine" and "Pappoose" did not start. The race for the Newmarket plate for two-years-olds was won by "Grace," "Ambassadors" second, "Dora" third.

Rome, October 22nd.—Various associations, five hundred and sixty in number, have signified their adhesion to the programme of the meeting to be held at Naples on the 26th instant, in favor of general disarmament throughout the world.

The *Papalo Romano* announces that serious danger threatens the Italian Press. An association, mostly composed of foreigners, has purchased several newspapers representing different political opinions in various parts of the peninsula, including two of established reputation, one in Rome and the other in Naples. The association is also trying to obtain possession of a telegraph agency. The *Papalo Romano* calls the attention of the Minister of the Interior to the serious consequence likely to follow the concentration of a number of newspapers and a telegraphic agency in the hands of such an association.

St. Petersburg, October 22d.—The Russian press expresses indignation at Salisbury's allusion to Russia in his recent speech at Manchester. The *Official Messenger* says it is unusual for a Foreign Minister to speak thus of a friendly nation, and that such language is not calculated to contribute to the maintenance of peace and good relations.

Berlin, October 22d.—The Municipal Council recommends the universal adoption of the practice of cremation.

London, October 22d.—Two thousand operatives of the Great Western Mills at Bristol, who have been on a strike for a month, have submitted to a five per cent. reduction of wages.

Paris, October 22d.—It is believed that the Bank of France will to-morrow increase the rate of discount.

Havana, October 22d.—It is reported that three rebel chiefs of some importance, surrendered at Las Tunas.

A Cuban member of the Spanish Cortes has written letter to a friend, saying that it is believed in Madrid that the export duties will be abolished within a month.

The Spanish steamer *Parajo del Oceano*, plying between Porto Rico and St. Thomas, recently took fire and was destroyed

off Caibaren. Ten of the crew and two passengers arrived at Caibaren. The fate of the other persons on board is not known, but they are supposed to be saved.

London, October 22nd.—A correspondent of the *Liverpool Post* says that a committee of the Beefsteak Club have requested the withdrawal from membership of Edward Levy Lawson, of the *Daily Telegraph*, and Henry Labouchere, of the *Truth*, who recently engaged in a street encounter.

Paris, October 22nd.—The *France* announces that General Chialdini, the Italian Ambassador, persists in resigning. He will be replaced by the Chevalier de Nigra.

London, October 22nd.—A despatch from Jellalabad says that advices from Cabul to the 18th instant report that the mutinous Afghan regiments have been dispersed. The disarmament of Cabul and the surrounding district is proceeding. The Ameer will be practically in safe-keeping until an inquiry into the circumstances of the outbreak is made.

City of Mexico, October 21st.—Governor Charles of Coahuila, anticipating the passage of the law extending Federal jurisdiction over the district of Sierra Mojada, telegraphed on the 11th inst., saying that Chihuahua and Durango are not opposing the jurisdiction of Coahuila; also, that several mining companies, hearing of the action of the Federal Government, had dissolved. Other and richer mines are said to have been discovered near Mojada, and over 12,000 persons have gone to Mojada.

London, October 21st.—A number of engineers from Bradford left England to-day for Pennsylvania, and another party will proceed next week for the same destination.

Vienna, October 21st.—Osman Pasha, who retains the portfolio of Minister of War in the present Turkish Cabinet, is as much a Philo-Russian as Mahmoud Nedim Pasha, the new Minister of the Interior, and is co-operating with him.

London, October 21st.—The *Journal de St. Petersburg* contradicts the statement that England has informed Russia that British influence must dominate in the foreign relations of Afghanistan.

London, October 21st.—It is officially announced that the report received through the Governor of Jellalabad, of the occupation of Merv by the Russians, is known to be untrue.

London, October 21st.—At a conference on the land question, held in Dublin yesterday, it was decided to form a Land League for Ireland. Parnell was elected President. He will go to the United States, to invoke the aid of Irishmen there for the cause.

London, October 21st.—A correspondent at Wolverhampton says that circulars are out from more iron manufacturers, announcing a further advance in prices. Telegrams are coming in from south and north of England ship-builders and others, ordering the immediate despatch of heavy quantities of iron.

Pesth, October 21st.—Distress in Hungary, an account of the bad harvest, is very great. The Government has suspended the collection of taxes until the next harvest has been gathered. In fifty-seven towns and villages in Temes country the greatest distress prevails. In Saros country, where some cases of starvation have occurred, forty parishes are threatened with famine. Frightful accounts have also been received from the counties of Abauj, Hews and Zempe.

London, October 21st.—A Rangoon despatch says that King Tiebau is in a warlike mood. The Sepoys' barracks in the British Residency building have been destroyed.

Belgrave, October 21st.—A formal defensive and offensive alliance between Serbia and Bulgaria is about to be signed.

Simla, October 21st.—The latest news from Ali-Kheyli represents that the frontier tribes, since learning of the fall of Cabul are dispersing.

Stockholm, October 21st.—The Hotel De Ville and a number of adjacent houses have been burned.

Strasbourg, October 21st.—There has been an immense fire at Ulfa. More than a fifth part of the town was consumed and many persons killed. The loss of property is enormous.

St. Petersburg, October 20th.—Further information from Central Asia reports the retreat of Lomakin's force west of Bourma. General Tergukasoff will abandon his effort to make Geok-Tepe the base of operations. He will winter between Tolikiatar and Duzulum, and begin a new campaign in the spring. The expedition to explore the ancient bed of the Oxus, with a view to connecting it with the Caspian Sea, has been abandoned—the difficulties in the way of such connection being found practically insurmountable.

London, October 20th.—The leaders of the new Ministry claim that they enjoy the confidence of the Sultan in a special degree, and are to undertake reforms in the way he desires. Osman Pasha, Minister of War in the old Cabinet, retains that position in the new.

London, October 20th.—The Foreign Office has received no confirmation of the news of the capture of Merv by the Russians.

London, October 20th.—The race for the Criterion stakes, at Newmarket, was won by "Preston Pans;" "Dora" second, Lorillard's "Nerid" third.

St. Petersburg, October 20th.—The Czar will come to this city from Livadia at the end of October, and remain a fortnight, when he will go to Berlin, to have an interview with

Emperor William, in consequence of a private letter from that sovereign. From Berlin the Czar will go to Cannes, where himself, the Empress, and several members of the Russian Imperial family, will pass the winter.

New York, October 20th.—Stephen Preston, the Haytian Minister at Washington, received the following intelligence: During the night of the 3rd instant, a revolution took place at Port-au-Prince against the Provisional Government which ended by the formation of a new one. Of the members of the late Government, General Jos. Lamothé and H. Herresse, who were the head, have been arrested and put in prison; Montmorency Benjamin is at the Dutch Consulate.

Lahore, October 20th.—Much anxiety is felt respecting the condition of transportation in Khyber Pass, where supply trains are completely blocked up. Three attacks have been made on the British by the tribes in the Kurum Valley, since the 12th inst. The Ghilzais, who were defeated on October 14th, are reported to be again preparing for hostilities. It is expected that Yakoub Khan's son, who is five years old, will be recognized as successor to the throne.

Paris, October 20th.—The *Gaulois* asserts that ex-Empress Eugénie, notwithstanding all efforts to dissuade her, will embark in February for Zululand, to pray on the spot where her son was killed.

Cairo, October 19th.—Intelligence is received from Massowah that the mission of Gordon Pasha to the King of Abyssinia has been successful. He renounces his claims to Massowah, but will be allowed to choose a more southerly point of communication with the sea.

Madrid, October 19th.—Further inundations have occurred in the Provinces of Almería, Málaga and Alicante. Several persons were killed and much damage was done to property. In the Málaga and Alicante Districts two thousand houses were destroyed, and it is believed that five hundred persons perished by the floods. The damage to property is estimated at thirty million francs. A later telegram from Murcia states that five hundred and seventy-five bodies have already been found. It is believed that over one thousand people perished.

Berlin, October 19th.—The Austro-German Treaty of defensive alliance was signed by the Emperor of Austria and the Emperor of Germany last week.

St. Petersburg, October 19th.—General Tergukasoff, having obtained extensive reinforcements, will undertake a new and largely developed expedition early next Spring.

Rangoon, October 19th.—All is quiet at Mandalay.

London, October 19th.—The *Daily News* understands that the Government has decided on the immediate construction of a railway to Candahar, and is already purchasing material.

Berlin, October 19th.—The Russian Government has withdrawn its prohibition of the sale of anti-German newspapers on the streets.

London, October 19th.—The *London Sportman* publishes a challenge from Boyd to row any one in the world, except Hanlan, over the Tyne course, for £200 a side.

London, October 19th.—A despatch from Cabul says that General Halls, (?) Military Governor of Cabul, has reported the advance of three Afghan regiments of cavalry and six regiments of infantry from Turkistan.

There is one case of cholera at Cabul.

The British troops will probably be quartered during the winter in Bala hissar and Shirpur Cantonment.

The Ghilzais in the neighborhood of Shutargardan are still markedly hostile.

Ten miles of telegraph line have been cut and carried away between Peiwar and Shutargardan, stopping communication with General Roberts.

The *Daily Telegraph* publishes the following special despatch from Ali-Kheyl: The magazine of Bala Hisar has been blown up. Twenty-seven of the British force and many Afghans were killed.

Fighting has been renewed at Sirkoi Kotai. The position was held by 90 Sopoyes against heavy odds. The enemy left 25 dead.

Sinla, October 19th.—An official despatch from Golaghat announces that the British Deputy Commissioner, in the Naga hills, was murdered by the Nuzena Nagas, on the 14th instant. His assailants were subsequently disposed of by a British detachment. An attack on Kohunga is expected, and troops will be sent there from Golaghat and Mokha.

Vienna, October 18th.—The Austro-Hungarian Government has accepted the war estimate for the maintenance of the Imperial army at an effective force of 800,000 men for the next ten years. The Hungarian Government has submitted with these estimates a statement showing that when the military systems now in progress are completed, Italy will have 2,000,000 soldiers, France has now 1,815,000 soldiers, and in 1882 will have 2,723,000 and Russia already possesses 2,723,000, while Austro-Hungary has 1,034,000.

London, October 18th.—Fifty pounds was posted in Newcastle yesterday on behalf of Courtney, for a match against any sculler in England (Boyd preferred) for £200 a side, on the Tyne, at the beginning of 1880.

London, October 15th.—Adolph Rosenberg, editor of *Töwen*

Talk, who was arrested last Saturday on a charge of libel preferred against him by Mrs. Langtry, and also by Mrs. Cornwallis West, appeared this morning in the Guild Hall Police Court. He had been unable to obtain bondsmen for £2,000. The preliminaries being disposed of, the prisoner made an abject apology, regretting that he should indirectly have been the cause of annoyance to estimable ladies. He pleaded ignorance of the writing in question about Mrs. Langtry's divorce and gave the name of the journalist who had written the paragraph. He said that he employed a detective to search the divorce records, and it was undoubtedly on the detective's report that the allusion to the petition had been printed. He denied that there was any malice in what had been recorded. His bail was not reduced and he was sent back to prison.

London, October 15th.—The Russian Press is very impatient about the dearth of news from the Central Asian Expedition, especially as no effort has yet been made to reconcile the apparent contradiction in two official reports of the action at Teuktope. Meanwhile a letter from Tiflis, published in the *Golos*, says grave apprehensions are felt there for the safety of the expedition. The letter describes invalid men arriving at Baker as being in a miserable plight, and says great numbers have died of diphtheria and scorbutic disease, and that the medical arrangements are inefficient.

The truth about the Teuktope affair is gradually leaking out. The assault on the Dengiltepe earthworks was made on the Plevna pattern. After an ineffectual cannonade the Russians made a rush with fixed bayonets, but were repulsed and retreated in disorder. The Turcoman cavalry attacking the Russian flank and rear, created such confusion that when the vanguard reached the main force in reserve the latter was unable to stem the tide of retreat and was itself compelled to retire forty miles before order could be restored. According to private intelligence received in St. Petersburg, the Russian loss is much greater than the official reports admit.

London, October 15th.—The *Daily News* publishes a letter from St. Petersburg which confirms the news of the Russian defeat at Geuktope. The letter says the advance column of the expedition, after an ineffectual assault on Dengiltepe, retreated on the main body which fell back to Bearoma during the night.

Constantinople, October 15th.—The British Ambassador to Constantinople, just from Asia Minor, reports that the condition of that country is unsatisfactory, in consequence of disagreements between the European inspectors and Turkish officials, and the bad administration of justice.

Eastern Siberia is menaced by famine. Prices of grain are higher than ever known before, and the poorer classes are suffering severely. The harvest is extremely poor, and the cattle plague has increased the evil.

London, October 15th.—Oswald Lariyer of Bournemouth and Spencer of Chelsea have signed articles for a match on the Thames championship course for £200 a side, on the 1st of December.

London, October 15th.—It is reported from Dublin that the Irish Government authorities contemplate legal proceedings against Charles S. Parnell, Home Rule leader. The *Globe* understands that Parnell, in response to several pressing invitations will go to America at the end of November after the termination of his political tour in England for the organization of the Irish vote.

London, October 15th.—French papers semi-officially note that the French Minister of War will experimentally reduce the term of service of contingent conscripts of 1878 from five to three years.

The Governor of Algeria has issued a circular to the authorities proposing to extend a civil instead of a military administration to the whole country, except in the frontier districts.

Paris, October 15th.—It is said that immediately on the reassembling of the French Chambers, a proposal for plenary amnesty will be presented. The proposition will cause considerable excitement out of doors, which will afford a practical test as to whether the return of the Chambers to Paris was wise.

Berlin, October 15th.—Field-Marshal Count Von Moltke has reported to the Emperor that a considerable increase of the military defenses at Alsace-Lorraine will be necessary.

Berlin, October 15th.—In consequence of the rise in the price of breadstuffs it is doubtful if Germany will begin levying new duties on grain the 1st of January, 1880, as provided for by the tariff bill which passed the Reichstag in July last.

The Shareholders of the Berlin, Potsdam and Magdeburg Railway did not accept the terms of the Government for the purchase of that road.

London, October 18th.—The *Times* says Sandford's two-year-old bay filly "Mirth" was defeated in the race for the Great Sapling plate in consequence of her fractiousness before the start, which caused much delay. She had to be led to the starting-post, and looked as though dragged through a pond.

Sinla, October 18th.—The following details are received of the attack on the camp at Ali-Kheyl by Afghans, on the 14th instant: Four thousand Afghans made a desperate attack on the British camp, but were repulsed at the point of the bayonet, leaving on the field 40 killed and 200 wounded and two standards. The British pursued them two miles. The British loss

was two killed and fourteen wounded. The latest intelligence is to the effect that the combined frontier tribes are retreating.

London, October 18th.—The *Cologne Gazette* believes that the treaty between Germany and Austria received the sanction of Emperor William last week.

Paris, October 18th.—On leaving the Cabinet council to-day, President Grévy received the members of the French Committee on a Franco-American Treaty of Commerce. Waddington and Leon Say were present.

Foucher de Careil introduced the delegation of ten, among whom were Wilson, Chatteau, Hyppolite, Calozac, Berger, Vanderbilt, Hickland and the Secretary, Desmoulins. The latter read a resolution adopted at the meeting of the 5th inst. Careil insisted upon its importance as inviting the French Government to take the steps deemed necessary by the Congress of the United States for a treaty of reciprocity.

President Grévy received the communication most favorably. He stated that he himself, personally, and the Government felt the greatest desire to renew commercial relations with the United States, and that France attached great importance to the movement looking to extending her relations with the great American Republic.

In dismissing the delegation, the President said: "We are benevolent going to labour in concert to attain the object you pursue."

London, October 20th.—A dispatch from Ali Kheyl October 19th, says: The cause of the explosion of the magazine at Bala-hassar is unknown. The first explosion occurred at half-past 1 this afternoon; the second at 4 o'clock. Further explosions are apprehended. The magazine, it is believed, contained 820,000 shot and shell, a large number of Snyder rifles and six tons of powder. One man of the Sixty-sixth Regiment, 21 Goorkhas, six camp followers and many Afghans were killed by the explosion.

London, October 20th.—The *Times* says: It is quite possible the abdication of the Ameer of Afghanistan may ultimately further the task imposed on us in the punishment of Cabul and the reduction of Afghanistan to a settled government.

A correspondent at Simla says the Ameer had shown himself unfit to rule a turbulent people.

A correspondent at Simla says: Abdication is probably the wisest course for Yakoub Khan. We may now place on the throne a man fit for the position and on whose friendship we can rely. It may be difficult to find a man to succeed the present Ameer, and when found he may at first require active support, but the task will be light compared with that of upholding a weak and irresolute puppet like Yakoub Khan.

Another correspondent says: The disturbances on the Assam frontiers and the murder of the British Deputy Commissioner by Nuxema Hages, need cause no anxiety, as the Naga hill tribes are marauders, whom the presence of the British troops will speedily reduce to submission.

Simla, October 20th.—Independent tribes between Ali Kheyl and Shatargardan are still assembled and making hostile demonstrations. Reinforcements are proceeding thither from Cabul and Kurram for united action in case of need. Gen. Gough has occupied Kushi.

Cholera has appeared amongst three British regiments. Two cases were fatal.

Paris, October 20th.—The Radicals of Lyons have put up Loup Garel, an amnestied Communist, for a seat in the Municipal Council. Blanqui has arrived at Lyons to forward the candidature of Garel.

Vienna, October 20th.—Duke De Bailen, Spanish Envoy extraordinary, has arrived to demand the hand of Archduchess Marie Christine in marriage with Alfonso, King of Spain. After this formality the Archduchess will make a solemn renunciation of her rights of succession to the Austrian throne in the presence of the Imperial family and the Duke De Bailen. It is expected the Archduchess, accompanied by her mother, will leave Vienna November 20th for Paris, remaining there two days to see King Francis and Queen Isabella. Her Imperial Highness will then proceed to Madrid by way of Irun, and will be conducted by the Ministers of War and Foreign Affairs, with royal honors, to Pardo Palace, near Madrid, where she will sojourn eight days previous to the marriage, which will take place in Attocha Church on the 27th or 28th of November. The King's birthday is on the 28th.

St. Petersburg, October 20th.—The *Golos* says: The son of the Khan of Merv has brought several thousand Turcoman troops to the aid of Tekkes. A previous request of the Khan of Merv for aid was refused.

Constantinople, October 20th.—The Sultan invited Aleko Pasha, Governor of Eastern Roumelia, to visit Constantinople, but he declined. This incident caused dissatisfaction in official quarters, as Aleko Pasha had promised to visit Constantinople twice in each year to acquaint the Sultan with the condition of Eastern Roumelia.

Madrid, October 20th.—The Cortes will be asked to relieve Murcia from direct taxes, in consequence of the losses by inundation. The floods were subsiding rapidly on Saturday, and no further danger is expected.

London, October 20th.—A dispatch from Paris says that the

total damage by the recent floods in Spain is estimated at 60,000,000 francs. Three thousand five hundred houses and 120 mills were destroyed.

Madrid, October 20th.—King Alfonso has subscribed 50,000 francs for the relief of the sufferers by the flood, and Princess of Asturias 5,000 piastres. The Bank of Spain has collected 60,000 francs for the same purposes.

Halifax, October 24th.—By the wreck of the schooner *Nancy* on Caribon Island, the Captain and four seamen and a boy were drowned.

St. Petersburg, October 24th.—The possibility of trouble between Russia and Persia is a further reason for postponing the Tekke Turcoman expedition. The Persians are jealous of the commercial advantage gained by the Chinese through the treaty between Russia and China, by which the latter secures Kuldja, and have made claims which Russia is not likely to comply with. It is very generally believed Russian influence in Teheran is gradually being supplanted by the British.

Berlin, October 24th.—The cast steel works of A. Bookhoff have been ordered to suspend their large private business, every resource being required to execute the enormous orders of the Government of Russia for steel cannon and other implements of war.

London, October 24th.—Lord Beaconsfield will attend the banquet of the Lord Mayor on the 10th of November.

Henry Labouche of *Truth* has refused to withdraw from the Beefsteak Club.

The Executive Council of Transvaal consists of the Lieutenant-Governor, Commandant of the troops, Colonial Secretary, the Attorney-General and Secretary of Native Affairs.

Liverpool, October 24th.—A leading Grain circular says: The demand for Wheat in the country markets is generally slack. Millers, having bought freely lately, are inclined to hold off. Previous prices, however, are in most instances fairly supported. In consequence of a decline in American quotations, cargoes in all positions are lower. At Liverpool and neighbouring districts since Tuesday, business in Wheat and Corn has been of a retail character, at somewhat easier figures. This morning's market freely supplied fresh imports of Wheat, and millers, abstaining from large operations, were able to supply their moderate requirements at a reduction of two pence to three pence from yesterday's rates. Corn was in slow request and 3½d. cheaper. Flour was also rather cheaper.

Vienna, October 24th.—Midhat Pasha has resigned the Governorship of Syria, because he will not hold office under Mahmoud Nedim Pasha, the new Turkish Minister of the Interior. It is doubtful whether the Sultan will accept the resignation.

Constantinople, October 24th.—Layard and De Fournier, the British and French Ambassadors to Turkey, have lodged protests against the Porte's policy of farming the customs revenues.

Bucharest, October 24th.—The Senate passed the bill for the relief of the Jews by a large majority.

Vienna, October 24th.—The *Political Correspondence* publishes a despatch from Cetinje, reporting that a band of Albanians had attacked the Montenegrins on the 23rd instant, between Orshavritza and Velika. A sanguinary fight ensued, the result of which is not known. The Arnauts are arming and making great preparations to attack the Montenegrins and Servians.

Vienna, October 24th.—The Government have stated in the Reichsrath that all of the men of the reserve stationed in Bosnia will be dismissed to their homes, one-half of them going in November.

Berlin, October 24th.—Emperor William, General von Moltke and all the Ministers and Ambassadors now in Berlin were present to-day at the funeral of the late Minister von Bulow.

Manchester, October 24th.—There was a great Liberal demonstration here to-day. The Marquis of Hartington, addressing a mass meeting in the evening, sharply attacked Salisbury's recent speech. He said the policy indicated in Salisbury's circular had not been carried out, and that Russia had been confirmed in all the conquests she made by the Treaty of San Stefano. Discussing the question of reforms in Turkey, Hartington characterized Salisbury's defence of the assertion that England had frequently spent blood and treasure in defence of bad Governments as unjust policy. Referring to the claims of Greece, he said he believed Great Britain was the only obstacle at this moment of the satisfaction of these claims. He declared that the Government's Afghan policy would end in annexation.

Madrid, October 24th.—Among the members of the Parliamentary majority it is believed that the bill for the gradual abolition of slavery, drawn up by the Committee on Cuban Reforms, will be rejected by the Ministry or will have to undergo important modifications, as it would be impossible to postpone the complete abolition of slavery for ten years.

Montreal, October 24th.—The Artisans' Building Society has resolved to go into liquidation. Liabilities, \$194,000; assets, \$175,000.

London, October 24th.—A despatch from Berlin announces that the discovery of a Liberal League among the students at the University of Kasan, Russia, led to a sanguinary conflict

between the military and the people, who would not allow the students to be arrested. After prolonged fire, the rioters were dispersed.

London, October 24th.—A despatch from Madrid says: The prevalent opinion here is that Premier Campos has encountered so much opposition from the Conservatives that he will resign after the Cortes meets, and the King will ask Senor Sagasta to form a Liberal Cabinet to carry out additional reforms in Cuba.

London, October 24th.—A despatch from Berlin reports that Chambers of Commerce throughout the country are about to petition the Government to postpone the introduction of the bill in regard to the duties on corn.

Simla, October 24th.—Intelligence from Yarkand to the 31st of August announces that 12,000 Ignis-Kirghiz and Kipchaks reached Mingyul, near Kashgar, where they met a large force of Chinese. Two indecisive engagements were fought. The Chinese had many killed. A Kipchak who was arrested as a spy, stated that the Russians supplied stores to the invaders. Chinese troops from Yangi-Hissar and Yar have been despatched against them. Another Andyni column is advancing across the Altai-Pamir Mountains.

London, October 24th.—Ghilzais have assembled in force near Shutargardan, and are expected to oppose the passage of the British troops which are withdrawing from the Pass. Other tribes of Ghilzais are assembling between Kurd, Cabul Pass, and Jagdallak, and have occupied Hazar-Darakht, near Gandamak. General Gough has arrived at Gandamak.

A despatch from Ali-Kheyl says that two Afghan troopers and a Sepoy of one of the Herat regiments have been hanged (it is presumed for complicity in the massacre at the British Residency.)

A Candahar correspondent says that intelligence has been received from Kheilat-Ghilzai that the Governor of that place, who from the time Gen. Hughes entered the city persistently avowed himself friendly to the English, has suddenly decamped with his whole staff.

London, October 24th.—Sir Richard T. Kindersly, formerly Vice Chancellor, is dead.

Birmingham, October 24th.—Excepting in common qualities pig-iron is adversely affected by the relapse in Glasgow. The iron market continues firm at late rates, and the firmness is gradually extending to a high class of iron. Native iron of all the mines and pigs of approved brands are 2s. 6d. to 3s. per ton higher than the prices current at the end of September, and marked bars are strong with considerable transactions therein. Leading firms in the finished iron trade in South Staffordshire and East Worcestershire yesterday considered an application for an advance in wages on the ground of the improvement in trade. They decided that they did not consider that the state of the trade justified an advance.

London, October 24th.—The Iron industry led the way and the revival is now spreading to textile fabrics, among which our chief interests centre. In cotton Messrs. Ellison & Co., Liverpool, estimate the probable available supplies for imports to Europe from all sources at 5,235,000 bales, against 4,857,000 bales in 1878 and 1879. This estimate places the total supply of American at 5,100,000, of which 3,370,000 bales will be for Europe. They conclude that should these estimates be realized, there will be enough cotton to allow of increased deliveries to the point touched in 1877-8, but no more; that the consumption of 1879-80, will exceed that of 1878-79 is scarcely doubtful. Beyond that point they cannot pretend to forecast the course of trade; but in the absence of any new financial or political disturbances, it is only reasonable to expect a higher average of prices.

London, October 24th.—Billion withdrawn from the Bank of England on balance to-day, £160,000.

London, October 24th.—Silver, 52½; four-and-a-halfs, 109½; Erie, 44½.

Liverpool, October 24th.—Cotton firm; Uplands, 6½; Orleans, 7; sales, 10,000 bales, including 7,050 American. Wheat, 10s. 9d. @ 11s. 10d. per cental for average California white; 11s. 7d. @ 12s. 3d. for California Club; 10s. @ 11s. 2d. for red western spring and 11s. 6d. to 11s. 9d. for red western. Receipts of wheat for the past three days were 331,000 centals, including 258,000 American.

London, October 24th.—T. Edison, a nephew of the American inventor, died in Paris, where he recently arrived to superintend his uncle's patent affairs.

In a duel at Algiers between a Lieutenant of the Zouaves and a Commissary Adjutant, the latter was killed.

General Bialdini has withdrawn his resignation.

The deficit in the sugar-beet crop will be between 25 and 50 per cent. less than last year.

Rome, October 24th.—Peter's pence, thus far this year, is considerably larger than at this time last year.

Paris, October 24th.—Signor Tapalis, a Trieste banker, committed suicide on account of the impossibility of fulfilling some large contracts. Liabilities, 240,000 florins. Creditors are not likely to obtain more than 30 per cent.

Berlin, October 24th.—The Emperor of Russia and the Grand Duke Constantine on their way to St. Petersburg halted here only two hours. The never paid nor received visits. Specula-

tion, of course seeks to invest this incident with serious meaning.

Sofia, October 24th.—The new election for the Bulgarian Chamber resulted in a Government majority.

Lahore, October 24th.—A reconnaissance was made on the 21st from Gundamuck, and a large quantity of stores and provisions were seized in the Sufed-Seng fort.

Constantinople, October 24th.—Aleko Paasha, Governor of Eastern Roumelia, will visit the Sultan after the closing of the Roumelian Assembly.

THE JAPANESE PRESS.

THE SPIRIT OF UNION.

(From the *Mainichi Shimbun*.)

WHAT a marked feature it is of Oriental nations to stand aloof from one another and neglect the advantages derivable from union.

This policy has existed for hundreds of years and can only be properly described, as a narrow-minded course of action which looks only to petty advantages, totally regardless of the superior benefits derivable from a more generous procedure.

Passing over India and Arabia, let us take the case of Japan and China who, with the concurrence of all the world, consider themselves the foremost nations of the East. The civilization of Japan is of course before that of China, since we have abandoned the old regime and revised and improved all our former manners and customs. Under those circumstances and with the new lights we have gained how is it that we still adhere to the antiquated policy of standing alone in the world? An uncivilized nation cannot fairly be censured for seeking small advantages, but when once it becomes civilized the excuse no longer exists.

The public opinion of a nation is its real substance, while its system of Government, manners and customs, is only its shadow. However admirable the latter may be, so long as the former is similar to that of uncivilized peoples, the nation cannot be deemed civilized.

To casual observers Western nations appear like enemies in the great competition which exists between them in trade and industrial pursuits, but in reality they are all banded together to preserve and extend their joint rights, privileges and influence.

Eastern nations on the other hand, never enter into competition amongst themselves in trade, so it is beyond the bounds of possibility that they can successfully compete with the nations of the West, but they are attached to and in fact proud of this exclusive policy, the result being the entire absence among them of what we have termed "the spirit of union."

If our readers entertain any doubts as to the accuracy of our observations, let them look for confirmation to the feeling now existing between Japan and China. Here in Japan it is commonly remarked, "China should be invaded and conquered before her military preparations are completed," and again "The power of China is not to be despised, her population is to be counted by hundreds of millions, she is a large country, much favoured by nature and her people are highly educated and wise." Now although these two opinions are diametrically opposed, yet they both proceed from the same cause—thinking of China as a strange country, the one feeling is undoubtedly extremely hostile, while the other implies that we may despise China if we could only afford to do so with impunity. The Cabinet of China is, we understand, actuated by similar feelings towards Japan, and the feeling is daily growing in intensity. Indeed, they are said to have now reached the length of asserting that "Japan has for some time been insulting China and sooner or later must pay the price of her temerity."

These sentiments of both nations are the result of mutual hatred and contempt. How therefore can they possibly become united for political or other objects?

The enmity between Japan and China is the subject of much rejoicing amongst Western people and there is great reason to suspect that the disputes between the two nations are actively fomented by foreigners who are perfectly well aware that, if Japan and China were once united for mutual protection, that the scheming intruders would not enjoy one-tenth part of the privileges they do at present. The policy of seclusion, which has always existed amongst oriental

nations, facilitates the crafty schemes of these designing foreigners, and some day they will probably succeed in extending their dominion over the whole Eastern world.

Oh! for some mighty power to draw a line along the summit of the great Himalayan range of mountains and equalize the power of the nations lying on either side of it!

We, in Japan, should shew a good example of unity and by force of that example gradually introduce the same excellent policy into China, Korea, India and the other nations of the East. If once this great object was accomplished, the Western nations would find it impossible to coerce the people of the East to submit to their impudent assumptions.

THE MEMORIAL OF THE OSAKA CHAMBER OF COMMERCE ON THE SUBJECT OF TREATY REVISION.

(From the *Mainichi Shimbun*.)

(Continued from last week.)

IF the improvement of facilities for land carriage is of importance, carriage by water must not be neglected. Japan forms one of the largest group of islands in the Eastern Seas and the water communication is of quite as much moment as that by land, and indeed our system of communication would be imperfect if either means was wanting. It is now about ten years ago since steam-vessels were first introduced into Japan and although great facilities have thereby been afforded to passengers and the transport of mails and imported goods, yet the natural products of the country being weighty and bulky cannot afford to pay the high freights by steamers and have to fall back upon sailing-vessels. Japanese junks are what is termed "local transport" ships and from the policy pursued by the Tokugawa family are unfit to undertake long voyages as they can only reach their destination when the wind and tide are favorable and they are also very easily lost. It is necessary that for these junks, should be substituted strong, sea-worthy vessels and this can only be done by the Government granting protection to the coastal carrying trade. If protection is granted not only will there be a great diminution in the loss of merchandize while in transit by sea, but the freights will be much reduced and thus the price of the goods be lowered, in fact the advantages would be enormous. We consider that the improvement of the vessels of native form would be one of the principal means of adding to the wealth of the nation. There is one other step which ought to be adopted at the same time and that is, the opening of more ports at suitable places; if this is not done the advantages to be derived from improved means of land and sea carriage will be much decreased.

As we have already said, the construction of good roads, rebuilding of ships and opening of new ports, is absolutely necessary in order to place the financial position of the country on a firm and lasting foundation, so if the Government and people desire to see this accomplished they must join in carrying out these objects. If any one of the three is neglected, the whole project will fail.

If the Government is satisfied with the present state of affairs and do not carry out a radical change, our trade will surely decline month after month, so that in about three years from now, things will have reached such a stage as to be almost beyond remedy. Foreigners as well as natives are well aware how matters stand and that some decisive action is absolutely necessary for the prosperous maintenance of trade.

The revenue of Japan is at present insufficient to sustain the burden of carrying out the improvements we have demonstrated to be essential to future prosperity. If these suggestions are not acted upon, so to speak, without a day's delay, the ruin of trade will follow, and we will now proceed to endeavour to shew how the necessary increase of revenue is to be obtained. The taxes which are the lightest and can be increased with the least injury to the national prosperity, are those which must be looked to, to furnish the increased revenue. Now taking everything into consideration, the high land tax paid by farmers and the certainty of its having to be lowered at no distant period, and the small

amount produced by the customs' duties as compared with the other taxes (contrary to the experience of all other countries), the conclusion is irresistibly forced upon us that it is to the customs' duties that we must look for an increase of revenue to provide funds for carrying out the improvements necessary for the very existence of our commerce.

Assuming that the Government increase the import duties, we will now consider how such action will affect foreign trade.

It may perhaps be said that if these duties are increased the price of foreign goods will rise and their consumption be greatly reduced. This, however, is a very superficial view to take of the question. Imported articles have not been consumed because they are cheap, but because they are of good quality, serviceable, comfortable and becoming. We suggest such an increase of the duties that the price of the foreign goods will still remain lower than those of native manufacture and thus the demand for them will not be lessened. Moreover, the increased facilities for transit which we have recommended, must inevitably lead to a very large consumption of imported articles.

Again, it may be said that increased duties would cause a rise in the price of home manufactures which would re-act unfavourably upon consumers. But the question of the paper currency must not be lost sight of. If the imports and exports do not equalize each other in future, all the remaining bullion in the country will be drained out of it, the paper money will become valueless and the financial position of Japan will then be something too pitiable to contemplate.

Now whether is it better for consumers of home made goods to pay a little more for them consequent upon an increase in the duties, or see the finances of the country sink into the miserable condition we have alluded to? We think this question admits of only one answer.

We shall now give another reason why the import duties should be increased. If the Government are unable through poverty to carry into effect the three essential improvements we have already described, it is evident that some of the taxes must be augmented in order to find funds to enable them to do so. But all the internal taxes are already as heavy as they can possibly be and any attempted increase in that direction would possibly lead to serious disturbances. On the other hand, imported goods are not articles of necessity but of luxury, those who purchase them are possessed of some means and any slight increase in their price would lead to no practical inconvenience.

For the reasons we have adduced we desire to see increased duties levied where they can be most easily borne and where the lightest imposts are at present imposed.

If the import duties are increased funds will be forthcoming for carrying out the important measures we have suggested, otherwise, years will elapse before this can be done and in the meantime all the specie in the country will have been absorbed by foreign countries and Japan be left in a state of beggary. There is every appearance of this unhappy future being in store for us unless we now devise some means for our protection before it is too late. The feeling we have given expression to, is gradually gaining ground and unless the cause is removed will result in a strong aversion to foreign trade. Under these circumstances the Government should at once take steps to prevent the exhaustion of bullion which is now going on and endeavour to increase the export trade of the country. In order to accomplish those important objects we earnestly desire to see the export duties abolished so that foreigners will be able to purchase our native products at reduced prices, thus stimulating production and thereby increasing trade. The abolition of the export duties would be highly advantageous both to natives and foreigners.

In Japan from the earliest times the officials and farmers alone were considered as worthy of respect, merchants and artisans being invariably treated with contempt. This was because the official class served in the army and the farming population paid all the taxes. The farmers were therefore heavily burdened; the taxes are stated to have amounted to four-tenths of the produce of the ground, but under the *Han* Government they paid as high as six-tenths. The present Government perceived the hardship of this long since and reduced the farmers' taxes in 1873 to three per cent of the value of the land and again in 1877 to two and a half per cent. so that although they are not now in as poverty stricken a condition as heretofore, still

they are yet heavily taxed and some alleviation of their burdens is absolutely necessary. In the present state of the national finances no decrease that could be made in the land tax would have the effect of benefitting the farmer to any appreciable extent and therefore instead of any futile decrease in the land tax, we desire to see the export duties abolished because this would at once increase the wealth of the producer and stimulate industry.

We do not know of a single civilized country in Europe or America where export duties are levied. In the United States and other countries the practice is said to be prohibited by the constitution. The abolition of export duties would result in the improvement of trade and a great increase in both imports and exports. If export duties are continued to be levied, the balance of trade will become more and more against this country and, therefore, considering the policy of other nations and the circumstances of Japan, the abolition of these duties has become an absolute necessity and we earnestly desire to see our recommendation carried into effect.

We have now enumerated the most important subjects at present existing both as regards the national finances and foreign trade. If our suggestions are not attended to we fear that trade will decline and the prosperity of the country suffer beyond redemption. If they are carried out, we feel convinced that the import and export trade will increase, the balance of trade be restored and specie retained in the country; the foreign loans can be paid at the appointed time, a feeling of mutual confidence will spring up and intimate friendly relations will be established between natives and foreigners when they are in the equal enjoyment of the advantages of prosperous and profitable commercial enterprises.

The above are the suggestions which this Chamber has the honour of making on the subject of the forthcoming revision of the treaties.

October, 1879.

DIRECT NATIVE TRADE WITH ABROAD.

(From the *Chingai Bukka Shimpō*.)

NATIVE merchants have lately commenced to export to foreign countries without the intervention of the resident foreign merchants. It is matter for regret that the advantages derivable from this direct trade have not yet been fully acknowledged and greater progress made in its development.

The Government has caused the exports and imports by natives and foreigners to be recorded separately and we will now see how the business has prospered up to the present time.

During the first half of 1878, the total value of our exports was 10,964,115 yen, out of which native merchants contributed 722,559 yen, or about 6.59 per cent. of the whole. The value of imports during the same period was 17,133,725 yen, out of which 315,133 yen or 1.83 per cent. were consigned to natives. During the first half of the present year, the value of exports was 10,057,514 yen, natives contributing 742,495 yen or about 7.38 per cent. while the imports amounted to 14,417,082 yen, natives receiving 632,080 yen, or about 4.38 per cent. of the whole. From these returns it certainly appears that native trade is slightly increasing, but it can scarcely be said that the prospect is at all a bright one.

The great cry at the present time is, that native merchants have been deprived of their rights by foreigners and are entirely under the control of the latter. This may be the condition of our merchants but let us consider how it has come about and we will find, not that foreigners have acted improperly but they have simply secured business which natives wilfully cast away.

As we have written on former occasions, in commerce as in war, people must not alone carefully study their own affairs, but those of the country with which they may be brought in contact. The foreign merchant after a long voyage arrives here in Japan, studies the habits and customs of the inhabitants and imports goods from the result of his observations. For example, narrow shirtings, square tippets, comforters and numerous other articles, are not generally used in foreign countries, but foreign merchants noticed that they were adapted for Japan and hence they imported them in large quantities. In other goods the same course was pursued by foreigners, but our native merchants were content with an immediate small profit and remained at home afraid of the hardships they might have to undergo abroad. Thus

they are now almost altogether under the control of foreigners and are entirely ignorant of any demand which may exist for our productions in foreign countries. When the price of native produce declines, they at once jump to the conclusion that there is no demand and rush to sell their stocks, and when the price of imported goods is low, they buy all they possibly can, without considering what supplies are on the way. A notable instance of this occurred recently with kerosene oil. If the native merchants had known the large stocks almost in port, they would not have made the egregious mistake they did. These are the results of ignorance of the state of trade in foreign countries. The only remedy for this is direct trade. It is a cowardly view to take of the matter when the opinion is advanced that profit is more easily and safely obtained by a merchant's confining himself to the home trade. So long as native merchants follow out that idea, so long will they be under the control of the foreigners and in ignorance of the circumstances of other countries. Market reports, telegrams, circulars, &c., are all very well in their way, but unless a merchant is personally engaged in the trade and liable to suffer from its fluctuations, he can never hope to thoroughly master its intricacies.

When our merchants once commence the direct trade on a proper scale they will soon escape from the control of foreigners. Then the latter will not be able to dictate, as in the "iron hoops" question. If they attempt to do so we will be able to import direct through our own merchants. Many other evil practices—such as the payment of bribes—will be put a stop to, and we will not have to depend upon foreigners for information as to the state of foreign markets.

It will also be necessary in order to develop our export trade, to imitate the course adopted by foreigners in Japan, we must watch the changes of fashion in foreign countries and manufacture our goods accordingly.

These are our reasons for advocating the opening up of direct trade with foreign countries, as the most important business for our merchants to engage in.

LAW REPORTS.

IN H. B. M.'s COURT FOR JAPAN.

Before R. T. KENNIE, Esq., Judge.

Tuesday, 18th November, 1879.

JOHN WILL (defendant), appellant, and MATTHEW CATLIN ADAMS (plaintiff), respondent.

The arguments of Mr. Denison, of Counsel for the appellant and Mr. Litchfield, of Counsel for the respondent were heard on Friday 14th instant and judgment reserved.

The Court now gave judgment as follows:—

This is an appeal from H.B.M.'s Provincial Court in Hakodate, which has held that the respondent is entitled, less certain deductions, to the sum of yen 750.60 deposited by the appellant with H.M.'s Consul at Hakodate for the purpose originally, of liquidating a claim of \$685.76 preferred by the respondent, against the appellant, and admitted by the latter to be just.

Mr. Litchfield, for the respondent, at the hearing of the appeal took a preliminary objection that there was in fact no petition of appeal, but it appears that certain written grounds of appeal filed by the appellant in the Court below were then received as a petition and endorsed as such with an order for service upon the respondent. The correspondence, moreover, that has passed between the Consul and the respondent's agent shews that the respondent must have had ample time to object to the defect of form upon the hearing, but as he has not done so, I am clearly of opinion that rule 168 precludes him from now entering this objection.

The facts of the present case are almost identical with those in the case of Blackiston, Marr & Co. *versus* Will, heard and decided by me on appeal from the Provincial Court at Hakodate a short time ago. The only material difference being, as pointed out by Mr. Denison, that in the former case the defendant Will had been adjudicated a bankrupt before Messrs. Blackiston, Marr & Co. claimed the moneys in question, while in the latter case the respondent made the demand some before the bankruptcy supervened.

The Court below based its judgment principally upon the 94th section of the Bankruptcy Act of 1869, and appears to have ignored the grounds upon which my judgment had been founded in the former case. I then held that the present

respondent, Will, had, in the exercise of his legal right, countermanded the application of the moneys left by him in the Consul's hands before they had been accepted or applied for by Messrs. Blackiston, Marr & Co., and that consequently the latter had failed to establish their claim to them. This doctrine appears to me to be equally applicable to the facts of the present case, and I do not therefore see that the Bankruptcy Act has any operation in it. It is true that Mr. Litchfield argued, with much ingenuity, that the property in the money passed to the respondent immediately on its deposit in the Consul's hands, and that the Consul must be regarded as the banker of the respondent, but he failed to adduce a single authority in support of this proposition; again he urged that the respondent had been guilty of no laches in the matter, and that he should not be made to suffer for the irregular acts of his agent. Whether he has been guilty of laches or not would not probably affect my decision, but I may point out that while the moneys in question were deposited with the Consul on the 1st November, and their disposition not countermanded until the end of December, in is in evidence that the respondent was himself in Hakodate on the 30th November, and did not then accept or apply for the money, his first demand for it being made on the 11th January ultimo.

On the whole I am clearly of opinion that the respondent has failed to establish his claim to the money sued for, and that the judgment of the Court below must be reversed.

The appellant will have costs in the Court below, and also of this appeal.

R. P. BRIDGENS, by his attorney LEON VAN DER
POLDER vs. E. LEWIS.

On the 30th Oct. last, plaintiff sued defendant for \$71.00 for rent, fees, &c. Judgment was then given in favour of plaintiff by the Acting-Assist Judge for \$65.00 and costs.

Defendant, being dissatisfied, now applied for a rehearing of the case, on the grounds of surprise, and that the judgment was against the weight of evidence, if not contrary to law.

After hearing what defendant had to say in support of his application and ascertaining that he had no new witnesses to call, His Honour stated that, he had read over the evidence in the case which had been taken down carefully by the Acting-Assistant Judge, and that nothing in the remarks made by the applicant would lead him to alter that decision in any way. The previous judgment would therefore be sustained with costs.

Mr. Lewis enquired "if any more appeals were allowed" and received an answer in the negative.

PIRACY IN BORNEO.

The following communication on the prevalence of piracy along the coast of Borneo, with which we (*Straits Times*) have been favoured, is deserving of careful perusal and consideration. The writer is one who is entitled to speak with authority, and we believe he has been prompted to take up the pen by reason of remarks that lately appeared in our columns concerning the cruise of Her Majesty's ship *Acetart* along the shores of Borneo:—

For many generations past the Illanuns have been known as a tribe almost entirely devoted to piracy. In the year 1845 their villages on the north-west coast of Borneo were attacked and destroyed by Sir Thomas Cochrane. On this account, which, according to Mr. St. John, formerly Consul General for Borneo, they broke up their communities and most of them who were addicted to piracy retired to the north-east coast to Tungku and the neighbouring rivers; those that remained in Tamdaesak long bore an ill name, but now under the able management of the Resident, they are rapidly being reformed, and show considerable promise of some day taking high rank amongst the inhabitants of this important island. Those that went to Tungku, however, still retained their old propensities, and have continued their raids down to the present time, their Chief, Dato Kurunding, boasts that with one cruise he has murdered 120 people on piratical expeditions; for the last year or two nothing has been heard against this man and it was hoped the Tungku people were giving up their former evil ways. The Illanun expeditions have usually been amongst the Philippine Islands and down the Straits of Celebes. In the year 1872, I myself was in a village, not above a hundred and fifty miles south of Manli, that had just before been burnt by them, several of the people and much valuable property carried off, and in another village there were two men who had escaped from them and returned home, their tongues had been cut out so that they should not give any information as to the pirate haunts; on one occasion not so very many years ago the Spaniards were challenged to meet them at a certain place but did not go, and the seas were virtually in their possession for some time. The following extract from Professor Bickmore's travels in the East Indian Archipelago will give an account of the proceedings of the Illanuns to the south-east:—

"Piracy is described in the earliest Malay romances, and spoken of by these natives not as a failing of their ancestors but as an occasion for glorying in their brave deeds. They continue to infest the Sulu sea and the southern part of the Philippines; they come down here in the middle of the western monsoon so as to have a fair wind both ways. The Illanuns are now the most daring pirates in these seas. Last year the man-of-war on this station had the good fortune to surprise five boats, one of them carrying as many as sixty men. At first they attempted to escape by means of their oars, but her shot and shell soon began to tear them to pieces; they then pulled in toward the shore and jumped overboard, but by this time they had come near a village and the natives at once all turned out with their spears, the only weapons they had, and scoured the woods for these murderers until not one of them was left alive. They seldom attack a European vessel, but when they do and succeed, they take revenge for the severe punishment their countrymen receive from the Dutch warships, and not one white man is left to tell the tale of capture and massacre. They prey chiefly on the small schooners commanded and manned by *Mestizos* by which most of the trade between the Dutch ports in these parts is carried on. One of the vessels was taken last year. While I was at Kema two Malays appeared; while they were fishing they had been captured by a fleet of pirates but escaped by jumping overboard and swimming. They applied for food, and as such cases are specially provided for by the Dutch Government their request was immediately granted. A few years ago these pirates sent a challenge to the Dutch fleet at Batavia to come and meet them in the Straits of Macassar and several officers assured me that five ships were sent. To the Dutch almost exclusively belong the honour of having rendered the navigation of these seas so comparatively safe as it now is."

Large parties of Illanuns such as are spoken of here usually came from the southern coast of Magindanao.

The Baligninis are another tribe of freebooters. Formerly their expeditions were carried down as far as the vicinity of Singapore itself, and there is now in Campong German (Sandakan) a Singapore man who was captured down there with some others. In the pursuit the boat was upset and while struggling in the water some of them were murdered in cold blood merely to strike awe into the rest; he was subsequently sold in Sugli; for I must explain while the object of the Illanuns is indiscriminate plunder, the specialty of the Baligninis is kidnapping people for sale. Sugli used to be their best market and it is a curious point to note, that at that time any Sugli man they captured was murdered, as it would not do to take them to Sugli for sale. It seems almost incredible that such should be the case, but it must be remembered that human life is held at a very cheap rate in these seas, that piracy is looked upon quite as an honourable profession, and that the risks run by traders, &c., from pirates are looked upon quite as a legitimate risk of the sea. Most Sooloos in fact have had something to do with piracy at one time or another, and it is difficult to get straightforward information out of them even now, what they say being largely influenced by their personal sympathies or by family relations.

The principal market for the Baligninis, Sugli, has been closed against them for some time, and since, they have taken their captives to Palawan, the Kina Batangan, Seeganan, Boolangan, and elsewhere, notably the last named place. Owing to the difficulty of selling their slaves, the approach of the Spanish from the north, the British from the south-west, and the Dutch from the south-east, a good many of the Baligninis have dropped kidnapping as a profession, picking up a living as best they may, and are now the principal collectors of tortoiseshell and other foreshore productions; only kidnapping or committing a small act of piracy when particularly tempting opportunities present themselves. There are in fact very few of the original tribe of Baligninis left, having got so mixed up with runaway slaves, criminals, outcasts of all descriptions, and even it is said whitemen from time to time.

One chief, however, Artib Janjowi has remained firm to his forefathers, his campong for some years past has been at Boarn in the eastern part of Tawi Tawi; Orang Kya Abu Bahr is his principal lieutenant. In the year 1877, no less than 160 people were murdered or carried off into captivity by Artib Janjowi's men.

The above remarks will explain how it is that all down this coast the villages are not to be found at the mouth of the rivers, as might be expected, but at considerable distances in the interior; but Malapi for instance, although 50 miles up the Kina Batangan, was raided not very many years ago by a Tidong man known as the Capitan or Rajah Laout, in command of a lot of Sagais—who took the heads as their portion of the spoil, while the Capitan Laout took slaves and booty for his share. This Sandakan Bay also has twice been raided in the last 20 years, and on one occasion the pirates ascended to the village of the Booloodoopies, which is at the extreme western end of this Bay, and carried off several women from there. Ibrahim the head man of the village is very anxious to proceed to Seeganan as soon as he can, under proper protection, to enquire after his wife, who is said to be in the harem of Dato Allum of that place. Lingable is the only village on the sea, on this coast, and this place owes its immunity to its being the head-quarters of a lot of parang men, who are a strong and fierce race, and with whom the pirates do not often meddle. Many of these parang men are well known as having committed robberies, but none cares to interfere with them under the lax state of affairs at present existing.

Last November there was a very general meeting of pirates at Lingcabo and the people here were under considerable fear of being attacked. Dato Allum of Seeganan sent a messenger, Panglima, to say that he was trying to raise and restrain Dato Kurunding; but that Dato gave out that he would again take to the sea, and attack any boat he met, whoever it might belong to. For some time, however, nothing appeared to come of it all, but it afterwards turned out that this meeting was called for the purpose of forming an alliance between the Illanuns and Baligninis and giving the

young Dato Paginda, son of Dato Kurunding, a chance of taking to the sea, and emulating the exploits of his father.

The first result of the alliance was that the Boam pirates, under Artib Janjowi, moved in a body and took up their residence in the Tungku district at places known as Seebart and Telleboo.

Having completed their arrangements the pirates took to the sea in April, piloted by a Lincabo man, named Otto, son of a man named Abbas, an old resident at Lingcabo, and a man named Armie of Meimbong. Proceeding with the utmost treachery, the division under Otto made a complete haul of a lot of Bajaus collecting treping off the Paitan river, murdering most of the adults, and bearing the females and children into captivity. Muanum, one of the Chiefs of the Bajaus here, supplied the names of 27 people, his immediate friends and relations, who were thus dealt with. By proceeding almost alone, and pretending friendship, he being known to most of them, and then bringing the pirates up quietly at night, Otto managed to get nearly every Bajau in those parts. Four men, two Bajaus and the Lingcabo people, were asleep in a boat; a pirate depong stole up and her men suddenly jumping on board, killed two of them before they could stir, the other two managed to escape into the mangrove, and the pirates then carried off the boat and all its contents.

Several times pirates have been reported as being off the coast and more particularly I was informed by a man named Hirance, one of three in company, had been taken by them (five sail strong) under Armie two who escaped were slightly wounded by gunshots, and three others in the depong that was captured carried off. Armie called out that he was coming in another month with forty depongs to raid this bay, and also he is the man that fired a gun which wounded one of the men.

On leaving immediately after this occurrence the *Fir East* came across two depongs at the entrance of the harbour, one of which was identified as the identical boat captured by the pirates, and now turned into a cruiser by them. She was full of men, who had 7 rifles amongst them; the other, a larger one, with a fort in it, made of ironwood, was said to be under charge of the Capitan Laout himself. The *Fir East* retook the first with a loss to the pirates, it was said, of two men killed and one wounded, the remainder escaping into the bush in Balhalla. On the next morning one or two Balignimi shields, &c., were found, and a parang, besides one of the original men of the depong who had escaped from the pirates during the previous night. The sail of the depong had been changed for a Balignimi one with a private signal in the centre of it.

After finishing at Paitan the pirates are said to have crossed to Pongutaran, capturing on the way a Labuan bound prahu belonging to Cagayan Sheriff, murdering him and all the crew, and at Pongutaran they are said to have captured or murdered another lot of people. Since then they have made their appearance in many places capturing and murdering whenever they could find an opportunity. The original lot of captures are all said, to have been taken to Tungku in the early part of June and from there were sent down south for sale. I think it not unlikely some of them may be found at Seeganan but doubtless the major part were taken on to Booloongan.

The last information I have about the pirates is that having disposed of their captives and bought fresh supplies of arms, ammunition, &c., with the proceeds they are busy making preparations for operations on a larger scale and challenge any one that may come, saying that, whether English or Spanish, they will not seek the protection of their walls and forts, but come to sea and "mine-mine" there (have a dance). This is probably merely an idle boast, as it is quite at variance with their characters, as far as I have been able to learn, for from what I gather I should consider them a set of sneaking, cowardly rascals, who take the greatest care to avoid the slightest chance of endangering their own skins. It would be enough if the slaves sold there were acquired even in accordance with the very bad laws of these parts, by being bought amongst the islands or simply sent there for sale by their masters; but the matter is far worse, as it at present stands. Encouragement is given to piracy, murder and kidnapping, on a scale it is almost incredible should exist in the latter part of the nineteenth century in any part of the world; moreover by the slaves being bartered for arms and ammunition, the pirates are fitted out for the committal of further atrocities. It is also said, as if all these horrors were not enough, that a good many of the slaves, sold in Booloongan, are bought by the head hunters (Sagais) for the purpose of being butchered in the most coldblooded manner, that their murderers may have possession of a head, without the possession of one of which, it is, I am informed, almost impossible for any man to find favour in the eyes of the females of those parts.

THE TIMES OF THE TAIRA.

By CAPTAIN F. BRINKLEY, R.A., AUTHOR
OF THE "TIMES OF TAIKO."

CHAPTER XXV.

TOKIWA'S ARCHERY.

The room which Tokiwa occupied was constructed after a fashion very common in the houses of the nobility seven hundred years ago, as indeed it is to-day; that is to say, it had a double verandah, of which the inner portion, though lower than the floor of the chamber itself, was yet raised above the boards without by the thickness of the richly bordered mats that covered it. It was here that Tokiwa carried on her daily, or too often nightly, practice. The target consisted of

an elaborately carved frame of 'Incense wood,' within which was suspended by silk cords attached to its four corners, a cardboard disk, of just sufficient consistency to retain the tiny arrows that pierced it. The bow, which was from two to three feet long, was made of ebony, its horns and handle, as well as the arrow-tips, being of pure gold.

Tokiwa was seated at a distance of three mats or about twice as many yards from the mark. In shooting, the string hand was gradually carried back till it touched the cheek just below the right eye, while at the same time the arrow point, raised at first above the head, was slowly lowered to the level of the target, these efforts of aim and tension being so exactly harmonized that each was consummated simultaneously. The skill of usage and aptitude which this foretold was verified by the result, for almost every space of the target bristled with the arrows that had struck it, to such an extent indeed that it seemed impossible for any others to lodge there without displacing their predecessors. The shooting, however, went on without any such accident until the whole number of shafts lying at Tokiwa's side had been discharged, and it was then possible to see that the mere attainment of the target had not been the only object, for the arrows, arranging themselves symmetrically on either side of the disk's vertical diameter, had traced out the unmistakable representation of a human figure.

Yoshitsune, under Iné's guidance, had entered the chamber by a door almost facing the target, and which was therefore behind Tokiwa as she sat. They had not desired nor indeed thought it possible to escape observation, but the secrecy suggested by the purpose of their visit as well as Yoshitsune's involuntary hesitation on the threshold, had combined to make their entry so silent that Tokiwa seemed to have remained unconscious of their presence, and Yoshitsune thus gained time to master an emotion which must inevitably have betrayed him had it been observed. Still grasping Iné's hand, he stood gazing through a mist like that which blurs the outline of a strong light leaping up suddenly from a waste of darkness, and though in after life no reminiscence visited him so constantly or in such minute detail as the scene he then witnessed, he had no consciousness at the moment of anything save a tumultuous passion of joy and yearning that made him fain to lean for support against the pillars of the portal and seek to gather composure from the placid aspect of the figure he contemplated.

For despite the rapt attention she devoted to the pursuit in which she was engaged, Tokiwa's demeanour had lost nothing of the almost unnatural tranquillity which those about her, looking with the eyes of aliens, had come to regard as a true index of her mental condition, but which her son recognized at once to be altogether a mechanical apathy. It was only when the last arrow had pierced the target that she seemed for a moment to abandon this mask of unconcern. Then indeed, laying aside her bow, she joined her hands and still facing the target, prayed with a fervour that almost startled the onlookers. The words of her orison were not audible, but the passionate earnestness of their utterance shewed that they formulated a desire than which life held nothing dearer, and though Iné and her companion felt that no idle reason might now suffice to vindicate their intrusion, neither of them for a moment balanced this prejudice against the joy of knowing that their worst fear were unfounded.

Nevertheless feeling that every moment added to the perplexity of their position, Iné was on the point of stepping forward to make herself known, when Tokiwa, turning as she rose from her seat, saw the two figures standing behind her in the shadow. This at least seemed to be her earliest perception of their presence, but they, having just seen to what emotion her nature could be stirred, found it difficult to believe that she had not from the first been cognizant of their coming, so completely unconcerned were the tones in which she addressed them.

"You need not have hesitated to disturb me, Iné, for knowing, as I know you do, that it is my desire to be alone at these times, you have surely not intruded without sufficient cause."

"Madame," replied Iné, who felt that the agitation she sought in vain to control contrasted ill with this imperturbable patience, "I pray you to believe that this intrusion is altogether unintentional. I might certainly have known the time to be ill chosen, but I think the events of to-day may in some degree excuse my heedlessness."

"You do not then understand, child," said Tokiwa with

the same voice of gentle kindness, "that whether your intrusion be witting or unwitting I am content to anticipate the sufficiency of your motive. Nay, I can even promise to prove my forgiveness if only you will let me know how I can aid you."

"Ah! Madame," cried Iné, at once reassured and affected by so much benignity, "if only I might know whether this benevolence has any deeper origin than the sympathy all that suffer receive from your Ladyship."

"You shall be free to seek even fuller confidence than that," answered Tokiwa, looking, not altogether unmoved, at the radiance of hope and appeal that shone in Iné's beautiful face; "but first I must remind you that your companion is still a stranger to me."

Since his entrance Yoshitsune had made no attempt to advance farther than the threshold. Kneeling in the shadow beyond the feeble lamp-light, he now, instead of coming forward as etiquette demanded, merely bowed his head in such lowly obeisance that it was impossible to discern his features. Iné who had fancied that Tokiwa's gracious reception might have induced her companion to make himself known, understood from this that he still desired to avoid recognition. Adhering therefore to the plan originally devised, she introduced him as her husband.

Tokiwa waited a moment as if in expectation that Yoshitsune would address her, but seeing that he remained silent, she turned to Iné and said:—

"I owe you no light thanks for contriving this meeting. The services of Yoshinaka's father and his uncle's loyal death are not least among the grateful memories of my life."

"Then your Ladyship has not altogether forgotten the past?" Iné ventured to enquire.

"How should that be child? The past can only be forgotten by those who have found something to replace it in the present."

"Or perchance by those, Madame, who have ceased to care whether the future can be made to resemble it."

The faintest possible shadow of resentment rested for a moment on Tokiwa's placid face.

"You speak somewhat heedlessly, Iné, but I cannot quarrel with your intention. You alluded, however, if I mistake not to some events which have made this day exceptional. If they concern either yourself or your husband, you may count on my sympathy, and if need be, my aid."

"Your Ladyship's kindness makes my task even more difficult, for I fear to be remembered as one that brought a grave trouble into the tranquility of your life."

"Take care that your judgment be not somewhat hasty, Iné. It may be that this calm you see conceals a purpose no less earnest than your own, and that the voice which tells me your secret, is nothing but a consonance of hope."

"Oh! Madame," cried Iné joyfully, "mine is not the only heart that assurance makes glad. There is one at least to whom time could bring no greater sorrow than the certainty of your indifference to his aims."

"Of whom do you speak, child?" asked Tokiwa, no longer caring to conceal her agitation. "It were ill done to trifle with feelings even you can scarcely appreciate."

Before Iné could reply Yoshitsune had sprung forward and knelt at his mother's knees. It seemed at first as though Tokiwa's emotion when she saw her son's face had deprived her of both sense and strength, for she sat rigidly still, not even a breath passing her lips, but presently she started like one awaking from sleep, and throwing her arms passionately about his neck, rocked him to and fro on her bosom. Love long suspended but now supreme, had swept away the consciousness of all the sorrow-laden years, and given her back the child she had risked her life to save and whose baby touch had first reconciled her to that life.

"Mother," said Yoshitsune, "pardon me if I have been so blind as to doubt you for an instant. I had not thought it possible that this might be, but separation sometimes makes rumour stronger than faith."

"It is perhaps better so, my boy," replied Tokiwa, smiling. "Doubts dispelled are the seed of faith, they say, and certainly our lot has not been to live a life beyond the reach of such chances. I was little likely to be so fortunate that this dissimulation should win your pity for its necessity rather than your mistrust of its motive. But at any rate I have the means of proving to you that the long degradation I was once compelled to endure has not touched my heart."

So saying Tokiwa rose, and detaching the disk from the target, placed it in Yoshitsune's hands.

"Draw out the arrows," she said, "and I think the motive of this target practice at any rate will become clear to you."

Yoshitsune followed his mother's instructions, and on doing so found that the outer covering of the disk came away, leaving exposed a surface upon which the figure of a man had been traced. Within the outlines of this figure every one of the arrows without exception had lodged, so that the original design was for the most part obliterated, yet for all that Yoshitsune had not the least uncertainty as to the original of the sketch.

"For one hundred and seventeen months," said Tokiwa, her voice trembling with suppressed emotion, "I was constrained to be the toy of my husband's murderer and my children's foe; and each day of my life since then, a hundred and seventeen arrows, one for every one of those months, have pierced the effigy of that tyrant. These twenty-eight inches of ebony that form my bow, are the twenty-eight constellations that shall shine on our revenge, and the nine inches of cherry wood in each arrow, are the nine luminaries that shall rekindle the glory of our house. The God of Battles, who hears my ceaseless prayers, knows that whatever of rite or ceremony this imprecation lacks, is more than compensated by the earnestness of its purpose, and I have a strong trust that by his aid the force expended in impelling all these arrows, three by three, has been daily stored up in the arms of my three children, so that they may hereafter strike a blow before which the might of the house of Hei shall be as straw before the hurricane. This faith has been my only solace through all the years of my association with dishonour and separation from my children, though in truth I dare not expect that I shall myself be suffered to witness the consummation of my hopes."

"Your words fill me with disquiet, mother," said Yoshitsune. "They seem to point to some peril that menaces your safety. Yet I had thought your protection assured, if not by the promptings of an ancient kindness, at least by the strength of your present alliance."

"It is not strange that you should think so," replied Tokiwa, "and it were perhaps better I should leave your assurance undisturbed, but I cannot choose to forego your sympathy. In the very things you have mentioned lie the sources of my weakness; for when Kiyomori's malady overtook him, there were not wanting enemies who ascribed his bodily sufferings, not to his own excesses but to the crime of loving your father's widow. It was this that persuaded him to put me away—and I earnestly thank the gods for that issue, whatever was the cause that prompted it—but he chose for me an alliance which, if it seemed not unworthy of my former rank, was yet in reality designed as a cruel insult to myself no less than a precaution against future intrigue, for my new husband was accounted an irresponsible imbecile. This might perhaps have sufficed were it not that every fresh calumny is an added gain to the spies with whom the Heike Chief has surrounded himself. By these he has been taught that the Treasurer's eccentricities are the mask of a subtle schemer, and he now seeks to convert the error of uniting me to such a man into a means for destroying Yasutsune himself. The veriest shadow of discontent or symptom of repining would be construed into an evidence of intrigue, and I am almost glad to find that my resignation has been sufficiently well assumed to deceive my own son since it is the more likely to succeed with our enemies."

"But is it possible that these Heike spies have access even to the Lord Treasurer's castle?" asked Yoshitsune in surprise.

"The Treasurer is himself a vassal of the Hei," replied Tokiwa; "but even though he were not, these spies might neither be detected nor gainsaid. It is only by a vigilance amounting to universal distrust that one can hope to elude them, and indeed Iné herself was an object of no little suspicion to me at first; for which I hope her forgiveness will be as sincere as my regret. The error was soon perceived, Iné, and your visit to-night anticipated my confidence by a very little. But tell me, child; is my son really so fortunate as to occupy the position your introduction gave him to-night?"

"Nay, mother," interrupted Yoshitsune laughingly. "Iné is, as she told you, the wife of my staunchest ally, Yoshinaka. I have been anticipated by one more worthy of her indeed, but not more sensible of her worth."

"Then the courage and discretion she has displayed are all the more admirable," said Tokiwa.

"That they are, mother," Yoshitsune warmly assented; "and you will appreciate her services still more when you have heard their results, though these will bring you a new element of uneasiness, I fear."

"It is indeed so, Madame," said Iné, hastening to avail herself of an opportunity she deemed already too long deferred; "but before I recount what I have observed, I may be allowed to ask one question. Is the Lord Treasurer's mental condition really such as it seems to be?"

"Truly," replied Tokiwa, "you ask me more than I can certainly answer. I have sometimes thought that Yasutsune's eccentricities are in the main simulated, but inability to discover their cause has made me again abandon that conclusion. To me at least he has always been rational and kind. Of this I can give you no better proof than the fact that he thus suffers my caprice of living apart from him and the world alike."

"Yet surely it must have been a community of aim that dictated his letter to me," said Yoshitsune.

"His letter to you!" exclaimed Tokiwa with a sudden access of alarm. "Can it be possible that some trap has been devised to bring you within reach of your enemies?"

"I know not whether it were a trap or not," replied Yoshitsune, "but I know beyond question that I received a letter purporting to be written by Yasutsune, the Lord Treasurer, and containing counsels little friendly the House of the Taira."

"If that be so," said Tokiwa after a moment of earnest reflection, "there is a mystery here that is likely to cost us dear before we unravel it."

"Unless we hold the key already, Madame," cried Iné, and forthwith she recounted everything in a few rapid words: her own doubts of the Treasurer's insanity, founded on his aspect towards the Factor Kageyu; the suspicions excited by the latter's intimacy with Hiromori; the conversation she had overheard between the two men, and finally the incidents of the dance and the terrible peril Yasutsune had so narrowly escaped.

Tokiwa heard her to the end with an attention that proved the importance she attached to her recital.

"I have not the least doubt," she said, "that the letter my son received was a part, perhaps the beginning of the plot Iné has so skilfully discovered, only, I fear, to discover at the same time our inability to defeat it."

"Surely, mother," exclaimed Yoshitsune, "you speak with unreasonable despondency. Even though the Treasurer himself be incapable of anticipating his enemies, there are not wanting Genji swords to sweep these crafty assassins from his path. To me it seems that this discovery points rather to success than to disaster, if only the strength it gives us be wisely wielded."

"Child, child," Tokiwa said sadly, "you have but little real idea of the might to which we are opposed. Not a man in the capital from the Emperor to the sandal-maker lives beyond the shadow of the Heike power."

"Say rather, mother, that living where the shadow has so long brooded, they have no more heart to look for the sunlight. Think you that if Kiyomori's arm reached so very far, Benkei had been suffered to spoil a thousand Taira vassals of their swords, or I, to live three months unmolested within bowshot of Rokuhara? This at any rate I can tell you of a surety: there are men both in the north and west, who, could they but win one word of Imperial sanction, would soon plant the white flag on the barbicans of every Heike stronghold in Japan. With our knowledge of this plot have we not an almost assured hope of securing the Lord Treasurer's alliance, and with his aid may we not look to obtain that sanction, if not from the Ex-emperor himself, at least from one of the Princes of the blood?"

In the excitement of the moment Yoshitsune had forgotten everything but the prospect he so confidently described. His words rang out high and sonorous in the stillness of the night, and even as Tokiwa held up her hand to enjoin caution, a leaf of the sliding door was suddenly thrust back and a man dashed into the room. His coming was so unexpected and his motions so rapid, that before those within could even recognize, much less prevent him, he had seized the disk of the target and regained the door.

Pausing on the threshold, however, he turned and showed

the face of Kageyu the Factor; an evil face at the best of times but now rendered more than ever repellant by the mood of malignant triumph it displayed.

"It seems to me," he sneered, "that this 'crafty assassin' is not the only plotter in the Lord Treasurer's household. Your scheme was felicitous enough in conception and might have prospered in abler hands, but this arrow-pierced disk will serve my purpose better than all the stories of eave-dropping girls could have benefitted yours. I thank you sincerely for the opportunity you have made for me, and I think I can promise you Kiyomori's gratitude also."

Standing thus on the threshold of the door, which, partly in bravado, partly under the impulse of a stealthy habit, he had almost closed behind him, this man held, and knew that he held, the lives of every one of his auditors in his hand. He understood perfectly that the impossibility of Tokiwa's escape involved her son's destruction, for assuredly Yoshitsune would prefer death in any form at his mother's side to a flight that left her without succour. In the Treasurer's present condition Kageyu's authority was almost absolute. He had only to say a word, and his servants, of whom many were even then within call, would either close the issues from the castle until Kiyomori's pleasure could be ascertained, or—and to this latter alternative the man's savage greed largely inclined—help their master then and there to perpetrate a deed certain to bring both him and them no small praise and profit.

Neither was the extent of their danger in the least underestimated by Tokiwa and her companions. They were completely without resource. It was impossible to intercept the Factor's exit. Any attempt to do so could only have precipitated his action, and although Yoshitsune, springing to his feet, now stood with his hand on his sword and a tumult of almost uncontrollable fury surging through his veins, he felt that even to his activity the task of anticipating their enemy was impracticable. Once outside the door Kageyu would have an immense advantage over a pursuer unacquainted with the place, and would moreover be able to command immediate assistance, for it was easy to perdict the nature of their action who might perceive the Treasurer's chief vassal pursued by a stranger within the very precincts of the castle.

Nevertheless there was one chance to which Yoshitsune's faith in manhood made him attach considerable value. He knew from experience with what contempt his own slight proportions and youthful appearance generally inspired his opponents. Kageyu was in the prime of manhood, and the enjoyment of a reputation founded upon no considerable exploits. Surely no fear of jeopardizing his triumph would be suggested to such an one by an encounter with a beardless boy, or at least no fear sufficient to make him a brook an insult or underlie a challenge. In this improbability at any rate lay the only apparent expedient; an expedient, for the rest, according well with Yoshitsune's mood.

But how was the thing to be accomplished? No verbal defiance however ungently framed might be altogether trusted. Rather was it expedient to devise some swift and sudden method of assault; some method which without including any attempt to come to close quarters, would nevertheless move Kageyu beyond the capability of forbearance.

Yoshitsune carried in his girdle two swords: one was the celebrated 'Raven'; the other, the dirk Hidehira had sent him from Oshiu as a token. This latter was a short but very heavy weapon; just such an one indeed as Yoshitsune had by long practice, acquired the power of throwing with a force and precision even Benkei could not rival. For an instant he had forgotten this resource, but as his fingers, twisting nervously about the hilt of the 'Raven,' came into accidental contact with its companion, a sudden memory of the power he possessed flashed across him and made his heart throb with fierce exultation. It should be an action so swift that Kageyu might not even perceive its intention, and as for its precision—ah! was it likely that one who for sport could bury the steel in a wooden visor at ten paces, should miss the body of a man when the price of failure was his mother's destruction.

All these thoughts passed through his mind while Kageyu was speaking, and almost before the last of the Factor's jilbing words had been uttered, Yoshitsune's dirk was loosened in its sheath.

(To be continued.)

DOUBLE ACROSTIC.

Hushed is the thunder, the storm has passed by,
Floats not a raincloud across the clear sky;
In the west lingers the glory of day,
Gleams on the mountains its last golden ray.

In the dark forest the breeze is at rest,
Not a wave ruffles the lake's silver breast;
Gently the flowers have sunk to repose,
Softly among them the rivulet flows.

All the wide landscape lies silent and still,
No sound in the valley, no voice on the hill;
Slowly the bright colour fades from the sky;
Risen in splendour the moon floats on high.

1.

If this light should really turn out what its meaning must convey,
Its termination you'd not see for many and many a day.

2.

The charms of peace denied, with iron hand
And fire and sword, he ruled th' Iberian land.

3.

How little did the youthful King, when from her treacherous hand
The charring cup he took, suspect she would his death command.

4.

Hard by the stream at its trickling source
This vision might be seen,
'Neath shadowy boughs whose leaves caress,
As they bend with the breeze, the golden tress
That escapes from her coronet green.

5.

A miscreant, who himself declares in villainy the way
To act, is not to dull device by coldness and delay.

6.

If that we're daily asking for from others could this be,
No doubt we should be satisfied in a singular degree.

7.

How few who earn their living by the pen
Possess this dawning gift of Heaven to men.

DELTA.

DOUBLE ACROSTIC.

Alas! these two go hand in hand,
For when a soul departs,
We hear of sorrow in the land,
With many aching hearts.

1.

This we do not, though we wish to
Tis what we would not that we do.

2.

A female heart served up in dishes,
As well a multitude of fishes.

3.

Imagination—what the mind conceives,
And then in faith with innocence believes.

4.

The proudest mortal must e'en prostrate lie,
For unto all 'tis given sure to die,
He comes upon life's stage, goes through his role,
And makes his egress with a muffled toll.

5.

This is the sum and substance of our life,
The consummation of our earnest hope,
In varied form such piety is rife,
But in the dark all more or less must grope,
For we are told as plainly as can be,
It evidences what we cannot see.

FUJITAMA.

LIGHTSHIP SIGNALS.

The following are the signals made from the lightship to denote the approach of vessels:—

Merchant steamer:—A black ball, with the national flag of the vessel below, at the yard arm.

Mail steamer:—A black diamond, with the company's flag below, at the peak.

Man-of-war:—National flag of the vessel at the peak.

Sailing vessels:—For a ship; flag B. (red): barque, flag C. (red ball on white ground): brig, flag D. (white ball on blue ground): schooner, flag E. (white ball on red ground) all commercial code, with the vessel's national flag below as soon as it can be made out.

METEOROLOGICAL REPORT

FOR WEEK BEGINNING FRIDAY, NOVEMBER 14TH, 1879,
Observatory of Daigaku, Moto-Fujimicho Hongō, Tokio, Japan.

REMARKS.

Heavy line represents barometer.
Light continuous line—max. & min. thermometers.
Dotted line—represents velocity of wind.
Dashed line—percentage of humidity.
Max. velocity of wind, 31 miles per hour on Friday, 1 p.m.
The barometer is reduced to the freezing point and to the level of the sea.
A temperature slightly below the freezing point is recorded this week for the first time for this season. It was observed on Sunday morning. The maximum barometer for the week was on Sunday at 7 p.m. being 30.259 inches. The minimum was on Thursday at 10 p.m., being 28.695 inches. One of the noticeable things of the weather of the week was the wind on Friday, a velocity of 31 miles per hour having been recorded at 1 p.m. of that day.

MISCELLANEOUS.

W. & A. GILBEY'S WINES AND SPIRITS.

W. & A. GILBEY have special facilities for carrying on an extensive Foreign Trade, having held for many years in their Excise Bonded Stores, for the purpose of their Home Trade, a stock of not less than 12,000 Casks of Wines and Spirits, which are equally available for Export. These stores are by far the largest private Duty Free Warehouses in the World, and are under the supervision of a staff of Excise Officers specially attached to these Warehouses.

THE EXTENT of W. & A. Gilbey's purchases enables them to give the best VALUE to the public, as a twentieth part of the Foreign Wines consumed in the United Kingdom is supplied from their stock. In the year 1876 W. & A. Gilbey paid duty on 1,881,049 gallons of Wines and Spirits, and the average quantity bottled and sent out by them daily was 3,050 dozens or 36,600 bottles.

QUALITY is guaranteed by W. & A. Gilbey, and is the same whether the Wines or Spirits are obtained direct from their Head Establishments or from any of their Agents. The purity and genuineness of every article in this list are guaranteed in accordance with Act of Parliament, 38 and 39 Vict., Cap. 63.

W. & A. Gilbey have always adhered to the standard of Bottle Measure recently recognised by the Government, namely—

6 bottles contain one gallon; 12 half-bottles contain one gallon.

SECURITY is ensured to the purchaser, each bottle bearing W. & A. Gilbey's seal and label guaranteeing quality and measure, and the strength also in the case of Spirits.

W. & A. Gilbey's Head Establishments:—

England.—(Offices) Pantheon, Oxford Street, London; (Warehouses, Duty Paid) Oval Road, Camden Town, London.

Ireland.—(Offices) Upper Sackville Street, Dublin; (Warehouses, Duty Paid) Upper Sackville St., Dublin.

Scotland.—(Offices) Haymarket, West End, Edinburgh; (Warehouses, Duty Paid) Haymarket, West End, Edinburgh.

France.—Principal Establishment, Chateau Londenne, near St. Estephe, Medoc.

Excise Bonded Stores.—Warehouses, Nos. 1 to 5, North-Western Goods Station, and Bonny Street, Camden Town, London.

Distillery.—James Street, Camden Town, London.

Printing Department.—Poland Street, Oxford Street, London.

J. & E. ATKINSON'S PERFUMERY,

CELEBRATED for nearly a century past, is of the very best English manufacture. For its purity and great excellence it has obtained the following

EXHIBITION PRIZE MEDALS,

LONDON, 1862. PARIS, 1867. CORDOVA, 1872.
LIMA, 1872. PHILADELPHIA, 1876. VIENNA, 1873.
"ONLY GOLD MEDAL FOR ENGLISH PERFUMERY,"
PARIS, 1878.

Atkinson's Choice Perfumes for the Handkerchief,

White Rose, Frangipane, Ylang Ylang, Stephanotis, Opopanax,
Jockey Club, Ess. Bouquet, Trevo, Magnolia, Jasmijn,
Wood Violet, Gold Medal Bouquet,

And all other odours, of the finest quality only.

Atkinson's Florida Water,

A most fragrant Perfume, distilled from the choicest Exotics.

Atkinson's Quinine Hair Lotion,

A very refreshing Wash which stimulates the skin to a healthy action and promotes the growth of the hair.

ATKINSON'S Ethereal Essence of Lavender,

A powerful Perfume distilled from the finest flowers.

ATKINSON'S

Quinine Tooth Powder, Violet Powder, Macassar Oil, Glycerine Cream,

And other Specialities and general articles of Perfumery may be obtained of all dealers throughout the World, and of the Manufacturers.

J. & E. ATKINSON,
24, Old Bond Street, London, W.

PRICE LIST FREE ON APPLICATION.

CAUTION.—Messrs. J. & E. ATKINSON manufacture their articles of one and the best quality only. Purchasers are cautioned to avoid counterfeits by observing that each article is labelled with the firm's Trade Mark, "a White Rose on a Golden Lyre;" printed in seven colours.

THE BEST REMEDY FOR INDIGESTION.

TRADE

NORTON'S

MARK.

CAMOMILE PILLS are confidently recommended as a simple Remedy for Indigestion, which is the cause of nearly all the diseases to which we are subject, being a medicine so uniformly grateful and beneficial, that it is with justice called the "Natural Strengtheners of the Human Stomach." "Norton's Pills" act as a powerful tonic and gentle aperient; are mild in their operation, safe under any circumstances, and thousands of persons can now bear testimony to the benefits to be derived from their use, as they have been a never-failing Family Friend for upwards of 45 years. Sold in Bottles at 1s. 1½d., 2s. 9d., and 11s. each, by all Medicine Vendors throughout the World.

CAUTION.

Be sure and ask for "NORTON'S PILLS," and do not be persuaded to purchase an imitation.

THE GREATEST

WONDER OF MODERN TIMES!

HOLLOWAY'S PILLS.

Persons suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

Sir SAMUEL BAKER,

in his work entitled "The Nile Tributaries in Abyssinia," says, "I ordered the dragoman Mahomet to inform the Fakery that I was a Doctor, and that I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as possessing unmistakable purgative properties they create an untieable effect upon the patient, which satisfies him of their value."

SIMPLE, SAFE AND CERTAIN!

HOLLOWAY'S OINTMENT.

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

Mr. J. T. COOPER,

in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls, butter, and horse-feed poured in upon us, until at last a tea-spoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining stock."

Sold by all Chemists and Medicine Vendors throughout the World
May 17th, 1873. ff.

THE SHIP-OWNERS' COMBINATION.

THE details which are now published of the offensive and defensive alliance entered into between the combining ship-owners of London and Liverpool do not tend to make us think better of their scheme, or consider it one likely to last even the few months during which it is to be on trial. Probably the wisest clause in the agreement is the one that stipulates for its termination, outwards on the 31st December 1879, and homewards on the 1st March 1880, unless renewed; and we imagine that before this period has elapsed both public opinion and actual opposition will have convinced the signatories that their combination is impracticable, and even opposed to their own future interests. It is an un-'Holy Alliance,' repugnant to the feeling of the age, detrimental to commerce and opposed to progress.

It is true that the most extensive monopoly ever created first opened India and China to British trade and it may be questioned whether the commerce of those countries would have been developed until many years later, had not the association of the 'Governor and Company of Merchants of London trading into the East Indies' obtained their first charter in 1600 and then acquired the power and influence of the well known 'Honourable East India Company.' For the two hundred and thirty years during which their trading privileges existed, the company had to fight against public opinion and against well founded complaints that the business they were conducting was disproportionately small compared to the extent of their monopoly and the resources of the countries they were dealing with. It was difficult in those days to annul privileges granted by the state and, in an age when bribery and corruption were acknowledged arguments, to withstand the power acquired by the great company. But public opinion finally carried the day, the commercial character of the company's charter was abolished and

British trade to the East at once took the strides of progress which it otherwise could never have accomplished. Since the monopoly was withdrawn from the hands of the East India Company, the carrying trade to the East has been free to all comers. For many years its profits were shared by few competitors, but with the opening of the Suez canal a new era of communication was inaugurated; and now, the choice of means of conveyance between London and China or Japan has become as varied as the method of traffic between England and the Continent. The time of concessions for trade privileges being granted by the state has happily passed away from English policy, and the hard fought for status of free trade has become a standing principle with the Government and the people. Of this principle, and of the national energy which it provokes, the various steam lines to the East have been conspicuous examples. Treading on each others' footsteps the French mail line started in competition to the P. & O.; Holt's line entered against both; the 'Glen,' the 'Castle,' the 'Shire' and other steamers followed, all of which claimed an equal right to the trade of the East as that of their predecessors. But now, regardless of the very principle upon which they have severally joined in this competition these companies would debar others from following their example. Free trade in their opinion, is just and commendable up to a certain date, but after that it becomes a crime: where formerly they would have been the first to invoke public sympathy against any combination of the interests they were attacking these companies would now proclaim their sole right to a trade they then considered open to all. Sympathy and public support were in their favor when initiating their lines, but both must inevitably be withdrawn if they themselves go back upon the constituents who gave them that sympathy and support.

A perusal of the agreement between the ship-owners will show how arbitrary is their present combination, and how very futile the plea originally put forward that it was intended as much for the benefit of shippers as themselves. It appears to us that not only will merchants recognize this 'agreement' as a direct attack upon their interests but that it will develop the strongest support towards any opposing ships that may now enter the trade. But the details of the agreement are so complicated and so open to causes of complaint amongst the signatories themselves that we can hardly imagine the combination would last, even without the opposition it has already evoked and which cannot fail to increase. Sufficient unanimity has been found to secure the alliance of nine ship-owning firms and brokers (with the possibility of their number being increased to twelve) to join in this agreement, but one necessity of this alliance will be to obtain from their neighbours an exposé of the average earnings of the different ships, whenever the occasion arises to divide a loss incurred by reducing freights to crush an opposition. Past experience must stultify itself if such information is likely to be freely given

by nine or twelve rivals in the same trade. Again, the brokers under this agreement are expected to refrain from loading cargo in sailing vessels which might be carried by steamers, or in other words they promise to decline business from one class of constituents for the benefit of this confederacy; and, what will appear as a very arbitrary enactment to some merchants here, it has been further stipulated that the Agents in China and Japan of the signatories to the agreement shall be unable to load any other vessels than those belonging to the combination.

The inducement held out to shippers as a means of securing their acquiescence in a high rate of freight upon their own and their constituents' cargo is a bonus or a return of threeshillings per ton upon the quantity they may ship during six months. The principle of any return upon a specific rate is, in our opinion, radically unsound whilst, in this instance, the method of its application is, far more objectionable than in the case of insurance wharfage and other companies where it has already been adopted. According to the ship-owners' agreement many of these returns upon freight will not be collected until twelve months after it has been shipped—a lapse of time which, although inevitable, admits of too many changes in the interests involved to ensure its being satisfactorily settled in all cases.

It is, however, unnecessary to criticize the details of this combination at greater length. The principle of free trade which it violates is sufficient to call for strenuous opposition, whilst the details of the scheme are both complicated and objectionable. If the latter do not entail the natural death of this attempted monopoly before its first period of probation has expired, we may be sure that the influence of the former will ere long accomplish its downfall.

THE U. S. METEOROLOGICAL SERVICE.

I.

IN this review for November 15th, a brief notice was published of the work of the Meteorological Bureau of the U. S. Signal Service, especially in reference to the international character which it is fast assuming. The great interest which is just now manifested throughout the world in this matter is sufficient excuse for undertaking a more elaborate discussion of the subject, in which we shall briefly refer to the origin and history of this important system of Meteorological Observations, and in addition we shall describe with some detail the operation of the service and refer to a few of the very valuable results it has already accomplished.

Nobody needs to be reminded of the fact that prediction of the weather to a greater or less extent has been constantly attempted among all races by all classes of people. A large volume would be required to contain a list of the "weather signs" which have from time to time been "discovered" or "invented," many of which, indeed, have survived the combined attack of time and the diffusion of more rational and scientific methods of reasoning and still afford much satisfaction to many intelligent people. Many of these "signs" are entirely fanciful or mythical and have no support whatever in reason or experience. The origin of these is certainly curious and belief in them doubtless rests, in many instances, on a basis similar to that which gives faith in a lottery wheel. Everybody is sure to hear of the man who draws a capital prize in a lottery, but the unlucky unfortunates, to the number of hundreds and thousands who secure blanks go unheralded. In the same way a single verification of a prediction is more widely known than a thousand failures of the same, and thus a single coin-

cidence serves to establish the character and reputation of an indication.

A few of these signs rest to some extent upon known relations of natural phenomena; such as the appearance of halos around the moon as an indication of rain and also the color of the sky observed at sunrise or sunset. To the same class belong observations of the behavior of plants and hygroscopic substances which indicate roughly the quantity of moisture in the air, and also those concerning the direction of the wind, the form and number of clouds and the audibility of distant sounds. To a third class belong those which at first are essentially local in their character and which are also often traditional. They depend on an assumed constancy in climate and although at first local they are transplanted and in this way often lose any trace of reliability which they may have originally possessed. To this class, indeed, belong many systematic attempts in modern times at weather prediction and in some localities the constancy of climate is such that no small degree of success has attended them. To illustrate; if regular meteorological observations be maintained in a country, whose climate is reasonably constant for a period of from twenty-five to one hundred years, the probability of a certain kind of weather at a given time can be stated with considerable accuracy. Thus,—on the Pacific Coast in the United States the permanency of meteorological conditions is such that should one always predict for to-morrow the same kind of weather which he is experiencing to-day he would find his predictions verified in about nine cases out of ten; and the same process can be applied with a somewhat less degree of probability in various other portions of the same country. Although this method of foretelling the weather has been applied in many countries, it can hardly be said to rise to the dignity of a scientific system of meteorology. Such a system must be based on a careful and conscientious investigation of the relation of the various meteorological phenomena as regards the order and manner of their occurrence and as far as possible, the discovery of how and to what extent each plays a part in the production of what, in its entirety, is called "the weather." It implies, not only the making of suitable observations at desirable localities and frequent intervals, but the prompt collection and arrangement of these and their examination and investigation by competent meteorologists. Of weather observers there have long been many in the field. As long as ten or fifteen years ago, competent authorities in this department of science discouraged the erection and endowment of meteorological observatories for the reason that the accumulated mass of facts was already greater than meteorologists could make use of. As long as there was no unity of action in regard to the collection and discussion of observations, this was doubtless true. As a result of this much-needed unity of action, however, practical meteorology has become an established fact and it is now assuming a position and attracting a degree of attention of which it is without doubt, eminently worthy.

Although the U. S. Government has taken a leading place in this work it stands by no means alone. Several European countries were early in the field and have continued there without lagging in their enthusiasm. It will be generally admitted, however, that to the United States belongs the honour of the first inception as well as the most perfect realization of the scheme. To the Smithsonian Institution at Washington, and especially to its late distinguished Secretary—Professor Joseph Henry, must be given the credit of this pioneer work. The question was agitated as early as 1830. Many volunteer observers were enlisted and the Smithsonian Institution continued for many years to supply gratuitously the necessary instruments to those who would undertake to make and report the observations. The practical realization

of the electric telegraph quickened scientific research in many directions. As soon as lines began to be extended over any considerable area it was suggested that storm warnings might be furnished by their aid. In the report of the Smithsonian Institution for 1847 there will be found this sentence; "The extended lines of the telegraph will furnish a ready means of warning the more northern and eastern observers to be on the watch for the first appearance of an advancing storm." In that of 1848 it is proposed to employ as far as the funds of the Institution will permit, the telegraph in the investigation of atmospheric phenomena. In 1849 the announcement is made that successful applications have been made to the various telegraph companies for aid and assistance in the matter. In 1850 a large outline map was hung in the Smithsonian Institution upon which was represented from day to day the conditions of the weather in various parts of the country as far as was reported. By the aid of the telegraph much information was in this way gained as to the progress of storms and this, with constantly increasing corps of observers, furnished much useful material for discussion by students of meteorology. But no systematic attempt at weather prediction for the benefit of commerce and agriculture was made nor, indeed, was it possible at that time. The breaking out of the civil war in America, in 1861, arrested the progress of this work, as it also seriously interfered with the general scientific progress of the country.

In the meantime, however, active advances were being made in Great Britain and Europe. In the year 1848 a suggestion concerning the employment of the telegraph in meteorology was made at the meeting of the British Association for the Advancement of Science, and in 1854, the distinguished Astronomer Le Verrier, urged the importance of systematic telegraphic weather reports. A scheme for the undertaking was sanctioned by the Emperor Napoleon in 1855 and the system was inaugurated, the stations from which reports were received being confined at first to France. In 1857 the network of stations was extended to foreign countries and in 1858, all of the important cities of Europe being included, Le Verrier began the publication of the "Bulletin International." In England, Fitzroy met with great success in his efforts in this direction and the system was extended to India and Russia, and an organization was created in Australia.

In America in the year 1864,—before, indeed, peace had been declared, Professor Henry made an effort to revive and extend the system of storm warnings and daily weather reports. Application was made to the North American Telegraph Association for the privilege of the use of their lines for this purpose, and they generously responded by offering to transmit weather reports free of charge. Arrangements were at once made for actively renewing the operations which had been suspended, when unfortunately the occurrence of a disastrous fire at the Smithsonian Institution again interrupted the progress of a work in which that institution had been a pioneer, but upon which it was not destined again to enter.

But that which was thus unhappily terminated at the National Capital was to be reinaugurated and indeed given a new vitality in a somewhat unexpected quarter. In the city of Cincinnati, Ohio, in the year 1869, there appeared what must be considered the nucleus of the extensive meteorological system which is now controlled by the U. S. Government. To Professor Cleveland Abbe, who organized that nucleus, more than to any one man, belongs the credit for the great efficiency and high scientific character which the system under the control of the War Department has attained. An ardent student of meteorological science, he has enriched it by numerous publications as well as by his indefatigable labors in the Signal Service Department. From some of his publications, many of the facts in this article are

extracted. As Director of the Cincinnati Observatory in 1868, he represented to the Chamber of Commerce in that city the importance of a system of weather reports, and so successfully that that body authorized him to collect and publish reports and predictions at its own expense and for its special benefit. On the first of September, 1869, the "Weather Bulletin of the Cincinnati Observatory" began. The bulletin was published daily at noon and in addition to containing the reports transmitted by telegraph from twenty-five or thirty stations there was appended to it a brief "forecast" of the weather which would probably be experienced at Cincinnati during the next twenty-four hours. This was the first practical attempt in this direction in the United States. The bulletin was maintained under considerable difficulties and many discouragements by its author, but its value to the general public came to be recognized and was frequently acknowledged. Prof. Abbe's enthusiasm was contagious and others became interested in the scheme. The number of observing stations was largely increased and Mr. Armstrong, the manager at Cincinnati of the Western Union Telegraph Co., began early in 1870 the daily publication of a weather map of the United States, which added largely to the value of the reports, copies of which were sent to New York, Chicago, and other cities, being universally received with great favor and creating much popular interest in the work. The successful labors of Prof. Abbe in Cincinnati, as well as considerable pressure from other localities, had induced Congress to consider the question of a National Establishment, and a bill providing for its organization was passed in 1870. In consequence of this the publication of the Bulletin and Map at Cincinnati terminated in December of that year. Prof. Abbe began to "forecast" for the National Bureau and soon came to be affectionately known throughout the length and breadth of the country as "Old Probabilities." Of the organization of the present signal service and its results, we shall speak in a succeeding article.

McCLATCHIE'S "JAPANESE PLAYS."

IT would doubtless be possible to pick holes in the little volume of "Rhymes" reprinted from the *Japan Herald* by Mr. Thomas McClatchie*; but it would be impossible not to feel the charm of the verve, the *bonhomie* (our author affections French words) which, breathing through every line, show with what frolic spirits the writer has set himself to his jaunty task, while they put his readers in good humour with him and with themselves from the very first page. We cannot stop to ask whether all these good things are really in the original, whether it is possible that such happy hits, such fun and humour, such quaint rhymes do actually form the staple of those Japanese dramatic entertainments, which lasting, as they do, from morn till dewy eve, and dragging their slow way through the interminable lengths of never-ending conversations, seem to most European spectators to prove merely what a vast fund of patience an Eastern audience must possess. No, we take what we get, and are thankful. If Mr. McClatchie's production is scarcely Japanese, it is much better than it would be if it were Japanese. The spirit is English, but the stories are new; and the style of versification, though of course not positively new,—indeed a confessed imitation,—is still unusual enough to form another pleasant element in the entire impression received.

Mr. McClatchie makes us acquainted with six plays in the course of some hundred and thirty pages of good clear print. To review each one separately would carry us beyond the

* JAPANESE PLAYS, (Versified.) by Thomas R. H. McClatchie, Interpreter; H. B. M.'s Consular Service, Japan: Yokohama, Kelly & Co. and Lane, Crawford & Co.

limits of our space. In order, therefore, to give such of our readers as have not yet seen the volume an idea of its contents, we take one of them at hap-hazard,—say, “The Enchanted Palace,”—and will let the author, as far as possible, tell the story for himself. The personages are a Bishop (Buddhist of course), his three attendants, viz., a Monkey, a Dog and a Man, and—but we must not anticipate. The scene is laid on a certain magic mountain :

“And where was this said mountain?”—I sternly object
To commit myself, Reader, in any respect;
For, in fact, its position to demonstrate right
Is a task for which I am incompetent quite;—

Yet this much will I say—
Take your Atlas down, pray;
Now, just hit the west border of “spicy Cathay;”
(Have you got it?)—then, next, will you carefully scan
All the district from thence down to fair Hindostan;—
Well, ’twas somewhere ’bout there—beyond that, as I live,
Not the least information I’m able to give.
But this much I will answer—not a word I’ll retract—
That there was such a mountain ’s a positive fact!

Yes, it looked very fine from a distance, I’ll own,
As a king may look noble and grand on his throne;
But suppose that the monarch should order his men!
Quick to lead you away to the scaffold,—how then?
Would you still call him “gracious?”—Believe me, my friends,
‘To the view it is distance enchantment that lends!’
(Thus I freely translate the old proverb you know,
Running “*omne ignotum pro magnifico*.”)
And just so this same mountain, though grand to the eye,
Was a different thing when one ventured too nigh;
For each person who wasn’t contented to view it,
But endeavoured to climb it, had reason to rue it!
Many dozens of ‘globe-trotters,’ eager and proud,
Thought to gain some slight *kudos* by ‘doing’ “Black Cloud;”
Many dozens, I say, started off on the track,
 (“They’d be up in a jiffy, and down in a crack!”)
But alas! for their boasting—they never came back!

Oh! many a party, and many a crowd,
Started off on a picnic to famous “Black Cloud”—
But they stayed there for ever, not merely *pro tem*.;
‘Stead of ‘doing’ the mountain, the mountain ‘did’ them!

Well, it so fell out that the Bishop and his three attendant clergy, in the course of their diocesan visitations, were led one day over the very part of the country where “Black Cloud Mountain” stood, and,—need we say it? for such things are so much the rule in remote rural districts—they had not gone far when there burst on their ears the sound of heavenly music, and on their eyes the vision of a palace

From the roof to foundation with jewels bedeck’d,
Gleaming bright as the sunbeams whose rays they reflect;

while as to the interior,

This much will I tell—
As the dull oyster-shell
Is outshone by the pearls in its bosom that dwell,—
As the rich fruity part
Of a raspberry tart
Is more dear than the crust to a juvenile heart,—
Even so with this Palace—(no Metaphor thin)—
By so much is its outside surpassed by its in!

Then, *place aux dames*. The ladies come on the scene,—lovely damsels, honris who begin to ply their visitors with wine and dainties till the Bishop is scandalized and the Dog drunk. Naturally these Circes are but demons in disguise, tarantula spiders in fact, who, though they let the holy man (for, as a good Buddhist, he had carefully abstained from the proffered spirituous liquors) slip through their fingers, carry off his unfortunate tipsy attendant, the Dog, to the horrible larder where bleach the bones of former ill-fated pilgrims. All, however, ends well, the Bishop rides back to help his luckless companion,

Light dawns upon the mountain side;—
No Palace greets our eyes!
Where once it stood in all its pride,
Now crags and boulders rise!
Vanish’d the hall—the ladies fled—
A dismal pile of rocks
That rears aloft its rugged head
Alone our vision mocks!
Yet o’er that huge dark mass is spread
A net, of texture fine,
Even as the web the spider’s thread
So cunningly doth twine.

To be brief, you the sombre exterior view
Of the larder (or gaol) of the devilish crew,
Where our friends lie confined, in as dismal a state
As is fitting in view of their probable fate!

But where there’s a will there’s a way. The Bishop and the Monkey go to work with pickaxes, every hair that falls from the Monkey’s coat turns into a little baby Monkey who at once sets to work to assist his papa in the labour of delivering the captives, the latter are rescued, the goblins routed, and all the good folks live in happiness ever after.

And here we must take leave of Mr. McClatchie and his “Rhymes.” Cross-grained critics eager to blame at any price might, perhaps, be moved to enquire what the ghost of poor old Horace has done to be so perpetually evoked at this distance both from Rome and from the Sixth Form, and to ask whether, after all, English is not a good enough language for most practical purposes—even Ingoldsby’s purposes, and able to stand on its legs without assistance from French, Latin or Japanese. Possibly, too, some of them might have something to urge against the fitness of indiscriminate quotations from scripture and from “poker,” and (even putting aside all linguistic purism) they might be astonished to find so gallant a poet talking of a beautiful young lady as a *kid*! We, however, do not mean to make any of these ill-natured observations. As we started by saying, we take our Japanese Ingoldsby as we find him, and offer him our best thanks for plucking such smiling flowers from the thorny tree of oriental studies, and arranging them in so merry a posy for our benefit.

ANY details of arctic exploration or discovery are of special interest just now in this part of the world, which was so recently the first to welcome Nordenskjöld on his release from Siberian frosts and successful accomplishment of the North-east passage. Denmark does not care to be left behind in the march of polar investigation. The Copenhagen correspondent of the *Pall Mall Gazette* says, that the presence of Sir Allen Young at the Danish capital, is connected with an idea proposed by a scientific committee of the International Meteorological Congress, which met at Hamburg, for the purpose of promoting expeditions to the arctic seas. It was there suggested that an attempt be made to approach the North pole gradually by means of a series of stations which should narrow the circle round the much coveted spot. Greenland belongs to Denmark, and it is known that the government intends to ask a considerable vote toward defraying the expenses of a Danish arctic expedition, so as not to be too far surpassed by the Swedes. Rumor says that Sir Allen Young will be consulted with respect to the proposed expedition, which, if it is to be equipped at all, will start from some point in Greenland. As long ago as the winter of 1876 the idea of narrowing the circle around the pole was formulated in the *New York Herald* whose scheme was “that several vessels should be prepared adapted for the service; that supplies of every conceivable kind should be gathered together, for not a mere single hibernation in some ice-locked bay, but for a protracted siege of years in duration; that a sufficient number of men be enlisted for the undertaking, with unstinted bounties, and that a trusty leader be found to command the forlorn hope which was always to precede the main body and mark out its pathway. It was proposed that this advance guard should proceed in ships as far north as practicable, and then a permanent camp should be established amid perpetual ice. At intervals from this camp to the open Atlantic other camps were to be made on shore, if that were possible, and if not, vessels of supply were to be stationed and a constant communication kept up between the innermost explorers and the outer world. The foremost camp should, as rapidly as possible, be made a grand depot of men and supplies and employed as the base for northward advances. From its

shelter there should be a continual pushing forward, and the establishment of a cordon of depots as far north as should be indispensable to the support and safety of the vanguard, who are to be always on the move ahead, fast or slow, as they can, and whose ranks are to be supplied right along with fresh men to replace the broken down and sick."

THE organization of the Chinese Customs' Service is admittedly as perfect as any public department of a Western Government, and the Chinese authorities have shown their appreciation of the work done by maintaining their foreign inspectorate long after the lapse of treaty obligations might have enabled them to dispense with its services. No better proof of the success of foreign advice and foreign supervision could be hoped for than the fact that a country like China continues to give the entire control of one of its principal departments to foreigners—to people whom it professes to despise, but whose good work it is quite capable of appreciating and turning to account. One of the most important and useful branches of the Customs' service is the Statistical Department and a reference to the regular publications from that office shows what a very complete and efficient system has been organized in Shanghai. We have now before us the Quarterly Returns of Trade from July to September 1879, published in Shanghai on the 7th November and comprising the returns from nineteen different ports. The same pamphlet or rather book (for it has 163 pages) also contains a Report of Dues and Duties collected at all the ports during the same period, a précis of all the fines and confiscations, and a report of the movements, appointments, etc., made in the service. We notice that the total customs' collections for the quarter amounted to 4,168,492 Taels, against 4,000,947 Taels during the same period in the previous year—or more than double the total customs' revenue of Japan in a whole year. With such an income it is of course possible to do anything, but we must admit that better work than these statistical publications from the Shanghai Custom House could not be seen in any country. Since 1866 the same office has published in Shanghai its 'Daily Returns' consisting of a sheet containing the shipping entries and clearances each day, and a detail of every outward and inward Manifest. The information thus given is of considerable interest to merchants and also forms the basis from which all the subsequent statistics can easily be compiled. We take the liberty of suggesting to our own Custom House that it also should adopt a similar plan, and although its records must be meagre compared to those of Shanghai, the information would be none the less appreciated by the merchants in Yokohama.

But, excellent as the Shanghai Customs' returns are and capable as they may be of useful imitation here, we must not withhold praise from the work the Japanese Custom House has already done in the same way. The monthly and annual returns are already very complete and require but slight improvement in the matter of editing and printing to be nearly perfect. They already form the basis of all Consular returns, but they are, we think, insufficiently known to foreigners many of whom are scarcely aware of the commercial information so ready at hand.

TEUTONIC enterprise in the east is steadily advancing. The *Pall Mall Gazette* has some interesting statistics on the subject:—From the reports of the German consuls for 1877 and 1878 it appears that of late years there has been a gradual and steady, if not very rapid, increase of German commerce. In 1877 forty German vessels, of an aggregate tonnage of 56,841 tons, passed through the Suez Canal, the

number of ships being 32 per cent., and their total tonnage 38 per cent., greater than passed through in 1876. In 1878 the number and tonnage of the German vessels using the Canal were less than in 1877; but the total number of ships of all nations passing through the Canal last year was 4.8 per cent. below the number using it in the preceding twelve months. Further eastward the number of German vessels entering and leaving the harbour of Singapore steadily increased every year from 1870 to 1877, the number returned in the former year being 110, not one of which was a steamer; and in 1877, 250, 75 of which were steam-vessels. Here again, however, the number fell in 1878, amounting in that year to only 220. The total tonnage also of the German vessels entering and leaving Singapore, which was 7,700 tons greater in 1877; than in 1876, was again 10,000 tons less in 1878 than in 1877; but the total value of the exports and imports at Singapore was 87,000,000 dollars less in 1878 than in 1877.

IN some English periodical we recently saw a query, the substance of which was, what becomes of the large quantities of rice which are imported into countries whose populations do not at all, or in very limited quantities, consume that cereal for food. Besides being used to a great extent for starch-making in England and other European countries, it is very serviceable in all the great distilleries. Probably no insignificant proportion of the cheap spirit which, under various names, finds its way to the East, is derived from rice. Japan, India and China have now no monopoly of the uses to which the grain can be put by fermentation and the still. Sylvanus Urban, writing in the *Gentleman's Magazine* nine years ago, propounded that the English people, being beer-drinkers, ought to be pleased to hear that a new source of the national beverage has been discovered and commercially introduced. The German brewers were the first to mash the white grains with a proportion of malt, producing "a liquor that foams and exhilarates like the produce of the Munich vats, and is as mild and palatable as the Bavarian drink that is struggling its way into English favor." Probably the Sapporo brewers, who have already produced a liquor in no respect inferior to much of what is imported from Hamburg and Denmark, are not unaware of the value of the material which grows close to their vats as it were.

FEW visitors to London, and still fewer residents, have probably heard of the existence of the mummified head of Henry Grey, Duke of Suffolk, who was beheaded for high treason in 1554, and which is to be found in an out-of-the-way little church in the Minorities called the Holy Trinity. A correspondent of the *Times* thus calls attention to this neglected relic:—

"This suggestive relic of the Maryan age is in the highest state of preservation, having, by the accident of its having been for a couple of centuries or more wrapped up in oak saw dust, become converted into leather, to which in touch and appearance it will exactly compare.

Mr. Doyne Bell, in his "Notices of the Historic Persons buried in the Chapel of St. Peter in the tower," has furnished all the information that would seem to be attainable with reference to the identity of the head, which is further supported by the testimony of Mr. George Scharf, the keeper of the National Portrait Gallery, who declares from personal inspection that the features correspond with the portrait in Lodge's well-known work.

My purpose, however, in this letter is not to go into the question of the value of the evidence of identity of this remarkable object; Mr. Bell has pretty well determined that; but rather to invoke, through your columns, the aid of the Government in taking the needful steps for the suitable care of this unique and mournful relic.

At present the head, as already stated, is in a really good

state of preservation, showing the eyes, teeth, and, on the back of the neck, even the double blow of the axe; is deposited in a commonplace metal box, and may be taken up in the hands of any inquirer, and is dealt with, no doubt, often roughly without a thought. The custos of the church made no difficulty in allowing myself and accompanying friends to do what we would with the relic, which was replaced in its box, as it was taken from it, with as little ceremony as you would use with a parchment deed or register.

Surely so interesting a remain as this pleads itself in its own mute and life-like features for more considerate treatment. If still left in the dingy, forlorn old church, in which it has reposed forgotten and neglected for so many years, the head might, at least, be securely placed in a glass case, and so fixed to the walls of the building as that its surreptitious removal would be difficult. Let the relic be treated with suitable dignity and consideration, even if it be regarded as the only example extant of a head severed from its body by the headsman's axe; but as the father possibly of Lady Jane Grey, whose pitiful story will never be forgotten while English history remains to have a reader, this interesting object has a claim of no ordinary kind, which doubtless only requires to be made known to be suitably recognized.

The Legge family, represented by the existing Earldom of Dartmouth, long used this church as their place of sepulture, the vaults being filled with its members. They have ceased to be buried there, and hence, probably, have ceased to take an interest in the church, or I feel assured this matter would not have escaped their notice."

THE VENDETTA.

THE final abolition, by a recent Government decree, of the practice of torture in Japanese Courts recalls to our mind another edict proclaimed at the era of the late Revolution, an edict that at the time attracted considerable notice. This was the prohibition against carrying out the *vendetta* on Japanese soil. Until that period the task of avenging the murder of a relative or kinsman had been deemed an almost sacred duty, fully authorized by the teachings of the Sages, and scrupulously carried out through many a generation back. Implicit obedience was accorded to the vengeful maxim that "with the slayer of his father a man may not live under the same heaven; against the slayer of his brother a man must never have to go home to fetch a weapon; with the slayer of his friend a man may not live in the same state." And so far was the deed of vengeance countenanced by the authorities, that several formalities were laid down, with which the avenger had to comply when starting upon his enterprise. Japanese annals abound with tales of boys growing up to manhood with this one fixed duty ever before their eyes, and even of tender girls being carefully trained to the use of those weapons with which they were eventually to encounter in deadly combat the destroyer of their kin.

A point that here particularly strikes our attention is the dogged tenacity of purpose and the stern resolution with which the avenger tracked his enemy. Time and distance were of no account; months, and in many cases nearly half a score years, elapsed ere the deed could be accomplished, while neither mountain fastness nor remote wilderness could ever avail as a secure hiding place for the hunted prey. No matter how dexterously he might evade his pursuer, how warily he might select his haven of refuge, it seems (from the accounts with which we are as yet acquainted) to have been certain that sooner or later he would be brought to bay and forced to hold his own against the foeman who was thirsting for his blood.

Again, it is an undoubted fact that in well-nigh every attempt to carry out the duty of vengeance, the pursued and not the pursuer had the worst of the contest. It would indeed appear as though there were perfect truth in the Japanese assertion that Heaven fought ever on the side of right, and assisted the avenger of blood in the accomplishment of his pious enterprise. And this is all the more surprising in view of the rules usually observed in such combats. The avenger did not spring out like a common footpad on his unsuspecting prey, but stepped boldly forth, encountered his adversary face to face, and, shouting aloud his own name, called on the other to draw and defend himself. Thus the fight was at all events a fair one and without favor, a fact that renders it all the harder to assign a reason why the tide of victory should have

almost always turned in one and the same direction. Whether a guilty conscience possessed sufficient power to dim the eyesight and numb the sword-arm is open to conjecture, but the defeat of the murderer was nevertheless the general termination of the fray.

Were it possible to collect details of each *vendetta* carried out in this country for but a very limited number of years back, they would be found to contain many a thrilling incident, many a weird tale that might well serve as the groundwork for a highly sensational narrative. But such affrays would appear to have been of too frequent occurrence to induce any Japanese author to compile a minute history of each single event. We may, however, here give a brief sketch of a *vendetta*—almost, if not actually the last ever fought in Japan—which took place but eight years ago in the province of Kishiu.

In the year 1862 there lived in the castle-town of Akô, in Banshin, a fencing master named Murakami Shinsuké, much renowned for skill in his profession. In consequence of a quarrel with one Yoshida Sôbei on the subject of swordsmanship, Shinsuké was one night attacked and murdered in his own house by a band of thirteen men, headed by Sôbei. The assassins immediately fled and concealed themselves, whereupon the two sons of the murdered man, together with some of their friends, to the number of seven in all, petitioned their feudal lord for a long leave of absence, became *Rônin*, and started in pursuit. For nearly nine years did these seven men track their foes from place to place, till, in the spring of 1871, they finally ran them down and lay in wait for them at the base of Mount Kôya, in Kishiu. The spot selected by them is now shown to all travellers in that region,—on a narrow ridge connecting two hills of considerable height. The ridge or isthmus is not more than eight feet in width, though of tolerable length, and on each side an almost perpendicular cliff descends to the valley below. Hastening on ahead, the avengers posted themselves here, so as to attack their foes when the latter should be wearied by the ascent of the first hill. Of the original band of assassins but six remained, and they came along in a body, accompanied by a boy of only fourteen years of age. The avengers drew up across the road, shouting aloud their names, and both sides at once engaged in desperate conflict on the narrow ridge. Ere many moments had passed, Shinsuké's sons and their five friends, all unhurt, remained masters of the field, having slain all their foes with the exception of the boy, who was permitted to escape though wounded. The victors are said to have worn high wooden clogs, as "being unwilling to defile their feet with the blood of such wretches."

This was, as we have said, in all probability the last instance of the *vendetta*, and some enquiry was made into the matter by the Government, with what result is unknown. But it may be taken as a fair sample of the light in which the duty of vengeance was regarded, and of the semi-chivalrous rules by which the combat was regulated. Owing to the Government prohibition, such affairs are now happily but tales of the past or merely curious reminiscences of ancient usage.

THE OTARU INSCRIPTIONS.

TO THE EDITOR OF THE "JAPAN WEEKLY MAIL."

Tokio, November 25th, 1879.

DEAR SIR,—In your last issue of November 22nd reference was made to some inscriptions found at Otaru in Yezo which were described by me at the last meeting of the Asiatic Society of Japan. From your note upon this subject it appears that my description of these inscriptions might lead to wrong impressions. When I spoke of them as resembling Runic characters, I did not wish it to be understood that I thought that they might actually be Runic. The expression "Runic character" was used more for the purpose of giving a general idea of what the markings were like to those who had not the inscriptions themselves to look at, than to indicate what they actually were. So far as I am aware the meaning of these characters has not yet been solved. One gentleman who saw them suggested that they might be old Chinese, another thought that they were perhaps drawings of some of the paraphernalia carried

by priests. That they were phallio was a third suggestion. A fourth suggestion was that they were rude outlines of men and animals, whilst a fifth idea was that they might possibly be the calligraphy of a modern Bill Stumps.

I myself am inclined to think that they are the work of people who inhabited Otara before the Japanese and who are in all probability identical with the people who left so many traces of themselves in the shape of stone implements, pottery, shell heaps and the like in the same locality—and these people I endeavoured to show were the Ainu.

I remain,

Yours truly,

JOHN MILNE.

THE GREAT "HOOP" QUESTION.

TO THE EDITOR OF THE "JAPAN WEEKLY MAIL"

SIR.—"Hoops or no hoops" is the topic which for several weeks past has been agitating our commercial world, and commerce being by far the leading interest here, the discussion has naturally extended to the whole community. The purely American phrase of "hooping it," a vulgarism which is supposed to have originated over the classic game of "poker," and the use of which is confined to the disciples of that exhilarating pastime only when in the immediate pursuit of it, has during the last few weeks resounded in all the goldowns and comprador quarters and in all the offices of high and low degree. It has come in regularly with the after dinner clarot, and so great has been the importance attached to it as often to cause the discussion to be continued within the sanctity of the drawing room. And not only with foreigners; the native population is of course equally interested and gives utterance to its opinion with equal if not even greater force and freedom. The chorus is swelled until it is re-echoed by the very newspaper boys in the street, calling out as an additional attraction for selling their papers, "*Uki Hoop Hanashi*," "*Uki Hoop Hanashi*."

The hoop crusade was commenced by a number of native merchants combining and refusing to take delivery of bale goods unless these goods are in the same condition as when they were landed, i.e. with all the iron hoops etc encircling them. But the heathen buyers' cry for hoops struck no sympathetic chord in the breast of the christian seller. The tenor of the reply, variously formulated, was always on the principle of one pound of flesh but not a drop of blood. "Fifty pieces of shirtings but no hoops" or "Three piculs of yarn but no hoops" is what the staid head of the house contents himself with saying; whilst, "We do not give bread with one fish ball" and similar expressive phrases, accompanied by suitable gestures, are given as a complement by the factious junior members of the hong.

It will doubtless be a surprise to some to learn, that, directly at least, the foreign merchant is not pecuniarily benefited by retaining these hoops and that he is fighting for the good of his comprador. It is really a touching sight nowadays when such determined bitter hostility is shown towards the Chinamen in parts of the United States, of Australia and even of Canada, to find the cause of the latter so warmly espoused in Yokohama.

Everybody here is aware of the existence of Chinese compradors and there is no one ignorant of the fact that hoops can be found in large quantities, but there are many, especially among late arrivals, who are unaware of the close and intimate connection existing between compradors and hoops. The discussion under review has caused due prominence to be given to this fact and a few words of explanation in regard to it will therefore not be out of place. When the foreign settlement of Yokohama was first opened all business between the native and foreign merchant was done by means of Chinese compradors. It was a custom analogous to what had previously existed in China. There it was to a great extent a matter of necessity, engendered by the almost insuperable difficulty of acquiring the native idiom. In Japan, the language is comparatively easy and to learn as much as the average Chinese comprador knows would have been merely a matter of days or at most weeks but, as it seems, the pride of the Anglo Saxon rebelled at the idea of personal contact with the heathen Japanese. The Hindoo god will only receive a Pariah's offering through the mediation of a priest of higher caste and in the same way here, the profits made out of the Japanese merchant had to be filtered—and lessened—(Oh how lessened!) by passing through the hands of

the Chinese comprador. One of the first things the latter did, for his own private benefit and advantage, was to remove the hoops from bale goods delivered to the native purchaser. The Japanese merchant at that time dealt merely with the comprador; of him he bought and to him he paid his money and it was only natural that he submitted to the latter's dictum in "hoops" as well as in everything else. He could only do so or else stop dealing, for he would find the same state of affairs in every other "hong," and he was shrewd enough to submit with a good grace for the comprador could, on occasion, be liberal in turn, where his own pocket was not concerned and where he dispensed favours merely at the expense of his master.

Hoops may well be called the protoplasm of the comprador's profits, as elucidated the other day by Professor Mochiguwaisho Kanagawa no Kami (formerly resident lecturer at the Tenrui College), in his celebrated inaugural address before the United Alumni of Benton Dori. His analogies are not always perfect and the comparisons adduced are sometimes a little strained, but in general they hold good and are true enough to deserve my giving an abstract of the learned professor's discourse:—

"Huxley," said the Professor, "calls protoplasm 'the physical basis of life.' Hoops formed the basis of the profits upon which the compradors' physical and economical well being was built up. Protoplasm will develop higher forms of existence. Hoops also gradually caused to be evolved:—cases, tin boxes, packing material in general, commissions and squeezes on everything that was paid in or paid out, not to speak of direct, undisguised bribes. Protoplasm is a slimy, tenacious substance. The way in which profits stick to a comprador or rather the way in which the latter holds on to profits, the origin of which is neither pure nor clear is certainly equally tenacious. Examine protoplasm under the microscope; you will find it may be seen to flow away in streams, either broad and attaining but a slight distance from the main mass, or else stretching away far from their source as narrow liquid threads, and this not only where gravity would carry them but in a direction diametrically opposed to gravitation. Examine a comprador's dealings carefully and you will find them identical with and closely allied to, a part and parcel, so to say, of all the greater and more important transactions which form the more immediate business of the firm, but his 'feelers' will also stretch away far, far until they reach and embrace every minor affair where money changes hands and this not where honesty would impel them but in a direction diametrically opposed to honesty. Protoplasm may be observed spreading out on all sides into a thin liquid stratum and again drawing itself together within the narrow limits which at first confined it. The comprador's dealings (and profits) although spreading over everything within reach, and even over what to the uninitiated will seem to be without reach, will yet often apparently be encompassed by the very narrow limits which were expected to circumscribe them when the comprador was first engaged. Examine protoplasm still more closely, bring to bear on it the highest powers of the microscope;—you will doubtless find disseminated through it countless multitudes of exceedingly minute granules. Examine a comprador's profits more closely, bring to bear on them the highest power of research through boy, cook, betto, ama, etc.—you will doubtless find a great part of them to consist of minute small squeezes such as two cents a day for every girl in the tea-firing 'godowns,' one half of the 'benefit' on the cook's daily market purchases, fifty cents per month on the boys' monthly wages and twice or perhaps three times that sum on the horse feed. In short," as the learned professor summed up, "wherever there is life, from its lowest to its highest manifestations, there is protoplasm; wherever there is protoplasm, there, too, is life. Wherever there is a Chinese comprador there too will be found 'hoops' and squeezes in general; wherever there are 'hoops' and squeezes to any considerable extent, there too a Chinese comprador will as a rule be found not to be absent."

I am, Sir,

Yours truly,

And that literary contributions of every description be addressed to the EDITOR.

YOKOHAMA: SATURDAY, NOVEMBER 29TH, 1879.

JAPANESE ERA 2539, MEIJI 12TH YEAR, 11TH MONTH, 29TH DAY,
DO-YO-BI.

NOTES OF THE WEEK.

Mr. Henry Gribble has retired from the editorship of this Review and its subsidiary issues.

There is but scant mail news to report during the past week. The M. M. steamer *Tunis* arrived on Saturday night last, and was followed on Tuesday by the P. & O. steamer *Sunda*, with European dates to October 12th. The P. & O. steamer *Malacca* left with the homeward mail on Thursday morning at daylight. The Shanghai and way port steamers arrived and departed as usual. We learn that the M. M. steamer *Volga*, left Hongkong on Friday at 2 p.m., with the European Mail of the 19th October.

H. M's. *Iron Duke* sailed on Monday morning for Hongkong.

The French flagship *Arnade* has left for Hongkong, and will there be relieved and proceed home.

The shareholders and managers of the Oriental Bank Corporation must be congratulated on the prompt recovery of the value of their shares upon the London market, whence the latest news advises them as being at par. It is evident that the frank disclosure of losses made and the steps taken to remedy them have now thoroughly re-established the confidence of the public in one of its most favorite Banks.

Mr. J. J. van der Pot, Agent in Japan for the Netherlands Trading Society, has been appointed Dutch Consul in Yokohama, in place of Mr. W. C. van Oordt who has resigned that post.

A correspondent writes to us from Osaka that considerable excitement has existed in that city—quite equal to that caused by the Fujita affair—by the arrest of a band of thieves or would-be rebels who have been committing various depredations. On the evening of the 21st instant, a house in one of the low quarters was broken into by five armed robbers, and after the master and other inmates had been secured and bound, a young girl was induced by threats to reveal the hiding place of the money in the house, which was seized to the amount of 200 yen. A boy of some nine years of age managed, however, to escape under the house and give information to the police, who were soon on the spot but in insufficient force and, after a

battle with the robbers, in which several of the police were wounded, four of the men managed to get away. The remaining one, who seems to have been a desperate fellow, also eluded his captors and escaped. Since then eighty of the band have been captured including the chiefs, Osawa Kinzo and Okuda Benjirō who had been acting as spies in Osaka for some time past. It is stated that many of the police force are implicated.

We notice the departure to Shanghai, by the last Mail, of Mr. W. Allan Gay—the American artist—who has been for some time a resident in Yokohama, industriously engaged in sketching and painting many views of Japanese scenery. We hope none of our readers missed the opportunity kindly afforded them by Mr. Gay, of inspecting his last picture which was painted in execution of a commission from the Somerset Club of Boston and is now on its way to America. The artist must be congratulated on the choice of his subject, which was a view of a portion of the moats and castle wall of Tokio—a true relic of old Yedo; and although we equally congratulate him on his treatment of it, we should be loath to give a second place to many of the smaller and less finished efforts which cover the walls of his studio. Many of these are exquisite works of art and equally truthful representations of scenes familiar to all. For this truth to nature and for the artistic execution of details, Mr. Gay's collection of pictures cannot fail to be much appreciated in America on his return home. Our recollections of Shanghai alone do not leave a favorable impression of Chinese scenery; but even if Mr. Gay does not extend his visit beyond the 'mud flats' we have no doubt that under his trained hand many valuable additions will be made during his sojourn to his already charming collection of eastern views.

Miss May's benefit took place at the Gaiety theatre last evening, on which occasion that lady was assisted by Mr. Fairclough and a few members of the Amateur Dramatic Corps. The entertainment provided was of the conglomerate order and was apparently intended as some sort of complimentary offering to the lady (on her departure from Japan), by a few of her admirers; although, if report speak truly, the burden of all the arrangements seems at the last moment to have been permitted to fall upon the fair *cantatrice* herself. Our idea of a Grand Complimentary benefit is that the "large number of residents" and great circle of admirers should have at least relieved Miss May of these sublunary cares and guaranteed a full house: that we should have considered the proper thing, but it is just possible that we do not understand these matters and that the scarcity of applause and total absence of bouquets were additional signs that "Still waters run deep." The programme was divided into two parts, the first lyrical, the second farcical. The expected band was not in attendance, so the overtures and entr'actes were, perforce, omitted and the concert opened by Gana's song *Ye Happy Birds* sung by Miss May. Next followed a lady's song sung by a gentleman who unfortunately forgot his words and (like a persevering dentist who with a refractory tooth lets go and begins afresh) made more than one attempt before he succeeded in giving us the old Scotch ballad '*Call'er Herrin*'. Recalled for the sake of "Auld lang syne" Mr. Black gave a kind of recitative *parlante* concerning the love passages of a sexagenarian with a bonnie lassie of twenty, which seemed to please a portion of the audience. Mr. Fairclough gave a recitation in character delineating the capture, trial, and escape, of *Shamus O'Brien* for complicity in the Galway riots of the last century, and the first part came to a conclusion by Miss May's rendering of the Scotch ballad *Auld Robin Gray*. This was very sweetly sung, but the tempo was decidedly slow and the effect was somewhat marred by the *strepitoso* character of the pianoforte symphony between the verses. Altogether the first part fell flat in some unaccountable manner and we fear the fault lay in the selection of the pieces. Had Miss May again treated us to some excerpts from those lyric operas in which she has so often charmed us—*I dreamt that I dwelt in Marble Halls*; *There's a Power whose Sway*; *The Harp in the Air*—and many others we could mention, we feel sure no Yokohama audience could have shown itself so apathetic. Our thanks are due to Mr. Vinay for his great kindness in undertaking the various accompaniments.

The second part consisted of a curtailed version of Shakespeare's glorious comedy *The Taming of the Shrew* but sadly cut and mutilated. This comedy with *Bianca* omitted is like a land-

scape with no gleam of sunshine, a picture in dark colors with no relief, a symphony lugubrious and dull with no joyous episode. To compensate for this a strong element of farce was engrafted on what little of the original remained, and like the new piece of cloth on an old garment the rent was made worse. We do not know who was responsible for this, but we are sure it could not have been Mr. Fairclough; his painstaking and artistic readings of Shakespeare already given us quite absolve him from any complicity in such a piece of vandalism as the mutilation of his idol. Miss May played her part well in this medley and all through realised the character without being carried away with the boisterous play of the subordinate actors. Mr. Fairclough as *Petrucio* was good but somewhat rough and overstrained. Mr. Eyton as *Biondello* was good but he seemed irretrievably mixed in the words, at one time repeating a long story which properly belongs to *Grumio*. *Hortensio* (having deputed his music-teaching to a worthy substitute Mr. Brower) made a highly respectable walking gentleman, and we must not fail to congratulate Mr. Bayne on his improved state of health: for once the cough was conspicuous by its absence although it is true he had not much to say on the present occasion. Mr. Brower did well as *Baptista*, while Mr. Mitchell threw all the comical powers of *John Small* into the part of *Grumio*, and the audience laughed accordingly. On the whole, however entertaining the boisterous fun might be we could not help confessing that it was not Shakespeare; and the audience shared this feeling, witness the feeble recall at the end of the piece contrasted with the genuine admiration displayed for Mr. Fairclough on former occasions when he has really delighted us with delineations of the Shakespearian heroes. A short impromptu valedictory address from Mr. Fairclough on behalf of Miss May and himself, brought the evening to a close.

Having now had so many opportunities of hearing and seeing the artists who are leaving us, we may perhaps be permitted to sum up their merits and capabilities as displayed here. Miss May has a light soprano voice of pleasing quality and a petite figure, both especially adapted for the performance of the heroine in certain lyric operas. Of all the performances given here we liked her best in *The Lily of Killarney*, *The Daughter of the Regiment*, *Satanella* and *Maritana*. Her powers of acting are good also in rôles suited to her physique, and she has done well as *Ophelia*, *Katherine* and *Julie de Mortemar*. The higher tragic and lyric rôles whose majestic form is essential, such as *Norma*, *La Grande Duchesse*, *Portia* and *Lady Anne*, are unsuited to her powers. While lacking the magnificent voice and exquisite culture of Madame Hirsleemann, her histrionic powers are infinitely greater and the whole community has received unfeigned pleasure from her performances here in the works above mentioned.

Mr. Fairclough is a tragedian of no mean order and is especially suited for the older parts in high class drama. Indeed anything better than his conception of *Shylock* we have rarely seen even in the great centres of civilisation, next in order comes his *Othello* magnificently played; the fiery passion of the Moor being faithfully and artistically portrayed. His *Richelieu* was also a most powerful performance; while on the other hand, his *Richard III.* and *Petrucio* leave much to be desired and the *Hamlet* and *Romeo* were comparative failures. For these latter rôles he lacks the youthful gentle smile and winning voice so necessary to a true rendering of these characters. His path lies among the high class heroes of legitimate drama, and while we are far from classing him with the Keans, Feichters and Macreadys of the world, we recognise in him a most careful and painstaking artist, a devout student of the great master who wrote "not for an age but for all time," and we frankly admit that we have never seen any actor of his calibre in Yokohama since this whilom Japanese fishing-village first became a name in the world.

In conclusion, we reciprocate heartily the sentiments expressed last night, and in our farewell to Mr. and Mrs. Fairclough wish them "long life, health and happiness," at the same time assuring them that their visit to our little settlement will form a bright spot of retrospect in the years to come.

Under the head of brevet appointments in the London Gazette we observe the promotion of an old friend, Captain S. T.

Bridgford, retired, Royal Marine Artillery, to the honorary rank of Major.

The Boating season being finished and the Y. A. R. C. having gone into winter quarters, the Football Association has now taken up the running. On Saturday afternoon last, a match Yokohama versus The Fleet, took place on the Cricket ground in the Public Gardens, and resulted in a victory for the former with one goal and one touch-down to The Fleet's nothing.

The Italian man-of-war *Vettor Pisani*, under the command of H. R. H. the Duke of Genoa, arrived on Monday night last. His Royal Highness landed officially at the admiralty pier on Thursday, under a royal salute from the man-of-war, and was received by the Governor of Kanagawa ken, the Port Admiral and the commanders of the various Japanese men-of-war in harbour. After a brief stay, H. R. H. entered one of the Emperor's carriages which had been specially sent for his accommodation and proceeded to the railway station, leaving for Tokio by the 4 o'clock train. At the Shinbashi station Mr. Sanjo, Prime Minister, General Oyama, Chief Superintendent of Police, General Hiyashi-Fushimi and Osawa, Admiral Akamatsu, the Governor of Tokio Fu, &c., &c. were in attendance and welcomed the Prince to the capital of Japan, the military band playing an appropriate air. From the station to the Yenriokwan, the Duke's carriage was escorted by cavalry, the streets being lined with infantry who presented arms as the cortege passed. In the evening, a banquet was given in the Yenriokwan which was attended by all the leading nobility, ministers, &c., and a grand display of fireworks took place. The Duke had an audience with the Emperor yesterday and the visit was to be returned to-day.

The Société Suisse de Tir hold their next meeting on the 6th December, weather permitting. Persons who are not members of the society will be allowed to compete in the different matches, on being introduced by a member and paying a small entrance fee.

The following is the programme of the races which will take place to-morrow (Sunday) at the Toyama Race course Tokio, commencing at nine o'clock a.m.

- | | |
|-----------|---|
| 1st race. | For Japanese ponies only. Prize; a vase value 45 yen. 9 entries. |
| 2nd " | For all ponies. Prize; a silver watch value 40 yen. 6 entries. |
| 3rd " | For Japanese ponies only. Prize; a set of double harness value 35 yen. 17 entries. |
| 4th " | For all ponies. Prize; a gold watch value 50 yen. 4 entries. |
| 5th " | For Japanese ponies only. Prize; silver cup value 30 yen. 14 entries. |
| 6th " | For Japanese ponies only. Prize; ten <i>tan</i> of red and white crape silk value 60 yen. |

A burglary was committed on the premises of Mr. Retz, watchmaker and jeweller, in Main-street on last Friday night. Entry was effected by burning the woodwork round the locks of a door opening upon a small yard in the rear. Fortunately the most valuable goods were secure in iron safes, but the thieves succeeded in decamping with plunder to the extent of about \$500 in value. A large clock and a chronometer were taken, but abandoned as being too cumbersome. No trace of the thieves has as yet been discovered.

The *Kinji Hiora* compliments Mr. Katsu, (the former Minister of Marine) upon his power of refuting arguments and upon his having silenced if not actually convinced the Chinese Minister, in a conversation which is said to have lately taken place in Tokio between them. The compliments, however, are more sarcastic than genuine. The Chinese Minister reproached Mr. Katsu with his countrymen having violated the old customs handed down by their ancestors in now adopting the western style of dress, thus increasing the demand for western articles and denuding the country of coin and bullion. Mr. Katsu's reply is thus reported: "Do not let your Excellency feel any regret at this. We have changed our dress because we are rich, and we have done so several times before. In ancient times we only used to wear bark, or hemp for our dress, but when in the reign of Ōjin the people of Hiyakusai

came over to Japan, we adopted their fashions. This was because theirs were better looking and more convenient than ours. Again, when we opened intercourse with the Chinese under the To dynasty, as their dress was still better we imported female weavers from China and introduced the art of weaving throughout Japan. And now during the period of Meiji, we have adopted the western style of dress for no other reason than the simple one, that we find it better looking and more advantageous, and could make this change by spending the money we possessed. I will give your Excellency an example: Look at a group of jinrikisha coolies; those who are poor expose their heads to the glaring sun whilst those who can afford it buy hats to protect themselves. Now, which are the wisest looking and the most comfortable? Our country has changed its dress for similar reasons. Is it not right for us to adopt a good looking and comfortable dress when we can afford it?" The Chinese Minister was silent and then changed the subject. The *Kinji Hiron* adds that it had long heard of the eloquence and skill of Mr. Katsu in refuting arguments in a strange way, but that his present reply not only surprised the Chinese Minister by its quick perception, but also—the Editor himself.

The ceremony of distributing prizes to the successful competitors at the Exhibition of Raw Silk and Cocoons, took place on the 25th instant, in a temporary building, or rather series of buildings, erected for the purpose in the public gardens. Punctually at a quarter-past one o'clock, their Excellencies Ito, the Home Minister; Hayashi, the Vice Home Minister, Okuma, the Minister for Finance and Matsukata the Vice Minister for Finance and Director of the Agricultural Bureau, with a long following of subordinate officials arrived on the ground and were received by the officials connected with the exhibition and conducted to seats on the dais; immediately in front of which was the building containing the exhibitors and on either side other buildings in which were accommodated the invited guests, native and foreign; the officials, merchants, newspaper editors &c., being all allotted different portions of the buildings, an arrangement which prevented any confusion. The proceedings then commenced by Mr. Matsukata, the Director of the Agricultural Bureau, addressing the exhibitors as follows:—

"Raw silk and cocoons are the most celebrated and important articles of export in Japan and over 1,000 persons of those who are engaged in the industry with a view of ensuring the success of this competitive exhibition, joined heartily in the undertaking and forwarded no less than 1,326 exhibits. The great improvements made of late in the preparation of silk has attracted universal attention and a complete revolution has taken place from the imperfect methods formerly practiced. This praiseworthy change is owing to the patient and energetic efforts of the silk growers and the uniform excellence attained has we are aware much enhanced the labours of the judges. In judging the various exhibits, both the native and foreign methods of testing the quality of the article were followed; and in addition the profit derivable from the silk and the amount of labour bestowed upon it were also taken into consideration. In the case of raw silk the method of packing and reeling into hanks, the colour of the thread, its value, elasticity, absence of knots, facility of re-reeling, size of factory and number of workmen employed, were all carefully considered; while in the case of cocoons, the colour, condition, strength, facility of reeling, length of thread, absence of knots, quantity of egg-cards and cocoons produced, were all taken into consideration by the judges. These judges were all experienced men chosen from the different silk producing districts and after much labour they have now concluded their arduous duties. We believe that they have made a most careful and impartial inspection and that the exhibitors will all coincide with the awards made by them. In conclusion, it is my earnest desire that everyone engaged in the silk industry will continue to strive to improve their product to the utmost, so as to cause the reputation of Japanese silk to constantly increase."

Mr. Ito, the Home Minister, then addressed the exhibitors:—

"I am extremely gratified at the result of the inspection made by the judges which shows the great improvements made in this important industry. To-day it is my pleasing duty to see the distribution of the prizes in accordance with the awards which have been made. I trust that the silk growers of Japan will not rest content with the success they have already achieved, but will continue to develop this industry, which is the foundation of the wealth of Japan, and thus promote the national welfare."

Mr. Sano Rihachi, then replied to their Excellencies on behalf of the exhibitors:—

"It was far beyond the utmost hopes of myself and the other exhibitors to have received the great honours which have been showered upon us to day. We will always carry in our minds the instructions of your Excellencies and earnestly strive to carry them into effect."

The distribution of the prizes then commenced, each successful competitor receiving his prize from the hands of the Minister for Finance. The following were the prizes awarded:—

Raw Silk.

Special prize, Gold Medal and 100 yen, the *Nehonmatsu Seisha Keisha*.

5 prizes of the first class each of 100 yen

14	"	second	"	30	"
62	"	third	"	10	"
274	"	fourth	"	5	"

Cocoons.

5 prizes of the first class each of 50 yen

26	"	second	"	30	"
35	"	third	"	10	"
73	"	fourth	"	5	"

Each prize taker also received a certificate which will probably be more durable than the money prize.

The awards having been handed over, a general adjournment was made to the Town Hall, where tiffin was prepared for the exhibitors and guests and done ample justice to. In the evening, there was a special entertainment for the exhibitors in the temporary buildings, when the gardens were gay with the many lanterns which adorned those erections during the day. Fireworks were also displayed in profusion, and the whole ceremony was a most unqualified success. Amongst the gentlemen present we noticed the Governor of Kanagawa Ken and all his principal officers, Mr. Kawai, the Chief Inspector of Police, and a large number of officials from Tokio. The Exhibition will be formally closed to-morrow, the 30th instant.

ARRIVAL OF THE FRENCH MAIL.

The Messageries Maritime Company's steamer *Taxis*, Captain De la Marcelle, from Hongkong, arrived here on Saturday night, with the European Mails of the 5th October. The American mail has anticipated the European intelligence but the following telegrams from *The Straits Times Extra*, are rather fuller than we have yet had.

Beni-Hissar, 7th October.

The decisive success yesterday of our troops, in capturing the heights of Charnasia has had the best results. Sir Fred. Roberts' policy in attacking was the best that could possibly have been followed, the tribes in the neighbourhood and the Kabul people, were just in that state when the slightest hesitation or check would have raised the whole country about us. Now that we have driven the Afghans back, and are now encamped at Beni-Hissar, only two miles from the Bala Hissar, the moral effect has been enormous. To-day the Hindu and other leading merchants of Kabul came in to the General, and all that remains for us to do is the capture of the entrenched camp at Sherpur, north of the city. Three mutinous regiments, which arrived too late to fight yesterday, are there encamped, and are said to mean fighting. In spite of enormous transport difficulties, the great body of our troops is here, and the rest come in early to-morrow.

Kandahar, 9th October.

An influential deputation of Alizais arrived yesterday protesting before General Stewart against the return of Mahomed Yusuf Khan as Governor of the province. They alleged gross cruelties and exaction and stated that great excitement prevails in Girishk. A wing of the 59th and Horse Artillery arrived on Tuesday, escorted. All is well at Khelat-i-Gilgai.

Simla, 16th October.

The Khyber column has been ordered not to advance at present. The attack on Ali Kbeyl took place at dawn on the 14th inst. The enemy were repulsed with very heavy loss. Our own loss was six wounded.

A rumour was circulated yesterday that consequent on the Amir's principal officers being found deeply implicated in the massacre of the Embassy, General Roberts has telegraphed for permission to hang a few of them and to imprison the Amir himself.

St. Petersburg, 16th October.

General Kauffman is about to return to his post of Governor-General of Turkestan.

Paris, 16th October.

In consequence of the election of a Communist to the Paris Municipal Council and the demonstration made on the arrival of liberated Communists from New Caledonia, as also at their burials, the French Government has discussed the matter and resolved to take preventive measures if the same are continued.

Simla, 17th October.

General Roberts telegraphs from Kabul on the 13th:—Bala Hissar occupied yesterday. Very impressive sight. The Amir pleaded indisposition, but his eldest son accompanied General Roberts. All the principal Sirdars were summoned to hear the Proclamation read. General Gough holds Jellalabad. The news of the victory at Charasiuh is reported to have produced a notable change in the Khan of Lalpura's demeanour.

General Roberts' Proclamation is to the effect that as the inhabitants had pertinaciously opposed the advance after warning, had thus become rebels, and had added to their previous guilt in abetting the murder of the British Envoy and his companions, he thought that the British Government could justly totally destroy Kabul but mercy would be given and the city would be spared. Punishment, it must be remembered, was necessary, and therefore the portions of the city which interfere with the military occupation of the Bala Hissar would be immediately levelled and a heavy fine imposed. Kabul and the surrounding country within a radius of ten miles would be placed under martial law. A military Governor would be appointed, and the inhabitants were warned to submit to his authority.

A searching enquiry into the circumstances of the outbreak is being made in order to deal with the participants. Carrying arms is forbidden in the city and within a radius of five miles. Persons found armed in a week from the date of the Proclamation would be liable to the penalty of death. Articles belonging to the Embassy were to be delivered up with the firearms and ammunition. Rewards are offered for all rifles brought; and a reward is also offered for the surrender of any person concerned in the attack on the Embassy, or for information leading to the capture of persons who have fought against British troops since the 3rd September. Larger rewards are offered for the Afghan officers.

Allahabad, 18th October.

General Roberts in his Proclamation offers a reward of fifty rupees for the surrender of any person concerned in the attack on the Embassy, or who has fought against the British since the 3rd September. If a captain or subaltern, the reward is increased to rupees 75; if a field officer to rupees 120. The inhabitants are ordered to produce all arms; for country-made rifles, three rupees will be given; for those of European manufacture, five rupees. The proclamation forbids the carrying of swords or knives. The proclamation was listened to in silence. The Sirdars were then dismissed with the exception of Mustafa Wazir and Yahiya Khan and his brother, who were detained prisoners pending inquiries into their conduct at the time of the massacre. Strong European guards are placed over them. No communication with outsiders is allowed. Their arrest was quite a surprise to them, not a word having been said beforehand of the General's intention.

Simla, 19th October.

The Ameer stated to General Roberts his determination to resign the Ameeriship, saying that he intended doing so earlier, but had been persuaded against it. General Roberts requested him to think over his decision, but at a second interview the Ameer declared his resolution unchanged. General Roberts is taking the necessary provisional measures for carrying on the administration.

Simla, 20th October.

In consequence of the Ameer's resignation, his son five years old, will be proclaimed Ameer, with a Council of Regency under a British Governor to conduct the administration during his minority.

Allahabad Kuttra (?), 20th October.

Sixty sepoy and one constable were killed (? at Kotia) with Mr. Damant, the Deputy Commissioner, who was shot while at the gate of a village by Mozema Nagas on the 14th. A detachment leaves at once.

The Tekkes have attacked the Russian expedition for surveying and exploring the country and rivers between Samarcand and the Amu Daria, which started on the 18th August. They were however, repulsed.

The Afghans have welcomed the expedition which has pronounced the affluents of the river Daria to be navigable.

Simla, 21st October.

A further message from Galaghat states that Mr. Damant's death occurred at Knonoma and not Mazeina. Mr. Damant went with 80 men to seize ammunition, but at the gate of the village shots were suddenly fired by the Nagas. Mr. Damant was the first killed, by a bullet through the head. All the men with him were murdered and a guard below attacked; only a few of these escaped. There has been also reported the loss of the political officer, Jemadar Havilar Naick, 17 sepoy, and six police officers.

Madras, 23rd October.

The *Hindustan* struck on a rock half way between Madras and Seven Pagodas. All the passengers have arrived safely at Madras. The steamer is in a very critical position, with eighteen feet of water in the hold. The passengers have only saved their cabin luggage. It is possible that when the cargo is thrown overboard or landed that the steamer may be floated, but it is very doubtful.

Berlin, 23rd October.

A treaty of alliance between Austria and Germany was signed on the 15th instant. The Emperor of Germany was reluctant to conclude the treaty, but Prince Bismarck threatened to resign unless he consented.

Allahabad Kuttra, 24th October.

Three of the largest godowns, containing a vast amount of powder, have been found intact earthed over. Captain Shafto's and the Ghoorkas' bodies have been dug out and it was decided to destroy the whole of the Bala Hissar. Vast stores of warm clothing and boots were found.

Calcutta, 24th October.

The Government has issued most arbitrary rules for the guidance of editors and correspondents with the army in the field. They are forbidden to write without a license and being subjected to the Mutiny Act are required to wear a distinctive badge. Cypher and the use of foreign languages are forbidden. A military officer is appointed censor and it is required that letters and telegrams be despatched through him, and numerous other rules are prescribed.

London, 24th October.

The *Daily News* publishes a telegram from St. Petersburg, which states that Russia contemplates despatching two military expeditions next spring, one under General Kaufman, consisting of 35,000 men, from Turkestan and another from the Caucasus; both expeditions to converge on Afghanistan and assist the tribes against the English.

London, 25th October.

In a speech made by Lord Hartington at Manchester yesterday, he said it was impossible to maintain the treaty of Gundamuck, and that the abdication of Yakoub Khan precluded our placing a British Envoy at Cabul without sufficient protection. He declared Lord Salisbury's foreign policy to be immoral, and welcomed the conclusion of the alliance between Austria and Germany as being a more effectual restraint upon Russia. His Lordship said the policy of the Liberal party was to respect the International obligations of England which should combine with the other Powers to secure the maintenance of peace, oppose aggression, and protect the weak.

Cape Town, 15th October.

Colonel Lanyon, with the 1st Dragoon Guards, has been despatched to Middleburg, owing to slight disturbances which have broken out among the Boers.

ARRIVAL OF THE ENGLISH MAIL.

London, 28th October.

Rumours are current of an offensive and defensive alliance having been concluded between Servia and Montenegro in consequence of the menacing attitude of the Albanians. Advices from Constantinople state that Midhat Pacha has withdrawn his resignation.

The Postmaster-General has consented to the departure of the English mails from Bombay every Saturday throughout the year.

Berlin, 28th October.

At the opening of the Prussian Parliament yesterday, no allusion was made to the foreign policy of the Government, but a new loan to cover the deficit was announced.

New York, 28th October.

Mr. Sherman, Secretary of the Treasury, made a speech here yesterday, in which he denounced the demagogic doctrines current concerning the silver question. The only solution was to put silver enough into the dollar to equalize it with the gold dollar. It was found impossible to circulate the present dollar, because people wanted honest money.

St. Petersburg, 28th October.

30,000 Russian troops have been ordered to proceed to Central Asia.

A new revolutionary journal entitled the "Will of the People," has appeared in St. Petersburg.

St. Petersburg, 29th October.

Advices have been received, that Russians attacked Tekkes at Anusi near Krasnovosk on the 22nd October, killing 62, and capturing 100. The women and children fled at sight of the Russians.

London, 29th October.

The Marchioness of Lorne has arrived in England from Canada.

In a speech by Mr. Fawcett at Hackney, he said the principal questions Government would have to deal with for the next few years would be those relating to India and Ireland. He admitted that a reversal of Afghan policy was inexpedient even if possible, but added that we must not advance an inch further in Afghanistan than absolutely necessary. England ought to bear the charges of our new frontier policy since India was incapable of bearing them. He emphatically deprecated any compromise with the home rule party.

London, 30th October.

The *Daily News* published a telegram from St. Petersburg stating that the news that the Russians contemplated despatching two military expeditions next spring to assist the Afghan tribes against the English proves to be untrue.

Parliament is further prorogued until December 19th.

Allahabad, 30th October.

A party of gipsies, migrating to the Jellalabad Valley, halted at Kabul, giving as their reason that Mohamed Jan is in the Khurd-Kabul Pass with 4,000 or 5,000 men, including rebel soldiers. In an engagement at Shuhjui with Sahib Jan, eighty men of the 59th gallantly stormed a conical hill. Sahib Jan was imprisoned at Kabul, but escaped on Shera Ali's (? Yakool Khan's) departure.

Simla, 30th October.

A proclamation issued by General Roberts at Kabul states that the Ameer having abdicated, has left Afghanistan without a ruler. Consequent on the outrage upon its Envoy, the British Government is compelled to occupy Kabul and take military possession of the other parts of Afghanistan. The British Government now command all the Afghan Authorities, Chieftains and Sirdars to continue their functions, referring to General Roberts for whatever instructions are necessary. The people shall be treated with justice and benevolence; their religion and customs being respected. The Sirdars and Chiefs assisting in preserving order will be rewarded, but disturbers of the peace, and persons concerned in attacks upon British authority, will meet with condign punishment. The British Government, after consulting the principal Sirdars, tribal chiefs and others representing the interests of various provinces and cities, will declare its will regarding the future permanent arrangements for the Government of the people.

THE STRANDING OF THE STEAMER "HINDOSTAN."

The B. I. S. N. Company's steamer *Euphrates* returned to Madras on Saturday, afternoon, taking on board such of the passengers of the steamer *Hindostan* as had not already found their way to Madras by land, and Captain Rowland, Assistant Master Attendant, and Mr. George King, Agent of the P. and O. S. N. Company. From the further particulars gathered, it appeared that on Tuesday morning the weather was so very squally, that the second officer of the *Hindostan* could hardly see before him, and at about 3.15 o'clock, after the squall had ceased, he capied land and almost immediately the vessel struck. He at once reversed the engines. At the time the vessel struck, the steamer is said to have been going at the rate of eleven miles an hour. The shock occasioned by the bumping produced some consternation among the passengers, but the captain succeeded in allaying their fears, and the passengers are then said to have behaved in an admirable manner. Every effort was then made to get boats, which, however, was not an easy matter. The crews of such boats as could be got at after much difficulty demanded the most exorbitant rates, and the passengers were not landed till 11 o'clock during a shower of rain. The comfort of the passengers who landed was consulted by the captain and officers of the steamer sending ashore spars and yards and sails, out of which tents were provided. Six of the passengers managed to find their way to the nearest station of the South Indian Railway, and thence proceeded to Madras. The *Hindostan* lies now on rocks about half a mile from shore. Her position is said to lie with her head about N. N. W. She is at one end in 2½ fathoms and at the other end in 4 fathoms of water. There is said to be either a rent or a hole in the fore compartment of the steamer, and, through this, water is getting in, there being, when the *Euphrates* left the ill-fated vessel about sixteen feet of water fore and aft in the hold. Under all these circumstances, it cannot but be felt that the *Hindostan* is in a very perilous condition; yet her recovery from the unfortunate position in which she lies is considered not to be hopeless. Arrangements are being made to get the assistance of the divers of the harbour works in order to stop the holes. It is expected that a steam-tug from Calcutta will arrive by Sunday to assist the *Hindostan*. Many of the passengers lost a large portion of their property, but the specie on board the steamer was secured.

JAPAN NEWS.

[The following Notes on various Japanese matters are chiefly derived from the native papers, occasionally supplemented from original sources of information, and are carefully collated and edited, so as to make them readable and intelligible.]

COURT, POLITICAL AND OFFICIAL.

Mr. Shimadzu's performance of *Inu-o-mono* came off in the Fukiage Gardens in the presence of the Emperor and leading nobility, ministers, &c., on the 27th instant. His Majesty arrived at the gardens about 9 o'clock and took his seat in the building prepared for his reception. The piece of ground enclosed for the performance, was forty *ken* square. Immediately after the Emperor was seated Mr. Shimadzu stopped forward and saluting His Majesty expressed the pleasure he felt in having the honour of performing in the imperial presence. He then retired, made his preparations and re-appeared on horseback, in company with twenty-three mounted companions amongst whom was Mr. Kawamura, the Minister of the

Navy. The game then commenced and was continued with great spirit until 11 o'clock when the Emperor retired for tiffin, the imperial princes, ministers, Mr. Shimadzu and others being of the party. At about 1.30 the game recommenced, the Empress and Empress-dowager having arrived in the meanwhile from the palace, and was not concluded until 3 o'clock. The whole performance was an unmitigated success and their Majesties, as well as the visitors, expressed themselves highly delighted with this exhibition of one of the favourite pastimes of the nobility of "old Japan."

A plot of ground in the neighbourhood of Tokio, several *ri* in circumference and extending over a portion of the three departments of Minami-katsushika, Adachi and Toyoshima, has recently been fixed upon as a shooting ground for H. M. the Emperor, into which the public will not be allowed to enter.

Mr. Numama, the well known public lecturer, who has lately accepted the position of conductor of the *Mainichi Shimbun*, has been elected a member of the Tokio F. M. Assembly.

The Presidents of the *Osaka Joto Saibansho* and of the *Saibansho* at Nagasaki, Matsuyama and Nagoya, arrived in Tokio a few days since on Government business.

Mr. Oki, the Minister of Justice, has recently dismissed his cavalry escort, and it is rumoured that all the other Ministers will dispense with escorts shortly.

The Government has now decided that the total expenses for establishing a Japanese Court at the Exhibition to be held in Melbourne, Australia, next year will amount to 23,014 yen. A notification will be shortly issued containing the Rules of the Exhibition and permitting the Japanese Exhibits to be exported free of duty, &c.

NAVAL AND MILITARY.

The *Choya Shimbun* reports, that it is intended to devote the saving effected in the Navy department by the abolition of the English Naval Mission, to an increase in the number of men of war from next year. If the increase is limited to those funds only, it is not likely to be an appreciable one. The same paper also states that the Military Arsenal, at Koishikawa, will shortly be removed to the neighbourhood of Itabashi.

The Naval College in Tokio will be closed on the 10th proximo, for the new year's vacation when the students will be allowed to visit their homes. It is said that, on the occasion of the recommencement of Naval Duties in January next, a grand review of men-of-war will take place in Yedo bay.

The Japanese man-of-war *Tenkuba Kan*, which left Shinagawa in September last, with 30 students from the Naval College, returned to Yokohama on the 23rd instant. She has completed a course round the coast of Japan under sail, visiting Hakodate, Morioka, the West coast, Nagasaki and Kagoshima.

It is said that the Japanese man-of-war *Mosoku Kan*, now at Shimonoseki, will shortly proceed to China and Korea to survey the coasts of those countries.

A grand review and sham-fight between the soldiers of the Garrisons stationed in Awamori and Sendai and the men of the Reserve in the six prefectures under the control of the Sendai Garrison, took place in the neighbourhood of Morioka, on the 15th and 16th instant. The total expense connected therewith is said to have been 12,405 yen.

INDUSTRIES, TRADE AND FINANCE.

A sheep farm is to be established shortly in Miyagi Ken. The young sheep and the necessary appliances will be supplied from the Shimosa establishment. A woollen factory is also to be erected in its neighbourhood.

The Japanese exhibits for the Berlin Exhibition of fish and fishing apparatus, left by the P. & O. steamer *Malacca* on Thursday morning.

Aramaki, of Settsu, some time ago discovered antimony mines in the province of Yamato, near the river Totsugawa, and the people of the locality are now engaged in digging for the metal, having formed an association with a capital of 80,000 yen.

The coal mines at Akayamura in the Niigata ken, were first worked by the leading men of that province in 1871, and it is reported that large quantities of coal have been produced. But in order to renew and improve the road leading from the mines to the port of shipment, and thereby reduce the cost of transport

application has been made for a loan of yen 150,000 to carry out the necessary works.

As all the roads leading to the port of Nagasaki are very steep, thus causing great inconvenience in the transport of goods to that port by land, the authorities of Nagasaki Ken have lately applied for a special grant of 29,000 yen, to defray the expenses of cutting a road through the Himi Mountains and making a new road thence to the port of Mogi.

The *Mainichi* reports, that in anticipation of Nobiru becoming an important port in the North, Mr. Shibusawa, and some others have recently purchased all the best situated ground in the neighbourhood, and that people have already commenced to build godowns on the island opposite to the harbour, where the anchorage for steamers, etc., is likely to remain.

The *Nichi Nichi Shimbun* states, that two-thirds of this season's cartoons have now been disposed of, although at a very low price. There are now only about 200,000 cards on hand.

The launch of the sailing vessel *Tsukumo Maru*, from the yard of Mr. Shiramine, at Kanagawa, took place on Thursday at 3 o'clock in the afternoon. This addition to the Japanese mercantile marine has been built by Mr. Shiramine for Messrs. Kiusei & Co., of Osaka.

The compilation of the tables of the actual accounts of the national revenue and expenditure for the 9th Financial year of Meiji, (1876-7) has been completed by the Finance Minister and will be forwarded to the Council of State shortly.

The name of "The Specie Bank" has been given to the new bank we have already alluded to as being about to be established by Messrs. Tokugawa and Nabeshima. The *Nichi Nichi Shimbun* states, that the site of the bank will be in Sakaicho, Ichome, and the capital four millions of yen instead of three millions, as previously announced.

The calling in of the former paper currency, known as the *Daijokuan Satsu* and *Mimbusho Satsu* which was issued shortly after the Restoration has now been completed, and the following are the amounts received, ascertained to be destroyed, &c.

The <i>Daijokuan Satsu</i> , of 1 yen and under, originally issued.....	Yen 21,697,420.00
Received	" 21,518,268.25
Amount not tendered for exchange during the period allowed for that purpose	Yen 179,156.75
The <i>Mimbusho Satsu</i> , originally issued	Yen 7,500,000.000
Received	" 7,421,598.375
Amount not tendered, &c., &c.....	Yen 78,401,625

It is stated that upwards of 700,000 yen have already been expended in carrying out the sanitary measures throughout the Empire during the late cholera epidemic, and that it is anticipated the total sum will exceed one million yen before the accounts are closed.

The sum of 70,000 yen, recently presented to the people of Tokio by His Majesty the Emperor, to be spent for sanitary purposes, was on the decision of the Fw Assembly, distributed by the *Fuchō* among the Superintendents of the Districts and the Presidents of the District Assemblies in Tokio, on the 21st instant.

MISCELLANEOUS.

The *Nichi Nichi Shimbun* is responsible for the following:—
"The Mitsui Bishi Co.'s Steamer *Shinagawa Maru*, which left the port of Nemuro, in Yezo, for Hakodate, on the 10th instant, with a cargo of sea-weed and about 200 men who were returning to their homes after having worked for some years in the Island, encountered a heavy storm on the passage. The gale commenced on the night of the 10th and lasted for 5 days during which the ship lay hove-to. At about 5 p.m. on the 16th, the wind having somewhat subsided she at last safely made the port of Samé, in Hachinohe. The provisions having been used up before her arrival, all on board suffered from want of food to such a degree that some were unable to walk. They were however taken to the hotels in Hachinohe where they received every attention. Some of the passengers are reported to have died, while others were bruised and wounded during the voyage."

The Governor of Okinawa Ken has applied to the Government authorities for increased facilities of communication between the Loochoo Islands and Japan. Hitherto steamers have been despatched every two months, but hereafter a vessel will leave for Okinawa monthly.

The chief priests of the various religious sects in Japan are making arrangements to send five or six missionaries from amongst their body to China, in order to investigate the state of religion in that country and, if advisable, establish mission stations there.

Two famous robbers, with about 50 of their accomplices, were arrested in Osaka, during the night of the 15th instant. Their fate is also shared by two police officers and over ten government spies who have been found to be implicated in their acts of theft and violence.

Another gigantic piece of coral has been dredged up off the island of Hodosima in Oita Ken. This coral is reported to be nine inches in diameter, four feet long and to weigh 35 *kis*. It has been brought to Osaka for sale.

The *Nichi Nichi Shimbun* says, an exhibition of newspapers published in all the countries in the world, will be held in Belgium in 1880. Mr. Levy of Yokohama is now engaged in collecting all the newspapers published in Japan for the purpose of sending them to the exhibition.

The Government in Tokio has for some time, been busily engaged in investigating matters connected with Fire Insurance. We hear that the authorities of the Osaka Fw have lately appointed three leading merchants of that city to investigate the same question.

The authorities of Kiyoto Fw, issued an order to the local journals, on the 18th instant, not to publish anything respecting the visit of Prince Henry of Germany to that city, until it had first received official approval.

The powder magazine now in course of erection at Oji, is nearly completed and will commence operations next January. The Printing Bureau of the Finance Department is about to establish a paper mill in the same locality.

A party of Kurile Islanders arrived in Kobe a few days since, accompanied by some officials of the colonization commission. It is reported that they intend to visit Kiusiu, to become acquainted with the methods of fishing adopted in that province.

The total number of students in the seventy public primary schools of Tokio, who have received prizes at the 2nd examination for this year is, according to the *Yomiuri Shimbun* 20,079.

The members of the *Hokushinsha* (Political Society) commenced to give a series of lectures in the Concert house in Bashmichi, Yokohama, on the 22nd instant.

LAW REPORTS.

IN H. B. M.'s COURT FOR JAPAN.

Monday, 24th November, 1879.

Between JOHN PITMAN, Defendant and Appellant
andA. H. GROOM, Attorney for Mourilyan, Heimann, & Co.,
Agents for S.S. *Galley of Lorne*, Plaintiffs
and Respondents.

This was an appeal from a judgment of Her Britannic Majesty's Court at Hiogo, tried on the 25th August last.

Mr. Lowder appeared for the appellant (the defendant below) and Mr. Litchfield for the respondents (the plaintiffs below).

Mr. Lowder opened the case by reading the pleadings in the Court below which were as follows:—

The petition of Mourilyan, Heimann, & Co., the above-named plaintiffs, shows as follows:

That the defendant engaged passages per steamship *Galley of Lorne*, for His Excellency Governor Hennessy and suite, to Shanghai.

That in consequence the master incurred certain expenses, and the steamer was detained.

That the defendant has refused to reimburse the plaintiffs for their outlay, and also has refused to compensate them as agents for the said detention.

That plaintiffs therefore pray that the defendant may be ordered to pay to them the sum of two hundred and fifty dollars, together with the costs of this action, and that they may receive such further relief as the nature of the case may call for.

Defendant's reply:

The above-named defendant hereby makes answer to the petition of the above-named plaintiff, and says:

1st.—That the first paragraph of the said petition is untrue, inasmuch as said defendant did, at no time, engage passages as stated.

2nd.—That of the second paragraph defendant has no knowledge, and that if true it was owing to plaintiff's fault or neglect.

3rd.—That the allegation in the third paragraph of said petition is true, in that defendant has no knowledge of payment by the plaintiff.

The defendant therefore prays that said petition may be dismissed, with costs against said plaintiff, and that he may receive such further relief as the nature of the case may call for.

The verdict and judgment of the Court below were in these words:—

This is a claim of \$250 for compensation for the detention of the s. s. *Galley of Lorne* beyond her sailing-time. The plaintiff in his evidence states that the defendant came into his private office, after having had some conversation in the general office, to make enquiries with regard to the departure of the "*Galley of Lorne*" for Shanghai, and he informed him that she would be going that evening (Friday). The defendant then said that Governor Hennessy and suite would like to go in her if she were leaving on Saturday evening, and what would be the amount for demurrage if she was detained until then. The plaintiff replied that he thought it was not a matter of demurrage, but simply a question of how much the captain would charge for the passage of Governor Hennessy and suite to Shanghai, remaining over till Saturday evening. As defendant had to leave for Kioto, it was agreed that he should telegraph to him the captain's decision. The plaintiff further stated in his evidence that when the defendant was leaving his office he said to him, might he consider the matter settled if capt. Dryden agreed to wait and take them? To which the defendant replied "Yea." A few minutes later, capt. Dryden came in, and plaintiff explained to him the purport of his conversation with the defendant, and after talking the matter over they decided to ask \$250. The following telegram was then despatched to the defendant at Kioto. "*Galley of Lorne* will wait until Saturday evening, will take Governor Hennessy and suite for two hundred and fifty dollars, captain Dryden considers it settled." It appears that the telegram got mutilated in transmission, leaving out the words "and suite for two hundred," thus rendering it "*Galley of Lorne* will wait

until Saturday evening will take governor and fifty dollars, captain Dryden considers it settled."

At this stage of the proceedings in Court, the defendant admitted—to save time—the plaintiff's sworn statement as being correct, as to what transpired verbally between them in plaintiff's office.

The point therefore for the Court to decide is whether the defendant was justified in putting the construction he did upon the telegram he received as fixing \$50 per day for demurrage, after the conversation he had held with the plaintiff in his office in the morning, when he was instinctively told that it was not a question of demurrage.

I am of opinion that the defendant must have been aware, from his own personal experience in business matters, that a large steamer of the *Galley of Lorne's* class could not be detained at the rate of \$50 per day. If there had been any doubt in his mind with regard to the true meaning of the telegram he might easily have had it repeated.

I therefore consider that it was an error on the part of the defendant, and that he is liable for the amount claimed.

Judgment is therefore for the plaintiff, together with costs of Court.

[For the sake of convenience we will here insert the petition of appeal and answer.]

The amended petition of appeal of the above named defendant and appellant shows as follows:—

To RICHARD TEMPLE RENNIE, Esq., Judge of Her Britannic Majesty's Court for Japan.

1.—On the 18th day of August last, the plaintiffs and respondents filed a petition herein in Her Britannic Majesty's Court at Hiogo, whereby they claimed that the defendant and appellant might be ordered to pay them the sum of \$250 with costs and for further relief.

2.—The defendant and appellant by his answer dated the 22nd day of August last prayed that the said petition might be dismissed with costs and for further relief.

3.—The cause came on for hearing before Marcus Flowers, Esquire, Consul and Judge of Her Majesty's Court at Hiogo, on the 25th day of August last, and His Honour delivered judgment therein on the same day whereby he found for the plaintiffs for the full amount claimed with costs.

4.—The appellant's case as supported by evidence before the Court and by the Record is that the action in the Court below was not taken in the name of the true plaintiff or plaintiffs that is to say the master or owner of the steamship *Galley of Lorne*: that no privity of contract is shown to have existed between the actual plaintiffs and the defendant entitling the said plaintiffs to a verdict or judgment in the cause; that A. H. Groom is not shown to have been the attorney of the plaintiffs; that Mourilyan, Heimann & Co., are not shown to have been duly authorised either by the owner or the master of the *Galley of Lorne* to bring the said action: that rules 249 to 252 attached to the order in Council of 1865 or one or some of the said rules were not observed by the plaintiffs or their agent: that no cause of action by the plaintiffs and respondents against the defendant and appellant is disclosed by the petition or by the evidence or on the record: that the allegations of the petition are not supported by the evidence adduced; that no proof that the plaintiffs had sustained injury or damage by any act or omission of the defendant or for which the defendant was responsible was adduced at the hearing: that the finding of the Court below is against evidence and had no evidence to support it: that the Judge of the Court below was wrong in adjudging the receiver of a telegram to be liable in fact or in law for a mistake occurring during the transmission of the said telegram: that His Honour ought to have found that the plaintiff alone was liable for such mistake: that in any case the damages awarded are excessive: that the judgment is against evidence and against law.

5.—The appellant is therefore dissatisfied with the said judgment and appeals therefrom to this Honourable Court and prays that the said judgment may be reversed with costs both in appeal and in the Court below and that this Honourable Court may order the petition of the plaintiffs and respondents to be dismissed or that the plaintiffs and respondents may be nonsuited with costs of this appeal and in the Court below or to make such other order as the Court may think just.

The following was the respondents' answer:

In answer to the said petition, I, Arthur H. Groom, say as follows:

That defendant did not question plaintiff's position in Court, and did not ask for proof of power to bring the action, which would have been produced, and that defendant cannot therefore now bring forward such an argument. That the evidence does show an agreement was verbally made, and that the s.s. *Galley of Lorne* was detained, as proved, until the Saturday, in consequence. That exhibit "C." does not go to show that there was no agreement, for the steamer had been postponed at and from the time that captain Dryden decided to take the Governor and suite to Shanghai in accordance with defendant's verbal contract. That the contract was admitted by defendant when he accepted my sworn evidence and the evidence (also admitted) of Arthur W. Gillingham testifying to the conversation between plaintiff and captain Dryden in Mourilyan, Heimann & Co.'s office. That had the defendant kept to his original intention to leave, as arranged, on the Saturday, no loss would have been incurred by the owners of the steamer, and that the unnecessary detention and consequent loss was caused by defendant taking it into his head that the captain was willing to wait for the small sum of (\$50) fifty dollars per day, and defendant changing his mind about leaving on Saturday as first agreed, thinking to detain the steamer until the Sunday for (\$50) fifty dollars. That the telegram clearly showed that the message was mutilated, but that even as defendant chose to interpret it, (he having agreed to the detention of the steamer till the Saturday, provided the captain accepted), he was still liable for the amount claimed. For whether he read the telegram, as (\$50) fifty dollars for one day's detention or (\$250) two hundred and fifty dollars as telegraphed by plaintiff, makes no difference.

And I further pray that the appeal may be dismissed with costs, and that I may have such other and further relief as the nature of the case requires.

Dated at Hiogo, the 25th Sept., 1879.

The learned counsel (Mr Lowder) stated that he would not read the evidence at the outset of the case as he would do so later on when he came to refer to it. He might remark that this appeared to him to be one of those stupid cases that ought never to have come into court at all. Neither party was perhaps wholly responsible for what had occurred, but still he repeated that it was a most stupid case to have litigated. There was no doubt that Pitman had a conversation with Groom which would have amounted to a contract with the owners of the steamer, at Mourilyan, Heimann & Co.'s office, the misunderstanding arose out of the telegraphic message in which the sum to be charged for detention was inaccurately stated, although the message was clear enough when taken in connection with the conversation Pitman had already had, and if Mr. Groom had behaved properly he might possibly have said, "Well! there has been a mistake which is no fault of either yours or mine let us cry quits." This would have been the more reasonable as the steamer was not in point of fact detained at all.

Counsel then submitted that the first objection he had to make to the proceedings of the Court below would be thought by him to be fatal. His objection was, that there was no privity of contract between Mourilyan, Heimann & Co. and Pitman, and that an agent cannot, as in this case, sue in his own name. Moreover the agent does not appear from the evidence to have had any power to sue at all. He would draw His Honour's attention to *Kent's Commentaries*, vol. II, page 630, note 1. "The party dealing with an agent is not bound to him unless he makes the case his own." Again in *Leak on Contracts*, which is the latest work on the subject, "The general principle or presumption of law is that an agent cannot sue unless distinctly authorised." Now in the present case the plaintiffs do not presume to sue in any capacity but that of agents for a steamship.

His Honour.—On appeals of this description I do not think I ought to entertain any highly technical objections. The master of the vessel authorised the action, which he had power to do on behalf of himself and the owners.

Mr. Lowder.—That, your Honour, is just what I contend he cannot do, and refer your Honour to *Chitty on Contracts*, 9th ed. p. 210, note g, where referring to the power of agents

it is laid down "nor can the captain of a ship sue on an implied contract for demurrage."

His Honour.—I consider this is an express contract and that the master authorised the action. My impression is that on hearing an appeal of this description it would be undesirable for me to decide the appeal at once on technical grounds. The spirit and intent of our rules are that appeals should be heard on their merits. I will, however, take a note of your objection.

Mr. Lowder also referred to *Abbott on Shipping* and the cases of *Fairleigh v. Fenton*, L. R. 5 Exch. p. 169; and *Grey v. Pearce*, L. R. 5 C. P. p. 568, the ruling in which latter case was also followed in *Erans v. Hooper*, L. R. 1 Q. B. div. p. 105. As to the second objection, the want of authority in plaintiffs to sue, the learned counsel stated that he relied upon the respondents' own answer on appeal as proof that the necessary documents which would show their right to sue, were not produced at the hearing.

His Honour.—I will hear you on the merits and consider the objections afterwards.

Mr. Lowder continued. The first witness examined, Mr. A. H. Groom, says "The defendant, after having had some conversation in the general office, was shown into my private room. He said that he had heard that the *Galley of Lorne* was to be despatched for Shanghai that evening (Friday); 'was it certain that she would go?' I said, 'Yes.' The defendant then said that Governor Hennessy and suite would like to go in the steamer if she was leaving on Saturday. If we detained the steamer until Saturday evening, what would the amount of demurrage be? I replied in these very words, 'I do not think it is a matter of demurrage; it is simply a question of how much the captain will charge for taking Governor Hennessy and suite to Shanghai, remaining over until Saturday evening.' I added, 'I cannot say anything for certain until I see the captain.' The defendant then said, 'I have to leave at once for Kyoto,' and requested me to telegraph to him the captain's decision. To this I agreed. As he was leaving my office I said to him that as the steamer was to have left that night it would be very inconvenient if the matter of postponement could not at once be decided; and might we consider the matter settled if captain Dryden agreed to wait and take them? The defendant replied, 'Yes,' and left the office. A few minutes later, captain Dryden came in, and I explained to him, before Mr. Gillingham, Mr. Feuner, and Mr. Gutierrez, who were all present, the upshot of my conversation with the defendant. After talking the matter over, we decided to ask \$250 for taking Governor Hennessy and suite to Shanghai—I mean myself and captain Dryden agreed. He was to wait until Saturday evening. I telegraphed at once to defendant. [Exhibit "A." handed in, reading as follows: 'To Pitman, Kamikiokoi, Daizukumi; Shokokujii, Kyoto.—*Galley of Lorne* will wait until Saturday evening, will take Governor and suite for two hundred and fifty dollars, captain Dryden considers it settled.'] This was at noon on Friday. I would here mention that the Telegraph Company made a blunder in delivering the message, leaving out the words 'and suite for two hundred,' so that the message read without those words." Witness then handed in a letter from a Mr. Milne which is neither here nor there as he was not called. Mr. Pitman then received the telegram in a mutilated form. The same day that Pitman received the telegram we find that he had gone in the morning to plaintiffs' office and asked how much they would charge for detaining the vessel until Saturday. Groom replied that he could not say anything until he had consulted the captain. The telegram thus reached defendant at Kyoto, with the words omitted. Defendant sent the following reply, "15/8/79. From Pitman to Mourilyan, Kobe. If *Galley* waits until Sunday, Governor accepts, otherwise consider cancelled; telegraph reply to-day, so as to prevent the detention of *Tokio Taru*." Now assuming in favour of respondents that a contract had been entered into at the time Pitman parted from Groom, the second telegram imports new terms and thus makes a different contract as Groom sent back the following answer without consulting the captain, "To Pitman, Kamikiokoi, Daizukumi, Shokokujii, Kyoto. In accordance with agreement *Galley* postponed until Saturday evening can wait till Sunday evening but must charge demurrage; kindly reply." At this time the parties seem to have been under two different

impressions, Groom that they would make the ordinary charge and Pitman that the vessel would wait until Sunday for \$50 per diem. The next morning Groom saw the captain who informed him that he had received the following telegram from Mr. MacCarthy:—"15/8/79, 4.10 p.m. From MacCarthy, Kioto, to captain Dryden, *Galley of Lorne*, Kobe. If you wait until Sunday morning at ten o'clock, Governor Hennessy, wife, child, and one other passenger will go in your steamer to Shanghai or Hongkong; reply to Governor Hennessy, Shikokuji Kioto, and state latest hour you can wait." Groom then telegraphed, with the master's approval, thus:—"August 16th.—To Pitman, Kamakioku, Daizenkuni, Shokokuji, Kioto.—Captain awaits reply to last telegram do you wish to detain steamer until Sunday customary demurrage three hundred and fifty dollars per day. A. H. Groom." During Saturday afternoon, the following telegram was handed to Groom through Messrs. E. Fischer & Co. "16/8/79. From Kiyoto, to Fischer, Kobe. Inform Mourilyan, Governor leaves Kioto 4.26 train to-morrow afternoon proceeding direct aboard *Lorne*. Ask captain arrange dinner seven." At about a quarter to 10 on Saturday evening he received an answer through E. Fischer & Co., and also one direct to himself:—"16/8/79 7.15. From Kioto to Fischer, Kobe.—Inform Mourilyan cannot accept \$50 dollars demurrage, agreement fifty dollars per day otherwise cancel negotiations and Governor remains."—"16/8/79, 7.15. From Pitman, Kioto, to Mourilyan, Kobe. Refer telegram yesterday declining to detain *Lorne* unless she could wait until Sunday at demurrage according to agreement fifty dollars per day, if these terms not accepted consider negotiations cancelled; wire reply." This was it seems the first intimation Groom had, that Pitman was under the impression \$50 per diem would be charged for the detention of the steamer. Now we see that the parties might have understood one another on the Saturday evening and therefore, assuming that the *Galley of Lorne* was detained at all she was only detained until that time because although the vessel went on Sunday at daylight Groom said distinctly that the charge made was only for Saturday and the master told Mr. MacCarthy, that although people thought the *Galley of Lorne* would leave on Thursday or Friday he could not go until Saturday. This is the only credible evidence we have on this point and therefore no detention of the vessel was proved at all. Moreover what the captain said has been borne out by Groom who said to Pitman "it is not a question of demurrage but of what we will take you for" showing that he knew at that time the vessel would not go until the Saturday. [Counsel read the evidence on subject of damage caused by detention.] Now where does this \$250 damages come from? Call it for the detention of the ship and we find that no detention is proved. Groom says that it is only an offset against expenses and that there were accounts, such as Domoney & Co.'s, which were not charged. The evidence shows there was actually no detention of the vessel and Groom says he cannot produce any account showing what the expenses were. The whole evidence tends to prove that there was no idea originally of charging for detention and that it was only an afterthought and that if any contract existed it was cancelled by the subsequent telegrams. Let us now pass on to the judgment of the Court below. In his judgment the Consul treats the claim as one of compensation for detention although the petition contradicts the assumption by saying that the plaintiffs claimed for expenses incurred. But the Court below has treated the action as brought for compensation and nothing else. The defendant admitted that Groom's evidence was correct except upon one point. Now what is that point? That Groom did not say positively "the question is not one of demurrage." The judgment goes on to say. "The point therefore for the Court to decide is whether the defendant was justified in putting the construction he did upon the telegram he received as fixing \$50 per day for demurrage, after the conversation he had held with the plaintiff in his office in the morning, when he was distinctly told that it was not a question of demurrage." Now, no such statement was made. Pitman was not told distinctly that it was not a question of demurrage and there can be no doubt that the Court below has come to a wrong conclusion and one that is not borne out by the evidence. On this conclusion depends the judgment as it goes on to say. "I am of opinion that the defendant must have been aware, from his

own personal experience in business matters, that a large steamer of the *Galley of Lorne* class could not be detained at the rate of \$50 per day. If there had been any doubt in his mind with regard to the true meaning of the telegram he might easily have had it repeated." Now there is no evidence of Pitman's "experience" and the Court has gone out of its way to say "if he had any doubt he might have had the telegram repeated." But the evidence shows he had no doubt. The Court below says defendant was in error. What was the error? That he had read "fifty," when "fifty" was plainly before him? How can defendant be held responsible? Groom wrote 250, Pitman received a message with 50 written, and the Court says he made an error and therefore must pay \$250! Putting all technicalities aside where have the owners of the steamer been shown to be damaged? If the case had come before this court originally the plaintiff would not have got a verdict for one farthing.

Court adjourned to 1.30.

After the adjournment Mr. Litchfield addressed the Court in support of the judgment of the Court below. He said that after his Honour's observation in the forenoon respecting Mourilyan, Heumann & Co. being the proper parties to sue he would dismiss the matter in fewer words than he had originally intended. Mourilyan Heumann & Co. were styled "agents" all through the proceedings. No doubt the heading to the petition was inartistic but as His Honour had observed on a former occasion, they could not expect highly technical pleadings in the Provincial Courts. The mistake, if mistake there be, could however be amended at the present stage. Under the new Judicature Acts the powers of amendment were much wider than formerly. *Wilson's Judicature Acts* and the local rule 172 were clear upon the point.

His Honour concurred, but considered the question of the right of the master to sue of more importance.

Mr. Litchfield, on the latter point referred to *Yates v. Duff*, 5. Carrington & Payne, p. 188, which was an action by the master of a vessel to recover passage money.

His Honour considered there was no doubt of the master's right to sue in cases of this description. The master was personally liable for breaches of those contracts and it was quite within his functions to enter into them.

Mr. Litchfield further referred to *Storey on Agency*, 4th ed. sec. 116, as to the powers of masters of vessels to enter into contracts and submitted that in case of freight or passage money being contracted for and the contract broken, the master had power to sue.

His Honour concurred.

Mr. Litchfield then went into the merits. It had been decided in England in the case of *Grey v. Turnbull* L. R. 2 Scotch Appeals, p. 53, that in cases where the Court below had an opportunity of observing the demeanour of witnesses it would require an overwhelming weight of evidence to disturb the verdict. He would call attention to the wording of the judgment which had been commented upon by his learned friend. Where the judge has pointed out that the contract was entered into was, when the conversation took place between the parties. This was the finding of the Court below as to the contract for the carriage of Governor Hennessy and his suite. The contract was inchoate but would be completed when the captain signified his intention to wait and charge a reasonable sum for doing so. It was plain that defendant had confidence in Mr. Groom and left it in his hands to complete the matter. The final completion was, when the telegram stating the terms was sent.

His Honour:—Supposing the telegram never reached?

Mr. Litchfield:—The contract would have been complete when the telegram was despatched on the same principle as contracts concluded by letter, *Dunlop v. Higgins*, 1 House of Lords Cases, *Duncan v. Topham*, 8 C. B. p. 225, "a contract is complete when the letter accepting the terms is posted altho' the letter never reaches." Pitman must have known there was a mistake. He could easily have replied and thus avoided all this litigation and ill feeling. On the subject of telegrams counsel referred to *Henkel v. Pape*, L. R. 6 Exch. p. 7: the plaintiff was a gunmaker in Birmingham, defendant a merchant in London. Defendant wrote asking the price of fifty Snider rifles with sword bayonets. He received a reply, and plaintiff received a telegram purporting to come from him which read "send the rifles by mail." The fifty

rifles were sent and the defendant wrote back expressing his surprise as he had only ordered three. It was impossible for plaintiff to have imagined there was an error as the first letter said fifty. Verdict was directed for defendant with leave reserved to move to enter verdict for price of the balance of the rifles over three. The rule was moved for and refused, the Court deciding that the sender of a telegram was not answerable for errors in transmission. In the present case the judgment of the Court below is therefore right and Pitman rightly held responsible. The telegram is unintelligible, it says, *Galley of Lorne* about to ship "one Governor and fifty dollars," two treasures in themselves and the startling information is added that, "captain Dryden considers matter settled." If the word "and" had been left out, the message would have been intelligible. The real question was what would be charged for taking the Governor and his suite to Hongkong, \$50 was a ridiculous sum, Pitman knew it to be so and was therefore liable. The whole of the evidence bore out the finding of the Court below. The defendant (appellant) said he had heard that the *s.s. Galley of Lorne* would go in the evening, and upon that commenced arrangements for the stoppage of the ship till Saturday. Mr. Gillingham, in cross-examination, said that he understood that the Governor and suite would go, and that the terms would be reasonable, and left it to the captain. That the captain considered that the matter was settled, was additionally proved by the fact of \$86.68 having been laid out in extra delicacies for the use of the Governor and suite. He would, in conclusion, ask that the decision of the Court below be confirmed, and that the appellant be ordered to pay costs of this appeal.

Mr. Lowder rose to reply. He said he had very little to say and should not occupy the Court's time very long. The first point to be considered was whether any contract ever existed between the parties. He contended that no contract ever had existed, and that therefore defendant (appellant) could not be held liable for any loss that had been incurred. To show clearly what was the nature of a binding contract he would refer the Court to *Broom's Commentaries*, page 304 (definition of a contract read). He thought what he had quoted settled the point, that a contract must be definitely settled and arranged or it was not in law a binding contract, in fact no contract at all. Pitman had asked Groom how much demurrage the steamer would charge and Groom had replied that he did not know. Pitman, it was clear, had left the respondents office under the impression that it was merely a question of demurrage, and afterwards receiving the telegram he did from Groom thought the money mentioned in it was the amount of demurrage demanded for detaining the steamer.

His Honour: The question is whether the telegram was to be accepted or not; or whether any conclusion was arrived at from the telegram from Pitman to Groom. There was no distinct offer of terms in it.

Mr. Lowder said, that if the sender of a telegram was not to be held liable as argued by his learned friend, then clearly the recipient was also not liable. He thought that the case concerning Snider rifles quoted by his learned friend, did not bear on the present case at all. It was quite clear that Mr. Groom was to consult the captain of the *Galley of Lorne* before the final arrangements were made.

His Honour said that point was already admitted.

Mr. Lowder then went on to say, that steamers were in the habit of carrying Governors and other high public functionaries at quite nominal rates, and often for nothing. This was notorious. He considered that Mr. Pitman had acted in a very frank way with the respondents, who unfortunately had not met Mr. Pitman in a similar spirit. Mr. Groom should have met Mr. Pitman half way in the matter. It was a case that ought never to have come into Court, nor indeed would have done so but for the actions of the respondents. Mr. Groom had considered that he was justified in putting the case into Court because he had received from Mr. Pitman what he considered a discourteous letter. As a matter of fact there was no evidence to show that the steamer had been detained at all. Pitman was told that the steamer was going on Friday, but that was no evidence. He could not understand how the Court below had arrived at \$250.00 as the damages for the detention, supposing that the steamer had been detained. Certainly the list of delicacies did not amount to nearly that sum, (list read which included such articles as champagne, China eggs, Gloucester cheese, carraway seeds,

sheep's pluck, tripe, beef, mutton, and China chairs at 50 cents each). He would not occupy the Court any longer, but would in conclusion ask that the judgment of the Court below be reversed, and that the respondents be ordered to pay all costs in both suits.

His Honour said he would consider his decision and deliver it in a day or two.

The JUDGMENT of the Court was delivered this morning at 10 o'clock and is as follows:

This is an appeal from a judgment of Her Majesty's Provincial Court at Hiogo, ordering the appellant to pay to the respondents the sum of \$250 as compensation for the detention of the steamship *Galley of Lorne* beyond her sailing time.

Before discussing the merits, Mr. Lowder, for the appellant, argued certain technical points raised by the petition of appeal as to the right of the respondents to sue as agents of the steamer,—the right of the master to authorise them to sue on behalf of himself and owners,—and as to the non-compliance by the plaintiffs in the Court below with the requirements of certain of the rules of procedure of the Court. I held that none of these objections could be properly sustained on the appeal, and I will only say further on this head that the authorities cited by Mr. Litchfield appear to me to be amply sufficient to sustain my ruling.

The main facts of the case as set forth in the record of appeal are as follows: The appellant applied to the respondents, as agents at Kobe of the steamship *Galley of Lorne*, for information with regard to the departure of the steamer from Kobe for Shanghai, and was told by the respondents' representative, Mr. Groom, that she would be going that evening (Friday). The appellant then said that Governor Hennessy and suite would like to go in her if she were leaving on Saturday evening, and asked what would be the amount for demurrage if she were detained until then. Mr. Groom replied that he thought it was not a matter of demurrage, but simply a question of how much the captain would charge for the passage of Governor Hennessy and suite to Shanghai remaining over till Saturday evening, adding, "I cannot say anything for certain until I see the captain." As the appellant had to leave for Kioto, it was agreed that Mr. Groom should telegraph to him the captain's decision. As the appellant was leaving the office, Mr. Groom said to him that as the steamer was to have left that night it would be very inconvenient if the question of her postponement could not at once be decided, and might they (the steamer's agents) consider the matter settled if capt. Dryden (the master) agreed to wait and take them (the Governor and suite). The appellant replied "yes," and left the office. Subsequently, at noon on the same day, after consulting with the master, Mr. Groom sent a telegram to the appellant in the following words: "*Galley of Lorne* will wait until Saturday evening, will take Governor and suite for two hundred and fifty dollars, captain Dryden considers the matter settled." This telegram was incorrectly transmitted by the telegraph office, and when delivered to the appellant read as follows: "*Galley of Lorne* will wait until Saturday evening, will take Governor and fifty dollars, captain Dryden considers matter settled." To the telegram delivered the appellant replied, also by telegram: "If *Galley* waits until Sunday Governor accepts, otherwise consider cancelled. Telegraph reply to-day so as to prevent the detention of the *Tokio Maru*." In answer to this Mr. Groom sent a telegram in the words following:—"In accordance with agreement postponed until Saturday evening, can wait Sunday evening, we must charge demurrage, kindly reply." Next morning (Saturday), before any answer had been received from the appellant, in consequence of a telegram received by the master of the steamer from a third party and communicated by him to Mr. Groom, the latter telegraphed again to the appellant, "Captain awaits reply to last telegram. Do you wish to detain steamer until Sunday? Customary demurrage 350 dollars per day,"—and the same evening the appellant telegraphed to his agents at Kobe Messrs. Fischer & Co.,—"Inform Mourilyan cannot accept 350 dollars demurrage, agreement 50 dollars per day, otherwise cancel negotiations and Governor remains." This was duly communicated by Messrs. Fischer & Co. to Mr. Groom, and the appellant likewise at the same time sent a telegram direct to Mr. Groom saying,— "Refer telegram yesterday

declining to detain *Lorne* unless she could wait until Sunday at demurrage according to agreement 50 dollars per day. If these terms not accepted consider negotiations cancelled. Wire reply." Upon this Mr. Groom and the captain concluded that the steamer should be no longer detained, and she was sent to sea without the Governor and suite on the next (Sunday) morning. Upon this evidence the Court below, after saying that the point for it to decide was whether the appellant was justified in putting the construction he did upon the mutilated telegram, has held that it was an error on his part and that he is liable for the amount claimed with costs of suit.

The appellant contends that this decision is unsatisfactory, firstly, because it is contrary to law inasmuch as no contract is shown ever to have existed between the parties, and secondly, because there is no evidence of any detention of the vessel or of damage caused thereby,—and in support of his argument that no contract ever existed, Mr. Lowder cited *Broom's Commentaries*, page 304, and *Albinson v. Cope*, 22 L.J. Exch.

The respondents contend that although the contract was inchoate only at the close of the interview between the appellant and Mr. Groom, it was made complete by the despatch of the first telegram from Mr. Groom to the appellant and Mr. Litchfield cited *Dunlop v. Higgins*, 1 "Smith's Leading Cases" and *Duncan v. Topham* 8 C. B. Rep. 225, as authority for the proposition that a contract is complete when the letter (and by the same course of reasoning a telegram,) accepting the terms is posted, although the letter never reaches. He also cited *Henkel v. Pape*, L.R. 6 Exch. p. 7, to prove that the sender of a telegram is not responsible for errors in transmission. Obviously therefore the first question I have to decide is, whether upon the evidence and the law applicable to the case, a binding contract or agreement was ever entered into or concluded between the parties.

Now, as observed by Mr. Pollock in the first paragraph of his well known work on contracts,—“It is somewhat curious that no such thing as a satisfactory definition of contract is to be found in any of our books”; but it is clear that in order to produce a binding legal agreement between two parties they must concur in expressing a common intention, and that there must be a mutual communication between them by proposal and acceptance. I may here observe that although it was apparently held in *Dunlop v. Higgins* and *Duncan v. Topham* that the posting of a letter accepting the terms of an offer made to the sender by the party to whom the letter was sent would constitute a contract binding on the parties, yet the authority of those cases for the entirety of this proposition has been more than doubted in the subsequent judgments of the Master of the Rolls in *Reidpath's case*, 11 Eq. 86 and the Court of Exchequer in the *British and American Telegraph Co. v. Colson* 8 Exch. 103. I do not propose, however, to review now the somewhat nice distinctions which have been drawn by eminent judges upon this point because in the present instance it is clear to me that there never was any concurrence in intention between the parties upon the most material point of the proposed contract or agreement. An agreement is not a contract unless its terms are certain or capable of being made certain. Now, the main question in discussion between the appellant and Mr. Groom, upon which certainty was expressly required, was the amount of money—whether it be called passage money, demurrage, or by any other name—which was to be charged for the detention, if any, of the steamer and the conveyance of the Governor and suite to Shanghai. It was clearly with the object of ascertaining this that the appellant called upon Mr. Groom. The latter being unable to tell him what it would come to, it was agreed that he should consult the master of the vessel, and until the decision of the master had been communicated to the appellant and accepted by him there could be, according to my view of the law bearing upon the case, no binding agreement between the parties upon which either of them could successfully sue the other. As the result was, owing to a mistake of the Telegraph Company, for which neither appellant nor respondents were to blame, the decision of the captain was never in the course of the negotiation actually communicated to the appellant, and even if willing so to do the latter could not possibly without further communication than actually passed between the

parties have accepted or refused the captain's terms. The Court below has held in effect that there was an obligation, under the circumstances, thrown upon the appellant of verifying the accuracy of the terms of the mutilated telegram, but I am not aware of any legal doctrine to support this theory.

The judgment of the Court below must be reversed and entered for the appellant who will have the costs of this appeal as well as of the original suit.

Thursday, 27th November, 1879.

Between WILLIAM ALFRED MALCOLM, trading as MALCOLM, WILLCOX & Co., plaintiff; and JARDINE, MATHESON & Company, defendants.

Petition:—

The Petition of William Alfred Malcolm the above named plaintiff shows as follows:—

1.—That the plaintiff is a merchant carrying on business at Yokohama, Japan, under the name of “Malcolm, Willcox & Co.” and in London under the name of “Temple, Willcox & Co.”

2.—The defendants are a firm of merchants carrying on business at Yokohama aforesaid and elsewhere as lightermen and carriers of goods for hire.

3.—That on or about the 4th day of September in this year and on or before the happening of the events and grievances herein complained of, the said plaintiff employed the said defendants to receive from the steam-ship *Viceroy* then lying in the port or harbour of Yokohama, 584 bundles of iron of and belonging to the said plaintiff and for reward to be paid by the said plaintiff to the said defendants to carry the same from the said ship's side to the landing pier or Hatoba at Yokohama aforesaid.

4.—That in consideration of such employment as aforesaid and for the reward as aforesaid the said defendants agreed to carry the said goods safely from the ship to Yokohama as aforesaid and to use due care and diligence in and about the carriage of the said goods.

5.—That the said defendants did not use due care and diligence in the carriage of the said goods but on the contrary by reason of the want of sufficient covering and protection to the boats in which the said goods were carried and other want of care in such carrying as aforesaid a great portion of the said goods were damaged by rain and thereby rendered unmerchantable.

6.—That by reason of such damage as aforesaid, 272 bundles of iron weighing about 235.43 piculs were rendered unmerchantable and by reason thereof the purchaser of the said goods refused to accept the same and thereafter upon sale of said goods at public auction a great loss and damage was sustained by the plaintiff and the plaintiff has been put to great expense and inconvenience thereby.

The plaintiff therefore prays:—

1.—That the said defendants may be decreed and ordered to pay the plaintiff the sum of \$245.78 together with costs of suit.

2.—That the plaintiff may have such further and other relief as the nature of the case may require and as the court may direct.

The following is the defendants answer:—

1.—That the defendants admit the truth of the allegations contained in the first paragraph of the said petition.

2.—That the defendants deny the truth of the allegation contained in the second paragraph of the said petition as also the truth of the allegations contained in the remaining paragraphs of the said petition except so far as the same are hereinafter admitted.

3.—That on the 28th day of August last, the S.S. *Viceroy* arrived at the port of Yokohama from London the defendants being the agents for the said ship at the said port of Yokohama and the plaintiff being consignee of 584 bundles of iron shipped in London on board the said ship to be delivered to his order from the ships tackle in the said port of Yokohama.

4.—That on the said 28th day of August last and on several subsequent days the defendants in compliance with the custom and usage of the said port of Yokohama caused the following advertisement to be inserted in the *Japan Herald* and the *Japan Gazette* the same being Yokohama daily newspapers:—

"NOTICE.—Consignees of cargo per steam ship *Viceroy*, from London via Shanghai, are requested to take delivery of their Goods from alongside the vessel. Those Consignees who are desirous that their goods should be landed by the Agents of the Steamer as heretofore, will please make the request in writing to the undersigned at the same time as their Bills of Lading are sent in for counter-signature. Consignees will please note that Cargo which unduly impedes the discharge of the vessel will be landed and stored in the Bonded Warehouses, at their risk and expense. Consignees of optional Cargo are requested to give notice, *at once*, to the Agents, at which port they wish their goods landed, otherwise they will be forwarded on to Hio-go. JARDINE, MATHESON & Co., Agents. Yokohama, August 28th, 1879."

5.—That the plaintiff availing himself of the said advertisement requested the defendants to land the said 584 bundles of iron for him in accordance with previous custom.

6.—That in compliance with such request and solely to suit the convenience of the plaintiff the defendants caused to be landed at the risk and expense of the plaintiff the said 584 bundles of iron and caused the same to be delivered to the plaintiff.

7.—That the said goods were landed and delivered to the plaintiff with all due care and diligence and every proper ordinary and reasonable precaution was taken for their protection against the weather and otherwise.

Mr. Litchfield appeared for the plaintiff and Mr. Kirkwood for the defendants.

Mr. Kirkwood applied with the consent of plaintiff's counsel to amend the defendants' answer by the addition of the following paragraph:—8.—That the plaintiff was and is well aware that the landing agent by whom the defendants caused the said iron to be landed as in paragraph 6 mentioned, was David Scott of Yokohama and that he alone if anybody is liable to be sued in respect of the subject matter of this dispute.

His Honour granted Mr. Kirkwood's application.

Mr. Litchfield then opened the case on behalf of the plaintiff. He read the petition and answer and stated that the action was brought by William Alfred Malcolm who was resident in London against defendants to recover \$245.78 damages sustained by the plaintiff through the neglect of the defendants. The facts, said the learned counsel, which will be laid before your Honour are extremely simple. On the arrival of the steamer *Viceroy* the plaintiff's firm employed the defendants to land certain iron, part of the cargo of that vessel, and carry it to the Hatoba. This iron was landed on the 4th September, the morning was cloudy, gradually melting into a nice, soft rain. In the midst of the rain, the iron was landed in open boats, a large portion of it spoilt, and delivery of it was then offered to plaintiff in an unmerchantable condition. The iron was admittedly in good order when it left the ship's side but about half of it was damaged in transit. Fortunately it was not all in one boat, so part escaped. When the iron was offered to plaintiff on the 4th September, it was shown to the Japanese who had made a contract to purchase it. This person accepted what was good and after inspection, refused to take the damaged portion and in respect of that portion this action is brought. The iron was inspected by two persons and sold by auction. The defendants have denied any liability on several grounds; first of all they said the damage was occasioned through stress of weather, they then abandoned that defence and said it was all the fault of Mr. Phillips, plaintiff's manager, because he did not scrub the iron clean and pour in oil like the good Samaritans we read about. Now they apparently have a fresh defence and try and set up some custom of the port and throw the blame upon Mr. Scott. Counsel expressed an opinion that defendants would find it difficult to establish any custom, that persons employed to land goods for reward could avoid responsibility under the present circumstances.

Mr. Kirkwood stated that the custom of the port of Yokohama was, that when a sub-agent was employed the principal was not responsible.

Mr. Litchfield. If the person who is employed can shift all responsibility upon a third party between whom and the employer no privity of contract exists, the employer is in a worse position than if he engaged the lighterman himself. I shall have an opportunity of calling your Honour's

attention to the cases on the subject hereafter, now I will call my witnesses.

Richard Bulkeley Phillips:—I am the manager here of the firm of Malcolm, Willcox & Co. under power of attorney from William Alfred Malcolm which is filed in this court. Mr. Malcolm is the sole partner in the firm which is carried on here under the name of Malcolm, Willcox & Co. and in London under the name of Temple, Willcox & Co. We received some iron by the steam-ship *Viceroy* which arrived here last August; it was shipped in London by Temple, Willcox & Co. (bill of lading put in and marked as exhibit "A.") I employed the defendants to land the iron for us. It is usual to employ the ship agents to land cargo as it is a matter of convenience to both parties. The consignee pays for landing the cargo. We have not yet paid anything for landing this iron. An account was presented but I refused to pay pending the settlement of this case by the court. It is more convenient for the ship for the agents to land cargo, as it prevents the ship being delayed. We all have ships consigned to us and we work in with one another. Ships are sometimes consigned to my firm. The iron was landed on 4th September. I saw it after its arrival, part of it in boats and part being landed, it was landed in the rain. The iron was wet with rain water, some was so wet that when we turned it on its edge the water ran out. The boats were quite open and as far as I could see no effort had been made to protect the iron. My attention was called to the iron shortly after noon. The weather was dark and overcast in the morning, threatening rain all the time. I do not recollect when it commenced raining, but it rained all the afternoon. The iron came out under contract of sale to a Japanese at \$4.80 per picul. The Japanese was notified as soon as the vessel arrived that the iron had come and went down to the Hatoba several times to see if it was landed. I first saw it on the 4th September, but I believe a small portion was landed the day previously. The Japanese saw the damaged portion on the 4th; he first asked for an allowance and on further inspection refused to take delivery at all. The letter now shown me was written by me to defendants (exhibit "B."). Letter read:—

Yokohama, Sept. 4th, 1879.

Messrs. JARDINE, MATHESON & Co.,
Agents s. s. *Viceroy*.

DEAR SIRs,—A quantity of sheet iron belonging to us has been landed to-day from above vessel, exposed to the rain, and as considerable damages are likely to ensue, we (if our customer claims for the said damages) must hold the vessel responsible.—We are, Dear Sirs, Yours Faithfully,
p. pro. MALCOLM, WILLCOX & Co.,
R. B. Phillips.

I also wrote the other letter now shown me (exhibit "C."). Letter read:—

MEMORANDUM FROM MALCOLM, WILLCOX & Co.
Yokohama, 5th August, 1879.

Messrs. JARDINE, MATHESON & Co.,
Agents s. s. *Viceroy*.

Our buyer declines to take delivery of the damaged iron unless an allowance of seventy-five cents (75 cts.) per picul is made to him. At what time will it be convenient to view the goods to-morrow?

p. pro. MALCOLM, WILLCOX Co.
R. B. Phillips.

I also wrote this letter (exhibit "D."). Letter read:—

Yokohama, 10th September, 1879.

Messrs. JARDINE, MATHESON, & Co.
Agents s. s. *Viceroy*

DEAR SIRs,—We beg to advise you that we intend to have the damaged sheet iron surveyed. Mr. H. Barlow will act for us and we should be glad to know if you will appoint a gentleman to survey in your interest.—We are, Dear Sirs, Yours Faithfully.

p. pro. MALCOLM, WILLCOX & Co.
R. B. Phillips.

I afterwards commenced proceedings against the master of the *Viceroy* but withdrew them and brought the present action. After the iron was surveyed it was sold by auction through Messrs. Bourne & Co., and realized \$4.00 per picul. These are the account sales, (exhibit "E.").

"Account sales 272 bundles sheet iron all more or less damaged with fresh water, net proceeds \$905.47."

At the time the *Viceroy* arrived there had been no iron of the description sold for some time. As far as I know there was only one other parcel in Yokohama. The iron was sheet iron for making stove-pipes, it was not galvanized and necessarily thin.

Cross-examined by Mr. Kirkwood.

Before I understood the circumstances I considered the captain of the ship responsible but afterwards when I found the iron had been landed in open boats I changed my opinion and thought defendants liable. The document shown me is the petition I filed against the captain, it says "the defendant (captain) delivered the goods in Yokohama in so damaged a condition that they were not merchantable." I consider delivery takes place on the *Hatoba*. At first I considered the iron was being landed by defendants as agents for the ship but afterwards found they were our agents. Defendants repudiated the notion of landing on account of the ship. I presume I read the advertisement shown me in the local papers. It is the same as that set out in the petition in this case. I do not consider we are lighterinen. When discharging a ship I think we are carriers for hire. When discharging a ship we carry for hire between the ship and the *Hatoba*. If it is more convenient and pays us better we use our own boats. The last time I employed our own boats was about five years ago. For the last four years I have hired boats. We never owned boats of our own, we used to hire boats and send our own Chinamen or native staff, now we employ European landing agents and have done so for four years. When we employ a European landing agent he sends in the accounts of landing charges to the consignees. For the last four years we have received nothing for landing cargo, all the profits accrued went to the European landing agent. The landing charges do not enter into ships accounts at all unless in the case of goods left unclaimed. I caused the advertisement produced to be put in the local papers, it is dated 24th March, 1879, it contains the words "landed by agents as heretofore." By landed as "heretofore" I meant landed by the ship. In the case of the *Viceroy* I understand the defendants were acting for us as I gave them a written request to land for us. I requested them to land the goods in the usual way on the *Hatoba*. This is the application I made to defendants to land the goods. I was not aware, in fact knew to the contrary, at the time of making the application that it was not the defendants' custom to employ a foreign agent. This was the first occasion to my recollection that I knew of them employing an agent. I do not know whether most agents for steamers land their goods through foreign agents. Most of the steamers visiting Yokohama come to defendants and Adamson, Bell & Co. The 'Glen' line come to defendants. The *Galley of Lorne* has come to both defendants and Adamson, Bell & Co. The *Egean* I do not know about. The letter shown me was written by my firm. It refers to sending in accounts after the departure of ships.

In all the instances mentioned in the letter our firm did not apply to Mr. Scott direct. That letter was written by a former manager of our firm. We have on several occasions refused to recognize Mr. Scott in anyway. We always applied to the agents to land the goods. I have paid Mr. Scott's accounts for landing to save trouble to all parties. I do not know what profit other agents of vessels get for landing goods. If you employ your own men you get a profit. Mr. Scott has not landed anything for us, at any rate within the last year or two. The account produced dated 9th September, 1879, was presented to us by Mr. Scott. I wrote the memo. at foot in red ink. I have agreed with Mr. Scott that he shall charge us 5 cts. a package for all goods landed for us. I believe I did get a letter some time ago from Mr. Scott, referring to the charge of 5 cents a package. I think I received the letter last year. I have had correspondence with the agents of vessels about corrections in charges. Any arrangement about landing charges I have made, has been with the European landing agent. I am tolerably certain the iron was landed on the 4th. I believe a portion was discharged on the 5th having been, I presume, brought to the jetty on the 4th and remaining out in the rain all the time. The iron was very wet, I took no steps to preserve it. I did not take delivery. I would not accept it because it was damaged. It was not in our possession, in fact we had the bill of lading at the

time. It was not in our possession when landed. I cannot say if it was in our agents possession on our account as they were also agents for the ship. I cannot say that I should have taken steps to protect the iron. The cost of cleaning would come to as much as the damage and still leave the iron "damaged goods." Leaving the water on the iron would increase the damage day by day. Cleaning the iron at once would have prevented the damage from proceeding any further. I gave no instructions about it and made no enquiries as to the cost of cleaning. I was waiting for the decision of defendants. I cannot tell what the cost would be but I know it would be prohibitive from the work that would have to be gone through to clean and oil the iron. Mr. Whitfield examined the iron I claim for, in my presence. I do not recollect Mr. Whitfield saying the iron could be made as good as new for 10 cents per picul. The iron was put in bond by some one, I do not know who. I gave up the bill of lading on the morning of the sale by auction because the defendants refused to allow it to be sold unless the bill of lading was given up. It was understood that it was as agents of the ship they wanted the bill of lading. I cannot say that the iron would be eaten through in a fortnight, although it would be in a worse condition than if it had been cleaned at once. I have no practical experience in iron.

By the Court:—The accounts for landing the iron are made out in Mr. Scott's name.

Adjourned to 2 o'clock.

Re-examined by Mr. Litchfield.—When we employed defendants we had nothing to do with whom they employed to land the goods. I should have objected to Mr. Scott as we would not employ him under any circumstances. Mr. Scott presented the account. If defendants had presented it we would have paid it. I consider that we as agents for the ship would under similar circumstances be liable. We could hire boats and make money out of the business, it used to be the practice. This would entail extra work. Defendants used to land goods by their own Chinese servants. The present case is the first in which I have known them to employ an agent. I have read defendants' advertisement respecting the *Viceroy*. They first inserted advertisements in similar form immediately after the kerosene fire at the *Hatoba* last year. I recollect a different form of advertisement being inserted by defendants during this year relating to the "Glen" line, insisting on consignees taking delivery of their goods from the *Hatoba*. The advertisement produced is the one I refer to. (exhibit "F." read.)

NOTICE.—Consignees of Cargo per Steam-ships *Glenfalloch*, from London, and *Glencoe*, from Shanghai, are requested to send in their original Bills of Lading to the undersigned and take delivery of their Goods from the *Hatoba*, where they now lie at their risk and expense. JARDINE, MATHESON & Co., Agents. Yokohama, April 18th, 1879.

The form of advertisement that was used for the *Viceroy* and inserted in the answer to the petition herein has since been changed also. When acting as agents for vessels we have paid claims for damage to cargo which occurred between ship and *Hatoba* when we were employed by the consignees to land their goods. This occurred in the case of the *St. Mark*. I accepted the responsibility and paid for a piece of machinery which was damaged. I afterwards recovered the amount from the person I employed to land the cargo. On the 4th September I saw the iron on the *Hatoba* the same day I wrote to defendants. I believe the bulk of the damaged iron was landed on the 4th. I had not received delivery when I saw it was wet. Defendants did not offer to clean and make merchantable the iron. Acting as a landing agent I would not offer to clean iron under similar circumstances. It is not customary. When I filed the petition against the Captain of the *Viceroy* I did not personally know when the damage had occurred.

In answer to Mr. Kirkwood:—We had no goods by the *Glenfalloch*, the steamer mentioned in the advertisement, (exhibit "F.") and do not know under whose instructions they were landed on the *Hatoba*.

Henry Barlow:—I am a merchant residing at No. 94. Have been for some time manager of Shaw & Co. Have had considerable experience in landing merchandize. In September of this year I was called upon by the last wit-

ness to examine some sheet iron. It was stated to be about 280 bundles. I first saw the iron on the 10th September and subsequently on the date of survey, 15th September. The iron was damaged by fresh, evidently rain, water and was still very wet. It appeared on the 10th, to be damaged about from 15 to 12 per cent. on the market value, that will be about 45 to 50 cents a picul. I formed my estimate of the value of the iron from the market value and what it would probably sell for. The iron at the time I saw it was unsaleable as sound iron.

Cross-examined by Mr. Kirkwood:—I speak of the iron as it was on the 15th September when I made my report. From the appearance of the iron on the 15th, I could not form an opinion as to its state on the 5th. From its appearance it had not been wet long. All the bundles were wet. I cannot say if it was all wet at the same time, I could not tell when the dry portion was wet. There was dry rust as well as wet rust. Of course it was drying every day. The part that was wet and not dry could not have been made what is termed "sound iron." The very fact of oiling it would make it less marketable. The oiling would mark it, this kind of iron is polished. I have known oiled iron refused. Oiling and a kind of composition have been tried to prevent sea damage and the iron has been refused by Japanese as they had a suspicion that the oil or composition was used to hide defects. I do not know what it would have cost to clean this iron as I never saw or heard of its being done. I would not have attempted to clean it. The market price of that kind of iron was then about \$4.50. The market has since improved.

Re-examined by Mr. Litchfield:—I did not hear of any transactions in that kind of iron at the time. It would command a better price shortly after. There was a small stock of that kind of iron at the time. I formed the same opinion of the iron on the 15th as I had on the 10th. There was no further deterioration during the five days. Of course it had not improved.

Charles Seitz:—I am a landing and shipping agent and German subject carrying on business at No. 41. I remember the 4th September when the *Viceroy* was in port. It was a lazy morning and commenced raining about noon. I was landing cargo on that day from three other vessels, *Eme*, *La France* and *Abbay Town*. I stopped discharging good iron on account of the threatening weather. The captain refused to take the responsibility and I would not. The boats I used are the open boats, if I had gone on landing I would have only done so at ship's responsibility and would then protect the iron or other cargo with tarpaulins. I was on the *Hiatoba* on the 4th and saw some iron there in open boats. All these boats are under the regulations of the custom house. I am employed by the general agents of ships to land cargo. I am responsible for all damage that happens in landing. I am responsible to the agents of the vessel.

Cross-examined by Mr. Kirkwood:—I render the accounts to the consignees of the cargo. The agent has nothing whatever to do with my accounts. I render them as landing agent and in my own name. I sometimes make agreements as to the charges with the consignees. The agents settle any disputes that may arise between the landing agent and consignee. I receive the whole amount of the accounts myself. On the 4th September I knocked off work about sundown. I was discharging old wire rope and chain after 10 or 11 o'clock. It commenced to rain about noon. If I had been discharging good iron into boats when it came on to rain, it might have got a little wet, no matter what precautions were taken, but it would not amount to much. It would take perhaps 10 minutes to cover iron up, provided everything was at hand to do it. The proper place to keep the tarpaulin if you expect rain is either in the boat or on board the ship, handy for use. I stopped discharging the good iron when I saw it was going to rain. My own judgment told me it was going to rain. It would take about three hours to load one of the boats with iron. There is no covered place to discharge in. If it comes on to rain before the boats are discharged the cargo has to remain on board the boats until it clears up. The rain cleared off on the 4th about sunset, but the boats could not then be discharged before the next day without paying extra custom house charges. I have been about 16 months acting as a landing agent. Captain Scott, Mr. MacArthur and myself are the European landing agents at this port.

Re-examined by Mr. Litchfield:—The 4th September, was a dark threatening morning. If I had been landing new iron I would have considered it my duty to have provided the boats with tarpaulins. If rain had come on I should have covered the goods up with tarpaulins. Tarpaulins protect a cargo boat well. Ten minutes in the rain could not possibly destroy iron to any great extent. Adjourned to 9.30 on Tuesday.

THE STEAMSHIP OWNERS COMBINATION. WORKING OF THE CHINA AND JAPAN TRADE, OUTWARDS AND HOMEWARDS.

The Peninsular & Oriental Steam Navigation Co. shall have the right to run its Line of Steamers.

The Messageries Maritimes de France shall have the right to run its Line of Steamers.

The Ocean Steam Ship Co. shall have the right to run its Line of Steamers.

Messrs. McGregor, Goss & Co. shall have the right to run their line of "Glen" Steamers.

Messrs. T. Skinner & Co. shall have the right to run the "Castle" Line of Steamers.

Messrs. D. J. Jenkins & Co. (through *Messrs. Norris & Joyner*) shall have the right to run their Steamers: "Radnorshire," "Merionethshire," "Breconshire," and "Flintshire," and

Messrs. Norris & Joyner shall have the right to ten departures per annum, including those loaded for *Messrs. D. J. Jenkins & Co.*

Messrs. Shaw, Williams & Co. shall have the right to six departures of steamers per annum, the following vessels having a claim to the berth: "Lord of the Isles," "Galley of Lorne," and "Harter."

Messrs. Gellatly, Hankey Sewell & Co. shall have the right to load the "Afghan," and including her sailings to four departures per annum.

N.B.—In the departures above provided for, as well as any further requirements which may hereafter become apparent, the steamers now owned by *Messrs. William Thomson & Co.*, *Messrs. John Warrack & Co.*, and *Mr. Charles Williamson*, all of Leith, shall follow the above-named eight vessels in preference of the berth, provided their owners have not traded against the interests of those subscribing to this Agreement.

1. Advertized days for receiving cargo shall be arranged so as to clash as little as possible with each other, and shall be strictly adhered to, the Mail Steamers taking their fixed dates.

2. Should the Signatories hereto consider that the trade requires more than the departures above provided for, the loading of such excess shall be given to *Messrs. NORRIS & JOYNER*, *Messrs. SHAW, WILLIAMS & Co.*, *Messrs. GELLATLY, HANKEY, SEWELL & Co.*, steamer by steamer in that rotation.

3. The Representatives of the Signatories (*Messrs. D. J. JENKINS & Co.*, and *NORRIS & JOYNER*, ranking as one) shall meet from time to time, to arrange freights and discuss the general working of the Trade, the decision of the majority to be binding. When necessity arises, a secretary shall be appointed and an Accountant named for arranging the contributions towards the Defence Fund.

OUTWARDS.—Rates of Freight.

4. Through rates of freight from Lancashire and Yorkshire to be as per Schedule annexed, or such as may be decided upon from time to time, the same via Liverpool or London, and no rebate of any kind to be allowed to shippers other than that provided for in this Agreement.

5. Goods for Japan may be taken by all the lines, via Hong-kong or Shanghai at five shillings per ton over the China rates, but direct conveyances shall be despatched, as occasion requires.

6. Shippers to China and Japan shall be entitled to a return of three shillings per ton weight or measurement, on the amount of freight contributed, provided it has not been less than fifty tons in the six months; the said return to be distributed half-yearly, six months after the expiration of each term on the condition that up to the time of distribution the claimant has confined his support to vessels loaded by the Signatories hereto.

7. If goods have been shipped through forwarding agents who have not fulfilled the above condition, the claim of the bona-fide owner shall nevertheless be recognized if he be entitled to the above return.

8. Should there be an opposition, either in Liverpool or London, a vessel or vessels, belonging to this Combination shall—unless the majority of the Signatories hereto decide otherwise—reduce freights to meet it. The loss hereby incurred shall be made good in the following manner:—The average per ton of the aggregate outward earnings (after deduction of railway carriage, Channel freight on Continental, and Ocean freight on American goods), of the "Glen" and "Castle" steamers, if the opposition has to be met in London and of the Ocean Steam Ship Co.'s steamers, if it has to be met in Liver-

pool, during the six months preceding the date of clearance of the reducing vessel, shall be assumed as the rate to which she is entitled on the cargo she carried; the difference between the amount thus arrived at and her actual earnings shall be considered as her loss, and shall be made good to her by the parties hereto in proportion to the tonnage that has been carried by each, from Liverpool and London, during the six months previous to her departure; and the date of each steamer's final clearing at the Custom House to determine whether she is liable to contribute. The vessel reducing shall bear its share of the loss. Annexed is a pro forma statement exemplifying the above.

9. The departure from England to be regulated so as to provide for the additional tonnage required at the opening of the Tea season.

10. Any of the parties to this Agreement may load sailers, so long as they do not carry bale and case goods or cargo that is usually sent by steamers; and this latter question shall be decided in a liberal spirit by the Signatories hereto, or by a majority of them, but such sailers shall be prohibited from taking the berth for England or the United States from Japan, China or Hong Kong.

11. This Agreement includes all steamers and sailers dispatched by the Signatories up to the 31st December, 1879, and then terminates unless renewed. If renewed, any one of the parties concerned can withdraw, at any time, after the expiry of one month's notice.

12. Rates of freight free of primago, per ton of 40 cubic feet or 20 cwt., if the latter be more advantageous to the steamer.

FOR CHINA.

	P.&O. O.S.S.Co. Castles & M.M. & Glens & outsiders		
Manchester Balcs and Cases, excepting			
Yarn	72'6	70'	67'6
Yarn	62'6	60'	57'6
Yorkshire Goods	77'6	75'	72'6

All the above include carriage to and ordinary expense at port of shipment.

Town goods or fine goods from other places than Manchester or Yorkshire:—

	P.&O. O.S.S.Co. Castles & M.M. & Glens & outsiders		
Shipped from Liverpool or London ...	62'6	60'	57'6
Biscuits in Cases	35'	35'	32'6

Cargo for Japan five shillings per ton over the above rates.

13. Freight on other goods, measurement or weight, and on through cargo from America and the Continent to be fixed by the Signatories hereto, the decision of the majority to be binding.

14. Freight on Treasure to be the same by all the lines, and to be fixed by the two Mail Companies.

15. The reduction in rates fixed for the "Castles" and "Outsiders," as compared with those of the other lines, is to compensate for difference in premium of insurance. Should alterations occur in this respect, the reduction to be subject to revision or extinction.

16. Liverpool forwarding agents and Manchester agents may be paid by each of the said lines, according to their various agreements, but the payment is not to exceed sixpence per package or two shillings per ton. It shall not be made to principals who do not employ such agents.

17. Carriage and actual outlay to lay goods alongside steamers in London.

	Value per ton of 40 cubic feet		
	£	s.	d.
Shirtings, per ton of 40 cubic feet	1	0	9
Yarn do. do.	0	13	4
Long Ells do. do.	1	1	5½
Worsted Lastings, per ton of 40 cubic feet ...	1	3	0
Figured Orleans do. do.	0	15	1
Camlets do. do.	1	3	10

HOMEWARDS.

18. The Peninsular and Oriental Steam Navigation Company, the Messageries Maritime Company, the Ocean Steamship Company, Messrs. McGregor, Gow & Co., T. Skinner & Co., D. J. Jenkins & Co., Norris & Joyner, Gellatly, Hankey, Sewell & Co., and Shaw, Williams & Co., to stipulate with their China and Japan Agents, that they shall not load other vessels, either for London or New York, than those sent out by this combination.

19. Should the Owners or Consignees of any steamer of any line consider that through speed, or other advantages, higher freights than those as per schedule annexed, can be obtained on her account, they shall be at liberty to demand same.

20. River rates of freight from Yangtze ports to Shanghai shall be the same for all steamers coming under this Agreement. Any steamer loading at Hankow to make a freight for Tea, not less than fifteen shillings per ton over the fixed rate from Shanghai; but it is intended, so as not to interfere with the fair working of the trade for the Mail lines, to confine the sailings from the river ports to the smallest number consistent with the requirement of shippers, and the necessity, should it arise, to meet opposition.

21. Should there be an opposition in Shanghai, Foochow, Hong Kong or Japan, whether on the London or New York line, a reduction in freight shall be made to meet it, unless the majority of the Signatories hereto, up to that time interested in the particular line for the current year, decide otherwise. The loss thereby incurred shall be calculated on each line respectively, and be borne solely by the parties interested therein, in the following manner:—

22. The average per ton of the earnings of the steamers belonging to the "Ocean," the "Glen" and the "Castle" lines that have not raised their freights over the schedule rates, on the voyage on which reduction has to be made, shall be taken as the rate to which the reducing vessel is entitled. For this average the gross amount actually earned by those steamers to Europe or America as the case may be, is to be taken; if the reduction be made in China, the earnings from all the China ports to be included. In the case of through freight from ports at which these steamers do not load and, or to port at which they do not call, the excess of freight over that for the actual voyage run by the steamer itself shall be deducted and shall not be included in the return of average earnings. For constitution (?) the Hankow and Shanghai berths shall be considered identical, and the Foochow a separate line. Amounts received by the agents of the steamers for cargo under deck and coolies, from China to Singapore or Penang, are to be included in the return of earnings, and space under deck unoccupied on discharge at Singapore is to be calculated as worth forty shillings per ton.

23. The difference between the earnings of the vessel reducing, calculated as above, and what she would have earned—if a mail steamer on the cargo she actually carried; if any other on her under deck cargo capacity—at the average rate indicated above, shall be considered as her loss, and shall be made good to her by the parties hereto; the mail steamers contributing according to the cargo carried from China ports, the remainder according to the under deck capacity run, on the particular voyage, during the 12 months preceding the date of clearance of the vessel reducing.

24. The date of each steamer's departure from its last port in China or Japan to determine whether she comes within the time of contribution, and the vessel or vessels that have had to reduce rates shall bear their proportion of the loss. Annexed is a pro forma statement exemplifying the above.

25. This Agreement includes all steamers going out under its provisions and leaving their first Port in the East up to 1st March, 1880, and then terminates unless renewed. If renewed, anyone of the parties concerned can withdraw at any time after the expiry of one month's notice.

CONTRIBUTIONS TO DEFENCE FUND OUTWARDS AND HOMEWARDS.

26. Should a necessity to contribute arise before the Agreement has been in existence six months outwards and twelve months homewards, an estimate of what will probably be due from each line shall form the basis of a provisional settlement, to be amended when actual calculations can be made; and in the event of the Agreement being terminated before the periods above named, then the settlement shall be made on the voyages performed up to that time, and if any one or more of the subscribers hereto withdraw from the Combination; they shall only be liable to contribute for the actual tonnage run by them under the Agreement.

27. The freight earnings for six months outwards give a fair basis for calculations, and those of twelve months homewards show the average results of in-season and out-of-season business.

28. The Agents of the Peninsular and Oriental Co., the Messageries Maritimes, and the "Ocean," "Glen" and "Castle" lines, at each port in China and Japan shall form a Committee for the consideration of all points arising under this Agreement, the decision of the Majority to be binding. Minutes of meetings to be duly recorded and sent home from time to time. No representative to be allowed to vote on questions relating to a trade in which he is not likely to be interested.

29. In the working of the trade Outwards and Homewards the interests of the Signatories hereto be in providing ample tonnage, not only for existing demands, but for all possible developments. Goods that can afford to pay high rates, must be charged such figures—those that cannot be exported save at a low freight must be carried although they are unprofitable to the Steamer, in the hope that sooner or later they may yield a better return:—

shillings per ton on Tea cargo that pays the equivalent of Tea, Silk excepted; and 3s. (say three shillings) per ton on goods that go at a lower freight; provided that the aggregate of their shipments during the term on which return is being made has not been less than 50 tons; and that up to the time of distribution, the claimant has confined his support to vessels despatched by this combination—say the PENINSULAR & ORIENTAL CO., MESSAGERIES MARITIMES, OCEAN STEAMSHIP CO., Messrs. MCGREGOR, GOW, T. SKINNER & CO., GELLATLY, HANKEY, SEWELL & CO., NORRIS & JOYNER, and SHAW, WILLIAMS & CO. He shall not be excluded however, from participating in this

return, if, in the case of goods in which he had no ownership, he was compelled by his principals to support other conveyances and shipments from China and Japan via San Francisco, shall not be considered a ground of exclusion.

30. Advertized days for receiving cargo shall be arranged, as far as possible with each other, and shall be strictly adhered to, the Mail steamers taking their fixed dates.

31. Shippers from China and Japan to London and America shall be entitled to a return of freight to be distributed half yearly—six months after the expiration of each term—at the rate of five shillings.

32. The first returns will be made on shipments up to 31st December, 1879, and subsequently on those of each half-year.

33. Rates of freight from China, Coast Ports, and Hongkong Per ton of 40 cubic feet, free of primage.

	P. & O.	O.S.S. & M.M.	Castles
		Glens.	Outsiders.
Tea to London	77/6	75/	72/6
" New York via London	87/6	85	82/6
" " direct	87/6	85	82/6

Rates for Gold and Treasure to be the same by all lines, and to be fixed by the two Mail Companies.

34. Freight on Tea to New York from Japan to be fixed to meet the action of those controlling the Pacific routes, and should it be necessary to reduce rates below those current in China, an arrangement shall be made by the parties interested in this agreement, to retain the present trade via Suez by a contribution to the steamers that take the Japan berth from all the lines, whether to London or to New York, and whether from China or Japan, on the ground that it is the interest of this Combination to force Tea via Suez instead of via San Francisco, otherwise the tonnage provided would be in excess of the cargo procurable.

35. Steamers willing to take the Japan to New York berth, if fairly compensated when compelled to reduce freight below the China rates, would, if the loss were not jointly borne, decline to do so.

36. The proposed contribution shall make good to the reducing steamer any difference between the rates she actually obtains and those current at the time from China to London.

37. Freight on other goods and passage money for Coolies to the Straits shall be fixed from time to time by the Agent of the Subscribers, the decision of the majority to be binding. Insurance allowances on cargo being made, according to the value of the article in question, on the basis of the parity agreed upon for Tea.

38. The reductions in rates fixed for the "Castles" and "Outsiders" as compared with those for the other lines, is to compensate for difference in premium of Insurance. Should alterations occur in this respect the reduction to be subject to revision or extinction.

39. Any dispute under this Agreement, either on the outward or homeward routes, to be left to the decision of Mr. J. B. Westray, and should there be a charge of its text having been broken by the Signatories hereto or by their Agents, it shall be referred in like manner.

40. The penalty of any established breach of agreement shall not exceed five hundred pounds sterling over and above a rectification of accounts, the Subscribers being responsible for each steamer loaded by them or by their Agents. The penalties thus obtained shall be divided amongst the parties hereto, principals in the particular line or lines, proportionally to the number of departures outwards they have had during the current year.

41. Should the working of the Agreement prove some of the clauses defective they shall be altered to meet the intentions of the Signatories hereto, either by the decision of a referee appointed by all or by arbitration in the usual manner.

42. This Agreement does not in any way interfere with the free action of the Messageries Maritimes as regards their tariff for continental cargo to and from Marseilles, and under it they are not called upon to make any return to shippers, other than those from and to London.

43. In all cases where China is mentioned in this Agreement, Hongkong is understood to be included as though it were a part of China.

44. As, by the circumstances of the case, effect cannot be given at once to the stipulation expressed in clause 18, it is agreed that a delay of six months be allowed for making the necessary arrangements. The penalty clause No. 40 will therefore not become operative in respect of clause 18 until after the 28th February, 1880.

In opposition to this combination a meeting was held in London on the 6th October, by merchants interested in the China and Japan trade, and a committee of six was appointed to prepare resolutions to be brought before a subsequent meeting

and to organize a plan of defence. The committee consisted of:—

Mr. Duncanson of	T. A. Gibb & Co.
" Dent	Dent, Bros & Co.
" Michel	Eastern Agency Limited.
" Pyke	Birley, Smith & Co.
" Paterson	Paterson, Simons & Co.
" Hudson	Hudson & Co.

The action of the P. & O. Co. in joining the combination was strongly condemned, as upon a previous occasion (in the matter of the mail subsidy) merchants gave them their support. On the 8th October, the committee met and decided; 1st, that the combination amongst the merchants and shippers should be called "The China and Japan Shippers Association;" 2nd, that Mr. Hudson be requested to act as honorary secretary; 3rd, that a circular requesting applications for tonnage be circulated in the name of the association. Brokers were also appointed to act *pro tem* for the association and it was decided not to convene the general meeting, until the resolutions to be brought before it were maturely considered.

THE TIMES OF THE TAIRA.

BY CAPTAIN F. BRINKLEY, R.A., AUTHOR
OF THE "TIMES OF TAIKO."

CHAPTER XXVI.

THE TREASURER'S JUSTICE.

Before carrying out this design, which if it did not result in maiming his enemy would at least compel him to raise his hand in revenge, Yoshitsune cast an involuntary glance at his companions in disaster, not indeed that any doubt restrained him, but because he would fain gather an assurance that in thus resorting to extreme measures he did not anticipate some wiser action.

One look however sufficed to shew him that he had only himself to trust. Iné had hidden her face in her hands, and though she was able to control any sound that might disturb the others' fortitude, her heaving shoulders and the convulsive sobs that shook her frame, betrayed the presence of a grief for the moment all absorbing. Tokiwa on the other hand sat perfectly still, like one petrified by the sudden aspect of some horror. Probably her more intimate experience of Kiyomori's limitless power and cruelty enabled her to appreciate better than her son and Iné how completely hopeless a misfortune had overtaken them, but at any rate the sight of her utter dejection stirred such a strength of sympathy and ruth in Yoshitsune's heart that nothing but an almost inconceivable disposition to forbearance could have induced him to hold his hand any longer.

Just therefore as the Factor turned to leave the room, exulting in the apparent consternation of his victims, he was arrested by a voice neither loud in tone nor broken by passion, but nevertheless such an utterance as the most intrepid might not endure to disregard:—

"Whether you call yourself Kageyu, or by whatever name the story of your ignominy shall be transmitted to men, remember that once beyond the threshold of this room, there will attach to you a stain you can never hereafter obliterate, the stain of a miserable craven. If your heart be a tithe as strong as your words, turn now and prove that murderous schemes are not the only trade you have learned in the service of the Taira."

Kageyu arresting his steps and leisurely confronting Yoshitsune, laughed a laugh which for all its attempted jibe was not entirely without disquiet.

"Ha! ha! young gentleman," he said "you have found your voice then, only I fear to display your want of judgment. One could hardly have expected anything better from a boy in truth, but yet, methinks, the traditions of your race might have taught you that the veritable coward is he who suffers himself to be moved to violence by the taunts of a child."

While speaking Kageyu leaned carelessly against the pillar of the door, and fixed his eyes on Iné, who now turned her face towards him with a look of appeal even he perhaps found it difficult to resist.

"There is a very easy method of saving your conscience in that matter," replied Yoshitsune, in whom the other's assumption of contemptuous unconcern excited such a fury that he began to think it almost possible he might come within arm's

length of his enemy at a single bound instead of entrusting his revenge to a mere truncheon of steel; "but though I should be sorry indeed to discover any possibility of compromise, I may not choose to proceed to extremities without giving you a last chance of extricating yourself. Say on therefore, if you have anything to propose."

"Truly here is ample food for mirth if I had time to be merry," sneered Kageyu. "One might almost fancy you malapert enough to offer conditions instead of soliciting forbearance. Nevertheless it occurs to me that my friend Hiromori may see cause to be lenient if Iné here will consent to treat with him. For my own part, should her Ladyship prove to me that it is more profitable to restore this disk than to carry it to Rokuhara, I will not shew myself unreasonable."

A transient light of hope shone in Tokiwa's face at these words. It was something to know that the Factor's motive was only greed, even though no means of satisfying him were immediately apparent. In the first flush of this reassurance Kageyu's allusion to Iné had escaped her, but it was not so with Yoshitsune. Knowing the true cause of Iné's aversion for Hiromori, he was able to appreciate the foul insult this proposition included. Infuriated beyond the possibility of hesitation, he drew his dirk and hurled it with all his force at the Factor.

It was scarcely possible to conceive that Kageyu could have had any prescience of this design, or even that foreseeing it, he could have eluded the missile, for Yoshitsune's motive was too rapid to be intelligible, and the heavy steel flew swift and straight as an arrow. Nevertheless at that very instant, even as though the same impulse that hurled the weapon had been simultaneously communicated to its mark, he bent suddenly down so that the dirk, passing over his head, buried itself deep in the door-post behind him.

Incomprehensible as this failure seemed to Yoshitsune, its sequel was still stranger, for Kageyu, staggering forward two or three paces, fell writhing to the ground, his left shoulder almost served by a gash far different from anything the dirk could have inflicted. Tokiwa hid her face in horror, for though the Factor, too stout-hearted to betray his suffering, uttered neither cry nor groan, the least experienced eye could see that he had received his death wound. Both the women indeed having only perceived Yoshitsune's vigorous action, naturally supposed it to be the cause of the Factor's fall, and Kageyu himself seemed to be possessed either by a similar conception or by an insatiable longing to realize some part at least of his scheme, for in all his agonized struggles one purpose was apparent, an effort to draw his sword and strike a dying blow at his boy enemy.

But his strength was soon exhausted and as he sunk down at last overcome by weakness and pain, the half open door was drawn back and Yasutsune himself walked into the room. He carried in his hand a long glaive, the blade of which was still wet with blood, and when he came to where Kageyu lay, he paused for a moment and looked down at the dying man with an expression of mingled pity and contempt. Until that instant the Factor had evidently been ignorant of the truth, and however depraved the man's nature might have become from circumstance or association, it was impossible to doubt that the consciousness of his disgrace caused him more agony than even the ghastly wound from which his life blood was fast welling.

Neither did the treasurer himself easily master the emotion which the contemplation of his old vassal's sufferings caused him. His feet faltered strangely as he turned away, and though he passed at once to Tokiwa's side and laid his hand kindly on her shoulder, some little time passed before he could command his voice to speak.

"It was not to show you such sights that I took you from Kiyomori's care," he said; "but what can one do in such distraught times as these? Men's feet turn into strange paths when mad rulers set the fashion. To these the crime, to those the error. Meanwhile this, as we know, is not the beginning, neither dare we hope that it will be the end of trouble for you and me; nevertheless I think I can promise you that it will lead to nothing worse for the nonce."

The Treasurer's tone retained just so much of its wonted levity as was useful to restore his hearers' confidence, but for the rest, not the smallest trace of his reputed eccentricity was apparent. On the contrary his demeanour was strikingly quiet and dignified, all evidences of the nervous restlessness that generally disturbed him having entirely disappeared.

There was no longer any doubt that the reputation acquired by so many years of simulated imbecility was destined to subserve some vital purpose, and if the perception of this truth was to Tokiwa and her son an assurance of unexpected aid and alliance in the future, it seemed for the moment almost to increase the terror of the peril they had so narrowly escaped.

The Treasurer no doubt easily divined the cause of the astonishment that kept his hearers silent. After a pause during which nothing but the laboured breathing of the wounded man was audible, he resumed his speech, now addressing himself to Yoshitsune:—

"No greater misfortune can befall a house than the loss of an old servant, nor may a master easily be confronted by a more grievous necessity than that which has impelled me to this sacrifice. Let no one however think that this man has been always faithless, or that he should have lacked my forgiveness and affection had he even now returned to the path he once trod. He has erred only in thought. His deeds and those of his fathers leave a large debt of gratitude in his favour, and I am persuaded he will not contradict me at this moment if I say that my glaive has discharged no small portion of that debt by saving him from the crime he contemplated. Could I have added this stroke to the list of my many eccentricities and left the man himself to divine its true cause, I would gladly have accepted the obloquy in his stead, but this might lead to results worse than those it was intended to forefend. He must reap therefore as he sought to sow, but this I tell you, Yoshitsune; you who at your first coming witness the disgrace of my house, that Kageyu's evil design was assuredly prompted by the part I have been obliged to act and not by any innate lack of loyalty."

Contrasted with the unflinching strength of purpose and marvellous self-command that must have been required to support Yasutsune through twenty years of dissimulation—twenty years of irksome acting and its accompaniment of contempt—the evident effort it now cost him to control his emotions afforded an unerring evidence of their sincerity. A man who kept the memory of past service so green that he would fain have made his own errors furnish an excuse for his vassal's disloyalty, and who with all the heart to spare did not want the strength to strike; it was not strange that the Treasurer's chivalry won large mead of applause from hearts capable of appreciation. Yoshitsune, feeling that Yasutsune's story, whether as that of enemy or a friend, must thenceforth hold a high place among the examples he had garnered for his own guidance, could not restrain this expression of admiration:—"If for one that is false, my Lord, you should find ten thousand faithful, it were yet true that the service is unworthy of your merits."

"Say you so?" replied Yasutsune smiling. "Those of your race were ever wont to judge as they deserve to be judged. But I thank you for your good opinion since you cannot have known that we have a common cause and a common enemy. My ancestor was a Minamoto, and if, the least worthy of his descendants, has bent for a time to the Heike power, it was only as the patient labourer stoops to wrestle more staunchly with his toil. Those who saw in this assumed incapacity an occasion for my abasement and their own ascent, may surely be forgiven, since they knew not that such a motive for revenge as mine was sufficiently powerful to mould all the actions of my life to one end. If your sight had been strong enough to penetrate my disguise, Kageyu, certainly you would not have strayed so far from the right path. But though you misunderstood your master, think not that he was equally blind. Many a month has passed since I first detected your disaffection, and that I have withheld my hand until the mischief was so nearly achieved is my chief solace now as it ought to be my justification."

The Treasurer had stooped down as he spoke and raised his vassal's head, but death had been too quick for him. His last words had fallen on ears that might no longer hear, but Yoshitsune saw that before the pallid face was covered, Kageyu did not lack the tribute brave men are not ashamed to bestow on the memory of those they love.

All these things having taken place entirely without outcry or disturbance, had apparently attracted no attention beyond the precincts of the chamber, but as this secrecy might not be any longer preserved, Tokiwa suggested the advisability of her son's departure before his presence should be noticed.

To this, however, Yasutsune refused his assent. Even at the risk of recognition it was essential, he said, that Yoshitsune should presently assist at an interview which was not

unlikely to exercise a large influence on the fortunes of his cause, perhaps, even to accomplish the purpose of his visit to Kiyoto. "At the same time," he added, "we shall do well to keep you out of sight as long as may be. So far, thanks to Iné's precautions, your presence is, I believe, known only to ourselves, and if you will follow me, I think I can shew myself as dexterous though not as attractive a guide as your last."

Yoshitsune needed no second bidding. Never had such a hopeful heart throbbed in his bosom since the day Hidechira's sons rode out to meet him with a goodly clump of spears on his arrival in Oshiu. He who in so many rough experiences had found nothing really reliable save his own right arm, now for the first time felt that he followed one on whom he might implicitly depend. The main details of his purpose and its progress were evidently not less well known to the Treasurer than to himself, and the fact that while playing a part which placed him at a peculiar disadvantage, Yasutsune had yet been able to keep himself more than abreast of the times, proved that for all his chief vassal's disaffection, he was not only exceptionally well served but also thoroughly capable of utilizing that service.

At the moment, however, Yoshitsune was less disposed to take account of these things than to speculate on the nature of the interview he was about to witness. It seemed strange almost to bewilderment that a crisis such as that through which he had just passed should be immediately followed by another no less momentous, and knowing himself unknown, except perhaps by name, to the chiefs of the two factions, nor having as yet either heard or observed anything that pointed to concerted action among the leaders of his own party in Kiyoto, he found it utterly impossible to form any idea of the part he might be presently expected to take. Nei's parting words at their interview by the shrine of Atsuta coupled with the mystery of all this, seemed to indicate the existence of some scheme strong as it was secret but from which nevertheless those most interested had so far been excluded.

This conjecture was not a pleasant one to Yoshitsune, especially as it necessarily assigned to his cousin and enemy, Kiso Yoshitaka, an intimate, if not a leading, part in the league, but feeling that the attainment of his own immediate purpose were cheaply purchased even on these terms, he thought neither of questioning his guide's intentions nor of hesitating to obey him.

The Treasurer led the way to the same room where the dance had taken place that afternoon, and there posted Yoshitsune in a room which was separated from the chamber itself by a screen of close fitting bamboo lattice. In this position Yoshitsune found himself beyond the reach of both the moonbeams and the lamp light, so that he was able to see and hear everything that went on without running any risk of detection.

"I cannot make you any certain promise as to what you are about to witness," said the Treasurer. "It will not at any rate be so perilous to the actors as the last performance that took place here, though its consequences both to them and others may be of infinitely greater moment. I must however have your promise beforehand that whatever you see or hear, you will not anticipate my signal to leave your post of observation, nor in any way make known your presence here."

Yoshitsune readily assented to this condition, as he would indeed have assented to anything that promised to expedite the issue, for he grew every moment more curious and impatient. In truth these events which had followed so fast upon one another: Iné's discovery of the Factor's plot; the dance, in which, as Yasutsune himself had just confessed a false step signified death; his own meeting with his mother; the terrible risks it had entailed; the strange means by which those risks had been averted; the Treasurer's timely assumption of a character so opposite to that he had displayed for the preceding twenty years, and finally the position in which he now found himself; all these things were sufficient to disturb the equilibrium of an older and less elastic mind than Yoshitsune's.

Half doubtful therefore whether some vision too vivid to be easily distinguished from reality had not grown out of the anxieties and uncertainties of his life, and fearful lest he should presently awaken to find himself again wandering among the cedars at the old cloister of Kurama and feeding his impatience with the rosy fancies of boyhood, he took his

post, mechanically obedient to his guide's instructions, and peered out almost timidly into the dimly lighted chamber where the Treasurer had seated himself.

(To be continued.)

DOUBLE ACROSTIC.

Tis not well to forget—it is good to recall,
As we bask in the sunshine, the storms that have been;
When the joy of the present shines bright over all
To remember a moment the darkness we've seen;
For there was not a day when some light did not break
Like an Angel from Heaven thro' the tempest's dark shroud,
And Hope with fresh smiles from her slumber awake,
As the fair bow of promise shone bright on the cloud.

1.

How oft has this alone in deadly strife
Effective been to save a precious life.

2.

The ancient poet hath with feeling sung
How, I from lovely Helen's tears have sprung.

3.

To enterprise he great assistance lent;
Founded a Court on persecution bent,
Against misgovernment he made a stand,
And drove th' invader from his native land.

4.

True type of her sex, she but cruelly smiled
When, summoning all her false charms to her aid,
Her heart-stricken victim by Love was beguiled
And, for trusting to her, the death penalty paid.

5.

"The sweets we wish for turn to loathed sour,
Even in the moment that we call them ours."

6.

Hail noble matron! who with pride displayed
Jewels more precious than by man e're made.

7.

A dame to childhood dear, whose love of chat
Was so expansive it embraced her cat.

8.

A gallant tribe, roused by a woman's tears,
Laid down their lives beneath the Roman spears.

9.

The grand conception of a mighty brain,
Distinguished by full many a heavenly strain.

10.

I live unnoticed, lost in sweet seclusion,
Far from the busy world and life's confusion.

DELTA.

DOUBLE ACROSTIC.

The glare of gas, the plaudits long and loud,
The strains of music, the expectant crowd,
Proclaim my first; if well our efforts end
T'ensure my second they will doubtless tend.

1.

First, a vessel;—though scarcely a steamer or ship;
Still it's handy whenever you're in need of a dip.

2.

Next, a colour,—not crimson, nor yellow, nor blue,
Nor—but there, that's enough, so I'll leave it to you.

3.

Though it's certainly nice to gain *kudos* or 'tin,'
You should strive to *deceive* all the honors you win!

4.

Are you sick? it arises no doubt from good cheer;
For 'tis liquor that oft brings a man to his bier.

5.

For "*amantium ira*" a synonym find;
Such a quarrel might vex any true lover's mind.

6.

Now, a mountain in Switzerland—lofty, sublime;
As a punster might term it—a great foreign climb!

7.

Don't be lazy o'er this—'tis the very last light;
Seek the ant (like the sluggard)—you'll read it aright.

METEOROLOGICAL REPORT

FOR WEEK BEGINNING FRIDAY, NOVEMBER 21st, 1879,

Observatory of Daigaku, Moto-Fujimicho Hongō, Tokio, Japan.

REMARKS.

Heavy line represents barometer.

Light continuous line—max. & min. thermometers.

-----represents velocity of wind.

.....percentage of humidity.

Max. velocity of wind, 19 miles per hour on Friday, 9 a.m.

The barometer is reduced to the freezing point and to the level of the sea.

The barometer has been tolerably constant during the week. The maximum reading was 30.107 inches on Saturday at 7 a.m. and the minimum 29.755 on Friday at the same hour, the range being slightly over one third of an inch. The temperature of 32 degrees was reached once during the week, on Sunday. There was no rain and the percentage of humidity ranged considerably lower than usual, the lowest average being for Friday when it was 71 per cent.

SHIPPING INTELLIGENCE.

INWARDS.

Nov. 22, French steamer *Tanis*, De la Marcella, 1,736, from Hongkong, Mails and General, to M. B. Co.
 Nov. 23, Japanese steamer *Niigata Maru*, Walker, 1,603, from Hongkong via Kobe, Mails and General, to M. B. Co.
 Nov. 24, Japanese barque *Kanagawa Maru*, Eckstrand, 1,000 from Nagasaki, Coal, to M. B. Co.
 Nov. 25, Italian corvette *Vettor Pisani*, Captain H.R.H. Tomaso di Savoia, Duke of Genoa, 1,800, from Shimo Yamada.
 Nov. 25, Japanese 3-masted schooner *Asajishima Maru*, Crichton, 660, from Nagasaki, General, to M. B. Co.
 Nov. 25, British steamer *Sunda*, Reeves, 1,704, from Hongkong, 18th instant, Mails and General, to P. & O. Co.
 Nov. 27, Japanese steamer *Nagoya Maru*, Wynn, 1,260, from Shanghai and ports, Mails and General, to M. B. Co.

PASSENGERS.

Per French steamer *Tanis*, from Hongkong:—Messrs. Appert, Braehem, Schall, Doderlin, Collins (two), Woodland, Yatahi, Kabura, De Montandini, Cantellies and Stephens.
 Per Japanese steamer *Niigata Maru* from Hongkong and ports:—Mr. R. Mulder. 324 Japanese and 1 Chinese in steerage.
 Per British steamer *Sunda* from Hongkong:—Messrs. A. B. Goram and K. A. Hammond in cabin; and 3 Chinese in steerage. From Venice; Mrs. Green and servant in cabin.
 Per Japanese steamer *Nagoya Maru* from Shanghai and ports:—His Excellency Baron von Eisenacker, Dr. Boelts, Mr. J. Allen, Mr. and Mrs. Ishaya and servants, Mr. and Mrs. Yegawa, Mrs. Yagawa, Mr. and Mrs. Ikuta and child, Messrs. Oi, Awoki, Higashio, Makino, Masuki, Suyuki, Fukuda, Minomura, Wada, Kojima, Takeda and Kuwahara in cabin; 1 European, 4 Chinese and 337 Japanese in steerage.

OUTWARDS.

Nov. 22, Japanese steamer *Higo Maru*, Moore, 1,411, for Kobe, General, despatched by M. B. Co.
 Nov. 22, Japanese steamer *Tamaura Maru*, Carrow, 377, for Hakodate, Mails and General, despatched by M. B. Co.
 Nov. 24, H. M.'s Iron-clad *Iron Duke*, Captain H. F. Cleveland, 6,034, 14-guns, for Hongkong.
 Nov. 24, British barque *Emulation*, Gunn, 391, for Kuchinotsu.
 Nov. 24, Japanese steamer *Tsuruga Maru*, Steadman, 661, for Kobe, General, despatched by M. B. Co.
 Nov. 25, Japanese steamer *Tokio Maru*, Swain, 1,146, for Shanghai and ports, Mails and General, despatched by M. B. Co.
 Nov. 27, British steamer *Malacca*, Woodgate, 1,709, for Hongkong, Mails and General, despatched by P. & O. Co.
 Nov. 29, French Iron-clad *Armada*, Captain De Labarriere, 3,750, 6-guns, for Hongkong.
 Nov. 29, Japanese steamer *Niigata Maru*, W. Walker, 1,603, for Hongkong, Mails and General, despatched by M. B. Co.

PASSENGERS.

Per British steamer *Malacca* for Hongkong:—Messrs. Thomson, Senbury, Ekstrand and 10 Chinese.
 Per Japanese steamer *Tokio Maru*, for Shanghai and way ports:—Miss B. Fraser, Mrs. F. A. Cope and child, Mrs. Dal Unqua and infant, Lieut. C. Harvey, R.N., Rev. J. H. Quinby, Messrs. Kawara, Kitahama, Hashiguchi, Kawaguchi, Ah King, Sakamoto, Yamada, Kawaka, Miyemura, W. A. Gay, E. C. Kirby, J. A. Fraser, Taku, Hind, Sawama, Dr. W. Anderson, Tada, Otsuna, Taki, Ohashi, W. C. Gasper, W. Tron, T. Walsh, and E. H. Gill.
 Per Japanese steamer *Niigata Maru* for Higo and Hongkong:—Mrs. Rogers, Mrs. Green, Messrs. D. Reynolds, W. Copeland, Nakada, C. Braem, H. Broschan, C. J. Reid, Hashimoto and R. Geoppe.

CARGOES.

Per Japanese steamer *Tokio Maru* for Shanghai, and ports:—
 Treasure Yen 41,575.00
 Per Japanese steamer *Nagoya Maru*, from Shanghai and ports:—
 Treasure \$ 34,200.00
 Per British steamer *Malacca* for Hongkong:—
 Silk for London 788 Bales.
 " France 51 "
 Total 839 Bales.
 Silkworm eggs 1 Case.

REPORTS.

The Japanese steamer *Kanagawa Maru* reports: Left Nagasaki 16th instant, had light N.E. winds and calms throughout. Made the round passage in 19 days.

The Japanese steamer *Niigata Maru* reports: Left Hongkong on the 15th instant, at 3 p.m. Arrived at Kobe on the 21st, at 11 a.m. Left Kobe on the 22nd, at 4.30 p.m. Arrived Yokohama at 11.30 p.m. on the 23rd. From Hongkong to Turnabout fresh monsoon and fine. In company with S.S. *Tanis* from Turnabout to Soanaki, unsteady easterly winds dark cloudy weather and rain from thence to Kobe strong N. west gale. From Kobe variable winds and fine weather.

The French steamer *Tanis* reports: Left Hongkong on the 15th instant at 6 p.m. Experienced strong N.E. winds with thick weather to coast of Japan, thence to port moderate and fine. Arrived at 8 p.m. on the 22nd instant.

The Italian corvette *Vettor Pisani* reports: Had fine weather during the passage.

The British steamer *Sunda* reports: Left Hongkong 18th inst. at 5 p.m. Experienced moderate N. E. winds with fine weather throughout. Arrived at 1 p.m. 25th inst.

The Japanese steamer *Nagoya Maru* reports: Left Shanghai on the 19th 1.35 p.m. fresh breeze to noon of next day wind gradually increased to a gale with heavy beam sea during the night of 20th stove in a portion of the port bulwarks and split several sails. On 21st wind moderate to a fresh breeze, arrived at Nagasaki 1.55 p.m. on 21st.

THE GREATEST

WONDER OF MODERN TIMES!
HOLLOWAY'S PILLS.

Persons suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER,

In his work entitled "The Nile Tributaries in Abyssinia," says, "I ordered the dragoman Mahomet to inform the Fakay that I was a Doctor, and that I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as possessing unmistakable purgative properties they create an undeniable effect upon the patient, which satisfies him of their value."

SIMPLE, SAFE AND CERTAIN!
HOLLOWAY'S OINTMENT.

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

MR. J. T. COOPER,

In his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls, butter, and horse-feed poured in upon us, until at last a tea-spoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining stock."
Sold by all Chemists and Medicine Vendors throughout the World

NEW TREATY PORTS.

THE memorial of the Tokio Chamber of Commerce shows that its members have devoted a fair amount of attention to the question of opening up new ports to foreign trade. After what has been advanced by them in the preceding part of the above document, their remarks on this point naturally follow as an obvious corollary. The chamber argues that for many years to come the principal articles of export from Japan will be raw products, and amongst these, chiefly probably, coal and rice. With the low values of these articles as compared with their bulk, and the high percentage of cost for transport entailed thereby, it becomes a matter of the utmost necessity that these charges should be reduced to a minimum; and this, it is obvious, will to a great extent be accomplished by the opening of new ports to foreign trade.

In the matter of coal and rice the pecuniary advantage thus accruing is patent on the surface, and apparent to everybody. Whatever may be the case with some articles, where natural or acquired facilities, enjoyed by the countries producing them, are so great that their sale to foreigners who need or desire them is profitable, even if production and attendant charges, such as transport, etc., are not based on the most economic principles, coals and rice certainly do not enjoy such privileges. Fuel and food are staple necessities all the world over; and for many years to come the surplus production of Japan will not have much effect in influencing their price in the great marts of commerce. Any saving, therefore, which can be made in the cost of transporting these goods implies so much positive and actual gain to the home producer. The direct benefit, however, of the sum thus gained, whatever its amount, forms only a very small part of the attendant advantages and profits. The value of indirect saving in the cost of production, including, of course, the expense of conveyance to market, has been demonstrated in every progressive country. To try to prove it would be a work of supererogation: it would be merely recounting the history of the rise and progress of every industrial nation. In Japan, by far the greatest part of all the labour performed

is manual with very limited assistance from machinery. Fixed capital, to use the terminology of political economy, is comparatively unknown; and it is this which is required. If, under circumstances as they exist at present, Japanese products can in any sense compete with those of other lands, then every dollar of saving implies so much gain to be added to fixed capital, which, in its turn, by its own increase, still further cheapens production. Thus, in regular progression, every successive gain induces still greater gains. Such a conversion of profits here into "fixed capital" would be a gradual one, and would entail no hardship upon any class of the population, such as has been too often the case in other countries when circulating capital has been suddenly turned into fixed capital. Here it would only absorb the gains. The increase of fixed capital would keep pace with the increase of circulating capital; and improved productiveness would be an absolute gain not even temporarily injuring any class or vested interests.

The opening of new ports is closely and intimately allied to the subject of inter-communication and facilities for internal transport in general. It is only one of the sub-factors of the greatest of all necessities for the welfare of a country—an economical, certain, and proportionately speedy, system of transport for goods and persons. Every means which assist in ever so slight a degree in achieving this end must be of great benefit to the country at large. Foreigners here have been continually desiring and striving for the opening of the whole country. Every new port opened is certainly a step towards that end and should, at least in part, realize the expectations founded on the consummation of the greater event. Yet the opening of new ports is often deprecated, and the explanation for this lies near at hand. It has become the custom to suppose that the foreign trade of the country cannot and will not advance beyond the point which it has now attained; and that the proposed measure, therefore, would merely imply that the business now done by foreign merchants shall be distributed among them, new-comers thus entailing a positive loss upon those now established. The opening of a new port is like building a new road, or like constructing a new canal, and as such must be beneficial in developing the resources of the surrounding country. The extent to which it will do so depends of course upon the conveniences offered, and upon the facilities developed for calling latent industries into being. The only question is whether, in the event of new ports being opened, the general increase of trade all over the country will be such as to compensate the foreign merchants now established for the loss that would thereby be entailed on them. That it may not do so at once is only too probable, but the increase of prosperity in any part of the empire is sure to react everywhere; and in a comparatively short space of time any initial loss would be more than made good. And indeed any loss entailed by the operation of the measure would be more apparent than real, for the chief part of the business at the

new ports would certainly be conducted by branch establishments of firms now doing business in Japan; and they with their knowledge of the needs of the country and the connections they have established at home, could generally defy competition. Moreover the expense of keeping up branch establishments would not be a wholly new and additional burden; for part at least of the clerical staff now employed would be drafted from the principal houses.

There are at present five ports open:—Nagasaki, Kobe, Yokohama, Niigata, and Hakodate. Niigata can hardly with propriety be called a port: it is more of an open roadstead and the difficulties in the way of landing and discharging there are such as to render it practically useless as a harbor of entry. Sparsely inhabited and comparatively neglected as Hakodate is, its resources have not yet been in any degree developed; and trade and industry have until recently been almost entirely absent. At present the island of Yesso is virtually under the control of the Kaitakushi. More than in any other part of the empire the government has there preserved its patriarchal character; and, as has been several times pointed out in the *Japan Mail*, does not at all come up to the standard which Japan's altered status in the family of nations requires. Under these circumstances the show made by Hakodate is even more creditable than could be expected. Nagasaki, when everything is taken into consideration, has made fair progress. It must be borne in mind that the exaggerated expectations at first entertained in regard to the trade of Japan were sure to meet with great disappointment there. For two hundred and fifty years it had been the sole emporium of foreign commerce in Japan; and the prestige it had thereby gained, when other ports were opened, caused hopes to spring up which facts and reality proved illusory. The Takashima mine and other industries which are developing in its vicinity are, however, bringing back a measure of confidence and prosperity, and dissipating feelings of despondency and disappointment engendered by the non-fulfilment of extravagant and unjustifiable hopes.

It is in Yokohama and Kobe that we must look for the benefits derived from open ports; and expectations must have been very high indeed, if they have not been extensively realised there. Houses and streets have been built, to great extent on reclaimed land, a considerable amount of which has also been made available for agriculture; roads have been made, canals dug, railroads constructed; and new local manufactures of considerable magnitude have sprung up. The circle to which this influence extends is gradually widening and widening and the outermost of its rings are vibrating with a vitality heretofore unknown. But still the influence is limited. Like waves of sound and water it loses in force and vigor in inverse ratio to the distance it traverses; and the apathy and stolidity which, in matters of trade, have characterised this country for three hundred years, must be pierced in more than two or three places before the new life that is being infused can permeate the whole. There is always talk of "hard times" and "bad business," but these phrases have been more justified during the last few years than they ever were before, not only in Japan but the world over. Notwithstanding this, commercial statistics prove that the business of Yokohama and Kobe is steadily increasing. The telegraphic and constantly augmenting steamer facilities to a great extent preclude the possibility of large, sudden, and unexpected profits; but this only in part proves what is proved by other facts, and what every old established house will testify to, namely; that business is being done upon a more legitimate basis than it was in former years. There is little or no rivalry now between the trade of Yokohama and that of Kobe. Each port has gradually come to do that share of business for which it

is best fitted. Every man of experience in such matters will acknowledge that the transactions of neither port could be diverted to the other without entailing serious loss and inconvenience, and consequent curtailment in amount. In the same way the foreign trade of the whole country, which must now find its way to these ports, cannot possibly be as great as it would be if open ports nearer to the places of production were allowed to furnish more convenient outlets. The most cursory observer will find, within a radius of forty or even fifty miles from Yokohama and Kobe, evidences of the good effect of the nervous, active, western, business example set by those two places, evidences which show themselves in better houses, better roads, more highly cultivated fields, and greater manufacturing activity. The same sort of thing, to a smaller extent, can be seen near Nagasaki; and it would certainly be unreasonable to suppose that every newly opened port would not soon be instrumental in developing similar progress in its own neighbourhood.

Apart from all general arguments which may be adduced in favor of opening new ports, there is one special point which we cannot forbear to touch upon. At a meeting of the native tea merchants, the proceedings of which have been reported in this review, it was shown that the native producer does not suffer merely from the high cost of transport, but that he is handicapped by the unreliability and often by the utter dishonesty of those native middlemen in whom he is obliged to confide. One of the most prominent business men of Tokio declared in the reunion that it was this reason which had caused him to abandon the tea business. It would, of course, be idle to suppose that such a state of affairs can do otherwise than act unfavorably in many directions. Independently of other causes which must gradually induce a healthier tone of commercial morality, a momentary remedy lies in establishing closer relations between the producer and the foreign buyer, and reducing the number of commercial go-betweens to a minimum. The greater the distance from the source of supply to the place of shipment, the greater must be the number of individuals that have to be employed and trusted, and the greater becomes the risk encountered. In a article in the *Japan Mail* some weeks ago, on "Japanese Merchants," we showed some of the causes which have contributed to lower commercial integrity among those natives who effect the interchange of commodities between Japanese and foreigners. The harm which a few such men do is incalculable. Nothing is more injurious to industry than a feeling of dread that the fruits of one's toil may be lost. The aggregate of the exactions of eastern potentates have probably never been proportionally greater than the taxation levied by many of the foremost commercial nations; yet despots being irregular in their demands, asking sometimes perhaps very little and at others all they can lay hands on, their appropriations have ever acted as a blight, while taxation levied in western countries has hardly ever impeded the increase of trade, industry, and, consequently, of wealth. The element of uncertainty must be expunged from every commerce before it will flourish. More open ports in addition to the other advantages they will offer, will also contribute their quota to this desirable object being accomplished in Japan.

THE U. S. METEOROLOGICAL SERVICE.

II.

PERHAPS the first important step toward securing the co-operation of Congress and the interest of the general public, in the system of weather warnings, was taken at the meeting of the National Board of Trade, at Rich-

mond Va., in the year 1869. At that meeting was presented a memorial drawn up by Hon. I. A. Lapham of Milwaukee, who had himself been a constant observer and contributor to the *Cincinnati Bulletin*; and it was supported by arguments based on experience from the delegates of the Chamber of Commerce of Cincinnati. Besides having the approval of this body it was supported and recommended by many other boards of trade and commerce and by all eminent scientific authorities. Many members of Congress became interested in the matter and the Hon. H. C. Paine of Wisconsin made himself the successful champion of the measure. In February, 1870, a joint resolution was passed by unanimous consent which says; "That the Secretary of War be, and he hereby is, authorized and required to provide for taking meteorological observations at the military stations in the interior of the Continent and at other points in the States and Territories of the United States, and for giving notice on the northern lakes and on the sea coast by magnetic telegraph and marine signals of the approach and force of storms." General Albert J. Myer, the chief signal officer of the Army, was charged with the duty of the execution of the law, and he at once organized, in connection with the signal office of the army, the "Division of Telegrams and Reports for the Benefit of Commerce."

It will thus be seen that Congress saw fit to intrust the organization and management of the meteorological service to the War Department. Without admitting the entire propriety of making this a military service, it cannot be questioned that there are a great many advantages resulting from that course. In the beginning, the regular signal service of the army, in which the education and training is not unlike that requisite for the meteorological service, was able to furnish a considerable number of intelligent and disciplined men who soon became skillful observers at the newly established stations. There is great advantage, also, in the precision of a military system, when applied to the operation of making, collecting and preserving a series of meteorological observations. Although the duties are not heavy they demand above all things, promptness, regularity and precision, and these are qualifications which a military education and training ought to ensure. On the other hand, many objections may be urged against the plan of utilizing the army in the performance of a task which is particularly unwarlike in its character, and which, in the opinion of many, might, on the whole, be more efficiently performed by a corps of well trained civilians. It is certainly true that many men whose tastes and education especially fit them for the duties of observers are prevented from becoming such by their unwillingness to enlist in the regular army, and be subject to its seemingly arbitrary regulations, which might result, indeed, in their being transferred to an entirely different branch of the service. Be this as it may the United States Army has succeeded in the work to an unexpected degree, and General Meyer has given the meteorological service the benefit of his great executive ability and indomitable energy.

Very soon after the inauguration of the service a school of instruction for "observer-sergeants," as the regular observers are designated and their assistants was organized at Fort Whipple, which has, under the efficient management of Lieut. C. E. Kilbourne, of the 2nd U. S. Artillery, continued from its organization to educate and train candidates for the positions of responsibility at the various posts. As before intimated, admission to the service is only gained by enlistment as a private soldier in the regular army for a period of five years. These

enlistments at the signal office are confined to those who pass preliminary examinations before a board appointed by the chief signal officer. The successful candidate is ordered to Fort Whipple, where he receives instruction in the making of observations and the use of meteorological instruments, as well as in the regular military work of the signal service proper. After having been reported by his instructor as qualified for the duties of assistant to an observer-sergeant he may be assigned as such at some post at which he remains for a period of six months, making observations and receiving daily instruction from the sergeant in charge. Should his duties here be performed satisfactorily, he may, at the expiration of that time, be ordered to Fort Whipple for the purpose of receiving instruction for promotion to the grade of observer-sergeant. After this additional instruction, which includes the study of meteorology, telegraphy and the performance of the usual military duties, he again appears for examination, and upon successfully passing the same, he may be promoted upon the occurrence of the first vacancy in the corps of regular observer-sergeants. Although this system of training has many advantages, the fact that desertion occasionally takes place, and now and then men are discharged for gross neglect of duty would seem to indicate that a more judicious selection might be made through the instrumentality of a civil rather than a military service. The observers in charge at any post are a sergeant and an assistant, and sometimes, at important stations, from which maps are issued or danger signals posted, this number is considerably increased. Each station is supplied with the following apparatus;—

- Two standard barometers,
- Two standard thermometers,
- One standard hygrometer,
- One maximum thermometer,
- One minimum thermometer.
- One anemometer (self registering),
- One wind vane,
- One rain gauge,
- One clock.

The room selected for office purposes is generally the upper room in some high, well exposed building at a convenient distance from the telegraph office. At stated hours during the day and night observations are taken, and transmitted at once by telegraph to the central office at Washington. The observer also receives the daily report from a certain number of other stations in the "meteorological neighborhood," the publication of which he generally secures, along with his own, in the principal daily papers of his city or town. This is valuable and interesting as it enables every reader, if he desires, to become a student of the meteorology of the country. The press has been generally friendly to the system and newspapers willingly publish observations furnished them. In any considerable town where a station is maintained a number of bulletin boards are permanently placed in conspicuous localities, upon which are recorded the various reports received during the day and indications or probabilities, which are made up and telegraphed from the central office. The greatest interest attaches to these daily indications or forecasts. The success which has attended the service in this particular is remarkable, and testifies alike to the efficiency of the general management and the good judgment and skill of the meteorologists who prepare the indications. It is perhaps unnecessary to say that they are not mere surmises but legitimate predictions, based upon the application of meteorological laws to the observed condition of things during the previous twenty-four hours. Our limited knowledge of the first and the limited range of area covered by the second, make it

impossible, of course, to avoid many failures, but the degree of success thus far has been very encouraging. For this result, it seems to us, much is due to the frank and honest way in which the United States service has invited inspection and criticism. A failure, to it, has been even more valuable than a success. From the very beginning there has been a very rigid self-inspection on the part of the officers engaged in forecasting the weather. The labor involved in arranging and reviewing the mass of material each day being very great, the task of making out the indications is assigned from time to time to different officers. At the same moment that one officer is engaged in determining what the weather *will be* to-morrow, another is making up a synopsis of what it *has been* to-day, which he is also required to compare carefully with the indications made out on the previous night and make note of those that are fully verified, those partially verified, and those which have failed entirely. Thus the work of "Old Probabilities" is constantly being tested by a comparison with the actual facts; and the results of this comparison are regularly made public. Indeed, any citizen may himself determine the percentage of accuracy reached by a little study of the predictions published in connection with the weather of the day. As illustrating the success of these predictions the following facts are selected at random from reports published within the last two or three years.

In the month of April, 1877, the indications being published three times each day, the general average percentage of verification was 85.7. For purposes of prediction the country is divided into ten or twelve districts; and the percentages of verification differ slightly in these, varying from 84 to 88. In June, 1878, the percentages of accuracy are a trifle higher than the above and only 2.7 per cent are reported as having failed absolutely.

In short, the indications may be relied upon as being correct in about nine cases out of ten; and so well is this fact established that the "Weather Indications" are invariably given a most convenient place in the columns of the daily paper, and are constantly consulted by those whose daily programme would be influenced thereby. The following is a sample of these indications from a recent American morning paper. "Indications for the Ohio valley—Warmer and clear weather, followed by increasing cloudiness, southerly winds, falling barometer, followed in the west portions by rising barometer, rain areas and colder north-east winds." And the following from an evening paper. "For this latitude, this evening and to-night, the indications predict cool, clear or partly cloudy, but pleasant, weather."

In one sense, at least, the most valuable work of the service has been the hoisting of danger signals at stations on the sea coast or on the shores of the great lakes. It is difficult to estimate the value of property thus saved from destruction, but at the lowest estimate it must exceed the cost of the service many times over. The order to hoist a danger signal must come from the central office at Washington and it must not be taken down until an order to that effect is received from the same place. It is ordered up wherever a wind of twenty-five miles per hour or over is anticipated at or within a hundred miles of the station. The synopses have proved that, in a great majority of cases, the hoisting of the signal was justified. Owners and masters of vessels of all grades have learned to watch for the appearance of this signal and they rarely venture out while it is up. The annual reports from the stations at which danger signals are displayed contain innumerable illustrations of their value, similar to the following which are selected at random.

"Nov. 7.—Boats in the harbor that had prepared to sail remained in, and there was quite a violent storm at sea."

"Dec. 26.—The signal was hoisted several hours before the storm, affording sufficient time to make preparations and no vessels left the harbor."

"March 8.—No vessels left port during the display of the signal. Many were anxious to leave, but did not do so until two hours after the signal was lowered."

"April 16.—No vessels left port. One steamer, the *N. P. Banks*, attempted to leave but was compelled to put back."

"Sept. 19, (from same station).—No boats left during the display of the signal. The steamer *N. P. Banks* attempting to leave was compelled to return to port on account of high sea."

"Nov. 18.—Vessels that were out put back to port and waited until the signal was lowered."

These examples might be multiplied indefinitely, but the above are sufficient to demonstrate the importance of the service to commerce. If but a single violent storm each year could be foretold the saving would compensate for the maintenance of the Weather Bureau. In the cyclone which visited the shores of Nova Scotia and Newfoundland on the 24th and 25th of August, 1878, a grand total of one thousand one hundred and twenty-three vessels were destroyed, nearly five hundred human lives were lost, and a loss of property to at least the amount of three and a half million of dollars was sustained. Had the range of observations been sufficiently extensive at that time it is most likely this could have been predicted and a great saving effected. Now and then in an unexpected way the service proves its usefulness. In one instance the owners of a cargo lost at sea sued the insurance company for the recovery of its value. The records of the signal service were brought into court and established the fact that there could have been no storm at the place and time, the wind only blowing a slight breeze, and the case was decided in favor of the insurance company. It was afterwards proved that the vessel had been sunk for the express purpose of obtaining the insurance on the cargo.

As fast as the appropriations of Congress have permitted the service has been extended throughout the country by an increase in the number of stations. Not content, however, with the number of observers at his command, General Myer has recently caused to be distributed to a great number of post offices throughout the country where stations do not exist, a sort of combination meteorological instrument, which can be easily managed by the post-master and easily consulted by farmers and others interested. It is accompanied by plain and simple directions for forecasting; and the result of its use among the agricultural population of the country is looked forward to with much interest. Desirous of extending the area over which observations are taken, the United States Weather Bureau at an early date invited the co-operation of other countries in the making of simultaneous observations. The response to this invitation has been very encouraging, and the system may now be said to embrace almost every civilized power north of the equator as well as many ships upon the sea. The results of these observations are, as far as possible, published daily at Washington in the form of an *International Bulletin* which regularly contains reports from as many as 557 stations. For more than a year there has also been published daily an international weather map, each map representing the condition of the atmosphere at the time for taking the international observations. Already much benefit has been derived from the study of these maps, and Europe has recently received numerous

warnings of approaching storms by telegraph from the United States Meteorological Bureau. Such rapid progress is being made that we may soon expect that any vessel about to leave an Atlantic port may be notified of any considerable storm that is raging at sea. The project of having floating stations, connected with either continent by cable, has been suggested and is not considered impracticable. It is gratifying to know that there is one thing, at least, in which all civilized nations may unite and by which all may be greatly benefited.

It may not be improper in conclusion, to suggest the great importance of the establishment of a meteorological service in Japan. The extent of her coast line, the increasing magnitude of her shipping and commerce, and the frequency of violent and destructive winds, all point to the fact that it would be wise economy to begin, at once, such an organization. The extent of the system of telegraphs already established and under way would diminish greatly the expense of such an undertaking. Besides being a protection and a benefit to the nation itself, it would furnish material of much value to meteorologists for the study of the storms peculiar to this region, and add much to our knowledge of the varying atmospheric condition of the world at large.

ILLEGAL PUNISHMENT IN HONGKONG.

IF, as has been frequently stated by the hostile colonial press, the Governor of Hongkong has been placed upon his defence, he has succeeded in vindicating himself in a most successful manner. It is well known that his uncompromising zeal for the reform of abuses has, from time to time, attracted towards him the ill-will of a large and influential portion of the European residents, has been opposed by their representatives in the Legislative Council, and has not uniformly found favor with his own advisers. It is by no means astonishing that the foreign gentry of the island, living, as they do, surrounded by a population composed in great part of the scum of the riverine population of the mainland—pirates, outlaws, and robbers—should desire that the most stringent available pressure should be exerted for the repression of crime, and its rigorous punishment when detected. It is not surprising that the British authorities, when the island became the property of the crown nearly forty years ago, should speedily have found that the penalties of a code which was quite sufficiently deterrent or punitive for the average European, appeared to their new and mostly ruffianly subjects the excess of stupid, if not impotent, leniency. There is no difficulty in realizing how and why special and class legislation, approximating in its criminal provisions in some degree to the harshness of Chinese administration, should have had to be devised and enforced. But at no time should a community principally composed of Englishmen allow themselves to be carried away by anger, or pride of race, or panic, so far as to countenance inflictions, in an organized condition of government and police, not sanctioned by the law. Still less, under any circumstances, should officers of English Justice, constituting themselves a law within themselves, go beyond the prescriptions of that written law which they are sworn to administer and obey. The prediction, we think, may now safely be made that, when the colonists perceive, as they must in time, how honestly and earnestly their present Chief Magistrate has striven and is striving to do his duty in his government, and to eradicate abuses which have been a disgrace to English rule, they will admire and appreciate his efforts. In fact, the close of the debate on deportation and illegal floggings,

held in the Legislative Council on the 6th ultimo, was not wanting in indications that such a result might not be far distant. The discussion elicited that, after all said, harmony existed, as to the end to be gained, if not altogether as to the means to be pursued, between the Governor and those who had opposed and criticized his measures. Indeed it was so distinctly proved that very many criminals had been illegally branded, flogged, and deported that there could be but one expression of opinion, unless a dissentient had chosen to put himself, as the member of a British law-making assembly, in the position of a deliberate defender of illegality. That, fortunately, no British legislator would be prepared to do.

As was remarked by the Chief Justice, it is for the Legislative Council to decide whether or not remedies shall be devised for any insufficiency of the law. He went on to say, however, that he believed on the whole the existing "law provides for every wrong a remedy;" but that is not the question. Whether the law is sufficient or not: be it Draconian or too lax, it must be adhered to until it is amended. It is the business of the Judge, as Sir John Smale remarked, to take care that, punish men how we will, they shall only be punished according to law. If the magistrate cannot punish them as he believes they deserve, "if he thinks the law will not allow it, he has only to regret the fact and say that they must go unpunished." A Governor's function is to beware that the sentences of justice are legally carried into effect; and it is the duty of British subjects of all stations to abide by the law.

ONE of our translations this week deals with the question of Japanese copyright and the amendment of the existing law. The inconveniences which the writer indicates, as caused by the rule applied to translations, are no doubt very real; and it is only proper that those who undertake the task of reproducing in Japanese the works of foreign authors, should, in exchange for their copyright, be held to complete their undertaking within a reasonable period. But the whole question of copyright, national and international, should, as well as that of patent laws, have the serious and prompt consideration of the government. Foreign authors have the right to be protected not only from piratical publishers, but from unscrupulous translators. That the whole subject is one involving considerable difficulty in its treatment, we admit. The laws and customs affecting it have, even in England, required centuries to arrive at their present, only partial, condition of perfection. Still, they have been the means of mitigating and preventing an incalculable amount of gross wrong; and have afforded a model for imitation, and a basis for righteous coöperation, to most European nations. We trust that Japan will not be deterred, by obstacles which there is no disguising, from effecting a complete reform in this vital direction. She has, in this, as she has had in so many other cases, the long experience of other countries to guide and assist her.

OCCLUSION has recently been taken by the *Shanghai Courier* to draw attention to the frequently amusing, and generally astounding, manner in which the geography and politics of China and Japan are confused by home journals in their ignorance of affairs in the Far East. This is usually to be accounted for by the want of interest felt, by any but very few Europeans, as to events in this portion of the globe. "Rebellions which lay waste tracts of country nearly as large as the British Isles, or famines which destroy millions of people, arouse only an evanescent interest in the breasts of many who are shocked and overwhelmed at the suffocation of a dozen miners in a coal pit, and painfully affected by the death of a single creature from neglect or

starvation. Writers, knowing what little concern is felt in matters transpiring out here, take little trouble to verify their statements, or ascertain the facts of the questions with which they deal. Moreover, most of what appears in the home journals about China and Japan is written by men who have never visited those countries, and who have but the most superficial knowledge of Eastern topics. Therefore, their mis-statements are, to a certain extent, excusable. But the same palliation cannot be accorded to the faults of those who conduct, or contribute to, foreign periodicals published in these regions. And, not improbably, the origin of some of the errors perpetrated in England may be traced to inaccuracies first promulgated in the East. A recent instance is cited by the *Courier*—that of a local writer in the model settlement, who refers to its population “as not so numerous as that of many an insignificant agricultural parish in Great Britain”; and again “a little population of foreigners not amounting to that of many a village at home.” These statements are, of course, very misleading, at least to persons who have had no opportunity of realizing the difference, in point of wealth and importance, between a busy settlement like Shanghai, with its extensive trade flowing into a hundred channels, and “an agricultural village.” The comparison would be absurd if applied to Yokohama: it is several times more ridiculous when used of Shanghai.

A TELEGRAM dated London, the 4th instant, received yesterday in Yokohama, announcing that an offer has been made by the United States to mediate between Japan and China in the dispute, long pending, on the question of the allegiance of the Loochoo Islands, should be received with satisfaction. It ought, also, to have the effect of allaying any apprehension that may yet be entertained of an appeal to arms by the two Eastern empires for a solution of the difficulty. It is hardly within the bounds of probability that the friendly tender of service will be rejected by either side, especially after the confidences made by each to General Grant, to whose good offices may be ascribed the timely suggestion. Moreover, the award, whatever it may be, will be final, and accepted with relief by both parties, to whom, further, the proposition can hardly come as a surprise. There are many reasons why the American Government is the most suitable for the accomplishment of the task it has set itself.

MR. J. J. Henderson, of Shanghai, at present counsellor at law, but sometime in the United States Consular service, has published a pamphlet entitled “An International Court for China.” We fail to see how the scheme which he proposes would be an improvement upon the tribunals, with which foreigners are concerned, already established in this and the neighbouring empire. The Mixed Courts of the open ports of China are objectionable enough, certainly, from every point of view; and there are various other difficulties, inseparable from the multiplicity of courts and authorities, which make the situation of a resident who may have to invoke the assistance of justice anything but satisfactory. The author proposes international courts on the Egyptian plan. There is no evidence that that cumbrous system works perfectly smoothly, and it would not find favour with the large preponderating English and American population of settlers. In China, as the *N. C. Daily News* observes, at least nineteen-twentieths of the commercial disputes arising are cases in which English or Americans are interested. And it must not be forgotten that “the foundation of the jurisprudence of both nations is the common law, and the practice of the courts and the laws of evidence may be said to be identical. Neither can look with any favour on the theoretical jurisprudence introduced in the brand-new Courts of Egypt, which is contrary to the legal

and commercial instincts of both nationalities. The differences complained of between the British Court and that of the United States in China are fortunately of a nature readily adjustable, and an international convention of skilled jurists on both sides could easily provide remedies for any probable case of conflict of jurisdiction in China and Japan. Recent experience in Shanghai, as in Alexandria, goes to prove that the local acknowledgment of the interests of each separate nationality as of equal validity, is fraught with danger to the permanent good order and stability of the communities concerned.”

OUR contemporary, the *Tokio Times*, mentions that it is reported that Mr. Satow is the author of the editorial article in the *Gazette* on the Loochoo question. We understand, however, that the author is a distinguished member of the Chinese Legation. It would be impossible for any member of the British Legation in Tokio to write editorials for any newspaper in Japan on political subjects. Such a course would be entirely opposed to diplomatic usage; and so it gives us the more pleasure to be able to attribute the article in question to another very eminent Chinese scholar. We regret that our friend did not use our columns for his brochure in reply to our editorials on Loochoo, instead of those of the *Gazette*, which is always only too happy to print attacks upon Japan and Japanese affairs.

STILL the slavery question continues to excite interest in Hongkong, where, in fact, it seems that the Courts are not to have much respite from adjudicating on individual cases of kidnapping. The chief Justice, at the November sessions, when passing sentence of two years' hard labour upon a child-stealer, took occasion to make some further comments upon the magnitude of the question involved. Alluding to his failure to secure the prosecution of certain slave-holders, during the absence of the governor from the colony, he remarked that he was thankful that he did fail as, otherwise,—if such proceedings had been taken,—he thinks it not improbable that he might have continued blind to the mass of iniquity existing in the colony, but the very “disappointments impelled him more fully to delve into these then hidden evils. To these disappointing circumstances it is due that he has set forth before the world, that in a dot of an island under the flag of England—the flag of freedom—slavery has found a last home; that there are, as some estimate, ten thousand as others say, twenty thousand slaves.” The latest trial proves that there is a pretty well understood value for children. The market price of the one in court “warranted sound,” was fixed at one hundred dollars, a sum which truly offers a vast temptation to the many poor and wretched people who arrive starving in the island. It is quite evident, from facts already elicited in reference to the institution, of slavery and its connections, that the matter “rises above colonial debateable ground into imperial questions.” There cannot be much doubt either that they will be disposed of by the English Government “in that spirit which is the common inheritance of British statesmen.” In other words the traffic is doomed to extinction at the hands of the moral force of the nation, acting through the power of the home Government, in case the colonial authorities themselves are unable to extirpate it.

THE *Nichi Nichi Shinbun* has commenced the publication of an article, dealing with the liberty of the subject, as it should be, in Japan. The writer would recommend a system based principally on that which has been arrived at by the wisdom of the freest people in the world, acting with the experience of ages. First he proposes the

adoption of trial by jury. Now, it so happens that the question has come to be asked very freely lately in English possessions whether that institution is in accordance with the spirit of the times: whether, like other admirable inventions which have done generous service in their day, it has not outlived the age so far that it might be discarded with advantage? It appears, at any rate, that some less cumbersome system would be better adapted to the improved administration of justice in Japan. No objection can well be taken to any of the other propositions, though there may be a difference of opinion among jurists as to the correctness of the principle that, no matter what evidence may be discovered, subsequent to the discharge of a prisoner, to incriminate him; he shall not be again arraigned for the same offence. The advantages of the aid afforded by a state prosecutor, in the conduct of criminal processes, are so apparent that it is hardly necessary to approve the suggestion that they should be availed of in any reorganization of the judicial system.

SOME months ago the revolt of the Hakka peasantry in Hainan was successfully, but not without long delay, put down by imperial Chinese regiments. More recent intelligence announced the yet more important fact of the retrocession of Kuldja by Russia to her neighbour on terms which cannot be described as otherwise than eminently satisfactory to the latter power. And now the Canton correspondent of a Hongkong journal sends word that the undoubtedly formidable revolt of the Kwangsi rebel, Li Yung Choi, has been suppressed. For months past this chieftain has been hovering on the mountains of the borders of Annam, and defying the imperial forces sent against him. At length, shortness of supplies compelled him with his followers, no doubt considerably lessened in number since he threatened Tonquin, to descend to the plains, where, it is reported, he fell into the hands of the forces sent against him. Although a North China paper has recently propounded with reason that an exaggerated estimate has been formed, in Europe, of the numerical and military strength of China, yet it is beyond question that late successes, and indeed the very maintenance of the integrity of the empire, constitute her power an important factor in the politics of two continents; and the foremost statesmen of Europe are evidently fully impressed with the fact. Young officers, who have of late been undergoing careful training in the navy of England and the army of Germany, have resigned their honorary posts in the respective services, and are at this moment, probably, on their way home, there to instruct land and sea forces in the tactics they themselves have learned.

THE order of Knights of the Annunciation in Savoy (Ordine Supremo dell'Annunziata), of which His Majesty the Emperor of Japan is now a member, was originally known as that of the Neck-chain and Collar. It is certainly among the very oldest in Europe, the English Garter being more ancient by from ten to sixteen years. The institution of the Italian distinction is due to Amadeus the sixth Duke of Savoy, and dates from 1360. In 1720 it was raised by Victor Amadeus to be the principal order of the Savoyard Kingdom. The reigning monarch is always Grand Master; and the Knights, whose number since the year last mentioned has not been limited, constitute only one class, and must be of high rank and already admitted to the orders of Saint Mauritius and Saint Lazarus. No doubt, then, the insignia of the latter institution has also been conferred upon the Mikado. The emblems of the superior order are a gold medal representing an Annunciation surrounded by gold love knots. This badge is generally worn suspended from the neck by a plain gold chain, although the proper collar consists of a band of alternate love knots and roses.

THE *Chingai Bukku Shimpō* is in course of publishing some articles on the subject of commercial education in Japan. When the series is complete we shall write further on the subject. Meanwhile we can say broadly that we are strongly in favor of the Japanese Government establishing free commercial schools, and entirely in favor of a system of free education, in all its branches, for all classes of the people. We shall hail with pleasure any step in this direction. There is now in Tokio one commercial academy, which we understand has been very successful under its present able manager, who is well known to the community as a friend to western ideas and western peoples. We believe that several of the graduates of the Tokio institution have already received clerkships in the First National and Mitsui Banks, and in other Japanese commercial houses; and we hear that the preliminary business education received by the youths has already been found of value by their employers. Under these circumstances we cordially approve of any system which the Government may inaugurate, to establish free commercial colleges in the leading mercantile centres of Japan. In fact, the work can only be done effectually by the authorities, and it will be wise policy to grant Government money freely for this purpose. Of course the institutions must be supervised and managed by skilled teachers with a thorough knowledge of business.

MR. Rennie's decision in the appeal case of "Pitman v. Moutilyan, Heimann & Co.," reversing the judgment of the lower Court at Kobe, can only be received with satisfaction. Indeed it was never to be expected that a higher tribunal would sustain the ruling that the recipient of a telegram is to be held responsible for any mutilation it may sustain in the course of transmission. There is no need for further comment on the case than that contained in the concluding words of His Honor's judgment:—

"The Court below has held in effect that there was an obligation, under the circumstances, thrown upon the appellant of verifying the accuracy of the terms of the mutilated telegram; but I am not aware of any legal doctrine to support this theory. The judgment of the Court below must be reversed and entered for the appellant, who will have the costs of this appeal, as well as of the original suit."

WITH respect to the Oriental trade of Hongkong, the colonial Harbour Master states that there has been a considerable increase in the commerce with India and Singapore, "as well as with Japan." Commenting recently, in the Legislative Council, on this announcement, Governor Hennessy has said that he is disposed to think, as regards this country, from what he has seen himself and heard from resident merchants, that the Japanese trade with South China and Hongkong will increase more rapidly than any other branch of commerce east of those quarters.

THE commercial public of Yokohama will do well to bear in mind a remark, made by His Honor the Judge of H. M.'s Court, in the course of a case recently heard by him. It was to the effect that "in his opinion no 'custom' peculiar to the place could, in the legal acceptance of the term, be held to exist in Yokohama." The same ruling has also been made in Shanghai.

WE have received, from the Silk Association of America, a work upon the silk goods of the United States, where the manufacture of such fabrics has been increasing "in extent and variety for several years;" so that the industry already has a history to be recorded and a future to

be assisted. As the book before us contains much that is interesting, we will probably on another occasion refer to its contents at greater length than we can spare space for at present.

REUTER'S TELEGRAMS.

LONDON, December 2nd, 1879.

The state of seige in Berlin on account of socialism is prolonged for twelve months.

LONDON, December 4th, 1879.

The United States Government have made an offer of mediation to China and Japan regarding Loochoo.

[FROM THE "STRAITS TIMES."]

LONDON, November 17th.

At a banquet given by the Lord Mayor, the Premier stated that the Government were anxiously watching the course of events in Ireland; that he believed that a long period of pence was before Europe, provided England maintained her present position in the Councils of the Powers.

[SUPPLIED TO THE "HONGKONG DAILY PRESS."]

LONDON, November 20th.

Several arrests have been made in Ireland for seditious language.

Russian military operations in Asia are suspended for want of transport.

Valentine Baker is appointed to superintend the scheme of reforms in Asia.

The movement of the Mediterranean Squadron is counter-manded.

JAPANESE ERA 2589, MEIJI 12TH YEAR, 12TH MONTH, 6TH DAY,
DO-TO-DI.

NOTES OF THE WEEK.

BIRTH.

At the Grand Hotel, on the 28th November, the wife of JOSEPH J. ADDICKS, U. S. Navy, of a daughter.

We have but scant mail news to report for the past week, the only home despatches to hand being those brought forward by the M. M. steamer *Volga*, which arrived here on Friday morning last. Her European dates are up to October 19th. The steamer *Tibre* left for Hongkong with the outward mails on the morning of the 4th, and the P. & O. steamer *Sunda* is advertised to go on Monday morning at daylight. The Shanghai and way port mail vessels have arrived and departed as usual. The *City of Peking*, with the American mails, left San Francisco on the 15th ultimo, and is expected to arrive here on Sunday or Monday next. The *Belgie* left Hongkong for this port, on the 3rd instant, and is advertised to leave here for San Francisco about the 13th instant.

We are informed that the S.S. *Consolation* left Shanghai on the evening of the 4th instant, for this port.

The steamer *Antenor*, from Liverpool, left Singapore on the 24th ultimo, for Hongkong.

The "Glen" steamer *Glenorchy*, from London, left Singapore on the 25th ultimo, for Hongkong.

Owing to the break down of the P. & O. steamer *Australia*, the *Peshawar*, with the next outward English mail, will be about four days late in arriving at Singapore.

The action of the P. & O. Company in ordering the alteration of the day of departure for their steamers from Yokohama for Hongkong, from Thursday to Monday, still continues to exercise a portion of the public, who naturally regret that not only should the Saturday half-holiday, for which they strove so long, be virtually taken away from them, but that they should, by the same blow, be deprived of their weekly day of rest on Sunday. The local agent of the company has done, and is willing to do, all in his power to have the decree reversed; but, of himself, he is, of course, powerless to interfere. The most recent suggestion is one made by a correspondent of the *Herald*, who proposes that another effort should be made, namely, to have the sailing time altered, say, to noon on Saturday. He suggests that the community would willingly bear the expense of a telegram to the head-quarters of the company at home, conveying the necessary request, through the agency here.

Hiogo seems to be, at present, a more favored place than this larger port for the sale of ships of foreign construction. We read that three small vessels, varying in capacity from two hundred to two hundred and fifty tons, have been purchased there recently by Japanese. They are the schooner *Alerta*, and brigs *Leonore* and *Orinoco*.

It appears as though, after a rest of some duration, Her Britannic Majesty's Court had entered upon one of action. The hearing of an important case, involving a question of liability for damage sustained by goods while landing from ships in harbor, has this week occupied the attention of Mr. Rennie, who has promised his decision in a few days.

We read in Hongkong papers that Mr. and Mrs. Maury (the new literature adopted for his name by the present Japanese Envoy to Great Britain) were, during their stay in Hongkong, the guests of Governor and Mrs. Hennessy.

With several special entertainments the visit of Prince Henry of Germany to Hiogo has been brought to a close. The foreign residents of the port were the last to fête him at their national Club, which was brilliantly illuminated, the rest of the concession shining with lesser glory. The *Prinz Adalbert*, to which vessel His Royal Highness has returned, was expected to leave Kobe on Monday last en route to Nagasaki. The *Hiogo News* says that she is likely "to consume ten days on the passage, as it is intended to call in at a number of ports on the way up. On passing through the Akashi Straits and entering the Harima Nada, her engines will be tested up to their full power, with six boilers going. The first port she will call at will be Kusakabe, in the island of Shodzu, where a short stay will be made, in order that the midshipmen may be exercised at drill. She will then in all probability proceed to Mihara, in Bingo, where the Japanese government purpose establishing a navy yard, calling in on the way at Mitaraishima. Thence she will go on to Hiroshima, and, passing through Shimonoseki Straits, will direct her course for Hirado, where the old Portuguese settlement 'Firando' was located. Finally, passing through Speck's (or Hirado) Straits, she will fetch Nagasaki, which she is expected to reach about the 10th prox. After a short stay at the last-named port she will in all probability return once more to Kobe, but this is not yet definitely decided on. Should she do so, she will be here again about the 20th Dec."

During the prevalence of the recent epidemic, as is well known, the bodies, clothing, and many other effects of those who died from cholera were burned at one or two cremation grounds, set apart for the purpose at some distance beyond the extreme ends of the town. The operation was very rudely performed—necessarily so under the pressure of circumstances. At first, as far as the Negishi cemetery furnaces were concerned, incineration was conducted during the greater part of the day and night, or whenever bodies arrived on the spot. Subsequently, out of deference to the wishes of many of the Bluff residents, who complained of the sickly and noxious effluvia which winds from a westerly point wafted to them, the work was only done during the hours "when deep sleep falleth upon

man." The pyres were mere logs of wood arranged in and round the coffins, which rested on shallow stone troughs. The mats, clothes, and other property, no less loathsome than the corpses, were consumed separately in a large pit. The medical board, at one of its meetings, recommended the construction of incinerating stoves of approved pattern. We observe that the *Courier* now hints that cremation may become the general mode of disposal of the native dead in this vicinity. It states that the Kencho has ordered the construction of three special kilns, which will, of course, be so built as to hide the ghastly details of annihilation, and to consume the smoke and gases exhaled during combustion. And as cremation is very frequently practised, in other than pestilential times, as any one may see for himself by visiting the burial ground near the race course, it is to be desired that the experiment mentioned may be carried into effect.

The news of the breach of quarantine by the German vessel *Hesperia* in August last has occasioned much comment in censure of the measure in the London press. A letter signed a "Japanese Barrister" on the subject involved, has excited special attention, and Mr. Reed, again, has some remarks to make, which it is unnecessary to reproduce. He concludes his letter by a general advocacy of measures and conduct which will tend to establish a firm friendship between Great Britain and Japan. He holds that the "resources of the latter country make it the most desirable ally of England in the East." He is satisfied that Mr. Terashima has been a true and loyal friend to the English, and that Mr. Inouye will be still more so. On the whole it appears that, during his sojourn in Japan and since his return, Mr. Reed has learned a great deal more about men and measures here than most people would be willing to give him credit for.

The droll manner in which Japanese names get mutilated in telegraphic transmission to foreign countries may be seen in a despatch to the *Times* of the 10th of October, announcing the changes made during the previous month in the constitution of the ministry. The name of His Excellency Inouye Kaworu is hardly recognizable in its travestied version of "Mouye Jakolu." Other errors, not so much of letter as of sense, referring to the appointments of Admiral Enomoto and General Yamada, occur in the same telegram, but it is not worth while to mention or rectify them here.

Mr. E. J. Reed, M. P., writing to the *Times* of the 13th of October, refers to the mistakes in the despatch above mentioned. On Mr. Inouye's transfer to the presidency of the Foreign Office, he says that the gentleman in question "must be well known to many official persons in this country, having been resident in London for several years, where, as a private gentleman, he devoted himself with singular assiduity and ability to the mastering of our political and commercial systems. He is, moreover, one of those who all but gave his life to the reformation of his country, having, during the troublous days of change passed through a few years since, been so nearly slain as to be left for dead with frightful wounds, of which he still bears the marks. He is not now engaged for the first time in diplomatic affairs, having been joint Ambassador to Corea with General Kuroda Kiyotaka (now Minister of the Colonies), when about ten years ago a difficulty arose between the two countries. The mission was successful in averting war, and in settling a treaty of amity and commerce. The telegram to which I have adverted was perfectly correct in supposing that Mr. Inouye's accession to the Foreign Office of Japan may be taken as a sign that peaceful counsels will, if they honourably can, prevail in the settlement of the dispute between Japan and China."

In a report addressed by Mr. Sakata, one of the Commissioners to the Sydney Exhibition, to his government, he complains that the exhibits do not find a ready sale. This he explains in part by the fact that previous expositions in New South Wales have principally consisted of industrial and agricultural objects, and that, in consequence, the inhabitants being persuaded that the present show resembles preceding ones, few people, and hardly any women, visit it. This explanation is decidedly strained. A more valid reason for the small support said by Mr. Sakata to be accorded to the institution, is to be found in the circumstance, which he also cites, that the rich

squatters, at the time he wrote, were occupied in their important business of annual sheep shearing. A little anecdote, narrated by the commissioner, if not true is well invented. He says that two visitors, "having asked a Japanese exhibitor the price of two flower vases, were told that they could have them for one hundred dollars." They replied that "they would prefer to buy sheep with the money, as they would then secure an annual income." The writer adds, with evident disgust, "you may learn from this how little taste the Australians have for luxury." It is just possible that the salesmen were asking rather too high a price for their wares; twenty pounds' worth of sheep will not bring in a very handsome yearly revenue even in New South Wales.

At noon on Friday, as a lighter was being filled with rubbish from the creek side in Honmura, one of the labourers employed slipped on the edge of the wall and was precipitated, with his two baskets, each full of dirt and refuse, into the boat beneath, where he was almost buried in the debris. Although, from his cries at the moment of the accident, it might have been imagined that he was badly hurt, yet, after being promptly extricated from the heap and resting for a few minutes, he shouldered his stick and baskets and walked away, apparently with the intention of resuming his work, and as if no misadventure had occurred to him.

The *Courier* announces that thieves broke into the restaurant occupied by Mr. Chapelle, at No. 162, near the Laikawa bridge, on Tuesday night last. They made their way into the kitchen which they cleared of all its copper utensils. Next they passed into the dining room, and stole thence a clock and several bottles of champagne. Before leaving the premises they completed their booty in Mr. Viest's cottage, where they collected several cooking appliances.

A printer's error occurred in our notice of Friday week's performance. We wrote that *Biondello* repeated a long story which should be properly spoken by *Gremio*, not *Grumio*, a worthy gentleman whose part was excised along with those of *Bianca*, *Lucentio*, *Vincentio*, *Tranio*, and others. We observe a letter in Monday's *Herald* on the subject and thank honest "Grumio" for so well corroborating the evidence of our senses and knowledge, and making our assurance doubly sure that the buffoonery we saw was not the work of Shakespeare. We doubt not that the actors themselves thought their representation perfect, and we regret that others could not be of the same mind, especially that portion of the audience which has had the pleasure of seeing the comedy under review performed in its pure and unalloyed form.

A very severe shock of earthquake occurred on Wednesday morning at 7.15. Houses were violently agitated for about six seconds, when there was a slight pause and the movement recommenced and lasted for about four seconds more. The shock was certainly the most severe that has visited Yokohama for years. The International Hotel has been somewhat damaged, and one of the chimney stacks of that building was thrown down on to the roof of Messrs. Domoney & Co., clearing its way through the timbers, and landing about half a ton of stone, bricks and other debris on a bed in an unoccupied room. Five hundred dollars will probably not suffice to repair the damage sustained at No. 18 alone. Considerable harm has also been done to many other houses in the town, notably to the Hongkong and Shanghai Bank buildings and others in their neighbourhood. Naturally great alarm was felt in many quarters. A coloured man is said to have jumped through a window on the second story of the house where he was living, and to have sustained serious injury. The vibration was distinctly felt on the ships at anchor in the bay.

On Tuesday morning an interesting sight was witnessed from the Bluff by those whose residences overlook the sea. At 6.30 a.m., the following ships of H. M.'s Japan Division of the Navy, *Charybdis*, *Groveler*, *Pegasus* and *Swinger*, under the command of Captain C. F. Hotiam, steamed out in line, about one hundred fathoms apart, executing various nautical manoeuvres as they proceeded until somewhat beyond Cape Sagami, where they parted, the *Charybdis* and *Pegasus* going on to Kobe, and the *Swinger* and *Groveler* returning to their anchorage here.

STUART ELDRIDGE, M.D.,
Surgeon-in-Charge.

PARIS LETTER.

Paris, October 10th, 1879.

Gentlemen having had to quit the sea side for their shooting, ladies had no reason to remain behind, for though they may be the life of a ball or a picnic, gentlemen will ever be the soul; and people are not sorry to return to a chateau or a town house, either as proprietor or visitor. The year has not at all been happy anywhere; there was no real general enjoyment perceptible; Paris was left at the last moment and even with regret, because there was no confidence in the weather. But the best of all proofs that the sea side as a residence was not good, is to be found in the fact, that not many matches have been made, and parents that expected to get a daughter or two off their hands, must wait a little longer, and it is no secret that another twelve months may make or mar a girl's fortune. It is whispered too, that eligible ladies have more of great expectations, than positive cash or unquestionable debentures; papas are not so well off as formerly, and I believe the only inducement that can decide Frenchmen to wed, is the prospect of a good *dot*; the latter is so expected on both sides, that nothing wrong is thought of commencing at the commercial side of love. To the credit of French parents they do look into, or after, this part of the match-making like shrewd folks of the world, and the young couple can only bless them for their foresight as soon as the honeymoon over, time will allow them to throw a glance on mundane matters. I have alluded to gentlemen setting out to enjoy shooting; there are ladies who also as eagerly consult the almanac for the arrival of the day of liberty to allow them their dog and their gun; sportswomen are not on the increase in France; real sportsmen do not like the society of ladies, nor do gentlemen, in their heart of hearts, admire the eccentricities of their costume. Promenades in parks, drives in the open country, rides in the forests, are charming and bracing; it is pleasant also to arrange a "meet" with gentlemen, where after a morning's shooting, they can *déjeuner* in common; ask any lady what part of the day she most likes in a Chateau life and she will invariably reply, the in-door, especially the evening, and above all in the *salon* after dinner, where something like family life can be enjoyed, and games indulged in. Now the favorite drawing room amusement at present is arithmetical puzzles, or mathematical;—they are all the same; perhaps this mode may be owing to the re-ent discoveries, that ladies are superior to gentlemen in "squaring the circle," and surpassing "calculating boys;" it is all easy work for ladies who have graduated at the Sorbonne, or taken out the diploma of school-mistress at the Hotel de Ville examinations, like Baron Rothschild's daughter, Betty; but for the general run of ladies, multiplication, as a brother of mine was accustomed to repeat, "is a vexation, and division is as bad." A lady who is the directress of an important Boarding-school, and whose pupils are international, and follow many of them, professional studies, some for medicine and two for "law," to say nothing of painters, assured me that French girls were first in science, and Germans, in music; she has not had experience of American young ladies, and can only speak of them from hearsay, she understands they are cleverer in picking up a little of every kind of learning. There are two young ladies at present in Paris, who have passed their "bachelors'" examination at the Sorbonne, and intend going into partnership as solicitor and barrister, a gentleman lending them as it were his name by which they can practice in chambers—till all the "liberal professions be made liberal." In one matter French ladies do not succeed, that of editing journals; the only success under this head has been won by an Irish lady; she told me a few days ago, she is now able to comfortably live by her journal; in lecturing perhaps French ladies are more fortunate: this is perhaps owing to the curious subjects they occasionally select; and where the male sex are

not overlooked or overpraised, they sometimes get a Roland for their Oliver; thus M. Peincolet is to hold a conference where he will discuss the "Head and Heart of Woman"—this will be a rejoinder to a fair orator who maintained, that man is the unique cause of woman's unhappiness, and her failure in matrimony when it occurs; however, in the agitation now going on for re-establishing divorce, not many wives, it is well known, demand that kind of relief, which would condemn her to a life—unless she be rich—like the Princess de Sagan or the Marchioness de Galliffet, that Dante never imagined for his suffering souls.

The public is of opinion that madame Rattazzi has been just married at St. Sebastien for the third time: in truth it is her fourth "ceremony." The Princess Bonaparte Wyse, was born in England in 1833, her first husband was Comte de Solmer; in 1863 she married Rattazzi, who died in 1873. Some years ago, a Spanish priest gave the nuptial benediction in one of the oldest chapels in Madrid, to a kneeling man and woman, at the hour when the "crows caw, and fly in hundreds before roosting," as the Iberians say: the woman was the Princess, Rattazzi, and the man M. Rute, the bridegroom of a few days ago. The mystery is this, the late King of Italy said, that if his cousin Rattazzi re-married, he would stop her pension—which is considerable; now if *re galantuomo* being no more, the fourth marriage was only the public ratification of the third. While on Spanish matters nothing is talked about in Madrid, but the splendours of the future Queen Christine's trousseau; one lace dress is a marvel and set down at a fabulous sum; the ex-queen Isabella has certainly not sold all her diamonds and precious stones, as she is to present her daughter-in-law with a splendid diadem of diamonds, pearls, and sapphires. Perhaps it is the custom in some western royal families to expect the return of gifts just as in the case of the Sultan, who ever receives back the presents he bestows on a favorite.

Efforts are in progress to induce Mme. Victoria Woodhall to come over to Paris and deliver a public lecture. Apart from the clubs, French ladies have not the slightest idea of what an eloquent sister from America is capable of executing in the tribune or pulpit; she would create really a great sensation, and if she intends competing for the Presidency of the States, she could, by fixing a small admission fee, raise sufficient to cover canvassing expenses. Some apostle is required to stir up French ladies to perform their duties; to visit the poor and the needy, and to economise from their superfluities something to ameliorate the diseased in mind, body and estate. The Rev. Mr. Loyson's lady is endeavouring to organise something like lay sisters of charity; it is a duty requiring great taste and resolution, for the French are very proud, and in no case will they accept anything approaching to patronage. Mr. Loyson seems to be "getting on in business," he is to inaugurate a second church in one of the most historical Faubourgs—that of St. Antoine; it would be a mercy if some church could succeed in bringing the working population of Paris within their pale; the last thing that ever enters their heads, is a thought on religion; to despise the latter, is rather the evidence of independence. A curious change is at present taking place in one of the most fashionable drives of Paris: instead of patronizing the avenue de Champs Elysées as formerly, when going to the Bois de Boulogne, the *crème de la crème* of society, carriage people in a word, take side routes to arrive at their destination, and even in the Bois the popular alleys are being forsaken for others. It is alleged, that the "common people" now monopolize all the reserved routes &c.; if not, the fact of the belief being entertained will soon cause them to do so. The working classes appear to prefer their own parks, the Bois de Vincennes and the Butte de Chaumont, infinitely more picturesque than the Bois de Boulogne and nearer their doors. The shops commence to display their treasures, as residents arrive in town; milliners and dress-makers, having executed their foreign orders, are at liberty to attend to the wants of Parisiennes, who are clients in search of fashions and materials quite different from what outsiders require. One color is particularly prominent in the displays, the deep, fiery yellow or *canaque*, called after the aborigines of New Caledonia: it is certainly destined to rule during the winter, and will be largely employed for feathers and ribbons. To give a description of the fashions in a few words I would say, the leading rule is for a lady to seek that which suits best her figure, her complexion, and above all that which will have a good appearance, and she will never be far from the *mode* of the day, which is the triumph of agreeableness and independence: we have the independents in politics, painting, and music, and why not also in elegance? However, this does not mean eccentricity, for in the latter case it is the wearer, not the toilette that is looked at. The display of silks is superb, and the shades are undefinable, while the patterns are marvels in point of design; the woollens are relatively not less handsome, and have the changing colors; they have still been made under the inspiration of old Persian draperies, or the splendid tissues of Smyrna and Arabia. Robes will be worn short, save for full dress; indeed for visiting, costumes are less than demi-long; for mantles or coats the Mascarille and Fronsac, and also the

Directoire, are general; there is no change in colors, save that green seems to predominate; at dinner parties, cardinal red and black satins are frequently encountered. I am happy to add that the little *toque* hat is holding its own against the invasion of the larger shapes; nothing can ever be more becoming for young persons than the former model. As for trimmings, the entire field of natural history is open to ladies, provided their selection be in harmony with their features and their toilettes; note, that the head dress is no longer an enormous scaffolding: it is rather flat, and adapts well to the hats in vogue.

The theatres have not yet received their choice public, so managers are keeping back their best plays; the Opera has revived Auber's *La Muette* (Masaniello), and has proved the occasion for discussing the composer, rather than his work; the impression is, that Auber was not a genius, and not at all to be compared with Meyerbeer or Rossini; he wrote agreeable, charming music, but essentially French; there were none who did not applaud the overture, and the prayer, and all admired the pantomimic acting of Fenella. The rising generation cannot be expected to feel as we do on these musical creations, to which we have been accustomed from our youth up, and that formed practising pieces in days gone by, and associated with the most important incidents perhaps of our lives. "Oh, could we feel as we have felt, or be what we have been!" For me when I listen to these operas of the past, the great pleasure is the reminiscences they summon up. The Exhibition at the Palais de l'Industrie is a very agreeable lounge; it is instructive to boot; I note that it is very extensively patronised by provincials; there are many exhibits far superior to those at last years' World's Fair, and you can "take them all in;" there is plenty of excellent music, no end of attraction, and it strikes me there is a *Kermesse* dash about the whole undertaking that enhances the pleasure of your visit.

ARRIVAL OF THE FRENCH MAIL.

Capetown, 22nd October.

Sir Garnet Wolseley has gone into Seccoceni's country. Colonel Lanyon, who went to Middleburg owing to disturbances among the Boers, has returned. They (some of the Boers) will be prosecuted for theft.

Kabul, 26th October.

The Kabul kotwal and four others were hanged to-day for complicity in Sir Louis Cavagnari's massacre. Fighting took place at Ali Kheyl and Shuturgardan, the enemy being dispersed with heavy loss. Communications reopened.

Simla, 27th October.

Colonel Johnson, Political Agent, Manipore, started for the frontier immediately on hearing of the Kohima occurrence with a large body of Manipore troops, some frontier police, and his own military escort. He hoped to reach Kohima on the 26th. The services of Lieutenant Dunn, 34th Native Infantry, have been placed at Colonel Johnson's disposal for this contingent. Lieutenant Raban, R.E., accompanies the troops from Golaghat as Engineer Officer. The telegraph line has been extended to Golaghat. The villagers of Khonoma took a considerable part in the excesses for the repression of which the last Naga Hills expedition took place. As they then agreed to our terms, they were let off with some leniency.

Allahabad, 27th October.

General Roberts has had a satisfactory interview with a hundred headmen of the Kohistan villages now staying in the camp. It now appears that the big magazine in the Upper Bala Hissar contains one million pounds of powder. It has been positively ascertained that the Press rules for correspondents were sent from the Horse Guards in the shape they bear as published here. The alterations from the original draft were utterly trifling, and the Government of India must be wholly exonerated from the responsibility of having invented the rules. Still there is reason the hope that the Government of India may take the responsibility of recalling them. The policy of the Government towards Afghanistan provides for the administration of the country by the military authority, acting through the existing native Governors of cities. These will be told to look for orders to Kabul. No successor of the Ameer will be proclaimed. Government have decided that there is no occasion to again utilise the Contingent of the Punjab Native States. The Chiefs have been asked, however, to maintain the forces in as high a state of efficiency as possible without entailing any extra burden on their States.

Simla, 27th October.

A reconnaissance was made on the 25th up to Surkh Pul beyond Gundamuck. The attitude of the Ghilzais is still questionable. A large convoy of ammunition and ordnance with a force of cavalry left Ali Kheyl on the 26th inst, for Kabul. Other details of the troops with more stores were to follow. The Hussan Kheyl Jajis will be punished, unless they submit to the terms imposed. General Gordon will punish some of the other tribes concerned in the attack on the Shuturgardan. Arrangements have been made for winter stores for Kelat-i-Ghilzai. Beyond Kelat the country is unsettled, but

it is reported not unsafe for caravans. The Governor of Ghazni is said to have shut himself up in his citadel. The Governors placed by the Ameer over the Tarkai and Andari tribes near Kelat have been plundered and forced to fly to Kabul.

Allahabad, 29th October.

The hunt after the rebel leaders still continues. It is hoped that Naik Mahomed, the Commander-in-Chief at Charasiah, and one of the Colonels of the Herat Regiment, who are supposed to be hidden near here, may be captured. The political aspect continues unchanged. We are certainly in an anomalous position in proclaiming the Amir's authority with one hand, and despoiling him with the other of all tribute. The grain due to him is being collected by the Commissariat. News from Shuturgardan reports all quiet there.

Calcutta, 29th October.

Mr. Hinde, with a party of armed police from Wokha reached Kohima safely. 700 Nagas, armed with guns and rifles, assembled between Samaguting and Kohima, have sworn to prevent the approach of our troops from that direction. A detachment of the 43rd N. I. and Frontier Police were to leave Samaguting for Kohima on the 28th, whilst the Manipuri troops made a diversion on the other side.

Bombay, 29th October.

The troopship *Crocodile*, which arrived here yesterday, brings the latest news from the Cape. Sir Garnet Wolseley was sworn in as Governor of the Transvaal on September 29th. In the Government Gazette a Proclamation has been published, declaring the will and determination of Her Majesty's Government that the Transvaal shall be for ever an integral portion of Her Majesty's dominions in South Africa, and concludes by charging all Her Majesty's subjects in the territory or elsewhere to act and govern themselves accordingly. Colonel Colley started on September 29th for India. The *Crocodile* brought officers and men belonging to the 17th Lancers and 18th Regiment. She arrived at Port Louis in the *Mauritius* on 16th October, disembarked three companies of the 9th Regiment, and a Battery of Artillery, at the same time embarking three companies of the 88th Regiment. The *Euphrates* landed troops yesterday. The *Crocodile* will land troops to-day. The 17th Lancers leave to-day for Khundwan, thence they go to Mhow. The 88th Regiment go to Deolalee, and thence to Jubbulpore. Four troopships are now in Bombay harbour, and three more are shortly expected. This is unprecedented.

Simla, 29th October.

General Roberts telegraphs from Kabul, under date 26th October, that Dr. Bellow and the officers who were detained on Shuturgardan, had arrived. Supplies were coming in plentifully. By the 15th November General Roberts hopes to have five months supplies stored. Improvement of the road towards Butkhak has been commenced. Shelter for the British portion of the force is nearly complete. In the Sherpur cantonment, the native regiments have commenced butting themselves. From Kandahar, it is reported that Sahib Jan Tarak-Ghilzai, a notorious ruffian and freebooter, had assembled a force of about a thousand men of his tribe about Mukur. On the 23rd, news reached General Hughes, through the Tokhi Ghilzais, that he had advanced to Shahjui with an avowed intention of attacking our camp at Taxi. General Hughes sent out Colonel Kennedy, 2nd P. C., with a force of all arms, at 2 a.m., on the 25th to reconnoitre towards Shahjui, and followed with the remainder of the force in the morning. Colonel Kennedy drove in the enemy's pickets near Shahjui, and found Sahib Jan in position with 200 horse and 700 foot, which he attacked, and completely dispersed. Sahib Jan and 41 others were found dead on the field. Our loss was one private of the 39th, and one of the 2nd Punjab Cavalry killed. Captain Sartorius 59th, Captain Broome, two native officers, and 24 men of the 2nd P. C. wounded. Neither Captain Broome nor Captain Sartorius are dangerously hurt. Sahib Jan was the terror of the district.

Allahabad, 30th October.

One Brigade moves from Kabul towards Gundamuck, when General Gough returns from Shuturgardan. A new line of communications will then be secured, before the snow falls. Kabul now is in heliographic communication with Shuturgardan. A party of gipsies migrating to the Jellalabad valley halted at Kabul, giving as their reason that Mahomed Jan is in the Khurd Kabul Pass with four or five thousand men, including the rebel soldiers. This news is unconfirmed. A daring engagement took place at Shubjui with Sahib Jan. Captain E. Sartorius and eight men of the 59th gallantly stormed a conical hill. Sahib Jan was imprisoned at Kabul but escaped on Shere Ali's departure.

Madras, 30th October.

A serious railway accident has occurred near Arcunum, 36 miles from Madras, owing to the slip of an embankment caused by the heavy rain. The known losses are fifteen dead, and 45 wounded, which are all brought to Madras.

Simla, 30th October.

General Roberts has, under instructions, issued the following proclamation at Kabul:—
I, General Roberts, on behalf of the British Government,

heroby proclaim that the Amir having by his own free will abdicated has left Afghanistan without a Government. In consequence of the shameful outrage upon its Envoy and Suite, the British Government has been compelled to occupy, by force of arms, Kabul the capital, and take Military possession of other parts of Afghanistan. The British Government now commands that all Afghan authorities, Chiefs, and Sirdars, do continue their functions in maintaining order, referring to me whatever is necessary. The British Government desires that the people shall be treated with justice and benevolence, and that their religious feelings and customs be respected. The service of such Sirdars and Chiefs as assist in preserving order will be duly recognized, but all disturbers of the peace and persons concerned in attacks upon the British authority will meet with condign punishment. The Government, after consultation with the principal Sirdars, tribal Chiefs and others representing the interests and wishes of the various provinces and cities, will declare its will as to the future permanent arrangements for the good of the people.

Constantinople, 30th October.

The Commission which was appointed to discuss the Greek frontier question holds weekly sittings, but little progress is made.

Paris, 31st October.

The French Government has threatened Don Carlos with expulsion unless he ceases demonstrations.

St. Petersburg, 31st October.

The *Golos* announces that in consequence of a disastrous engagement with the *Tekkes* on the 9th September, the Russians retreated and the expedition is suspended until after the winter.

Allahabad, 31st October.

Three more prisoners have been sentenced to death by the Military Commission. They are Saifuddin, wounded in the foot at Charasiah, the Jemadar of Kotwal, hanged some days ago, and thirdly, the Kabul Moolah Sahibzada Farakdin who preached a *jehad* against us. The number of rifles and smooth bore guns surrendered by the villagers about Kabul was 3,000. The examination of Upper Bala Hissar shows that many boxes of snider cartridges were quite uninjured. The buildings in the fortress were being dismantled, the beams being required for firewood. The weather is growing colder rapidly. The nights being quite wintry, special provisions for local warm clothing are being made for the native troops. The following are the details of investment of Shutturguridan from 15th to 19th inst:—On the morning of the 5th the main body of the enemy was found still holding the position they had taken up after being driven off Surkai Kotal on the 13th. A wing of the 21st Punjab Native Infantry has been sent with orders to attack if they moved towards Kotal, and a company of the Third Sikhs went to Karatiga Fort to bring up stores and ammunition left there. The fort was found thoroughly looted. Allahabadi reported that the enemy has been largely reinforced and the whole country in arms. Colonel Money has resolved to draw in defences under cover at night. Surkai Kotal was abandoned on the 17th. The enemy showed in such numbers southward of the ridge and south of the camp that the outlying picquet was withdrawn and fell back upon strong picquet posts near the camp. On the 17th, evening, the enemy occupied the road from Karatiga to Haseem Khayl and cut off the grass supply. Their numbers were so great that reasonable anxiety was felt about the attack, so our men worked at strengthening the defences, and Captain Nicholson laid down wire entanglements at weak points to check any rush. In the evening Allahabadi brought in Jirgah, who proposed absurd terms of surrender, and they were sent back with a hint to go to Kabul and settle terms there. The garrison had only regimental ammunition with them, this being greatly reduced by the action of the 14th, the Mountain guns also having a lighter number of rounds. Colonel Money resolved to husband the ammunition and act on the defensive. On the 18th the enemy showed in still greater force and cut off the water supply. On the 19th, when matters looked serious the heliograph was seen flashing at Kushi and Colonel Money learnt that General Hugh Gough was there with two regiments and four guns. Upon this he knew he was safe, and after sending skirmishers down he got his guns into action and shelled the enemy's line with common shell and shrapnell. The tribesmen gradually drew off; no man being left at the evening. The enemy brought 200 women to witness the final attack.

Allahabad, 1st November.

It is believed that the Burmese Embassy will not be permitted to proceed beyond Rangoon, unless it brings very satisfactory and explicit assurance that the incidents of the last few months are deplored and will not be renewed. A private telegram from London intimates the formation of an important Committee, with Lord Tweeddale as Chairman, for working the Punjab Coal mines.

Berlin, 1st November.

The Prussian deficit amounts to 47,000,000. [query marks].

Simla, 1st November.

General Bright was to march on the first towards Gundamuck, Major Warburton remaining in Political charge at

Jellalabad. The telegraph wire was being pushed on to reach near Rozabad. Further reports confirm the description of Kabul regiments from Herat. Sir Robert Sandeman has reached Sibi after exploring the country between Quetta, Peshin, and Sibi, and visits the head-quarters of the Pathan tribes. He was accompanied by the Marri and Brahui Sirdars and was escorted by 250 of the 19th Punjab Infantry, and forty of the Sind Horse. There are two direct routes between Quetta and Sibi, both well watered, with abundant supply of wood and forage. From Candahar it is stated that Sirdar Mahomed Yusuf Khan, a former Governor of Zamindawar, was to leave for Kabul on the 31st. His successor, Abbas Khan, brother-in-law of Sirdar Sher Ali leaves for Zamindawar shortly with the Alizar Chiefs. General Hughes returns to Candahar at once with the heavy guns, Goorkhas, two companies 59th, and two squadrons 2nd Punjab Cavalry, leaving a force to garrison Kelati-Ghilgai under command of Colonel Tanner. General Gough with a small column is marching through the Logar Valley and is expected to reach Kabul on the 3rd November.

2nd November.

Colonel Johnstone, Political Agent at Manipur marched into Kohima with fifty regulars and police and fifty Manipuri troops at 4 p.m., October 27th. He reports that he found the garrison reduced to extremities after a noble defence of thirteen days by Messrs. Hinds and Cawley. The party saved three officers, two ladies, two children, and 537 natives. From Alikhel it is stated that the Ahmed and Hassan Khel Jujis have submitted to the terms imposed, namely, payment in six days of Rs. 100, and the delivery of hostages, four of whom were sent to Kurram at once. Advice from Kabul report that it was proposed to abandon the Siyah Sang position when General Macpherson marched to Butkak on the 1st November. The remainder of the force will then be collected at Sherpur. Some cases of Ludiana disease having occurred in the Twelfth Bengal Cavalry, the regiment has been moved four miles on the Butkak-road.

The Khugians have restored about ten tons of grain, being part of the amount plundered by them from the Amir's stores before the arrival of our troops. The telegraph is open to Gundamuck.

THE STEAMER "HINDOSTAN."

There is little chance of saving the *Hindostan*. It is said her port bilge is all crushed in, and she is almost a wreck. The weather has been such during the last two days that the crew and hands of the ill-fated steamer, 150 souls in all, have had to seek refuge on board the *Maharaja*, which steamer Captain Hazelwood had prudently engaged to stand by him. We learn that Captain Wilkinson the P. & O. Superintendent, proceeded in the *Nepaul* to-day, to the scene of the wreck, and that the P. & O. tug from Bombay is due there to-morrow or Monday, too late, we hear to render any assistance.

Constantinople, 3rd November.

The British Ambassador here has explained to the Porte that the reason for the British Mediterranean squadron being ordered to Vourlah is because England insists on the execution of reforms in Asia Minor according to the Treaty of Berlin. The Porte is resolved to execute the reforms in Asia Minor which it considers to be necessary, also those embodied in the Berlin Treaty stipulations. The Austrian squadron is expected at Salonica.

London, 3rd November.

Particulars of the fight between the Chilean and Peruvian fleet off Mejilones, which resulted in the capture of the *Huascar* by the Chileans, show that the *Huascar* made a most gallant defence. The Peruvian Admiral who commanded her at the time, besides two Lieutenants and many of the crew, were killed before she surrendered.

Allahabad, 3rd November.

Trustworthy information having been given on the 28th that the Amerer would try to escape, a guard of forty men were placed near him, all attendants, except (? those in) four tents (?) were cleared from near him, and a sentry placed inside his tent, with four more patrolling outside. He is in fact a close prisoner, and all access is denied. The British are carrying out everything in the Amerer's name.

London, 4th November.

There is great excitement at Constantinople in consequence of the British action regarding the reforms in Asia Minor. The London Press approve of enforcing the Anglo-Turkish Convention.

Allahabad, 4th November.

Three neatly made graves said to contain the bodies of Messrs. Jenkyns and Hamilton and Dr. Kelly have been opened and only the remains of natives were found, placed with an intent to deceive. Many lakhs of treasure, the greater part of which had been looted by Yakub Khan from the mother of Abdullah Jan are in process of being unearthed at Kabul. A special fatigue party which was sent, got eight lakhs of treasure in gold and precious stones.

London, 5th November.

The Chancery division of the High Court of Justice has disallowed the demurrer of the Secretary of State for India in the suit respecting the Banda Kirwee Booty.

Washington, 5th November.

The Northern State elections have been carried by the Republicans by an increased majority. Mr. Cornell has been elected Governor of New York.

Aden, 5th November.

The *Bangalore*, with the mails of the 24th ultimo, left for Bombay at 1 p.m. to-day.

London, 5th November.

In a speech by Mr. Lowe at Grantham yesterday, he condemned the policy of the Government and said the Liberals when they came into power would resume the policy of the former Liberal Government. Consols closed at 97½.

Cairo, 4th November.

Mr. Gerald Fitzgerald has been re-named Director-General of Accounts in Egypt.

London, 6th November.

The Turkish Ambassador having, on behalf of his Government, promised the execution of the reforms in Asia Minor the despatch of the British squadron to Vourlah has been countermanded. Advices from St. Petersburg state that the main body of the Russian Expedition against the Turcomans has returned to Tchikislas. Trade is reviving generally throughout Great Britain whilst the traffic on the different lines of railway is improving, and stocks are buoyant.

Consols closed at 97½.

London, 7th November.

It is rumoured that the English ministry is about to enter into negotiations for the settlement of Anglo-Russian relations in Central Asia.

Ismailia, 7th November.

The Peninsular and Oriental steamer *Kaiser-i-Hind* is seriously aground in Lake Timsah, and is unloading her cargo. The passage of the Canal, however, remains free.

JAPAN NEWS.

[The following Notes on various Japanese matters are chiefly derived from the native papers, occasionally supplemented from original sources of information, and are carefully collated and edited, so as to make them readable and intelligible.]

COURT, POLITICAL AND OFFICIAL.

Their Majesties the Empress and Empress-Dowager propose to visit Yamato and Kiyoto, next February.

As was previously announced, the celebration of the one hundredth anniversary of the death of Gomomono Tenno, (the 117th Emperor of Japan) will take place to-day, at the Imperial Palace, where all the Imperial Princes, Ministers, Councillors of State, principal officials of the Government, *Kwazoku*, &c. will attend in uniform. The day will be considered as a general holiday throughout the country, all the Government offices being closed and the native newspapers suspending publication.

Mr. Horikawa, one of the chamberlains of His Majesty the Mikado, is now travelling through Kiushiu, and will return to the capital at the end of the present month. It is rumoured that it depends upon his report, whether His Majesty will visit those provinces next year.

Mr. Kennedy, the *Chargé d'Affaires* of England and Mrs. Kennedy, accompanied by H. E. Inouye, the Minister for Foreign Affairs and Mrs. Inouye, were admitted to an audience with H. M. the Emperor at 1 p.m. on the 29th ultimo.

In accordance with the recent notification from the Imperial Household Department, to forward copies of photographs of all the Government officials in and above the rank of *Nomin*, the Photographic Section of the Printing Bureau is now engaged in taking portraits of these officials at the rate of about fifteen daily.

On the 29th ultimo, the Council of State issued the following notification to all the Cities and Prefectures:—

"It is hereby notified that as the Meeting of Provincial Governors will take place next year, the Governors of all the Cities and Prefectures are requested to arrive in Tokio, not later than the 1st of February next.

"Note. In case any Governor cannot come to Tokio, on account of business connected with the local administration, his secretary should attend on his behalf."

It is rumoured that the Yenriokwan will be used for the debating Hall of the Provincial Governors.

The Council of State has informed the Governor of Okinawa Ken, that he need not attend the meeting of Governors next year. This is because it cannot be expected that matters in his province are as perfect as in the other provinces of the Empire, owing to its being so recently formed into a prefecture.

The Foreign office lately notified the Osaka *Fu*, to furnish it with a complete report upon every occasion which had occurred where Japanese laws, rules, &c., could not be enforced because the parties concerned were foreigners. This is said to be in connection with the forthcoming treaty revision.

The *Nichi Nichi Shinbun* says, that Mr. Inouye, the Minister for Foreign Affairs, has presented copies of all Government notifications, and a number of translations of foreign books, &c. to the policemen appointed to be his escort, in order that they may study them during their leisure time.

Mr. Yoshikawa, the Director of Telegraphs, who proceeded to London last spring, in order to represent the Japanese Government at the International Telegraphic Conference recently held in that city, is now reported to have left on his homeward journey, by way of America.

Eleven of the students who have received certificates of the completion of their studies at the Engineering College a few weeks ago, were on the 25th ultimo, ordered by the Government to proceed to Europe in order to obtain further scientific knowledge.

A chair in connection with the Buddhist religion, is to be established in the Department of literature of the Tokio University.

Messrs. Hiraoka, Kawano and three or four other members of the *Aikoku-sha* (Patriotic Society), arrived in Tokio a few days ago, in order to arrange for the establishment of a branch of the society in the capital. The office will be situated in the neighbourhood of Sukiyachō.

The *Choya Shinbun* reports, that in Peking, the 3rd November last, (the Birthday of the Mikado,) was celebrated in the Japanese Legation there. During the day, the entire building was decorated with flags &c., and at night it was illuminated by a large number of lanterns, fireworks being exhibited from time to time. In the evening, Mr. Shishido, the Japanese Minister, entertained all the leading Japanese officers and residents at the Legation, while a Chinese band which was in attendance discoursed sweet (?) music. Crowds of people assembled round the Legation to see what was going on.

The total amount of money spent for sanitary purposes throughout Kanagawa Ken during the recent epidemic of cholera, was 148,000 yen, and if the amount given as rewards to those who performed their duties diligently in connection therewith be added, the total amount would be about 150,000 yen. The total number of cholera cases throughout the Ken was 2,110, of which 1,501 proved fatal, whilst 637 recovered.

His Royal Highness the Duke of Genoa, left the Yenriokwan at 3 p.m. on the 28th ultimo, in one of the Imperial carriages, accompanied by Mr. Nabeshima, the ex-daimio of Hizen and other nobilities and escorted by a detachment of cavalry of the Imperial Guard and proceeded to the Imperial palace at Akasaka, at the entrance to which the party was received by H. I. H. Prince Higashi-Fushimi, and conducted by him to the audience chamber. His Majesty the Mikado, at once came forward and held an interview with the Duke. The party left the palace at about 3.40 p.m. and returned to the Yenriokwan. On the 29th ultimo, at 10 a.m., H. M. the Mikado returned the visit of the Prince at the Yenriokwan. The same day, the Duke proceeded to the Imperial palace at 2 p.m. to present the Mikado with the Order of the *Annunziata* from the King of Italy. His Highness was received at the palace by the Director of the Decoration Bureau and the Master of the Ceremonies and conducted into the presence of H. M. the Mikado. The Duke then presented the decoration in the name of His Majesty the King of Italy and affixed it to the breast of the Mikado. The Order is stated to be the most ancient in Europe and is so exclusive that there are said to be only twelve members belonging to it in Italy. His Majesty the Mikado has determined to present the King of Italy in return with the highest rank of the Order of the *Chrysanthemum*. The Duke was present at the races in the Toyama Park on the following day and visited the Tokio Normal School on Tuesday, where he was entertained at tiffin. In the evening, H.R.H. gave an entertainment at the Yenriokwan to all the foreign Ministers.

His Majesty the Mikado left the palace at 9.30 a.m. on Tuesday, and proceeded to the parade ground at Hibiya, Tokio, where he was met by the Duke of Genoa. His Majesty

and the Duke entered a carriage, accompanied by Prince Kitashirakawa and General Yamagata, the President of the Military Staff Bureau, and drove along the line of troops. The general review then took place. Several foreign Ministers were present and admitted to an audience with the Emperor. Lieutenant-General Taniwa was in command. The Duke visited the College of Engineering in the afternoon and on the same evening, the Emperor entertained him at dinner in the palace, when the Imperial Princes, Ministers, Councillors of State and the principal attendants of the Duke, in all about twenty-five, were present. Nabeshima, the ex-daimio of Hizen, entertained the Duke on Thursday, when there was a grand exhibition of *dakis*, (the old Japanese game of ball playing on horseback) for the amusement of the Duke. On Friday, the Imperial Princes gave a banquet in honour of the Duke at the Branch Palace at Shiba, and on the 7th, he will be invited to a rifle match which is appointed to take place at the rifle range at Mnkogaoka, under the auspices of General Oyama.

The Duke on Thursday visited the Imperial Naval College, in Tokio, where he witnessed the examination of the students of the various classes, firing drill with Armstrong guns, target shooting, &c. About twenty-five samples of the raw silk and cocoons, exhibited at the competitive exhibition just closed and for which the highest prizes have been awarded, have been forwarded to the Yenriokwan, for the inspection of the Duke and Mr. Morita Kanya, the proprietor of the Shintomiza theatre, has applied to the authorities for permission to invite him to a special performance in the theatre. A grand review of the Japanese men-of-war will take place shortly off the coast of Kanonsaki, in the presence of the Duke. The *Mainichi Shimbun* says, that His Royal Highness will leave the Yenriokwan on the 9th instant, and return to his ship now anchored in Yokohama.

On Friday, the Duke paid a visit to the paper mill at Oji. Invitations have been issued by the Prime Minister for a soirée on Monday evening at the Koku Dai Gakkô, where the guests will have the honor of meeting the Duke.

NAVAL AND MILITARY.

A complete chart of the whole coast of Korea is to be shortly prepared by the Naval Department.

The Japanese man-of-war *Iwaki Kan*, recently built at the Yokosuka dock yard, left there on the 28th ultimo, for a trial trip to Shimidzu.

A native paper states that the War Department has effected the purchase of a plot of ground, of about ten *cho* in extent in Hori-no-uchi Muru, Tokio, which they intend to employ as a parade ground.

A cavalryman of the Tokio garrison, was shot on the 2nd instant, on the execution ground at Yetchinijima island. The man had escaped from custody, while undergoing imprisonment for stealing 2,572.378 yen of the Government funds. On being recaptured, he was sentenced to death for breach of the military code.

INDUSTRIES, TRADE AND FINANCE.

The ceremony of closing the competitive exhibition of Raw silk and cocoons in the Town Hall, took place on the 1st inst. at 9 a.m., in the presence of the Directors of the Boards of Agriculture and Trade. We have been informed that the sales of raw silk contracted during the exhibition were one hundred and sixty-nine, the sales of cocoons being one hundred and twenty-nine. The exhibition was visited by 2,750 persons while it was open.

A number of officers of the Agricultural Bureau will proceed shortly to all the provinces in Kiushiu, Chiugoku, and Shikoku to inspect the state of agricultural affairs there.

The Treasury has recently granted 15,300 yen, to defray the expense of certain improvements recently effected at the Shimosa sheep farm.

The Agricultural Bureau of the Home Department has recently purchased in Paris, through the French Minister in Japan, a complete set of machinery for manufacturing sugar, at a cost of \$100,000.

The survey of the proposed line of railway from Otsu to Tsuruga, was finally completed on the 24th ultimo, and

a large number of labourers will be sent shortly to commence the construction of the line.

A Chamber of Commerce, consisting of about fifty of the leading merchants of Okayama and Tamashima, has been established at the former place. The new Chamber held its first meeting on the 26th ultimo.

The *Yomiuri Shimbun* states that, "some Yokohama native merchants are busily employed buying up wheat and rice to send to Lima, Peru."

The total number of silkworm egg-cards exported from Yokohama this year, up the 21st ultimo, was 661,147.

The *Mainichi Shimbun* indulges in some sentiment on the subject of the settlement of the iron hoops dispute, and talks of the foreign merchants "having laid down their arms at the camp of the native merchants."

The *Hochi Shimbun* says that Japanese merchants in Corea are frequently cheated by the natives, in the quality and appearance of the gold and silver dust which the latter exchange against imported goods. A simple test has been notified by the Japanese Consul at Fusan, whereby to discover any fraudulent attempt to pass off base metal for pure.

The same paper states that a number of Italian silk merchants who came to Yokohama to purchase silk-worm-eggs, left in the French mail steamer *Tibre* on the 4th instant, taking with them a large quantity of cards. Mr. Otani, the well-known native silk merchant, regretting the low price the cards fetched this year in Yokohama, left for Italy in the same steamer, also taking a large number of cards with him, for sale in the latter country on his own account.

The same paper reports that, on account of the recent excessive rise in the value of rice, the authorities of Miyagi Ken issued a notification on the 26th ultimo, ordering the people in that prefecture to suspend the manufacture of *saké* for the present.

The *Choya Shimbun* says, that it is rumoured in Kiyoto that some residents there are buying up Japanese subsidiary silver coin of the five and ten *sen* denominations at a premium of ten per cent. and exporting them to China.

The *Mainichi Shimbun* reports, that the new issue of paper money will be put into circulation by the Finance Department in a few days; and that all sections of the government have been notified that it will be called the "New Paper Currency."

The following is the official returns of imports and exports at all the open ports in Japan, during the month of October last, as prepared by the Customs' Bureau of the Finance Department:—

Value of imports.....	Yen 4,042,650.365
" " exports.....	" 3,778,152.350
Excess of imports over exports ..	" 264,498.015
Total customs' revenue	" 326,134.491
Gold and silver coins and bullion	
exported.....	" 1,580,695.025
Do. imported.....	" 67,384.000

Excess of exports over imports .. 1,513,311.025

The following is the return of the customs' revenue in the port of Yokohama during November last:—

Duty on exports	Yen 96,240.233
" .. imports	" 75,800.557
Miscellaneous income... ..	" 1,050.590

Total... .. Yen 173,091.380

The following is the return of shipping in the port of Yokohama, for the month of November last:—

	Arrivals.	Departures.
Native ships	94	92
Foreign "	15	20
	109	112

The total number of passengers by the steamers running between Yokohama and Yokosuka, during the month of November, was 14,264.

It has now been decided to proceed with the works for the improvement of the harbour of Hakata, in Fukuoka Ken, and Mr. J. de Rijke, of the Board of Works, will proceed there at once to make the necessary preliminary surveys.

MISCELLANEOUS.

We learn from the native papers, that the editor of the *Nichi Nichi Shinbun* was fined ten yen for libel on the 28th ultimo. There was nothing very remarkable about the fact of the libel and fine, but it certainly does appear rather strange when we find out further on, that the fact of his having committed a similar offence very recently and been fined five yen for it, is treated as an extenuation! and the fine on the present occasion reduced in consequence to five yen also! But there is yet more behind, on the same day, the editor of the *Chuga Shinbun*, was also fined ten yen for libel, but as, like his confrere of the *Nichi Nichi*, he too had recently been in difficulties about a libel and fined ten yen, his fine was, on the present occasion, remitted altogether! The law of libel as affecting native journalists is certainly very fanciful and leads occasionally to strange results. We have heard on very good authority, that the proprietor of one paper when he ventures on a libelling match or an infraction of the press laws, deals in no half measures so that the offence will be punished with imprisonment and not by fine, he thus saves his pocket and the person put forward as responsible suffers the imprisonment.

A report recently received from Okinawa Ken (Loochoo), states that according to the last accounts, the total number of villages in the whole of the Loochoo islands is about 530; the houses are about 30,000 and the population about 307,000; of whom 133,000 are males and 154,000 females.

The *Hochi Shinbun* reports that the villagers of Uchishikimura, in Shimoda, have hitherto been disaffected on account of something connected with the practice of cutting the *Kaya* (kind of rush) growing in the ground owned by Mr. Awoki, the Japanese Minister to Germany. A few days since about fifty of them left their homes in order to present a petition direct to the Home Office even by force of arms. This occurrence having been telegraphed to the authorities, policemen from both Tokio and the Prefecture have been ordered out to endeavour to persuade them to return quietly to their homes. No further reports or details are yet to hand.

A fire of comparatively some magnitude broke out in Nakachô, Sakura, Shimoda, on the 25th ultimo, at 2 a.m. It destroyed 164 houses and a large number of people are rendered homeless.

The *Chuga Shinbun* states that a *shizoku* of the Fukuoka Ken called on the 27th ultimo at the Ibaraki *Kencho* and wished to present a memorial. The officials refused to receive it. After making four or five attempts to change their determination the man retired into one of the waiting rooms and blew out his brains with a pistol. The contents of the memorial have not been made public. The *Nichi Nichi Shinbun* reports that the man was insane.

Mr. Shimadzu, the Ex-Daimio of Satsuma, repeated his performance of the *Inu-o-mono* at his residence on the 29th ultimo, before a number of guests who assembled in response to his invitation. The company consisted of his friends and acquaintances, his former principal retainers and Shotai, ex-king of Loochoo, and about twenty of the officers of the late Loochoo Han.

The *Hochi Shinbun* states, that Messrs. Yasukawa and Miura have formed a society with the object of giving public lectures twice a month in *Ibunmura-rô*, Asakusa, Tokio. Among the members of the society, are Dr. Faulds, Mr. Verbeck, &c., &c. The *Hochi* also says, that the Hon. J. A. Bingham, U. S. Minister, Messrs. Swing (?), Ewing and Cooper, of the Tokio University, Mr. Dixon of the Engineering College, Dr. Hepburn and other gentlemen, will occasionally give lectures for the society. The first meeting of the members will take place on the second Saturday of the present month.

Mr. Læya and some other residents of the district of Azabu, in Tokio, contemplate fetching water from the Tanagawa in pipes, for domestic purposes in the district, at an estimated cost of 30,000 yen. It is proposed to form a company, divided into three hundred shares of one hundred yen each, and to utilize the deep wells as reservoirs for the water, charging four yen and a half per annum for permission to use it. After all expenses connected with the scheme are repaid, the present idea is to devote the net revenue to sanitary and educational purposes.

From and after the 1st inst., the shrines of the Tokugawa

at Zojoji, Shiba, Tokio, will be open to the public daily from 9 a.m. to 4 p.m. This is the first time any but members of the family have been permitted to visit these shrines and they are said to be very well worth inspection, as they contain matchless relics of "old Japan."

The anniversary of the wreck of the *Tokushima Maru* No. 3, at Awaji, occurred last October, and Mr. Nakayama, of Kochi Ken, and some other residents of that place are about to build a beacon about 18 feet in height, at their own expense, at the point on the coast where the wreck took place, and dedicate it to those who were then drowned. This beacon will ensure the safety of the navigation of the neighbourhood for the future.

Native papers report that, a "gentleman of colour" recently visited the house of a native butcher in Ota, Yokohama, and offered a small animal for sale. Although the butcher did not know what kind of an animal it was, he offered a few yen which the gentleman of colour willingly accepted, and went away rejoicing. It has since been discovered that the animal is a musk cat! This astounding fact having become known, some speculators offered as much as six or seven yen a day for a loan of the cat to open a show with, and the ex-daimio of Kaga is said to have offered 1,700 yen for it. But the butcher refused to sell the cat as he has determined to make it a present to the Emperor."

IMPERIAL GOVERNMENT RAILWAYS.

TOKIO AND YOKOHAMA SECTION.

Statement of traffic receipts, for the week ending Sunday, November 30th, 1879.

Passengers, parcels, &c.	\$ 7,999.54
Merchandise, &c.	\$ 1,307.36
Total.....	\$ 1,036.90

Miles open 18.

Corresponding week last year.

Passengers, parcels, &c.	\$ 6,707.42
Merchandise, &c.	\$ 915.68
Total.....	\$ 7,623.10

Miles open 18.

KORE AND OOTSU SECTION.

Statement of traffic receipts, for the week ending Sunday, 30th November, 1879.

Passengers, parcels, &c.	\$ 12,792.03
Merchandise, &c.	\$ 2,226.57
Total.....	\$ 15,018.60

Miles open 55.

Corresponding week last year.

Passengers, parcels, &c.	\$ 9,542.52
Merchandise, &c.	\$ 1,409.20
Total.....	\$ 10,951.72

Miles open 47.

THE JAPANESE PRESS.

A COPYRIGHT LAW WANTED.

(Abridged from the *Kinji Hiron*.)

A COPYRIGHT law for all books and publications, original or translated, is as necessary as is a patent law to protect mechanical inventions. Without some such guarantee for the safeguard of the results of their ingenuity and talent, learned and industrious men can have no certainty of reward for their labour. The outcome of their research may be appropriated by any unscrupulous scoundrel. Copyright regulations have been found necessary in all civilized countries, in order that men who work with their brains may have the same protection as the patent laws accord to inventors of manual contrivances. . . . If, however, the laws are not properly adapted to the purpose which they are meant to serve, they will inflict injury upon the public at large. Both copyright and patent privileges remain in force for a certain number of years, varying in different countries from five to fifty. After the lapse of the period allowed, any person other than those in possession of the rights secured can manufacture

the articles, or print the publications, as the case may be. Now in Japan, regulations for publication have recently been issued; and the publishers of books, original or translated, have increased in number daily, and the corresponding evils in proportion. We are forced to assert that translations of foreign works do not serve the literature of our country: they rather obstruct its advance. We will explain what we mean by evils accruing from translation. A person may apply for the copyright of a rendering of a large foreign work into Japanese. On receiving the required sanction, he will probably only translate one or two chapters, which he will publish in two or three Japanese volumes: then he will publish no more, and thus retard the translation of the remainder for several years. Even if the book is not a large one, he may pursue the same course. Now if another person should attempt to translate the remainder, or even to make a fresh rendering, he will most likely be proceeded against by the first translator, in virtue of his holding the so-called copyright. Let us look, for example, at the translations published since the beginning of the era of Meiji and we shall see how few of them have been completed from beginning to end, so as to represent accurately the originals. Indeed some editions, containing the translation of the opening sections or chapters, are dated ten years ago, whilst others are six or seven years old. But the translators will neither relinquish their copyright nor promptly publish the remainder. They keep the work by them in the hope of gaining further advantage. How mean and selfish! [The writer next reviews the benefits to be derived from translations properly and thoroughly made.] It may be argued, in opposition to our view of this question, that article seventeen of the regulations affords sufficient protection from these evils, as it authorises any one to make a fresh translation of any work if it can be shown, either that the former translation contains errors or omissions, or that the proposed new translation will be a more faithful and easily understood rendering of the original. Practically, however, this provision is found to be altogether valueless; the first translation, as far as it goes, may be perfect, and the translator can then leave the remainder unpublished for eight or ten years, thus depriving the public of all benefit from it; and again, even if the first translation contains errors, it is the natural disposition of all men to refrain from disclosing the faults of their fellows, and be the means of their losing their copyright. The practical result is that, as the law now stands, the vast benefits to be derived from the perusal of numbers of valuable foreign publications, are entirely confined to those who have acquired a knowledge of the language in which the particular works may be published. We therefore reiterate our former opinion that article seventeen is inadequate for the purpose it is intended to accomplish. The expressions used in the article, "omissions" and "making the translation more easily understood," seem to us to be extremely ambiguous. For example, a free translation may be unexceptionable as a free translation, but if treated as a literal translation it will undoubtedly be found full of errors. It thus appears that everyone can term a translation erroneous or otherwise according to the light in which he chooses to regard it. Again, power is reserved to grant or refuse a copyright. We therefore find that, although a second translation may supply all the errors and defects in the first, it depends altogether upon the will of the authorities, whether or not a copyright will be granted for it. In order to meet the requirements of the situation we would suggest the following amendment in the existing regulations affecting copyright, viz:—that, if the translator of a foreign book fails to publish a complete translation of the work within two years from the time of obtaining a copyright in respect of it, his copyright should *ipso facto* become null and void. Such a regulation would be of the utmost value to all parties, both those whose business it is to make translations and the very large class who depend upon these translations for the means of acquiring a knowledge of foreign literature, not otherwise attainable.

THE PROTECTION OF INDIVIDUAL LIBERTY.

(Translated from the *Nichi Nichi Shinbun*.)

IN compliance with a very generally expressed feeling on the part of the public, the Government has, we understand, caused a revised criminal code to be prepared and

this code has now been submitted for the approval of the proper authorities. It is therefore only reasonable to surmise that the time is not far distant when the new code will be brought into operation. As we have no reliable information as to what is actually being done, we will pass over at present without comment one or two rumours that have reached us, but at the same time we must express our conviction, that when the new laws are brought into force they will be found to have the beneficial effect of guarding the rights and liberties of the Japanese. The most important subject at present attracting the public attention, on the question of a revision of the criminal code, is the establishment of the system of "trial by jury." As we believe this system is of the utmost consequence for the protection of personal liberty, we strongly advocate its adoption without waiting to consider whether or not it is suitable to the present circumstance of the country. We will put on one side for the moment, the question of the advantages of trial by jury and mention other matters of vital importance to the protection of personal liberty. These are, 1st, that warrants should be issued for the arrest of criminals; 2nd, that every prisoner should be looked upon as innocent until proved guilty; 3rd, that every prisoner should be brought to trial within a specified time or else released from custody; 4th, that trials should be conducted in open courts; 5th, that after once being tried for an offence and acquitted, the accused person should not be tried again for the same offence; 6th, that a criminal should only be tried for the offence with which he stands charged; 7th, that criminals should be allowed to employ counsel; and 8th, that the examination by the official prosecutor should always be made in the presence of a Judge. All these matters we trust to find provided for in the new criminal code. After careful observation of the proceedings of policemen and detectives in the discharge of their duties, we have come to the conclusion, that although they cannot be furnished with warrants for the arrest of persons who commit offences in their very presence, yet they frequently neglect to procure warrants for the arrest of offenders who have already been charged with crime. We are aware that in the case of grave offences warrants are issued, but we are not sure that the name of the person to be arrested is mentioned in them, nor even the nature of the crime with which he is charged. Then again, petty thieves are arrested not only without any warrant at all, but the so-called detectives have nothing to show that they are really clothed with the official power they assume. Now, although the existing practice may be suitable to the present circumstances of the country, yet, if it be regarded from the point of view of the protection of the liberties of the people, it can scarcely be considered either right or proper, because as matters now stand, the most respectable gentlemen in the community are liable at any moment to be arrested by the so-called detectives and have no power when arrested to insist upon answers to such questions as:—"Why am I arrested? Have you any warrant for what you are doing? Is the name of the person to be arrested stated in your warrant? What crime am I charged with?" and so on. In fact the absence of a warrant effectually prevents people from having any protection. Up to the present time the great care exercised by the police officers and detectives, has prevented any serious evils arising, but if unprincipled persons happened to be made detectives, very grave consequences might ensue, for which the law as it at present stands, provides no adequate remedy. If there was any probability of anything of the kind occurring it would indeed afford good cause for regretting the imperfections of the existing criminal code. It appears to us that the following rules are of the utmost importance for the due protection of the rights and liberties of the people, viz:—That in every case a warrant must be issued for the arrest of an offender signed by some official, specially authorised for the purpose; that except when an offence is actually committed in the presence of an officer, no person shall be arrested without a warrant, no matter how clear may be the evidence of his guilt; that the officer making the arrest shall in all cases produce his warrant and only use force when resisted in the execution of his duty; that the warrant shall state distinctly the name of the person to be arrested and the nature of the offence with which he is charged; and finally, that all warrants which do not comply with these requirements shall be treated as void and conferring no authority whatever.

(To be continued.)

MR. ASANO ON CIVILIZATION.

THE *Choya Shimbun* lately despatched a special correspondent, Mr. Asano, to America and Europe, whose experience and views of matters in those countries, as detailed in his letter to the *Choya*, excited considerable surprise and amusement. Mr. Asano has now returned to the land of his nativity, apparently a wiser and sadder man than when he left it, some few months ago. A recent issue of the *Choya* contains a communication from that gentleman referring to his trip and will probably prove interesting. It is entitled, "Can the European and American nations be styled enlightened?" and is as follows:—

'After my recent experience the prevalent idea, "that European and American nations are highly civilized," excites in me the greatest wonder. It is not because I desire to be considered eccentric that I give utterance to an opinion opposed to that of the rest of the world, but because I sincerely believe the generally accepted belief is wrong, both in theory and practice. I will now give the reasons why I have arrived at my present conclusion.

'The nations of Europe and America, more especially England, France and the United States, admittedly stand in the front rank of civilization, both as regards the perfection of their method of government and laws and the prosperity of their trade and commerce. This "perfection" and "prosperity" are principally due to the advanced state of education amongst the people. Now the intellectual condition of the inhabitants of these countries cannot be considered either good or bad. Intellect is either good or bad as it is employed, therefore a country or people should not be hastily styled "good" because their intellectual culture is in an advanced state. This is my reason for doubting the propriety of terming European and American nations "civilized and enlightened." It is undeniable that in those countries everything has attained the highest degree of perfection and the inhabitants are wise and learned. But if matters worthy of admiration have made great progress so also have matters which call for the strongest condemnation. Thus these nations are superior to us in their system of government, laws and literature, but at the same time adultery, manslaughter, stealing and highway robbery are much more prevalent amongst them than here in Japan. Trade and commerce are very flourishing in these vaunted lands, but so too is private immorality. This is the result of my personal experience and no one need doubt me when I assert, that in these countries, dissolute habits are much more common than amongst ourselves. When I was going abroad a short time since, a friend said to me that I was about to visit the great centres of civilization, that all I would see and hear would be most excellent, and that I should derive great benefit from my trip. On my return the same person remarked to me, evidently very much displeased, that the notes of my journeyings in foreign lands, which appeared from time to time in the *Choya Shimbun*, were not at all complimentary to the various places I had visited, and although there might perhaps be some small amount of truth in what I had written, "was it possible that such evil practices as I had described could exist in civilized countries?" Said he, "If all you have written is truth, what is civilization? Where is the real benefit of it?" I was really greatly amused at these remarks, as I know well that the present condition of European and American countries is certainly not that of the "Golden Age," and as far as morality is concerned—well the less said about it the better. However, they have one consolation,—intellectual culture receives great attention. How can the practices obtaining in these countries be termed good? For my part, noticing how their intellects are cultivated, I wonder they are not worse than they really are. People as a rule, like my friend, fall into the egregious error of styling these people civilized and enlightened. What a pity it is that some learned man will not undeceive my countrymen who have evidently been led astray by the word "civilization." Let us see what is the origin of this much used word "civilization." I think it is derived from the Latin word *civis*, which means literally a *citizen*. Here then is another glaring example of the disingenuousness and greed of Europeans and Americans. Everywhere, both at home and abroad the intellectual culture of citizens is superior to that of

country bumpkins, but at the same time their immorality and depravity are also greater. There can, however, be no question which class is preferable. It is no doubt right to call Europeans and Americans *civilized*, i.e., *citizens*, but I am altogether opposed to styling them *enlightened*. My readers! Do not be alarmed at hearing of the vicious customs of Europe and America. These countries are not "enlightened" in the proper sense of the word: they are merely places where both good and evil practices have reached a great and equal state of perfection. After visiting these vaunted haunts of civilization, the only surprise I feel is, that they are not worse than I found them!

ON SOME POINTS IN THE FRENCH AND GERMAN BANKRUPTCY LAW.

As it is in the parliamentary recess that bills of any value must be really considered, and as a new Bankruptcy Act is one of the subjects which must be discussed next session, it is not uninteresting to consider some points in the existing bankruptcy laws of France and Germany. For in regard to the law of bankruptcy reformers are not hindered by any antique doctrines or any difficulty in discovering what is in fact the existing law on the subject.

One of the most flagrant vices in our present bankruptcy law is admitted on all hands to be the ease with which vicious insolvents get rid of their burdens. Years ago virtuous law reformers introduced into English bankruptcy law provisions to lessen these evils, but they proved, in the form in which they were then cast, of very little use. On this point, however, both the law of France and of Germany is exceedingly stringent; and even if it has no direct practical effect, in yet serves as a national mark of disapprobation of evil practices that result in bankruptcy, and of bankruptcies which are not wholly due to ill fortune. And undoubtedly it is a step towards putting an end to bad practices, if they are stigmatized by legislative enactment. Thus under the French Commercial Code of Insolvency and Bankruptcy a debtor is liable to be convicted and sentenced by the tribunal of correctional police, on the prosecution of the trustee, a creditor, or a public officer, for a considerable number of irregularities. The offences are: if the debtor's personal expenses or those of his household are found to be excessive; the loss of large sums gambling in or on the Stock Exchange; putting bills into circulation to obtain money with a view to stave off a failure; after the suspension of payment paying one creditor to the prejudice of another; and the keeping of books which do not show a true statement of assets and liabilities: and these offences must be distinguished from more distinctly fraudulent proceedings, which are dealt with in a separate chapter of the code. Careless or vicious trading and speculation is equally punishable under the new German Bankruptcy Law of 1877. We cannot enumerate all the offences which bring punishment on the head of the offender, but some of them may be stated here. Thus a debtor may be punished with two years' imprisonment when he has lost money or become indebted by excessive expenditure, gambling, or speculation in differences either on the Stock Exchange or in merchandise, or has omitted to keep trade books or has kept them improperly. For preferring one creditor to another when they are aware of their insolvent state, debtors are liable to a term of imprisonment not exceeding two years. Nor is the creditor exempt from punishment; for if a creditor accepts from the common debtor some special advantage, or even a promise of it, on an understanding that he shall vote in some particular manner, he may be punished either with a fine of 3,000 marks or with imprisonment for a period not exceeding one year. Thus we see that the existing bankruptcy law both of France and Germany contains penal provisions which bring the careless or reckless trader within the category of criminals; and it must be borne in mind that in Germany this bankruptcy law was enacted so recently as 1877. But such provisions as these authorize a much larger legal control over the business affairs of traders than has hitherto been known in any English bankruptcy law.

Turning to another point, it appears that both in France and Germany the administration of the bankrupt's estate is considerably more under the control of the courts than it is in England. In France, by the decree declaratory of the insolvency of the debtor, the Tribunal of Commerce appoints one of its members as a judge-commissioner, whose business it is to accelerate and to superintend the administration of the insolvent estate, and to report to the Tribunal of Commerce all disputes that may arise out of the insolvency. But the decisions of this official are subject to a Tribunal of Commerce, which is in fact the Bankruptcy Court, to which application has frequently to be made. For the judge-commissioner's duties are more akin to those of the old official assignee, who under some bygone English Bankruptcy Act had conjoint duties with the creditors' assignee. At the same time, the really active administrators of the estate are the trustees, who, provisionally appointed by the sole authority of the Tribunal of Commerce, have to be confirmed in their office by the creditors in consultation with the judge-commissioner. But it is obvious that in most cases these persons provisionally appointed by the Tribunal of Commerce will become the permanent trustees; so that it is really the law courts and not the creditors who have the control of the trustees. Again in Germany the power of the courts is paramount, for the administrator in bankruptcy is appointed by the court; and when the administration embraces several branches of business several administrators may be appointed, each of whom is independent of the others. By way of recognizing the rights of the creditors in this matter, however, the law provides that, subsequent

to the appointment of the administrator of the court the creditors may elect another person in his stead. But it is provided by the same section that the court may refuse to recognize this nomination, without assigning any reason for doing so. The administrator when he has entered on his duties is directly under the supervision of the Bankruptcy Court; but, on the other hand, a creditors' committee, chosen by the general body of creditors and approved by the court, assists the administrator in his proceedings and supervises the conduct of them. To these persons he has to submit all the information they desire, and once in every month he must have his cash balances verified by a member of the committee. There is another useful section by which the administrator, before making a distribution of assets, has to deposit at the registry office of the court a statement of the claims and of the sums to be distributed; and the statement is open to the inspection of all those who are interested in the affairs of the bankrupt. The object of all these provisions is to give to the legal tribunals the main control of bankruptcy proceedings, while allowing creditors cognizance of all that is going on and opportunities of stating their views and desires; and considering how often some creditors are biased by various considerations towards undue leniency to the debtor, while others are unable or unwilling to busy themselves in winding up a bankrupt's estate, there is much to be said in favour of the system which is in force in France and Germany.

Turning to the important question of compositions with creditors, we find that in both France and Germany a debtor may make no arrangement with his creditors in cases of fraudulent bankruptcy; and no such arrangement can take place unless it is approved by a majority of creditors representing three-fourths in value of the total claims. Again in both countries no such agreement is valid without the sanction of the court. In France it is the judge-commissioner who has the virtual authority in this matter; for before the confirmation can be decreed he must report on the character of the insolvent and the admissibility of composition. And though the court has power to refuse to confirm the composition, there can be very little doubt that the report of the judge-commissioner virtually guides its decision. There are other provisions in regard to the subject of compositions of too technical a character to be noticed here; but what has been said shows that in relation also to this matter the policy both of France and Germany is to keep a large measure of control in the hands of the court, and to make the plans of the debtor and his creditors depend for fulfilment upon their agreement with principles of equity and the welfare of the commercial community. Only one other point remains for notice: it arises out of the German law touching the question of insufficient assets. If in the opinion of the court the assets are insufficient to cover the costs, the application to institute bankruptcy proceedings may be annulled; and current proceedings in bankruptcy may be arrested whenever it appears that the assets do not suffice to pay the expense of the proceedings. By this means long and tedious windings-up, which result in benefiting no one but an assignee, are to some extent avoided.—*Pall Mall Gazette*.

LAW REPORTS.

IN H. B. M.'s COURT FOR JAPAN.

Before R. T. KENNIE, Esq., Judge.

Tuesday, 2nd December, 1879.

Between WILLIAM ALFRED MALCOLM, trading as MALCOLM, WILLCOX & Co., plaintiff; and JARDINE, MATHESON & Company, defendants.

Continued from Thursday, 27th November.

Mr. Litchfield again appeared for the plaintiff and Mr. Kirkwood for the defendants.

Ah Hi, examined by Mr. Litchfield:—am a Chinese subject and employed by plaintiff as a godown man. I look after the landing of plaintiff's goods. Last September I recollect some iron coming to plaintiff by the *Viceroy*. There were 584 bundles. I saw the iron at the Hatoba on the 4th September. It was then in two cargo boats. About 9 o'clock in the forenoon of that day the sky looked very dark. I saw the iron about half-past twelve. It was then raining very heavily. The boats in which the iron was, had no tarpaulins over them. I saw the iron landed after the rain ceased. I said something to Mr. Phillips. The iron was wet.

Cross-examined by Mr. Kirkwood:—Both the boats had sheet iron in them. There were no other goods in the boats. Some of the iron was discharged at half-past twelve on the 4th. I do not know how much. I did not interfere with the iron. On the 5th I handled the iron. It was all put in one heap, both what was wet and dry. When I returned from seeing Mr. Phillips on the 4th, the iron was not covered up. I saw no Chinamen working with it only Japanese. I only saw our sheet iron in these two boats. I do not know if there was any of our iron in other boats. When I first saw the iron on the 4th there may have been three or four hundred bundles landed. I did not count it. When I came down at half-past twelve, there was only forty or fifty bundles landed. I know captain Scott's

Chinamen. I know the iron was wet because it was landed in the rain, but I did examine it on the 4th. On the 5th, I examined it. I paid duty on the iron on the 5th and on that day and the following day got a coolie to separate the wet from the dry iron. The custom house officer marked the iron on the 6th. A good deal of the iron was left in the boats all night on the 4th. The iron was all separated on the 5th and 6th. I could not tell if any of the iron got wet on the night of the 4th.

Re-examined by Mr. Litchfield:—The iron was not in the bonded warehouse when I first saw it. A custom house coolie put it in the Hatoba godown first and afterwards in the warehouse. On the 5th the iron was under the shed. The iron was piled under the shed by Scott's coolies and separated by plaintiffs.

Francis Cunningham Spooner:—I am a merchant carrying on here the business of a storekeeper and commission agent. In September of this year I surveyed some sheet iron in company with Mr. Barlow. Mr. Phillips asked me to survey. The iron was marked W in a diamond. There was between two and three hundred bundles. The iron was in a rusty state. It was damaged to such an extent that it would not bring the market value of sound iron. It was not in a condition to bring the full market price. I did not ascertain the cause of the rust. There was no dispute about the cause then. I was called in to see it in the 14th or 15th and had not seen it previously. I have had considerable dealing in iron. I have never cleaned and oiled iron delivered to me in a wet state.

Cross-examined by Mr. Kirkwood:—If it got wet coming from the Hatoba to the godown, I could protect it in any way I would. This sort of iron would be difficult to clean as it comes in bundles. If it was damaged so as to require the bundles opened, I would send it to auction. If the water was left on, the iron would of course rust. If I was to receive a parcel of iron which was damaged so as to require cleaning, I would prefer sending it to auction at my own risk, sooner than incur the great trouble and expense of cleaning. A Japanese might take it and try and make it look as well as possible. It would not be worth my while cleaning it. When I examined the iron a few of the bundles were open. I saw the inside of them. I cannot tell how old the rust was.

Richard Bulkeley Phillips recalled:—The plaintiff's claim is made out on the basis between the contract price and the net proceeds at auction.

Mr. Litchfield put in the surveyor's report, which was marked as exhibit "G."

This closed the plaintiff's case.

Mr. Kirkwood then opened the defendants' case. He mentioned that before entering into the merits he would state generally the line of defence he would adopt. He submitted:—1st, that the defendants were not the agents of the plaintiff; 2ndly, that they were only the agents for the ship, and if employed by plaintiff at all were employed by him solely in that capacity; 3rdly, that if the defendants were employed by the plaintiff, the terms of employment were such, that the defendants incurred no personal responsibility but that the sub-agent if anybody, was responsible. The learned counsel proceeded to shew the meaning of the advertisement inserted in the papers by the defendants upon the arrival of the *Viceroy*. He held that it simply meant that the defendants, being the agents of the vessel, undertook to offer their services gratuitously to consignees to see that their goods were handed over to a third party to be landed and that under the terms of the advertisement, the defendants incurred no liability whatever. In the present instance, the defendants had employed a competent agent to land the goods and that was the utmost they were bound to do, even if they could be held to have been the agents of the plaintiff. The plaintiff had not stated if he wished to hold the defendants liable as "common carriers."

Mr. Litchfield:—They are sued as "carriers for hire" and do not see that I am bound to disclose anything further.

His Honour:—I do not think it affects the case at all. If the defendants are liable at all they are liable under a special agreement.

Mr. Litchfield:—If it will assist my learned friend in any way, I will admit that I do not think there can be such a thing as a "common carrier" in Yokohama.

Mr. Kirkwood :—My contention is, that the defendants are not "carriers for hire," but only "mandataries" and therefore only liable for gross negligence, which has neither been alleged or proved.

His Honour :—You will have to get over the difficulty established by Mr. Litchfield, that if the plaintiff cannot sue the defendants who can he sue.

Mr. Kirkwood :—The landing agent Scott.

His Honour :—How can the plaintiff sue Scott when no privity of contract exists between them?

Mr. Kirkwood :—I contend that the plaintiff could do so.

His Honour :—Sue a sub-agent?

Mr. Kirkwood :—We can prove that it is the custom of the port, and that similar previous proceedings have been taken.

His Honour :—I have already mentioned that I do not think any "custom" can be said to exist in Yokohama. How could they sue Scott?

Mr. Kirkwood :—The plaintiff should have sued Scott, assuming that his contention is correct that defendants were employed as his agents and that negligence occurred. I shall now adduce authorities in support of my position. The learned counsel then quoted several passages from *Story on Agency*, shewing that under certain circumstances and customs of trade, the agent was not responsible for the acts of the sub-agent, if he had exercised due care in selecting him and that the recourse of the principal would then be against the sub-agent, the law assuming a privity established by custom. The usage in Yokohama was well-known and it was laid down in the same work that in general, in cases where it was well understood by the parties, the particular means by which a particular piece of business was to be done, the liability of the parties *inter se* was governed by such understanding. Counsel contended that the advertisement of the *Viceroy*, meant only that the defendants would land goods in the usual manner customary in this port, that is :—get some one else to do it for them. The agents of vessels never derive any remuneration from landing goods. They merely employ a sub-agent who settles his charges direct with the consignees. The agent merely sees the goods taken out of the ship and put into the hands of a competent person to land them on the *Hatoba*. Counsel again quoted from *Story on Agency* in support of his contention.

His Honour :—Have you any cases to produce?

Mr. Kirkwood :—The doctrines are well established. The cases referred to by *Story* are in *Mauds and Selwyn's* reports and *Lord Eldon's*.

His Honour :—I should like to see them. *Story* is an admirable authority, but I should like to see if the cases he refers to are American or English.

Mr. Kirkwood proceeded to quote from the same work, in regard to the usage of trade governing the liability of the principal.

His Honour :—I suppose you want to shew that Scott might have sued plaintiff for his bill?

Mr. Kirkwood :—Clearly your Honour, plaintiff and Scott arranged the prices to be charged between themselves previously, this is shewn conclusively by the letters produced. I am also prepared to prove by persons doing an extensive business as shipping agents, that it is the invariable custom for the agents not to land the goods themselves. The landing charges do not appear in the agents' books at all. This Mr. Phillips, the plaintiff's manager admitted.

His Honour :—You can refer to these points again.

Mr. Kirkwood :—As to any damage plaintiff has sustained the proof is very slight indeed. It was clearly the duty of the plaintiff to have cleaned the iron and taken steps to preserve it, and not let it remain for a fortnight deteriorating. It also appears that plaintiff took possession of the iron on the 5th September by exercising acts of ownership over it and paying the duty. No negligence whatever has been proved. The goods left the ship covered up safely, they were so protected when they arrived at the *Hatoba* and any damage that occurred during transit (although there is no proof of any such damage), was due entirely to stress of weather for which neither the defendants nor the sub-agent are legally liable.

Mr. Kirkwood then called :

James Johnstone Keswick :—I am a partner in the firm of Jardine, Matheson & Co. and have been manager here for

about four years and a half. I am well acquainted with the custom of this port and have had great experience in shipping. With Messrs. Adamson Bell & Co., I should think my firm have the largest shipping business here. The steamers of the *Glen* line come to my firm. The *Glenorchy* is one of them. Most goods that come here come under the eastern bills of lading, similar to that produced, (exhibit "A.") The consignees have to take delivery from alongside the vessel. On the arrival of a ship we invariably put an advertisement in the local papers. We did so when the *Viceroy* arrived in September last. The document produced is the advertisement we then inserted. (exhibit "II" being the advertisement set out in the answer). By the words "landed as heretofore" used in the advertisement, I mean that Jardine, Matheson & Co. will, for the convenience of consignees of goods, adopt the invariable custom of the port and appoint a landing agent to prevent the trouble of consignees taking delivery themselves alongside.

His Honour :—I do not think I can take Mr. Keswick's version of the advertisement. Whatever he has committed himself to he must be bound by. It is for me, after hearing the evidence, to construe the advertisement.

Mr. Kirkwood :—How have you caused goods to be landed "as heretofore"?

Witness :—Heretofore we have always, when applied to by consignees under the terms of such an advertisement, employed landing agents on behalf of the consignees to land the cargo on the *Hatoba*. We have never on any occasion had anything to do with the cargo after it has left the ship. We handed over the plaintiff's goods to Mr. Scott to land. Mr. Scott has acted as a landing agent for different persons all the time I have been here. He has frequently landed goods from ships consigned to us. We have never received any "reward" or "hire" for landing or causing goods to be landed. The charges for landing have never passed through our books. The landing agent has always settled direct with the consignee. Our object in offering "as heretofore" to find some person to land the goods, is to afford convenience to the consignees and discharge the ship as quickly as possible. It is really for the convenience of every one having goods on board. For example, a person having one package on board would otherwise have to send a boat alongside and wait until it came out. As sub-agent our *compradore* has often landed goods from ships of which we were agents. In appointing him I considered we appointed a competent man. We appointed him to act for the consignees in the customary way and land the goods. When he has landed goods we never received any reward for his doing so. He has kept all the hire himself and settled the accounts himself. Some of the gentlemen in the office initial the accounts for him as he is a Chinese and does not speak English well.

Cross-examined by Mr. Litchfield :—I consider our *compradore* our servant as long as he remains so. If I was to appoint one of my clerks to act as sub-agent and he received pay from other persons I should consider myself relieved from all responsibility. The words "as heretofore" have held the meaning I attach to them for about fifteen months; in other words, from the time an advertisement of this nature first appeared. The same practice has obtained from the earliest date in Yokohama. I think Mr. Litchfield is rather confused in his question; the words could have no meaning *before* they were inserted. This form of advertisement was first used shortly after the kerosene fire at the *Hatoba*. Previous to that, goods arriving on board ship were landed on the *Hatoba*, first giving the consignees an option of landing them for themselves. (Exhibit "F." handed to witness). This advertisement refers to transhipped cargo. The document now shown me is a *compradore's* bill initiated by a gentleman in our office (exhibit "I"). Exhibit read :—

"MESSRS. MALCOLM, WILLCOX & Co.

Dr. To JARDINE, MATHESON & Co.

To landing charges per ship *Glencagles* \$2.56.

Rec'd. payment. JARDINE, MATHESON & Co.
per C.H.C."

I cannot say when we first employed captain Scott. I cannot say if there were less claims when our *compradore* landed goods than when other people landed them. By claims, I mean claims generally. The words "as heretofore" were thought to be very explicit before the trouble arose

about this small quantity of iron, but to save all question we have now changed the form as to the landing of goods. The advertisement shown me, dated 19th September, 1879, is the form we now use, (exhibit "J."). Exhibit read:—

"NOTICE.—The Steamship *Glencoe*, from London and China Ports. Consignees of cargo by the Steamship *Glencoe*, are hereby informed that their Goods are ready for delivery alongside the vessel, in accordance with the terms of the Bills of Lading. Consignees who may be desirous to have their goods landed by the Agents of the steamer will please make the request in writing, at the same time intimating that the landing is to be at the risk and expense of the Consignee. All cargo which unduly impedes the discharge of the vessel will be landed by the Agents, and stored in the Bonded Warehouse, at Consignees risk and expense. JARDINE, MATHESON & Co., Agents. Yokohama, Sept. 19th, 1879."

Under the new advertisement we are not answerable for any damage which may happen between ship and *Hatoba* and were not previously. I consider the liability is still the same. There was a claim by Hudson & Co. under the new advertisement, but I have heard nothing of it lately. I know nothing of the particulars but will find out for you. I have heard nothing of the matter for a month.

Re-examined:—The claim in this case was first made against the captain. When we have landed cargo without instructions from the consignees, we have done so as the ship's agents.

Frederick D'Iffanger:—I am manager here for Messrs. Adamson, Bell & Co., and have been so for eight years. We do a large shipping-agency business. We are agents for a great number of steamers, the *Castles* and *Shires* amongst others. We make use of a similar form of advertisement to that used by defendants (exhibit "H"). Our custom when requested to land goods by consignees under that form of advertisement is to allow an agent to do so. We suggest an agent, we do not name one. We suggest him to the captain of the ship to land cargo which may not be applied for, or which impedes the discharge of the ship. That is the person consignees have the opportunity of knowing to be our sub-agent. They must be well aware who the agent is. I would mention that at present we are discharging a steamer and some of the consignees having objected to our sub-agent, are landing their own goods. The way consignees know the sub-agent is from having had bills rendered to them before. We generally employ the same agent. It is the practice here for the ship's agents to appoint whomsoever they please to land the goods under this form of advertisement. The custom suits both the ship and consignees. We derive no benefit whatever from landing the cargo. We get no reward for the goods being landed. The accounts do not pass through our books in any way. The usual custom is, that the ship's agent derives no benefit from landing the goods.

Cross-examined by Mr. Litchfield:—We employ Mr. Seitz at present to land for us. The consignees can employ whoever they like and then take their goods from the ship's side in terms of the bill of lading. The ship is not responsible for damage between the ship's side and *Hatoba* when the goods are landed by the sub-agent. I did formerly employ a form of advertisement similar to exhibit "H" but now I employ one similar to exhibit "J." The *Glen*, *Castle* and *Shire* steamers belong to the combination. Mr. Seitz has an agreement with us that when he lands goods that are not applied for, he must land them in the same state he gets them. Mr. Seitz does not guarantee my firm as to the landing of goods except as to goods applied for before the ship leaves. He guarantees the ship. Now I must explain how he guarantees. He guarantees the ship as to loss or damage to goods landed by him on master's responsibility. That guarantee has reference to the paragraph in the bill of lading that "the goods are to be landed as soon as intimation is given of the arrival of the ship." Mr. Seitz is employed by the master of the ship on behalf of the ship, and by the consignees for themselves. We put the advertisement in the paper on behalf of the ship and consider ourselves as ship's agents only when appointing Mr. Seitz.

Adjourned to 1.30.

George Whitfield:—Am a mechanical engineer carrying on the business of the Yokohama Iron Co. My experience of iron extends over 13 or 14 years. About the beginning of September, either the 5th or 6th, some iron was pointed

out to me by captain Scott on the *Hatoba*. It was thin stove pipe iron, slightly damaged with fresh water. The outside sheets, a few of them, were rusted, the rust had not eaten in. A few of the bundles, not half, were injured. I considered there was no damage done to the iron at the time, but that by a few cents outlay per picul, it might have been cleaned and restored to a good condition. It could never have been made bright again, and marketable as sound iron. It would have been good for use. I thought about twelve cents a picul would have paid for cleaning and oiling it. It would then have been as good for use as previously but not bright. Iron when it first comes out has a purple skin on it, water takes this off. Japanese would not then accept it unless at a reduction. I cannot estimate the reduction as I do not deal in that class of iron. I saw the iron again on the 16th September. Mr. Barlow, Mr. Spooner and Mr. Phillips were then present. The iron was much more rusty than when I saw it before. It would then be more difficult to clean it. I do not think the rust had time to eat in, but the iron was more discoloured. The opinion I then formed was the same as before, except that the cost of cleaning would be greater. I estimated the loss then at 18 cents per picul which would be the cost of cleaning and oiling. On the 8th, I estimated the loss at 12 cents per picul. Although it would be then as good for all practical purposes that would not cover the reduction in the market price. I cannot say what the actual loss would be, as I have no experience in that thin iron. The Japanese at auction combine and sometimes goods do not realize within seventy-five per cent. of their value. It depends whether there is a combination or not whether iron would realize its real value or not. I do not think that sheet iron sent to auction would realize its fair value owing to combination amongst the Japanese purchasers. The damage I saw might have been sustained through the iron being exposed to heavy rain for ten minutes and would have been quite sufficient to account for the rust.

Cross-examined by Mr. Litchfield:—I buy iron to use, not to sell. If I had contracted for sound iron and been tendered the iron in the state it was when I saw it, I would have taken it to use but not to sell again. There are 5 or 6 or more sheets in a bundle. The bundles are fastened by iron hoops. I do not think there were ten sheets in these bundles. Each bundle could have been taken to pieces, the sheets cleaned and the bundles put up again. Coolie labour is paid at the rate of about 25 cents per day. I do not know how many bundles go to the picul. I would not have cleaned and oiled the iron if I was making stove pipes out of it. Supposing the sheets are 6 by 3 and 10 sheets to the bundle, I do not know how long it would have taken to clean and oil them.

Re-examined:—I think if cleaned and oiled it would have fetched 12 cents more per picul than if sold in its rusty state. If the iron was mine and I was going to store it, I should have had it dried and cleaned.

James Martin:—Am a stevedore here and have been for the past nine years. I was stevedore for the discharge of the *Viceroy*. Captain Scott was the landing agent who discharged most of the cargo. This was in the early part of September last. I recollect one day it commenced to rain about 10 o'clock in the forenoon. We stopped discharging once or twice. When we stopped there was one lighter being loaded. It was before tiffin time. The lighter was being loaded with sheet iron. We covered the hatches of the steamer first, I then looked over the side and saw tarpaulins being put over the iron in the boats. The iron was then partly covered. I cannot say if there was any delay in covering the iron. The lighters remained alongside for a short time and then went ashore. I cannot say if the iron was so covered that no rain could reach it. We knocked off work for the day. I think they had the tarpaulins in another boat. There were two or three boats alongside, but only one with iron that I recollect. The tarpaulins were being taken from one boat and put over the second.

Cross-examined by Mr. Litchfield:—The rain was so heavy we put the hatches on. I do not think it would have been judicious to attempt to discharge lighters on the *Hatoba* that afternoon.

Nathaniel Prettyjohn:—Am occasionally employed by capt. Scott and was employed discharging from the *Viceroy* in the early part of September last. I recollect discharging some sheet iron in the morning. As well as I can recollect

we loaded one boat about ten o'clock in plenty of time to get ashore before the rain came on. We partly loaded another boat when the rain commenced very suddenly. We covered the second boat with tarpaulins as soon as the rain came on. The tarpaulins had been sent off by Capt. Scott in the morning and were right alongside in another lighter. We generally have them aboard. They were however close at hand. The first boat was sent ashore when we found the rain would continue.

Cross-examined by Mr. Litchfield:—I was by the ship. I remained in her a couple of hours after the rain commenced. It was nearly twelve o'clock when it commenced to rain heavy. We put the tarpaulins on at once when the rain began. It took about 5 or 10 minutes to put them on. The iron could not have got much damaged in that time. Every care and precaution was taken but we could not help the rain.

David Scott:—Am a landing agent and marine surveyor in Yokohama and have been for eight years. My experience in ships and lighters extends over about 40 years. I was landing-agent for most of the cargo of the *Viceroy* in September last. I recollect the 4th September, it was dull in the morning, came on equally in the forenoon and rained very heavy in the afternoon. When I land cargo I hire boats and Chinamen. I sent the last witness on board to make out the boat-notes and Chinamen to tally at each hatch. When the goods come ashore a Chinaman receives each boat and tallies it. There were two boats of mine came ashore too late on the 4th to be discharged that day. I saw them at the Hatoba. It was too late to discharge them because it came on to rain. They were covered up. The boats remained at the Hatoba all night but that did not injure the contents as there was no rain during the night. I put a second tarpaulin over each boat when they came ashore. The rain could drift under any tarpaulin if it blew hard. It did blow hard on that day in squalls. The rain may have got under in consequence, in spite of my having covered the boats. I saw the iron on the 5th. It was lying in a heap at the door of the shed just as it had been landed. The next time I saw it was the following day, the captain, Mr. Cobden, Mr. Whitfield and Mr. Phillips were present. It was then all spread out. I was then done with it, it was delivered to "73" Chinaman (plaintiff's). It was a little streaked with rain. The morning looked threatening rain on the 4th up to half-past ten. I sent the tarpaulins off at 9 in consequence. Ships generally stop discharging when it begins to rains but not until it actually does. I always collect my landing charges from the consignees. The letter produced was sent by my instructions to plaintiff. (exhibit "K") Letter read:—

"Memorandum, Yokohama, 9th August, 1878.—From D. Scott, Custom House. To Messrs. Malcolm, Willcox & Co., No. 73, Dear Sirs, I think it will be more satisfactory for all parties to have one fixed rate for all ordinary sized packages. I propose to charge you 5 cents all round, only making exception in case of very large or very small, such as wines, etc. Trusting this arrangement may meet with your approval, I am, yours truly, per David Scott, J. R. Higginbotham."

That letter was written in consequence of Mr. Phillips having complained about my charges. The letter refers to goods coming out of ships in the future. I do not think plaintiff has ever expressly asked me to land goods for him. I have always landed his goods under instructions from the agents of the vessel. I received from the plaintiff's firm the letter produced. (exhibit "L.") Letter read:—

Yokohama, 19th June, 1878.

To Mr. DAVID SCOTT.

Dear Sir,

Enclosed we beg to return you your account of landing charges per *Prinz Frederick Carl*, such account having been already paid you. We also enclose endorsed for payment your accounts for landing goods ex *Aegean*, *Galley of Lorne*, and *Glenorchy*. We have to draw your attention to the inconvenience caused us by the length of time you allow to elapse between the departure of vessels and the time of sending in your accounts and we must request you for the future to send in any accounts you may have against us within ten days of the vessel's departure.

Yours faithfully,

p. pro. MALCOLM, WILLCOX & CO.
J. S. BARBER.

I landed the goods mentioned in that letter under instructions from the agents of the ship not the consignees of the cargo. The accounts produced I presented to plaintiff for payment. The memo. thereon is in Mr. Phillips' writing. Where 2 cents is marked against brandy by Mr. Phillips instead of 5 cents I do not know what he meant. Brandy used to be charged 1½ cents. (Account put in, exhibit "M.") All money I get for landing goods I keep myself. The accounts I render in my own name. I have always done so and believe it to be the custom of the port.

Cross-examined by Mr. Litchfield:—Consignees often refuse to pay my landing charges. I then get paid the best way I can. I never get paid by the agents and do not ask them to pay me. I think I got my instructions from defendants in the case of the *Viceroy*. I do not know how many bundles of iron I landed for plaintiff, I think some four or five hundred bundles. My account says 584 and is correct. Four or five boats were employed to land it. I do not think it was all landed on the same day. I am sure it was not all landed on the 4th, a little was landed on the 5th. I saw the last boat being towed ashore at 20 minutes after 10. That boat was unloaded next morning. I saw another boat containing some of plaintiff's iron in the evening. Both boats were unloaded on the next morning, the 5th. I think those were the only two boats I saw containing iron on the 4th.

Re-examined by Mr. Kirkwood:—The last boat came to the Hatoba about 20 minutes past 10. The first boat was partly discharged when the last boat came in. The first boat had been ashore about an hour. I stopped discharging the first boat on account of the rain. About 100 bundles were taken out when I stopped. The boat was then covered up and both boats remained untouched until next morning. When I get my instructions from Mr. Cobden I consider it the same as getting them from the captain of the ship.

By the Court:—I consider I get my instructions from Mr. Cobden. I considered it the same as getting them from the captain.

Tuesday, 2nd December, 1879.

Mr. Litchfield again appeared for the plaintiff and Mr. Kirkwood for the defendants.

Cheong Ah Mow, examined by Mr. Kirkwood:—Am a Macao Chinaman sometimes employed by captain Scott and my duty is to take tally of goods on the Hatoba. I was employed by captain Scott to tally cargo from the *Viceroy*. I wrote the books produced, one is my tally book, the other is used by another man.

Mr. Litchfield consented at the suggestion of the Court, to allow the pages of the tally books referring to the iron, to be put in evidence to save time. The pages were pointed out by witness and marked as exhibits "N" and "O."

Mr. Kirkwood read the entries in the books referring to the iron, showing how the 584 bundles was made up.

Examination continued. Five boats came with cargo from the *Viceroy* on the 4th to the Hatoba. The last two boats were numbers 149 and 80. Number 149 boat, contained 22 boxes, ten cases and one box and 394 bundles of sheet iron. Boat number 80 had 131 bundles of iron. The iron was all marked W. in a diamond. On the 5th, 60 bundles came from the vessel in the first boat that day. On the 4th, boat 149 came in first. It was not raining when that boat came in at half-past ten. The other boat came in about twelve o'clock on that day. There was no rain when the boat came in but it was covered with a tarpaulin. I discharged the boxes and some of the iron. I did not take out the remainder of the iron because it began to rain. I then put on the tarpaulin again. I think I had then taken out about one hundred bundles. I discharged the boat the next day at about half-past eight o'clock. It was not raining on the morning of the 5th. I was not more than four or five minutes in replacing the tarpaulin when the rain came on. It rained very heavily and it was very windy. Boat No. 80 had a tarpaulin on when it came in. It was then raining. No iron was taken out of that boat on that day. The boat remained out all night and was discharged the next morning about nine o'clock. If it was raining and blowing hard when I put on the tarpaulin, rain could have got to the iron. I made the entries in both books because the other man could not write.

Cross-examined by Mr. Litchfield:—One of the books is my own and the other my fellow tally-man's. I made the whole of the entries on the 4th which refer to that day. I made the entry of the sheet iron at the same time as the other entries. I could not enter what was in the boxes as I could not see inside them. The boat took about an hour to unload. It commenced to rain about half-past eleven. As soon as the rain commenced I stopped unloading and covered over the boat properly. When the tarpaulin was over the boat no one could see what was in the boat.

Re-examined:—The entries in the tally books are copied from the boat-notes.

Yong Ah Wong:—Am a Chinese subject employed by captain Scott. I remember captain Scott landing some cargo from the *Viceroy*. The books produced (exhibits "N" and "O") I copy from the captain's book. I made the red marks in them. I make the marks when the goods leave the cargo boat. About one hundred bundles were discharged on the 4th September from boat 149. No more was taken out, on account of the rain. I got a coolie to cover the boat when the rain came on. The boat remained at the Hantoba all night and was discharged the next morning. Boat number 80 was not discharged on the 4th, in consequence of the rain. It was raining and blowing hard on the 4th. All the cargo boats are open boats and require to be covered if it rains.

Cross-examined by Mr. Litchfield:—I saw the coolie cover boat 149 with the tarpaulin. He was about five minutes doing so. The tarpaulin remained on all day and was not taken off in the afternoon. I know Ah Hi. I saw him on the 4th. He was looking at the iron. I forget what time it was. It commenced to rain about twelve o'clock. When the tarpaulin was taken off on the 5th the iron was a little wet on the top.

By the Court:—No iron was taken out of the second boat on the 4th. I put a second tarpaulin over that boat when she came from the ship.

Mr. Kirkwood put in the advertisement referred to in Mr. Phillips' cross-examination. It was marked exhibit "P".

This closed the defendants case.

Mr. Litchfield put in evidence certain correspondence between the plaintiff and defendants previous to the filing of the petition in the action, which was marked as exhibit "Q."

Mr. Kirkwood then addressed the Court on behalf of the defendants. He said that the question of negligence was the main point involved in the case, if no negligence on the part of defendants was proved then they had incurred no liability whatever. Presuming that it had been proved that the defendants were the agents of the plaintiff for landing the goods, then they would only have been bound to exercise ordinary and reasonable care and diligence. All the evidence tended to shew, that every precaution was taken to prevent any damage from being sustained. The evidence of Mr. Phillips, the plaintiff's manager was, that he personally did not know, either how or when the damage to the iron had occurred, in fact his last answer, was that he filed a petition against the captain of the *Viceroy* to recover for this very damage, because he did not then know where it had occurred. Mr. Phillips' evidence therefore throws no light on the subject. The only evidence adduced on the point by the plaintiff was that of the Chinaman Ah Hi, and his evidence was very indefinite indeed. He said he first saw the iron at about half-past twelve o'clock and it was then a little wet. When questioned on cross-examination as to how he knew it was wet, he said that "he knew it was wet because it was raining but he did not examine it." This witness therefore concluded that the iron was wet because it was raining and some of it was discharged. He also said that only forty or fifty bundles of the iron were then landed and that he did not examine it until the day following, the 5th September, when he separated the wet iron from the dry. He further stated, that he could not tell whether or not the iron he found wet on the 5th had been wet on the 4th. Now against the evidence of this Chinaman we have the evidence of Martin, the stevedore who was employed on the *Viceroy*. He swears that he was on board the vessel on the 4th and saw the boats loaded, that when the rain came on he saw the iron in the boats covered over with tarpaulins. This witness was corroborated by the witness

Prettyjohn, who covered one of the boats when it was half loaded. In fact all the evidence proved conclusively that every possible precaution had been taken, the time it would take to cover the boats being fixed by plaintiff's own witness Seitz. Now in what state were the boats when they arrived at the Hantoba? The only witnesses who saw them arrive were Scott's Chinamen, and the tally-books clearly corroborate their testimony. When the first boat came in, it was fine, a few bundles of iron were taken out of her and the boat was then covered up all right, a second tarpaulin having been put over the goods. When captain Scott came up, he had a second tarpaulin put over the second boat, and both boats remained so protected all night. It was therefore manifest that every reasonable precaution had been taken to avoid damage to the goods in the boats. It was also proved by the same witness that no ship would stop discharging cargo until it had actually commenced raining. Upon consideration of all the evidence bearing upon the point, it was plain that only a very small amount of damage could have been sustained, and only by a few bundles of the iron. Manifestly there was only very slight exposure to the rain. The witness Whitfield said that ten minutes exposure, would have been quite sufficient to account for all the damage. It had also been shown that although every possible precaution was taken to cover the goods, still, when, as in the present instance, a strong wind was blowing, the edges of tarpaulins would get lifted up, and rain would drift underneath. The learned counsel went on to say, that if his clients should be unfortunate enough to be held the agents of the plaintiff he then submitted that they were not responsible for damage under all circumstances. With reference to the law on the point of liability, he would refer to the well known case of *Coggs v. Bernard*, decided by Lord Holt, but more especially to *Story on Bailments*, 9th ed. secs. 495 and 592, where it was laid down that if carriers are not common carriers, they are only obliged to exercise ordinary care and diligence. If the defendants were held to be not common carriers but forwarding agents, then secs. 444 and 502 of the same work explained their liability. If the defendants were held to be common carriers he would refer his Honour to *Nugent v. Smith*, L. R. C. P. div. 423, as to the construction of the expression "Act of God." Counsel also quoted *Story on Bailments*, sec. 459 and *Serle v. Laverick*, L. R. 9 Q. B. div. 126 as to the liability of carriers for negligence. On the question of bailees who gave their services gratuitously being liable for gross negligence only, counsel referred to *Moffatt v. Bateman*, L. R. 3 P. C. 115. Mr. Kirkwood submitted that the onus of proof of negligence in cases of this description rested upon the plaintiff, who should make out his case conclusively, it was not sufficient to merely prove that the iron had got wet. *Bird v. Northern R'way Co.*, 28 L. J. Exch. 3, where it was held that "the fact of the occurrence of an accident was in itself no proof of negligence"; also *Cooper v. Barton*, 3 Campbell's rep. 5.

His Honour:—I do not think these cases will be of much use to me. I have heard the evidence and am to balance it. The cases you refer to have come at home before the Courts on motions for new trial, &c.

Mr. Kirkwood:—But if your Honour felt any doubt.

His Honour:—The cases you quote refer more especially to pleadings.

Mr. Kirkwood:—Does not your Honour think that the onus of proof of negligence lies upon the plaintiff?

His Honour:—No, I do not. Evidence has been given that the iron was damaged by rain water and I will have to decide, after weighing the evidence given on both sides, whether the defendants exercised reasonable care.

Mr. Kirkwood:—But if your Honour cannot decide the question?

His Honour:—I trust I shall be able to make up my mind, if it comes to be a decision on that point.

Mr. Kirkwood:—In a case heard here before Mr. Justice Wilkinson he decided that as he could not make up his mind on which side was the preponderance of evidence, he gave a verdict for the defendant.

Mr. Kirkwood continued:—If your Honour finds that there has been negligence and that some one is liable, the question then raises, who really is liable. This brings us to the question of the liability of the sub-agent and the usage of trade governing his direct liability to the principal. With respect to usage controlling the contract, whatever

your Honour may decide the contract to be, I refer to *Furkes v. Lamb*, 31 L. J. Q. B. 98.

His Honour:—The evidence of custom must be very strong.

Mr. Kirkwood:—I also refer to *Ireland v. Livingston*, L. R. 2 Q. B. 99 and *Sutton v. Tatham*, 10 Adolphus & Ellis, 27. As to the custom of brokers, *Marted v. Payne*, L. R. 6, Exch. 132, *Griswold v. Bristol*, L. R. 4 C. P. 36 and *Ballance v. Duan*, 1 Campbell's rep.

His Honour:—I really do not think the authorities cited have the slightest application to a case of this kind.

Mr. Kirkwood:—*Da Costa v. Edmonds*, 4 Campbell's rep. 132.

His Honour:—I do not think that case has any application to this either. It refers to the law of insurance which is very special in its application. In this case there are none of the requirements of special custom.

Mr. Kirkwood:—There is the same thing here with reference to the custom of employing a sub-agent. On this point it has been proved by the shipping agents doing the largest business in the port that it is the invariable custom to employ a sub-agent. Seitz and Scott have both sworn that they always render the accounts for the landing-charges in their own names and receive payment of them themselves. These accounts never appear in the books of the agents of the ships at all. The appointment of a sub-agent, is for the convenience of all parties. What the agents announce to a consignee in the advertisement is, in effect, "You can send off for your goods yourself but if you prefer we will name some one to land them for you." For this service the agents received no reward whatever, their action was entirely gratuitous. Mr. D'Ifanger in his evidence was very explicit. He said "the sub-agent is the captain's agent for landing any goods that may not be applied for, or which impede the discharge of the ship. He collects the landing charges himself. When I appoint a competent person to land goods under these circumstances, I consider my liability ceases." The letters which passed between Scott and plaintiff shew distinctly that those accounts were rendered direct and that an arrangement as to charges was arrived at between them, as far back as June, 1878. In the face of that letter how can it be said that there was no direct dealing between these parties? [Letter read and commented upon.] Then there is the letter of 9th August, 1878 from Scott agreeing to an uniform scale of charges. These letters tend to shew the plaintiff's knowledge of the custom of the port and his acquiescence in it. Again there is the account rendered by Scott to plaintiff which includes the charges for landing this very iron. Mr. Phillips rejects the charges for the iron and passes the rest referring to their previous arrangement. Mr. Phillips' memo. on the account was, "Please make out a corrected bill, the iron must of necessity stand over." In one of the letters put in by the plaintiff and which his counsel would probably comment upon, the defendants had offered \$30.00, although they repudiated any liability, in case any damage might possibly have happened to the goods while in their custody. This offer really goes for nothing, it was made without prejudice, and it is well known that it is to the interest of the agents of ships to settle claims without trouble or litigation if they can possibly avoid it. Now as to the claim of plaintiff against the sub-agent, we must consider who the sub-agent could sue, *Cochrane v. Irlam*, 6 Maude and Selwyn's rep. p. 303, in this case the Court found that in cases where agents are authorised to place goods in the hands of a sub-agent the latter can settle his accounts direct with the principal. It was most extraordinary and worthy of remark, that although the doctrine of the rights and liabilities of a sub-agent were considered so settled in *Story*, there were no recent cases in England affecting the question. Then as to the damage. The only evidence bearing upon this point was that given by Barlow and Whitfield. Whitfield was of opinion, that by the expenditure of 12 cents a picul the iron would have been made sound for all practical purposes. It has not been shewn what the iron was wanted for, whether for sale or use. Before a correct estimate of the measure of damage can be arrived at, the defendants should know what the goods were intended for.

His Honour:—The difference between what the goods fetched at auction and the market value will give the damage.

Mr. Kirkwood:—There can be no question the iron should have been sold as early as possible, and not kept for a fortnight deteriorating. The plaintiff's Chinaman separated the good from the bad iron on the 5th September, and it should have been sold directly afterwards. If the goods had been landed on account of the ship, the owners of the ship would have clearly been liable and not the defendants. It was the duty of the plaintiff to have sold the iron at once and not to keep it to depreciate and entail further loss. The only witness who really gave any evidence of the amount of damage was Whitfield, and he said that further depreciation in value occurred through the iron, being allowed to remain in a wet state. The evidence of Barlow was all they had as to the market value of the iron which he stated to be \$4.50 per picul and not \$4.80 which plaintiff had mentioned as the contract price. The learned counsel contended that it had not been clearly proved that the defendants had been guilty of any negligence. That was the substantial defence. The question of liability was raised merely for future guidance. It had been abundantly proved, that every care had been taken to cover and protect the iron, a little wet may have got on it before it was wholly covered or while the tarpaulins were being put on. It must also be recollected, that there was no covered place to which the boats could be brought. Counsel concluded his address by saying, that if captain Scott had been the actual owner of the iron, he could have done nothing more than he had done for its protection. The defendants were not insurers, but even if they were, nothing was omitted in the present instance that could possibly have been done to ensure the safety of the goods.

His Honour:—How long do you think you will be Mr. Litchfield?

Mr. Litchfield:—I think I can finish in an hour your Honour.

His Honour:—I cannot give you more than half an hour, without an adjournment.

Mr. Litchfield:—Well, your Honour, I will try and see what I can do in half an hour.

Mr. Litchfield then replied on behalf of the plaintiff. He said the question in the case was one of more than ordinary importance as it involved the ordinary liability of carriers to their employers. He referred to the case of *Cogg's v. Bernard*, where it was distinctly laid down, that a carrier was bound to use the utmost diligence. He submitted that under the advertisement used by the defendants in the case of the *Vicroy*, they bound themselves to carry goods from the ship's side to the Hatoba and could not be treated, under some imaginary custom which it had been attempted to set up, as mere conduit pipes to tell Scott to land them. It is very clear that defendants cannot shift the liability they undertook. Jardine, Matheson & Co. could have collected the charges for landing these goods from the plaintiff, in precisely the same way as they did previously under similar circumstances in the case of goods from the *Glenengles*. They cannot relieve themselves of a legal responsibility by simply paying the landing charges to other people. It is patent that they must employ somebody to land goods, who that somebody may be does not signify in the least. They as carriers undertake to do the work and they cannot shift their legal responsibility to a sub-agent, between whom and the principal, no privity of contract exists. It would be just as reasonable to say, that the directors of a railway company were not liable for accidents occurring on the railway because they did not drive the engines themselves, or that the manager of "Pickford's" incurred no responsibility because he did not drive the vans himself. The learned counsel then referred to the notes in *Cogg's v. Bernard*, 1 Smith's Leading Cases 6 ed. 205, commenting on the cases of *Leck v. Maister* and *Garside v. The Trent Nav. Co.*, where it was distinctly laid down that the onus lay on the defendant to show that there had been no want of proper care. The cases in *Story on Agency* referred solely to dealings *inter partes*, the case was different with a carrier, who was bound by the nature of his business to employ a medium to do the work. By the same principle it had been held that a railway company which granted "through" tickets were liable to a purchaser of one of those tickets for an accident occurring on a line which did not belong to them and which was caused by the

carelessness of persons over whom they had no control, *Thomas v. The Rhynner Railway Co.*, L. R. 6 Q. B. 267, *Milton v. Midland Railway Co.*, 28 L. J. Exch. 385. Counsel contended that before defendants could succeed in establishing the so-called usage of the port they must shew some case in which agents had been absolved from responsibility to the consignee under similar circumstances. Neither Mr. Keswick nor Mr. D'Offinger asserted that any such case had happened, they only said what they *thought* was the custom, not that a consignee had ever been a party to any such arrangement. No matter what Mr. Barber had written, Phillips had sworn that he always refused to acknowledge Scott and that while using a similar form of advertisement to that adopted in the case of the *Viceroy* by defendants, he had paid claims arising under similar circumstances. It was altogether unreasonable to suppose that any custom could be established that would relieve persons who had undertaken to perform certain duties from all responsibility no matter how negligent their sub-agent might be. Perhaps it would be contended that if Scott had chosen to pitch the goods into the sea defendants would not have been liable. Under the Eastern bills of lading the ship's responsibility ceases when the goods are delivered alongside. Who then was responsible for their carriage between the ship and the *Hatoba*? Certainly not Scott, whom the plaintiff had not employed and refused to recognize, but the persons whom the plaintiff did employ, viz:—the defendants. The learned counsel submitted that from the evidence the defendants must be held to have been guilty of negligence. Phillips' evidence was, that the damage had already occurred to the iron when it was first brought to his notice, he found the iron wet and when the bundles were lifted up on their edge the water ran out. Did that look like the result of exposure to a little damp as attempted to be set up by the defendants? Then the Chinaman Ah Hi was very distinct on the point, he saw the iron at half-past twelve o'clock, it was then raining very heavily and the boats had no tarpaulin's over them, and on cross-examination he further stated that when he returned from seeing Mr. Phillips, the iron was still uncovered. It was very evident that if the iron was covered up in the manner defendants' contend, it was utterly impossible for Mr. Phillips and the Chinaman to have seen it at half-past twelve, as their vision was as limited as that of a celebrated witness who stated "he could not see up a flight of stairs and through a back-door." No effort had been made to prevent the damage being sustained. The letter (exhibit "B") which Mr. Phillips wrote on the subject completely corroborated his story as to how, when and where he saw the iron. It was very evident, without producing any authorities on the subject, that it was not exercising reasonable care to expose iron or other cargo without any attempt to cover it up. The letter of the 4th September is a complete corroboration of Phillips' evidence. Then again when Ah Hi was asked where he found the iron on the 5th, he said it had been put by somebody, in a heap under a shed, good and bad, wet and dry, all mixed up together! Was that to be called taking ordinary care to place it all higgledy-piggledy together in that fashion? Then as to the damages. The measure of damage must be taken to be the difference between what the goods were worth to the plaintiff when they arrived and what they fetched at auction. Counsel submitted that Mr. Phillips had adopted the reasonable and proper course to pursue under the circumstances. He wrote to defendants, he gave the person who had contracted to purchase the iron every chance to make an offer for it, he wrote again to defendants after the contractor's refusal, what more could he be expected to do? Whitfield acknowledged that the iron was damaged and it was in evidence that the Japanese wanted a reduction of 75 cents a picul on it, which was very nearly the difference between the contract and auction price. The defendants rely upon the evidence of Barlow that \$4.50 and not \$4.80 was to be taken as the value of the iron, but plaintiff contended that the contract price was the proper gauge of the market value. Barlow said there was very little of this particular description of iron in the place, that the particular parcel had arrived very early for the stove pipe iron market, thus corroborating Mr. Phillips who said the same thing, and Barlow topped up by saying that the market had since risen. The foregoing were the chief points upon which counsel desired to call His Honour's attention and

from the preponderating weight of evidence in favour of plaintiff, and the authorities also supporting his contention, he thought he could with confidence leave the result in His Honour's hands.

His Honour said he would give judgment in a day or two.

THE TIMES OF THE TAIRA.

BY CAPTAIN F. BRINKLEY, R.A., AUTHOR

OF THE "TIMES OF TAIKO."

CHAPTER XXVII.

THE ROYAL MANDATE.

Some time had passed thus, neither the watcher nor the watched shewing any signs of impatience, when a page entering the room, said something unintelligible to Yoshitsune, but which from the Treasurer's answer he understood to be the announcement of an arrival.

An unusually secluded novitiate in the cloisters of Kurama and a clandestine sojourn of a few months in the capital, had necessarily included few meetings with either the court nobles or the great barons, and Yoshitsune, remembering how little his own knowledge would be likely to aid him in recognizing the Treasurer's visitor, paid less attention to the new comer's appearance than to his host's form of greeting. But though he might have been prepared for what followed, it caused him at the moment a surprise that excluded every other sentiment. His own association with the Treasurer had brought him no experience of that nobleman's eccentricities. He had only seen him perform a rôle of which determination and self-control were the conspicuous attributes, and so well had these finer qualities seemed to suit the man's nature that his sudden return to the restless caprice of apparent imbecility was at once startling and incredible. If indeed there had been any awkwardness in the proceeding; any evidence of effort that might have proved the character irksome to its assumer, the impression conveyed could not have altogether effaced the memory of rational moments; but long practice and an unflinching purpose had made Yasutsune so perfect in his part that to believe it an effort of simulation was altogether impossible.

Thus when he ambled forward to meet his visitor, and then without completing his greeting hurried back to his former place with an air of vacillating perplexity ludicrously unsuited to the occasion, Yoshitsune rubbed his eyes and peered in bewilderment through the bamboo lattice, asking himself whether some miraculous metamorphosis had not been effected among the actors in the scene before him.

But the Treasurer's demeanour evidently suggested nothing strange to the new-comer. Advancing gravely at his host's invitation, and not suffering the peculiarity of this reception to curtail anything of his formality, he took his seat upon the pile of silk cushions prepared for him, a man far advanced in years, white haired and wrinkled but betraying no symptom of debility or moral decay. Yoshitsune could form no guess as to who he might be, but a very slight examination sufficed to determine that he was a nobleman of rank, holding his high place not by a mere accident of birth but by the strength of established superiority.

"You have preceded the Prince," said Yasutsune after he had acknowledged his friend's greeting. "There is no fear I trust that he may not follow."

"I think not," replied the other emphatically. "His Highness' progress is scarcely a measure of his impatience, as you very well know."

"True, true. Nevertheless it had occurred to me that the honour of receiving either you or him to-night was little certain. A mere fancy perchance. I live among fancies, you know."

"A happy life too. For my own part there are not a few realities I would gladly change into fancies if I might. But since your fancies are never entirely without foundation, on what was this last based, may I ask?"

"Why that were to make a wise man of me," laughed the Treasurer. "If I dreamed that you were both minded to mend the times rather than to be merry in them 'twas only because my heart is as giddy as your's are grave."

Lightly as this was said it evidently startled its hearer not a little. He scrutinized the Treasurer's face with an intent-

ness that must have been hard to endure, but the other's airy vacuity was not to be penetrated.

"Truly, my Lord Treasurer," he said, "the light that kindles those faucies of yours might, methinks, make many an obscurity clear. You have read my mood aright, though I have kept it hidden from myself for twenty years, and from the world until this moment."

"Then it is just as old as these fancies of mine, if what men tell me be true," cried the Treasurer, clapping his hands delightedly. "Who knows but these our twins may be more closely related than they seem. If only the Prince were here to aid us we might spend a pleasant half hour tracing their genealogy."

The Treasurer's visitor again scanned his host narrowly. He was beginning to have a suspicion that this debonnaire nobleman's mental vision might after all be clearer than their's who ridiculed his imbecility.

At this moment another visitor was announced: a comparatively young man, of proportions sufficiently comely and robust, but older in point of energy and vigour than the white haired veteran who had preceded him. Both in his deportment and expression it was easy to detect evidences of the acquired helplessness that grows out of complete moral and physical dependence, and this alone, without the emphatic deference of the reception he was accorded, would have been sufficient to mark him as one living far above the common cares of life.

He gazed listlessly around as the Treasurer led him to the seat of honour, and whether real, or suggested by the contrast of the other's animation, the feature Yoshitsune found most noticeable about him, was an air of permanent discontent growing apparently from graver causes than the weariness of exceeded enjoyment so common among men of his rank.

"Is it an accident," he asked, "that has obtained me the pleasure of meeting the Lord Seneschal here to-night?"

This question was addressed to the old man, in whom with sudden wonderment Yoshitsune recognized his uncle, the poet-warrior, Yorimasa. The reply, however, came from the Treasurer, and the tone of the first words he uttered caused the listener to redouble his attention, for the voice was no longer that of the frivolous simpleton. Yasutsune had laid aside his long worn mask, and his two guests made no attempt to conceal their astonishment at the transformation.

"Your Highness," he said, "accident has ceased to be an acknowledged factor in Yorimasa's existence as well as in mine own. Little shallops may drift comfortably in shallow waters, but the ship that would ride safely must needs search for the sunken rock beneath her keel. For twenty years the Lord Seneschal and myself have trodden the same path: he with eyes averted from the goal; I, with gaze so impatiently fixed on it that the distance has seemed well nigh interminable. We knew not that we should come together at the last any more than we now know how many thousands are waiting before or hastening after to join us in compassing the end. That end is to-day within sight and though many must perish in the attainment, there is no possibility of pause or reflection for any. This is not a plot: it is a necessity forced upon us by events we would have given everything, save the right of revenge to prevent. My Lord Seneschal, if I seem to take over-much upon myself, suspend your censure I pray you till you have heard the cause of my presumption."

"Say on, Yasutsune," replied the Seneschal; "if I lacked the wit to comprehend you before, it was because the things you have done are as impossible to ordinary men as they are incredible to those who have not witnessed them."

"I will ask you then," resumed the Treasurer, speaking with the monotonous voice of one who dares not emphasize his recital, "I will ask you to go back to the time when this city echoed with the din of arms, and the waves of onset rolled from four issues on the men of Gen beleaguered within the palace walls. If on the night of that battle you had travelled a mile eastward from the spot where we now sit, you would have found a fair castle with stout muniment and spacious barracks, but never a man to garrison the barbicans or raise the draw-bridge, for every vassal old or young had gone to take his post beside the Earl of Harima under the shadow of the white standard. In a room of that castle two persons were seated: one a lad of fourteen; the other a girl but a few summers older; a girl no man might look on without loving. They had been waiting since nightfall for some news of their friends, and at break of day came tidings of the

Emperor's escape from the palace, and of the immense host that had assembled to revenge his imprisonment. They knew then that there was little hope for the Genji cause, but the girl refused to fly, though urged by her brother to do so. Her husband had left her in charge of the castle when he marched to the fight, and she thought that to desert her post would be to forfeit all chance of meeting him again. She would, however, have provided for her brother's escape, but the lad was not altogether a craven. He too chose to remain, not knowing that his choice involved something worse than death. At noon, the castle was summoned by the advance guard of Kiyomori's force. There was no possibility of resistance, more especially as those within knew by the presence of the Heike chief that the palace had either fallen into their enemies' hands, or that at least its surrender was certain. It might be too, that seeing only a woman and a child, Kiyomori would find occasion to be merciful. Yon smile at the notion, my Lord Seneschal, but remember, this was twenty years ago. We did not know the man then as we know him now. His first act was to order the boy's execution, believing him to be a son of the lord of the castle. When informed of his error and told there was no heir as yet born, he seemed like a man overtaken by a grievous disappointment. "The rebel at least has a wife," he cried; "bring her before me that I may provide for the future as well as the present." If his heart had been accessible to any sentiment of clemency, he must have relented when he saw the girl, but has the beauty or worth of a victim ever served for aught but to whet his ferocity? Finding that she expected to be a mother in a few weeks, he ordered his soldiers to take the child from her bosom, adding with a sneer, "if it be a girl, you can give it back to her; if a boy, let its head be exposed over the castle gate." There were not wanting some, and they amongst the stoutest of his warriors, who grew pale at this terrible mandate and joined their prayers for mercy to those of the woman herself, but Kiyomori was impatient to achieve the foul deed he already found so pleasant so contemplative. He drew his sword and swore that since his vassals were so delicate he would himself set them an example. From that moment the girl uttered neither entreaty nor lamentation. She knew how to die bravely as she had known how to live blameless. Only when the steel flashed before her eyes, she remembered to offer a supplication on behalf of her boy brother, pleading that his mind was distraught and that her husband hated him because of his attachment to the House of Hei. Whether her unselfish love alone suggested this idea, or whether, standing on the shore of death, she was able to look across the sea of futurity, and discover the days of which this is, I hope, the dawning, none but the gods that helped her in that moment of agony can tell. Her brother, who might not die with her since it was for him to avenge her, understood that she had taught him the only method of achieving that duty. For the rest he had no need to simulate. More than a year elapsed before he was able to be sure that the horror he witnessed that day was no longer anything more than a memory, and when he knew that he had recovered his reason, he had also discovered the convenience of seeming irresponsible. Had it been his object only to take vengeance on her brutal assassin, assuredly Kiyomori would long ago have received the guerdon of his deed. But the boy was a Minamoto. Through long, long years—how long he himself alone can tell—he has endured to be an object of scorn and ridicule to his fellows, hoping only for the advent of the day when he might join the onset that shall hurl the Heike from the high places they have usurped, and leave their bones to bleach upon the graves of the multitudes done to death by their cruelty and caprice. That day has now at last come, and in the name of all those who have outrages no less terrible than his own to revenge, the brother of that murdered girl prays his prince and rightful sovereign to give his royal warrant to Yorimasa, the Minamoto chief, that the multitudes awaiting this signal in the sixty-four provinces may have at once a legal cause and a leader."

The Treasurer had clasped his hands and bowed his head like one in prayer, but neither his attitude nor the passionate earnestness of his entreaty moved his hearers more than the wonder of his restored reason and the still greater marvel of his long sustained simulation. If the Prince did not immediately reply, it was perhaps because he found less food for speech than for surprise. Yorimasa spoke first:—

"I think I can understand how long this waiting must

have seemed to you, Yasutsune, and certainly I can promise that no effort of mine shall be wanting to render the sequel worthy of so much patience. For the rest, it has fared with me even as you say, and I marvel much that a mere surmise can have been thus unerring. Longing to strike, I have always withheld my hand, for these faction feuds are the curse of the land, and it seemed hard to forfeit the confidence with which my sovereign had honoured me. But the gods are surely weary of our enemies' gracelessness and our own inaction. Strange portents are beginning to trouble the peace of the autocrat himself. This morning at daybreak looking out into the garden of his castle, he saw the ghastly heads of the thousands his bloody progress has crushed, rolling from all sides towards the eaves of his chamber, until they grew into a skull of mountain size that glared at him with such savage hatred that even the man's impious fearlessness quailed before the lightning of its looks. This very day too he has ordered prayers to be offered up in all the temples, that the gods may avert the evils prophesied by the chief astrologer,* but none have dared to tell him the extent of those evils, and the voices of orison will scarcely suffice to smother the clamour of the oppressed, nor the fumes of incense to sweeten the evil savour of his vices. Neither will I conceal from you that the last remnant of my patience has been exhausted by an ungenerous and flagrant insult the man has just put upon my own son. This I may not suffer since the cost of forbearance would be dishonour. That there are other and less selfish motives for action, His Highness well knows, but he knows also, I hope, that whether he accords us the strength of his sanction or not, the earliest result of our success will be his restoration to the rights from which he has been unjustly ousted."

Yoshitsune now appreciated the wisdom of the precaution which had exacted his promise to remain quiet under all circumstances, for when he marked the shadows of doubt and uncertainty flit across the Prince's irresolute face, and remembered that on the decision then to be pronounced depended the honour, perhaps even the success, of the Genji cause, his utmost self-control had scarcely strength to restrain him from springing forward and adding his own instances to those of his uncle and the Treasurer. He knew from what Yorimasa had said, that this was the Prince Mochihito, to whom the throne of Japan belonged by birthright, but whose claims had been set aside in favour of Takakura son of the ex-Emperor Go-Shirakawa and grandson of Kiyomori. The Prince's wrongs were known and pitied by every loyal man in Japan, and their redress would furnish a claim to the aid of many a nobleman otherwise little likely to take part in so doubtful a struggle as that of the rival clans must at first be. Yoshitsune found it indeed somewhat strange that neither the Treasurer nor Yorimasa had reminded the Prince more earnestly of his own grievances, but he learned afterwards to understand the discernment of this reticence, for Mochihito's character was one of those not uncommon compounds of diffidence and courage that find any motive more hopeful than their own interests, and are ready to incur risks for others from which they would shrink helplessly in their own cause. Something of this was apparent in his answer to the speeches of the two noblemen.

"I thank you, Yorimasa," he said, "for the loyalty that prompts your words. I might adopt your counsel at once with a good hope that my purpose would not be misunderstood, seeing that my appeal to the nation's sympathy would have been preceded by twelve years of patient submission. But besides my own wrongs which I could well endure and yours, which I would fain redress, I am impelled by another motive not easily over-estimated. So long as my brother enjoyed the sovereign privileges, which as you truly say belong of right to me, and so long as the lustre of that sovereignty was not tarnished in his keeping, I was content to suffer my wrongs in silence. But for his sake, as well as for that of the sacred office he held, I am constrained to draw the sword. There is no longer any Emperor in Japan, since he that now bears the title is a helpless infant and he that last bore it had less authority than the humblest gentleman among your lordships' vassals. This is no exaggeration, but a plain truth of which with shame I give you the proof. In the spring of last year

the late Emperor, as you know, took Kogo, the daughter of the Vice-Deputy to be his concubine. You who have seen the girl know that she was well worthy of even your sovereign's affection, and I who enjoyed his confidence can tell you that his love was more to him than his life. That Kiyomori knew this and knowing it drove her from the palace, is my justification when I denounce him as my brother's murderer. That he had the power to subject his master to such an indignity is your disgrace no less than my humiliation."

"Your Highness" said Yorimasa, for the Prince had paused here apparently overcome by the emotions his recollections excited, "we dare not ask you to dispense with this recital whatever pain its details may give you, for in the knowledge of such impiety lies a new and incalculable source of strength to our cause."

"I know it, Yorimasa," replied the Prince, "and if I seem to hesitate, be assured it is rather from shame than reluctance. But a few weeks, then, after my brother had discovered this, the first and only sunshine that ever illumined his life, Kiyomori, deeming forsooth that his daughter, the Empress, was slighted by her husband's affection for his concubine, sent a message to Kogo forbidding her at her peril to remain another day in the palace. The girl dared not appeal to the Emperor, for she knew well not only that he was powerless to aid her against such an adversary, but also that his interference would assure her destruction. She adopted the wisest, indeed the only possible course, and fled from the palace that same night. The shadow of loneliness this separation cast upon my brother's life deepened day by day into an unendurable melancholy. None of those solaces possible to men in humbler positions were within his reach, and to add to his unhappiness, the knights and noblemen who had once been the sharer of his few pastimes were, by Kiyomori's connivance, excluded from the palace. Yet his only fault was that he could not submit the impulses of his heart to the dictates of one who is himself the slave of every passion by which humanity is disfigured. Is it written in the history of any country, that an emperor has been content to suffer misery inflicted by the caprice of a subject? One summer night, now little more than a year ago, my brother, walking in the palace gardens with only the sad moonlight and his sadder memories as companions, found that he might no longer endure his desolation. He called for the captain of the Guard, who happened to be the knight Nakakuni, and conjured him to seek out Kogo and bring her back to the palace at any risk. There was little to guide the knight in his search. The Emperor only knew that Kogo's retreat was somewhere in the neighbourhood of the Storm Mountain, but love suggested a device worthy of success. Kogo's wonderful skill on the harp had been the first of her charms that attracted the Emperor's attention, and at his command Nakakuni had sometimes accompanied her on his flute, especially in one piece, a particular favorite of her lord's. "It cannot be that she has forgotten my love," said the Emperor, "or that on such a night as this her harp will be silent. Go therefore to the Storm Mountain. The 'gentle goddess' will guide your footsteps, and unless my heart be a false prophet, the strains of the melody that once pleased me most will enable you to win my undying gratitude." I need not, my Lords, describe to you the details of Nakakuni's search. They are no doubt well-known to you as they will be to many a generation of our successors.† It is with their sequel we have to do. The girl had been but a few days restored to her lover when Kiyomori discovered her return. She saved her life by consenting to shave her head and become a nun, but as for the Emperor; he never recovered this second separation. Those who were oftenest at his side will corroborate me when I say that during the short space he survived his loss, none saw him smile and few heard him speak. I accuse Kiyomori therefore before the Gods of impiously violating the rights they have conferred on their descendants: I denounce him to you as the assassin of your sovereign, and by this commission I authorize you as loyal subjects to take the speediest and most unsparring measures you can devise to punish his crimes."

On bended knee and with the deepest reverence, Yorimasa received the document which the Prince handed him, but

* Rats had disfigured the tail of Kiyomori's favourite horse to provide materials for their nest and the soothsayers pronounced this to be an omen of danger menacing the House of Hei from an obscure quarter. The prediction is supposed to have been fulfilled by Kiso Yoshiuaka's rebellion.

† This prediction has since been amply fulfilled. No story is more familiar to the Japanese to-day than that of Nakakuni's quest: how he wandered about in the moonlight until he heard the distant notes of a harp, and how, playing on his flute the air indicated by the Emperor, he was answered by the harp and so guided to Kogo's retreat.

never a word did either he or the Treasurer speak of comment or consent. They had been eloquent enough so long as there was any need of persuasion, but neither of them wanted the wisdom to appreciate the woeful disasters and miseries this action must presently entail on victors and vanquished alike. They knew that a sword was now drawn which might not be sheathed again till its edge had been dyed in the blood of their country's bravest men, and the calamitous prospect their foresight descried kept them for the moment speechless and appalled.

(To be continued.)

DOUBLE ACROSTIC.

Oh, kindly friend! who serves me day by day,
Obeys my summons, and provides my pay!
To prove my gratitude shall never fail,
I'd fain immortalise thee in the *Mail*.
Right willingly to thee a note I raise—
One long drawn out—of friendship and of praise;
It is not false—believe me, it is true—
Then graciously accept it as thy due!

1.

I love to tread the narrow paths that paddy-fields divide,
And view the rich and golden grain that stands on ev'ry side.

2.

By active force I'm plied—around me circling eddies break,
And stir the placid surface of the broad and silent lake.

3.

We've lost our friend, young Hildebrand—or, what is just the same,
He's gone, and left us nothing save the echo of his name.

4.

Who in his handiwork excels this light may rightly bear;
That's if he chance to merit it by diligence and care.

5.

Unfortunate Francesca! Well the ancient Florentine
Has told thy fate, with touching words, in poetry divine!

6.

There's something wrong—though what it is I fear I cannot say,
Yet this sad fact is certain, that there's something gone astray.

7.

How true the proverb that declares "the tailor makes the man!"
With ladies, too, the milliner no doubt makes all she can.

8.

Just take your Atlas down, and there you'll doubtless find aright
A state beneath the stars and stripes whose name suggests this light.

9.

To ride a wild "back-jumper" is a task that's hardly nice;
And yet I'd rather mount him than a creature with this vice.

10.

This passion fires the foeman's breast, and urges him to do
The deed that afterwards perchance he bitterly may rue.

METEOROLOGICAL REPORT

FOR WEEK BEGINNING FRIDAY, NOVEMBER 28TH, 1879.
Observatory of Daigaku, Moto-Fujimicho Hongō, Tokio, Japan.

REMARKS.

Heavy line represents barometer.
Light continuous line—max. & min. thermometers.
.....represents velocity of wind.
.....percentage of humidity.
Max. velocity of wind, 11 miles per hour on Tuesday, 12 m.
The barometer is reduced to the freezing point and to the level of the sea.
The average barometric height has been slightly lower this week than last. The highest reading was 30.187 inches on Friday, at 7 a.m. and the lowest was 29.759 inches on Monday at 10 p.m. The mean height for the week is slightly below 30 inches. Although the minimum thermometer has not reached the freezing point during the week, the range of temperature has been considerable—averaging about 20° for each day, the greatest being 24°—on Sunday.

SHIPPING INTELLIGENCE.

INWARDS.

Dec. 1, British steamer *Merionethshire*, S. R. Rickard, 1,245, from London, General, Adamson, Bell & Co.
Dec. 1, Japanese barque *Sumanoura Maru*, Speigenthal, 925, from Nagasaki, General, to M. B. Co.
Dec. 1, Japanese steamer *Tsuruga Maru*, Steadman, 661, from Kobe, Mails and General, to M. B. Co.
Dec. 2, Japanese steamer *Kumamoto Maru*, Drummond, 1,240, from Hakodate, Mails and General, to M. B. Co.
Dec. 4, Japanese steamer *Genkai Maru*, Conner, 1,917, from Shanghai and ports, Mails and General, to M. B. Co.
Dec. 4, American barquentine *Katie Pickinger*, Gilman, 472, from Newcastle, N.S.W., Coal, to Walsh, Hall & Co.
Dec. 4, German barque *Anna*, Davidsen, 352, from Takao, Sugar, to Chinese.
Dec. 5, French steamer *Volga*, Guirand, 1,502, from Hongkong, Mails and General, to M. M. Co.

PASSENGERS.

Per British steamer *Merionethshire*, from London:—Mr. and Mrs. Curtis, and 1 Japanese from Hongkong.
Per Japanese steamer *Kumamoto Maru* from Hakodate:—Messrs.

Neilsen, and Beyer in cabin; 1 European and 80 Japanese in steerage.

Per Japanese steamer *Genkai Maru*, from Shanghai and ports:—His Excellency Mayeshima and suite, Mrs. Mayeshima and 2 children, Capt. G. Hay, A. B. Cook, Messrs. Biggleston, Playfair, E. C. Kirby, Grob, W. Copeland, S. E. Butler, J. A. Fraser, C. R. Simpson, Pierce, Matanda, Itagaki, Komeita, Nakazata Fajulo, Obata, Shimui, Nagao, Kofugi, Itsuji Haraguchi, and C. H. Loring, U.S.N. in cabin. 1 European, 264 Japanese, and 2 Chinese, in steerage.

Per French steamer *Volga* from Hongkong:—From Marseilles, Mrs. Jourdan and child, Mr. and Mrs. Juery, Mr. Scott, Mr. and Mrs. Brovons, from Hongkong, Messrs. Dubouquet and Tilford.

OUTWARDS.

Dec. 1, Dutch schooner *Otargo*, Isaacsen, 46, for Bonin Islands, General, despatched by H. Cook.
Dec. 1, American ship *Alexander McNeil*, Sprout, 1,122, for San Francisco, General, despatched by Walsh, Hall & Co.
Dec. 2, Japanese steamer *Maru Maru*, Thompson, 524, for Hiogo, General, despatched by M. B. Co.
Dec. 2, American ship *City of Boston*, Crosby, 1,062, for Hongkong, General, despatched by Edward, Fischer & Co.
Dec. 2, British Gun-boat *Swinger*, Com. U. P. Tudor, 430, for Practice.
Dec. 2, British Sloop-of-war *Pegasus*, Com. Hon. H.N.S. Hood, 1,124, for Kobe.
Dec. 2, British Gun-vessel *Gromer*, Com. Willcox, 584, for Practice.
Dec. 2, British Corvette *Charybdis*, Capt. Hotham, 2,187, for Kobe.
Dec. 3, Japanese steamer *Nagoya Maru*, Wynn, 1,260, for Shanghai and ports, Mails and General, despatched by M. B. Co.
Dec. 3, American barque *Mabel*, Hallet, 781, for Nagasaki, General, despatched by H. MacArthur & Co.
Dec. 4, French steamer *Tibre*, Reynier, 1,726, for Hongkong, Mails and General, despatched by M. M. Co.
Dec. 4, American ship *Grandee*, Jacobs, 1,295, for Kobe, General, despatched by C. & J. Trading Co.
Dec. 4, American ship *Unlainted*, Dismore, 1,764, for Manila, General, despatched by L. Kniffier & Co.
Dec. 4, Japanese barque *Kanagawa Maru*, Eckstrand, 606, for Nagasaki, General despatched by M. B. Co.
Dec. 4, Japanese 3-masted schooner *Aronjishima Maru*, Crichton, 660, for Nagasaki, General, despatched by M. B. Co.
Dec. 5, Japanese steamer *Meiji Maru*, Peters, 1,000, for cruise, despatched by Lighthouse Department.
Dec. 5, Japanese steamer *Hiogo Maru*, Moore, 696, for Hakodate, General, despatched by M. B. Co.
Dec. 5, Japanese steamer *Tsuruga Maru*, Steadman, 661, for Hiogo, Mails and General, despatched by M. B. Co.
Dec. 5, Japanese steamer *Tokai Maru*, Hogg, 652, for Hiogo, Mails and General, despatched by M. B. Co.

PASSENGERS.

Per French steamer *Tibre* for Hongkong:—Messrs. R. Gebauer, Civetta, G. Farfara, Cheynet, F. Maurer, P. Roulez, E. J. Geoghegan, G. Guidetti, Oyama Tsunayoshi, Komatomé Riou, Mlle. Mascini, Mr. and Mrs. Fairclough and servant, Messrs. M. M. P. Sacconi, H. S. Deane, MacCullum and A. Hoy.
Per Japanese steamer *Nagoya Maru* for Shanghai and ports:—Mr. and Mrs. E. H. Booth, Mrs. Enouye, Miss Enouye Atami, Miss M. Ashley, Captain W. Crichton, Mr. and Mrs. Sato, Messrs. G. Bayfield, Nomura, Watanabe, Kawashima, Tanabe, Nishiwaki, J. Crosby, Obata, Morishita, Kawashiro, Ishimaru, Fajada, Kolkel and W. H. Stone.

CARGOES.

Per Japanese steamer *Nagoya Maru*, for Shanghai and ports:—
Treasure \$13,295.00
Per French steamer *Tibre*, for Hongkong:—
Silk for London 550 Bales.
„ for France 880 „
Total 1,430 Bales.
Per French steamer *Volga*, from Hongkong:—
From Europe 2,896 packages
„ Hongkong 537 packages

REPORTS.

The British steamer *Merionethshire*, reports: Left Hongkong on the 23rd ultimo, strong N.E. winds.
The Japanese steamer *Kumamoto Maru* reports: Left Hakodate 30 November 4 a.m., experienced fine weather throughout.
The Japanese steamer *Genkai Maru* reports: Left Shanghai 26th November, first N.E. winds fine weather, arrived Nagasaki 6 10 a.m. 28th Nov. left mid 28th Nov., arrived Kobe 5.20 p.m. 30th, left Kobe Dec. 2.6 p.m., arrived 4th Dec., 2.45 a.m., light N.E. winds and fine weather to port.

KEATING'S COUGH LOZENGES,

COUGHS,

ASTHMA,

BRONCHITIS,

ACCUMULATION OF PHLEGM.

Composed of the purest articles. These Lozenges contain no opium nor any deleterious drug, therefore the most delicate can take them with perfect confidence. Their beneficial effect is speedy and certain. The old unfailing family remedy is daily recommended by the most eminent Physicians. (In use nearly 60 years).

MEDICAL TESTIMONY.

July 25th, 1877. 22, Cold Harbour Lane, London.

Sir,—Your Lozenges are excellent, and their beneficial effects most reliable. I strongly recommend them in cases of Cough and Asthma. You are at liberty to state this as my opinion, formed from many years experience.

J. BRINGLOE, M.R.C.S.L., L.S.A., L.M.

Indian Medical Service.

Mr. T. KEATING,
Dear Sir,—Having tried your Lozenges in India, I have much pleasure in testifying to their beneficial effects in cases of Incipient Consumption, Asthma and Bronchial Affections. I have prescribed them largely, with the best results.

W. B. G. —, Apothecary, H.M.S.

KEATING'S COUGH LOZENGES are sold by all Chemists, in bottles, of various sizes, each having the words "KEATING'S Cough Lozenges" engraved on the government stamp.

KEATING'S WORM TABLETS,

A PURELY VEGETABLE SWEETMEAT, both in appearance and taste, furnishing a most agreeable method of administering the only certain remedy for **INTESTINAL or THREAD WORMS**. It is a perfectly safe and mild preparation, and is especially adapted for Children.—SOLD IN BOTTLES BY ALL CHEMISTS.

Proprietor, **THOMAS KEATING, London,**

Export Chemist and Druggist.

THE GREATEST

**WONDER OF MODERN TIMES!
HOLLOWAY'S PILLS.**

Persons suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER,

in his work entitled "The Nile Tributaries in Abyssinia," says, "I ordered the dragoman Mahomet to inform the Fakay that I was a Doctor, and that I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as possessing unmistakable purgative properties they create an undeniable effect upon the patient, which satisfies him of their value."

**SIMPLE, SAFE AND CERTAIN!
HOLLOWAY'S OINTMENT.**

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

MR. J. T. COOPER,

In his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls, butter, and horse-feed poured in upon us, until at last a tea-spoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining stock." Sold by all Chemists and Medicine Vendors throughout the World May 17th, 1873. ff.

"HIGHEST AWARD & PRIZE MEDAL PHILADELPHIA
EXHIBITION, 1876."

MINES AND MINING.

I.

IT is hardly necessary to state that the reality has not justified the hopes and anticipations which were entertained in former years in regard to the mineral wealth of Japan. Undoubtedly all those expectations were overstrained. Originating with the reports of Marco Polo about the wonderful "Zipangu," with its temple-roofs covered with gold, its profuse wealth of gold and silver vessels, and its soil rich both in the precious and useful metals, Japan for many centuries was looked upon as a peerless Eldorado. Its situation in the Far East and its policy of extreme isolation naturally heightened the illusion; for distance and mystery have ever been powerful incentives to the imagination. Fancy reached such a height that the more sober accounts of Kämpfer and others were believed not to do justice to the reality. The great traveller's descriptions were undoubtedly truthful; and his judgment was well-founded and correct. Still it is generally believed by some foreigners now residing in the empire, that he was unconsciously biased: that he wrote more favorably than the actual condition of the country justified. We must, however, bear in mind that we look with eyes other than those of Kämpfer, and that we now apply a standard whereof the great traveller of the seventeenth century did not dream. Whatever may have been the difference, in wealth and material prosperity, which then existed between Europe and Japan, shrinks into utter insignificance when compared with the respective conditions of those countries to-day; nay the ideal Japan, as western fancy created it, could hardly have been as superior to Japan as it really was, as the Europe of our time is to the Europe of two hundred years ago. Nearly all the great inventions and discoveries, by means of which natural obstacles are over-

come and the earth is made to give up its treasures were made in the intervening period, while, during the same interval, little or no progress was made in Japan. This will in part explain how the optimism of the past, by making unjustifiable analogies and comparisons, has given place to a pessimism which is, to a great extent, equally unfounded on facts and reason.

In a lecture delivered by Mr. C. Netto, before the German Asiatic Society, a printed copy of which has been kindly sent to us by the author, we find the present status of "Mines and Mining in Japan" described in as painstaking, conscientious and thorough a manner as the highest exigencies of modern times can demand of the specialist from a scientific as well as from a practical point of view. Reasoning both from the actual condition of the mines now worked as well as from deductions drawn from the experience of the past, Mr. Netto shows that Japan's mineral resources, although not, probably, justifying extravagant hopes, are by no means inconsiderable, and will, if properly developed, certainly be found capable of adding greatly to the wealth of the country. The essayist shows, further that the great wave of progress which has swept over the land has but slightly influenced the mining system. There are at present five mines belonging to government, and four conducted by private enterprises, where foreign scientific talent and machinery are employed. With the exception of these instances the former empiricism has not yet been supplanted by modern and more economical ways of working. We are shown conclusively where, and to how great a degree, this method is deficient; and our remarks on this part of the paper are little more than a condensation made for the benefit of the general reader. The original, which covers forty printed pages, with accompanying drawings, specifications, etc., will naturally be referred to by those who desire information on all detail of the subjects.

The evils of the old primitive methods are most plainly apparent, here as they have been in other countries, in regard to drainage. Absolute inability to meet requirements, and utter disproportion between the means employed and the effect produced, have been the cause of the abandonment of many mines, and the reason why the cost of working many others is still so high as to render them almost unremunerative; while, with improved methods, and the mere saving thereby effected, there would be more than a fair percentage of profits. Almost the only plan employed for raising water from the bottom of mines is by means of hand pumps of the simplest construction, consisting of a prismatic wooden box or tube, open above and below, with a valve opening upwards, and a piston, bound round with straw or leather, moved up and down by means of a rod held directly in the hands of a labourer. The height to which water is raised is about five feet; and successive pumps, placed one above the other, the receptacle containing the water discharged by the lower one serving as a basin from which the next highest draws its suction, are thus made

to drain the mine. The costliness as well as inconvenience of this procedure is apparent, although the extent to which it is so will hardly be realized at once. It is not an unusual thing in some of the more important European and American mines to raise one thousand gallons of water per minute. To do so to an altitude of, say, seven hundred and thirty feet would, with the price of coal at six dollars per ton, cost \$6,287 worth of fuel per annum if performed by a good Cornish water-lifting engine. According to the Japanese plan, even with the low rate of wages paid, the same work would amount to \$2,291,616. In the copper mine of Beishi the water is raised from a depth of seven hundred and thirty feet, by means of the pumps above described, one hundred and thirty of which, with as many men to work them, are placed at regular interspaces of a little over five feet. Such a waste of human labor is certainly appalling; but it proves, also, that many of the mines now worked in this manner must be of much more than average richness if they can be carried on at all under such a system. But although this is the greatest, it is not by any means the only, drawback to remunerative work. With regard to ventilation and the lighting of the mines there is sufficient room for improvement, hardly any attention being paid to the former, while the latter is sometimes effected by means of vegetable oil burned in small lamps made of shell, and utterly inadequate for the purpose, or, more generally, by means of thin dry bamboo stems, which not only require continual attention, but greatly aid in the further vitiation of the bad air in the tunnels.

Mr. Netto lays just stress upon the scheme of management, which at present fails to do justice to the interests of either owner or labourer, and in consequence precludes the possibility of economical and proportionately profitable work. Every mine will show a relatively large corps of employes entrusted with the direction; but among them all it is very seldom that even one man can be found possessing any practical knowledge of mining. This remark applies even to the very lowest among them: to those ranking as overseers, etc., whose business consists in the more immediate supervision of the labourers. The latter are quick enough to find out that there is no one above them able and willing to judge of, and pay proper consideration to, the amount and quantity of the labour performed; and so they naturally confine themselves to doing only what is necessary to keep up appearances. Moreover, as the lower clerks and supervisors are never paid more, and often less, than the labourers; and, as their situations are not permanent, and offer no chance of advancement, it is hardly a matter for surprise to find them in direct collusion with the contractors and often even with the workmen whom they are sent to superintend. Under the circumstances anything like a zealous or even conscientious discharge of duties is out of the question. An opinion seems to prevail among the owners, and is carried into practice, that dishonesty can be avoided by very frequent changes of management. It is, however, hardly necessary to point out that a contrary result is invariably achieved.

Another great impediment in the way of the rational development of a mine is the plan, very generally pursued by the directors, of paying for the ore taken out in proportion to its value. All other labor connected with the undertaking, such as draining, keeping the works in order, making surveys, etc., is done under the immediate control of the directors, but the taking out of the ore is left to sub-contractors, each directing a gang of men, on the conditions stated. Very often, especially in the case of the precious metals, only

the gold and silver actually extracted is taken at a certain rate, and the whole of the labour of getting and reducing the ore is thus confided to men over whom very slight control is maintained. A vein being of varying richness in different parts, the location assigned to the sub-contractors is fixed by rotation. It is, however, in the interest of all of them to work only the richer ores; and the consequence is what is appropriately called in German *Raubbau*, that is mine-robbing, the object being to extract as much as possible without any regard to the future, a method which is utterly subversive of all the true interests of mining.

Masonry for tunnels, etc., is next to unknown, although good clay can be found almost everywhere for the manufacture of bricks. Timbering even is rare; and where it has been found indispensably necessary to resort to it, it is of the simplest kind. No appliances exist for hoisting ore by machinery: it is brought to the surface, packed on the backs of human beings, up the steps which, twisting in various ways, connect the different parts of a mine. It is thus carried, without being unloaded, for a distance often of several thousand yards. The low narrow channels which hardly permit the passage of a full grown man with a corresponding load, cause the employment of children, who usually carry from twenty-five to fifty pounds each.

The above are the principal difficulties which attend the production of the ore up to the time it arrives above ground. It will be seen that they seriously handicap the Japanese producer. The price of metals, as well as of every thing else, is governed primarily by the cost of production. In former years, before Japan was partially opened, the internal laws of demand and supply had adapted themselves to the internal cost of production; but at present the cost of production is what governs the market all the world over, and here as well as everywhere else. The poorer mines have been forced to cease working; and, if the whole mineral production of Japan has increased, as there is evidence that it has, the fact is owing altogether to the augmented yield of those mines which, in whole or part, are exploited on foreign models.

Considering the primitive and simple means heretofore employed to overcome natural obstacles, it is astonishing to see how much has often been accomplished. Tunnels can be found attaining a length of ten thousand feet; and a depth of eight hundred feet below the surface of the ground has in some cases been reached, the whole having been accomplished without gunpowder or other blasting materials, and with most imperfect means of drainage. This shows plainly enough how much labour and time has been bestowed. A fairly extensive literature in regard to mining also exists and; a good record has been kept showing the results of the working of different mines.

SILK IN AMERICA.

IT is of great importance that all those, foreigners or natives, who are connected with the silk industry in any of its branches in Japan, should be kept informed, as far as possible, of the progress of the trade and manufacture in every country which is at all dependent upon this for its supply, whether of the raw or the manufactured article. The report of Mr. Wyckoff, embodied in his history of the silk goods of America, shows what has been the condition of the trade in that country during the twelve months previous to May last. The reviewer states that the period in question, while it witnessed no great failures, on the other hand saw no instances of remarkable prosperity, this, under the trying circumstances of the time, happy absence of vicissitudes being ascribed to the unusual absence of interference on the part of

Congress. The fact affords an example of how much more securely and satisfactorily business of any kind can be done on a fixed than on a shifting tariff. There was an almost continual decline of prices in the United States as in Europe. In February, rates were lower than they had been for thirty years, and very much below those which ruled from 1865 to 1872 and during the excitement of 1876. The fall of values had been from twenty to thirty per cent. by the 14th of May, when prices were fairly quiet. Several reasons are given for this result. The unsettled condition of European politics, that bugbear of commerce all over the world, together with the slender prospect of good prices for fabrics, gave the first impulse to the decline. Then followed a repetition of that uncertainty as to the quantity of stock on hand in European centres, which was one of the chief causes of the fluctuations in 1876. The curious incident is noticed that during the past year those interested began by underestimating, and ended by overestimating, the amount. Notwithstanding, more silk was consumed in manufacture than in any former years. In America itself the increase was thirty-eight per cent. over 1877, and twenty per cent. over 1876. Much the same result occurred in England; and even in Lyons, though the French trade was not flourishing, the conditioning-houses recorded augmented receipts. We append a tabular statement, compiled by the secretary of the Association, of the receipts of the raw material at the ports of New York and San Francisco during the fifteen months from the 1st of April 1878 to the 30th of last June.

	From England and the Continent.	Japan.	Hongkong.	Shanghai.
	BALES.	BALES.	BALES.	BALES.
1878. April.....	255	223	118	403
May	152	188	240	452
June	95	145	308	420
July	85	102	79	249
August.....	185	121	54	264
September ...	276	305	145	538
October.....	137	343	52	731
November	179	404	529	821
December	330	436	541	392
1879. January ...	123	—	—	—
February	533	535	611	814
March	483	368	172	332
April	234	340	437	360
May	253	131	204	330
June.....	613	240	380	674
Total in 15 months...	3,923	3,871	4,330	6,780

Hence it will be seen that the smallest quantity arrived from Japan, though not much less than from England and the Continent; and that the shipments from Shanghai nearly double those from this country. A new feature in the trade is the increase in the amount which goes to America from Asia through the Suez Canal. As the greater part, however, is still sent across the Pacific, and then taken to New York by rail, it follows that the article is "travelling simultaneously two opposite ways around the world, though starting from the same point and going to the same destination." A comparative statement of the yearly import from all quarters into the United States shows the following figures:—1874 7,452 bales, value \$3,627,367: 1875, 10,552 bales, value \$5,327,742: 1876, 11,237 bales, value \$5,600,877: 1877, 9,913 bales, value \$5,591,084: 1878, 13,734 bales, value \$6,807,725. A glance at the value as against the number of the bales, will demonstrate a considerable fluctuation in the average price of the noble article. This average was, according to the foregoing statistics, say,—in 1874, \$486: in 1875, \$505: in 1876, \$498: in 1877, \$564: in 1878, \$496. Thus, there was not a very great difference between the average cost, per bale, in the first and the last years the records of which are given, though the depreciation in value in 1878, as compared with the preceding year, was very marked, as before stated.

A circumstance of considerable importance to growers and exporters in this country, is prominently noticed. No compar-

ative table of the yearly quantities sent to the United States from Japan is given; but we are informed that there has been a very large increase, as, of course, the local records will establish. Our author remarks that the quality, however, has not been quite satisfactory, owing to a want of care here in preparing the article for the market on the other side. The defect indicated has been principally observed in Kakedas; though, we are happy to be able to add that the silk from the best filatures is not open to this criticism. Mr. Wyckoff says pertinently, and his remark had better be taken to heart, "that the deservedly good repute of Japanese silk was only won," in the region where he writes, "a year or two ago by diligent effort; it can be lost even more rapidly by carelessness." The importation from China appears to have increased in about equal ratio with that from this neighborhood; but it, in its turn, shows no improvement in quality, being adulterated at least as much as hitherto. We read that the export of silk from Hongkong to the two American ports before mentioned was nearly twice as great as in 1877, and sixteen per cent. over 1876: that from Shanghai it was sixty per cent. more than in 1877, and thirty per cent. over 1876. As for Yokohama, it exported one hundred and forty-eight per cent. in 1878 more than it did in 1877. It is added that European raw silks have been very much depressed in price, and relatively cheaper than the Asiatic products.

It may be adduced that, here, people have not much concern in what becomes of the material when once it is despatched from our ports. We think, however, that a few points in this report of the Secretary of the American Silk Association will bear transient notice. Thus, naturally, with the decline in the value of raw product, manufactured goods have become cheaper. The writer deplors the want of harmony between members of the trade. He says that it seems to be an invariable rule that whenever American manufacturers, in that branch, attain control of their domestic market, a sharp rivalry at home keeps down prices and profits. He admits, however, that this state of things brings a few consolations. "In view of the fact that, along with the exclusion of foreign goods, there is always a lower price established for the domestic product, there is no room for the fallacious argument of opponents of the tariff, that a protective duty makes goods cost more to the consumer." We give this proposition for what it is worth, and without prejudice. It may be said that the result which the author would evidently regret, might be arrived at, if the "harmony" he desires were to exist among manufacturers, but it is not our object now to enter upon the consideration of the question which is here involved.

Many costly experiments and improvements have been made in the United States during the year; and the mills have been fully employed, though the very precarious nature of the enterprise is evidenced by the expensive alterations of machinery necessary to meet new requirements, and the decrease in value of goods on hand. It is satisfactory to learn that, compared with the other large industries of the country, the silk manufacture has been remarkable for the steadiness with which it has kept its operatives at work. In one place one-fourth of the entire population is said to be employed in this special industry. The universal demand, in this as in other branches of textile fabrics, for a cheap stuff, has been met "by more skilful work, greater economy, less waste; and this result has been brought about by the improvement of the operatives, who have learned better how to perform their duties." Home competition has kept down prices, and made-up silks were never cheaper. As wages are higher than in Europe, after making liberal allowance for the difference in the cost of living, many of the frugal workers in the mills are saving a pair portion of their earnings. On the whole, it is evident that this particular manufacture bids fair to become one of very great importance in America, and to prove a

formidable rival, as so many of its predecessors have done, to the older institutions of Europe. It is for these to look to the retention of the markets they possess, to spare no pains, no appliances, no economy, in order to maintain their positions, and improve their productions. And it is for Japan to learn and apply useful lessons from the efforts and experience of any and every country.

THE AMATEUR ATHLETIC ASSOCIATION.

WE note with pleasure, from the recently published report of the committee, the healthy condition of the finances of this Association; and we trust that the coming year may prove even more successful. Athletics have always met with favour in Yokohama, and we venture to predict that, notwithstanding many drawbacks, they will yet continue to flourish. The number of competitors is certainly smaller than we should like to see it, and there may no doubt be some foundation for the frequent charge of tameness adduced against the meetings; but at the same time it cannot be denied that the half-yearly sports of the Athletic Club furnish the community with the opportunity of a pleasant outing, and a fair day's amusement. In these eastern settlements one requires as many recreations as can be provided, and harmless out-door exercise is undoubtedly one of the most healthful and innocent that could be devised. The Society has had many difficulties to contend against, not the least of which is the matter of the running path and grounds. The great drawbacks here are, first, the uncertain tenure of the present location on the rifle range, and, secondly, the distance of that spot from the settlement. Liable as the society is to be turned out, at any moment when it may please the Japanese authorities to demand the surrender of the property, it is no wonder that the committee should be chary of risking too great an outlay in repairs to the premises in general; and, again, it is no slight drawback for men in training to be forced to trudge up the camp hill any afternoon when they fancy a run. Here a question suggests itself. Would it be absolutely impossible for the Association to make such arrangements with the Cricket Club as to allow of the meetings being held in the public garden in the rear of the settlement? This arrangement must surely be feasible, and, were it carried into effect, would decidedly prove a boon to our athletes, most of whom have their places of residence in town. Furthermore, we can well assert that the spectators would infinitely prefer to view the contests from the well-built pavilion recently erected on the cricket field, instead of from the decrepit building that now does duty as a grand stand at the rifle range. We venture to offer this suggestion for the consideration of the incoming committee of the Athletic Association. Were it carried into operation early results would prove the change not only a source of convenience and reduction of expenses to the members themselves, but also of satisfaction and pleasure to the community in general.

THOSE who are interested in genealogies may be glad to have a little information on the subject of the family of the illustrious member of Italian royalty who is now a visitor to this country in command of one of the fine vessels of the fine fleet which his country, faithful to old traditions, is forming. It is altogether in the fitness of things that a Duke of Genoa should be a sailor. In the *Almanac de Gotha* we read that Prince Thomas Albert Victor was born on the 6th of February 1854, and is thus nearing the close of his twenty-sixth year. He the son of the late Prince Ferdinand of Savoy, Duke of Genoa, brother to the deceased King of Italy, Victor Emanuel. His mother, now Marchioness Rapallo through a second marriage (her first husband died at the end of 1855, nearly two years after the birth of the present Duke) is the Princess Elizabeth, daughter of King

John, of Saxony. Only two children were the offspring of the first union. The elder sister of the Savoyard Prince is the Princess Marguerita, now Queen of Italy, having been married to her cousin, the reigning monarch, then Prince Humbert, in April 1868. The house of Savoy is undoubtedly one of the most ancient, wearing royal honours, in Europe, tracing as it does, its descent in direct line from Imperial and Patrician families of ancient Rome.

A POINT of considerable importance to persons forwarding telegrams was decided in Foochow, on the 6th of November, in the local German Consular Court. From the report of the proceedings in the *North China Herald*, we learn that an action was brought by the Great Northern Telegraph Company, through their agent in Amoy, against Messrs. Schönfeld & Co., of Foochow, to recover \$62.70 for deficiency in charges upon two telegrams forwarded by the Company, via Suez to Russia. Shortly stated, the facts were, that, on the 9th of August last, the defendants sent through the agent of the company two telegrams addressed respectively to Moscow and St. Petersburg. The Foochow agent understood that it was the intention of the defendants to have these two telegrams forwarded via Siberia; and the charges were collected accordingly. Upon the arrival of the telegrams at the Amoy station the company's cable between Shanghai and Nagasaki, and their land lines in Siberia were interrupted. Consequently the company's Amoy agent forwarded the telegrams by the "Eastern Extension," via Suez. The charges by this route were \$62.70 in excess of those by the Northern, or Siberian, route, and when payment of this difference was demanded from the defendants it was refused, on the ground that they wished their messages sent by the Siberian route, had paid the charges by that line, and that the Company's Agent had no right to forward the despatches by another and more expensive course. The company, in order to recover the difference, relied upon the terms of the "International Telegraph Convention" of 1875, which is in fact their Charter. It was proved at the trial that telegraph administrations in pursuance of a rule of the convention, undertake to adopt all necessary measures to secure the prompt transmission of messages, and, failing to do so, would be open to censure, and doubtless to prosecution for damages which might accrue from avoidable delays.—The company alleged that their action in forwarding the two telegrams by a route other than the one intended by the senders to be followed, was in strict accordance with the rules of the convention of 1875, and it was proved that the senders of telegrams by the company, hold themselves bound to accept and abide by the said convention, article XXXIV. of which declares in substance that, "If the sender of a telegram does not prescribe the route to be followed, the administration (i.e., the Telegraph Company) remains the judge of the direction by which to forward the same. If, on the contrary, the sender has prescribed the route to be followed, the respective administrations are bound to conform to his instructions—unless the route indicated is interrupted. The sender who wishes to prescribe the route to be followed must write the corresponding direction in the margin of the message." It was shown that the defendants did not designate the route they wished their telegrams to follow, as required by the convention, but they maintained that their directions were sufficiently indicated to the company's Foochow agent by the payment of the charges by the Northern and less expensive way, and that the company was stopped from the recovery of other or additional charges by the agent's acceptance of the charges for the cheaper route. The company on the other hand submitted that this did not follow, because article XVIII. of the convention declares that "the charge is calculated according to the least expensive route between the starting-point of the

telegram and its destination, unless the sender selects another route;” and that article XXV. clearly contemplates that if the charges so calculated are insufficient to pay by another route, by which the telegram may necessarily be sent, payment shall be completed by the sender. The consul and assessors after a thorough investigation adopted the views advanced by the Telegraph Company, and gave judgment in its favor for the full amount of the claim. A question of this kind is of very great importance to the mercantile community, and it is satisfactory to know that the legal points involved will receive further consideration, as the defendants have given notice of their intention to appeal from the decision of the Consular Court to a higher tribunal.

JAPANESE authors, as far as regards their own productions, are by no means insufficiently protected by their copyright laws. Their condition, in fact, is sufficient to attract the envy of their fellows in England. A London journalist remarks of them that they are “fortunate beings,” inasmuch as “by application they can obtain the exclusive right to sell their writings for thirty years, or, if the work be very important, for forty-five years, each book bearing the name and address of the author or publisher, and the date of its registration. If the copyright is violated, the offender is fined, obliged to hand over the product of his piracy, as well as the plates from which the work was printed, while the publication or sale of books put forth anonymously, or under a pseudonym, and without note of the place of publication, is punished by imprisonment of from ten days to six months, and confiscation of the work.” It is protection for foreign authors whose works are illegally translated, or absolutely and shamelessly pirated, that is required.

THE triumphant success of the Swedish exploring expedition, under the leadership of Professor Nordenskjöld, has undoubtedly given a great impetus to the cause of Arctic investigation. We notice that a meeting of the International Geographical Congress was held in Hamburg last October, for the purpose of securing harmonious action on the part of the governments and geographical societies of Europe and America in the work of Polar exploration. Delegates were present at the meeting from Germany, the Netherlands, Russia, France, Austria, Denmark, Sweden and Norway. We regret to observe that neither England nor the United States was represented, but both nations are expected to coöperate in the plans of the Congress. The delegates were either official representatives of their governments or of scientific associations, but had no power to pledge their principals to gifts of money or material aid. A resolution was passed recommending the establishment of permanent stations of observation in the Arctic regions at the following places: First, Eastern Greenland, to be maintained by Germany; second, Jan Mayen, by Holland; third, Finnmarken, by Norway; fourth, North Spitzbergen, by Sweden; North Novaya Zemlya, by Austria; sixth, mouth of the Lena, by Russia; seventh and eighth, Lady Franklin Bay and Point Barrow, by the United States; ninth, Upernavik, by Denmark. It was decided that these stations should be occupied one or more years. The observers at these posts will doubtless succeed in collecting much valuable information respecting those little known northern lands which have hitherto baffled the most arduous efforts of so many gallant explorers.

WE have received from Dr. Syle, a copy of the October number of the *Boston Missionary Herald*. The illustration is a well executed engraving of twelve of the fifteen first graduates (1879) of the Kioto missionary training school. The editor remarks that “the class has had a re-

markable history, and high hopes are entertained of their usefulness. Four of them remain as teachers in Kioto, six go directly to evangelistic work, while four may perhaps remain for another year’s study.” The first paper is on “Scientific Education in Japan,” and is written by Mr. S. T. Yamasaki, one of the graduates above mentioned. Scepticism, its advance, and the best means of checking it, are treated perspicuously and at some length by the writer, who is strongly in favor of scientific instruction in the missionary schools. We will not follow him through his argument; but are glad to testify that the work of the young author, who remains in the seminary as teacher of science, is creditable alike to himself and his instructors.

ENGLISH papers in China take a generally correct view of the state of the question pending between Japan and the continental Asiatic empire, on the right of control over the Loochoo Islands. The *Hongkong Daily Press* propounds that “the Chinese Ministers must see, on calm consideration, that the Japanese Government cannot possibly accede to their proposals without a sacrifice of self-respect that it is impossible to conceive would be made. The Peking Government must also be well aware that it has distinctly recognised the sovereign rights of Japan over Loochoo, and that, having done so, it cannot expect to receive the moral support of other powers if it provokes a struggle with Japan. China has protested against the conversion of the Loochoos into a *ken*, and with that action she had better rest content. It was, perhaps, not altogether beyond her functions, as an old patron of the little island kingdom, to make such protest, but to do more would clearly be exceeding her privilege. The storm that has been raised over the affair should be allowed to settle down again quietly. China and Japan ought to be natural allies.” Of course they should; and, indeed, all apprehensions of a rupture are now dissipated.

ON another page we print the Japanese proposal for a new Custom House tariff. Copies of the document have been for some weeks past in the possession of the various foreign representatives. The scheme is very moderate in its scope, and will probably be accepted with but trifling, if any, alterations. The highest duties are those to be levied on articles principally used or consumed by foreign residents, or the comparatively well to do classes of natives who affect western habits of life. On the new scale the Government may expect a fair revenue from its Custom Houses, and will be placed in a position to relieve the agricultural population of a portion of the burden which now unduly weighs upon it.

NEW York papers announce the death, at Washington, of Rear-Admiral Reynolds, U.S.N., who was two years ago in command of the American Asiatic squadron. The deceased officer, who had many friends in China and Japan, was appointed to the navy from Pennsylvania as a midshipman in 1831, and at once started on a cruise in the schooner *Borer*, but was soon transferred to the sloop-of-war *Peacock*, in which he cruised about the coasts of Africa, Brazil and the East Indies. In such service he spent five years, when he was sent to the naval school at Norfolk. After two years there he was promoted to be a passed midshipman, and served with the navy department in Washington. From 1841, when he was made a lieutenant, to the breaking out of the war, he did the usual duty of naval officers, though he took no part in the Mexican struggle. When it began he was under surgical treatment, and until 1866 he was on the reserved list. He was on the invalid list until 1870, when he was made a commodore and placed in charge of the bureau

of equipment. In 1873 he was promoted to be rear-admiral in charge of the fleet in these waters. About two years ago he was placed on the retired list of the navy.

A LATE issue of the *Peking Gazette* contains two decrees which tend to shew that the paternal government of the Middle Kingdom bestows a greater amount of care and solicitude upon the poorer classes of that vast empire than is usually supposed. The first decree sanctions a grant of Tls. 3,600 for the purchase of wadded jackets to be distributed amongst the destitute poor in Peking for use during the coming winter. The requisite funds are to be procured from the revenue derived from moneys placed out at interest by the Office of the Imperial Household in Chibli; and it is further provided that, if the remittances due from Ch'ang-lu have not yet arrived, the necessary amount is to be advanced from the Treasury of the Privy Purse. The second decree provides for the continuance of a very extensive charity. It authorises the usual monthly grant of three hundred and thirty piculs of rice for distribution amongst the various gruel kitchens in the *Wai Ch'eng*, or Chinese quarter, of Peking. These kitchens, we learn from the decree, were to be opened on the 1st of the 10th moon (14th of November) the commencement of the inclement season; and three hundred piculs of rice are also granted to three night refuges, and the same amount to a Mahomedan temple at which gruel is dispensed, with smaller grants to other establishments of a similar kind.

AN article in the *Akebono Shimbun* considers at some length the alleged offer of the United States to mediate between the two extreme oriental empires. It strongly deprecates any such intervention, saying that, distressing as it would be to learn that peace could not be maintained, yet it would be still more calamitous if it should be preserved through American intercession. The writer argues that China and Japan are natural allies, and should be able to settle their own disputes. This is quite right, as far as it goes; but if they fail to arrive at a mutual understanding the friendly arbitration said to have been offered would be their best resort.

GRADUALLY the prominent actors in the stirring scenes of the middle of the century are passing away. Not long since we had to record the decease of the "Saviour of India;" and now the news reaches us of the death of the Right Honourable John Arthur Roebuck, M.P. Few there are who will fail to remember with what pertinacity the deceased gentleman advocated the cause of the English soldiery who were rotting in the trenches and hospitals before Sebastopol, in consequence of the gross mismanagement of the Crimean war by the Aberdeen Ministry, whose retirement from office was caused by Mr. Roebuck's success in obtaining the appointment of the celebrated "Sebastopol Committee." Possessing in the highest degree the qualities of pluck, pertinacity and sterling honesty so dear to Englishmen, Mr. Roebuck won for himself the familiar appellation of "Tear'em" from the fearless manner in which he advocated his views, and in no instance did he depart from his convictions through any dread of the consequences to himself. His advocacy of the cause of the Confederate States was the natural outcome of the feelings of a brave man at the sight of a chivalrous people battling gallantly against overwhelming numbers. Mr. Roebuck owed the loss of his seat for Sheffield to his unsparing denunciations of the scoundrel Broadhurst and the trade union outrages which had made the operatives of Sheffield a reproach to England and the very name of man. He had the satisfaction however of being triumphantly re-elected

on a subsequent occasion. The following account of the deceased gentleman's career is taken from *Men of the Time*:—

Roebuck, The Right Honourable John Arthur, M.P., grandson of Dr. John Roebuck, of Sheffield, maternally descended from the poet Tickell, was born at Madras in 1802, went to Canada in boyhood and left that country in 1824 for the purpose of studying law in England. He was admitted a barrister of the Inner Temple in 1831, and chosen member for Bath at the first election after the Reform Bill. The character of a thorough reformer, which he won in this arena, led to his appointment, in 1835, as agent for the House of Assembly of Lower Canada during the dispute pending between the Executive Government and the House of Assembly. Mr. Roebuck, commenced the publication of a series of political "Pamphlets for the People," in which, having assailed the whole body of political editors, reporters, and contributors to the press, particularly those of the *Morning Chronicle*, he became involved in what is called an affair of honour, and fought a very harmless duel with the late Mr. Black, the editor of that journal. In the country he was a popular favourite, though the plain speaking he had practised toward the whigs, whom he regarded as false to the cause of progress, lost him his seat at the General Election in August, 1837. He regained it in June 1841, but was again defeated at the General Election in August, 1847, and from May, 1849, until 1868, he represented Sheffield. Mr. Roebuck is a bold and unsparing orator, and has particularly distinguished himself in his replies to Mr. Disraeli. In January, 1855, he brought forward in the House of Commons a motion for enquiry into the conduct of the war, known to history as the "Sebastopol Committee." The Aberdeen Government resisting the enquiry, was beaten, on a division, by a majority of 157, and compelled to resign. Mr. Roebuck had no place in the new cabinet, but acted as the Chairman of the committee appointed through his exertions. In December, 1855, he was an unsuccessful candidate for the Chairmanship of the Metropolitan Board of Works at a salary of £1,500, standing third on the list at the close of the poll. In 1856, he accepted the Chairmanship of the Administrative Reform Association, from which great things were expected, though, after publishing a luminous programme, the Society became extinct. Mr. Roebuck has written, "Plan for government of our English Colonies," published in 1849, and "History of the Whig Ministry of 1830," in 1852, a work of great ability. In 1868 he lost his seat at Sheffield in consequence of his denunciation of the tyrannical proceedings of Trades Unions, but he was returned at the head of the poll at the General Election of February, 1874. He was sworn of the Privy Council, August, 1878.

THE CHIT-BOOK.

OF all institutions in the Far East, the one that is especially calculated to impress the mind of the verdant griffin or the jaunty globe-trotter, first with surprise, and next with admiration, is undoubtedly the chit-book. The newcomer looks upon it at the commencement as a curiosity; then politely allows that it is a grand convenience; and finally comes to regard it as a trusty and well-beloved friend. And indeed the handy little volume, neatly ruled in columns for date, name, number of notes, and remarks, may well and rightly lay claim to be our best assistant, and our most frequent visitor—particularly at the beginning of each month.

Of chit-books there are many different sizes, and shapes, and styles. This, a huge leather-bound tome, of substantial thickness and imposing surface, at once conjures up before our mind a vision of the "Big Taipan" to whom it belongs. That, a small neat unpretending book, bound in black leather and of oblong shape, bears on its very face evidence of the fact that it appertains to the unpretentious clerk. Add to these the exquisite turn-out in, say, light blue morocco, stamped with gold border surrounding the image of a Cupid or the impression of a cornucopia, gilt edged, and bearing initials in old German text—that, as you may perceive at a glance, is the chit-book of the dashing ladies' man, who, as a rule, is a junior in some large house, but who nevertheless considers himself an infinitely greater man than his employer—and one hundred-fold more attractive than that Olympian whom he irreverently calls his "boss." And, again, though late by no means least, those dear little *carpets* of bright hue, enclosed in prettily constructed cases, with names marked thereon in plain capitals, assert at once by their artistic style that they serve as the medium of conveyance for the literary productions of our fair friends. And, last of all, as it deserves to be, comes a tattered old mass of leaves and blotting paper, that was perhaps once a bound book, but all semblance of which it has now lost. Its sheets are smeared with ink: dog's-ears

abound; and it is altogether a most disreputable and ill suggestive article,—that, reader, is the chit-book of the wild young spark, given to frolic and spree, who's only enemy is his own self.

Of equal variety are the notes that these books contain. The imposing envelope, of size sufficient to contain a sheet of foolscap, needs not the magic words "On Her Majesty's Service" to set you to work speculating whether you are to be reminded that your registration fee is due, or requested to attend the Saibansho at a given date to take delivery of one spoon, salvaged from the proceeds of a burglary at your Bluff mansion some ten months ago. The large square cover generally contains a business letter or a legal communication. The blue or yellow missive is invariably from a dunning store-keeper. The envelope with a few words scribbled inside the flap, and hastily fastened down, perhaps bearing the mark of a dirty thumb on the outside, contains an invitation to "chow" with an old and esteemed chum. And what is this dainty little affair, on pink paper and delicately scented, with your name inscribed thereon in charming Italian hand-writing? That—oh, happy man!—indicates that Mrs. X. Y. requests the pleasure of Mr. A. Z.'s company at dinner! Such are the notes forwarded in those brightly clad volumes anent which we grew so enthusiastic a few lines above. We well remember one kind chit-book which brought many such charming missives to our address, on the receipt of which we used to dance round the office with delight, thereby calling down the reproofs of our employer and the anathemas of our fellow clerks. Alas! these joys are of the past.

Now for a dip inside the cover of the chit-book. Not to mention the splendid collection of autographs to be found therein, how amusing, quaint, and withal instructive are the disjointed sentences jotted down in the column set aside for the reply. Here are merely initials, meaning that a reply will be sent anon or else that the receiver of the chit cannot answer it just now. If the note be a dunning one, then you may make a heavy bet that these initials will not be those of the person to whom the letter is actually addressed. The laconic "O. K." conveys assent, and may be seen freely sprinkled over every page in the shabby and disreputable chit-book. We ourselves possess a volume with its history of delivery and receipt. Turning up a page at random we cull therefrom the following choice morsels for the edification of those who desire to make a study of this brief style of correspondence:—"Here you are, A. B.": "O. K.—C. D.": "Delighted!" (in a feminine hand): "\$10 herewith, E. F.": (Perhaps we had been lucky at poker the preceding evening): "Thks. G. H.": "Will see you, I. J.": "Can't be did, K. L.": and so on, *ad infinitum*. These extracts may suffice as a specimen of the whole. In a lady's chit-book, it may here be noted, one almost without exception finds "Ansd.", with initials attached, after every address. Young bachelors, as a rule, rejoice to receive chits from their fair friends; likewise do they love to reply thereto. In fact, the sly fellows generally contrive so to word their replies as to necessitate a final letter from the other side ere the correspondence can be closed.

The following suggestions for the correct treatment of a chit-book are placed at our disposal by a young gentleman who professes to have a large experience on the subject:—"If the note contain a bill which you are unable to meet, always get a friend to sign for you, and (if you can rely on his integrity) request him to add the convenient words 'Up country':—this is an effective *ruse*, and by no means to be despised. When an affirmative answer is required, at once put down 'O. K.' If you wish to be peculiarly grateful, insert '1,000 thks.' or 'M. thks.' When you receive an invitation to dinner, look at the names which precede, follow, or surround your own in the chit-book. You can thus make a good guess as to your fellow guests, and get up your conversation accordingly. Finally, should you ever desire to convey an especially tender message to one of the opposite sex, write it in pencil; and should you yourself ever be so fortunate as to receive, in your own chit-book, a reply in pencil to one of your effusions, erase it as soon as read, and desire your *bantô* to scrawl in its stead some undecipherable Japanese hieroglyphic for the benefit of the uninitiated."

The propounder of the foregoing code confesses that he was once and once only most grossly deceived as to the contents of the missive accompanying a chit-book. He says he received a dainty little note that looked almost like a *billet doux*. Making sure that it contained an invitation at the very least,

he pondered long as to the sender's name. When unable further to endure suspense, he finally tore it open with strange palpitations of the heart. Alas! there dropped from it—his card-chits for the preceding month.

REUTER'S TELEGRAMS.

LONDON, 26th November.

Reinforcements are being sent to the West of Ireland.
The retirement of Prince Gortschakoff is reasserted.
The Chilians have achieved a brilliant success at Iquique.

LONDON, 28th November.

Speaking at Dalkeith, Mr. Gladstone expressed himself in favour of local autonomy in Ireland.—*Hongkong Daily Press*.

LONDON, December 9th.

An unsuccessful attempt has been made to assassinate the Emperor of Russia.
The Chilian army are successful at Tarapaca and are blockading Arica.
Paris.—The Chamber of Deputies have passed a vote of confidence in the Ministry.

LONDON, December 12th.

The Albanians attacked Matrouaza, but were repulsed after severe fighting.
The *Morning Post* publishes a telegram that the German Government resume the sale of silver.

[SUPPLIED TO THE "HONGKONG DAILY PRESS."]

LONDON, 3rd December.

Prince Gortschakoff is at Berlin.
King Alfonso was married on the 1st instant.

The Japan Weekly Mail.

'FAIS CE QUE DOIS; ADVIENNE QUE POURRA.'

NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. Whatever is intended for insertion in the JAPAN WEEKLY MAIL must be authenticated by the name and address of the writer, not for publication but as a guarantee of good faith.

Manuscripts found unsuitable for our columns will be carefully returned to the writers.

It is particularly requested that all letters on business, relating to Advertisements, Job-printing, or Accounts, be addressed to the MANAGER.

And that literary contributions of every description be addressed to the EDITOR.

YOKOHAMA: SATURDAY, DECEMBER 13TH, 1879.

JAPANESE ERA 2530, MEIJI 12TH YEAR, 12TH MONTH, 13TH DAY,
Do-tô-di.

NOTES OF THE WEEK.

The O. & O. steamer *Belgic* arrived from Hongkong on the 9th instant, and was despatched to San Francisco, this morning, at daylight. The European mails came to hand per P. & O. steamer *China*, on Friday morning last.

Unoccupied lots in the Tsukiji, Tokio, concession will be put up at auction on the 15th instant. Tenders for purchase should be addressed to the Kencho office at Akashi Machi.

Our Shanghai correspondent reports the departure of the U. S. S. *Richmond* for Foochow on the 2nd instant. In the former port, as in Yokohama, officers and crew were immensely popular; and the fine band of the vessel was, whenever occasion required and circumstances would permit, ready to contribute to the recreation of the community.

In his letter published in this current issue, our Shanghai correspondent gives a full and interesting account of the Waverley ball, held in Shanghai in honor of the St. Andrew's festival. The occasion has been celebrated in a similarly appropriate manner in Hongkong, where, however, the ball was not a fancy one. Our Yokohama Scots are certainly behind the age this year.

Official proceedings in connection with the visit of the Duke of Genoa to this part of Japan have now been brought to a close; and His Royal Highness has resumed the active duties of his profession in charge of his splendid vessel. The *Vettor Pisani* goes into dock at Yokoska. While she is being overhauled her illustrious commander proposes to make a few excursions, as a private tourist, to places of interest in this neighbourhood. A trip to Osaka and Kioto is also contemplated.

After many changes of venue, it seems, for the moment, to be definitely settled that Tokio will, after all, be the site of the deliberations for the revision of the treaties.

We read in the columns of one of our French contemporaries that the *Chargé d'Affaires* for France wishes it to be understood that he will be happy to receive the communications of all those who desire to make known to him their views on the subject of treaty revision. He hopes to send to Paris, about the middle of January, an analysis of the work of those who shall have, by that time, corresponded with him on this important matter. The *Courrier* comments thus on the subject:—"The notification of the French representative appears evidently to indicate the receipt of new instructions, of such a nature as to render futile the mission of Mr. Mori Arinori, which is said to have for its special object the renewal in Europe of negotiations for the revision of the treaties. We are told also that the proposals of the Japanese Government on the subject of Custom House dues are not of a kind to render an understanding impossible; and that the end can be achieved just as well here as in Europe if not better. Under any circumstances a solution, one way or other, of the question, cannot now be very remote."

During the last two or three seasons the silk-worms' egg card buyers from Italy have not had much encouragement for their dealings in Japan. The trade itself hardly deserves much sympathy—that is from a local point of view. Hence we are not sorry to see that the Japanese are likely to make a supreme effort to obtain complete control of it. The *Yūchi Shinbun* now reports that the Kagi-sha, or Silk-worms' Eggs Card Company, has resolved to send, next year, all its cartons direct to Milan, where they will be sold by Japanese agents, and to decline unconditionally to sell any cards on the spot to foreign *graineurs*. It is added that the Mitsui Bussan Kaisha, which already possesses branch establishments in Europe, America, and China is about to send its manager and two other of its most trusted officers to dispose of Japanese silks in Paris and Lyons.

Exchange in paper currency has been marked, this week, by excessive and undue depreciation, the result, in part, it is believed, of extensive and unwarrantable speculation. Hence it is not surprising to learn that some heavy balances cannot be met. The rule has been that, on time bargains, a depositor can buy to the extent of two hundred and fifty times the amount laid down. Thus for four hundred dollars one can get credit for ten thousand. Yesterday there was considerable perturbation, among money-dealers, owing to rumors of impending regulations, by the Government, designed to clear the cloudy atmosphere of the brokers' universe. No quotation could be obtained before eight o'clock in the evening, when treasury paper was at 133 per cent against Mexicans and silver yen. The *Yomiuri Shinbun* of this morning states that the Finance Department has notified the Exchange Office that, commencing with to-day, all transactions in money are to be for cash, balances being paid every evening.

There appears to be no chance, at least for the present, of an alteration in the date of despatch of the European mail steamers from this port. Monday morning is the time fixed, and on Monday mornings the vessels of the P. & O. and M. M. Companies will henceforward sail alternately. The agent of the latter service kindly telegraphed to head quarters to ask, on behalf of the Yokohama community, for permission to start his ships early on Sunday; but the French Post Office authorities are opposed to the alteration. It has, however, been decided by the local agents of both companies not to apply for the opening of the Custom House on Sunday, except

in case of extreme emergency; so that, as a rule, shipping business will have to be concluded by Saturday afternoon. After the expiry of the current P. & O. Company's contract the date of departure of that line of steamers will, we understand, be altered with a view to the convenience of the public.

We observe that the following Governments have signified their acquiescence in the new international code of ocean and river signals and rule of the road at sea, as just issued by an Order in Council:—France, Germany, Russia, Italy, Spain, Portugal, Belgium, Denmark, Sweden, Netherlands, Austro-Hungary, Greece, Chili, and the United States of America. The new rules and signals will come into use on every ocean and sea of all nations on the 1st of September next year, and in the interim all candidates for certificates of proficiency will undergo examination in the new regulations.

The *Shanghai Courier* says "the Mitsui Bishi Company's steamer *Sumida Maru*, Captain Hubenet, made a very rapid passage from Nagasaki to Shanghai. She left Nagasaki at 9.30 a.m. on Tuesday, and arrived at Woosung Bar at 11.30 on Wednesday, thus accomplishing the distance in the short space of thirty-eight hours. The *Sumida Maru* is one of the new boats recently added to the Mitsui Bishi fleet, and on a voyage from Hongkong to Japan a short time ago, gave the English mail boat a pretty good beating."

A brilliant assemblage of guests met on Monday evening in the large hall of the Kobu Dai Gakku, on the invitation of His Excellency Sanjo Saneyoshi, to meet the Duke of Genoa, the public festivities in whose honor are now brought to a close. The ministry, the diplomatic body, the military and naval services of several nationalities were well represented. His Royal Highness arrived shortly after nine o'clock and danced, first, with Mrs. Inonye. Supper was served at eleven o'clock, and shortly before midnight the guests dispersed, a special train having been kindly provided for the convenience of visitors from Yokohama.

From a paragraph in the *Illustrated London News*, we learn that the Rev. Edward Champneys Irvine, M. A. Vicar of Hinton Admiral, Hants, has accepted the chaplaincy of the Episcopalian Church in Yokohama.

The *Moniteur des Soies* announces a better state of affairs in European silk markets. It adds that the enormous quantity of work going on, joined to the failure of this year's crop on the continent, has given rise to reflection; and people begin to perceive that the principal stock of silks is now to be found in Lyons. It would be far from sufficient, even with expected arrivals, if the factories were to renew their supplies in view of the demand for plain, black, and coloured stuffs, which is decidedly arising.

The following appointments were made in the Council of State on the 12th instant:—Mr. Kusumoto, Governor of Tokio Fu, to be a member of the Senate, and Mr. Matsuda, Chief Secretary of the Home Department, to be Governor of Tokio Fu.

We regret to have to announce that a large portion of the town of Hakodate was destroyed by fire on Sunday night. From the scant particulars to hand up to the present, it appears that the flames were first noticed about eight o'clock in the evening, and were not extinguished until four o'clock the next morning. During the time the fire lasted, two thousand three hundred houses were totally destroyed, and one person was fatally injured. The conflagration extended over twenty of the wards in the town; and many of the principal buildings, including the British Consulate and Telegraph Office, were burnt down; the Custom House and premises of the Colonization Commission, however, being fortunate enough to escape the general calamity. In consequence of a telegram received at the British Legation from the scene of this disaster H. M. gun-boat *Seienger* has sailed for Hakodate carrying supplies of food and clothing for the foreign residents. Mr. Kuroda, the Minister for Colonization, has also telegraphed to Hakodate, stating that he will give yen 2,000 towards the relief of those who were rendered homeless.

A permanent exhibition of Japanese industries is about to be opened within the precincts of the Finance Ministry.

Cholera appears to be far from extinct in the provinces even now. It is to be hoped that there will be no relaxation in general vigilance on the part of all the local health boards. In view of the severity of this year's disaster, the possibility of a fresh outbreak next spring ought not to be overlooked.

The *Akebono Shimbu* states that His Royal Highness the Duke of Edinburgh will revisit Japan next summer, but this may be regarded as entirely without foundation. The *London and China Express* of the 31st October states, that: "It has been arranged that the Duke shall hoist his flag on board the *Penelope*, at Harwich, on the 13th proximo, and assume the duties of Admiral Superintendent of the Royal Naval Reserves."

The *Choya Shimbu* reports that, after the receipt of the telegram from London, announcing that the United States Government had offered to mediate between China and Japan regarding Loochoo, it instituted strict inquiries in the proper quarter, but found that no official intelligence has yet been received here on the subject.

It is said that the Specie Bank, having now received its charter, will very shortly open its head office in Yokohama.

At the annual meeting of the Star in the East Lodge, No. 640, Scotch Constitution, held at the Masonic Hall on Tuesday last, the following officers were elected and installed for the ensuing year:—

D. W. Stevens.....	R. W. Master.
Edward Fischer	W. & W. Past Master.
C. J. Strome	W. Deputy Master.
H. M. Perkins	" Substitute.
J. Douglas	" Senior Warden.
I. W. Beauchamp	" Junior Warden.
J. R. Morse	Treasurer.
Drummond Anderson	Secretary.
R. M. Roberts.....	Senior Deacon.
G. Booth	Junior Deacon.
C. H. Geffeney	Inner Guard.
A. Hearn	Tyler.

The retiring Master, Mr. Edward Fischer, being absent, the duty of installing the R. W. M. elect was performed by W. & W. Past Master. A. S. Forbes, assisted by the R. W. District Grand Master of Japan, E.C., Mr. C. H. Dallas: the officers elect were next installed; and after the conclusion of this ceremony the brethren adjourned to a banquet, served in the Hall. After dinner, the usual loyal and Masonic toasts were drunk with enthusiasm. The health of the new R. W. M. was proposed by Mr. J. J. Enslie, Past Master, Hiogo and Osaka Lodge, No. 498, S.C.; and that gentleman aptly responded. The health of "the Ladies" was given by the youngest member of the fraternity, who, commencing his oration in his usual modest manner, finished by making the speech of the evening. A little before eleven o'clock "Auld lang syne" was played by the organist; and the first annual meeting of Star in the East Lodge was brought to a close.

Masonry is as well represented in Hiogo as in Yokohama, in proportion to the number of residents. The *Hiogo News* gives the following account of the Installation Meeting of Lodge Hiogo and Osaka, No. 468, S. C., which took place in the Masonic Hall on Thursday evening, the 4th instant, at 6 p.m. "About thirty brethren were present. Bro. C. Wiggins, the retiring Master, had been again elected to the office, by the unanimous vote of the members, and was inducted into office, for the second time, by R.W. Bro. H. St. John Browne, P.M., who was assisted by the R.W. D.D.G.M., Bro. J. Marshall. Bro. T. C. Thornicraft, W.M., and W. Bros. G. Whymark, another officer of the G.L., and T. J. Larkin, P.M.'s of "Rising Sun" Lodge, were also present. The following brethren were afterwards invested with the badges of office in due and ancient form:

Bro. C. Wiggins	R.W.M.
" H. A. Miles	D.M.
" J. Gorham	S.M.
" F. Upton	S.W.
" G. Nankivell	J.W.
" W. Warburton	Treas.
" H. A. Miles	Sec.
" R. S. Black	S.D.

" H. W. Tabor.....	J.D.
" J. Hall	M.C.
" G. Rutherford	I.G.
" N. Mancini.....	} Stewards
" Taylor.....	
" A. Hazlett	Tyler

A banquet followed, at which nearly forty members sat down, W. Bros. R. Hughes and T. Rymer-Jones, P.M.'s of "Rising Sun" Lodge, who arrived from Kioto too late to take part in the Installation ceremony, being present, with other officers of their Lodge. During the evening, the usual loyal and Masonic toasts were proposed and duly honoured, and several songs were sung by brethren. The dinner was provided by the managers of the Hiogo Hotel. Much credit is due to Bro. Mancini, the caterer, for the excellent manner in which the affair was carried out. The decorations were very tasteful."

SHANGHAI LETTER.

SHANGHAI, December 4th, 1879.

The excitement of the races being over, our lovers of horse flesh are devoting all their time and energies to cross-country riding, as the crops are now out of the ground, or those coming forward are at such a stage of growth that no injury is done by riding over them. The first paper hunt of the season took place on Saturday last; and, as the weather was all that could be wished, there was a good assemblage at the start, near Jessfield, of both riders and spectators, and a still larger number of the latter at the finish not far from the Bubbling Well, though, owing to the difficulties the hunt encountered during the run, and the fact of its being the first of the season, the number of the riders at the finish had dwindled down to a tithe of the starters. Mr. Nickels was the winner on his recent purchase, *Grimbart*, that griffin that so disappointed his backers at the autumn meeting. The hounds have also been out once or twice, and will be in full swing when the country gets a little less blind, and the cotton stalks are cleared away entirely.

There was some talk of our A. D. C. getting a piece on the boards somewhere about Christmas, but nothing has been done definitely; and we may be afforded the pleasure of seeing our amateurs once more when the summer is coming upon us again. But there seems little probability of the doors of the theatre being closed to the public for any length of time. John Jack and his company are still here, and we are promised a visit before long by Signor Cagli and his large operatic troupe, and Dave Carson will wend his way Eastward very shortly with a large company,—let us hope with fresh jokes and fewer personalities.

Since their return from Japan, M. and Madame Hirlemann have given a concert. Madame Hirlemann was extremely well received and sung in her usually brilliant and correct style; but M. Hirlemann found no more favour here than he appears to have done in Yokohama, and some well deserved strictures were passed on his cruel way of treating the poor piano-forte. John Jack's Company have nearly worn out their welcome; and I am sorry to say that when the "Red Geneva Cross" was repeated the other evening, on the occasion of Miss Emily Blain's benefit, there were not sufficient people in the houses to cover the expenses of rent, lighting, printing and police, which was rather surprising, as Miss Blain is a favourite with the public. On Saturday afternoon this company gave us "H.M.S. Pinafore," being obliged to give it at that time of the day as they could not otherwise obtain the assistance of the *Richmond's* band. The performance was certainly not good, as so few of those who took part could sing the music allotted to them, and the piece betrayed a sad want of sufficient rehearsal. Several amateurs assisted, and the one who took the part of *Capt. Corcoran* sang better than any one else on the stage, but showed a want of freedom in his acting which marred his performance. The piece was repeated on Tuesday evening with partial success. It is probable that it will before long be given by the amateurs, and if so, I am sure they will do it a vast deal better than John Jack's company were able to do.

The meeting of ratepayers I mentioned in my last letter was held on the 12th of November, when the Chairman of the Municipal Council proposed that wharfage dues should be abolished and that the deficiency of revenue that would be caused by so doing should be made up by increasing the tax on land, house-property, etc. There was not much discussion at the meeting, but the Chairman's proposal was adopted by 154 votes against 89; and on the 1st January next, wharfage dues will be things of the past. According to the scheme for increased taxation laid before the ratepayers, land will yield an increase of £1s. 6,800 per annum, foreign houses £1s. 8,000, native houses £1s. 12,500, opium shops £1s. 6,500, and cargo boats, ponies and carriages let for hire, and liquor-sellers, will bring the increase up to £1s. 40,450. It is astonishing how the number of carriages let to the natives for hire increases in our streets. In fact these vehicles are a perfect nuisance, and it

would be a great comfort if they could be taxed out of the place altogether.

The U. S. S. *Richmond* left this on Tuesday last for Foochow. We are sorry to lose her, as her fine band has so often done good service here, and her officers have shown themselves ready to join in our sports, and demonstrate how easily they could beat our local club at base ball.

St. Andrew's Day falling this year on a Sunday, the next day, December 1st, was set apart for the customary tribute of devotion from Scot to their patron Saint. An innovation in the method of so doing was inaugurated last year, where the time honoured dinner, gave way to a ball so that the ladies might take part in the Saints' festivities; and the good example then set was improved upon this year when the Committee determined that the ball should be a Fancy Dress one, all attending being called upon to appear in a character from one of Scott's novels. The Waverley Ball has been on the minds of many for months past, and as the 1st December drew near tailors were interviewed, reels were diligently practised, heads were wracked for the selection of a suitable dress to assume, and by many—the majority perhaps—the pages of Scott were opened for the first time since childhood to obtain the description of a character to represent. After all this, it would have been a pity had the Waverley Ball not been a success, and I am glad to say it was unquestionably a very great one. But then there's no such word as "fail" in the lexicon of Scotchmen, and the Committee had made strenuous efforts to mark this year's celebration as something special. Last year the ball-room showed rather a want of national emblems, but this year made up for all previous deficiencies, as, throughout, the decorations were striking, novel, tasteful and plentiful, and above all—Scottish. The assembly was held at the Club, the lower hall of which was hung with flags of various nations, and freely ornamented with flowers and evergreens, while the usual carpet on the stairs leading up to the ball-room was abandoned for one of Stuart tartan. But even this pretty notion did not lead one to expect such a splendid display as the ball-room and the surrounding rooms presented. Conspicuous, of course, in the place of honour was that picture of the venerated Saint which is now vested with the additional sanctity of age; but elsewhere every available space was given up to the Scottish insignia seen for the first time in Shanghai—the rampant lion within its treasure, with the national supporters; the royal arms of Great Britain; designs of the Scotch thistle bearing the mottoes of the President and Vice-President of St. Andrew's Society, and twenty-four standards displaying the shields of the principal clans, besides minor national devices, set off by evergreens and floral decorations. A more characteristic and tasteful arrangement could not have been accomplished. This good effect was of course heightened when the guests began to arrive attired in every imaginable costume, and of any period. The general question was, "what are you supposed to be?" and though in most cases the answer showed that some care had been taken to insure correctness, yet in some instances a total disregard had been shown as to dressing the character properly. For example, one gentleman appeared in the costume of a modern Tyrolean peasant, with tall hat and cross-gartered like Malvolio; but on inquiry he declared that he represented Blondel the minstrel, but was rather lazy as to which of Scott's novels Blondel figures in. The attendance was very good but the rooms were not over-crowded; so there was a good chance of examining the various costumes. The ladies were of course perfection, and it is a difficult task to pick out any costumes as specially excellent where all were so good. Yet none could fail to be struck with the queenly figure of Elizabeth, gorgeous in ruby velvet and white satin gown with pearls, or her charming rival, poor Amy Robsart. Had the original been anything like the "counterfeit presentment" no Earl of Leicester would ever have had the heart to desert her. Lady Margaret Bellenden looked as if she were doing the honours of Tillietudlem; but spared us any allusion to his late lamented Majesty. Mysie Happer looked charming and as if she had just paid a visit to Dame Glendenning, being as Scott describes her, "a dark-eyed, laughter-loving wench, with cherry cheeks, and as skin as white as her father's finest bolted meal." No young students could have withheld their homage from Minnie Gray, whose clear complexion and sparkling eyes were set off by powdered hair; and in a somewhat similar costume Rose Bradwardine delighted the lookers on. But when Maggie Mucklebackit with her creel on her back, accompanied by a friend of the same persuasion, arrived, there was not a pair of eyes in the room that was not directed to the attractive pair, nor a tongue that would not pronounce them "canny lassies." The costumes were correct to the minutest particular, and it was hard to say whether the wearers best became the costume or the costume the wearers. The brilliancy of the surrounding dresses was relieved by the quiet but becoming attire of Janet Foster, Alice Lee and Alice Bridgenorth, and variety was afforded by the correct eastern attire of the Lady Hermione or the more pronounced one of Zarah—perhaps better remembered as Fenella—in Peveril of the Peak. Lady Peveril, too, was there in the proper costume of the period, and Di Vernon in a pretty dress surrounded by the whole tribe of Osbaldistons. Mary, Queen of Scots,

appeared in black velvet and pearls, but betrayed no traces of sorrow or trouble, and Queen Caroline of Auspach towered among less imposing figures. Eveline Berauger was a worthy representative of a noble Norman family; and Rowena looked in vain for her rival Rebecca or an Ivanhoe. The Fair Maid of Perth bore out her appellation most fully, and no Quentin Durward could have withstood the Countess Isabelle de Croye. Helen Macgregor looked stern enough to overcome any Bailie Nicol Jarvie that appeared, and Lady Waverley, Amiot Lyle, Cicely and Madge Wildfire, gave bright ideas of the author's creations. But the best dress in the room, in point of correctness of costume, was the quaint one worn by Lady Penelope Pannofeather with her hair towering upwards in a shape that threatened to fall and overwhelm her partner when dancing, but which, strange to say, retained the proper position to the last. This costume gave us a very faithful representation of how our great grandmothers must have appeared in society.

Among the gentlemen many were very correctly dressed and remembered that "the apparel oft proclaims the man," the palm for good effect being carried off by the worthy Scot who represented Hereward of the Warangian guard in Count Robert of Paris, as the barbaric trappings were faithfully produced,—the helmet, leopard's skin and battle-axe making up a bold warrior to the life. Kilts were worn by several, who represented characters from various tales, among them being Rob Roy. Kenilworth was largely drawn upon, as might have been expected, so that we had the Earl of Leicester, Shakespeare, Sir Richard Varney, a page, two Tressillians and two Earls of Essex, though one of them indulged in the incongruity of wearing white silk breeches of the time of George the Third. Holbert Glendenning and Roland Graeme were there, and the Knight of the Shears, Sir Percie Shafton, who, however, refrained from high flown compliments on this occasion to his Mysinda and other beauties. An embarrassment of choice was occasioned by no less than three Waverleys appearing in the field and all as dissimilar as could be imagined. Perhaps the good man was represented at three different periods of his life,—as he might have appeared. James the Fourth bestowed kindly glances all round, and his successor was there in his disguise of James Fitz-James.

"Midst furs and silks and jewels' sheen
He stood, in simple Lincoln green,"

and Clan Alpine's chief was close at hand, but showed nothing but amity to the Scottish king. Lincoln green was made use of to a great extent by the merry men of Shorwood, as we had two Locksleys, Little John, and Muck the miller's son looking as pleased with himself as if he were the greatest in the land, while Friar Tuck was also present, but had betrayed his natural eccentricity by wearing the cassock and bands and shovel hat of a modern priest. Ivanhoe had been largely drawn upon, as we had, beside the bluff figure of Cedric the Saxon, that of Isaac of York, who, however, looked too young and jolly and belied the assertion of Shylock that "sufferance is the badge of all our tribe." The graceful figure of the Grand Master claimed attention, as he busied himself inculcating the virtues of hospitality and good fellowship, being supported by another knight of his order. Quentin Durward wandered about in an aimless manner, and stout Simon Glover was in attendance on the Fair Maid, and Hal of the Wynd was not far off. George Heriot supported his character by becoming gravity, but was not appropriately dressed as the wealthy citizen and banker. There were two Masters of Ravenswood, one of whom was well dressed in black and violet, but the other might have been anything but the character he was supposed to represent. Dandie Dinmont was capital, and brought one of his tykes with him, but hardly of the correct breed, and in close proximity was a good representative of Richie Monoplies, and a splendid Edie Ochiltree, who seemed brimming over with enjoyment. Dirk Hatteraick looked formidable enough, and strange to say found a prototype in the Pirate, though certainly the latter did violence to Scott's description of the man. Many other characters there were too numerous to mention, some being good and some indifferent, but none really bad, and during the course of the proceedings a monstrous egg made its appearance as "The lay of the last Minstrel," a notion more practical than poetical.

We were favoured with a piper, so that the Scotch dances went to appropriate music, though it seemed strange to see Queen Caroline, Queen Elizabeth, Eveline Berauger and others, footing it merrily in a reel with the Cruel Claverhouse—pleasant enough looking on this occasion—McGillie Chatternach, Roderick Dhu, Dirk Hatteraick, etc. Dancing was kept up with spirit until late. "The grey-eyed morn smiles on the frowning night," but all, I am sure, went home convinced that the Waverley Ball was one of the greatest successes ever achieved in Shanghai.

PARIS LETTER.

PARIS, October 10th, 1879.

The agitation organised in favor of the total amnesty, and Louis Blanc socialism, is more stupid, or inconvenient than dangerous. Those whose stir up muddy waters gain little by their work. It was

by vowing it would ne'er consent, that the nation consented to vote the partial amnesty of those communists who had been more dupes than criminals, and who had given evidence of contrition, and the promise to lead a new life. But it never entered into the head of any sane person, save poets like Hugo and sentimentalists like Louis Blanc, to restore to every civic and political right men guilty of murder and incendiarism. It was on the cards, that in time a further selection might be made from those left out in the cold, but to discount this possible clemency has only created indignation and relegated the total amnesty to the calendars. More, the impolitic agitation will have the effect of compelling the Republic, if it wishes to exist, to lop off its radical and irreconcilable tail. If the Republic, as Thiers said, divides us least, Communism divides us most. The best answer to those who desire to glorify in a sense the Commune, is the refilling of the shop windows with photos of the assassinations and fringes of the insurrection of 1871. There is a municipal election pending in one of the wards of the city: it is a tie between two candidates, who are equally republican and equally in favor of the total amnesty, but one is a returned Communist and was editor of a vile print that "denounced" poor Chaudry, the popular republican editor of the *Sicle*, and so led to his being shot with the archbishop of Paris.

What has given importance to the agitation, is the belief that Gambetta favors it, either to secure his popularity with the crowd, or to compel the Senate to vote the government educational bill and Ferry clause, against the jesuits. These tactics if true are not to be admired, and must fatally react on the Republic. M. Gambetta ought to state clearly his opinion on the thorny subject; he cannot let the matter lie over as he did in reference to his opinions on free trade. He is at present enjoying his annual visit to les Crêtes, in Switzerland, the favorite castle of the late M. Dubouché, a man who walked from Geneva to Paris with an empty pocket, and made millions by founding the city gas works. It was his intention to leave this castle—he had several others—to Gambetta, but he died before making the will; and his heirs not the less offered it to the heir presumptive who declined the gift, only asking to have the right to repose there whenever he could find the time. He loves the spot and he adores the Alps. The castle is on the crêtes, or "summits" of the rising-hills; he can see Lake Geneva from the drawing room windows, and enjoy bowls and nine pins in an alley of chestnut trees, sacred to J. J. Rousseau—it would be very difficult to find a corner of Switzerland without a reminiscence of Rousseau. He has for close neighbours, Prince Jérôme Napoleon, at Frangins, and Rochefort, at Coppet.

On the 29th September last—Goose Day, the Legitimists believed their *jour de gloire* had arrived; they held a series of bubble and squeak banquets, indulged in strong beers and loud haws. But the Republic was not in the least frightened, still less when they commenced to enlist "legitimists of action." Henri V. as usual, has put his foot down on these "virile resolutions." Comte de Chambord calls on his retainers to play the waiting game, as he has done for half a century. Even the Pope has given him up, in the sense that the clergy hold aloof from his programme—waiting for heaven to restore him to the French throne by a miracle.

Louis Blanc is making a noise, but only a noise; he out-rivals Blanqui and Naquet in lecturing on things in general and their own panaceas in particular. In May 1848, the "people" when they invaded the National Assembly, carried Louis Blanc, in his Robespierre vest, on their shoulders; and at Marseilles lately, they drew his carriage. Despite this, his socialistic views make no way. Thiers was right when he said, "socialism has emigrated from France to the foreigner;" that is, Frenchmen have found, that it is by themselves, not by government, that their social amelioration must be accomplished. Louis Blanc detests political economy—the dismal science, as strongly as Carlyle; he would abolish competition, and have mankind live in troops; this is "Communism," or according to him "progress." It is marching crab-wise. On the other hand, the reactionists would bring us back to the middle ages. Between both camps there is not, in point of nineteenth century necessities, the toss up of a coin.

Parisians, to judge from their joy on returning from their vacation rambles, feel that there is no place like home. Those whom fate condemns to pass their existence on a leather stool, are attacked in September, the month when I think our planet enters the sign of the virgin, with a fever peculiar to migratory animals. They bid adieu to friends, as if their fortnight's absence was a trip across the Dark Continent, and when they return, fresh calls are indulged in. Ordinarily a week is devoted to the seaside, to take baths, the first commencing by a bucket of water on the head; Then the table d'hôte, where fish is as fresh as in the Paris markets, and dealers; the stale jokes; the casino and its balls, its provincial, artistes; and where above all, the arrival of the letter carrier is the greatest attraction of the day, save the backbiting, the headers of

lady-bathers, with their pretty cries of fear; their *poets* well studied their costumes assorted, and their rising from the waves, more dressed than Venus, but only with a little more material. After the sea, the mountain air and milk. These necessitate a voyage to Interlaken and Thun, once corners of Paradise regained, but since invaded by cosmopolitan Philistines, they have become suburbs of Europe, a Bougival, a St. James' Park, or a Vienna Prater, yet where two incommensurable things co-exist—high mountains and lengthy bills. The present is the moment for Fontainebleau, with its artist's gatherings and Chassolais grapes—the former, are more numerous than the latter, this season. The drive across the forest to Mariatte is excellent, full of autumn glories and the terrible effects of last winter on rocks and trees. The hotel Mallet prepares its famous bacon omelette in the twinkling of an eye, to be followed by the proverbial sirloin steak. "Nana" still reigns at the bar, but she is no longer the "beautiful Nana," she smokes her cigarette like a princess, drinks wine innocent of water, cracks jokes with every one. She even inspires love, as a law student came down from Paris two years ago on a velocipede to have a look at her, and has since remained. Barbison has few English or American painters; the evenings at the hotel are very gay; pianists of celebrity who have come to seek "repose" play with frenzy: there are valets danced of the "loudest" description, and songs that raise the hair of your head, like the quills of the fateful porcupine. There is a terrible jury that controls membership, but it never functions. The walls of the rooms are full of sketches that troopers blush at and withdraw—they are presumed to be classical, like the fresco rooms of Pompeii and Heronlanum, where only married people are allowed to enter.

The Opera is preparing to represent Verdi's *Aida*, only the maestro will not come to superintend the execution. He is old too, in his sixty-fifth year, and has just given his anniversary dinner on his estate at St. Agatha, where he is occupied, not in composing, but in rearing horses and cattle. He names the foals after the heroes and heroines of his operas, just as Garibaldi baptizes his goats after the Popes: thus colts are called Nabucco, Henrico, Rigoletto; and fillies, Violetta, Aida, Leonora, Amcena, &c. Verdi and his lady never receive company, except on the 9th of October, when he is peculiarly gay and loquacious—the opposite of his character. A guest invariable on these occasions is Mario—an old man with the whitest of hair. He observes also an anniversary of another kind, by sending three crowns for Grial's tomb in Père Lachaise, to mark the day of her death.

An agreeable operette has been brought out at the *Vauclerville—Le Petit Abbé*, music by Grisart. "The little abbot," is Stanislas, nephew of the celebrated knight of Boufflers; he who was in turn abbot, soldier, writer, politician, deputy, philosopher, and who, it was said, succeeded in all, but the first. He maintained that the two most attractive professions were making war and love, and that after dispossessing the earth, it was incumbent on warriors to populate it. The *Petit Abbé* is sent with a letter of introduction to a canoness, but who is none other than Mlle. Guimard, a famous *dauvesse*; Stanislas is shown into her boudoir, and is astonished to find the surroundings anything but solemn or religious; he finds the books not at all theological, and the music far from sacred; on the floor is a slipper that Cinderella might claim; he opens the letter of introduction and discovers the trick his uncle has played upon him. Behind a screen, is a portmanteau containing the clothes of a marquis; he dons the suit and in exploring the room, finds a door leading into a bed chamber, where the lovely creature is in bed, and who wishes to bolt him out. The music is as light as the subject, but is very agreeable, carefully and tastefully written. The rôle of the young and mystic abbot, converted into the passionate lover, is interpreted by Mme. Chaumont—and with success.

The Empress of Russia seems to have turned the heads of all the good people of Cannes and Nice. That region is attracting sturdy invalids from every part of Europe; and during the winter it will be nothing else than a passing through and fro for the salt of the earth—even of salt that has lost its savor. Her Majesty's apartments are furnished in the styles Louis XV. and XVI.; no bed was supplied, as she brings that with her, and besides, it is simply a camp-bed; her boudoir has bamboo furniture. The dining-room can accommodate fifteen persons, and the walls have two paintings, the "Marriage of Cana," and the "Madona del Baldochino;" the chapel is overhead. The Empress has a nervous, suffering look, and her mouth seems to have a "twitch" resembling the affection from which the Comte de Paris suffers. In the Imperial train of twenty-eight carriages—quite a palace on wheels, there is one carriage occupied exclusively with a boiler, to heat the entire train; the *salon* carriage is that which formerly belonged to Napoleon III.—the Russian has replaced the Roman eagle. It is well known, that

political reasons have induced the Empress to select Cannes Russia is so isolated now, that she is endeavouring in every way to make friends of the mammon of unrighteousness.

The murderer—our latest—who killed the chemist and his servant girl, residing in front of the Elysée palace, has not yet been arrested; and the Swiss colony feel deeply the disgrace he has brought upon it. The Abbé Couvet's appeal has been rejected, and the condemnation—a fine of fr. 100 and expenses, maintained: he indulged in unapostolic language in the pulpit against the Government. Two young beauties, named Chaumont, kept a tobacco shop in Rordénux, and drew all the fast young men. One of the latter was welcomed by the younger sister, but in time he got tired of her. A few days ago, the two sisters drove to his residence, entered the garden, and shot themselves dead, around them were strewn the love letters, and at their side, bottles of poison, a dagger, &c.

American society in this city has been scandalised by the fine, and condemnation to three month's imprisonment, of a leading dentist Dr. J. W. C.—for public immorality. The case was so obscene that it had to be heard in private.

The clay pipe trade is brisk; pipes having the head of *Thiers* sell best, 57,000 of the pattern in a year: then follow *Gambetta* and *Grévy*. "Cetawayo" went off to the figure of 25,000, but his is only "King Theodore" re-named like certain patent medicines, cough mixtures in winter, and, by change of label, hair-wash in summer.

The new helmet does not give the small French soldiers a martial air at all.

The old King of Holland has ordered a *layette* for fr. 80,000—he could almost turn democrat, he is so happy at the prospect of an heir. A stout lady, who had left her husband, on returning was toasted as the "fatted calf."

NAGASAKI NEWS.

Save in matters purely Japanese the past month has been particularly lifeless; there have been but few arrivals, and our native friends have been so much engrossed with their *Kunichi* festival, that business has been almost entirely set aside. After the *matsuri*, too, there appeared on the scene the well-known actor Shikan, famous both as a tragedian and dancer; and so seldom is it, that a "star" from the north comes here, that the enthusiastic reception he has received, will no doubt, have its influence in inducing others to follow him at more frequent intervals. The reserved seats have been taken three and four days in advance; and at 5 a.m., I found the theatre (not a very commodious building) literally blocked to the door. *Chiushin-gura* and other stock pieces have been played during the week, but with the exception of Shikan, the company are a very scratch lot; and as they appeared to appreciate the fact under the eyes of the veteran, a good deal of amusement often resulted from it.

The dearth of shipping in the harbour still continues. Vessels are in much request, especially for shipment of coal, and I see the *Tankosha* are in the meantime, storing immense quantities of the black diamonds within their grounds. Speedy despatch and reasonable rates (this is not an advertisement!) would no doubt await speculators in that line, at the present moment.

Monsieur Florent, the Superintendent Engineer of the Tategami Dock, has, after good service in Japan, left for Europe, and it is a sign of the prevailing dulness of the times that his fine bungalow, situated opposite the dry dock, had to be bought in at auction at about one thousand dollars. By the way, I should like to see the dock more used than has yet been the case. Large sums of money were expended on its construction; and it is generally admitted to be one of the finest in the East. In regard to rates, I can say nothing, but they must necessarily be low in order to compete successfully with the advantages to be had in China.

I hear that the light-house on one of the Goto Islands has been completed and fitted with all the latest improvements, a boon that will be much appreciated by the various vessels that find themselves here from all parts of the East, "se-king," and which are not so familiar with that dangerous portion of the route between this and Shanghai, as the native-owned ships and merchant steamers.

As I predicted some short time ago, sport around this neighbourhood, has, up to the present, been of a very mediocre and unexciting character; pheasants are exceedingly scarce and what wild duck I have seen are of inferior quality. Snipe, however, appear to be plentiful.

Trade with Corea shows every indication of being on the increase and the disinclination of the Coreans to traffic in foreign goods seems to be rapidly changing to a positive desire to obtain them. And thus history once more repeats itself.

JAPANESE NEWS.

[The following Notes on various Japanese matters are chiefly derived from the native papers, occasionally supplemented from original sources of information, and are carefully collated and edited, so as make them readable and intelligible.]

NOTIFICATION No. 41-A.

It is hereby notified that vendors of newspapers, periodicals, etc., are strictly prohibited from calling out extracts from their wares in the streets.

(Signed) OYAMA IWAO,
Chief Superintendent of
Police.

(Signed) KUSUMOTO MASATAKA,
Governor of Tokio Fu.

December 8th, 1879.

COURT, POLITICAL AND OFFICIAL.

Prince Haru-no-miya, the infant son of His Majesty the Emperor, was, with his attendants, removed on Sunday last to the palace erected for his reception in the grounds of Mr. Nakayama, into whose care he has been confided. A ceremonial visit has been paid to the prince at the new palace by the ladies of the Court.

A memorial service was offered up by the Mikado on the 12th instant, the fortieth anniversary of the death of his predecessor, Kōkaku Tenū. The Empress and Empress-Dowager, the Imperial Princes, the Daijin and Sangi were all present in full ceremonial costume.

When the Imperial palace at Kiyoto was built by the Tokugawa Government it cost altogether, according to the *Mainichi Shinbun*, 3,000,000 riyos; the new palace in course of erection in Tokio, is estimated to cost 4,000,000 yen, the payment of which will be spread over four years. The *Mainichi* adds, that if the difference in the present and the former value of money is taken into consideration, the expense of the old palace will be found to be enormously greater than the new one.

Lieut.-Colonel Katsura, who accompanied Prince Henry during his visit to Japan, was admitted to an audience with His Majesty the Emperor on the 11th instant, and presented with a reward for the services he rendered the Prince.

On the 8th instant His Royal Highness, the Duke of Genoa, accompanied by a number of his officers and the Italian Minister and several members of the Legation, visited the palace, where the Duke had a farewell audience with the Emperor. After a brief conversation His Majesty presented the Duke with the decoration of the Supreme Order of the Chrysanthemum, the Duke then took leave of the Emperor and retired. Decorations of the Rising Sun were also conferred upon the Italian Minister and several members of the Duke's suite. The Duke's visit to the Emperor was made at the early hour of 9 a.m., and as it did not last very long, he had time to inspect the Printing Bureau of the Finance Department at 10 o'clock, where he was received by Messrs. Okuma, the Finance Minister, and Mr. Tokuma, the Director of the Bureau. After inspecting the Department His Royal Highness had tiffin, and returned to the Yenriokwan in the afternoon. On the following day the Imperial Princes, Ministers, Councillors of State, &c. called on His Royal Highness in the Yenriyokwan to take formal leave of him. His Highness left Tokio by a special train at 2.35 p.m., and returned on board the *Vettor Pisani* which was visited by Mr. Nabeshima, the ex-daimio of Hizen, and Mr. Nomura, the Governor of Kanagawa Ken, on the 10th instant.

His Majesty the King of Italy has conferred decorations on Messrs. Sunjo, the Prime Minister, Iwakura, the Vice Prime Minister, Inouye, the Minister for Foreign Affairs, Yenomoto, the Senior Vice Minister for Foreign Affairs, and Nabeshima, the ex-Daimio of Hizen. These decorations were presented by the Duke of Genoa on behalf of the King.

Two thousand five hundred rifles have recently been procured from England by the Imperial Household Department, for use at rifle matches.

It will be remembered that the Foreign Office lately notified

the Osaka *Fu* to furnish it with a complete report upon every occasion which had occurred, in which Japanese laws, rules, &c., could not be enforced, because the parties concerned were foreigners. The *Osaka Nippu* now states that there are nine instances referring to police cases and general administration, and several hundred having reference to civil suits.

The *Hochi Shimbun* states that the assembly of Provincial Governors to be held next year will differ from former meetings, inasmuch as they will consult principally upon executive matters. We also hear that Mr. Kono, the Vice President of the Council of State, will be made president of the meeting and Mr. Inouye, of the Home Department, appointed to introduce and explain the different measures to be brought forward.

The *Mainichi Shimbun* states that Mr. Kurumoto, the Governor of Tokio *Fu*, is to be appointed to the Senate, and that Mr. Matsuda, of the Home Department, and late envoy to Loochoo, will be made Governor of the *Fu*.

Mr. Okuma, the Finance Minister, is reported to have addressed a memorial to the Council of State, recommending the institution of a fund for the relief of agricultural distress. The Council adopted Mr. Okuma's suggestions, and have ordered regulations on the subject to be at once prepared.

It is rumoured that the authorities are about to establish stores of rice at Naha, in Loochoo, to provide against any emergency which may arise in times of scarcity.

The *Choya Shimbun* states that the fixed annual allowances hitherto given to the *Shinto* and Buddhist temples will be commuted early next year, and pension bonds will be given instead.

Matters connected with trade and agriculture have hitherto been managed by *bureaux* under the Finance and Home Departments. It is contemplated, in consequence of the rapidly increasing importance of the interests involved, to establish separate Departments and to appoint a minister to each.

It is reported that the Governor of Tera *Fu*, in Korea, will be treated as one degree higher in rank than the Governors of the other provinces, and that Kinkishin, the late Envoy to Japan, has been appointed Governor of that *Fu*.

The Finance Department is about to propound certain questions to all the Cities and Prefectures in reference to fire insurance, and a committee has been appointed in the Home Department to conduct the correspondence.

The following is a return recently prepared by the Fire Insurance Section of the Tokio *Fucho*, giving the number of buildings in Tokio and the ground occupied.

	Number of buildings.	Extent in <i>Tsubo</i>
Government buildings	4,331	218,913.701
Private "	241,345	3,968,584.419
Shinto temples	2,004	13,155.398
Buddhist "	5,841	148,490.486
Public buildings	323	11,670.956
Total	253,844	4,360,817.960

The new year vacation in the Government offices usually commences on the 29th December, but as the 28th falls upon Sunday this year, the offices will be closed on and after that date. The Senate will be closed on the 25th instant, but it has been decided not to close the Printing Bureau, Arsenal, &c., where there is pressing work, until the 30th instant.

NAVAL AND MILITARY.

Commissions will shortly be presented to about one hundred cadets who have passed the Naval College, and are now on active service in the Japanese navy.

Two of the cadets who completed their studies this year in the Military College in Tokio, are to be sent to France next February, to receive further instruction in military matters.

Seventy thousand yen have recently been added to the grant for building the new premises for the *Sambu Honbu* (Military Staff Bureau), in Tokio. The work was at first estimated to cost 180,000 yen, and is expected to be finally completed by December, 1881.

INDUSTRIES, TRADE AND FINANCE.

A factory is in course of construction for the manufacture of fuel out of coal dust, at Kobata, Chikuzen. The machinery and skilled artisans to erect and work it, have been obtained

from France, and operations are expected to be commenced in January next.

Okada Ichiyemon of Hiroshima, is reported to have discovered a process for manufacturing blankets from dogs' hair, and is now turning out large quantities of them which meet with ready sale.

Mr. Yoshida and several other residents of Shidzuoka Ken, have formed a company to raise cattle on a tract of country situated in the Hakone mountains. The Agricultural Bureau have advanced this new company fifty thousand yen, to be paid back by annual instalments extending over twenty years. The members of the company are now engaged buying young stock.

In the *Choya Shimbun* we find it stated that a letter recently received from Ishikari, in Yezo, reports that the take of salmon last year was about 25,000 *koku*, which realized on an average from seven hundred and fifty to eight hundred yen per one hundred *koku*, the rough method of calculation practised being, that twenty fish make one *soku* (bundle) and three *soku* one *koku*. The tax paid was twenty-five per cent of the yield. The quantity of fish caught this season, up to November last, was greater than during the whole of the previous season, and it was expected that the salmon would fetch about one thousand yen per hundred *koku*, although it was feared that the net profits would be less than last year, owing to the great rise in the price of labour, &c.

It is rumoured that a telegraph cable will be laid from the port of Niigata to Aikawa in Sado Island, a distance of twenty-five *ri*.

Mr. Sugiyama Iwasaburo of Okayama Ken, who has been lately staying in Tokio, was on his return to Okayama appointed President of the Okayama Chamber of Commerce, and the Chamber has since the 23rd ultimo, been engaged debating upon the draft of a memorial, which it intends to address to the Government upon the subject of Treaty Revision.

Mr. Watanabe, formerly Governor of Kochi Ken, went to Loochoo a few days ago with the intention of establishing an agricultural company.

A branch of the Mitsui Bussan Kaisha has been established in Italy. The object aimed at, according to the *Choya Shimbun*, from which we derive the information, will be the sale of cartoons.

According to the *Nichi Nichi Shimbun*, the increase in the coasting trade has lately been so great that freights have been raised. The rate from Hakodate to Shanghai which was formerly thirty sen per one hundred *kin*, is now forty sen per one hundred *kin*. The cost of chartering vessels has also risen over thirty per cent.

We learn from the *Choya Shimbun* that three thousand and fourteen horses, realising 97,336 yen, were sold this year at the market of Samuho in Awamori ken. The same paper states "that the recognized superiority of the horses in Awamori ken, is due to a celebrated Chinese painter having arrived there from China about one hundred and sixty years ago, bringing with him an Arab sire and dam and commencing horse breeding."

Osaka, the commercial capital of Japan, as Tokio is the political, has just taken a notable step copied from Western countries; a Clearing House has been established in Kitahama dori in that city in connection with the local banks.

A probable decrease in the amount of the land tax, which presses so heavily on the agricultural industry of this country, is mentioned in the *Nichi Nichi Shimbun*.

According to the *Mainichi Shimbun*, the total amount of paper money put in circulation by the Government, is 115,210,000 yen. Notes of and under fifty sen in value, amount to about 25,000,000 yen.

The following return of the trade of the port of Yokohama for the month of November last has been published:--

	Exports.	
	Weight in <i>pounds</i> .	Value in Yen.
Tea	7,757.50	274,399
Raw Silk	2,547.11	1,331,911
Noshi	681.05	95,446
Waste	932.14	96,686
Rice	517.74	1,550

MISCELLANEOUS.

There will be a race meeting at Mita, Tokio, to-day, on the occasion of opening the new race course recently made there.

It is announced that a rifle match will take place to-morrow, at the Naval rifle range at Shirokane, Tokio. Admirals Kawamura and Nakamoto will supervise the proceedings.

A periodical, to be called the *Naiyai Kōmon Shimpō*, is about to be published from the office of the *Mondō Shimbun*, which was suppressed by the authorities some short time since.

The funeral of Mrs. Motono, the mother of the superintendent of Customs in Yokohama, took place on the 6th instant, and was very largely attended. Amongst the number of leading officials who assembled to mark their respect for the deceased and Mr. Motono, were the Governor of Kanagawa Ken and the Foreign Consuls. The remains of Mrs. Motono were laid in the family burying place at the Hongakujō temple.

A public meeting to elect two persons; one to take charge of the joint property of the public, and the other to negotiate the establishment of a Chamber of Commerce in Yokohama, took place on the 6th instant, and resulted in the appointment of Mr. Totsuka Sentarō to the former office and Mr. Hara Zenzaburō to the latter.

The *Nichi Nichi Shimbun* reports a rumour current, that the decision in the cases of Fujita and Nakano will be given about the middle of the present month.

The *Osaka Shimpō* reports that Captain Nishimura, of the Hiroshima garrison, was discovered last month to be staying at Ushima in Buzen, and passing under the name of Yamada Kinzo. Suspicion was aroused, and policemen were sent to enquire into the matter; but on their appearance Captain Nishimura drew out a pistol and shot himself dead. A thorough examination of his luggage disclosed nothing beyond a few letters from Lieut.-Generals Yamada and Toriwo, addressed to Mr. Kuniishi of Choshiu. A rumour is current that the deceased was engaged in some desperate enterprise, and that the sudden visit of the police led him to suppose that his design was discovered.

In the *Nichi Nichi Shimbun* it is stated that "on the 10th instant at about 4 p.m. some forty sailors from a Russian man-of-war in port, were found beating another sailor. Japanese policeman at once proceeded to the rescue of the latter who was already fainting, and saved him from his cowardly assailants. The sailor having, on his recovery, said that he belonged to the *Vettor Pisani* was at once sent on board. It is said that the officers of the *Vettor Pisani* are in communication with the Russian Consul upon this affair."

The *Choya Shimbun* states that Mr. Crawford, the engineer of the Colonization Commission, has arrived in Tokio from Yezo, and will be entertained by the Minister of that Department at Shiba.

The following return gives the number of *Kuwaizoku* (Nobles) throughout the Empire in November last:—

IN TOKIO.	
Males	1,194
Females	1,457
IN KIYOTO.	
Males	199
Females	240
IN THE PROVINCES	
Males	42
Females	50
Total	1,435
Number of houses	481

A cholera return recently prepared by the Sanitary Bureau shows, that the total number of patients throughout the country from the commencement of the epidemic up to the 6th instant is 164,229; of whom 96,660 have died, 45,855 recovered and

21,714 were still under treatment on the latter date. The death rate is 58.86 per cent.

IMPERIAL GOVERNMENT RAILWAYS:

TOKIO AND YOKOHAMA SECTION.

Miles open 47.

ARRIVAL OF THE AMERICAN MAIL.

London, November 8th.—Henry L. Lawson has withdrawn from the membership of the Beefsteak Club. At a general meeting on the 14th instant the club will vote on a resolution for the expulsion of Lawson and Labouchere.

London, November 8th.—The £50 deposit on behalf of the American crewman, for a match with Boyd or Elliot, has been withdrawn, as the English rowers have made no response.

London, November 9th.—A meeting of cotton mill owners of Oldham last evening resolved to discontinue the short-time movement.

London, November 9th.—The *News* understands that Lord Derby has requested the Secretary of the Carlton (Conservative) Club to withdraw his name from the list of members.

London, November 9th.—The *Times*' despatch from Paris says: The crew of the British ship *Coringa*, Captain Gibson, from New York September 29th, have been arrested at Antwerp. The Consul is investigating an outbreak which occurred during the voyage. The mate had several times to repress insubordination, which on November 3rd reached such a height that the Captain ordered the arrest of one Kearney, of Liverpool. The crew resisted, the Captain seized a revolver, and the mutineers also armed themselves. The mate struck a man with a hatchet inflicting injuries which proved fatal on the 5th inst. This act restored order, and Kearney was arrested. The mate and five sailors are under detention.

London, November 10th.—George Augustus Sala will sail Saturday next for the United States. He is commissioned to make a tour through the Southern States as correspondent of the *London Telegraph*. A farewell dinner will be given him in London on Thursday next.

Edward L. Lawson's resignation from the Beefsteak Club has been accepted, and a meeting of the Club has been called for Friday next, to act on the question of expelling Labouchere.

Gladstone is about to leave London to visit the Earl of Rosebury at Dalmeny Park, near Edinburgh, this week, and he will at once begin his election work as contestant of the Midlothian seat against the Earl of Dalkeith, son of the Duke of Buccleuch. He will make his headquarters at Dalmeny Park.

London, November 9th.—Appearances to-day are more favorable to the maintenance of peace, but the danger of difficulties with Russia is not yet over. The threatened movement of the British Mediterranean fleet undoubtedly warned Turkey of her peril, and checked the intrigues of Russia at Constantinople. Count Schouvaloff has received his formal letters of recall from the Russian Embassy in England, and no one has been appointed to take his place. This is regarded here as rather ominous.

London, November 10th.—The Lord Mayor's procession to-day starts from Guild Hall, at noon, and, after passing through King's Cross, Upper Thames and Arthur streets, will cross London Bridge. It will then cross Southwark Bridge, and proceed up Ludgate Hill into Cannon street. The remainder of the route will be as heretofore, through St. Paul's Churchyard, Fleet street, the Strand, Charing Cross, and thence to Westminster.

The procession turned out to be of the usual character in its composition and accidents, the exception being that the crowd along the entire route hissed the ex-Mayor.

London, November 10th.—The American Exchange will unfurl the American flag to-day for permanency. The American residents will assemble and listen to soloists giving "The Star Spangled Banner," "My Country," and "Yankee Doodle."

London, November 11th.—At the Lord Mayor's banquet, yesterday,

Earl Beaconsfield, referring to the condition of the country, said: "Trade, which was a great index of prosperity, has been unable to execute its orders. The rise in the value of silver would in all probability, release Indian statesmen from one of their great perplexities. During a period of unprecedented depression there has not been a single meeting to express discontent with national institutions. He wished our brilliant brethren in Ireland would be a little more emulous of this example. He was at a loss to comprehend how the Irish people have brought themselves to believe that the best remedy for economical distress was political agitation and social confusion. [Loud laughter and cheers.] Doubtless there were portions of Ireland where there would be considerable suffering if a remedy was not offered. The Irish people should remember that they never appealed to English Government in vain. It would be the duty of her Majesty's Ministers to watch the condition of Ireland with the anxiety required by the situation. The Irish people should remember that their harvest though bad, and though they were much more dependent upon it than the English people on theirs, still was much better than the harvest of England." Addressing the Lord Mayor, Lord Beaconsfield said: "When I addressed your predecessor, I informed him that the government was contemplating large military operations in central Asia, the object being to strengthen and to render secure the north-western boundary of the Indian empire. These operations have been signally successful, and British influence is fully established in central Asia." [Loud cheers.] Here Lord Beaconsfield warmly eulogized Lord Lytton and the avenging army in Afghanistan.

Referring to South Africa, he said: "The recent war there has taught the colonists something of the art of self-defence, on which they must chiefly rely. We are about to effect some changes there which will contribute to the increased happiness of the population among which the colonists dwell. If I view external relations generally, I would say, notwithstanding that Europe may be covered with millions of armed men we have not merely a hope, but believe, that peace will be maintained. In assuming that peace will be maintained, I assume that no great power would shrink from its responsibility. If the most extensive and wealthiest empire in the world, with perverse interpretation of its insular character, turns an indifferent ear to the feelings and fortunes of continental Europe, I believe that country is endangered. It is to such indifference I attribute many fatal wars. But if the power and advice of England are felt and heard in the councils of Europe, I have a conviction that peace will be maintained for a long period. [Loud cheers.] If England deserts her natural post in the councils of Europe, war is too probable. A celebrated Roman being asked what his policy was, replied, *Imperium et libertas*. That is a short programme, but it would not disgrace a British minister. It is one on which the existing ministry will always act. In proposing your lordship's health I shall this time next year, in all probability, have the pleasure to congratulate you on your skillful administration." [Loud and prolonged applause.]

London, November 12th.—Charles Tomlinson, of the suspended Liverpool firm of W. D. Tomlinson & Co., cotton brokers, charged with obtaining £10,000 under false pretences and with negotiating forged paper, pleaded guilty, and has been sentenced to ten years penal servitude.

London, November 12th.—The Sheffield Daily Telegraph reports Edward Stanhope, Under Secretary of State for India, as saying, during a speech at Horn Castle, that Parliament might last till this time next year, but in all probability it was very near its end, and he took the opportunity of advising his hearers to prepare for an election at an early day.

London, November 12th.—The race for the great Shropshire handicap to-day was won by *Rugby Cross*; *Arontra*, second; *Drac-ander*, third. Twelve ran.

London, November 13th.—A despatch from Malta announces that the British fleet is ready to sail at a moment's notice.

London, November 13th.—Advices from Cape Town announce that the Cape Ministry have addressed a minute to Sir Bartle Frere, expressing the opinion that Sir Garnet Wolseley's settlement of affairs in Zululand is prejudicial to the permanent peace of South Africa.

New York, November 14th.—The *World's* special from London, dated yesterday, says: At a general meeting of the Beefsteak Club, this evening, Lord Warrington, President of the Club, said he did not allow journals like the *London Truth* to enter his house, but, having looked at the articles complained of, he must say that he thought it would be fatal to the Club to allow one member to write of another member as Labouchere had written of Lawson. Captain Frederick Burnaby and others, on the other hand, contended that this was not a question for the Club to decide. Mr. Inderwick, Queen's counsel, urged the Club to support the action of the Committee, and expel Labouchere.

When a vote was finally taken, there appeared 77 votes in favor of expelling Labouchere and 76 against. He was consequently expelled by a majority of one vote. Labouchere defended himself, but his speech produced no effect in his favor. The expulsion is felt to be a severe blow to him.

Belfast, November 14th.—Two thousand reelers of the York-street Spinning Company have struck for an advance of wages.

London, November 14th.—A correspondent of the *Liverpool Post* says: The Government has information from New York that American Fenians are offering money and arms to Irish tenant farmers to enable them to resist evictions. The correspondent adds: The Irish Executive fully credits the statement that such offers are made, but does not believe anything will result therefrom. Nevertheless he will be on his guard against insurrectionary movements.

FRANCE.

Paris, October 30th.—An official decree has been issued, annulling the resolution passed by the Council-General of the Seine in favor

of plenary amnesty. Other decrees dismiss 26 mayors for participating in factions manifestations.

Paris, October 31st.—An official return to be laid before the Chamber of Deputies shows 3,955 Communists amnestied, 1,500 being prisoners and 1,700 condemned by default. About 1,000 remain excluded.

London, November 1st.—A Paris correspondent says: It is now certain that Austria has refused to sanction the Anglo-French scheme for the liquidation of the Egyptian floating debt. It appears that England had taken an engagement with Austria to abide by her decision in the matter, which produces here much discontent and distrust of England's intention to abide by the Anglo-French intervention. These annoyances are unfortunate, especially in the present juncture, when Frenchmen jealously watch English movements, and are apt to misinterpret every act against French policy as an advance towards Germany. For the past week the *République Française* has been sharply attacking the French Cabinet, and its example is followed by other leading papers.

Paris, November 5th.—The Berlin express train was delayed over an hour last night between Venable and Lyons, France, by a snowstorm.

Humbert will appeal to the Council of State against the annulment by the Prefecture of the Seine of his election as a member of the Municipal Council of Paris.

Andrieux has tendered his resignation as Prefect of Police because he considers it insufficiently supported by the Government. President Grévy endeavored to dissuade him from such a course.

Halifax, November 5th.—The cable steamer *Faraday* has laid a telegraph cable for the new French company between Brest and St. Pierre, and is now laying a cable between the latter place and Cape Cod. The ship was in the heavy gale of last week, but kept steadily at work. The cable was buoyed two hundred miles from Cape Cod Sunday night. The *Faraday* arrived here yesterday.

London, November 6th.—The *Times* says:—The Paris Bourse is thoroughly disorganised. The agitation was concentrated on two securities; the shares of the Banque Européenne and of the Crédit Mobilier, Philipparte, or his institution, being known to have become a large holder of the latter. The Bourse thought and talked of nothing but rumors of immense losses sustained by Philipparte in his speculations, private and otherwise. It is stated, however, that the Directors of the Banque Européenne have held an extraordinary meeting, and decided that having no knowledge of Philipparte's Bourse operations, which were managed personally by himself, and without the Board's consent; the Banque Européenne could not hold itself responsible for them. Philipparte was reported to be at Brussels endeavouring to meet his engagements.

Paris, November 6th.—The truth of the report that Andrieux, Prefect of Police of Paris, has resigned, is denied.

Paris, November 6th.—President Grévy has commuted the sentences of five culprits who were condemned to death, including the notorious assassins Abbie and Tillie. The President is adverse to capital punishment, and this looks like its practical abolition.

Paris, November 6th.—Specie in the Bank of France has decreased 6,150,000 francs the past week.

Paris, November 6th.—*Le Lar*, organ of the Elysée, expresses the opinion that there will be no change in the Government for a long time, and declares that all that has been said on the subject is purely imaginary.

Paris, November 7th.—Toward the end of 1874 Philipparte burst like a meteor on the financial horizon of Paris. He created the Banque Franco-Holland, became President of the Crédit Mobilier, and attached himself to many other companies. He came to grief, and was declared a bankrupt, both at Paris and Brussels, his liabilities amounting to 28,000,000 francs. Four years elapsed, and that catastrophe was sinking into oblivion, when Philipparte reappears. It was noised about that he had settled with his creditors, not in cash, but by showing them he had acted with sincerity; had not enriched himself at their expense, and had worked conscientiously, but had succumbed to a great coalition against him by great railway companies, who sought to prevent him from grouping all small lines into the strength of a great company. His creditors believed him and absolved him, and he re-appeared in the financial world. He created a new bank (the Banque Européenne) and was empowered to raise its capital to 100,000,000 francs, and issued shares at a considerable premium. He made no promises. He simply reminded the public that it was he who invited it to subscribe. His first issue was of 40,000 shares at 500 francs nominal. At 700 francs they were subscribed for four times over. A general meeting, held at Brussels, authorized him to continue his issue, and 17,000,000 of francs entered the coffers of the Banque Européenne. Then commenced a kind of race against Bourse speculations. Philipparte bought an enormous number of shares of the Crédit Mobilier, the Chairmanship of which he wished to recover. His name was mixed up with a variety of schemes, and in a short time he shone more brilliantly than ever, and as if endowed with financial ubiquity.

At the settlement of October 15th, it was whispered that some difficulties had impeded his operations, and that he had to pay very dearly for money. The settlement, however, passed over. Four days ago he announced to the Board of the Banque Européenne that the coming settlement would be difficult; that he found it hard to raise money, and that he was going to Belgium to procure it. He started, and news from him was anxiously expected, but two days passed without tidings. Tuesday evening the Européenne Board met. A telegram was sent to him. There was no reply. The Banque's legal advisers were sent for, and the state of things examined into. Philipparte's liabilities to the Banque amounted to three or four million francs, but the Banque held an enormous quantity of Crédit Mobilier shares, and it reckoned its share in the purchase of the Grand Hotel and the Hotel Scribe as assets of three or four million francs,

The position of the Banque was therefore good, on condition of the bonds it held not being thrown on the market. The statutes provided that no operation of Philipparte should bind the concern unless endorsed by two directors. The Board decided that it had not a receipted responsibility of Philipparte's course of operations. On the Board's decision and Philipparte's disappearance becoming known on the Bourse, the effect was like a thunderclap. Philipparte was "elebrated," as it is called, the balance due by him reaching 680,000 francs.

Thursday evening it was affirmed that a compromise was about to be effected between the Banque Européenne and the brokers, on a basis to be agreed upon so as to make the best of the affair.

Paris, November 7th.—The *Gaulois* says: Princess Clotilde on the advice of the King of Italy, will pass the winter in Paris. The announcement has occasioned much gossip in political circles of Prince Jerome Napoleon.

The difficulties which marked yesterday's Bourse have not yet been surmounted. At the opening there was much hesitation and fear of catastrophe, but later on rumors of a quiet arrangement reassured the markets. The directors of the Banque Européenne have reconsidered their position regarding Philipparte's speculations, and will intervene in the settlement of the difficulties resulting from them. The Banque Européenne seems to have been advised that it stands by the law responsible for its Chairman's operations. It is said that Philipparte has resigned the Chairmanship of the Banque, and that an extraordinary meeting of shareholders would be held as soon as possible.

Paris, November 7th.—A duel was fought Wednesday at Pessac, near Bordeaux, between a writer on a Republican newspaper, and a clerical journalist, in which the former received a sword thrust in the arm.

Paris, November 9th.—Marshal Canrobert, Bonapartist, was to-day elected Senator from the Department of Loire-et-Charente. Guiffrey, Republican, was elected Senator from the Department of Hautes-Alpes.

Paris, November 9th.—The *Soir* announces that the Banque Européenne will discharge Philipparte's liabilities, after the payment of which the bank will have sufficient funds to continue operations.

Paris, November 9th.—*La France* says that Waddington persists in his desire to resign the presidency of the Council of Ministers.

Paris, November 11th.—Marshal Canrobert, Bonapartist, elected Senator, obtained 316 of 499 votes, Bellamy, Republican, obtaining only 126. Marshal Canrobert's return is not a Bonapartist manifestation, but he was elected as champion of the party of Order, and as a practical protest against the Communist election of Humbert in Paris and Garel in Lyons.

Paris, November 12th.—It is understood the Cabinet Council yesterday decided to transfer the control of the gendarmerie from the War Office to the Ministry of the Interior.

Paris, November 12th.—The *Bourse* newspaper states of 163,000 shares in the Banque Européenne, which Philipparte announced to have been subscribed for, only 36,000 shares are in the hands of the public; that 1,933 shares were taken by Philipparte, and that the bank is holding against these shares a number of tramway bonds and shares.

London, November 13th.—The *République Française* announces that it has been decided to remove Marshal Canrobert from the Presidency of the Commission for the promotion of officers of the French army.

Paris, November 14th.—The *National* says that the panic on the Bourse to-day was entirely due to speculative manoeuvres.

London, November 14th.—An explosion occurred yesterday in the cartridge factory of the Toulon Arsenal. Fifteen women and seven men were seriously injured.

GERMANY.

Berlin, October 31st.—Bismarck, though suffering from neuralgia and sleeplessness, continues to take an active share in all public business. The telegraph between Varzin and Berlin is kept busy.

The Progressists obtained from voting for President in the Lower House of the Prussian Diet. This action is characterized as on a piece with their discourteous absence from the opening ceremony at the Palace.

The budget was presented in the Prussian Chamber of Deputies to-day. It shows an estimated deficit of \$110,901,810 for the next fiscal year, which amount the Government proposes to cover by a loan, as also a deficit of \$2,186,115 remaining from the current fiscal year.

General Polbiciski, Inspector-General of Artillery, who held the post of Quartermaster-General during the Franco-German war, is dead.

London, November 3rd.—The German Admiralty has extended to the end of the year the contract time for raising the *Grosser Kurfurst*, sunk by collision with the *König Wilhelm*, off Sandwich on the 31st of May, 1878. The leak being completely stopped the contractors will attempt to raise her by the middle of November.

Berlin, November 5th.—The Emperor, in giving an audience to the new President and Vice-President of the Chamber of Deputies, expressed himself exceedingly well satisfied with the present internal situation of Prussia.

Berlin, November 6th.—Emperor William telegraphed to Varzin on Tuesday, making inquiry regarding Prince Bismarck's health, but the answer was not satisfactory.

Berlin, November 6th.—In political circles it has been much noticed that Emperor William has invited the Russian Grand Duke Vladimir and the Russian Ambassador for several days' shooting at Jütlingen.

Berlin, November 6th.—In order to neutralize the stronghold of Belfort, on the French frontier, a fortified camp is to be constructed at Neuf-Brisack, near the left bank of the Rhine.

Upper Silesia, Schwarzburg and other parts of the Empire are threatened with famine, in consequence of a bad harvest.

Berlin, November 7th.—Bismarck is suffering from the effects of a long period of hard work and he is not likely to experience much relief until he observes the advice of his physicians to take perfect rest and quiet for a considerable time.

The Vice-Ex-Chancellorship of Germany has not been offered to Prince Hohenzollern, and he is not likely to accept it if offered.

Paris, November 7th.—The Hesse Landtag has rejected the bill for the sale of the Main and Wiser railway to Prussia, though the line does not pay.

Berlin, November 8th.—In the Lower House of the Prussian Diet, to-day, the debate on the budget was continued. The Minister of Public Works defended the projected conversion of the railways into a State institution, on the grounds of public utility and national defence. The railways, he said, must be brought back from the service of speculation to the service of the country.

Herr Virchow urged doing away with the present system of Government, and especially with Bismarck.

Herr Bitter, Minister of Finance, characterized this attack as all the more indecorous as Bismarck had just rendered a great service to the German people.

The estimates were referred to the committee.

Strasbourg, November 12th.—The wife of Baron Von Mantouff, Governor-General of Alsace-Lorraine, is dead.

Berlin, November 13th.—In the course of debate, in the lower house of the Prussian Diet, to-day, upon the bill for the purchase of railways by the Government, Herr Miquel, in the name of the majority of the National Liberals, declared in favor of the Government's views.

Tilsit, November 13th.—The German authorities have prohibited Russian steamboat traffic on the Prussian section of the Niemen as a retaliation for a similar prohibition by the Russians on their portion of the river.

Berlin, November 14th.—The Czarewitch is expected to arrive early on Sunday morning. Emperor William and the Royal Princes will meet him at the railway station. A company of the Czar's Grenadier Regiment of Guards, of which the Czarewitch is honorary commander, will compose his guard of honor during his stay. There are some rumors that Bismarck intends coming here during that time, but they are regarded as unfounded.

Princess Bismarck has come here to remain with her daughter, the Countess Rantzau, until the latter's confinement.

The reference of the Railway Purchase bill to a committee of the Lower House of the Prussian Diet is regarded as almost equivalent to its passage.

The river Niemen affair, although in itself trivial attracts attention as being a result of many vexatious acts which the Russian Customs officials and frontier guards are constantly committing against German travelers. The Russians several times lately stopped Prussian vessels on the Niemen, so, finally, the Berlin authorities sent an order to stop all Russian vessels on the Prussian portion of the river.

Berlin, November 14th.—The organic complaint from which Prince Bismarck is suffering is said to be the incipient stage of fatty degeneration of the heart, as yet but slightly developed. There is no immediate cause for apprehension.

Berlin, November 14th.—In Government circles the visit of the Czarewitch to Berlin is held to be devoid of political significance, and indicative only of cordial personal relations between the two Imperial families.

Berlin, November 14th.—Russia is daily striving, but ineffectually, to come to special friendly relations with Germany.

INDIA AND AFGHANISTAN.

London, October 30th.—A dispatch from Cabul says: The population of Cabul is quiet but sullen. There can be no doubt that beneath it there is a deep dread of British dominion. The Cabulites are kept down simply by fear, and would rise if they saw a chance of success.

The trial of the Ameer's Ministers is about to begin. There is said to be convincing proof of their complicity in the massacre of the British Embassy.

A dispatch to the *News* from Cabul reports that eight lacs of treasure, chiefly gold coin, have been unearthed. It has all been confiscated for the present.

Eleven prisoners have been executed for participation in the massacre of the British Embassy, and sixty persons have been examined since the trials began.

A dispatch from Simla says: The opinion gains strength that the Afghan monarchy will not be reconstructed, but that the country will be broken up into several provinces. The innocence of the Ameer is still far from clear. Circumstances have come to light showing that he has not been altogether faithful to the treaty of Gundamuk.

A dispatch from Cabul says that the guard of the Ameer has been doubled, it having been discovered that he intended to escape.

London, November 5th.—A correspondent at St. Petersburg writes that when Kauffman was at Livadia, he represented to the Czar the impossibility of preparing a new Central Asian expedition without cash and supplies. He received the significant answer that it was perhaps better not to proceed with the preparations.

Berlin, November 5th.—The *National Zeitung* accuses Russia of complicity in the latest troubles in Afghanistan. Papers found in Cabul, it says, disclosed the fact that Russian influence is active in Afghanistan against England, and some papers seriously compromise the Government at St. Petersburg. On a proposal being made to furnish Abdul Rahman Khan the pretender to the Afghan throne, with money for the purpose of intriguing among the Afghan chiefs, an absolute refusal was given to such a proceeding during peaceful relations with England.

London, November 5th.—The Manager of the Madras (British India) Railway telegraphs than an accident occurred to a passenger train near Arcunam on October 31st, in consequence of the sinking

of an embankment after a rainstorm. Nineteen persons, including three Europeans, were killed and 45 wounded.

London, November 9th.—The *Times* despatch from Calcutta, says that there seems to be little doubt of the Ameer's treachery. The general opinion is that he will be sent as a State prisoner to India.

London, November 10th.—A Calcutta despatch says: The principal event of the past week has been the junction of the Cabul and Jelalabad columns, effected at Kutty Singh on Thursday. This junction having been effected, the Khyber and Jagdalak route will become the sole line of communication with Cabul. Everything is going on quietly at Cabul. The English troops are housed in the Shipur cantonments, which are very comfortable. Winter seems to be setting in early, and nine degrees of frost have already been registered.

The suspicion which rested on Yakoub Khan, and which was temporarily removed by his joining General Roberts at Kushi, is again settling down on him. It has been discovered that on the night before the Battle of Charasiab, he was visited in his tent by Naib Mahomed, who commanded the enemy next day, and it is also stated that a plan for his escape from our camp has been found out. Yakoub Khan is now practically a prisoner, and has been removed from Hussang to Shipur under escort of the Ninth Lancers. All his attendants, except four, have been dismissed. A sentry is constantly on duty inside his quarters, and strong guards outside. The mystery as to what has been done with the bodies of Major Cavagnari and his companions is not yet solved. Our relations with the tribes are assuming a more satisfactory aspect. Of course, it is impossible to predict how long this state of affairs will continue, for little reliance can be placed on the promises of the treacherous hillmen. There is, however, no doubt that the judicious severity shown in our dealing with the Cabul Rebels is having and will continue to have a good effect.

Preparations continue to be pushed forward in India with undiminished vigor. The Sukkur and Dadu Railway is open for engines nearly to Jacobabad, and is being constructed at the rate of over a mile a day. A large number of carts and a quantity of war material are being shipped at Bombay for Kurrachee. Sir Richard Temple is personally superintending the arrangements along the Bolan line.

General Hughes has reached Candahar from Khelat-i-Ghilzai. Everything is going on well there.

The publication of General Roberts' proclamation announcing the continuance for the present of the existing regime, has confirmed any waverers there may have been, and the people look on their emancipation from Cabul as complete.

London, November 12th.—A dispatch from Cabul of the 7th says: The mutinous troops of the Ameer in Turkistan have delivered up nearly five hundred stand of arms, a hundred camels, and some camp equipage.

London, November 12th.—Col. McPherson reports the country beyond Kho and Cabul open and road easy.

Simla, November 13th.—The troops of the expedition under General Baker surrounded a town in Charle Valley, and captured fifty prisoners and a large quantity of arms.

Lahore, November 14th.—Mahomed Jan is at the head of a fresh force in Khyber Pass.

Simla, November 14th.—A body of Sofas, numbering 1000, who attacked a foraging party of the 67th Regiment, were routed by Colonel McPherson at the junction of Panaher and Cabul Rivers. The enemy suffered great loss, and were pursued six miles. The British loss was four killed and five wounded.

An expedition to Kohistan is contemplated. It is considered likely that large quantities of arms belonging to the Ameer have accumulated there, and the revenue has not been collected for a long time.

THE JAPANESE PRESS.

THE CONFESSION OF A SATSUMA REBEL.

TSUDA SEITARO, a *shizoku* of Yamaguchi Ken who took an active part in the Satsuma Rebellion in 1877 was arrested a few days ago while working under an assumed name in the employment of Minemura Kumakichi, the tea-box manufacturer in Okinachō, Yokohama. After his arrest he made a confession the particulars of which we abridge from the *Mainichi Shinbun* :—

"My father, Genzō, was a cavalry soldier in the army of the Choshu Han and was killed during the war in Kokura Buzen while I was yet a child and I was then taken care of by a hotel-keeper in Shimonoseki. I was subsequently adopted by a native of the province of Tosa, who apprenticed me to Kawakami Kensai, a doctor in Kumamoto to be instructed in the art of medicine. This doctor together with Furusho Yosetsu (or Kamon) one of the persons concerned in the assassination of the late Sugi Hirotsuna, established an academy called *Fushinkwan* where they drilled the students after the English military style, and I also went through the course of instruction. When I was fourteen years of age, Kawakami conspired against the government and purchased a quantity of arms and ammunition, paying for it with part of the money deposited with him on behalf of the school by the ex-daimio of the province. The plot having been detected, Kawakami and

several of his accomplices were arrested, but Furusho and myself succeeded in escaping and proceeded to Shikoku, where I adopted the name of Mori Hikotaro and represented myself as a native of Yamaguchi Ken. I then became a miner in the mines of Hetsushi, Iyo. By the time I was seventeen years of age, I had become thoroughly acquainted with the art of mining, and I have since spent more or less of my time working in different mines. In September 1875, I left the mine in Yumato where I was then working and proceeded to Tokio, visiting Yokohama on the way. When in Yokohama, I stopped in the hotel of Fukui, in Bentendōri. There I met with a man named Riyozo who was about forty years old, a native of Kagoshima and who was ostensibly engaged selling pens, ink, &c. Riyozo asked me what province I came from, to which I replied that I was a *shizoku* of Yamaguchi Ken. Riyozo then wanted me to join him. He said he would tell me something very important, if I would entrust myself solely to his care; this I consented to do and he then informed me that his real name was Naito Shingo, and that he was one of the *Jimpoto* of Kumamoto and was engaged in a conspiracy against the government. He and I then changed our dress to that of pilgrims to the Konpira temple and visited several places where the members of the *Jimpoto* were in concealment, all the while carefully observing the different measures taken by the government. In April, 1876, Naito and myself became coolies in the employment of a man named Zeukichi in Kobe and remained there for about fourteen days. We then proceeded to Kumamoto by way of Chiugoku. In November, of the same year, we heard while in Yamaga in Higo, of the rising of the *Jimpoto* in Kumamoto and hurried thither, but the rebellion had been suppressed by the time we arrived. In February, the following year (1877), the Satsuma rebellion having broken out, Naito and myself, at the head of about thirty men proceeded to join the rebels. We did so and took part in several engagements which were fought at a place called Tabari, near Uye-ki. About twenty days after our arrival, the rebel force we belonged to, was routed by the Imperialists. Afterwards I was engaged in about twenty-five or twenty-six fights in Namamoto, Uye-ki, Takimiya, Nobeoka, Takaoka, &c., &c. In May of same year, Naito having been killed during the struggle and seeing that success was hopeless I determined to fly. Changing my dress to that of a farmer or a coolie, I accordingly made my way to Chiugoku; and after being employed at several mines, and by a tea box manufacturer in Kobe, I ultimately entered the service of Minemura Kumakichi, in Yokohama on the 28th October last. Shortly afterwards I heard incidentally, that the government proposed to give all the *shizoku*, the class to which I belong, pensions in the month of November and I then determined to deliver myself up at the Tokio *Saibansho*. However, on the 25th November, before I had a convenient opportunity of carrying out my intention, I was arrested at about 4 p.m. by some detectives sent from the police station in Matsukagecho."

THE PROTECTION OF INDIVIDUAL LIBERTY.

(Translated from the *Nichi Nichi Shinbun*.)

It is of the utmost importance that the laws which govern the personal liberties of the people should distinctly provide, "that every accused person shall be looked upon as innocent until actually proven guilty." It may not be altogether justifiable, having regard to the different circumstances of the two countries, to quote from a foreign law, but this matter is of such grave moment that we will risk the displeasure of our readers and make use of article 13 of the constitutional law promulgated by the French Republic so long ago as the 24th June, 1793. That article says "all accused persons shall be looked upon as innocent until the crime with which they are charged has been conclusively proven against them." This law is at the present time actually in force in France and there is no nation in the world which is considered civilized, which does not possess a similar regulation. The reason is obvious; the mere fact of a man being seized, brought before a Court and accused of crime is not in itself sufficient to entitle a Judge to treat that man as a criminal even although the accusation may be made by a Government official. Both in civil

and criminal matters the duties of a Judge are to hear the evidence and decide accordingly and it makes no difference that in civil cases, the parties are private individuals while in criminal proceedings, a Government official occupies the position of prosecutor. We understand that in civilized countries a very marked distinction is made between requiring an accuser to prove his charge and requiring a prisoner to prove his innocence, and for the following reasons; when the accuser is required to substantiate the charge he has made, the law acts upon the theory "that every man is innocent until proven guilty." Therefore when a prosecutor can make out an unanswerable case the prisoner is found guilty and punished, but unless the prosecutor can succeed in doing so, the accused person is released and treated as innocent. It is very different however when the prisoner has the onus cast upon him of proving his innocence. All the prosecutor has to do, is to make the accusation and then if it should happen that through want of money or skill an innocent man cannot make out a satisfactory defence, he will inevitably be punished for a crime he is altogether ignorant of. These examples show the vast difference that exists between the civilized and uncivilized method of dealing with these matters and we much regret to state that up to the present time our laws are such, that it is not altogether impossible for an accused person here in Japan to be precluded from producing any evidence in his defence. Many of our readers are acquainted with the state of our laws and therefore they will be able to say, whether or not a person arrested on suspicion can be haled out while awaiting trial and if the preliminary examination is more with the object of enabling the accused to prove his innocence or to induce him to make a confession of guilt. We will not answer these queries, not that we cannot do so but we are loath to place the humiliating confession that would be entailed on record, we prefer to leave our readers to ascertain for themselves, when they do so they will coincide in our reticence. Again "every prisoner should be brought to trial within a specified time, or else should be discharged from custody." This too is of great importance and we trust to see a provision of the description in the revised code. The arrest of an offender is not simply with the object of arresting him, but as a means of bringing him to trial before the proper tribunals. Therefore if the person arrested is kept in custody for any undue time before being brought to trial, the authorities are not carrying the object of the arrest into effect and the prisoner at the same time subjected to great injustice. Here in Japan the authorities commence their investigations immediately after the arrest is made, but these investigations or examinations do not satisfy our requirement, what we want to see is, the speedy examination of the accused in open Court before a Judge, then it would be impossible for prisoners to languish in gaol for months while undergoing these so-called preliminary examinations. Fortunately we live in enlightened times and although isolated cases may possibly have occurred where hardship has been entailed, still no great amount of injury has been done so far. But it is undeniable that if matters were to retrograde, grave consequences might and probably would ensue and it is manifestly better to abolish the system under which these wrong could exist and get rid of the pernicious practice of preliminary examinations altogether. We therefore suggest, that it be provided by the revised code that in all cases an accused person shall be brought to trial in open Court within forty-eight hours or three days from the time of his arrest and if not so brought to trial, the neglect to do so shall be considered as evidence of his innocence and entitle him to demand his release from custody. A provision of this description would prove of immense value as a safeguard of individual rights and liberty.

It is also of importance "that trials should be conducted in open Court." Law Courts are public places established for administering the laws of the nation, to punish the wrong-doer and protect the innocent, thus maintaining good order and the welfare of the community. Courts are not intended to be used as instruments for obtaining revenge by those who have, or imagine they have, sustained injury. In bygone times, Courts were considered by some as fitting means of wreaking vengeance and by others as a mere vehicle to enable despotic rulers to exercise their authority more completely. But that time has passed away and those ideas

no longer receive any consideration. Courts are established in the interests of the public and unless their proceedings are open to the public their object cannot be attained. If the custom of excluding the public from the Courts is adhered to, notwithstanding the more enlightened views now prevalent, it will not signify how impartially the laws may be administered, the public will have no faith in what happens inside. In old times when the country was governed despotically both the civil and criminal jurisdictions were conducted in the same Court, i.e., in the personal chamber of the ruler and there was no appeal, as the people had to obey the decision of the ruler whether right or wrong and whether the guilty suffered or the innocent. Under those circumstances the public could not complain of the Courts being conducted in private, but it is different at present, as the Courts are now established in the interests of the public. The Courts for the adjudication of civil matters are already open to the people and can properly be styled "open Courts," how then is it that the public are excluded from the criminal Courts? It is therefore only reasonable that disputants on this subject should ask, how is that the Courts are open in cases that only affect private individuals, i.e. civil cases and not in those which affect the public at large, i.e. criminal cases? We therefore reiterate our assertion:—"that trials should invariably take place in open Court."

Then as to our contention "that persons after having once been tried and acquitted should not be again tried for the same offence." In all civilized countries a similar provision exists. If a person after being tried and acquitted can be subjected to the same ordeal time after time, it is very evident that people cannot feel satisfied with the administration of Justice. During the latter years of the Tokugawa Government this occurred frequently and great injuries were sustained in consequence. Indeed we observed it ourselves about ten years since and dreaded the result. Now however nothing of the kind happens, because we are fortunate enough to have upright Judges and conscientious public prosecutors, and not because the law affords any protection. So long as the present or equally efficient Judges and officers hold office, everything will be satisfactory, but if they retire we also may the good administration of the law, therefore we desire an express provision in the new code that "after a man has once been tried and acquitted, he cannot be again arraigned for the same offence."

It is also of great importance for the due attainment of the protection of individual liberty, "that a criminal shall only be tried for the offence with which he stands charged." Courts of law are instituted for the purpose of investigating into the truth of the complaints made either by private persons or officials appointed for the purpose. The procedure should therefore be; 1st, is the prisoner guilty of the crime alleged against him—this is the special function of a jury; and 2ndly, his punishment if guilty—a duty which devolves upon the Judge. Such being the case, it is only reasonable that the trial should be confined to the specific charge of which the prisoner is accused when brought before the Court. It should not be open to the prosecutor to alter the charge, if in the course of the trial he discovers that although unable to procure the conviction of the prisoner for the offence he is being tried for, he can do so for some other crime that is disclosed in the course of the proceedings. It may be a convenience to the prosecutor to allow this course to be adopted but it is certainly a great misfortune to the public that such a power exists. For an example of how this works, we find that in the case of a man charged with a clandestine robbery, if the evidence shows that he has been guilty of robbery under arms, the charge is at once altered, although the man is not prepared to refute the accusation. Thus the public may come to the conclusion that if a man is once brought to trial he will be punished for some offence or other, although innocent of the crime for which he was arrested originally.

We also advocate, "that prisoners shall be allowed to employ counsel and that all trials in which they are not permitted to do so shall be void." These counsel are persons whom prisoners can consult and obtain assistance from, in order that they may not be punished for crimes of which they are innocent and they may be styled the protectors of the rights and liberties of accused persons. Prosecutions are invariably conducted by experienced and trained

officials, well acquainted with the laws and whose special business it is to conduct these cases in Court. They are careful to be provided with all the evidence procurable to prove the prisoner's guilt. The position then is this: the prosecutor is a government official and the accused person a private individual who is obliged to obey the commands of the official; therefore, unless in some very exceptional case, the parties cannot be said to be on an equal footing. The result is, that the vast majority of persons when arrested and brought to trial become confused and timid. They are unable to explain their innocence and their perplexity and confusion increases the suspicions of their guilt. Finally they are found guilty and punished for offences they have never committed. If one of the parties in a civil action was allowed to employ counsel and the other was not, they could not be said to be contending on equal terms. How much more necessary then is it, that counsel should be allowed in cases where perhaps men's lives are involved? If it was the object of the Courts to secure the conviction of every person placed on trial, then the present law would be admirably adapted to attain that end, but if the object of the Courts is, on the contrary, to avoid punishing innocent people, then the revised code should most certainly contain a provision allowing prisoners to employ counsel and state further that if a prisoner, through want of means or any other cause cannot procure assistance, the Judge shall assign some counsel for his defence.

Then again, "the examinations by the official prosecutor should take place before a Judge." We have already showed the importance of trials taking place in open Court, but for this it is necessary that the Court be presided over by a Judge, as the prosecutor in a criminal case occupies a similar position to a plaintiff in a civil one and the prisoner is equivalent to the defendant. Now although we fully believe that all the official prosecutors are just and honourable men, yet in theory the present practice is wrong. Suppose that a plaintiff had unrestricted power to extract and enslave evidence and confessions out of a defendant, how monstrous it would be thought. An official prosecutor might, if so disposed, extort evidence out of an accused person in this way, he might say, "You must have committed the offence. You have committed other crimes. Notwithstanding your assertions of innocence we have made enquiries and find you are guilty," &c. In civilized countries these remarks are not permitted, the Judges stop them. Now as these preliminary examinations are conducted in secret we cannot say positively that a Judge is not present. We do not believe that these examinations are improperly conducted, yet so long as they do not take place in the presence of a Judge, they cannot be termed public examinations, they are just the same as if a defendant was delivered over to the plaintiff.

We consider that our suggestions are absolutely necessary for the proper protection of the liberties of the public and therefore desire to see them incorporated in the new criminal code. Even if trial by jury was established it will prove of little avail, if these other amendments are overlooked.

JAPANESE PROPOSAL FOR A REVISED TARIFF.

Ad valorem import duty will be levied on the invoice value of goods, with cost of transport, insurance and commission charges added.

DUTY FREE.

Almanacs; Anchors and Chain-cables, except old ones; Animals, poultry, fish, tortoise; Atlases, maps, and charts.

Bags and sacks new or old; Baggage in reasonable quantity subject to the approval of the Customs authorities. Barometers; Betelnut; Biscuit in casks; Bones; Books (printed); Bricks and tiles; Bullion.

Carriages, for rail and tramways, and locomotive engines; Carts for conveyance of goods; Chalk, unmanufactured; Coal, coke and charcoal; Coin; Compasses; Cork (unmanufactured).

Diamonds, musc and glaziers; Drugs.—Aloes, liquorice, rhubarb, mawow or mawong, waugon or wauling, putchuck, kakko or kwak-kong, sojiten or changshahn, China-root, sankira or sankweiloy, saffron, camomile flower, wormseed or samon cymini, gum arabic, saraparilla root, cutch or catechu, cassia or cinnamon bark, cluchoua or Peruvian bark, and all others not otherwise provided for.

Eggs (fresh); Emery; Enamel; Esparto, or Spanish grass, and other material for manufacturing paper.

Feathers; Fire engines; Fish guts (Tenguen); Flints; Fruits un-preserved.

Gypsum and soap-stone; Globes; Grain:—rice, wheat, etc., un-ground and not otherwise provided for; Grindstones and whetstones; Guano; Gunny bags.

Hay; Hemlock and other tanning material; Hops; Hydrometers.

Ice; India rubber or gutta percha, crude or sheet; Instruments, apparatus, appliances, philosophical, astronomical, chemical, mathematical, surveying, drawing, surgical, and anatomical.

Kentledge.

Lard; Lime.

Madder roots; Malt; Mangrove bark; Medicines—Quinine, san-tonine, morphine, quinioline, cinchonia, calomel, and all medical acids, salt, ammonia, magnesia, potash, soda, etc. not otherwise provided for; Mercury; Microscopes; Mineral water; Models and plans of inventions and improvements.

Oakum; Oil:—of cinnamon, orange peel, cloves, cummin or fennel, cod-liver, peppermint, lemon, and castor, in bottle, and all others not otherwise provided for; Oil cake; Ores.

Packing mats (*awapara*); Parchment; Pitch, tar, and coal tar; Plants, trees, shrubs and roots; Platina, unmanufactured; Plumbago or blacklead, unmanufactured; Pumps, all kinds not otherwise provided for; Putty and putty powder.

Rags, all kinds, for manufacturing paper or other purposes; Rail-iron, and fixtures imported with it; Rosin.

Salt in bulk, sack or barrel; Salt meat, such as beef and pork, in cask; Saltpetre, crude or refined; Samples or musters in reasonable quantities, and subject to the approval of the Customs authorities; Seeds, flower and for agricultural purposes, and not otherwise provided for; Signboards, notifications and handbills; Smalt; Sol-dier, soft or hard; Sponges; Stick-lar; Stones, hewn, sawn, polished or other not otherwise provided for;

Tallow; Tea lead; Telegraphic wire; Telescopes and spy glasses; Thermometers; Timber:—lumber, boards, and planks, hewn, sawn, dressed, planed or other, not otherwise provided for; Turmeric; Type, new or old;

Vegetables unpreserved; Vessels and boats.

Waste; Whalebone and fine, unmanufactured.

FIVE PER CENT DUTY.

Sulphuric Acid; Alum; Caustic soda; Chloride of lime or bleaching powder; Crystal or washing soda; Ginseng; Glue and fishglue; Antimony; Bronze, unmanufactured; Copper, brass, yellow metal; Muntz metal, bar, rod, ingot, slab, and other to be remanufactured, except plate, sheet and wire; German silver; Iron, pig, ingots, bar, beam, rod, hoop, band, nail-rod, T, angle, and other to be remanufactured and except plate, sheet, wire, pipe and tube; Lead, bar, pig, ingot, slab, etc., except plate, sheet, wire pipe and tube; Nickel; Steel, bar, pig, ingot, slab, etc., except plate, sheet, and wire; Tin, bar, pig, ingot, slab, etc., except plate or sheet thereof; Zinc or spelter, bar, pig, ingot, slab, etc. except plate or sheet; All other metals unmanufactured not otherwise provided for. Hides, bull, cow, buffalo, and horse, raw, dried, salt, pickled, and undressed. Hoofs; Horns, bull, cow, buffalo, deer, rhinoceros, and all other; Skins of sheep and goats undressed, with or without hair; Teeth, elephant or ivory, narwhale or sea unicorn, sea-horse, etc.; Spirit of turpentine; Flour of all kinds and grain not otherwise provided for; Bamboo, unmanufactured; Cotton, raw; Hemp, flax, and jute; Ground beans or pea-nuts; Peas, beans and pulse, all kinds; Portland cement and plaster of Paris; Rattans, split or whole; Seed, cotton, hemp, flax or linseed, sesame, or sesamum and rape; Wood, hard, such as red ebony, box, tagayasan, and the like; Wool and hair; Balances and scales; Corks, manufactured; Implements and tools for farmers, carpenters, smiths and other mechanics, not otherwise provided for; India rubber tubing; Machinery, all kinds and parts thereof, such as blocks, india rubber belting, leather, &c. not otherwise provided for; Beverages, lemonade, ginger beer, and the like; Biscuits in tins; Coffee and chicory; Candies and confection-eries of all kinds; Fish, dried or salt; Ham and bacon; Macaroni, vermicelli, tapioca and sago; Melon seeds; Nuts, such as walnuts, ginnan, shii, chestnuts, kays, and all other nuts for table use; Pepper and pimento; Salt in bottles and small packages prepared for table use; Vegetables for food, dried; Table stores, such as anchovies, jam, marmalade, sardines, sausages, sugar of lemon, sauces, soy, vinegar, cheese, milk condensed or disiccated, butter, fruits, dried or preserved, salad oil, mustard ground, chocolate and pickles, preserved meat, vegetables, &c., not otherwise provided for.

TEN PER CENT DUTY.

Camphor, crude or refined; Cloves and mother cloves; Cesium and fennel; Nard and spikenard; Aniline dye, carmine, cochineal, blue, indigo, safflower, sapan wood, extract of logwood, gall-nuts, and other dye stuff not otherwise provided for; Gamboge, ultra-marine, verdigris; Lead (red, yellow or white); paint oil, varnish; foil, gold, silver, copper, tin, and others; vermilion and all other painting stuffs not otherwise provided for; Copper and brass, yellow and Muntz metal in sheet, plate and wire; Iron, sheet, plate, pipe, tube and wire, including boiler and roofing iron; Tin plate; Lead, sheet, plate, pipe, tube and wire (not otherwise provided for; Steel, sheet, plate or wire; Tin, sheet or plate; Zinc or spelter, sheet or plate; Skins, bull, cow, buffalo and horse, dressed and uncolored; Wax, bees' or vegetable; Shirtings and all other cotton goods except velveteen; Linen, linen and cotton mixture, and linen and cotton mixture; Cloth and all other woollen goods, and woollen and cotton mixture except velvet; Blankets; Canvas and cotton duck; Elastic cloth; Waterproof cloth; Bamboo cloth and all other textile fabrics made of different materials from those elsewhere provided for; all raw materials not otherwise provided for; Cordage, rope, or twine, of all kinds; Slate and oil paper for roofing; Umbrella ribs, hollow or not; Wire rope of iron or copper; Yarn and thread, cotton, woollen and other.

FIFTEEN PER CENT DUTY.

Nails, spikes, sprigs, tacks, brails, clinchers, rivets, &c.; Screws, nuts, and bolts; Skins, all, without hair, undressed and not otherwise provided for; Oils, peas, beans, pulse, peanuts, rapeseed, palm, coco-nut, cotton, hemp, flax or linseed, sesame or sesamum, fish or animal oil, and castor-oil in tin; Cotton velvets or velvetens; Books, blank, copy, account or register and all others of the like kind; Ink and Indian ink; Paper for printing, writing, drawing, packing, and covering books; Pens, penholders, and pencils all kinds; Slates, framed or not, not otherwise provided for; Inkstands, ink-stones, seal of stones, envelopes, sealing wax, wafers, liquid gum, cravers, paper knives, paper fasteners, elastic bands, and all other stationery not otherwise provided for; Chins, all kinds, not otherwise provided for; Cutlery, razors, scissors, pen-knives, fruit-knives, kitchen or table-knives, and files, and other cutlery not otherwise provided for; Doorlocks, bolts for fastening doors, hinges and the like; Elastic braid, or cord not otherwise provided for; Glass, window, uncolored, unstained and not polished, ten sheets not exceeding one inch in thickness; Needles and pins; Shoe-blackening; Smoothing or flat irons; Soap, washing, and soda ash; Spoons, forks and steels; Starch and wash-balls.

TWENTY PER CENT DUTY.

Musk and musk pods; Skins, bull, cow, buffalo, dressed and colored, calf, sheep, goat, kid or deer dressed, morocco or Russian &c., colored or not; Shark-skins; Kerosene oil and petroleum; Woollen velvet; Carpets; Napkins (except of silk); Oil and wax cloth; Table-cloths, and covers of all kinds, except silk; Towels; Ale, beer, porter and stout; Wine, red or white; Handkerchiefs, cotton, linen, cotton and linen mixture (except silk and lace); Silk, raw; Cotton, raw flax, and waste; Wood, sandal, alder or garro; Baskets; Bed sheets and quilts; Beds, all kinds; Scrapers and door-mats; Brushes and brooms of all kinds; Candles; Carriages and vehicles of all kinds and parts thereof; Clocks and parts thereof; Curtains and mosquito nets, manufactured; Frames for pictures, mirrors, and mouldings; Furniture, all kinds, such as bedsteads, bedding, chairs, sofas, desks, tables, wardrobes, chests of drawers, side-board, and candlesticks, and parts thereof, not otherwise provided for; Glass, window or plate, colored or stained, polished or not, ten sheets exceeding one inch in thickness; Glassware; Gold and silver plate and imitations thereof; Grates, fenders, stoves, and parts thereof; Hardware, all kinds not otherwise provided for; Hat pegs; Instruments and paper, photographic; Iron safes and cash-boxes; Lamps, lanterns, and parts thereof; Lamp-wicks; Locks and keys; Looking-glasses; Marble or alabaster, slate, manufactured, and composition stone, for furniture; Matting, China, coir, and coco-nut; Pictures, paintings, drawn, lithographic, and photographic, framed or not; Porcelain and earthenware; Saddles and harness.

TWENTY-FIVE PER CENT DUTY.

Skins and furs, such as sheep and goat, dressed; and tiger leopard, seal, beaver, fox and bear, dressed or not; Textile fabrics of silk and cotton, silk and linen, silk and wool &c.; Handkerchiefs, napkins, and table cloths and covers, made wholly or in part of silk; Travelling rugs; Boots, shoes and slippers; Buttons, buckles, hooks, and the like of all qualities; Hats, caps and bonnets; Trimmings, galloons, ribbons, braid, laces, fringes, gimps, tresses, tassels, knots, stars, corals, hair nets, veils and other ornaments for dresses, made by hand or machinery, of any material, and not otherwise provided for; Clothing ready made, and wearing apparel of every description, such as rain coats, shirts, shirt bosoms or fronts, cuffs and collars, knitted under-shirts and drawers, socks and stockings, gloves, neck-ties, scarfs, plaids or shawls, belts, braces or suspenders, gaiter tops, and leggings, &c., not otherwise provided for; Combs; Corkscrews; Fans of all kinds; Glass beads of all descriptions; Opera or field-glasses; Sand paper; Spectacles and pebbles or glasses; Straps, leather; Trunks, portmanteaux and travelling or courier bags of all kinds; Umbrellas, parasols, and sun-shades; Umbrella sticks with or without ribs and handles; Wall or hanging paper; Watches; Watch chains and keys and parts thereof; All other manufactured goods not otherwise provided for.

THIRTY PER CENT DUTY.

Casualties; Absinthe, arack, bitters, cherry cordial, cider, liqueur, madeira, port, sherry, champagne, brandy, gin, rum, whiskey, vermouth and all other spirituous beverages by whatever name or names known and not otherwise provided for; Sugar of all qualities; Molasses and syrup; Tobacco, leaf, cigars, cigarettes, cavendish, cut or prepared, snuff, chewing &c.; Studs and sleeve or cuff buttons and links; Tortoise-shell manufactured or not; Albums; Amber; Arms and ammunition viz:—ordnance, fire-arms, pistols, cannon balls, cartridges, side-arms, and parts thereof; Canes, sticks, and whips; Coral manufactured or not; Cosmetics, essences, extracts, toiletwater, hair oil or pomade, hair dressing, hair restoratives, tooth paste, aromatic decoctions, or other perfumes or cosmetics by whatever name or names known, used or applied as perfumes or applications to the hair, mouth, nose or skin, and not otherwise provided for; Fireworks; Fowling pieces and appliances for; Games, all articles; Gunpowder, gun cotton, and all other explosive substances; Instruments, musical and appliances for; Matches, all kinds; Percussion caps and fuses; Pipes, pipe-cases and all other articles used for smoking tobacco, of whatever materials composed; Precious stones set, such as diamonds, set or unset such as pearls, agate, emeralds, crystals, and other precious stones and imitations thereof; gold and silver manufactured, such as necklaces, earrings, rings, bracelets, pencils, compasses, lockets, &c.; Purser, card-boxes, pocket-books, &c.; Soap, toilet; Statuary; Toilet or dressing cases; Toys of all kinds.

LAW REPORTS.

IN THE U. S. CONSULAR GENERAL COURT.

Saturday, 6th December, 1879.

EMIL WIEGAND vs. WILLIAM COPELAND.

JUDGMENT.

The prayer of the petition in this case is, that the partnership existing between the parties in the business of brewing in Yokohama be dissolved; that an accounting be had; and that the defendant be ordered to pay forthwith the amount which may, upon such accounting, be found due the plaintiff.

The grounds upon which this prayer is based are alleged fraudulent acts on the part of the defendant, by which the plaintiff has been damaged in his pecuniary interests, and acts of personal violence towards the petitioner, from which he has suffered bodily pain and injury.

The evidence establishes the following facts: That the parties formed a partnership in 1876; that, previous to the preparation of the written articles of copartnership, certain verbal and written communications passed between them, which culminated in a written agreement, prepared by Mr. J. W. Hall, which was signed by both parties, in his (Hall's) presence, on the 6th day of June 1876, and provided for the actual commencement of the partnership on the 15th of the same month; that thereafter, to wit, on the 18th of July, 1876, a very long and elaborate deed of copartnership was prepared by Mr. Dickens, a well known barrister, and duly executed by both parties. This document established a partnership, to exist for five years from the previous 15th of June. It provided, also, in accordance with all the previous verbal and written communications between the parties, that "the capital of the partnership should consist of stock, plant, buildings, and property to the value of \$30,000, to be brought into the said business by the partners in equal shares."

This \$30,000 was the agreed upon value of the "business of the 'Spring Valley Brewery,' together with all the plant, stock, and property known as lots Nos. 240, 122, 123, and 105, Bluff, with the buildings and erections thereon," as expressed in the written agreement between the parties of the 6th of June.

The exclusive ownership of all this property was then in Mr. Copeland, the present defendant, Mr. Wiegand, the present plaintiff, it was understood, had but very limited means with which to purchase the one-half of the property, which was to constitute the capital of the firm, and therefore it was agreed that he should come in on equal terms with his partner, but should give to Copeland "a mortgage on his half-share of the property for the balance of the amount of purchase money which he was unable to pay down," that the parties should each be entitled to draw out of the profits of the business the sum of \$150 per month, and the remaining profits after deducting this \$300 per month, were to be paid to the defendant, he crediting one-half thereof to the plaintiff, until said credit should amount to \$15,000 or the value of the one-half of the property, whereupon the said one-half constituting the capital of \$30,000 was to be duly conveyed to the plaintiff. What possible legal interest the plaintiff possessed in the property referred to, which he could mortgage or assign as security for the payment of anything whatever the court is unable to discover; but, in pursuance of the agreement referred to, such a mortgage was prepared and executed on the same day of the execution of the partnership deed; and both the deed and mortgage were recorded at the U. S. Consulate General. This mortgage recited that whereas by the deed of partnership it was provided that "each partner should furnish a capital of \$15,000 in cash or stock, and whereas the mortgagor (the present plaintiff) was able to furnish only the sum of \$1,210.82 in cash or stock "the mortgagee (the present defendant) agreed to furnish the balance of the plaintiff's share, to wit, the sum of \$13,789.18, and the plaintiff executed the instrument as security for the repayment to the defendant of the sum named.

From all this it is clear that the original capital of \$30,000 was the property of Mr. Copeland, the present defendant; that he took Mr. Wiegand in as a partner, and Wiegand paid on his one-half, the sum of \$1,210.82 leav-

ing due to Copeland the sum of \$13,789.18, which sum without interest, Copeland agreed the plaintiff should pay out of his share of the profits of the business. Just here however a serious dispute has arisen between the parties. Wiegand claiming that he put into the business, stock belonging to him of the value of \$2,421.65, the one-half only of which, viz., \$1,210.82 has been credited to him. He insists therefore that the mortgage, if given at all should have been for only \$12,518.36 instead of \$13,798.18. But he goes much farther. He denies all knowledge of the mortgage and proclaims it a fraud. This allegation will be dealt with when I come to discuss the general charges of fraud.

It appears that the plaintiff was possessed of a certain amount of stock which he had used in his brewing business previous to forming the partnership, the value of which was finally agreed upon between the partners as \$2,421.65. In his petition, in his evidence, and strenuously through his counsel, the plaintiff has asserted, affirmed, and insisted, that his stock was put into the business as part of the original capital of \$30,000, and that he should have credit for its full value on his indebtedness of \$15,000.

The Court is not of such opinion; on the contrary, the evidence is conclusive that, in all the conversations between the parties, as well as in all their written agreements it was clearly understood and agreed that the plaintiff was to have credit on his account with defendant for one-half of his said stock as so much cash, which one-half he sold and conveyed to the defendant; and then, immediately thereafter, each party put his one-half of the said stock into the business, and each received credit, thus increasing the capital stock to \$32,421.65.

At the special request of both partners an attempt was made to show in the books of the firm not only the partnership accounts, but the account of each partner with the other—an attempt which several book-keepers and accountants have decided to be unsuccessful, and the result of which has occupied the Court for a number of sessions in endeavouring to comprehend. A few items also that have been entered in the book should not appear there; these are, clits given at different places in town by the defendant, for drinks for "the crowd," by way of inducing custom, and thus increasing the business of his firm; but they seem to have been given without the authority of Mr. Wiegand, who, on his part, refused to permit his personal clits to be paid by the firm.

Four hundred sacks of barley, also, which were purchased by Mr. Copeland without the consent of Mr. Wiegand, are not properly chargeable to the firm, but must be taken over and paid for by Mr. Copeland.

By agreement between the partners, the defendant was permitted to charge interest on moneys expended by him for *improvements* to the partnership property. This agreement seems to me eminently proper, in view of the fact that no interest was charged to the plaintiff on his indebtedness of \$13,789.18, and that the money so expended was really the property of the defendant. The method of charging the interest however on the books is somewhat startling, and while doubtless relieving the book-keeper of much labour, savors too much of the practises of "Isaac of York" to commend itself to the Court. It cannot be permitted that interest be charged on moneys before said moneys are expended, and interest account therefore, as kept in the books is wrong and must be corrected by charging interest only from the time the expenditures were actually made, and confined to expenditures for *absolute improvements* as distinguished from *repairs*.

As to the charges of fraud and swindling in which the plaintiff has so freely indulged, I might perhaps dismiss them by saying that they are utterly unsustained by the evidence and should never have been made, but such is their vicious character, such the forcible language in which they are clothed, such the vindictiveness, energy and perseverance with which they have been urged, that it seems to me proper to express the opinion of the Court with regard to them that, if possible, the injury already wrought by their publication may be removed, and that suitors may take warning not to wantonly assail their antagonists, or attempt to use the Court as a vehicle of slander and libel.

I feel perfectly assured that the learned counsel for the plaintiff was deceived with regard to these charges and the evidence relied upon to establish them. The defendant

however has been greatly injured and has no remedy at law; and it is due to him and to the Court to denounce the charges as scandalous inventions of the plaintiff. Referring to the mortgage given by plaintiff to defendant the evidence is overwhelming that the plaintiff had the fullest knowledge of all its details,—that he conversed about them on several occasions and agreed to them before they were put upon paper,—that they were read to him after preparation,—that he executed the instrument with the fullest comprehension of its contents and afterwards had a copy in his possession and pored over its words and figures by his own fireside until it became as familiar to him as his pitcher of beer.

As to the charge that the defendant drugged and adulterated the beer made by the firm and thus produced a noxious mixture injurious to health, and committed a fraud upon the public, it is proper to say that, if true, it did not lie in the mouth of the plaintiff to make it, as he himself assisted in the process, such as it was, but this is not true—it is, on the contrary, in all its essentials false. The article used in the beer and denounced by the plaintiff as a "noxious drug," the evidence discloses is "bisulphite of lime," which changes in the beer into "sulphate of lime" the chemical agent that produces, what is known as, "hard water" sought for for brewing purposes. The evidence shows that this article is used by many of the best brewers in England in their beer intended for export, and which bears such a high reputation in all parts of the world: and in a printed pamphlet prepared and circulated by a well-known chemist in England, which the defendant studied, and upon which he acted, the preparation is thus referred to.

"Bisulphite of Lime" has now been used for several years and has fully realized the hopes formed of it, as a most valuable auxiliary to the art of Brewing. It is undoubtedly one of the most effective agents known for decomposing and destroying the germs of disease in beer, and arresting the decomposition of those peculiar substances, the albumen, gluten, gum, &c. which, under certain circumstances are so prone to run a rapid course of acetification. Under its judicious use, the brewing of sound beer and its subsequent keeping and preservation for any ordinary time, or in any climate, is greatly facilitated. I will premise that the action of bisulphite of lime for the purposes indicated in the following remarks is no longer a matter of doubt or controversy, but has been proved by the most conclusive evidence, and its use is spreading over all parts of the country." And again,—“It may be said that beer fairly brewed cannot become sour in presence of bisulphite of lime; and, secondly, its antiputrescent, antiseptic, deodorizing, and disinfecting powers are perhaps greater than any known substance, and it has this great advantage that instead of leaving behind it a noxious substance like chloride of lime, it leaves simply sulphate of lime, so valuable in brewing operations. From these properties it was recommended by the Government commission on the cattle plague as one of the best means of destroying the virus of that malignant disease.”

When it is shown that this pamphlet was put in the hands of the plaintiff by the defendant, and that he retained it for a long time, and frequently assisted in putting the article into the beer, and in using it for cleansing and deodorizing purposes, no language, it appears to me, can be too strong in which to condemn the recklessness and malice of the charge he has made;—a charge which if sustained would not only ruin the reputation of the defendant but would greatly depreciate the value of the property and business in which the plaintiff himself is interested.

The evidence as to assaults, complained of by plaintiff, was confined to one occasion and is so slight and unsatisfactory as not to warrant the conclusion that any intentional assault was ever committed by the defendant.

In view of all these considerations, and of the general fact that the partners are ill-disposed towards each other, and that in consequence the business is greatly suffering, I have concluded that it is best that the partnership be dissolved, and to this both parties have assented.

In order to arrive at the pecuniary relations to each other in which the parties now stand, the Court, by an interlocutory order, appointed an experienced accountant (agreed upon by the parties), to take an accounting from the books of the firm, and report to the Court, and ordered

an account to be taken of all the stock, plant, buildings, leases, and property of all descriptions belonging to the partnership, with the estimated value thereof. The report and statement of Mr. C. H. Dallas, as the result of that order, has been filed, and is approved and adopted by the Court. From this it appears that after the severest scrutiny of the accounts of the partnership, and of the pecuniary relations of each party to the other, made in accordance with the instructions of the Court, that assuming the present value of the property of the Spring Valley Brewery to be \$28,000, and finding, upon this basis, the excess of assets over liabilities to be \$32,537.23½, the amount belonging to the defendant is ascertained to be \$26,287.19½ (which includes the indebtedness of the plaintiff to him) and the amount belonging to the plaintiff to be \$6,250.04½.

I can see no proper way in which to effect a settlement between the partners except by a sale of the partnership property and such is the usual decree in similar cases in the courts of the United States and Great Britain.

It is therefore ordered that the property of the partnership of Copeland and Wiegand consisting of lands, buildings, plant, furniture, stock in trade and property of whatever description be sold at public auction, under the supervision of the U. S. Marshal upon full public notice of not less than thirty days, and the proceeds thereof paid into court, that the debts due the partnership be collected as far as possible by the parties or their book-keeper up to the time of the sale of the property, after which the balance of said accounts shall be placed in the hands of and collected by the U. S. Marshal, and that the proceeds of all of such collections if any, after paying the running expenses of the partnership business, and the \$150 per month which each of the partners is entitled to draw out of the profits, shall also be paid into Court.

That out of such aggregate amount so paid into Court, there shall be paid:

First.—The expenses of the sale and collections.

Second.—The court costs, including the fees of assessors and witnesses.

Third.—The fees of the accountant, Mr. C. H. Dallas.

Fourth.—The fees of Mr. George E. Rice, accountant, for account made previous to suit by request of both parties.

Fifth.—The debts due by the partnership. The second, third and fourth of these payments shall be charged to the plaintiff, the others shall be charged to each party equally.

If after such various payments it shall be found that the amount remaining in the hands of the court is less than sufficient to pay over to the parties the sums adjudged as due to them to wit; to the defendant \$26,287.19½ and to the plaintiff \$6,250.04½ (after deducting from the latter amount the costs and fees made payable by the plaintiff) then, of the deficit one-half thereof shall be deducted from the sum due each, and the respective balances paid over. But if said sum shall be found to exceed the amount so found due each, as aforesaid, one half of said excess shall be added to said respective sums after the deductions aforesaid, and the said sums be respectively paid over.

No costs, as such, are allowed either party.

It is permitted that either party may bid at the sale of the property, in his own name.

THOS. B. VAN BUREN,
Consul-General.

We concur:

F. E. FOSTER, }
H. P. LILLIBRIDGE, } Assessors.

In re WIEGAND vs. COPELAND.

Yokohama, 3rd December, 1879.

General T. B. VAN BUREN,

U. S. Consul-General, Yokohama.

SIR:—In accordance with the instructions contained in your letter of 21st October, I have examined the books of Messrs. Copeland and Wiegand and have now the honour to lay before you the following report.

I would refer in the first instance to those matters of account which are affected by the special Findings No. 3, 4, 5, of the judgment delivered on the 18th October, and by the subsequent order made on the 1st instant.

Finding No. 3.—The books of the firm were in effect, opened in accordance with the ruling herein given, which therefore entails no correction in them. It is, however, to be noted that the loan

by Copeland to Wiegand and the purchase by Copeland of half Wiegand's stock were included in the opening entries, and therefore the statement of account now submitted embraces the pecuniary transactions between the parties.

Finding No. 4.—It appears from the books that the interest credited to Copeland, amounting in all to \$1,738.92, had been charged on all the disbursements entered in the Ledger under the head of "Improvements," and moreover that for the first three half-years it had been calculated at the rate of 6 per cent on the total amount expended up to the end of each half-year, even though some items had only been paid a few days previously. In addition to disallowing this mode of calculation the Court has, by its order of 1st instant, decided that interest is not chargeable at all on a large portion of the account styled "Improvements," and has settled the amount on which alone interest is to be allowed. Under this order Copeland becomes entitled to the sum of \$780.66 as interest up to the 31st October instead of to the amount stated above. I have accordingly made the necessary alteration in the books.

Finding No. 5.—As the amount of personal chits improperly charged to the partnership I have debited Copeland with \$221.

Finding No. 6.—As the laid-down cost of the 400 Sacks Barley ordered from San Francisco without the consent of Wiegand, I have debited Copeland with \$787.33.

After making these corrections, and some others of a routine nature, I proceeded to close the books up to the 31st October, and by writing off to Profit and Loss for depreciation and for bad and doubtful debts certain sums, which I particularize below, I arrived at a statement of the Assets and Liabilities of the firm on that date, of which the following is an abstract:

LIABILITIES.

Deposits by Japanese against casks &c. to be returned when empty.....	\$ 503.23
Cash received on account from R. H. Powers & Co., Nagasaki	39.85
Two accounts due in San Francisco	161.94
Various accounts due in Yokohama	240.31
Total Liabilities.....	\$ 945.33

ASSETS.

Cash in hand	\$ 116.88½
Cash remitted on account to W. Ellis, London	144.00
Value of ground-rents and insurances paid in advance.....	175.63
Stock in trade, as per inventory.....	3,223.13
Book debts, (Gross \$2,005.56) valued at.....	1,572.92
Furniture	250.00
Property	28,000.00

Total..... \$ 33,482.56½

The excess of the assets over the liabilities is thus \$32,537.23½, which amount stands to the credit of the two partners as follows, viz.:

to W. Copeland	\$26,287.19½
to E. Wiegand.....	6,250.04½

If, however, the private indebtedness of Wiegand to Copeland; amounting to \$13,759.17½, be removed from the books of the firm, the said excess of assets over liabilities will belong to the two partners as follows:

to W. Copeland	\$12,498.01½
to E. Wiegand.....	20,039.21½

No comment is called for by any of the items of the liabilities, or by the first three items of the assets: the other four require explanation.

Stock in trade.—The inventory which gives the amount set down above was taken by me on the 31st October in the presence and with the assistance of the two partners, and the quantities and values of every article were agreed to by both of them.

Book-Debts.—Under the head of "sundry debtors" I found outstanding bills for beer supplied amounting in all to \$1,977.73. Some of these bills are nearly three years old, and on going carefully through them with Mr. Eytan (Messrs. Copeland and Wiegand's book-keeper) I found that \$201.77 may be considered as bad; \$392.59 are doubtful and are worth say 50 per cent.; and \$1,383.37 are ordinary good bills, on which an allowance of 2½ per cent. should cover expense of collection, delay and petty reductions. I have therefore written off to Profit and Loss on this head the sum of \$432.64.

Furniture.—This account stood at \$284.54½. For depreciation I have written off to Profit and Loss \$34.54½, leaving \$250 which is, I believe, about its correct value.

Property.—This is the largest and most important item in the whole account. It includes land, buildings, cellar, brewing-plant, horse and cart, casks, bottles, taps, &c. It stood in the ledger at \$36,666.64. This amount is made up of \$6,666.64 for cash disbursed in improvements, and \$30,000 at which the account was put down in the books when they were opened, it being supposed to be worth \$5,000, more than the valuation at which one-half was sold to Wiegand. I do not think that subsequent events have sustained the supposition of the original entry, for which moreover there is no authority in the deed of partnership, and I have therefore written back this \$5,000, from the capital account. With regard to the \$6,666.64 for improvements, a large portion of this sum appears to have been paid for alterations, incidental repairs and maintenance; the permanent improvements and additions being the conversation

of an old godown into the bungalow now occupied by Mr. Wiegand, the laying out of his garden, the building of his servants' offices, the erection of a shed adjoining the office, a new verandah to the dwelling house, the construction of a drain, and some other small matters. The cost of these permanent improvements has been assessed by the Court at \$3,000, and I have therefore transferred to Profit and Loss the sum of \$3,606.64, which thus puts the value of the property as shown by the books at \$28,000; an amount, which while it may not be taken as finally satisfactory by either of the disputants, is yet, I believe, sufficiently near to form a convenient point of departure for a discussion of the actual value.

In connection with this item of the property I have to mention that one party claims that a heavy depreciation should be allowed from the Profit and Loss for the wear and reduced value of the brewing plant, and that the other claims that note should be taken of a large increase in the number of the casks, all the outlay on which has been written off half-yearly to Profit and Loss as a current expense, instead of being considered to add to the value of the property. These rival claims, each of which is disputed would, I believe, amount to about equal sums: the books afford no means of calculating them, and I have therefore taken no notice of either, which is equivalent to setting one claim against the other; a course by which, so far as my own knowledge of the facts extends, substantial justice is done to both parties.

With regard to the three additional points on which the judgment of the court desires me to supply information, I have to state that the books of the firm, as made up with all the allowances &c. above-mentioned show:

- | | |
|--|--------------|
| (1) That the Net Profits have amounted to..... | \$19,450.18½ |
| (2) That W. Copeland has drawn out..... | 13,437.90 |
| (3) That E. Wiegand has drawn out..... | 5,896.70 |

In concluding this report, I may be permitted to remark that I believe the only point in the above statement which will be challenged by either party is the amount set down as the present value of the property, which is necessarily an arbitrary one; and that the respective shares of the partners will be finally determined by adding to, or subtracting from, each of the amounts set against their names above, one-half of the difference between the valuation that may be ultimately agreed upon, and the nominal amount of \$28,000 set down in this statement.

I append a balance-sheet in the usual form, and I have the honour to be, &c.,

(Signed)

CHARLES H. DALLAS,
Public Accountant.

THE TIMES OF THE TAIRA.

BY CAPTAIN F. BRINKLEY, R.A., AUTHOR

OF THE "TIMES OF TAIKO."

CHAPTER XXVIII.

THE TWO WATCHERS.

None of the solemn thoughts suggested to the older men by the contemplation of the enterprise in which they were about to embark, came to trouble Yoshitsune's exultation. It is not when the one object for which we live is brought suddenly within our reach that we pause to count the cost of its attainment. The chilly air of experience that damps the graybeard's ardent blows not in the summer of youth, neither does he to whom nature and practice have made deeds of arms dear, bethink him of wounds and death upon the eve of battle. The crash of onset and the shout of victory; these are the only sounds he hears in the future, and it is not till sympathy has been stirred by the contact of suffering that the groans of agony and the wails of suffering visit him, like echoes, from the regions of retrospect. The Earl of Harima's son came of a race little apt to find reasons for hesitation in danger or difficulty. Moreover he had so long waited for the permission to strike that it never occurred to him to doubt the success of the stroke, and the whole course of his eventful life included perhaps no moment of deeper joy than that in which he saw Yorimasa receive from his prince the document that legalized the Genji cause and freed the hands of Hidehira's hundred thousand warriors.

Now that all reason for concealment was past, he made no doubt that the Treasurer would summon him from his hiding-place and introduce him to his uncle and the prince, but in this he was mistaken. Yasutsune not only suffered him to remain unnoticed, but even avoided all mention of either his name or his brother's in the long conversation which ensued between himself and his visitors. Nevertheless the subject of that dialogue was so interesting that Yoshitsune forgot to be impatient at his host's apparent neglect. Strange to say, after the transfer of the all important document, not one of the three men made any further allusion to its intention or consequences. One might have expected them to discuss the details of their

scheme or at least determine how and when the first act of defiance should be accomplished, but whether—which seemed scarcely possible—all the cardinal points were already preconcerted, or whether they desired to reassure the prince by their apparent indifference, Yorimasa and the Treasurer, as if by mutual assent, kept altogether aloof from a topic which must, none the less, have occupied their thoughts well nigh exclusively. But if they made no mention of their own resources, they did not neglect to confirm their royal ally's resolution by detailing his enemy's intemperances. Yoshitsune listening with keen ears, learned much that would have been almost incredible on other authority. He learned how Kiyomori, by an opportunity that compelled compliance, had obtained possession of a rarely beautiful steed belonging to the Lord Seneschal's son, and how he had testified his gratitude for the gift by branding the donor's name on the horse's forehead. He learned how Shigemori's death, which had just taken place, had been hastened, if not indeed altogether caused, by grief for his father's excesses, and how Kiyomori, deeming the Court's mourning on that occasion insufficient, had refused at first to receive a special envoy sent by the ex-Emperor, and receiving him finally, had desired him to lay before his master a list of complaints as frivolous as they were unreasonable, but which nevertheless he urged so imperiously, that the Emperor was constrained to degrade and exile in one day, forty-three of the chief officers of state who were supposed to be hostile to the Heike interests; a compliance which had only encouraged Kiyomori to fresh violence, so that four days afterwards he had sent a body of troops to the palace and placed a special guard on the ex-Emperor's person, who was now to all intents and purposes a prisoner.

All these things and many more too long to detail here, Yoshitsune heard with wonder and indignation, and when, after his uncle and the prince's departure, he found himself alone with Yasutsune, he could not refrain from censure of the forbearance which had suffered this arrogance to go so long unpunished.

The Treasurer shook his head gravely at the impetuosity these words betrayed. "The end will not be less certain," he said, "because it has been deferred till the justice of the deeds that compass it became indisputable. Even now long effort and perchance may a mishap separate us from the time when this assurance, which I feel no less than you, shall be confirmed by success. Meanwhile, know you why I have done you the discourtesy of keeping your presence concealed from my visitors?"

"No truly," replied Yoshitsune; "yet I am not so graceless as to doubt the wisdom of your purpose."

"Perhaps then it were better to leave your faith undisturbed," said the Treasurer with a smile, "for I doubt much that you will rebel at my ruling. Nevertheless I tell you of a surety that they who first hurl themselves against the might of such an enemy as ours will be dashed to pieces by the shock. Yes, yes! That gesture was not needed to assure me how little dissuasive such considerations seem to one of your mood, but it behoves you to remember that once the White Standard is raised your life belongs to your cause, not to yourself. Besides you, there are but two men in Japan capable of combining and directing the scattered strength of our clan: your brother, Yoritomo and your cousin, Yoshiuaka, who will one day assuredly be your enemy. Many men could be better spared to fall in the van than the Lord Seneschal. Right glad were I myself to take his place, but should it chance that you shared his fate, a blow were struck under which the men of Minamoto would long stagger, if haply indeed they might ever again stand firm. This is why, advisedly not willingly, I left your uncle in ignorance of your presence. You will yet approve my action, I believe, however much its motive irks you now."

It was with difficulty that Yoshitsune listened to the Treasurer's explanation. Every instinct of his nature and every principle of chivalry impelled him to rebel against the course suggested.

"My Lord," he said, "I respect your opinion too highly to set it aside on my own judgment, but since I know that all men of honour have but one code, I would fain have your answer to this question: How should you yourself act were you in my place?"

"Question for question," returned the Treasurer. "You

know the story of my life. How should you in your present mood, have acted had you been in my place?"

It was a subtle retort as Yoshitsune's embarrassed silence proved. Surely of all men in the world, the Treasurer was best qualified to teach patience.

"You do not reply," resumed Yasutsune. "Let me then be your mouthpiece. You would have done what the good gods scarcely enabled me to abstain from doing. You would have taken your sword in your teeth, you would have climbed the battlements at Rokuhara, and with that heaven-helped arm of yours cut your way to Kiyomori's side, and carried the tiger's head to the grave of your murdered sister. And what then? Death for yourself by your own hand. Pshaw! you say, a trifle. Granted, but what then? Death and degradation for every one of your name: for the white haired elder, for the merry stripling, for the girl in the spring of life and love and for the unborn babe in her bosom. But these you will tell me are prospects of which unsatisfied vengeance may not take count. I know it, for neither had I taken count of them but that the gods sent me a year of oblivion. I have waited long and often despised myself for waiting, but who may now say that the pain exceeds the profit, for I shall see what you can never see if you drift with the first ripple of this infant wave, and what will then be hidden from many another doomed to a bootless death by your imprudence, I shall see the mighty torrent of retribution break with giant fury against the House of the Taira and bury its ruins in a surge none may swim against. Yet however these things may be, you are not content. I perceive that any should strike before you or brave a peril you do not share. Well, well, I may not gainsay your choice. If it were otherwise I had perhaps found more cause for regret. Neither does it altogether become me to remonstrate. The right of decision rests with your uncle. If he will that you fight at his side, the gods speed and guard you! But should you think that as your mother's protector I have any claim on your gratitude, grant me this at least, that you will not seek your uncle until you have ascertained his will. Once by his side it will be impossible for you to leave the capital while Kiyomori lives. Here are writing materials. Consult Yorimasa by letter. Say you desire to join him; say you are determined to join him; say anything you please. I will provide for the immediate delivery of the letter, neither will I by counsel or comment seek to influence the Lord Seneschal's election. He shall only know that you write from my house and that I charge myself to forward his reply."

Constrained though not convinced, Yoshitsune reluctantly adopted this suggestion. He wrote briefly to the Seneschal saying that he was privy to his purpose, and praying for permission to participate in its achievement, and to this Yasutsune added a request that Yorimasa would make all speed with his answer.

So soon as this letter was despatched, Yoshitsune took leave of the Treasurer. He would fain have awaited the messenger's return, for even Yasutsune's repeated assurance failed to persuade him that his absence would not seriously retard the receipt of his uncle's reply, but he knew too well that he imperilled the safety of others as well as his own by remaining. Already indeed his mother had sent Iné two or three times to urge expedition, nor were these instances unreasonable for it wanted but a short space of dawn when he found himself once more beyond the castle moats.

He was entirely alone, having deemed it advisable to conceal his intended visit to Tokiwa from both Benkei and Saburo, and with much matter for reflection and little motive for haste, he lingered long on his way to the 'Sword-rack,' as Benkei's house had been jocularly dubbed by his companions. There were all the events of the day to be thought over and all the contingencies they might entail to be forecast. Most paramount was the question, who should carry round the Royal warrant to the Genji leaders in the several provinces. A service more difficult and at the same time more important could not well be conceived. Yoshitsune longed to undertake it himself. It would afford the means of obtaining accurate information as to the resources of his party, and would at the same time indisputably establish his own claims to leadership. Then too associated with it were elements of hazard and hardship most fascinating to a mind like his, and there was finally the not less potent incentive, that the gravest peril at the outset would have

been justly encountered by one who had the greatest interest in success.

But to achieve such an enterprise some disguise would be indispensable, and Yoshitsune knew by experience how little fitted to escape detection his own attempts in this direction were likely to be. The guise of a travelling Bonze was perhaps the only one that might be assumed to good purpose, and of the mysteries of priest-craft he had learned so little at Kurama that he dared not hope to succeed in such a part. Naturally this train of reflection brought Benkei to his mind. Benkei had received from his fellow-men the training of a friar and from his patron god, the might of a god. Circumstance and aptitude alike indicated him as the one best suited to this enterprise, and if achievement was possible to another, it was well nigh certain for him.

It happened, that as Yoshitsune attained this conclusion he had arrived almost within sight of his destination. A few more steps and he would turn into the street where the 'Sword-rack' stood. Men in those days, and especially they whose swords, like our hero's, represented their safety, were wont to travel in the middle of the paths, carefully avoiding the propinquity of any objects opportune for ambush. This habit had grown into an instinct with Yoshitsune, so that he had often unconsciously passed round the outer side of a giant pine that stood at these cross-roads, deterred from the more direct route by the aspect of a huge hollow in the hither side of the trunk. Now for the first time, however, the interest of his reflections, and perhaps his impatience to communicate their purport made him oblivious of caution. He passed within arm's length of the hollow, at the same time clapping his hands and crying out with no bated breath: "Benkei is the man; beyond a doubt Benkei is the man."

The words had scarcely been uttered when one heavy hand was laid on his lips and another, grasping his girdle, lifted him bodily into the hollow of the tree. He made no attempt to resist, for though to one of his address short space sufficed to deliver a sword thrust, it never occurred to him to fancy that this irresistible strength could have been exercised by any other than the man whose name he had just mentioned.

Neither was he mistaken. Feeble as were the last rays of the setting moon, they enabled him at once to decipher his surroundings, and to perceive that the old pine trunk had three occupants: Benkei; somewhat distressed by the pain of bestowing his huge limbs among the knarled protuberances of his hiding place, and two men little troubled by any such difficulty, for their dead bodies were cast down among the mould and rubbish in the deepest recess of the hollow.

Yoshitsune waited without a word for his companion's explanation. An idea, scarcely entertained sufficiently long to be clearly interpreted, suggested the shadow of a possibility that Benkei might have resorted to his old pastimes again, but this was the offspring of perplexity not reflection. Neither question nor assurance was needed to dispel it.

"This is sorry hospitality, master," whispered Benkei, a momentary ray of merriment lighting up the unwonted gravity of his mien, "but the fact is, I have no other to offer. It is better at any rate, such as you see it, than the welcome you would have received at the place you were bound for. The 'Sword-rack' has a new host. Hiromori, that worthy 'captain of spies,' who was once kind enough to present me with the 'Raven,' is waiting for us there with twenty other worthies. They were twenty-four originally but here are two not likely to trouble us again, and Saburo can probably account for the remaining two."

"What mean you, Benkei," asked Yoshitsune with sudden anxiety. "If it be as you say, how come you to be separated from Saburo?"

"We had no choice," replied Benkei, "except in the selection of our posts, and until I had the good fortune to arrest your steps our chances have been pretty equally divided."

"Where then is Saburo's post, and what is the purpose of his watch?"

"Two furlongs on the other side of the 'Sword-rack.' As for the purpose of his watch, it is achieved by your arrival."

"Were you then on the look out for me?"

"Most surely we were. Should we have done well to let you learn these things from Hiromori himself? and his herd of villains? You had left us in ignorance of your destination, so there was nothing for it but to guard the two approaches."

"But how did you escape yourselves? Had you any warning of Hiromori's design, and if so, what is the meaning of these dead bodies?"

"The bodies," replied Benkei with a gesture of disdain, "are the carcasses of a pair of varlets who were sent on some mischievous mission by yonder rascal, but unfortunately for themselves took a dangerous route. I speak from conjecture, for I asked them no questions, and if I mistook their purpose, the fault was their own for keeping bad company. But I see you are impatient to learn the whole story. It is easily told. You remember that on the evening of our encounter at the Fane of Kwannon, Saburo had rather a sharp passage of words with my old house-keeper. Probably neither you nor he thought any more of the matter, and for my own part, though I often remarked with what curious ill-favour she regarded you both, I never suspected her of anything worse than a longing to exercise her shrewish tongue at some somebody's expense. This afternoon, however, when I discovered not only her absence but also that of the sword I had placed where the 'Raven' formerly stood, it suddenly flashed across my mind that we were all in her power, and that she could gain more by treachery than truth. Saburo did not deride my suspicions, so we shut up the 'Sword-rack' and set ourselves to watch from the ruined tower over the way. A long watch it proved in truth, for midnight must have been two hours old when we spied the beldame acting as guide to a goodly party of armed men with Hiromori at their head. Shrewdly cautious knaves they were too, one and all. We had much ado to restrain our mirth when we saw them steal up to the door and form a hedge of swords and spears about it before they ventured to summon the inmates. I verily believe that if Saburo and I had fallen on them then and there, our chief trouble would have been to overtake them. However, when they had persuaded themselves by seditious feints and stratagems that the place was tenantless, they went in and shut the door as they had found it, evidently with the intention of preparing a reception for us all on our return. It was then that Saburo and I determined to post ourselves so as to prevent you from falling into their trap. How it has fared with him I cannot tell, but on two occasions, a pair of the varlets, issuing from the house, started off in opposite directions, bent apparently on some errand. These are the two that came my way, and as those that went his have not returned, I suspect they are not more likely to do so than their fellows. That is the whole history as far as it goes, and by my troth I think it rests with us to shape the sequel. The knaves have thrust their own heads into the trap. Let us act the rôle they proposed originally for themselves by taking post at the door and challenging them to come out. It will go hard if our three swords do not fall as fast as their footsteps."

"Well said! Benkei," cried Yoshitsune. "The same idea had suggested itself to me too. Let us hasten to put it into execution while the opportunity remains."

"Hold for one moment," replied Benkei, "while I relieve the old pine of this carrion." So saying he seized the two dead bodies, one with each hand, and carrying them from the hollow of the tree deposited them by the road-side, after which he led the way swiftly some two bowshots past his house to the entrance of a narrow alley which had served Saburo as a place of concealment.

It was with no slight sense of relief that Yoshitsune recognized his faithful follower in the figure crouching behind an angle of the houses at the end of the alley, for stout as he knew Saburo's arm to be, there is always some element of chance in a night encounter. There, however, were trophies the same as those that marked the place of watch in the hollow pine: two dead bodies, drawn into the shadow and disposed so as to escape observation.

"'Tis even as I guessed, you see," said Benkei, pointing to the fallen men. "Hiromori's messengers are not fortunate to-night. But I marvel that you ventured to use your sword, Saburo. The clash of steel travels far on a still night."

"Why Benkei," returned Saburo laughing, "you don't

suppose everybody has strength to take his fellow up and crush him between his fingers till there's no more room for his breath!"

"Well, well," retorted Benkei testily for he was ever disposed to resent any allusions to his abnormal muscles, "'tis not every man for the matter of that who can be certain of getting a sword-cut home in the moonlight. But we waste time. Let your blade have a little more air, Saburo, for we are going to dispose of yonder varlets before breakfast."

"Are you so much surprised then, Saburo?" asked Yoshitsune, replying to the other's bewildered look. "Bethink you that to clear his house of these intruders is the least return we owe Benkei for his hospitality?"

Saburo made no verbal answer, but stepping out into the street, pointed to the sombre roof of the Fane of Tenjin which raised its gracefully sloping shoulders high above the houses around. His companions, following the direction of his outstretched arm, saw that the gilded tips of the eastern gable were already glittering in the morning sunlight.

Benkei reluctantly returned his half drawn sword to its scabbard, and throwing off the silk cord that confined the long sleeves of his doublet, exclaimed:

"A plague on the early riser that comes to balk our work! But Saburo is right. We must put the daylight to another purpose, unless we elect to leave our heads in the hands of the Taira. I fear me, master, the capital will not be large enough to lodge us till its castles are garrisoned by Genji knights."

"That may be sooner than you think, Benkei," replied Yoshitsune, and forthwith he rapidly detailed to his companions the events of the past night, and the consequent impossibility of leaving Kiyoto before the receipt of Yorimasa's commands. This recital suggested a new perplexity for Yoshitsune had asked the Treasurer to send Yorimasa's answer to the very place which was now occupied by their enemies. If therefore the messenger were not intercepted, the Lord Seneschal's designs would not only be hidden from his friends but also in all probability disclosed to his foes.

In this dilemma Benkei found a new reason for urging his original proposition, and indeed Hiromori's forcible ejection from the 'Sword-rack' seemed the only solution of the difficulty. Saburo, however, again interfered. He explained that one of his companions, Araki Shoyemon, having passed his place of concealment some two hours previously, he had desired him to make his way by a circuitous route to the Treasurer's castle and warn Iné of the danger in which they were placed.

"I should hope therefore," said Saburo, "that Iné is by this time at Shomon's house, where I commissioned Araki to conduct her with all speed. From her too the Lord Treasurer will have had warning, and will have been able either to recall his messenger or to change his route. At any rate it seems to me that nothing is less wise than waiting here. Benkei's beldame knows the way to Shomon's house quite as well as to the 'Sword-rack,' and Hiromori is not likely to be content with one failure."

There was no gainsaying the good sense of this counsel, and the three men at once set out in the direction of Shomon's house, Yoshitsune leading the way at a pace that betrayed the impatience with which he was devoured.

They had proceeded thus some distance when, arriving at the foot of a little hillock crowned with a miniature fane of the 'Rice God,' Benkei desired his companions to halt for such a space as might enable him to ascend and descend the steps leading to the shrine.

"Not that I want to say my matins," he explained, "but I would fain take a farewell look at the old house. I doubt much whether I shall see it again for many a day."

Yoshitsune was somewhat surprised at his stalwart follower's whim, but made no attempt to oppose it, and Benkei, springing up the steps, peered out between the pine stems in the direction from which they had come. His parting gaze, however, proved a very transient one. In an instant he was back again at his comrades' side, whispering hurriedly:—

"The gods be thanked for that sentimental fancy of mine. We have just as much time to reach Shomon's house and rescue our friends as we can gain by our speed between here and there. Hiromori and half his party are setting

out from the 'Sword-rack' at this very moment, and that shrewish vixen—whose neck I shall wring if I come within arm's length of her—is again acting as their guide."

Saburo scarcely waited to hear these tidings to the end. If he had found it impossible to keep up with Yoshitsune in the race among the pines at Atsuta, no such disparity was apparent now, for these two, straining every muscle, ran almost side by side, Yoshitsune's finer turn of speed but leaving him leisure to note the wild disquiet of his companions air.

"At the most, Saburo," he said as they sped along, "we shall be seven against half a score. With those odds there is small cause for concern."

"Aye, Sir," panted Saburo, "and were they half ten score it would matter little if only Iné were beyond their reach."

No other words were exchanged by the two. They needed all their forces to sustain this headlong speed, which indeed Yoshitsune presently began to find too slow so much did his companion's anxiety infect him.

As for Benkei, he gazed after these fleeting figures with an air of bewildered hopelessness. "By my faith a regular pair of Will-o'-the-wisps," he muttered. "Mayhap I could run too, if I had a lass like Saburo's to look after, but being a somewhat heavy goer, I think I can do a better business by waiting."

Upon this opinion he proceeded at once to act, for having very deliberately knotted a kerchief tightly round his head and tied back the sleeves of his doublet, he stepped behind a pine tree some two or three yards from the road-side, and waited with his drawn sword in his hand. Anybody who had seen him standing thus would have been far from suspecting that he entertained the design of presently pitting himself single-handed against some ten or twelve armed men, for his face wore an expression of the happiest contentment, and as he turned his sword-hilt round and round in his huge hands, he looked for all the world like one on the eve of engaging in a playful fencing bout with the certainty of speedy victory.

(To be continued.)

DOUBLE ACROSTIC.

Its head! This head no head, alas! possesses;
No flashing eye: no dark, no golden, tresses;
Yet had more heads than one, each o'er the last,
Were this not so the thing had never passed
Into the thing it is, regret and glory
Of sage who, pondering o'er its half told story,
Joys to caress it; and laments in vain
Signs indistinct, and disappointing stain.

1.
Title once worthy, by a catachresis
Turned to base meaning, that's what this is.

2.
Brave craft! what other bore such gallant band
As thou, long beached on Corinthian strand?

3.
Vain thy stout ramparts, mighty engineer!
Ludvig comes thund'ring with triumphant cheer.

4.
Though obsolete this be, it well expresses
The note of cur, in anger or distress.

5.
Most men imagine they are born to it;
So they are; but very few are fit.

6.
Pyrrhus's legate called them grand old fellows,
A ready guessed! Who were they? Who can tell us?

7.
A queer old law. Please spell it badly, do!
It's been obliged to end it with a "Q."

8.
I think you use this daily, soft or hard,
Bring it in French, you have it in your yard.

9.
Not quite a goose: a great deal too good-looking;
Nor yet a duck; not good enough for cooking.

10.
The tail of the riddle, and ultimate light:
Should you have it about you don't screw it too tight.
QUAN.

LIGHTSHIP SIGNALS.

The following are the signals made from the lightship to denote the approach of vessels:—

Merchant steamer:—A black ball, with the national flag of the vessel below, at the yard arm.

Mail steamer:—A black diamond, with the company's flag below, at the peak.

Man-of-war:—National flag of the vessel at the peak.

Sailing vessels:—For a ship: flag B. (red): barque, flag C. (red ball on white ground): brig, flag D. (white ball on blue ground): schooner, flag E. (white ball on red ground) all commercial vessels, with the vessel's national flag below as soon as it can be made out.

METEOROLOGICAL REPORT

FOR WEEK BEGINNING FRIDAY, DECEMBER 5TH, 1879,
Observatory of Daigaku, Moto-Fujimicho Hongō, Tokio, Japan.

REMARKS.

Heavy line represents barometer.
Light continuous line—max. & min. thermometers.
-----represents velocity of wind.
.....percentage of humidity.
Max. velocity of wind, 19 miles per hour on Saturday, 11 a.m.
The barometer is reduced to the freezing point and to the level of the sea.

Since Sunday the barometer has steadily risen and the weather has continued fine since the heavy rain of Saturday. The highest barometer for the week is 30.164 inches on Thursday at 10 p.m. and the lowest 29.489 inches on Sunday at 2 p.m. There have been considerable fluctuations in temperature during the week, the maximum point being 63° 8' and the minimum 34°.

SHIPPING INTELLIGENCE.

INWARDS.

- Dec. 6, American steamer *City of Peking*, Berry, 5,079, from San Francisco, Mails and General, to P. M. Co.
Dec. 7, Japanese steamer *Hiroshima Maru*, Haswell, 1,200, from Yokosuka, to M. B. Co.
Dec. 7, Japanese steamer *Shario Maru*, Thompson, 524, from Yokkaichi, Mails and General, to M. B. Co.
Dec. 7, British barque *Nimrod*, Clark, 696, from Nagasaki, Coals, to Mitsui Bussan Kuwaisha.
Dec. 8, Japanese steamer *Takasago Maru*, Young, 1,230, from Hongkong via Kobe, Mails and General, M. B. Co.
Dec. 8, British ship *Don Enrique*, B. Creamore, 1,344, from New York, Kerosene and Sundries, to Messrs. Fraser & Co.
Dec. 8, Japanese steamer *Meiji Maru*, Peters, 1010, from Cruise, to Lighthouse Department.
Dec. 8, Japanese steamer *Kokonyu Maru*, Dithleisen, 1,133, from Hakodate, Mails and General, to M. B. Co.
Dec. 9, British steamer *Belgic*, Meyer, 2,627, from Hongkong, Mails and General, to O. & O. Co.
Dec. 9, British steamer *Consolation*, Young, 764, from Shanghai, General, to Cornes & Co.
Dec. 10, Japanese steamer *Tsuruga Maru*, Steedman, 661, from Kobe, Mails and General, to M. B. Co.
Dec. 11, Japanese steamer *Sumida Maru*, Hubenet, 896, from Shanghai and way ports, Mails and General, to M. B. Co.

- Dec. 12, German brig *Maid Marian*, Brinckmeyer, 298, from Nagasaki, Coals, to P. Bohm.
Dec. 12, British steamer *China*, Alderton, 1,030, from Hongkong, Mails and General, to P. & O. Co.

PASSENGERS.

Per American steamer *City of Peking* from San Francisco:—Ch. de Groote, Belgian Minister to Japan, Mr. B. Roth, wife and child, Miss E. D. Sandford, Mr. J. Tywell, Mr. Edward King and servant, Mr. A. K. Wyllie, Mrs. R. L. S. Hall, Mr. H. G. White and wife, Mr. F. Bridge, wife, 4 children and servant, Mr. P. T. Dickinson, wife and child, Miss E. J. Munsen, Miss Lightfoot, Dr. A. M. Owen, U.S.N., Dr. F. M. Gunwell, U.S.N., Mr. J. Foster, U.S.N., Mrs. Foster, U.S.N., Mr. F. R. Maloney, U.S.N., Capt. A. E. Knight, Mrs. M. A. Gulick and 2 children, Mr. Chas. Fendel, Mr. M. MacMichael, Mr. A. A. Bennet and wife, Miss Inveen, and Mrs. L. S. Whiting in cabin; and 6 Europeans and 6 Japanese in steerage. For Hongkong: Messrs. Geo. B. Emory, Leo. Baffe, F. Gardner, C. A. Tomes, H. Spencer, Jr., Mrs. L. Daniels and Miss J. Bermond in cabin; and 3 Europeans and 920 Chinese in steerage.
Per British steamer *Belgic* from Hongkong:—Rev. Mr. Dunlop, wife and 2 children; 1 European, and 118 Chinese in steerage, all for San Francisco.
Per Japanese steamer *Sumida Maru* from Shanghai and ports:—Baron de Giesbach, Comte de Diesbach, Mrs. Herbert, Messrs. H. Schoning, Blackie, McFarlane, Clerk, Kojima, Akagawa, Maruoki, Morgan and Dr. Anderson in cabin; 3 Europeans, 1 Chinese and 165 Japanese in steerage. For America, Paymaster Thomson, U.S.N. and Mr. G. S. Gregson, U.S.N.
Per British steamer *China* from Hongkong:—Mr. Gower Robinson in cabin; and 4 Chinese on deck.

OUTWARDS.

- Dec. 8, British steamer *Swada*, Reeves, 1,704, for Hongkong, Mails and General, despatched by P. & O. Co.
Dec. 7, Japanese steamer *Kumamoto Maru*, Drummond, 1,240, for Hakodate, Mails and General, despatched by M. B. Co.
Dec. 9, American steamer *City of Peking*, Berry, 5,079, for Hongkong, Mails and General, despatched by P. M. & S. Co.
Dec. 9, Japanese steamer *Meiji Maru*, Peters, 1,010, for cruise, despatched by the Lighthouse Department.
Dec. 9, American ship *R. R. Thomas*, Nicholls, 1,370, for Manila, General, despatched by C. & J. Trading Co.
Dec. 10, American barque *Great Surgeon*, Kingman, 909, for Manila, General, despatched by C. & J. Trading Co.
Dec. 10, British barque *Mary J. Leslie*, Bartling, 815, for Hongkong via Nagasaki, General, despatched by Grosser & Co.
Dec. 10, Japanese steamer *Genkai Maru*, Conner, 1,917, for Shanghai and ports, Mails and General, despatched by M. B. Co.
Dec. 11, Japanese barque *Sumanoura Maru*, Speigelthal, 925, for Nagasaki, General, despatched by M. B. Co.
Dec. 11, British steamer *Merionethshire*, Rickard, 1,245, for Kobe, General, despatched by Adamson Bell & Co.
Dec. 13, British steamer *Belgic*, Meyer, 2,627, for San Francisco Mails and General, despatched by O. & O. Co.
Dec. 13, Japanese steamer *Takasago Maru*, Young, 1,618, for Hongkong, Mails and General, despatched by M. B. Co.
Dec. 13, British steamer *Consolation*, Young, 764, for Kobe and Nagasaki, General, despatched by Cornes & Co.

PASSENGERS.

Per British steamer *Sunda* for Hongkong:—Mr. and Mrs. Brent, 2 children and servant, Mr. Chan Way Chen, wife and child, Messrs. Achong and child, Ah Tye, and Teen Sieng in cabin, and 16 Chinese in steerage.
Per American steamer *City of Peking*, from San Francisco for Hongkong:—Messrs. Geo. B. Emory, F. Gardner, Leo. Baffe, C. A. Tomes, H. Spencer, Mrs. Daniels, Miss I. Bermond in cabin; 3 Europeans and 920 Chinese in steerage.
Per Japanese steamer *Genkai Maru* for Shanghai and ports:—Paymaster Foster, U.S.N., and wife, Mr. and Mrs. Omori, Miss Lightfoot, Miss Inveen, Mrs. G. M. Dare, Dr. A. M. Owen, U.S.N., Capt. Bonger, Lieut. C. F. Oldham, R.N., Messrs. Watanabe, Neome, Sano, Nemura, A. C. Knight, Buissonnet, G. G. Howland, Hiyashi, Enouye, Makemura, Feindel, Maloney, U.S.N., J. H. de Forest, Sawada, Asawa, Kawai, Matsuka, Okamoto and Captain Jacobs.
Per British steamer *Belgic* for San Francisco:—C. H. Loring, Chief-Engineer, U.S.N., C. H. Thompson, Paymaster, U.S.N., Rev. Dunlop, wife and 2 children, Mrs. Marchant, Messrs. G. S. Gregson, R. A. Wyllie, G. Farley, Jr., J. N. Crawford, W. C. Whitney, and Mr. Reuben. For London, Messrs. Tasouvo Shigi, Tasaburo Tashima, Shin Tashima, and Takei Tashima. For Liverpool, Messrs. A. Primareki, and P. Mazzouchi. For New York, Mr. P. Sacconi.
Per Japanese steamer *Takasago Maru*, for Hongkong via Kobe:—Mr. and Mrs. Seykeelo, Messrs. Seykeelo Keyjee, H. J. Hawkins, Muramatsu, J. Z. Atkinson, F. T. Goodison, J. Tirrell.

CARGOES.

- Per British steamer *Sunda* for Hongkong:—
Silk for France 44 Bales.
" Italy 1 "
Per Japanese steamer *Takasago Maru* from Hongkong:—
Cargo for Yokohama 2,427 tons.
" " Kobe 89 "

Per Japanese steamer *Genkai Maru*, from Shanghai and ports:—

REPORTS.

The Japanese steamer *Takusago Maru* reports: Left Hongkong 29th November, at 3.30 a.m., arrived Kobe 4th instant, at 5.15 p.m. Left Kobe 6th, at 4 p.m., arrived Yokohama at midnight on the 7th instant. From Hongkong fine weather to Kobe, from Kobe very strong westerly gale with passing squalls of wind and rain to Rock Island, thence clear weather to Yokohama, W. winds.

The American steamer *City of Peking* reports: Left San Francisco November 15th at noon with 47 cabin, 12 European steerage and 920 Chinese passengers, 1,994 tons freight, \$362,566.65 in treasure and 45 packages U. S. Mails. Nov. 23rd, Dr. A. H. Adams, cabin passenger formerly of Osaka, died of remittent fever. Weather throughout generally good. Arrived at Yokohama December 6th at p.m.

The British barque *Nimrod* reports: Left Nagasaki December 1st. Moderate variable winds to Rock Island 5th inst. when encountered a strong N.E. gale with high sea which lasted two days: thence to port strong S.W. wind. Arrived at 4 p.m. 7th December. Passage seven days.

The British ship *Don Enrique* reports: Left New York on the 3rd July, experienced very heavy westerly gales and stormy weather off the coast of Japan.

The British steamer *Belgic* reports: Sailed from Hongkong Dec. 3rd, at 3.23 p.m. Experienced strong north and N.W. winds most of the voyage, with fine clear weather. Arrived at Yokohama Dec. 9th, at 4.25 p.m. Time, 5 days, 23 hours 10 mins.

The Japanese steamer *Sumida Maru* reports: Left Shanghai 3rd instant, at 1 p.m., arrived at Nagasaki 5th instant, at 7 a.m. Left Nagasaki 6th instant, at 12.30 a.m., arrived at Kobe 7th instant, 11 a.m. Left for Yokohama 9th instant at 7.30 p.m., arrived at Yokohama 11th instant at 1.30 a.m. Experienced very fine weather the entire passage.

Per Japanese steamer *Tsuruga Maru* reports: Left Kobe at 10 a.m. 8th instant. Experienced N. winds with fine weather throughout. Arrived at 4 p.m. Passage 43 hours.

The German brig *Maid Marian* reports: Left Nagasaki, Dec. 4th. Experienced light northerly winds to Van Dieman's Straits. Then very strong westerly gales from Van Dieman's Straits to Rock Island; thence to port light northerly winds.

The British steamer *China* reports:—Left Hongkong 5th inst. at 4 p.m. Experienced strong N.E. monsoon with high sea to Linchoten Islands; hence to port variable winds and fine weather. Arrived at 9 a.m. 12 inst. On the 7th inst., off Turnabout, passed French flagship *Armide* steering to the S.W.

KEATING'S COUGH LOZENGES,

COUGHS,

ASTHMA,

BRONCHITIS,

ACCUMULATION OF PHLEGM.

Composed of the purest articles. These Lozenges contain no opium nor any deleterious drug, therefore the most delicate can take them with perfect confidence. Their beneficial effect is speedy and certain. The old unfailing family remedy is daily recommended by the most eminent Physicians. (In use nearly 60 years).

MEDICAL TESTIMONY.

July 25th, 1877. 23, Cold Harbour Lane, London.

"Sir,—Your Lozenges are excellent, and their beneficial effects most reliable. I strongly recommend them in cases of Cough and Asthma. You are at liberty to state this as my opinion, formed from many years experience.

J. BRINGLOE, M.B.C.S.L., L.S.A., L.M.

Indian Medical Service.

Mr. T. KEATING,
Dear Sir,—Having tried your Lozenges in India, I have much pleasure in testifying to their beneficial effects in cases of Incipient Consumption, Asthma and Bronchial Affections. I have prescribed them largely, with the best results.

W. B. G. —, Apothecary, H.M.S.

KEATING'S COUGH LOZENGES are sold by all Chemists, in bottles, of various sizes, each having the words "KEATING'S Cough Lozenges" engraved on the government stamp.

KEATING'S WORM TABLETS,

A PURELY VEGETABLE SWEETMEAT, both in appearance and taste, furnishing a most agreeable method of administering the only certain remedy for **INTESTINAL or THREAD WORMS.** It is a perfectly safe and mild preparation, and is especially adapted for Children.—SOLD IN BOTTLES BY ALL CHEMISTS.

THE GREATEST

WONDER OF MODERN TIMES!
HOLLOWAY'S PILLS.

Persons suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER,

In his work entitled "The Nile Tributaries in Abyssinia," says, "I ordered the dragoman Mahomet to inform the Fakay that I was a Doctor, and that I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as possessing unmistakable purgative properties they create an undeniable effect upon the patient, which satisfies him of their value."

SIMPLE, SAFE AND CERTAIN!
HOLLOWAY'S OINTMENT.

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcers, curing skin diseases, and in arresting and subduing all inflammations.

MR. J. T. COOPER,

In his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls, butter, and horse-feed poured in upon us, until at last a tea-spoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining stock"
Sold by all Chemists and Medicine Vendors throughout the World

MINES AND MINING.

II.

JAPAN'S mineral products are classified by Mr. Netto, in order of their importance, as follows:—coal, copper, silver, gold, iron, kaoline, petroleum, sulphur, lead, antimony, tin, cobalt, quicksilver, marble, jasper, ngate, amber, and graphite. Coal, which now takes the first rank, was a product almost unused¹ until the advent of foreigners, steam being an unknown motor, and charcoal the only fuel required for the warming of houses, while wood was employed for boiling water, roasting ores, and, in general, in the small factories which then required heating power. It is gratifying to find that coal, the first and foremost need of modern industry, can be found in Japan in sufficient quantities not only to meet the internal demand, but also to furnish a good surplus for export. The production has steadily increased; and in the year 1877-78 it reached a total of almost four hundred thousand tons, a little more than one-fourth of which was exported, the rest being consumed in the country. This out-turn, although it may appear small as compared with that of other lands, is large in view of the fact that the enterprise was only fairly inaugurated about ten years since, and that even now there are but two coal mines² worked on the foreign system. What has been, so far, accomplished by geological surveys, goes to prove that deep borings will show the existence of extensive measures in addition to those already discovered. In Yesso, according to Professor Lyman's report, the amount of available coal in the districts surveyed by him amounts to one hundred and fifty thousand million tons.

The production of iron, the mineral which, next or rather together with coal, is the great *sine quâ non* of all successful industry, is as yet very limited in Japan. In 1877-78 it amounted to less than eleven million

pounds (about four thousand five hundred tons). Coal and iron so far have not been found in the immediate neighbourhood of each other in this country, a fact which is certainly to be regretted. There are at present, also, only two mines³ conducted on the foreign system for getting and reducing iron ore. Their estimated joint possible production, under the most favourable conditions, is sixteen thousand five hundred tons per annum; although, of course, it is doubtful whether this amount will be reached, and whether, in the absence of coal near at hand, work can be pursued so profitably as to compete with the product of other countries. Too little is known at present, however, to allow us to speak with anything like certainty; although an increase may, from present appearances, be looked for.

Copper, which has now been assigned the second place, has until the last few years been the most important, and the most valuable to the country of all its products. According to Dr. Geerts's calculations, the quantity exported from 1619 to 1858 by the Dutch settlers, amounted to two hundred and eighty thousand tons; and in the same period by the Chinese, to two hundred and fifty thousand tons; or an average yearly export of over two thousand tons. Between 1868 and 1873 the average shipments amounted to about fifteen hundred tons per annum, or nearly forty-three per cent of the production. Prospecting for copper mines has always been carried on so carefully, and, it must be admitted successfully, that there is very little likelihood that extensive new veins of that metal, will be discovered; but still a considerable increase of production for many years to come may be confidently looked for from the better exploitation of mines now worked, and from reclaiming, with modern machinery, many others, which have been swamped in former periods, and which the then known appliances were unable to free from water.

As regards the precious metals, all geologists who have ever examined the country are unanimous that, as far as it is possible to judge, there is no room for extravagant, or even moderately sanguine, expectations. The relatively low value of gold, as compared with silver, ruling in former years, may be ascribed, not as has generally been done to a superfluity of the former, but rather to a scarcity of the latter metal. The average yearly production of Japan from 1868 to 1878, amounted to \$96,911 in gold, and \$271,300 in silver. It may be said, however, that this very trifling return can hardly be reconciled with even a low estimate of the quantity of precious metals which must have existed in the country, upon any other supposition than that the yield may have decreased, as in former years it must have been considerable. This, it seems to us, implies the possibility that, here as in California, deep borings may disclose new deposits of hidden wealth. In this connection it may be a significant fact that, in 1877-78, undoubtedly in consequence of lately improved methods, the gold production was one hundred and forty-two per

1. It was only employed in the manufacture of salt.
2. Miike and Takashima.

3. Kameishi and Inaka-Osaka.

cent, and the silver production sixty-five per cent, greater than the average of the preceding ten years. We have no authentic data as to the yield of former times. Between 1550 and 1671, five hundred millions worth of gold and silver are said to have been exported by the Dutch and Portuguese. For two centuries from the latter year no information, as far as we know, exists in regard to the quantities sent out of the country. During the last ten years the export of precious metals required to counter-balance the increased imports of foreign merchandise exceeds seventy million dollars. At the present rate of production, as Mr. Netto shows, the country furnishes less than five per cent of the amount exported, which has therefore consisted nearly altogether of the accumulated savings of former years.

In last week's article we reviewed the principal disadvantages attending the manipulation of ore until it is brought to the surface of the soil. The processes of reduction, roasting, smelting, etc., although not conducted on anything like modern scientific principles, and subject to many drawbacks, are yet, by comparison, economically effected. The skill of the operators is so great that, in quartz, for instance, containing gold only to the value of one dollar per ton, the presence of the metal can be shown with considerable accuracy, even by the imperfect hand processes employed. In slack times, "tailings" are often worked, and yield a profit, although an infinitesimal one, if they contain gold to the value of seven and a half dollars in one ton. One of the principal disadvantages of the Japanese system lies in the fact that the same furnaces and appliances are used indiscriminately for roasting and smelting nearly all kinds of ore (silver, copper, iron, lead, etc.) Again, a great waste of fuel attends all existing contrivances for reduction, which also, being always made in the open air, entails great and needless hardship upon the operators.

Mr. Netto shows in detail, and at sufficient length, what improvements are necessary in all parts of the mechanical procedures connected with mining; and the remedies which he points out, although extremely effective, are in many cases very inexpensive. We cannot, however, look forward to a result approaching an adequate reform of present methods, so long as the two great factors necessary to remunerative mining even more than to other industries—capital and skill—are lacking in anything like the extent to which they are now deficient. It may be said that the few mines worked on foreign models supply the latter need, at least to a certain degree; but their sphere of usefulness in this regard is circumscribed by very narrow limits. No two beds are alike; and it requires wide and varied experience to adapt all the works to local conditions and requirements. And beyond this, whatever may be the extent of the knowledge gained by available examples, it will only result in benefiting the country in an abstract sense. It will bear no practical value, for in mining, more than in other industries as we have already said, skill and experience are worthless without capital. Its absence nullifies their usefulness. To start a mine fairly, according to modern requirements, is a costly affair even under the most favorable circumstances, and always involves a certain amount of risk. The sum needed for this purpose, which even with a wealthy nation is looked upon as considerable, becomes comparatively enormous in a poor country like Japan. Money wanted for working a mine must come out of surplus capital; and Japan has none. In addition to this, the entire absence hitherto of anything like organized capital, has prevented such small sums, as might have been spared here and there, from being collected and applied to this purpose. Even at

present, the only way in which the organization of capital finds any exponent, is in the formation of banks; and these seem to confine themselves to speculations in *kinsatsu*, and to advances, mostly on houses and merchandise, generally in small sums, and at a rate of interest which no legitimate manufacturing or other business could afford to pay for any length of time. A remedy to this state of things might in some measure be found in the co-operation of foreigners with natives, but here the law of Japan has created an impassable barrier. No foreigner is allowed to possess any pecuniary right or interest whatsoever in any mine; he cannot look to any security therein in the shape of mortgage or otherwise, for money lent or services rendered; and he is not allowed to participate, directly or indirectly, in its present or prospective gains. Even his engagement, at a fixed salary, by the owner of a mine, is subject to stricter regulations than if his knowledge is made use of for any other purpose. Special permission must be obtained from the Mining Department before he can be employed at all in this particular branch of industry. We do not know what reasons have actuated the Government in so zealously guarding the mining interest from intrusion. There may be good grounds, with which we are unacquainted, for the course pursued; and we will therefore not challenge the position that has been taken. Still, we earnestly hope, for the welfare of Japan, that in the forthcoming treaty revision, or sooner if possible, such precautions may be devised as will satisfy the Government, and yet permit foreign skill and foreign capital to assist freely in developing what may yet prove one of the leading resources of the country. As regards these, at present nearly everything is mere conjecture, but it is conjecture tinged with a considerable amount of justifiable hope. The success attending the Takashima coal mine will probably not prove a solitary instance; and even average good results will, in part, contribute to fulfil the chief conditions upon which Japan's future prosperity depends, namely,—diversified industry and productive employment for her people.

COPYRIGHT.

ON several occasions recently we have had occasion to refer to the subject indicated by the above title. In one of our notes last week we quoted the opinion of an influential London weekly that Japanese authors, in the complete protection accorded by their Government to their productions, are "fortunate beings." Certainly their lot will bear comparison with that of writers of other nationalities. It so happens, also, that they are in little danger of that piracy of their works to which those whose literary efforts are in languages of world-wide extent are exposed. Thus, as the possession of their property and the fair remuneration to be derived from it, are secured to them at home by stringent laws, and as the very isolation of the vehicle in which their thoughts find expression guarantees them practically thorough immunity from risk of alien appropriation of such portion of their toil as might be worth taking, the *littérateurs* of this realm perhaps merit the envy which their position apparently excites abroad.

On the 3rd of September, 1875, about the period when a portion of the foreign press locally published was criticizing, with more zeal than discretion, and more virulence than either, the then new newspaper laws wisely promulgated by a government which had found it necessary to bridle the licence engendered by freedom too early accorded to writers possessing scant knowledge or sense of responsibility, copyright regulations were issued by the Daijokwan. Their effect was virtually to free from every tram-

mel all honest work in literary enterprise. A glance at their provisions now will not be inappropriate, the rather that their value was principally obscured, at the time of their issue, by the discussions on the other subject to which we have just alluded. They first of all, then, provided broadly that original books or translations might be published on mere application to the Naimusho for permission. Copyright on such productions was to be granted for a term of thirty years, with right of renewal, in the case of works of approved and standard excellence, for fifteen years more. If an author should not choose to take the simple necessary steps to procure protection, his work would become the property of the public. Otherwise the regulations, as they were framed, and as they are at present in force, were most liberally in favour of the copyright holder, who was held to similar precautions and applications for the preservation of his privileges as those which are in force in England, and are designed rather to prevent fraud at his expense than to put him to inconvenience or annoyance. The penal clauses were drawn out with special stringency in regard to his claims. Thus, infraction of copyright, by publication of works with a change of name or appearance, subjects the culprit to fine of from twenty to three hundred yen, and forfeiture of his spurious volumes, gains from their sale, blocks, type, and other material. The seller of the counterfeits is liable to proportionate punishment. Publishers must notify the Naimusho of all their issues and present copies for registration and reference: they must print their names and addresses on each volume, Lewd and licentious publications are prohibited, under pain of confiscation of the property, fine, and imprisonment; and general compliance with all the regulations is enforced under the same conditions; while the newspaper law of libel is extended to control the issuers of other than ephemeral literature. Now, in all this, there is probably not a single point to which exception can properly be taken. The then conductor of this journal, announcing, "with great satisfaction," that all restrictions upon the book-press had been removed, and that notice of the intention to publish was virtually the only formality to be complied with, went on to write as follows:—

"We trust that the Government, having resolved on this liberal, but necessary, measure, will carry it out with entire loyalty to the mind of the nation, and to the writers who are the exponents of that mind. Among the first fruits of the measure there will be a certain number which are poisonous; and they will act as poison, causing disturbance, heat, delirium and inflammatory symptoms of various kinds. But it is equally certain that antidotes will come from other quarters, and diseases which have hitherto been chronic in the body politic will disappear under this more enlightened system of treatment. The Government must be prepared for some trouble and perplexity in dealing with this matter. These cannot be escaped. But we trust it will stand firmly by its resolve, and let the measure work freely. By this means alone can it be made to work easily. No demand for further liberty, from whatever quarter, can now, and perhaps for some years to come, be considered otherwise than factions. There is ample room for the play of the national mind in every direction, and if the Government deals loyally by the present measure, it will be fortified in exacting obedience to enactments which, though less palatable, are quite as necessary for the national welfare as that which we announce with so much gratification."

With what "loyalty" the government has acted in the matter may be seen in the literary fruit of the past four years; the improvement in style, matter, and tone of national publications. But the question now arises, whether the possible term foreshadowed in the above-quoted paragraph has now arrived. One Japanese writer evidently holds, from a purely local point of view, and at least in one particular, that it has. A recent article in the *Kinji Hiron*

which was translated into the *Weekly Mail* of the 6th instant, propounds that the regulations as regards translations, are insufficient; and the author finds special fault with those sections which deal with that, to Japanese, very important branch of literature. The particular clauses referred to were translated in this review on the 11th of September, 1875, thus:—

"XVI.—Should two or more persons make petition simultaneously, or at a very short interval, for copyright to be granted for identical composition, or translations of the very same work, copyright may be granted in each several case. Should the facts of the case be confused, the matter must be sifted, after which the permission may, or may not, be granted.

"XVII.—In the case of foreign works that have already been translated by some one else, should a properly guaranteed person again translate the same work, correcting the other's errors, filling in omissions, and making the whole more easy of comprehension,—and petition for copyright thereof, such may or may not be accorded after enquiries have been instituted.

"XVIII.—No objection is raised in the case of original works or translations bearing the same name, but being different as regards the text.

"Note.—Outside the cover must be written, 'Original works, or Translation, by so and so.'"

Now the *Kinji* commentator holds, on the teaching of experience, that these rules are insufficient for the purpose of supplying the nation with useful renderings of foreign works. He says that, practically, a translator may obtain copyright, in the Japanese, of any foreign production, by registering the version of a few chapters, and then both delay the completion of his task for years, and prevent other people from putting forth a perfect version. There is evidently some ground for this argument, though the proposition that "it is the natural disposition of all men to refrain from disclosing the faults of their fellows, and be the means of their losing their copyright," is, we are afraid, ridiculous, and not adduced as tenable even in Japan. It is easy to conceive how the simple operation of the law itself might deter or delay useful competition: how difficult it might be even to prove, on the one hand, that a first translation was not perfect, or to constitute a fair standard by which to judge of imperfection; and, on the other hand, how arduous it would often be to establish whether undue delay could be ascribed to the worker upon whom the privilege of translation had first been conferred. However, the *Kinji Hiron* suggests a corrective, which might in principle be accepted and acted upon, for the abuse which it signalizes. It suggests that, "if the translator of a foreign book should fail to publish a complete translation of the work within two years from the time of obtaining a copyright in respect of it, his copyright should, *ipso facto*, become null and void. Such a regulation would be of the utmost value to all parties, both those whose business it is to make translations, and the very large class which depends upon these translations for the means of acquiring a knowledge of foreign literature, not otherwise attainable." It might not be easy to fix one hard and fast time within which all the publications undertaken should be translated. The period necessary would naturally depend upon the length, and in a less degree, upon the nature, of the original work. It would probably be sufficient to hold the translator, who might obtain the privilege of copyright in the rendering of a foreign publication, to achieve his task within some reasonable term, to be specified by himself, and sanctioned by superior officials of the bureau to which he addresses his application.

Another, and equally vital, point has not been touched by the Japanese author whose essay we have considered. Reference to the same translation of the regulations as that wherofrom we have quoted, proves that the foreign author whose toil is considered worthy of a place in the literature of this country is not accorded any measure of protection. Article XIV. says that "A person publishing an original composition, or a translation by another person, must in any case obtain the consent of the author or translator. His petition for copyright, and his report regarding publication, must necessarily bear the seal of the author or translator in addition to his own." Article XV. further stipulates that "it is not permitted that works for which copyright has been granted shall be pirated, either in whole or in part, by other persons." This is perfectly fair and proper as regards "the author and translator;" but neither here nor in any other part of the code is provision made for any measure of fair dealing with the original foreign author. And yet an arrangement which should equitably protect all would be neither hard to conceive nor difficult to make; and it is to be hoped, as we have before stated, that this very important matter will not be neglected in any scheme for treaty revision. Japan would not be likely to refuse to enter that large and respectable association of nations, including Great Britain, Germany, France, Austria, Belgium and Italy, who are always willing to enter into mutual conventions to protect each others' copyright, inclusive of translations from the works of their respective authors. Some such arrangement would doubtless meet with favour at the hands of influential Japanese publishers; and would tend to still greater advancement in the honourable conditions of a press which has made vast progress already in the course of the last four years.

WE have before now had occasion to protest against the apparently authorized, and certainly connived at, presence of native beggars in the streets and roads of the foreign settlement. Now, it may seem a little cruel to advocate that mendicancy of every kind should be made to cease out of all lands altogether, though the attainment of that result is evidently the object of much modern legislation. Whatever differences of opinion may exist among philanthropists on the subject in some of its details, there can be no question, on any grounds, that loathsome and repulsive specimens of humanity should not be allowed to exhibit their deformities in public thoroughfares. And some poor creatures, whose aspect is well calculated to produce sentiments of horror or disgust, or even positive fear, at least in women and children of sensitive organization, are now not infrequently met within the very precincts of Yokohama, to say nothing of the roads leading from the Bluff, abjectly soliciting alms, and enforcing their claims to a pecuniary expression of sympathy by a display of their contortions or the ravages of accident or disease. We do not for an instant suppose that the prevention of the nuisance is beyond the scope of the municipal authorities; and a word or two from them to their police subordinates would probably lead to its prompt and total suppression.

THE late Chinese Minister to St. Petersburg, H. E. Chung How arrived in Shanghai by the French mail. He was received on landing by the Taotai, the Che-shien, Chén, the Mixed Court Magistrate, and a number of minor officials, and the acting Commissioner of Customs, Mr. James Hart. He at once proceeded to the Canton Guild Hall, in the Ningpo Road, where apartments had been prepared for him; and has since left for Tientsin.

When passing through Hong Kong the envoy called upon Governor Hennessy. The *Daily Press* thus describes the visit:—

"The Governor's steam launch brought him on shore with his suite, and he landed at Murray Pier shortly after noon, a guard-of-honour being drawn up with the band to receive him in the usual manner, whilst the shore battery fired a salute of nineteen guns in recognition of his being an Ambassador, a step higher than a Plenipotentiary. Chairs sent by His Excellency the Governor met the party, which was received at Government House by Major Palmer, A.D.C., and introduced to the Governor. There were present at the interview also His Excellency A. Mori, the Japanese Minister to London, the Hon. M. S. Tonnochy, Dr. Fitel, and Mr. d'Almada, Private Secretary. The usual compliments were interchanged through a French-speaking Chinese interpreter whom the Ambassador had brought with him, after which the latter referred to his having met some personal friends of His Excellency, Lord Loftus and Lord Dufferin. In reply to a question put by the Chinese Ambassador, His Excellency the Governor said he would perhaps accept the invitation, and visit Peking some time next year, whereupon the Ambassador promised a hearty welcome there from himself, as well as from Li Hung Chang and Prince Kung, to both of whom His Excellency sent polite messages. On turning to the Japanese Minister, Mr. Mori, the Chinese Ambassador recognized him at once as an old friend he had met years ago when on a special mission in Peking. Before leaving, the Chinese Ambassador asked His Excellency the Governor for a photograph, and presented at the same time his photograph, a beautiful specimen of art executed at St. Petersburg, and enclosed in an envelope on which His Excellency Chung How had added in his own hand the following words:—"Within will be found a portrait of Chung Ti-sha'n, Guardian of the Palace (of the Heir Apparent), in his 54th year, in undress-uniform, and he presents it to Governor Hennessy, on this the fourteenth day of the tenth autumnal moon in the year called Ki-man" (27th November, 1879). The Governor presented to the Chinese Ambassador, in return, a photograph of himself and of his son Herbert, when Chung How showed his acquaintance with modern conventionalities by begging that his respects might be presented to Mrs. Pope Hennessy. The party then withdrew, and the Chinese Ambassador proceeded to pay a visit to the French Consulate."

WE acknowledge receipt, from the secretary of the Educational Department, of copies of the "Japanese Code of Education" promulgated in September last. The regulations were translated in the *Japan Weekly Mail* of the 18th of October, and considered at length in a leading article the following week.

AN important London telegram, dated the 16th instant, announces that previous reports as to the contemplated sale by Germany of a portion of her reserve of silver is authoritatively denied. Any action of the great European empire in regard to the circulation of silver has interest in every part of the world in the present condition of exchange. The *Economist*, in its issue of the 18th of October, remarks, instructively, in view of the frequent reports that the Government of the United States is desirous of bringing about another International Monetary Conference for the purpose of dealing with the silver question, that its efforts have been so far successful that the objections of Germany to such an assembly have been removed, and should the conference meet a German representative will attend. "If this prove to be the case the change of attitude on the part of the German Government is important. It shows that it is much less firmly rooted than before in its adhesion to the single gold standard, and that, although it is not likely to retrace its steps, it is willing to make a much larger use of silver in its currency than was at first contemplated. So much may, indeed, be already inferred from the suspension of the sales of silver; but the adhesion

of Germany to the conference would more decidedly mark the new departure. So far as England is concerned, no change of attitude is probable. We should certainly be glad to see silver utilised as far as practicable for currency purposes, but so far as our own monetary arrangements are concerned, we neither need, nor wish for any change. Moreover, the present time, when the fall in silver appears to have reached its limit, does not seem the most opportune for a conference which may seek to interfere with the working of the economic forces that are operating towards improvement. To leave well alone is good policy."

IT is satisfactory to learn that the horrible barbarity which was ordered to be inflicted upon members of the family of Yakoub Beg will not be consummated. A Peking correspondent of the *North China Daily News* announces, on good authority, the fact that the sentence of mutilation has been commuted to one of close imprisonment in a distant fortress. This punishment, of itself, is hardship of untold extent, unmerited and unjustifiable; but it is something to discover that the Chinese court is now so far amenable to universal opinion as to substitute for its traditional policy one of comparative humanity in the case of these irresponsible children.

THE BILL COLLECTOR.

ONE of the greatest drawbacks to a residence in the Far East is doubtless the fact that our little communities consist of what has aptly been termed "floating population." Here to-day and there to-morrow, we are in short mere birds of passage; acquaintances we make by the dozen, but of real friends but few—very few. And so soon as we do strike upon any one person whose spirit is congenial to our own, and whom we long to cherish as a true friend, so surely do we lose him by almost the next mail. But no matter where we sojourn, one friend at least is ever present, always kind and constant, unwearied in his visits to our humble dwelling. This disinterested being is none other than the Bill-collector (whose name our compositor will, we trust, print with a big, big, B!) Although it be certainly true that all Bill-collectors bear, in the abstract, a very apparent similarity one to another, yet to the observant wight who has for any tolerable length of time been favored with the kind inquiries of this attentive class, they present varieties of temperament and differences of style and address that are not altogether unworthy of notice. *Imprimis*, there is the well-to-do Bill-collector, of course a foreigner. This worthy is generally a dapper little fellow of uncertain age, whose chief aim in life is to imitate the cut and style of the so-called "sporting man," of whom we behold such wondrous specimens on every suburban racecourse at home. His costume consists of a cutaway coat of bottle green, a tall white hat, a many-colored silk neck-cloth fastened with a huge horse-shoe pin, and straps and glossy boots. He invariably drives a natty little turn out, built somewhat on the style of an ordinary broker's trap, and drawn by a clever hack that for all we know may be a griffin in disguise, destined to cause weeping and gnashing of teeth among the "knowing ones" at the corner of the Grand stand, when the numbers go up for the "Griffins' Plate" at our next race-meeting. That trap, however, is a decided mistake; the roll of its wheels is well known, and it is simply owing to its timely warning that this specimen of the Bill-collector so seldom finds his friends at home. Ten seconds start is a very fair handicap, and it is positively amazing to view the celerity with which an embarrassed junior will quit his desk when the hoofs of the clever hack aforesaid beat the *reville* upon the gravel walk beneath the office window. To give him his due, however, the well-to-do collector is never disconcerted by any such sudden disappearance; he is a past master of his craft, and contents himself with leaving his dreaded missive on the defaulter's desk, just in such a position as to catch the eye of everyone entering the room. The total of the account being marked in huge figures in the left-hand bottom corner of the envelope, there always remains a hope that the head of the firm may step in at the right moment and ascertain at a glance the correct amount of his junior's liabilities. Our worthy is most in his element when taking round the list for

the collection of a "Ladies' Parse" at races, regattas, or athletic sports; this occupation is more congenial to his sporting predilections, he rises to the occasion, and never fails to pour into the hands of the Treasurer a goodly sum, giving utterance the while to many a blessing on the heads of those who "said, Sir, 'as how they wouldn't subscribe a red cent not for all the rats of ponies in Yokohama.'"

Passing from good to bad, our next specimen of this peculiar *genus homo* is the Japanese collector. He goes on foot, and trudges manfully around the settlement with a pile of bills in a small leather bag slung from a strap across his shoulder. He is persevering, inquisitive, distrustful, and at times almost obnoxious; but in his case there exists this one advantage, that he does not know all his victims by sight. He is not unfrequently told by the friend of whom he is in quest that "Mr. Z. is in Tokio," and, after a vain endeavour to ascertain the probable date of the latter's return, goes on his way rejoicing, wholly unaware that it was to Mr. Z. himself that he was indebted for the valuable information. In many other ways, too, is it possible to "bluff" the unlucky native, perhaps the most telling ruse being to cram up a few spicy sentences and hard-hitting epithets in Japanese, and then to "come the *daimio*" over him when he proffers his little bill. It is even asserted that he has been known, when so treated, to prostrate himself before his tormentor and to retire abashed and disconsolate from the presence of the very person whom he tried to dun. But he always takes heart of grace, and returns to the attack next morning.

But to descend, again, from bad to worse,—by far the most awe-inspiring of his kind is the persistent Chinaman. He makes a careful study of the general habits, the disposition, the outgoing and the incoming of his intended victim, and then "lays for" him accordingly. You may elude (for a while) the European, you may baffle or "bluff" the Japanese, but it is no good trying similar tactics with the Celestial. Let him be told you are absent, he'll sit down and cheerfully await your return, with a patience worthy of a better cause; declare that you are sick and therefore cannot attend to him, he'll be untiring in "kind enquiries" until you are pronounced convalescent;—injurious epithets he endures with stolid indifference: promises to settle at the end of the month he receives with a bland smile of most evident incredulity,—threat, banter, "bluff" are of no effect. When attacked by this subtle and obstinate foe you have no resource save to surrender at discretion, and proffer him something (no matter how small a sum) "on account." He then relaxes his fearful grip, with the greatest alacrity credits you with your instalment of fifty cents against his total of twice as many dollars, and repeats his tactics ere many suns have again risen. He has been known to occupy the better part of a year in collecting a rather doubtful debt, and to suffer with resignation every possible humiliation while prosecuting his enterprise. But in the end he is rewarded; his little account is invariably settled sooner or later.

Perseverance is a virtue; and to none is that virtue so necessary, in none does it shine forth so conspicuously as in the Bill-collector. Without perseverance, or even dogged obstinacy, he is a creature of nought, and wholly unfitted for the due performance of his high calling. Turn and twist like an eel, change like a very Proteus, alternately menace and cajole,—but it won't avail you in the long run. Sooner or later you *must* be brought to bay, and find yourself compelled to make terms. You may successfully combat the European, you may perhaps triumphantly encounter the Japanese, but then your creditors have always the last telling card of the Chinaman. And when it comes to that, the game is played out and you are the loser. After a very brief experience of his mode of warfare, you'll be chary of again exposing yourself to the onslaught of a being, endowed with such facility of resource, such promptitude of action, and such indomitable perseverance. Be warned in time, risk not the unequal encounter, pay your way; and from the lofty pinnacle of solvency you may view with satisfaction the vain struggles of less happy mortals to contend with your own old friend,—the Bill-collector!

EARTHQUAKES.

ALTHOUGH scarcely a month passes without our settlement being moved to a greater or less extent by the passage of these visitors, yet happily they seldom show such strength as was put forth by that which was felt on the morn-

ing of the 2nd instant. Shocks of much intensity are, in this particular, like angels' visits, "few and far between;" and, certainly, no one will object if in the future their recurrence should be an event even rarer than it has been in the past. The fear of earthquakes is different from every other fear, and evolves peculiar, though easily explicable, psychological phenomena. Ordinary courage will soon habituate itself to almost any kind of visible danger; and the effort necessary to guard against peril, and to meet and overcome it, whenever that is possible, will of itself be efficient to a great degree in conquering personal terror. No such factor comes into play to neutralize the apprehensions engendered by an earthquake; and it is the feeling of utter and complete helplessness, added to the impossibility—however highly one's nerves are strung—of being eased and finding a safety valve in action, which invests these motions with so many terrors. Every other danger is circumscribed within narrower limits, both locally and as regards the extent of its destructive power. In most cases we can always fix upon some point beyond which is safety, and can look for help and assistance from our fellow man. While an earthquake lasts we know that no spot which we can reach will offer immunity; those surrounding us are in the same position as ourselves, and are incapable of giving us any aid. Action and flight are alike impossible; and presence of mind is the more easily lost when we know that its possession is to a very great extent of no avail. Earth commotion is perhaps the only foe which loses none of its terrors through familiarity with its efforts. Each successive experience only increases one's fears; and the strong man, inured to perils and hazardous risks, may be as strongly affected as the weak and nervous girl in her teens. The exhilarating feeling which pervades those who have bravely encountered and overcome, or safely passed through, any great danger is unknown here. A heavy shock of earthquake leaves one in a state of depression, and haunted by an undefinable nervous dread which is slow to pass away. Still, with all this, the hazard from earthquake to life and limb, even in this neighborhood, is comparatively very slight. The great desiderata for passing safely through ordinary shocks are strong, well-constructed houses built on natural ground. In Tokio, which has witnessed so many tremors destructive to human beings, we still find nearly all of the temples, with their solid timber frameworks, enduring for hundreds of years; and even the pagoda towers (to) of seven and eight stories, rising to an altitude of nearly one hundred feet, have stood uninjured during ages in spite of the very small bases on which they rest.

Japan, in the historic period at least, has always been subject to earthquakes, as is proved by its records. A very complete and extensive earthquake literature is extant, reaching back to the third century B.C., and comprising regular earthquake almanacks. Dr. Naumann, of Tokio, has made up the most complete list of all the more important seismic revolutions; and they form part of a lecture delivered by him before the German Asiatic Society, and embodied in the fifteenth volume of the Society's printed proceedings. The author's labors were reviewed in the columns of one of our daily contemporaries at such length, and so ably and conscientiously, that it would be a work of supererogation to try and supplement the critique; but, in view of the interest which the late great shock has elicited, a few words of reference to the doctor's work and some short extracts therefrom will not be out of place. His list enumerates hundreds of earthquakes, some of great intensity, and many causing such a loss of life and property as to make them really national calamities. It is a continuous record of houses and buildings thrown down, of rivers overflowing their banks, of tidal waves, of toppling mountains, and of destruction to man and animals. The opening ground has often shot forth hot water and even lurid flames. Scores and sometimes hundreds of dwellings have now and then disappeared in the course of a day, or an hour; and immense districts have frequently been submerged by water. We find accounts of instances in which, for a hundred days, shocks were continually felt. A slight idea of the tremendous forces at work below, and the terrific execution which they are capable of doing, may be formed from acquaintance with some of the results produced. The external aspect and the formation of the Hakone mountains, have frequently been changed by earthquakes; at times, as for instance in the year 1703, to such an extent that every trace of the road leading over them was lost. Hoyusan, the hill on the right side of Fuji which is known to most of the foreigners here, rose up from its parent mountain during the earthquake

accompanying the eruption of the latter in 1707. During the present century there are accounts of continual quaking of the ground at Sado from the last days of 1803 up to August 1804. In the year 1809, the ground was rent at Atsumigori; and a hill of hard rock fell into the cleft which was 5,400 feet long and 3,000 feet wide. The large village of Nakayamura, together with three other great and six smaller villages, shared the same fate.

Strange to say it is recorded that the life of neither man nor beast was lost on this occasion; but no particulars are given as to how this miraculous escape was accomplished. In 1847 a tremendous earthquake convulsed the inland province of Shinshu. In the course of it the bed of the Saikawa river was filled up by the toppling over of some of the mountain tops of Kokusosan. A dam was thus created which retained the waters; and the Saikawa valley, over twenty miles long and eight or nine miles wide, was one vast sea. The waters of the river, which had previously been swelled by heavy rains, kept pouring into this temporary reservoir and pressed with incalculable force against the masses of rock which confined them until, of course, they finally broke through. This is told, in fine language, in the native chronicles; and as many of our readers in their tourists trips have become acquainted with the locality, a translation of it will certainly prove interesting to them and we hope, to others also. "The waters of the Saikawa had been already standing for twenty days. All the villages near the river bed were submerged; and the flood reached as far as Chikuma and Adzumi. An expanse of water so vast that the eye could not take it in extended through the districts of Minuchi and Sarashino for a distance of from eight to nine ri, reaching as far as Ikuno, Hisako and Uraka. Only the tops of the hills protruded out of this dangerous looking lagoon, like islands in the ocean. On the 13th (of April 1874) the weather had been glorious from noon till two o'clock. About six o'clock in the evening a deep, ominous sound was heard, and a heavy movement was distinctly felt. The first dam at Iwakura had been carried away; the masses of water so long confined rushed out with fearful force against mountains and through valleys, and the angry roar of the surging elements, deadening every other noise, could be plainly heard in the distant districts of Masushiro, Suzaka and Nakano. 'I, Shogen, happened to be on the mountain of Seidiosan at Unisu (Haizu), when for a time I heard continual hissing and splashing of water, sounding as if it proceeded from a place directly near me. After a few minutes the billows could be seen rolling westward, and the noise of the tempestuous waves was gradually echoed by the distant mountains. The misty clouds, as soon as they rose upward, flew to the North and East; and the hurricane which was raging carried storms of dust and gravel before it. The uproar created by the war of the raging elements impressed me as if a hundred thousand of the wildest horses were being driven, stamping and galloping, into one large place; it was as if heaven and earth were falling together.' After the break had taken place the height of the water at the foot of Magamiyama was 61 1/2 feet. The prodigious force with which the flood overcame every obstacle is indescribable. The principal stream took a southern direction, going through Koichi*, Komazubara, Imasato and Inai as far as Onbaigama where it united itself with the Chikuma river. A second stream took its course by way of Shioku, Nakashima, Nanboku, Hanamura, Ai and Komori. Towards evening a third stream forced its way through Kita-kawahara, Mumczawa and Higana. Engulfing everything in its way, it rolled on to the south of Tambashima, laid waste Riokuzaka and Kashimado; and only at Yamatahara did the stream subside and the rage of the waves moderate. The depth of the water even at Chikuma was more than twenty feet. At ten o'clock in the evening the width of the stream from East to West was more than six ri, reaching North as far as the main road to Echisen. By two o'clock on the morning of the fourteenth the water had subsided considerably; and at sunrise the masses of the three great streams were well separated. At four o'clock the flood reached Niigata. The inundation extended over a surface of fifty ri."

We will conclude this article by giving the report of an eyewitness of the great earthquake of 1803, at Sado. Whether the power of prescience in regard to these convulsions which

* The course of the torrent can be easily followed by the reader if he will consult any map of Japan.

is here attributed to many people is founded on fact, we must leave our readers to determine :—

"It was in the eleventh month of the year 1803, that business had called me to the small harbour of Ogi, on the island of Sado. On the morning of the 15th, in company with several of the ship's crew, I had gone to the top of a small hill to look at the prospects the atmosphere had in store for us, when one of the men said : 'This is curious weather. Look how dark it is growing, and see the heavy black clouds which enclose the mountains, so that only their summits are visible. This signifies neither wind nor rain. We, who have become old in the rough life which we lead, have learned to tell what signs forebode storms and rain ; but we cannot tell what such extraordinary symptoms as these now signify.' At this remark some of those who were with us looked surprised, and all became serious and thoughtful. I then addressed them thus : 'What you see are not clouds but *chiki* (exhalations from the earth). When I was young I heard from my father that such a rise of vapor always preludes an approaching earthquake. There is no time to be lost, so let us not remain idly here.' All my companions were convinced of the truth of what I had said ; and we hurried back to the inn, whence we all immediately despatched our baggage into the mountains ; and we ourselves sought safety in the more elevated parts of the country. Ogi, being situated between the mountains and the sea, is in a precarious and dangerous position. After I had proceeded for a distance of about four ri I felt a heavy shaking of the earth beneath me. Mountains swayed to and fro like waves ; trees fell down ; and it was only with great difficulty that I managed to save myself. As I heard afterwards the earthquake had created terrible havoc at Ogi. The houses were only so many heaps of ruins ; mountains in the neighbourhood had fallen down : the water of the sea had broken in and swept over all the lower coast, creating many new islands. After these first devastating shocks slighter ones were felt almost daily up to the sixth month of the following year. I had continued my journey until I reached the gold mines of the island. My first thought on arriving there reverted to the great shock. I was impressed with the belief that, in the destruction which probably would have been wrought in the subterranean passages, many of those employed there had undoubtedly lost their lives. On inquiry in regard to this matter I received the following unanimous response. 'From olden time miners can foretell the approach of an earthquake. The last one was known and guarded against, as far as lay in our power, three days before it occurred. There was not a soul in the mine when these malignant shocks exerted their evil influence ; and, although the greater part of the tunnels and shafts have fallen in, we have not to sorrow for the loss of a single human being.' When I asked further as to what were the manifestations which enabled them to foretell these calamities, they told me that—before an earthquake occurs, the mines are always filled with *chiki*, sometimes to such an extent that, in the case of two miners standing next to each other, the one could not see the upper part of the body of his comrade the effect of the exhalations being to veil everything in obscurity. According to my opinion people who spend half their life deep down in the earth must naturally understand these phenomena. Indeed, when the *chiki* rises into the air, even the feathered tribes take warning by it. Thus, for instance, for some time before the Sado earthquake, many thousands of cranes were seen flying high up in the sky."

Dr. Naumann, mentions many other signs which are held to predict, or at least in many instances precede, an earthquake. Thus, sudden increase in the temperature, clouds uncommonly near the earth, the appearance of the northern lights, and holes formed in the ground with softer masses of earth than the surrounding soil exuding through them. It is also said that, on the approach of a terrestrial disturbance, the sun and even the moon assume a deep red color. The former, at his setting, is said to have resembled a ball of blood before the earthquake of 1839 ; and a similar appearance was presented by the rising moon. The fear and terror which earthquakes inspire have caused public superstition, not unnaturally, to associate with their occurrence any unusual phenomena which, perhaps accidentally, have been manifested about the same time, and for which modern science could probably find an easy explanation in other causes.

INSURANCE OF BUILDINGS IN JAPAN.

TO THE EDITOR OF THE "JAPAN WEEKLY MAIL."

SIR,—A paper which was read last year, before the German Asiatic Society, by Mr. Mayet, and which has since been translated and published in English, on the subject of the insurance of buildings in Japan, caused a lively discussion among the members of the Society itself, as well as in some of the foreign journals published in Japan. Notices which have appeared from time to time during the past year in the native papers seem to indicate that the matter has now been taken out of the region of speculation, and that the Government intend adopting some plan of insurance ; but whether this will be Mr. Mayet's scheme modified, or not, does not as yet appear. In the paper in question the author demonstrates the possibility of insuring the buildings of Japan at an average annual premium of one per cent, not alone against fire, but also "collectively" against all the dangers which threaten edifices from earthquakes, inundations, storms and war. This collective insurance of houses—a new one, I believe, in the history of such insurance which up to the present knows only of fire insurance—seems necessary in Japan if insurance is to have the same effect here as in foreign countries, namely, to provide complete security for house property. The following extract from the paper sets forth the peculiar dangers to which houses in Japan are liable, as well as the benefits which would more immediately be derived from insurance :—

"Without a system of fire insurance no Japanese can feel sure of his property for a single day. It is as if no police, no armed force, existed in the country, while numerous hordes of brigands scoured it from north to south looting all property in their pitiless raids ; these could hardly pillage as many tens of thousands of houses as the flames destroy in their yearly course. But this is not all ; other great dangers arising, it is true, from causes of longer periodicity, and therefore not always so present to the mind, but none the less dreadful in the results they produce, menace the prosperity of Japan. Terrible earthquakes destroy whole towns, and with the earthquakes roll in vast waves of the sea, sweeping off whole villages from the coast ; ravaging typhoons leave destruction in their rear, and war and revolutions devour villages and towns. No wonder that the spirit of enterprise is feeble ; that no one will build good houses for the fire to feed on, and the earthquakes to sport with ; that manufactories are not erected, and no money risked in worthy enterprise ; that usury laws limit the rate of interest demanded for insecure mortgages on houses, wares, and machinery. A collective insurance against all the above named risks would change at once these conditions. It would add to the value of the title-deed of every property in Japan, and would enable trustworthy merchants and men of enterprise to obtain cheap credit. How many resources would then be developed ; how many now impossible schemes would start into life ! Each existing trade would be developed and placed on a safe basis ; industries would grow, and with them the capacity of the country to export."

To take but one instance ; the floods which occurred in the autumn of last year in the neighbourhood of Tokio, in which so much damage was done to house property, show how necessary it would be in any system of insurance to take not only fire, but also other casualties into account, if house property is to be secure. Several other institutions of the state aim at the same end, namely, the security of property—such as the protection of law and police. Mr. Mayet now proposes that the Government should introduce, in a most complete manner, the third of those institutions which act as safe-guards. He would as far as houses at least are concerned, make insurance compulsory. In Europe and America the development of insurance has been such that it is almost completely exercised by private companies as insurers, and is quite voluntary on the part of the insured ; but the insurance of houses is sometimes an exception, inasmuch as in

Norway and many parts of Germany it is still compulsory. Thus, according to Mr. Mayet, offices for the compulsory insurance of buildings were established:—in Silesia in 1742; Brunswick in 1750; Hanover in 1759; Norway in 1763; Wurttemberg in 1777. The system thus being by no means a novel one, it is recommended that it be adopted in Japan, because voluntary insurance requires an universal insight on the part of the population into the nature and utility of insurance; and it is evident that this knowledge cannot exist at present in Japan, in such a manner as to stimulate the instinct of thrift and foresight. The questions connected with life or marine insurance may be left for subsequent discussion; but the first practical question in reference to fire insurance is: Should the Government remain completely passive, and wait until private companies are founded, or should it administer the insurance system itself to the exclusion of private companies? To this question I shall confine myself in my present letter, as it lies at the threshold of the discussion. There are a number of other questions also worthy of notice, but, without losing sight of them, I will not consider them at present. Let us suppose for a moment that a number of private persons had succeeded in collecting sufficient capital and organized an insurance company; that they had their general meetings, their directors and controllers, their actuaries, taxes, book-keepers, correspondents, cashiers, general agents and agents, and were in a position to commence business. In private societies the task of persuading the householders to insure rests with the agents; but what reward would an agent get in this country for all his visits and letters, which would be but two often in vain. Frequently he might bring the owner of a house to the point of desiring to insure, but be finally disappointed by negligence, carelessness, want of money, opposition of wife or friends, or one or other of the thousand and one reasons that drive insurance agents to despair. I can hear the owner finally say to the unhappy agent:—"I was not burned down last year, and, no doubt, I shall also escape this year. Please call some other time." What would be a corresponding reward for the agent in this country where the average value of a house may be about the fiftieth part of that in other countries, and where therefore the pecuniary result of each particular operation of the agent would be correspondingly smaller for the institution represented by him. The insurance of a house worth ten thousand dollars brings fifty times as much premium as that of a house worth two hundred dollars; but nevertheless the labour of the agent is probably equal in either case to induce the owner to insure. In order therefore to remunerate the agent properly, there would have to be a proportionately higher percentage of the insured value set apart for that purpose in Japan than in Europe or America. If he were not properly rewarded, it would become impossible for the companies to find trustworthy and respectable persons for the work. Hence, any system of agency must be very expensive here.

The proportion of the average annual number of houses burned down to those not so destroyed in Japan is a very unfavourable one; and hence a policy of insurance must in any case be dearer than in foreign countries. According to Mr. Mayet, the proportion of injury to the amount insured was

In France in 1871—0.0395 per cent.	
" " 1872—0.0580 "	
" Germany in 1877—0.0925 per cent.	
" Norway (country) 1845-74—0.1465 per cent.	} Compulsory insurance.
" " (towns) " —0.4744 "	

while in Japan the proportion of houses destroyed to the total number in 1876-77 was 0.6354 per cent. It will thus be seen that the proportion for Japan is sixteen times greater than that for France; seven times that for Germany; four times that for the country and one and a third that for the towns in Norway: under these circumstances, any additional increase in the cost of insuring, such as for instance expensive agents would be a serious hindrance to the growth of a system of voluntary insurance in Japan. But more than half the labour of these agents, namely, that which consists in visiting, persuading and convincing the householder may be spared, by the single order of Government:—"the insurance of buildings shall be compulsory." With this mandate insurance will become

cheaper and universal. The Government has thought for each individual. Its wisdom and energy causes the insurance of each house for the benefit of its possessor, as well as for the common good of all; it complements the inexperience, lack of energy, indecision and thoughtlessness of each person; it teaches the subject the value of insurance of his abode against fire; and then leaves him free to appreciate and take to heart the lesson in other branches of precaution, and to insure voluntarily, moveables, cattle, life, &c. Agents thus are government officials who have to visit and tax each house, one after the other, without loss of time, and derive much assistance from the local officials and police—the latter being in a position to assume a great part of the labour and spend time necessary in the earlier stages of the process. This, I presume, is what Mr. Mayet calls "the assistance of the police," which should tend to make his proposed insurance scheme much cheaper than if modelled after the form of private foreign insurance companies. With the maxim "insurance is obligatory," the service of agents remunerated by a percentage of the amount of the premium would be dispensed with.

It is to be hoped that theory will not be allowed to triumph over facts. The theory is that the state administration of insurance is always dearer than that of private companies. This proposition is quite delusive and is refuted at least for fire insurance, by the fact that such a gigantic business as that of more than four milliards of yen insured property must be conducted more cheaply by the state than one of five and a half milliards by private enterprise. In dispensing with the system of agents, an insurance system in Japan will be able to avoid, as far as possible, a great danger connected with fire insurance. The agent desires to see his labour rewarded. A high rate of premium is not desired by the owner of the house, and where several private companies compete with each other a high premium cannot be retained. Thus it is for the advantage of the agent to have property insured at as high a premium as possible, so that his percentage, at least, may be a good one. From this system arises the danger of over-insurance, a danger which in America, according to Dr. Mayet, led to great calamities. "Thus from over-insurance (*i.e.* insuring goods or premises for more than their real value) originated the epidemic of incendiary speculation in the Northern States of America, during the stagnation of trade between the years 1862 and 1866. Before the war, loss by fire was about twenty-two millions of dollars yearly, in 1865 it was sixty millions, and in 1866 it reached the enormous sum of one hundred millions. During this period, 1862-66, one thousand eight hundred and thirty-seven fires took place in New York, of which more than one-third were proved to be due to incendiaries. In consequence of this America is now making extraordinary experiments in stringent police supervision in cases of insurance against fire."

Hence also it is that nearly all the German States have instituted a limited police control over insurance. In the same way the Government here could hardly refuse private companies almost as much help from the police, as it would require if it were the insurer itself. To stop the evil effects of over-insurance, English law provides that, in case of fire, if the insurance company demands it, the claimant must bring proof as to the extent of the damage. That a great check on incendiarism exists in such a law is certain; but in this country where conflagrations not unfrequently clear off whole villages or towns, it is just as certain that it is an impossibility to give afterwards proof of the value of each particular house. An enactment which would demand such proof here would be a great inducement to a private company to perform only a part of its duty to the insured, and to make objections which would seem to be sanctioned by law. In fact the system would be practically inapplicable to Japan.

There are two very effectual remedies against over-insurance. One is, what is known as under-insurance, that is, when a house is insured for only a portion of its value. Mr. Mayet suggests three-fourths. It is obvious, that except in very rare cases a man will have no inducement to destroy a house for which he will only get three-fourths of its value. The other remedy is rebuilding, that is, that the money obtained on account of the insurance must be spent in rebuilding the edifice for the destruction of which it was given. These two rules Dr. Mayet holds

would act as almost complete preventives to incendiarism. Both are practised only in Government insurance; neither by private companies, as these latter have only their profits, and not the interest of the community, in view. The execution of the very efficient rule of rebuilding must cause much trouble and inconvenient supervision, and could only be effectually carried out by Government, as a private company would rarely put itself to the trouble and expense involved. Above all, would the rule be necessary in places where the habitations being built of wood, incendiary fires are caused much more easily than elsewhere.

I have only dealt here with a portion of the arguments that might be adduced in favour of the authorities taking up the subject of insurance in this country. A reference to the original paper will suggest others. And, indeed, I recommend a perusal of the pamphlet in which the work appeared in English, to every one interested in the progress of Japan. No one can fail to see the labour and care which the author devoted to his task, and I have heard with satisfaction that his whole scheme is being examined by a commission appointed by the Government. On a subsequent occasion I may examine other aspects of the project.

I am, Sir,

Your obedient servant,

SAFETY.

Yokohama, December 15th, 1879.

"CRACKS" IN BUILDINGS.

TO THE EDITOR OF THE "JAPAN WEEKLY MAIL."

SIR.—I would like to make public, through your more widely circulated journal, a few reflections upon a certain production in last Saturday's *Gazette* upon the subject of earthquakes in Japan. From this peculiar concoction of science and frivolous facetiousness, it appears that the writer undertakes his share of scientific experiment with bright schoolboy gaiety and disregard of responsibility, watching his machines, as he says, "like a fisherman watches his float for a bob." "First catch your hare, then cook it" is a saying which has its origin in such rural sports. I hope this is not the order of proceeding which he would recommend in fishing for earthquake results. I shall assume, however, that he is of gravely scientific bent, and that his humorous efforts are but well-meant attempts to make science racy, and to render his more serious observations digestible for the general reader.

A fact which I must be allowed at the outset is that, in dealing with all matters of mathematical research, credulity, or belief without proof, is by no means demanded. Much as ordinary mortals may value the reverential and imaginative stretches of the mind, the modern scientist is the man of all others who boasts contempt for these faiths, and he should therefore not be surprised if he is met on his own ground, and asked for a careful proof of his conclusions. I, for one, would not like to base important results upon observations in a walk through the badly built brick and plaster erections of the Ginza and adjoining streets in Tokio, and a casual counting of the cracks in the plaster. Stucco, as we know only too well from many of our better built London houses, has a habit of cracking; and cracks mostly in those parts where there is the greatest strain of weight or thrust. It is a common thing in the speculative London builder's house, which, by-the-by is Cyclopean compared with the Ginza houses, to see flat arches broken across near to the abutment. Six months in a builder's office is sufficient to teach the slowest student that, if he places a heavy beam just on the crown of a weak arch, it will crack it through without the assistance of earthquakes; and also that a round arch will carry superincumbent weight, better than a flat one on to the wall. The writer in the *Gazette* wholly ignores the extremely careless building of these edifices, and insists on their importance to the observer, because they are "similar," whereas we must confess to never having seen a row of houses rendered more dissimilar and incongruous than has been done by the energetic attempts of Japanese merchants to devise the best way of adapting them to their comfort, habits and climate. Arches have been filled up, and cut through; two openings have been thrown into one, supports have been hewn away; and wooden posts, only fit to bear a sheltering roof, have been made to carry rooms and heavy furniture. I shall, nevertheless, be willing for a few minutes to accept our informant's eye-sight for cracks as

infallible; his reckoning of results as unprejudiced, and his choice of buildings for observation as unimpeachable, in order to consider the results at which he arrives. Moreover, let it be granted that the earthquake waves of vibration to which we are subject come always in one direction through a given place, and that the wall of a solid building is more likely to be cracked with its end to the shock than when broadside on to it. A building generally having, I believe, walls on all sides of it, the writer tacitly assumes that the plan must be oblong; for, if not, why does he speak of the "broadside" and the "end of a building?" On the other hand, I believe that the most convenient houses are more or less square on plan, that very many of our best public institutions are of the plan of a hollow square with interior court or garden, and that some of the finest edifices including the grandest cathedrals in all countries, are cruciform. To none of these does our theorist's theory apply, and we find as we go further we must concede more, and grant him that a building is a solid with an oblong base. Further, since an oblong building will be divided into other oblong rooms and passages, we should, I suppose, take care that the long sides of these oblongs are parallel to the broad side of the edifice, for we are not speaking of the overturning of the construction, as a whole, but of the greatest tension upon individual walls tending to crack them, as stated by the writer. The overturning of the structure as a whole, as I understand it, can only take place in great earthquakes such as seldom occur; and for these the oblong should be placed broadside on to the shock. The writer tells us that he hopes soon to lead to the foretelling of a large shock some considerable time before the occurrence. Could we not then, by his kindly warning, turn our buildings broadside on?

I notice that we are allowed the fact that there are other things governing the aspect of our dwellings, besides earthquakes, but that, because this is an earthquake country, they should take the first place in consideration among architects, and all comforts should be sacrificed to them. If this argument be sound, it follows then, from similar reasoning, that, because the China seas are frequented by typhoons which often clear ships of their boats and rigging, therefore we ought to advise captains on those waters to dispense with boats and rigging in their ships.

I venture to ask if the Japanese Government have indeed employed ready to advise them to abandon all notions of stability in their buildings; to make them of "artistically disposed cracks;" and to disregard all laws of aspect, prospect and comeliness for the purpose of adopting laws laid down by such unsound theories as these. With the best intentions I would suggest to the contributor who has incited me to trouble you with these few observations, that he should peacefully pursue his occupations and experiments (taking care however not to mistake a fly for a thief or a thief for a fly) and leave it to those who have some knowledge of the demands of building, to profit by any of his proven results which they may deem applicable to their works.

I beg to remain,

Yours faithfully,

REGESSEKI.

JAPANESE ERA 2539, MEIJI 12TH YEAR, 12TH MONTH, 20TH DAY,
DO-YO-NI.

NOTES OF THE WEEK.

The only European mail to hand this week, is that received per the M. M. steamer *Tibre*, which vessel arrived at the anchorage this morning, at ten o'clock. Her latest home advices are to the 2nd November. The outward mails went forward by the M. M. steamer *Tanais*, on Monday morning last; and the P. & O. steamer *China* is advertised for Hongkong, on the 22nd, at daylight. The M. M. steamers have arrived and departed as usual.

The U. S. flag-ship *Richmond* has left Shanghai en voyage for Manila and other southern ports. The *Alert* sailed the previous day.

The Mitsui Bishi Company, with a commendable desire to consult the convenience of the public, worthy of imitation in other quarters, has made arrangements for the arrival of the Shanghai steamers due here according to schedule on the 25th instant (Christmas day) and the 1st proximo (New Year's day) one day in advance of those dates. This has been done in order to interfere as little as possible with the Christmas and New Year holidays.

We understand that it will be impracticable to carry out the suggestion we made elsewhere relative to the next Shanghai steamer leaving on the 23rd instead of the 24th. The directors of the Mitsui Bishi company, actuated by that desire to consult the convenience of the public which has become so characteristic of the line, communicated with Kobe, and ascertained that the alteration could not be made without serious inconvenience to the foreign residents there. The steamer leaving here on the 23rd, would mean to our neighbours in Kobe a mail on Christmas day, which is of course not to be thought of; and both Chinese and Japanese consignees of cargo would have great cause for complaint if they could not obtain delivery of their goods until after the vessel had been twenty-four hours in port. The convenience of those Yokohama people who would go to Kobe for their holidays, could not be set against the discomfort that would be entailed on Kobe residents; and therefore the directors have decided to despatch their steamer on the usual date.

The approach of Christmas and New Year is announced by the preparations for decoration and festivity now evident in every part of the settlement. Still more to the point is the announcement of the Bank holidays, which this year, fortunately, can extend from noon of Wednesday, the 24th, to the morning of Saturday, the 27th instant. Another leisure day is accorded on Monday the 29th; and the period between mid-day on the last of this year to business hours on the 2nd of January, 1879, may also be availed of for purposes of rest and recreation.

At the Parsonage we see that the annual preparations are in progress for the decoration of Christ Church. A belfry is also being erected, and a church bell has been provided, both at the cost of the outgoing chaplain, Mr. Garratt, who thus makes a farewell present to those who have for several years benefited by his ministrations. Mr. Irvine, his successor, may be expected to arrive in Yokohama by the English mail due on or about the 24th proximo.

Among recent publications, announced in London, is a complete map of Japan by Mr. E. Knipping, compiled on a scale of

seventeen miles to the inch, and mounted in dimensions of four and a half by five and a half feet.

Rumours in Tokio hint at the early arrival from England of a trained naval architect, whose services are demanded by the Naval Department.

We learn from Indian papers that there is little chance of saving the P. & O. steamer *Hindustan*. It is said that her port bilge is all crushed in, and that she is almost a wreck. The weather had been such that the crew and others on the ill-fated steamer, one hundred and fifty souls in all, sought refuge on board the *Muharaja*, which steamer Captain Hazelwood had prudently engaged to stand by him.

Lord Cairns, High Chancellor of Great Britain, in his capacity of President of the London institutions known as Dr. Barnardo's homes for children, has been considerate enough to send us an appeal for collections or subscriptions in aid of the charity. It does seem to us that foreign residents in Japan have local claims upon them which are not too easily met. For instance, in one's rambles in this neighborhood one occasionally meets children more or less destitute, not improbably of very suggestive shades of colour. And then the episcopalian part of our colony can only afford to pay a clergyman, imported from England, at the rate of one hundred and fifty dollars per month, with the privilege of residing in a "fine house," and walking in a garden poetically described as equally desirable. When our new chaplain arrives the community is likely to be called upon for contributions wherewith to provide a quantity of spacious umbrellas, which he may take to bed on rainy nights, in view of the airy and pervious nature of the roof which he will find to shelter him. So far, we have reason to believe that the children of the settlement will be deprived, this year, of their annual treat—a Christmas-tree. On the whole we think that Lord Cairns' application need not be much regarded herabouts. If, however, it should direct attention to a few objects of local claim, upon which benevolence might honestly be bestowed, his note will not have been written in vain.

A very questionable provision of penal justice in Japan, has, it is stated by native papers, recently had practical application. An offender, condemned to a term of ten years hard labour, having no son to support his family, has had, for that reason, his sentence commuted to payment of a fine, which, in proportion to the first judgment, can only be called nominal.

The marriage of a young Japanese lady of Tokio, with a British subject, is said to have received official sanction.

Several of our readers were acquainted with Mr. Maillot, formerly professor of chemistry and natural science in the Tokio University, who died in the capital in 1875. His pupils, as we read in one of our French contemporaries, have opened a subscription to provide funds wherewith to erect a memorial, here or nearer the actual scene of his labors, in his honour.

Among the passengers in the M. M. steamer which sailed on Monday last for Europe, was His Excellency Don Mariano y Alvarez, for several years Spanish Envoy to the Court of the Emperor of Japan. In diplomatic and social circles in this vicinity, the ex-minister leaves many sincere friends and well-wishers.

Some of the lucubrations of Japanese tradesmen or their friends, in the announcements which they occasionally make, in foreign languages, of their special acquirements, are often sufficiently amusing, if hardly intelligible, as most Europeans, who will take an observant walk through the native quarters of the town, can find out for themselves. Chinese dealers or artisans of the same class are hardly, if at all, more happy in their choice of English for the expression of their ideas. The following drolly worded circular has been sent round to foreign firms, by a Mr. Ayuan, in Ningpo:—"The List of Sold for stove use Coal it is According to More dawn One of dollar a ton. Only Clear 9 dollars Ech ton I had japan and formmaso Coal Sam Like Can Come Yunn Chang Coal merchants I Can Kill to send your Residing house to it. The Circular sale Coal. My Dear sir."

If any of the fairer portion of our community should feel inclined to emulate the sterner sex in its favourite pastime

at this season, the following description of the garb adopted by the Princess de Metternich, who is an ardent sports-woman, may prove useful:—"Worth is the Princess's tailor, and the *costume de chasse* is most fascinating. The coat is of hunting form—in grey cloth, braided with rifle green; a short and very skimpy skirt reaches to the knees; gaiters meet the skirt edge; and a grey felt Tyrolean hat with green feather, and a muslin cravat with pin, complete the toilette."

To a great number, perhaps the majority, of visitors to London, the old historic places associated with their earliest recollections form the chief attraction of the mighty city. The lovers of these memorials of the past will be pained to learn from the *Whitehall Review* that "another relic of Old London had just passed away. Shakespeare's house in Aldergate Street, or at all events that which has long passed with antiquaries for Shakespeare's house, has been laid level with the dust, and its quaint gables and carved bow windows are no more. On its site will soon arise a pile of monster warehouses or chambers, to which will probably be given the name of the immortal Will. It was always said to have been the 'Half Moon,' a house occupied by Shakespeare whilst he owned the theatre in Golden Lane, and in which he probably entertained such jovial friends as Master Burbage and 'Rare Ben Jonson,' and perhaps also his patron, Wriothesley, Lord Southampton. The readers of Ben Jonson will not forget how one day, or rather night, feeling a craving for 'sack,' Ben called at 'the Half Moon in Aldergate Street,' but, finding it shut up, went on to 'the Sun in Long Lane,' where he sat down and wrote the well-known epigram:

"Since the 'Half Moon' is so unkind
To make me go about,
The 'Sun' my money now shall have;
The Moon shall go without."

We are informed that Messrs. Tanetaro Megata and Nagatane Soma, have been admitted to practise in the American Consular Courts of this country. The first named gentleman is said to have graduated in the law school of Harvard: the second in that of Columbia, U.S. Mr. Megata was recently one of the commissioners to America from the Japanese Educational Bureau.

The Cabul correspondent of the *Bombay Gazette* says: "Since the arrival of the British troops at Cabul, nay, in fact, since the 3rd instant, on their departure from Zagun Shahir, martial law of the sternest description has reigned within a radius of ten miles of the camp; also within the city and its environs. In order to maintain this régime a few military executions by firing squads were necessary, but no one not actually present in the valley can possibly realize how speedily order and tranquillity have been restored, and how the name and dread of the British troops have been established in every village for many miles around. Now, the wildest and most lawless character would as soon carry a red hot crowbar in his hands through the city as he would a firearm of any description, for death is the penalty, sternly and ruthlessly exacted."

"Idalia" in *Whitehall* discusses a new style and ladies' tailors. Here in Yokohama we are not behind the great centre of fashion as there is a full blown ladies tailor in the Chinese quarter, at anyrate his sign says so. "Idalia" remarks:—

'Liberty, Equality, and Fraternity' is the motto of those who make or mar the fashions. After having had jockey caps, *laitière* bodices, *blanchisseuse* skirts, and brewers' aprons, the Princess of Wales, by her first adoption of it in the early part of the yachting season, has introduced an imitation of boatmen's and fishermen's jerseys. Much curiosity was at first evinced concerning the jersey, and particularly as to the mode of entrance to and exit from such a garment; and, indeed, it is a difficult operation, only to be compared to the skilful way in which a frog or a newt draws its skin over its head. The Princess had spun silk jerseys, and both H. R. H. and the Duchess of Edinburgh took several abroad with them; but now jerseys are mostly woven and occasionally ribbed like a man's 'cardigan.' A few, moreover, have floss of ribbon to fill the spaces at the side seams, while others are plainly drawn down right over the hips and some are rolled up nearly to the waist, in true sailor fashion. They are admirable for tennis and skating. A propos of the equality of the sexes in the matter of dress, I see that ladies' tailors now form almost a guild of their own. At one of these artificers—I believe he was the first maker of silk jerseys—there is, I am told, a great demand for the *lucres* costume, with the tunic turned up high and plainly braided;

another of the fraternity is resorted to for cloth suits with long habit bodices, and no trimming at all beyond one or two rows of stitching; a third has a taste for military tabs of braid on serge or vicuña polonaises, which are of mathematical cut and moulded fit, though possibly the virtue of this consists in what so much literary matter alone deserves praise for—I mean, of course, judicious 'padding.'

There are few subjects on which greater diversities of opinion have arisen than how to dispose of the remains of the dead. Some advocate cremation, more burying in baskets, others cling to coffins of lead inclosed in mahogany or oak; and a comfortable niche in a well-ventilated vault amongst his "cousins and his uncles and his aunts" is still the destiny of the scion of a noble family. Lord Truro, has, we learn from the *Home News*, adopted the old fashioned coffin principle with modifications. His Lordship, we read "whose residence is at Falconhurst, on the summit of Shooter's Hill, has afforded a novel example of funeral simplicity. Last week Lady Truro, his wife, died, and his Lordship, having placed the body in a plain wooden box, lightly constructed so as not to arrest the process of natural decay, buried it himself in a grave dug on the lawn which fronts the house, at a spot selected for the purpose by the deceased lady during her life-time. The grave is about four feet deep, and a marble ornament will mark its position. It is stated that neither the local authorities nor any other officials have any power to prevent or object to primitive interments of this description, the only legal conditions being, that the ground shall be freehold, the situation removed some distance from a dwelling-house, and the depth of the grave and other circumstances arranged with due regard to the public health."

Mr. Rennie, in giving judgment this week in a case involving damage to goods brought from ship to hatoba in charge of a landing agent, had occasion to define, for the instruction of the community, the term "gross negligence." To do so he quoted Judge Wills, the latest authority on the subject, who remarks:—"I quite agree . . . that *gross negligence* is ordinary negligence with a vituperative epithet, a view held by the Exchequer Chamber . . . Confusion has arisen from regarding negligence as a positive contrast of a negative word. It is really the absence of such care as it was the duty of the defendants to use. A bailee is only bound to use the ordinary care of a man; and so the absence of it, is called, *gross negligence*. A person who undertakes to do some work, for reward, to an article must exercise the care of a skilled workman, and the absence of such care in him is negligence. *Gross* therefore is a word of description and not a definition."

With the advent of the winter it would be advisable that the police should bestir themselves a little in anticipation of the annual attempts more or less successful, at larceny and burglary initiated about this season, and generally prolonged during several months. The thieves have already commenced their raids, a daring abstraction of iron having been reported from the Custom House; and an effort made to break into and rob the store of a well-known jeweller in Main Street, both events happening during this week.

The Meeting of the "Société Suisse de Tir" which was postponed from the 6th instant in consequence of the inclemency of the weather, took place on Wednesday last. The following are the names of the winners of the various prizes:—

CIBLE PATRIE.

- 1st.—Mr. A. Wolff.
- 2nd. " B. Deck.
- 3rd. " A. H. Daro.
- 4th. " H. Pardun.
- 5th. " O. Schimmo.
- 6th. " F. Abegg.
- 7th. " C. Ziegler.
- 8th. " C. Haenni.

CIBLE A POINTS.

- 1st.—Mr. A. Wolff.
- 2nd. " C. Haenni.
- 3rd. " C. Ziegler.
- 4th. Dr. Tiegcl.
- 5th. Mr. A. Mottu.

We have already furnished our readers with short particulars of the recent fire at Hakodate, and we are now enabled to give

further details from the narrative of an eye-witness to that disastrous event:—

"In company with a friend of mine I was in ———'s house on Saturday, the 6th instant, when we heard an alarm of fire raised at about half-past eight. We did not pay much attention at first, but as the cries continued we hurried out and found a large conflagration already raging. It was blowing pretty fresh at the time, and the fire spread over the town with fearful rapidity: in fact it just seemed to "lick up" those native houses. The fire-proof buildings were of no use, the heat was so great they cracked and bulged out and fell to pieces. These fire-proof buildings don't appear much of a success anywhere. I was in Boston in the old *Crusader* when the great fire occurred there, and the granite houses seemed actually to melt away. It was a fearful scene at Hakodate, the night was bitterly cold, and thousands of men, women and children were rushing about like lunatics without sufficient clothing, although if they kept anyway near the fire they would not feel the want of it. I never saw anything like the confusion, men searching for their wives, women searching for their children, children wandering about crying piteously having lost their parents. The whole town seemed to be in flames at once, and in one part which is hemmed in by a hill at the back the people had to escape in sampans by water. The fire lasted until about three o'clock on Sunday morning when it had literally burnt itself out. The appearance presented by the town next morning was lamentable; the temples, banks, foreign churches, post office, English Consulate, in fact all the principal buildings, native and foreign, except the Custom House, the Colonial Office, Blakiston, Marr & Co.'s, and Thompson and Bewick's, have been burned down. It is calculated that over two thousand five hundred houses altogether have been destroyed, together with large quantities of merchandise of all kinds. The British Consulate is now temporarily in Messrs. Thompson and Bewick's, and the American Consulate in Messrs. Blakiston, Marr & Co.'s. I forgot to mention that some twenty-five or thirty people are said to have perished, but I do not think it is yet known exactly. It will be very welcome intelligence to the foreign residents when they hear H. M. S. *Swinger* has gone to their assistance, as they are nearly all burnt out. Mr. Denning's church is gone, so is Mr. Davison's, Mr. Euslen is homeless and so is Mr. Dun, Mr. Riddle the agent of the company, the comrades Schluter and Strandt, a Miss Priest who kept a school, in fact nearly everyone. I was glad to hear the Japanese Government were sending help, clothing especially, as some of the poor homeless people, the women and children in particular, must have suffered dreadfully these cold nights. I forgot to mention that the fire spread to the coal godowns, and when we left they were still burning, in fact the *Suminoye Maru* was lighted on her voyage from the yet smouldering ruins of the once pleasant and prosperous little town of Hakodate by the lurid glare of over one thousand tons of coal in flames."

Referring to the fire, the *Hochi Shimbun* states that the Mitsui Bank lost 210,000 yen, besides cheques, drafts, &c., and that Mr. Mitsui is about to visit Hakodate, and arrange for the erection of new bank premises, at an estimated cost of 15,000 yen. The *Nichi Nichi Shimbun* gives as the actual number of dwelling houses destroyed 2,535, besides seventy godowns and two hundred and ten wooden storehouses, and states that the fire extended over thirty-three wards. The Government, to relieve the inevitable distress, have purchased thirty thousand *futon* (sleeping rugs), and twelve hundred *koku* of cleaned rice, which have been forwarded by the *Gembu Maru*.

The numerous friends of Mr. J. W. McCarthy, of H. M. Consular Service, will be glad to congratulate him upon appointment to an important post in the Japanese Foreign Office. The department, too, has gained a young official of much talent and promise.

Our readers will observe in our advertising columns an official notice, that, after the end of the present, year the local English Post Office will be closed, and the management of postal matters taken over by the Japanese Authorities.

We had the pleasure of being present on Tuesday evening last, at one of those charming little réunions which the Committee of the Temperance Hall occasionally provide for the delectation of the public, and at which we often hear better music than at more pretentious assemblies. The entertainment had the additional advantage of Mr. Keil's co-operation, for not only did that worthy gentleman lend two fine pianos, but himself assisted in every piece on the programme. These little concerts also serve as a stepping-stone to wider fame for our aspiring amateurs; for, as every great M. P. of the United Kingdom is first heard in the critical arena of his College debating-room, so do our gentle

amateurs modestly put forth a first appearance at No. 86, and we were treated to no less than three *debuts* on the present occasion. The performance had to be considerably rearranged owing to the bad weather preventing some of the veteran amateurs appearing; but the audience was determined to be pleased. Our evergreen favorite, Mr. Black, sang no less than four times, and Mr. van Lissa with great courtesy gave an additional violin solo. The first piece in each part was a Fantasia for two pianos on themes from Rossini, and both numbers were well played by Mr. Keil and a young lady pupil, who did ample justice to the work before them. Mr. van Lissa played, with great spirit and fire, Supper Overture to the *Dichter und Bauer*, and in the second part gave us a strong reminder of the season approaching, by a transcription of Adami's *Noël*. A duet from *Cox and Box* rechauffé, with some delicate words suitable for ladies, fairly brought down the house, and the last verse had to be repeated. Another duet in the second part, Kücken's *Scallows*, deserved and obtained the same compliment, and a reading by Professor Jewett brought a very pleasant evening to a close. We hope that, on the next occasion, fine weather may secure our friends a full house, a consummation which the fare at these little meetings always richly deserves.

ASIATIC SOCIETY OF JAPAN.

TOKYO MEETING.

A general meeting of the Asiatic Society was held at the Shōbeikwan, Seido, Tōkiyō, on Tuesday, December 9th, Dr. Divers, President, in the chair. The election of Mr. Robert Lilley as a member of the Society was announced. The librarian reported the receipt of a complete set of the Journal of the American Oriental Society, for which a vote of thanks was passed.

Mr. J. H. Gubbins then read extracts from a paper entitled "Hidēyoshi and the Satsuma Clan in the XVI. Century." Mr. Gubbins remarked that, apart from other reasons which influenced his choice of a subject, his object in writing the present paper was to shew that Japanese history, if properly treated, was by no means so uninteresting as many people imagined, and also that in any work of this nature it was necessary to consider attentively the relations of each clan and province with the rest of the empire. It was only in this way, he thought, that the history of a country like Japan could properly be undertaken. The paper was divided into three parts. The first dealt with the causes which led to Hidēyoshi's expedition, and included a sketch of events prior to the period at which the campaign of Hidēyoshi actually commenced. In the second part the principal incidents of the campaign were narrated; while the third part contained an account of the final battle before Kagoshima, and the negotiations which ended in the surrender of the clan.

At the conclusion of the reading of Mr. Gubbins' paper, Mr. Aston said that in writing Japanese history what was wanted was not the translation of Japanese historical works. Even when trustworthy they were exceedingly lengthy as well as very uninteresting. He had had the advantage of reading Mr. Gubbins' paper in full, and knew how much laborious research it represented. He entirely agreed with the author that Japanese history could be treated successfully only by such monographs as this, dealing with special epochs and individual clans.

Mr. Cooper observed that western students were now agreed as to the hopelessness of studying history otherwise than in the way indicated by Mr. Gubbins in the introduction to his paper.

Mr. C. J. Tarring then read a paper entitled "Land Provisions of the Taiho Rio." The following is an abstract.

The Taiho Rio, or Code of Taiho, is so called from having been drawn up in the second year of the period Taiho, A.D. 702, which was also the thirty first year of the reign of the Emperor Mommu Tenno, who reigned from A.D. 671 to A.D. 706. The text was supplemented by notes contributed by the judges and lawyers and other learned men in the spring of the 10th year of Tencho, A.D. 763, by order of the Emperor Junna, and authorized by the Imperial Government. Text and notes now form a work called "Rio no Gige," or Commentaries on the Law, the whole written in the Chinese character in use among the Japanese of those times. The work is divided into thirty

sections, devoted to as many branches of the law. The section treating of the land system is called *Denrio*, or Law of Land; but a few provisions relating to the same subject are found in the *Fuyakurio*, or Law of Taxation, the *Korio*, or Law of the Family, and the *Sonrio* or Law of Buddhist priests. There is, as might be expected, a lack of logical division and ordering of the subject. Topics are treated fragmentarily in different places which a modern author would have given a single complete view of at once. There are, however, indications of a highly artificial organisation of society having already developed itself both in the ingenious and even minute classifications and distinctions found in the *Denrio*, and in the titles themselves of the other sections of the entire work; e.g., official titles, duties of officials in the household of the empress, in the household of the heir apparent, in the household of officers of high rank, descent of the crown and imperial dignities, army and frontier defence, ceremonies, official costumes, public works, mode of addressing persons of rank, funerals and mourning. There seems to be considerable doubt as to the binding force possessed by the code. It seems only to have had effect at any time in those parts of Japan under the immediate rule of the Imperial Court. The rise and progress of the *Shogunate* must therefore have seriously restricted its authority. However that may be, it is of considerable interest to jurists at the present day, as exhibiting the judicial ideas concerning property in land in vogue at that epoch. Theoretically the law is still in force; and it forms one of the subjects of study in the Tokio university. At the outset the principle is laid down that the whole of the land is the property of the sovereign, by whom different kinds of estates are granted out to different classes of persons. These kinds of estates were:—1. *Ku-bun-den*, month-share-land, granted to all persons of five years of age and upwards, for life only, in certain proportions. Every sixth year a fresh distribution was to be made; and in the interval between the death of a tenant and the next year of distribution, the land was held by the late tenant's family. 2. *I-den*, rank-land, granted to persons of rank in shares according to their degrees of rank. 3. *Shokubunden*, land given as salary to persons holding office. 4. *Koden*, land granted for public merit. The highest class was granted in perpetuity; the others for different and decreasing numbers of generations. 5. *Shiden*, which was an estate created by special edict of the Emperor. Besides these kinds of estates, there was a certain quantity of land retained in the *Gokinai*, or five home provinces, for direct governmental purposes which was called *Kuwanden*. Land devoted to the cultivation of the mulberry tree and the lacquer tree was called *Ouchi*, and was granted out to families of a village, reverting to the sovereign if the family died out. These grants were made on the condition of a certain number of mulberry and lacquer trees being planted within a given time.

In *Korio*, Land of the Family, are found elaborated rules as to inheritance in which land, so far as it is inheritable, is treated on the same footing as other kinds of property.

The Rev. W. B. Wright asked Mr. Tarring whether he could say how long the code was in force, and whether land is at present supposed in the first instance to belong to the sovereign.

Mr. Tarring did not know how long the code was in force but supposed that being Imperial in its character it lapsed in the 12th or 13th century, on the rise of the *Shogunate*. He could not speak definitely as to the present ownership of land in Japan, but believed that just now it was in a vague and transition state.

Mr. Aston said that the modern tendency was to give up the idea of imperial title to land. He asked whether the code came from Chinese sources or was of native growth.

Mr. Tarring replied that he believed the code differed in its provisions from land laws of Chinese origin. In answer to Mr. Wright, he said that the mention of slaves in the code was distinct and that they were divided into six classes.

Mr. Wright said he had been told by farmers that they held the land in fee-simple, and did not acknowledge the sovereign as owner.

Dr. McCartee said, with reference to the influence of China on the Japanese land law, that at the time this code was drawn up there was little intercourse between the two countries, so that we should not expect to find Chinese influence very apparent in the code. As to slaves, many references to them were to be found in old Chinese books, although in many

provinces the practice of slavery has now died out. He mentioned a curious case of two families living in the same neighbourhood, the members of one being by tradition and legal right the slaves of the other; but, as the spirit of the time was opposed to it, the claim was not enforced. There was, however, a good deal of coolness between the families.

Votes of thanks were passed to the authors of both papers, and the meeting was adjourned.

JAPANESE NEWS.

[The following Notes on various Japanese matters are chiefly derived from the native papers, occasionally supplemented from original sources of information, and are carefully collated and edited, so as to make them readable and intelligible.]

NOTIFICATION, No. 126 A.

It is hereby notified that permission having been given to the 153rd National Bank, established in Kiyoto *Fu* in accordance with the 'National Bank Regulations,' to issue paper money (which may at any time be exchanged for Japanese currency, — a sufficient amount of which is always kept in the banks, corresponding to the amount of the issue of their paper money), all payments either private or official, and for taxes, with the exception of those for the interest of the Public Loan Bonds and Customs' duties, can be freely made with this paper money, and the people are to accept it without suspicion.

Note.—The paper money to be issued from this bank being similar to that indicated in Notification No. 90, of 1877, and No. 16 of 1878, no specimen is attached herewith.

(Signed) OKUMA SHIGEMORI,

Minister of Finance.

December 13th, 1879.

COURT, POLITICAL AND OFFICIAL.

Messrs. Inouye, the Minister of Foreign Affairs; Uyeno, the Junior Vice-Minister for Foreign Affairs and Yoshida, the Japanese Envoy for the United States, accompanied by their wives, were admitted to an audience with their Majesties the Emperor and Empress, at 2 p.m. on the 15th instant. His Majesty thanked the Ministers for their services abroad and presented them with money rewards. Her Majesty the Empress made the Ministers describe to her the different countries they had visited, and afterwards handed each of them a neat gold-lacquered writing box.

His Excellency, C. de Groote, the Belgian Minister, will be admitted to an audience with His Majesty the Mikado, about the 23rd instant.

A grand performance of *No* dancing took place at the Palace on Friday. The Imperial Princess, Daijin, Sanji, &c., received invitations to be present.

The old Japanese game of *Iau-o-mono*, which we have referred to on several occasions lately, is to be repeated by Mr. Shinadzu and his retainers shortly, in the presence of the Mikado, who will invite the different foreign Ministers to witness the exhibition.

His Imperial Highness Prince Kita Shirakawa, paid a visit to His Royal Highness the Duke of Genoa, on board the *Vettor Pisani* on the 14th instant. On the following day, the Duke entertained Port Admiral Ito and the commanders of all the men-of-war in harbour on board his ship. His Royal Highness left Yokohama for Chiba Ken on the 16th inst., in a steam launch, on a shooting excursion. Mr. Sakakibara, an interpreter of Kanagawa Ken accompanied him.

The *Fuso Shimshu* says, it is rumoured that a report has lately been received in Tokio from the Japanese Minister in Peking, stating that the Chinese Government was about to summon the Governors of the eighteen provinces to the capital, in order to consult as to the settlement of the Looshaean difficulty; and, also that the Chinese Government has now sent an ultimatum to this Government, relative to the same affair.

All Government officials of the *Chokunin* and *Sonin* rank, and also the principal *Kwazoku*, will pay ceremonial visits to the Imperial Palace, during three days commencing on the 29th instant, in order to offer the compliments of the season to their Majesties the Emperor, the Empress and the Empress Dowager.

The authorities of Shimonoski are reported to have ordered the removal, to another quarter, of the houses of ill-fame. The reason of this step is said to be the approaching opening of the port to foreign trade.

Messrs. Saigo, the Minister for the Army, Kawamura the Minister for the Navy, Inouye the Minister for Foreign Affairs, Yamada, the Minister for Public Works and seventeen other principal civil and military officials were, on the 15th instant, promoted one degree in their honorary rank.

Several more Government officials have been promoted one degree in honorary rank. Among others, we notice Lieut.-General Nodzu, Major-General Nodzu, and Mr. Nomura, the Governor of Kanagawa Ken.

Mr. Kusumoto Masataka has been promoted to the Senate from the Governorship of Tokio Fu; and Mr. Matsuda, Chief Secretary of the Home Department has been made Governor in his stead. Mr. Matsukata however gains no pecuniary advantage by his promotion as, according to the *Hochi Shimbun*, his salary as a Senator is only 3,500 yen per annum, while as Governor of Tokio Fu, he received the same amount.

It has been decided to introduce the Educational Code in Okinawa Ken next year, in the same way as in the other prefectures. A number of officers of the Education Department will proceed thither for the purpose in the early part of next month.

Mr. Kuroda, the Minister for Colonization has presented the Duke of Genoa with two splendid seal skins as a sample of one of the products of the *Hokkaido*.

On the 26th ultimo, the Governor of Okayama Ken warned all the officials in the prefecture against joining in memorials to the Government.

Mr. Kusumoto, the ex-Governor of Tokio Fu, is to officially hand over the reins of Government to his successor, Mr. Matsuda, in a few days.

A number of officers of the Foreign office will proceed at once to all the cities and prefectures, in order to make certain investigations in connection with the forthcoming treaty revision. It is expected that these investigations will be completed before the close of the present year.

The erection of the building to be used as the Tokio branch of the Mint, is nearly completed, and will be open to receive bullion early next month.

Mr. Sonoda, and several other police officers who were sent on duty to the Loochoo Islands when the Han Government was abolished, have been presented by the Council of State with monetary rewards for their services on that occasion.

A police station has been established in the island of Oshima, where the police administration of the seven Islands of Idzu will hereafter be conducted.

The organization and uniform of the police in the provinces, is to be shortly assimilated with that of the Tokio force.

NAVAL AND MILITARY.

It has been decided that the Japanese man-of-war *Tsukuba Kan*, will sail on a cruise to either Australia or America next March. Twenty of the recently passed naval cadets will go in her.

Certificates of efficiency were presented, on the 18th and 19th instant, to the cadets who were successful in passing the recent examination at the military college.

A rumour is current that a large increase will shortly be made in the cavalry of the Japanese army.

About one hundred horses, lately purchased for the army in Miyagi Ken, are expected to arrive in Tokio, to-day.

The soldiers of the Japanese army have not hitherto been allowed to read any newspapers except those which have received official sanction. It is said that an officer in the army has recently forwarded a memorial to the Minister, pointing out the evils arising from the present regulation.

Suganuma Yasuzo, an assistant-surgeon, attached to the artillery of the Imperial Guard, was sentenced, on the 16th instant, to a fine of two yen, for neglecting to salute His Majesty the Emperor, in the Imperial Palace in Tokio, on the 8th September last.

A return has been prepared which shows that, during the recent cholera epidemic, three hundred and eighty-two officers and soldiers contracted the disease: of these, eight officers, sixteen non-commissioned officers and one hundred and seventeen privates died. The death rate was apparently about the same as among the patients from the general public.

INDUSTRIES, TRADE AND FINANCE.

The *Nichi Nichi Shimbun* states that Mr. Crawford, the American civil engineer in the employment of the Colonization Commission, will shortly proceed to America in order to purchase the necessary material for constructing the railway to connect the coal mines in Horonai with the port of Hakodate. On Mr. Crawford's advice the line of the proposed railway has been altered so that it will now connect the mines with the port of Tōmiya, via Sapporo.

The *Hochi Shimbun* mentions that a recent report from Sydney states, that the amount realized by the sales of the exhibits sent thither by the Mitsui, Kiritau and Okura companies alone, from the 4th October to the 1st November last, amounted to £86.

Many additions and improvements having been lately effected in the gas works in Shiba, Tokio, and the business of the company having recently greatly increased, Mr. Shibusawa, the manager, gave a banquet to the principal officials of the Government and the leading merchants, &c. of Tokio, on the 18th instant. An experimental balloon was sent up as part of the entertainment.

Mr. Sekido, of Kobe, is about to establish a company with a capital of two hundred thousand yen, for the sale and purchase of government pension bonds.

A number of the residents of Ogaki, have lately formed themselves into an association called *Kintōsha* (the "Undaunted") their object being to increase home productions and decrease imports. The members of the association have agreed among themselves not to use any imported articles.

Certain merchants of Nagasaki, says the *Hochi Shimbun*, are about to establish a specie bank, with a capital of three hundred thousand yen. A large number of the shares has already been subscribed for.

We learn from the *Mainichi Shimbun* that the application for the extension of the charter of the *Beishō Kaisha* (Rice Guild) has been refused.

A company has been formed in Shin-Funamatsuchō, Tokio, for the purpose of selling the productions of the seven islands of Idzu.

Mr. Hayashi Tokuyemon's paper mill, at Akabane, Tokio, is to be removed to Mifuno Mura, in Mikawa, where the factory will have the advantage of abundant water power supplied by the Yabagigawa.

The following quantities of rice arrived in the Tokio market from the various provinces, from October last to date:—

From the North...	29,000	koku.
" Mutsu	10,000	"
" Owari, Iso and Mino	35,000	"
" Suruga and Tōtōmi	1,000	"
" Neighbouring Provinces	150,000	"
Total	225,000	"

The *Hochi Shimbun* notes in its last issue, that the Ishikawa Iron Works have been leased by the Home Department to Mr. Hirano Tōmiji, for the term of thirty years. Mr. Hirano already has a type foundry in full operation in Tsukiji, Tokio.

The *Hochi Shimbun* states that the proprietor of the Shintomiza Theatre is just concluding a most prosperous season. The net profits of this favourite place of entertainment amount to 24,000 yen for last season, and if the loss incurred in the disastrous attempt to introduce plays after the European style be deducted, Mr. Morita will still be 3,000 yen in pocket.

We learn from the *Chōya Shimbun*, that the Mint at Osaka, will shortly commence the coinage of a quantity of silver yen, for circulation in Hongkong, after the end of the present year.

A native paper states that permission was granted to the "Specie Bank," on the 11th instant, to commence operations, and wonders if the sudden decline in the price of Mexican dollars was caused by the fact becoming known.

Counterfeit coins, both gold and silver, are said by the *Mainichi Shimbun* to be in circulation. These counterfeits are copper or brass, plated to resemble genuine currency, and are chiefly ten and twenty sen pieces and single yen. The characters have also been found altered on a quantity of paper money, so that ten and twenty sen notes are made to do duty for twenty sen and fifty sen notes.

MISCELLANEOUS.

About noon on the 16th instant, as Mr. Sanjo, the Prime Minister, was driving along Miakozaka, Tokio, a man suddenly appeared at the side of his carriage and flung a petition through the window on to the seat. The man has been ascertained to be Yagishita Hichizayemon, a *heimin* of Kanagawa Ken. The contents of the petition have not been made public.

Archery has again become fashionable in Japan. Mr. Ogawara and some other lovers of the old pastime, are about to open an archery school, in Tokio, on the 21st instant.

At about 7 p.m., on the 11th instant, cries for assistance were heard by the officers on board the Japanese man-of-war *Nisshin Kan*, in this harbour and a boat was at once lowered, and sent in the direction of the voice. A sampan, with a man clinging to it, and on the point of drowning, was found and placed in safety, and the sampan lashed to the boat of the *Nisshin Kan* and towed towards the shore, but the sampan sank in a few minutes. It is said that the sampan was coming up the harbour in the evening without a light and came into collision with a steamer.

Accidents have been remarkably frequent at the Osakayama tunnel in course of construction on the extension of the railway from Kiyoto to Otsu. This would certainly lead to the belief that there is a want of either skill or ordinary care in the conduct of the work. The tunnel has again fallen in, this time through one of the timber supports being removed. It is said that one workman was killed.

The *Asahi Shimbun* reports that Mr. Fukuda, an Assistant Judge of the Osaka *Saibansho*, was, on the 9th instant, suddenly arrested and conveyed to the Central Police Station of that city. It is rumoured that the arrest was on account of his having accepted bribes from suitors.

Some six *kannur* of gunpowder exploded at about half-past eight o'clock, on the 15th instant, at the military powder magazine in Itabashi. Fortunately, none of the rest of the powder stored in the same place exploded but as it was, one workman was fatally injured. The next day another explosion took place. One man was slightly injured.

The *Choya Shimbun* states that Mr. Shotai, the ex-king of Loocoo, is about to establish a school in Tokio for the purpose of teaching the sons of his former subjects, the Japanese language. About fifty students are expected to arrive in Tokio shortly to enter the school.

The *Choya Shimbun* states that a heavy gale occurred at Osaka, on the afternoon of the 6th instant. Several wrecks are said to have taken place in the vicinity and many lives lost.

Seven *heimin* of Fukuoka ken have, says the *Choya Shimbun*, been tried by a special court and acquitted of complicity in the assassination of the late *Saigy*, Hirokawa, and received money to enable them to return to their homes. The Court has still to try Nakamura Rokuzo, and several others, for the same offence.

About one hundred of the Tokio firemen are to be sent to Loocoo, to form the nucleus of a fire brigade. An engine and all the necessary appliances will accompany them.

The *Kiyoson Doshin* (Political Society) will, after January next, hold meetings once a month, when the debates will be conducted exclusively in English. The object is to prevent several of the members who have visited England and America from losing the knowledge of the English language they then acquired.

Mr. Magaye, the former editor of the defunct *Somo Zasshi* has been released from prison, his sentence of three years' imprisonment having expired.

The application made by the *Hokokui* (association for the preservation of the shrines at Nikko) for permission to carry out its object, having been granted by the Government, Mr. Nabeshima, the Governor of Tochigi ken, and other members of the association are now collecting subscriptions in aid of the work.

An asylum has been erected in Tsukiji, Tokio, at a cost of ten thousand yen, for the education of the blind, and will shortly be opened.

Messrs. Sanjo and Iwakura, have lately presented the sum of three hundred yen to the Blind Asylum, in Tokio.

A balloon will be sent up for experimental purposes from

the premises of the Gas Company in Shiba, Tokio, on the 18th instant.

Mr. Iwakura, the Vice-Prime Minister will entertain his friends and acquaintances and the principal government officials, at his residence, on the 18th instant, in order to celebrate the eightieth birthday of his mother. The aged lady is still in good health and spirits.

We learn from the native papers that the Governor of Kanagawa ken has applied to the Treasury for a grant of 3,500 yen towards the expense of repairing the roads on the Bluff.

Two natives of Saghalien (man and wife) have lately arrived in Tokio, and will give performances of music and dancing at Asakusa, next month.

According to the *Nichi Nichi Shimbun*, rinderpest has made its appearance in China, and all cattle coming from Hongkong or Shanghai are to be carefully examined before they are permitted to be landed in Yokohama.

Lieut.-General Toriwo, says the *Mainichi Shimbun*, is known to be a very earnest believer in the Buddhist faith, and it is currently reported that he is about to endow, in his native province, a theological school for inculcating the particular tenets of that sect.

The usual cholera return has been issued by the Sanitary Bureau, and includes all cases reported up to the 13th instant. The total number of persons attacked since the outbreak is 164,243; of these 97,080 have died and 46,470 recovered, while at the time the return closed there were still 20,693 patients under treatment. The percentage of mortality has been 59.11 per cent, and the proportion of patients to each 10,000 of the population of the country 47.06.

IMPERIAL GOVERNMENT RAILWAYS.

TOKIO AND YOKOHAMA SECTION.

Statement of traffic receipts, for the week ending Sunday, 14th December, 1879.

Passengers, parcels, &c.	\$7,454.04
Merchandise, &c.	\$1,317.35
Total.....	\$8,771.39

Miles open 18.

Corresponding week last year.

Passengers, parcels, &c.	\$6,088.10
Merchandise, &c.	\$ 960.17
Total.....	\$7,048.27

Miles open 18.

KORE AND OUTZU SECTION.

Statement of traffic receipts, for the week ending Sunday, 14th December, 1879.

Passengers, parcels, &c.	\$10,821.67
Merchandise, &c.	\$ 2,577.55
Total.....	\$13,399.22

Miles open, 35.

Corresponding week last year.

Merchandise, &c.	\$ 1,656.55
Total.....	\$10,041.25

Miles open 47.

THE JAPANESE PRESS.

SOME THOUGHTS ON TREATY REVISION.

(Translated from the *Fuso Shimshi*.)

ON the 10th of last September, our government selected from among the *Sangi*, the dauntless, active and shrewd Inouye Kaoru and placed him in the position of Minister of Foreign Affairs. The government had of late become noticeable for its inactivity and this step was at the time universally considered to be most beneficial. The Takagawa government, having at the outset made mistakes in our foreign policy, it afterwards pursued a temporising course by which no heed was paid to our rights or interests, so long as immediate troubles were avoided. We were thus placed at the mercy of the foreign powers who lost no opportunity of depriving us of our national rights;

which have not yet been restored to us. For such a small nation as Japan to retake those rights in antagonism to the will of such nations as England and France whose policy is, that whatever they can maintain by their might is right, requires a man of both firmness and shrewdness at the helm of its foreign intercourse. Both Ito and Okuma, are shrewd in the management of business but they seem to be deficient in firmness. Soyejima is firm, but lacks shrewdness. It is then only in Inouye, though perhaps not in the highest degree, that we find these two qualities combined. That he is an able manager of business can be seen by the manner in which our national finances were conducted at the time when *hans* were abolished and *hens* established, a great change, which did away with the feudal system which had existed in this country for hundreds of years. That Inouye is firm, may be seen by the way in which he opposed the opinions of the then Minister of Justice, Eto Shimpei at the time of the burning of the Imperial Palace; and how he opposed Saigo Takamori's scheme for an expedition against Corea, when every other member of the government concurred in advocating hostile measures. This is the reason why we expressed our satisfaction at the time of Inouye's appointment to the office of Minister of Foreign Affairs. When Terashima, who could neither be praised for good qualities or condemned for wrong actions was at the head of that department, we did not think it worth while to criticize the progress of treaty revision. Inouye, possessing the qualities fit for the post which he now holds, we do not look upon in the same light as we did Terashima, and, as we had previously hoped, we hear that he is showing much activity in the important duties entrusted to him. What are the objects of treaty revision and in what manner are the negotiations to be carried out? Mori was a short time ago sent very suddenly to England as our Minister; we had thought up to then, that it was the intention of the Government to carry on the negotiations in Japan and that for this purpose our Ministers abroad had been recalled, can it be that it has been decided to again open negotiations directly with the foreign governments? We hear too, that Yoshida will shortly be sent to Italy to represent our country. Recently there have been many reports floating about respecting the manner in which the government has determined to carry out treaty revision. We do not mean to say that we believe these rumours in full, but so long as they exist we cannot overlook them, we shall bring them forward, criticize them and place a few suggestions before Inouye who is now responsible for all matters connected with treaty revision, which we consider as a matter of the gravest importance to Japan. Rumor says, that the government recalled its ministers to various foreign powers some time ago, for no other purpose than its own convenience; and that step was not caused by the foreign powers agreeing to send their representatives to Japan to negotiate treaty revision here and that Mori has been sent to England to open negotiations there; it is also said, that negotiations will not be carried on for the purpose of having all our commercial rights restored, but to consult with foreign governments about our tariffs so as to bring about their modification. It is also said that in Europe, the different nations have to consult with one another before tariffs can be arranged; and for such a small and powerless country as Japan even to mention its national rights in Europe, would appear there absolutely ludicrous; under such circumstances it is now only intended that a new tariff to regulate our trade be shown to the European governments and to consult with them on the matter, asking them accede to it. Such is the report, should it prove true, we should like to ridicule the absurdity of such a plan and such reasoning, but unfortunately we cannot. It may be perfectly true that tariffs in the countries of Europe and America are determined upon by mutual consultation between the parties concerned, but this does not mean that each nation has not the right of fixing its own tariff; consultations take place because there is mutual concession of their respective rights. None of those countries would think of giving up to the other any privilege without receiving some equivalent in return. Japan is differently circumstanced, it has made concessions without receiving any in return, and it was powerless to refuse those concessions. If foreign nations agree to the alleged new tariff we shall have to make

some concession in return, while if they refuse, we have not the might to oppose their will. Such a mode of action is like indirectly inviting foreign powers to come and demand concessions and saying that we are willing to make them; for what else can we expect from the foreign powers with whom we have to deal, when we remember that they resemble hungry wolves and never lose an opportunity to promote their own interests, and cannot be influenced by argument, however reasonable or just, to give back the rights of which they have so unfairly deprived us. With such a policy as this, it is impossible to predict when the national rights for which we thirst will be restored to us. One who has self-respect will be respected by others, and those who have not, will be objects of scorn. The reason why our foreign intercourse has been brought to its present condition—foreigners filled with pride and looking down upon us with contempt—is because from the time when we first commenced our intercourse with them, they frightened us by their threats, and we, regardless of our interests or even common sense, acceded to whatever demands they made and let them in every way have their own will, we lost our self-respect and they have more and more looked down upon us. Though we may not at present be able to procure the abolition of extra-territoriality, there is no doubt a time has arrived when we should regain our commercial rights and invigorate our national spirit and wealth. Should we at such a time lose all respect for ourselves and say, that such a poor and small country as ours should not even be able to make mention of its national rights abroad and that all we can do is to bring the new tariff before the foreign governments and ask them to kindly consider and approve it? Foreigners can never be induced to have any respect for us, nor can they be made to observe our rights. While such a state of affairs exists they will look down upon us more and more and lay before us perpetual demands. What we want now, is to get full power to control our own tariffs; to consult with foreign powers for their adjustment is a matter of secondary consideration to be settled in future. When we possess the right to control our tariffs and then open negotiations for their adjustment, we shall in that case have power to refuse any demands for concessions; but, when we have it not, it would simply be opening the door to enable foreigners to obtain concessions from us. If foreign powers be now disposed to agree to the new tariff, we think that they would be just as willing to assent to our regaining our commercial rights intact; while on the other hand, if they refuse the one, they are just as likely to refuse the other. Why do our officials act so timidly and with no feeling of self-respect, and why do they not boldly try to advance the power of their country? If the European nations refuse to grant our just demands there is a plan to resort to and compel them. Let us enter into a special convention with the United States and other friendly powers, and make treaties by which those who do not observe our rights will be subjected to many inconveniences. There are a few words which we should like to say to the Minister to England. We hear that the determination of the government is, that the revision of the treaties shall be carried out, although we may have to make some slight concessions and that the alterations made by this revision are to last only for a brief term; we think that this is very deplorable. The present treaties were agreed to by the officers of our former government who were utterly ignorant of the nation's interests or the affairs of the world. It can fairly be said, that the whole of the treaties originated from sheer deception; it was like inducing a blind man sign a contract, because our government had no idea of the consequences. On this plan, we have now the right of revising the treaties, our eyes have been opened, we now know the affairs of the world, and were we now to enter into treaties we can no longer plead ignorance and we may not for a long time be able to get the right of revising them again. If we be unsuccessful in our present negotiations we may never be able to free ourselves from the disgraceful appellation of a semi-independent nation. We hope that our rights will be upheld with much firmness; there is no reason for haste; if we cannot gain our point next year, let us go on with equal firmness, adhere to our cause in the year following, time is of no object so long as in the end we succeed in regaining those rights to which we are naturally and equitably entitled.

THE PROPOSED MEDIATION OF THE UNITED STATES.

(Translated from the *Kinji Hiron*.)

EVERY individual and nation desires to secure respect, and to maintain it inviolate when once attained. It is now a long time since disputes first arose between Japan and China relative to Loochoo, and no settlement has, as yet, been arrived at. Both these powers are perfectly well aware that it is altogether opposed to the welfare of the Eastern world that they should refer their differences to the arbitrament of the sword, but China cannot withdraw her claims without a loss of dignity, and as Japan is wholly unable to do so either, it seems not improbable that war will, at no distant date, break out between the two nations. We have lately received from Reuter's Company a telegram dated in London on the 4th December, to the effect that "The United States Government have made an offer of mediation to China and Japan regarding Loochoo." This telegram is unofficial and should not be regarded as altogether reliable; we are also without any details giving the terms of the proposition. Again, as the matter is one of vast importance to this country and secrecy is a great essential in diplomacy, we should have refrained from basing any argument upon this private telegram, were it not that it was through private individuals that the public first learned any particulars of what was being done. Mr. Young, General Grant's secretary first, and now again this telegram from the far distant capital of the British Empire. The whole transaction is therefore laid bare to the gaze of the world. We will now inquire, supposing the telegram to be true, what object could the United States have in making this sudden offer of mediation between the two Empires? When General Grant was in China, last summer, the members of the *yamen* told him that Japan's action regarding Loochoo was extremely improper and selfish and requested him to use his influence to bring about a settlement. This the General declined to do, stating that he was only a private citizen and he could not interfere in the matter. After the General arrived in Japan, the same subject was talked over between him and Mr. Ito, the Home Minister, at Nikko, but General Grant would give no definite opinion and contented himself with saying "that the disagreement between the two Empires about such a trifling cause was much to be deplored," and he "should like to see them come to an amicable arrangement between themselves so as not to be exposed to the misfortune of an interference by European nations." Such being General Grant's views, we must attribute the offer of the United States to his good offices. Should this really be the case, it shows that both the Government of the United States and General Grant are of one mind in this matter and we know the General has extended towards us the kindest sympathy. We have had many tokens of the good feeling of the United States for Japan, not the least of which, was their being the first to agree to a revision of the treaties. It is, we think, undeniable that this Government has made the offer of mediation without any idea of self-interest, which none of the European nations would have done under similar circumstances. If therefore, the telegram is authentic, we must return our sincere thanks to the Government of the United States of America for their friendly and well-intentioned offer, and also to General Grant, who was the cause of that offer being made. The question then is: Should Japan and China accept the offer made by the United States? We answer emphatically—No! The Chinese Government having already requested General Grant to bring about a settlement—whatever their real intentions may have been—will, perhaps, gladly accept the proposal, but Japan should at once and decidedly decline it. Mr. Monroe, the fifth President of the United States said on one occasion:—"Whatever disputes may arise respecting the political affairs of America, we must under no circumstances permit the interference of European powers or accept their arbitration." We would now apply these very words to Japan, and desire our Government to carry them into effect. Did not General Grant himself wish the two Empires to come to a mutual understanding to escape the misfortune of European interference? We are of opinion that the offer of the United States is made in good faith and from no desire to interfere, unless out of

pity for the sad state of things that is gradually growing up in the East. The United States would not feel offended at our refusal to accept their offer and the policy of declining foreign interference should be always steadfastly pursued by Japan. If a mutual understanding could be arrived at between the powers they would not require any mediator, but if it cannot, why then a mediator is of no practical use. Now as regards this Loochoo question, Japan cannot recede from the position she has taken up and resign her claim at the behest of China, nor can China without incurring disgrace. Such being the actual condition of affairs, what possible good can be derived from the mediation of the United States? If the latter were to say to China,—“Your claim to Loochoo is unreasonable and unjust and you must abandon it,” would the Chinese agree to do so because of the mediation of the United States? We do not think it at all likely. Again, if the United States were to say to Japan, “you have been too hasty and should restore the *Han-si* to his former position and permit him to send tribute to China or else arrange to pay China compensation,” is it at all probable our Government would entertain that proposition? We all know perfectly well it would do nothing of the kind; in fact matters have reached that stage that we cannot recede one single inch from the position we have taken up. It is therefore very evident that under these circumstances we do not require the interference of any foreign power. It would be extremely discourteous to the United States to accept their offer of mediation knowing at the same time that it would be barren of results. It should also be borne in mind that Japan and China are so situated that they should unite to restore the falling fortunes of Oriental nations and place them as regards dignity and importance on an equal footing with the nations of Europe and America. Seeking the interference of a foreign power about a trifling matter like this Loochoo affair would go far to lower their dignity and decrease their influence. When we sent the expedition to Formosa and our Ambassador proceeded to Peking afterwards to arrange the dispute, Sir Thomas Wade, the British Minister, acted as mediator on that occasion and brought about a peaceful settlement by getting China to pay us half a million taels. The action of the two Governments on that occasion did not meet with our approval. If it becomes the custom of Eastern nations to invoke the interference of Europe and America in their disputes, it is impossible to foresee what amount of difficulty may arise with those powerful countries. England, Russia, France, Germany, &c., are not at heart like the people of the United States, although their eyes also are blue and their hair fiery red. We, the yellow race, are already in danger of becoming slaves to these people. Should we not therefore be careful?

A PARLIAMENT FOR JAPAN.

(Translated from the *Mainichi Shimbun*.)

ON previous occasions we have given our readers a brief description of the two Chambers which constitute the Parliaments of Rome (sic) and England. At the same time we mentioned that the establishment of these Parliaments did not in any way arise from the wishes of the people of those countries. We also asserted that in the United States of America no advantage was found to accrue from the fact of their having in that country two deliberative Chambers. We will in the present article consider what kind of Representative Assembly is best suited to the circumstances of Japan. Should the Parliament of Japan consist of two Houses? We answer most positively—No! There are two kinds of Upper Chambers viz.—the House of Lords and the House of Expert Lawyers. The former is the kind that exists in Rome and England and the members must all belong to the high and exalted class called “Lords.” The other description of Upper Chamber is composed of experts selected from amongst the people. In our opinion the *Kwa-zoku* of Japan are utterly unfitted to form an Upper Chamber, both as regards their social position and ability, although they may be wealthier than the other classes of the community. It must therefore be patent that no good result would ensue from the establishment of a House of Lords in Japan. The question then arises should we have the other kind

of Upper Chamber, i.e. the House of Export Lawyers? We think it also would be valueless. If it was established, what system of election would be adopted and in what way would the members differ from those in the Lower Chamber? If only the best men are to be elected to the Upper House, then the Lower House would be composed of the refuse and be altogether an inferior assemblage. If one Chamber monopolizes the talent of the empire, it naturally follows that the other will be nothing but a gathering of mediocrities. Under the constitution of the United States, a Senator must be at least thirty years of age and a Member of Congress at least twenty-five. The term of office of a Senator is six years that of a Congress-man two. Senators are elected from amongst the lawyers in the different States, and Congress-men from the general body of the people. American writers who favour the system of dual Houses, assert that the Senators are careful and prudent, while Members of Congress are reckless and liable to sudden changes of opinion, and that unless there existed the two Houses, the one to act as a check upon the other, the policy of the country would continually be changing and great evils would consequently arise. In our opinion the reason why the Congress of the United States has become so reckless and volatile is due to the fallacy of having two Chambers in the country and not to the Members themselves. The law is such, that Congress is composed of inferior men, how then can they be blamed for giving constant proof of their inferiority? Should this evil be remedied by making the qualification for both Chambers alike, there would then be a direct violation of the principle which lies at the very root of dual Houses. It appears therefore, that viewed in any light, evils are sure to arise from two Chambers and it is manifestly preferable to have only one Assembly and let it be composed of the most clever and experienced men in the country. Careful observation of the present state of matters in Japan has led us to the conclusion; that enlightened men of experience are not to be found among the wealthy classes who are, as a body, destitute of knowledge. Consequently if we have a Representative Assembly, its members must be paid; as the most suitable persons to belong to it could not afford to attend gratuitously, it will therefore be better to have one Chamber than two, as the expense will be less, there being fewer persons to pay. But even suppose that the Members of the Upper House could be induced to attend without pay, the expense of their election, travelling allowances, &c., would all have to be borne by the nation, so it is very evident that from an economical standpoint a single Chamber is preferable. From the very oldest times we find that in those countries which have two Houses the Members of the Lower House are always the most numerous, this we presume is with the object of decreasing expense. If the Members of an Upper House are many, the expense is great. If they are few, a system of bribery would probably be introduced, as it is always easier to influence a few people than a large number. Indeed heavy expenditure and bribery stand, in this instance, in juxtaposition, if one is avoided the other ensues. It is extremely difficult to escape from both evils. For the foregoing reasons we assert, that the system of dual Houses of Parliament is valueless and if anything injurious.

MADAME DE SAINTE-FOLYE'S BABIES.

(From the *Cornhill Magazine*.)

Madame la Comtesse de Sainte-Folye, wife of the Prefect at Ville Joyeuse, had been married ten years, and had all that time been vainly expecting an heir, when, at last, finding that neither the pious waters of Lourdes nor the ferruginous ones of Spa availed anything—perceiving, moreover, that St. Lactitia, her patroness, disregarded sundry votive offerings of waxen babies and silver-gilt hearts made at her shrine, she resolved that she would adopt a child whom she might call her own. It was told on a former occasion how that Madame de Sainte-Folye was a very wilful lady, who, when once she had got a whim into her amiable head, took no rest till the same was satisfied. Her husband had discovered this at the outset of his conjugal career, and made compliance his rule of life, so that when his consort announced her intention of adopting somebody's baby, he answered, "Yes, my dear," in the tone of a man who would not think of offering opposition. He did not even ask how the bright lady proposed to obtain an infant to her liking, though he noticed that she spoke about the matter as if babies were to be procured in the open market like puppy-dogs.

Such was indeed Madame de Sainte-Folye's opinion; or rather she imagined that there were so many cumbersome babies lying

dandled about the world by mothers who would rather have been unencumbered, that it would be easy enough to summon a number of them for inspection, and then make a choice. But, of course, Madame de Sainte-Folye wanted a cleanly baby, well dressed, with blue eyes and nice rosy cheeks—a baby who never squealed, and who smiled when spoken to. Others of the ordinary sort were not to her taste at all; and in explaining her wishes to her husband's secretary, M. de Beantoupet, she was particular in requesting that he would find her a baby whom she would be proud to exhibit in her daily walks, borne in the arms of a plump Burgundian nurse in a peak cap.

M. de Beantoupet was a young man, who always dressed in the latest style of fashion, and spent most of his time in snubbing people who came to the Prefect to ask for favours or redress. The Prefect was too shy a person to dismiss applicants himself, and too indolent to concern himself much about the general business of his high office. He was a great whist-player, a lover of horses, dogs, and fat cattle. He never missed an agricultural show, but liked to attend these sights unofficially, without putting on his uniform or being speechified to. He abhorred state, and could never be drawn into making a speech of more than five minutes' length, which had caused him to be somewhat respected as a man who thought more than he spoke, though in truth he thought nothing. Count de Sainte-Folye was one of those placemen who keep their offices a long time, because they make no enemies. He had his pockets full of the small coin of civility—kind words, which he distributed ungrudgingly to all postulants. But he gave them nothing else, and generally allowed them to understand that he had bestowed on them all that it was in his power to grant, which is the sum of what a man can do. The people of Ville Joyeuse gave their Prefect credit for the best intentions; but knew that in all serious conjunctures the man to go to was M. de Beantoupet, who took his instructions not from Count de Sainte-Folye, but from the Countess, who was the real Prefect. Thus M. de Beantoupet enjoyed all the prestige which usually encircles the private secretaries of high officials in every country under the sun.

Now M. de Beantoupet, having received Madame's commands to look out for a baby, shrugged his shoulders at the unwelcome job, and proceeded to execute it in the most summary way by sending for the Commissary of Police, and biddling him go and make a choice from among the most personable infants at the Foundling. The Commissary bowed, saying that his own discernment in the matter of babies was not great, seeing that he was a bachelor, and had always found one child look very much like another; but he promised to appeal to the most experienced nun among those who dry-nursed the foundlings, and doubted not that they would make their election with a full sense of the importance of what they were doing.

"I suppose you want a boy?" said he as he took his leave.

"Why should you suppose we want a boy? I have really not thought about it," answered M. de Beantoupet.

"Well, people who adopt children generally desire boys, to whom they can leave their names."

"Boys are unsafe kind of property to invest in, though," remarked the private secretary; "they get into debt, or become Radicals and disgrace the names you lend them. I think we had better have a girl."

"Girls make runaway marriages, you see."

"Yes, but they change their names in going to the bad, so that you are well rid of them."

"Or a girl may turn out well," proceeded the Commissary, "and in that case you have the regret of parting with her just as you begin to find her companionable."

"Oh, as to that," answered M. de Beantoupet, with a wink, "you little know madame, if you think that she is going to attach herself to anybody through a course of years. This adopted child of hers will be the toy of a few weeks, and after that she will be very sorry that she ever indulged the whim. However, that is her own lookout."

The Commissary smiled and withdrew. Two hours later, there arrived at the Prefecture a florid peasant-woman, in the custody of a buxom Black Sister or Carmelite nun. The nun carried a bundle of baby-linen; the peasant-woman bore one of the gravest infants that had ever been seen.

Such a solemn, round-eyed, pensive little girl it was, for the Commissary had decided for a girl after all. It neither wailed nor smiled. It did not put its thumb in its mouth, nor struggle in its swaddling-clothes, nor rub its fists into its eyes. It had none of the wayward tricks of infants, but lay still in its nurse's arms like a little waxen image, or like some small cherub that should have come to earth for some high purpose—to lead a life of Philosophy, and set an example of staidness in demeanour to all her sex, first as a child, and by-and-by as a woman.

"There, madame!" exclaimed the nun, as she lifted the veil from the baby's face, "this is the best-conducted child in our house. She was left on our door-step one terrible winter night, with a dog-collar round her neck and the name of Fido on it. So we christened her Fidelity."

"Poor little thing!" ejaculated the Countess. "Why, you allowed a dog to become its godfather!"

"Oh, no, madame!" answer the nun, scandalised.

"Yes, yes," laughed the Countess, "it doesn't matter. I have known dogs who behaved much more like Christians than men. How serious this child is, though! Have you no idea of who its parent were?"

"None whatever, madame. We conclude that the dog-collar was put on her as a mark for identification."

"But supposing the parents should turn up and claim the child just after I had become fond of it?"

"Oh, there is no danger of that," replied the nun, shaking her head. "That's against the rules of the Foundling. Once a child is put into it, it becomes lost to its parents for ever."

* See *Cornhill Magazine* for June 1879.

By this time Madame de Sainte-Folye had lifted the baby out of the nurse's arms, and was again eying it with a smile which invited response. The baby stared back at the Countess, but did not smile. Hither timidly the Countess began to dandle it, but she might as well have dandled a doll for all the pleasure the baby evinced in this mode of caress.

"Dear me!" murmured Madame de Sainte-Folye. "I hope this child is not always going to stare at me like that. I should be as afraid of her as if she were a grown-up woman."

"Is Madame afraid of grown-up women?" inquired the nun demurely.

"Well, no, but I like to see people about me laugh," was the rather rueful rejoinder; "but perhaps this child has—has the stomach-ache."

"They shout loud enough when they have the stomach-ache, Madame," answered the nurse bluntly, and she proceeded to give the baby a character for capital health as well as sweetness of temper. According to her, no more eligible child for adoption could have been discovered. "And she will become a pretty girl, too," added she. "Look at her large eyes and small mouth, you can always judge by those tokens. They are worth as much as a big dowry to girls."

"Well, well," said the Countess, in the tone of one who wants to hope for the best, "I will try and be a mother to the poor little creature, and I will even do something for the dog, her godfather, if he calls here." Saying which, she unlocked her desk and drew out some bank-notes, which she tendered to the nun as a gift for the Foundling. She Sister murmured her acknowledgments and retired, leaving the baby and the nurse to be the guests of the Prefecture from that day forth.

Our expectations are seldom fulfilled to the letter, so it cannot be denied that Madame de Sainte-Folye did not derive from her new acquisition all the excitement she had anticipated. On the contrary, the baby's presence had on her a subduing effect, which her husband was the first to appreciate. That long-suffering official had never found his house so quiet as he did during the first few days after little Fidélité had been introduced there. The Countess went about with a serious countenance, putting her forefinger to her lips and saying, "Hush! Baby's asleep!" or "Baby's just going to sleep!" For a man who loved quiet this was nice enough, and the Prefect, who was not devoid of humour, chuckled inwardly to think that a mite of a child had achieved the feat of calming those exuberant spirits and that pertinacious loquacity which the Countess had never abated to please her husband or M. de Beantoupet.

Unfortunately, the balcony days which had fallen upon the Prefecture were not destined to last long. Fidélité happened to be the offspring of one Soulot, a dog-fancier—which means a fancier of other people's dogs—and of his wife Leonie *née* Hurlard, who worked in a cigar factory and was not a pattern of the virtues. Those people used to put their children at the Foundling for the same reason as that eminent reformer of mankind, J. J. Rousseau, did—because they did not care to be bothered with them. Fidélité was the third who had been deposited on the doorstep of the old *Maison des Enfants Trouvés*, which frowned, black as a prison, in one of the most deserted streets of Ville Joyeuse, and the collar had not been put round her neck as a mark for future identification, but simply out of the facetiousness in which M. Soulot, her father, revelled at times when he had been drinking much of the white wine of his native province. In parting with their child the pair of Soulots had certainly never meant to claim her again, but they happened to hear that a baby, remarkable for having been lodged at the Foundling with a dog-collar round her neck, had been adopted at the Prefecture by no less a person than the Prefect's wife, and this, of course, altered their plans. They began to feel very parental indeed towards their little girl.

One bright morning a man smelling strongly of dog, and a woman diffusing an odour of spirits, rang at the Prefecture and were admitted into the vestibule, along with a well-clipped and curly poodle who trotted at their heels. The man carried a toy terrier in his arms and the heads of four puppies protruded from his pockets—two on either side. He gave his name of "Soulot" to the footman, and stated that he had come to speak to the Countess on a matter of business. The footman, concluding that he had come to speak about the sale of a dog, went upstairs with his message, and Madame de Sainte-Folye, who had some time before expressed to M. de Beantoupet the wish to have a tiny pug, ordered the man and his wife to be shown up. But when the Soulots had been ushered into the Countess's presence with the poodle, they put their hands to their eyes and began to snivel. "It's very kind of you to have adopted our poor little daughter, Madame," whimpered the dog-fancier, "but you may be sure we should never have parted from her if we hadn't been compelled by poverty."

"Then it's you who are my poor baby's parents?" asked the Countess, eying the pair in deep disgust.

"We are the father of the dear little girl with the dog-collar," responded Soulot, blowing his nose aloud.

"Ah! And is that gentleman—I mean that dog, the owner of the collar," continued the Countess, pointing to the poodle.

"That's he, Madame," said Soulot's wife eagerly, as if she thought there was an excellent joke in the whole matter. "This poodle—he was only a puppy then—was outgrowing his collar, so we put it on the little girl, just to know her again if we wanted to claim her."

"But you can't claim her," replied the Countess, coldly. "Oh, Madame! we can't do without our little girl—our poor little girl!" ejaculated Soulot's wife, and began to shed bitter tears through the unclean fingers which she put before her face.

Madame de Sainte-Folye was not a prefect's wife for nothing, and she saw these unvarnished Soulots were as insincere in their emotion as they were ill-founded in their demands. It was quite evident that the only object of their visit was to extort money; nevertheless, it was a question as to whether there would be any

prudence in refusing them some compensation for the adoption of their child. Impulsive in all things, Madame de Sainte-Folye put her hand into her pocket and extracted half-a-dozen napoleons from her purse, but at the sight of gold the ill-smelling Soulot, who would have sold his child for six francs had they been offered to him in a confidential way as a maximum bid, shook his head and thought he might hold out for a higher sum. "No, Madame, I want ten thousand francs," said he, stubbornly.

"Why, you incredibly base man, you are not entitled to a centime," exclaimed the Countess, indignantly.

"Oh! oh! we want our child," whined the female Soulot, raising her voice, as if she wished the servants to hear.

"And we want ten thousand francs," repeated the male Soulot, likewise raising his voice, so that the poodle barked and the four pups in his pockets snarled.

"You shall not have a son from me," cried the Countess, stamping her foot, "and if you are not gone this minute, I will have you taken to prison. Oh! you bad people, go away with you!"

It was not the stamp of the Countess's foot, but the opportune entrance of M. de Beantoupet, that induced the Soulot couple to decamp. As they went, however, they muttered threats and pitched their voices in the most lamentable key, so that to the footman who let them out they did really appear to be parents in deep affliction.

"Ah! bad luck to those who rob the poor of their children!" howled Soulot, as he stood on the doorstep with his wife by his side, and his four pups craning their heads out of his pockets. "Heaven didn't mean that the rich should take the children of the poor when they haven't any of their own. The poor have parents' hearts as well as the wealthy."

"Bad luck to the woman who has robbed me of my girl, my poor little girl," shrieked the she-Soulot, shaking both her fists in the astonished footman's face, and this worthy couple, as they left the Prefecture, collected quite a little mob by their dismal vociferation.

When Count de Sainte-Folye heard later in the day of what had happened he emitted a low whistle, which was always tantamount with him to a signal of alarm, and observed to his wife "You'll see, my dear, that all the tag-rag and bob-tail of the town will soon be making a political question of this baby."

"They may break out into revolution about it, if they please," exclaimed Madame de Sainte-Folye, with intense feminine energy. "But even though they took you to the guillotine along with M. de Beantoupet and the whole of the Prefectural Council, I'll not give the baby up."

"Thank you, madame," laughed M. de Beantoupet, who was present.

Now Madame de Sainte-Folye had been put much out of conceit with her baby by discovering that it was the child of an unwashed pair of dog-stealers. Being of an imaginative turn she had conceived in her mind a pretty romance about the solemn infant's supposed birth. She had decided that the little girl must have been abandoned by a high-born mother in reduced circumstances who was dying of consumption when she laid the poor mite on the step of the Foundling, hoping it would there find a comfortable home. Even the incident of the dog-collar seemed to the Countess to have a poetical significance, for who could tell but that this collar was that of a faithful dog who had followed the high-born mother and child in their wanderings, and had at last, by a spontaneous doggy instinct, offered the collar—his only property—to the little girl as a parting gift? There had been a time when, scanning the baby's grave face, the Countess had been seized with a slight shiver, fancying she discerned in its lineaments the half-intelligible lines of some most piteous story. . . . So it was a mortifying disappointment to find that little Fidélité's name was Soulot, and that, judging by the theory of congenital tendencies, she might possibly grow up to be as ugly as her mother and as scampish as her father. Anyhow there could be no pleasure in adopting a baby whose family were known to the whole town as vagabonds.

Nevertheless, from a mere spirit of feminine resistance, Madame de Sainte-Folye resolved to keep the child; and her combative instincts became finely aroused when the Radical journal of Ville Joyeuse, a low print called *Le Tocsin*, published a maliciously untrue account of the adoption story. The *Tocsin* was one of those organs whose notes ring as falsely as the chinking of base coin. It had no principles beyond attacking everything that was done by people in authority and buttering the lower orders with rancid flattery. It represented that the Soulots, having been obliged to deposit their child at the Foundling under great stress of poverty, the Prefect and his wife were making an oppressive use of the law in debarring them from recovering it. In this view all the mothers of Ville Joyeuse were disposed to concur. The case was one purely of sentiment and did not admit of arguing; if the Soulots really loved their child, it was sheer inhumanity to deprive them of it. The dog-fancier and his wife soon found it paid them very well to wash their faces and loaf about with the air of persons who were poor and sad, but respectable, and to whine their untruthful story into the ears of all the active characters of the Radical party. A fund was raised. After handing over a moiety to the bereaved parents, it was decided that the remainder should go towards defraying the expenses of a lawsuit which the Soulots were to bring against the Prefect for the recovery of their infant. A pushing young barrister with no work to do, one M. Bobinard, nobly undertook to plead the dog-fancier's cause for nothing, and three Red Republican members of the Chamber of Deputies bound themselves by an oath to bring the Prefect's dastardly conduct before the notice of Parliament. Dismayed by these things, poor M. de Sainte-Folye besought his wife not to resist the popular clamour; but, in making this request he had the misfortune to speak of Fidélité as a disreputable brat, which gave Madame an excuse for forthwith emptying all the vials of her wrath upon his head.

She happened at that moment to be sitting with the baby on her lap. Catching it up, she held it close to her husband's face, so close that the Prefect stepped back, pulling a grimace which af-

frighted the infant. Then its dear little tongue became suddenly loosed, and it began to howl in a voice of awful shrillness, as if to make up at one go for all its bygone silence. "My goodness, stuff something into that child's mouth to make it stop," cried the Prefect, appalled.

"It's you who are making it weep with your brutality," screamed the Countess, indignantly. "I know you never loved the child, and it's most unmanly of you to join in persecuting the poor little thing."

"My dear, I'm not persecuting," stammered the Count, wiping his eye-glass nervously with his coat-tails.

"Don't tell me," retorted the Countess. "You're joining with the rabble, as you always do when they shout. You've no notion of governing like a man. If the mob asked you to give up your wife I believe you would hand me out to them through the window."

"I don't think I could do it without your consent, my dear," replied the Prefect, with plaintive irony.

"That's right, be sarcastic now," rejoined the Countess; "but if you and the mob think to coerce me, you're mistaken. I know M. de Beautoupet will stand by me."

The Prefect's secretary, who had been a witness of the conjugal tiff, coughed shyly as if inclined to disclaim the chivalrous sentiments imputed to him. He was, however, spared the necessity of making any statement by the opportune arrival of a messenger, who brought a telegram from the Home Office. This document was thus briefly worded: "*You must give up the baby.*" The Prefect, with an inward sigh of relief, handed the message to his wife, who immediately said that she did not care two snaps of the fingers for the Home Minister; but then, feeling the uselessness of resistance, sat down to weep, and presently had a fit of hysterics. M. de Beautoupet took a prompt advantage of the situation. Seizing the baby, he caught it up, hurried from the room and ran to the nursery, where he ordered the nurse to leave the house without a moment's delay and take the child to its parents. Ten minutes later the Soulois were as much surprised as disgusted at being put in possession of their own. A baby was the most unwelcome of all gifts that could have been made to this couple; and while the nurse plumped into a chair and overwhelmed the pair with reproaches for getting her deprived of a good place, the dog-fancier eyed his now speechless offspring with consternation. As for the female Soulois, she examined the beautiful swaddling clothes in which little Fidélité had been attired by the Countess, and tried to console herself by wondering for how much they would sell.

Meanwhile the Countess, having recovered from her fainting-fit, and finding her adopted baby gone, took the gods to witness that she was an ill-used woman, and retired under her tent—that is to say, into her boudoir—meditating plans of vengeance. She remained cloistered in dignified sulks, for the rest of the day, and might have sulked through the morrow also, had she not been aroused towards evening by a noisy procession passing under the Prefecture windows. The Radicals, whose schemes had been disconcerted by the unexpected return of the baby, had concluded to make what political capital they could out of their easy victory by carrying the child in triumph from its parent's house to a certain lay school where it was to be reared according to the soundest Liberal principles, untainted by religious teaching. All the ragamuffins in the town had mustered to solemnize this important occurrence. First came a Radical brass band, playing the "Marseillaise" with a manly independence of the laws of time and tune; then an open fly, driven by a Republican coachman and containing the nurse with the baby and three Radical politicians, each provided with a money-box which they rattled in the faces of the people, begging pence for the Republican cause in general. Behind followed more Radicals on foot, with a great cohort of street boys, slatternly women and dogs. This soi-stirring procession, halting before the Prefecture, hooted Madame de Sainte-Folye who appeared at the window of her boudoir; and were making preparations for holding a Radical concert when the guard of soldiers on duty at the Place turned out and ordered them peremptorily to move on. This they did with characteristic alacrity, though they uttered derisive cheers against the military as soon as they had rounded a corner and were out of sight and shot.

One may imagine that, after this affair, which had made her odious in the eyes of some people, ridiculous in those of others, Madame de Sainte-Folye had had enough of adopting babies; and so she had. But Fate does not always shape our ends for us according to our likings, and from the day when it went forth that the Prefect's wife had been deprived (by law, some said) of the child which she had meant to treat so kindly, the Prefecture became a resort for all the mothers of the province who had babies to dispose of. Some came to the Palace with their squeaking progeny in their arms and offered to sell Madame little boys or girls of any age cheap and to seal the bargains by bonds having legal force. Others accosted the Countess as she was going into church; or stopped the Prefect and M. de Beautoupet in the streets, tugging these officials by the coat-tails and bidding them inspect babies that could be recommended as sound of wind and limb. There were other mothers again who, with a less mercenary maternal affection, deposited their children on the steps or in the lobbies of the Prefecture, converting that decorous government institution into a branch house of the Foundling. It became one of the daily plagues of M. de Beautoupet to see the chief clerk of the office enter his study and say, "I have just found another baby in my waste-paper basket, sir," or "We've just found two babies in the coal-box," or again, "What am I to do with this baby, sir, which I found in the cupboard where we keep the archives?"

"Give them to the police," was M. de Beautoupet's invariable cry, for he knew that the very name of infancy had now become odious in the Countess's ears. Nevertheless, as the secretary was not a bad fellow, he occasionally felt a twinge at reading some of the doleful epistles which distracted mothers had penned to the

clothes of the infants whom they foretook. He comforted himself by reflecting that if the Countess had consented to adopt but one out of every ten of the infants brought to her, she would soon have had a family fit to vie with those of the old-time patriarchs.

The Countess, in truth, was becoming very savage at the pranks which were being played with her—pranks which she persisted in thinking were practised from a desire to annoy her, rather than out of any genuine wish to supply her with babies. She put up with a great deal of perfidious commiseration from friends of her own sex; and chafed to hear unmistakable titters behind her whenever she appeared in any public place. The French are merciless jokesters, and when it becomes a question of poking fun at officials there is nothing they will not do to raise a laugh. It became the custom for the vulgar street-crowds to utter cries like those of babies whenever they saw the Prefect or his wife; and one night when the Count and Countess were at the theatre a wag let down a big baby-doll from the gallery right over the prefectural box by means of a rope, amidst the uproarious merriment of the house. The author of this unseemly jest was collared by the police and taken to the lock-up; but it was impossible to punish all the other facetious fellows who imitated him by purchasing dolls and exhibiting them in comical attitudes at unseasonable moments. A certain Radical rhymester went so far as to compose a ditty called *Le Bébé*, which, though interdicted in music-halls, was bawled loudly in the wine-shops, to the total subversion of loyalty among the masses.

All this was bad enough, but, alas! still worse things were to follow.

(To be concluded in our next.)

LAW REPORTS.

IN HER MAJESTY'S COURT FOR JAPAN.

Before R. T. RENNIE, Esq., Judge.

Tuesday, 16th December, 1879.

Between WILLIAM ALFRED MALCOLM, trading as MALCOLM, WILLCOX & Co., plaintiffs; and JARDINE, MATHESON & Company, defendant.

JUDGMENT.

The facts of this case are extremely simple. The plaintiffs were consignees of 584 bundles of sheet iron per *Viceroy*, which arrived here in September last and of which steamer defendants were agents. By the terms of the bill of lading the iron was to be delivered from the ship's tackles, when the ship's responsibility was to cease. On the arrival of the steamer, defendants inserted an advertisement in the local papers addressed to the consignees of cargo, the material part of which, for the purposes of this case, was as follows:—

Those consignees who are desirous that their goods should be landed by the agents of the steamer as heretofore, will please make the request in writing to the undersigned at the same time as their bills of lading are sent in for countersignature.

JARDINE, MATHESON & Co.
Agents.

The plaintiffs, acting under the terms of the advertisement, wrote to the defendants and requested them to land their iron. The defendants who were at this time employing one Mr. D. Scott, as landing agent for the steamer generally, directed him specially to land the plaintiffs' iron. In the course of the transit of the iron from the ship to the shore, or in the process of landing it at the *hatoba* (wharf), the iron was wetted with rain water. The plaintiffs' claim to recover damages from the defendants on this account, but the defendants deny that the wetting was caused by negligence at all, and allege that, even if such negligence were proved against Mr. Scott or his *employés*, that they are not, under the circumstances, liable for it.

It will be well to dispose of the legal question first.

The defendants' counsel argues:—That the defendants were not employed as plaintiffs' agents, but only as agents for the ship; that if they were employed by the plaintiffs they were not so employed as to incur any liability by reason of such employment; that the advertisement issued by the defendants was of such a nature as to exclude their liability if employed by the consignees of goods; that they employed a proper landing agent, which was all that was obligatory upon them; that defendants were not carriers for hire and therefore, only liable for gross negligence; and that plaintiffs might and should have sued Scott, who was the only person liable, even assuming that defendants were actually employed by plaintiffs.

Mr. Kirkwood called evidence to show that heretofore the practice of agents of ships landing goods for consignees, had been to employ their own compradores or foreign landing agents to discharge the goods, and the plaintiffs admitted, that they had themselves acted in this manner.

Mr. Kirkwood argued upon this, that there was an usage of trade at the port, which would relieve the defendants from responsibility when employing such a sub-agent as Mr. Scott, and that the plaintiffs had expressly or impliedly authorised his employment and accepted his liability instead of that of the defendants—or in other words, that the circumstances of the case showed a privity of contract between the plaintiffs and Mr. Scott.

Counsel for the plaintiffs relied upon the well known doctrine laid down in the case of *Coggs v. Bernard*, 2 Smith's L. C., viz.—“that if a man undertakes to carry goods safely, he is responsible for damage sustained by them in the carrying through his neglect though he was not a common carrier and was to have nothing for the carriage;” and also on the general liability of carriers for the acts of their servants and sub-agents. He also relied much upon the fact that the defendants had previously and so lately as the month of May last, landed goods for the plaintiffs from a steamer of which they were agents, and rendered accounts and received payment of landing charges in their own names.

I am of opinion that the defendants in this case did not land the goods as agents of the ship. The liability of the ship and her owners ceased by the terms of the bill of lading on delivery of the goods over her side; and it is therefore very improbable that the master would authorize his agents to incur the further risk of landing, except in the case of cargo not being claimed by the consignees and it being necessary to discharge it before the ship left the port. I think that under the terms of the advertisement there was a special contract made between the plaintiffs and the defendants for the landing of the goods, and that under that contract it was open to the defendants to execute the work either by their own servants or sub-agents. The evidence certainly goes to show that the defendants did not make any profit out of these transactions generally, or specially out of the present matter, but it appears that they might have done so had they pleased, when employing their own Chinese servants to do the work, and it is quite clear from the bill (exhibit “I.”) rendered by the defendants to the plaintiffs in the month of May last, that they did then at least act in a manner to lead the plaintiffs to believe that they were the actual recipients of the landing charges.

I cannot entertain any doubt that the defendants would have been liable to the plaintiffs for damages (supposing any to be proved in the present case), if the landing had been conducted by their own compradore who, as Mr. Keswick says, acted in such matters as the sub-agent of his firm; and I cannot see that the evidence of practice (I cannot call it custom), heretofore prevailing in regard to the employment of foreign landing agents, in any way lessens the defendants' responsibility when, for their own convenience they elect to employ one in lieu of their own compradore. I do not think that the authorities upon usage and custom cited by Mr. Kirkwood apply to the facts of this case, and I cannot find any evidence to satisfy me that the plaintiffs expressly or impliedly authorized the defendants to employ Mr. Scott as sub-agent on their behalf. On the other hand, the liability of any person who takes upon himself the safe transport of goods from one place to another, whether for hire or not, to answer for damages caused to such goods by his negligence, or that of his servants, is unquestionable. Mr. Kirkwood argues that in this case the defendants receiving no hire should only be held liable for gross negligence. It is very doubtful whether the defendants in this instance were or were not gratuitous bailees in the legal sense of the word, but I think it unnecessary to discuss the question, because the class of negligence imputed by the plaintiffs to the defendants is what the law, in the case of a carrier or other person holding himself out for the careful and skilful performance of a particular duty, would include as gross negligence. The latest judicial definition of gross negligence that I am aware of, is that given by Willes J. in the case of *Grill v. The General Iron Screw Collier Co.*, L.R., 1 C.P., 612; where that learned judge says:—“I quite agree with the dictum of Lord Cranworth in *Wilson v. Brett*, 11 M. & W. 113, that gross negligence is ordinary negligence with a vituperative epithet, a view held by the Exchequer Chamber, *Best v. Southern Devon Railway Co.* 3 H. & C. 337. Confusion has arisen from regarding negligence as a positive contrast of a negative word. It is really the absence

of such care as it was the duty of the defendants to use. A bailee is only bound to use the ordinary care of a man, and so the absence of it is called gross negligence. A person who undertakes to do some work for reward to an article must exercise the care of a skilled workman and the absence of such care in him is negligence. Gross therefore, is a word of description and not a definition.”

Thus I find as a matter of fact that the defendants by their sub-agents or servants did not exercise reasonable care, skill, and diligence in and about the protection of the plaintiffs' iron from wetting by rain. It is quite true Mr. Scott and his men have sworn that tarpaulins were duly put over the iron in the boats, but it being quite clear that this precaution did not prevent the rain from getting to the iron and no exceptionally bad state of the weather having been proved or even alleged, I am led to the conclusion that the tarpaulins must have been insufficient for the purpose, imperfectly put on, or perhaps not put on sufficiently soon; and upon these grounds I hold that the damage in question was caused by negligence of the defendants' sub-agents or servants in such manner as to render them, the defendants, liable to the plaintiffs for the damage so sustained.

I have only further to assess the amount of such damage. I agree with Mr. Kirkwood that the defendants are not liable for the difference between the contract price for the resale of the goods on arrival at the port of destination and the amount realised at auction; but I must proceed, so far as possible, upon the general rule that the amount of damage must be ascertained by the ordinary market value of the goods at the place and time at which they ought to have been delivered, independently of any circumstances peculiar to the plaintiffs. Now the only evidence as to the market value is that of Mr. Barlow, who says the market price of such iron as that in question would have been about \$4.50 at that time, and he also said that when he inspected the iron on the 10th September, it was damaged to the extent of 12 to 15 per cent., or expressing it in money about 45 or 50 cents per picul. This evidence also goes to prove that the auction sale was a fair one, inasmuch as the iron realised at it \$4 per picul, or some 50 cents under what he (Mr. Barlow) stated to be the market value. I assess the damages payable by the defendants to the plaintiffs at the sum of \$117.00 for loss on iron, and \$46.25 charges, making together the sum of \$163.25, and for this sum there will be judgment for plaintiffs, with costs.

IN THE U. S. CONSULAR GENERAL COURT.

EMIL WIEGAND vs. WILLIAM COPELAND.

The following order, as to the mode of sale of the property, was yesterday issued in the above case:—

“After hearing the evidence presented by both parties, and the arguments of counsel, as to the best method of selling the partnership property, decreed in this cause, I have come to the conclusion that it is for the best interests of the parties that the property and business be sold in lump, as a “going-concern,” and that, in the advertisement of sale a brief description of the said property be given so that the extent and variety of the same may be understood by the Public.

It is therefore ordered that the partnership property of Copeland and Wiegand be sold, as directed by the judgment or decree, rendered in this cause on the 6th of December inst., by the United States Marshal in one lot, and that the sale include the good-will of the business and the name under which it has been heretofore conducted, viz: the “Spring Valley Brewery.”

THOS. B. VAN BUREN,
Consul General.

THE TIMES OF THE TAIRA.

BY CAPTAIN F. BRINKLEY, R.A., AUTHOR
OF THE “TIMES OF TAIKO.”

CHAPTER XXIX.

A CHALLENGE.

Benkei had been waiting but a very few minutes when those he looked for came in sight. They were eight men with Hiromori at their head; all in armour and, as Benkei

confessed to himself, 'likely looking rabble' enough. In their midst walked the old waiting woman, hobbling along with many grimaces and expressions of fatigue, for though the men-at-arms evinced no excessive desire to hasten their pace, it was all too rapid for her decrepit limbs.

Had they maintained the order in which they were then proceeding, their leader must first have reached the point of peril, but restrained by some unhappy instinct, he stepped aside and let his followers pass before him into the shadow of the pine tree, from which immediately afterwards issued a clamour of voices and a clashing of weapons that summoned many a scared face to door or window, and startled the sacred doves from their roosting places under the eaves of the fane.

Benkei, prefacing his assault by a yell of which such giant lungs alone were capable, had leaped out from his post, and before the Heike men-at-arms found leisure to think of resistance, three of their number were down with severed limbs or cloven skulls. The attack would probably have been successful even under less favourable circumstances, for the first panic caused by its suddenness was prolonged both by the assailant's formidable aspect and by the irresistible might of the blows he dealt. As it was, however, Benkei found his best ally among his enemies. Hiromori had never contemplated a hand to hand encounter with such swordsmen as he knew or suspected Yoshitsune and his companions to be. Even with the advantage of the surprise his scheme was designed to effect, he had deemed a score of followers too few to secure success, whereas he now saw himself with less than half that number, surprised in his turn and taken at a grievous disadvantage by it might be an equal force. For the field of his troubled vision being entirely occupied by the monster figure that dealt havoc among his men and the ponderous blade that came nearer and nearer at each sweep, he neither waited to assure himself of his assailant's numbers nor dreamed of seeking to avert his party's discomfiture, but turning at once, made off at the top of his speed, setting an example which was immediately followed by those of his men to whom Benkei's blows had left the ability to fly.

Acting on his first impulse the victor set out in vigorous pursuit of his retreating foes, but he was by no means as swift of foot as stout of arm, neither did the invectives and challenges he shouted after Hiromori serve in any way to arrest the latter's progress. He was fain therefore to abandon the chase, which he did with much evidence of dissatisfaction, for in truth the chief object of his hazardous venture was defeated by Hiromori's escape.

"The knave will be all the hotter for this rebuff," he muttered as he retraced his steps. "'T were hotter done had I let his rabble pass ere I struck, but by my faith I counted not on such a craven. I must even take to my heels like my young master, lest they should reckon I have lagged from want of will."

Thus soliloquizing, he sheathed his sword, and casting a rueful look at the bodies of his three victims, was about to set off after his companions, when his glance fell on the old serving woman who had acted as Hiromori's guide. She had thrown herself down behind the portal at the foot of the steps leading to the fane, and lay there so motionless that Benkei fancied for a moment some chance buffet had put a final period to her mischievous machinations. But when, raising her not ungentle from the ground, he heard her shrill voice for the first time tremulous with entreaty, such a mood of wrath and loathing took possession of him, that at its aspect the old hag's words dying away on her lips, she gazed with silent terror at her master's darkening face.

Holding her up with one hand, yet without the faintest evidence of effort, he twined his muscular fingers round her withered throat, and for an instant it seemed that no power on earth could save the wretched creature's life, but Benkei had mistaken himself when he set about such a deed.

"Pah!" he exclaimed, casting her from him, "you will live long enough to be punished by your conscience yet. I leave your retribution in juster hands and save my own the stain of your distempered blood."

Fortunately for Benkei's future peace of mind, his anxiety to rejoin Yoshitsune prevented him from paying any further attention to the beklame's condition, for however laudable his forbearance was in intention, it proved abortive in practice. The revulsion of feeling which had sufficed to

turn him from his revengeful design, betrayed him at the same time into an involuntary exercise of his giant thighs, so that when the people in the neighbouring houses ventured to visit the scene of the combat, they found four corpses; three being those of the men at arms who had first been struck down, and one, that of an old woman, whose neck had apparently been broken by a fall, not—as they supposed—from the steps of the fane at the foot of which she lay, but from the unconscious hand of the master she had not scrupled to betray.

Meanwhile Benkei was pursuing his way at a speed to which his huge limbs were little accustomed. He had certainly succeeded in interrupting the execution of Hiromori's design, but on the other hand the respite thus obtained for his friends might be rendered null by his own delay, unless indeed they should decide to set out without him, in which case there was all the more reason for expedition. Stimulated by these reflections and meeting few obstructions in the still unpeopled streets, he reached Shomon's house considerably later than Yoshitsune and Saburo indeed, but still not so much after them as to have caused inconvenience or serious delay.

The whole party, including Iné, were assembled there, and immediately on Benkei's arrival Yoshitsune placed in his hand a letter he had just received from his uncle the Lord Seneschal.

The course Yorinasa suggested in reply to his nephew's offers of service was one which late events rendered peculiarly appropriate. He said that the best aid Yoshitsune could give him in the impending struggle would be to make his way with all speed to Oshiu, and exert his influence to procure Hidetora's prompt action. One sword more or less at Kiyoto, however deftly wielded, could make little difference, whereas the knowledge that a hundred thousand men were marching southward would paralyze many an arm among the Taira allies. As for the Imperial Mandate, its transmission to the various provinces had been undertaken by Yukiye, uncle to Yoshitsune's step-brother, Yoritomo, and it was already well on its way northward. "I should have been glad indeed to meet you face to face," wrote the Seneschal in conclusion, "that we might discuss the events which have hitherto kept us strangers as well as those that will, with the gods' help, presently reseat us in the places from which we have been so long ousted, but since this may not be, let the unity of our action atone for a separation which it rests with ourselves to abridge."

"And now what say you?" asked Yoshitsune after Benkei had perused this letter. "My own inclinations are so much opposed to my judgment that I can scarcely reconcile myself to any decision. Yours therefore shall be the casting vote. Whether it be given for the fight in Kiyoto or the flight to Oshiu, I am resolved to be guided by it."

"Verily, master," Benkei replied, "if the straight road were less plain my poor sagacity might well take a wrong turning, but it seems to me that this is not a case of choice but constraint. The Lord Seneschal's behests are imperative, not only as a matter of discipline but also expediency, and if we have to keep our swords sheathed now, they will be all the keener when the times comes to draw them."

Well said, Benkei!" cried Saburo, breaking the silence with which Yoshitsune, received his follower's counsel. "It may be hard to turn one's back on poised spears and brandished blades, but we fight for a cause not a fancy. Moreover it seems to me that we shall win the affections of neither the Lord Seneschal nor the Earl of Oshiu by joining the melée here against the wish of the former and without consent of the latter."

"So be it then," Yoshitsune interposed with ill-concealed impatience. "If I must needs leave my uncle to face the worst peril alone, and suffer my cousin, Yoshinaka, to be before me in the field, 'twill go hard if I fail hereafter to atone for this tardiness. Let us prepare for our journey with what speed we may lest something interpose to change our purpose."

"Our preparations need not delay us long for the matter of that," said Benkei, "since our swords are all the baggage we may carry."

"Yet perhaps it were not altogether lost time if we waited till you had changed your doublet, Benkei," suggested Saburo, pointing significantly to certain dark stains upon the giant's bosom and sleeves.

"Where got you those Benkei?" Yoshitsune enquired

eagerly. "Is it possible that you carried out your scheme of ejection single-handed after all?"

"Nay, nay, master," replied Benkei laughing. "You give me credit for too much perseverance. The truth is that my feet not being nimble enough to put the distance I desired between myself and Hiromori, I fell in with him on the way somewhat sooner than he expected."

Yoshitsune's face flushed crimson at these words. "Benkei," he exclaimed passionately, "if to this faint-hearted retreat we are about to undertake, is to be added the ignominy of having deserted you at a moment of danger, neither my uncle's counsel nor your countenance shall persuade me to turn my back on Kiyoto."

"You have little cause for compunction on my account," Benkei hastened to explain. "I might have avoided our pursuers with perfect ease, but the place was admirably suited for an ambush and it seemed unreasonable that my own servant should be suffered to act as my enemies' guide."

"Then you by yourself having deliberately waited for Hiromori and his half score of followers, were yet able to continue your way without hurt?" Yoshitsune cried admiringly. "Truly I know not whether to rejoice more at my enemies' weakness or my comrades' strength."

Benkei seemed somewhat astonished at this eulogy. "By my faith," he said, "'tis not displeasing to win praise unawares, but if the truth were told my utmost merit was a lucky speculation. I thought those fellows would not count on finding one of us alone, and if they fled from me, 'twas mainly because they believed me to be in your company."

There was such an air of simplicity and good faith about the strong man's depreciation of his prowess, that his hearers were fain to leave his modesty undisturbed, but from that time Yoshitsune began really to appreciate the loyal manliness of one whose name was destined to be associated with his own in all future histories of chivalry and valour.

Much however as they admired the brave purpose of Benkei's action, neither Yoshitsune nor Saburo failed to perceive that the momentary respite it had procured was likely to be dearly purchased. Hiromori's renewed attempt would surely be as much more formidable as his temporary defeat had been humiliating, and a moment's delay might render his revenge inevitable. Without even pausing therefore to arrange the details of their plan, the whole party, including Shomon, set out from the capital, and travelling with no thought save that of speedy progress, reached, while the morning was still young, that little hostel in the suburbs at which Iné had rested on her journey three months before.

From the first they had foreseen the impossibility of continuing their route together. So large a party must necessarily attract observation, and thus give an easy clue to their pursuers; for that they would be pursued there was no reasonable doubt. Nevertheless it was not strange that in the presence of imminent danger the idea of dividing their strength was particularly distasteful. On what principle was the division to be performed, and who might take upon himself to promise the certainty of reunion? Ever since they set out, Yoshitsune had considered and reconsidered the matter without attaining any satisfactory conclusion. No one of the party was either known to Hiromori, or if known, easily recognized by description, except Benkei and Iné, and there was a fair hope that the latter's flight from the Seneschal's castle was still ignored by the Taira captain. But as for Benkei, not only was he presumed an especial object of pursuit, but also his gigantic proportions made it an easy matter to trace him whatever disguise he might assume. Under these circumstances it seemed imperative that the first principle of division should include the separation of Iné and Benkei, but beyond this there was nothing to mid resolve. To act as Iné's escort would appear like shunning the danger of Benkei's company, while to follow Benkei would be to leave Iné unprotected, and Yoshitsune found it impossible to reconcile himself to either alternative.

Arrived at the hostel, however, Saburo proposed the only arrangement which seemed to meet all the difficulties of the case. He desired, he said, that Iné should leave Kiyoto exactly as she had come there; that is, escorted only by his own three retainers. In this way she would be

most likely to escape observation, and by following at first a route different from that of the others, they might arrange to come together again at some place beyond the reach of pursuit.

To this plan Yoshitsune was fain to give his assent, adopting, however, a modification suggested by Benkei, which was that their routes although different, should be so chosen as to cross at certain points, thus by a little adjustment of time enabling each party to assure itself so far of the other's safety.

Here then they once more parted Yoshitsune, Saburo, Benkei and Shomon proceeding northward by the main road, while Iné and her escort made a long detour to the west. As yet there were no guard-houses to challenge their passage, neither was it at all probable that Hiromori could already have made any dispositions to obstruct their progress. Their only danger lay in pursuit, and under these circumstances one might have expected them to hasten their steps as much as possible. But while Iné's escort strained every nerve to leave the capital far behind them, never did men proceed more leisurely or discover more frequent occasions to loiter than Yoshitsune and his companions. The truth was that anything resembling flight, and above all, flight under such conditions, was equally repugnant to each of the four, so that although they told one another nothing of this sentiment, it found unmistakable expression in the tardiness of their advance.

The first point at which the two routes crossed was a village some thirty miles north of Kiyoto, and it had been agreed that whichever party reached this place first, should there await the other's arrival. Now although in the early part of the day Yoshitsune and his followers found many obstacles to haste in the heat, the dust and the inconvenience of attracting attention, they began towards evening to be strangely uneasy on Iné's behalf, partly no doubt because they had been so long separated from her, but mainly because their own apparent freedom from pursuit suggested the possibility that Hiromori had discovered her traces and overlooked theirs. Thus before sunset they had quickened their pace to one of which such men urged on by such a dread alone were capable, and only halting now and then just sufficiently long to ensure permanence of this effort, they reached the first trysting place a little after the midnight watch had concluded its clanging circuit of the quiet village streets.

As they were approaching the inn Benkei arrested his companions' advance by enquiring what course they proposed to pursue in the event of not finding Iné in the village.

"Surely," said Yoshitsune, "it is not necessary to consider such an unpleasant contingency until it arises?"

"I know not how it may seem to others," replied Benkei, "but since for my part, should we not find our comrades here I intend, with your permission, to set out citywards forthwith by the route they ought to travel, I deem it better to seek your sanction now while we are beyond the range of listening ears."

"Benkei speaks wisely," Shomon interposed, and his forethought reminds me that we are not perhaps doing well in approaching the inn after this fashion. Should it so happen that our friends are already there, we shall have no need of prudence, but if not, our setting out to seek them at such an hour cannot fail to excite suspicion, and yet I think none of us will be content to delay a moment."

All this seemed so clear that the only marvel was it had not already occurred to Yoshitsune himself. He did not however hesitate to adopt his followers' counsel, or to acknowledge its expediency. Shomon was sent forward to ascertain whether Iné had arrived, while the rest of the party turned aside into the avenue of the village temple and there awaited his return.

Saburo had neither offered suggestion nor expressed approval during the progress of these arrangements, but it was easy to comprehend and sympathize with the reason of his reticence. Indeed these four men had so completely appropriated the perils of the journey not only by the route they had chosen but also by their method of pursuing it, that Iné's risk had not hitherto caused them very serious uneasiness, although, as we have seen, it had not by any means been absent from their thoughts. Now however the aspect

of things seemed completely changed. They did not remember that whichever party had arrived first must of necessity have experienced this same solicitude on the other's account, but finding that none had any word of comfort or confidence to relieve the access of disquiet accompanying that moment of inactive expectation, they began to conceive a thousand contingencies, each of which afforded fresh grounds of impatience and remorse. Even Benkei, usually so hopeful, scarcely sought to conceal his dejection, and as he mounted the temple steps to watch for Shomon's return, he looked a very different man from the blithe soldier who had stood that morning in the shadow of the pine-tree, fitting his fingers to the sword that was presently to be raised against odds few would have deemed it anything but madness to encounter.

Yoshitsune was the first to recover from this mood. Coming to Saburo's side, he laid a hand upon his shoulder and said with a laugh: "Why, Saburo, one might fancy we sought occasion to be downcast. Most probably Iné is at this very moment looking out for our arrival at the inn, with less despondency than we, though with juster cause to be anxious. Remember how very little chance there was of any pursuit being directed towards the route she chose."

Saburo raised his head and a sudden gleam of hope shone in his eyes, but it changed almost immediately to a gaze of redoubled apprehension, and Yoshitsune following the direction of his look, saw that Benkei was descending the steps girdling up his loins and adjusting his swords in his girdle after a fashion that needed no explanation.

Almost at the same moment Shomon came running down the street, but his comrades scarcely waited to question him for his aspect conveyed all the information they required. Neither did they pause to take counsel of one another or to cast up the chances that might have delayed Iné's coming. Enough had been said to shew that each was animated by the same resolve, and so, remembering neither the long journey they had already performed nor the fact that they were in all probability hastening to encounter an overwhelming number of foes, they placed themselves forthwith under Benkei's guidance and turned their faces once more towards Kiyoto.

The road was neither so direct nor so easy to travel as the route they had followed in the day time, but for all that, and despite the numerous delays entailed by the enquiries they were obliged to make, the drawing saw them but a very few miles distant from the point where they had parted with Iné on the preceding morning. Thus with scant intervals of rest they had traversed some sixty miles between two sunrises, and finding at this stage a roadside hostel just opening its doors to early wayfarers, they determined to rest a while, not indeed because they felt themselves fatigued, but since they knew that they must now be on the eve of adventures which would tax their powers to the utmost.

For having been able to assure themselves that Iné had not reached this point on her journey northwards, they might no longer doubt the cause of her detention. Saburo indeed still hoped that her escort had discovered their pursuers in time to avoid them by choosing another route, for he knew the men too well to believe them capable of surrendering their charge so long as they might wield a weapon, and of such an encounter as must have preceded their defeat there was yet no evidence. Moreover, being ignorant of Hiromori's feelings towards Iné, he found comfort in the reflection that under any circumstances her life would be safe, since the Taira captain's only purpose in detaining her would be to obtain tidings of his enemies' destination, and Yoshitsune, it need hardly be said, was careful not to impart any information that might deprive his comrade of this small solace.

Benkei, whose intimate knowledge of the country had caused him to be chosen as guide, now assumed the leadership of the party, for little scrutiny was needed to shew that both Yoshitsune and Saburo were no longer capable of calm reflection. Yet these were men whose pulses the peril of death might not quicken!

On entering the hostel therefore, Benkei was the first to accost the landlord. Had any travellers, answering to the description of Iné and her companions, stopped at the inn or been observed to pass it during the last twenty-four hours?

The question was put plainly and without any attempt to conceal the importance attached to the reply, for if Benkei himself retained the power to be discreet, he might not exercise it in the presence of such impatience as his companions displayed. It was not wonderful therefore that the landlord, perturbed by the abrupt and prepotent tone of his questioner, should have hesitated to answer, or answering, should have imparted no little emphasis to his negation.

Benkei however evidently found something particularly offensive in the man's demeanour, for without another word he seized him by the throat and carried him struggling and gasping outside the porch.

"Now, my master," he said, just relaxing his iron grip sufficiently to allow his victim to breathe, "I think you can clearly see the result of anything like mutiny. Answer me therefore as plainly and briefly as you can. What guests have you in your hostel?"

Benkei's interdiction of diffuseness seemed somewhat superfluous, for the half choked landlord had more difficulty in uttering than in curtailing his words.

"Six men at arms and an esquire," he gasped, and whether he would have added anything to this statement it was impossible to tell, for the terrible fingers again closed on his throat as Benkei turned to restrain the excitement this information had caused his companions.

"And for what purpose are they here? Ha! you hesitate, do you?"

"Nay, Sir, nay; for the love of heaven suffer me to breathe and I will tell you all," pleaded the landlord, clinging convulsively to Benkei's arm. "They are watching for some folks who are expected presently to pass cityward on even such an errand as your honour's seems to be."

"One more question. Know you whether they or their fellows have made any capture or encountered any resistance on their way hither?"

Benkei's voice was now scarcely less hoarse or tremulous than that of the man he entreated so roughly, for his soul was stirred beyond endurance by the aspect of Saburo's awful anxiety and of the pallid face, damp with dews of agony, his companion stretched forward in expectation of the other's reply.

"I heard some talk of a combat, Sir, in which my guests' party was severely handled," the landlord answered; "but as I hope to be alive to-morrow I know not who survived or who fell in the fight."

Benkei dropped the man as though his strength had suddenly failed him, and stepping back placed himself behind Saburo, thus intimating that he not only resigned the authority he had assumed, but was also prepared to yield implicit obedience to his unfortunate comrade.

Yoshitsune understood the significance of this action. "Saburo," he said, "the direction of our course is in your hands. Three swords are at your disposal for any and every design you appoint."

Saburo had dropped his head upon his bosom and his sturdy body seemed to have contracted and shrunk as if the blight of old age had suddenly fallen on him. When he spoke his comrades perceived that they were listening to one whose mind might no longer take note of anything save the purpose born of his anguish. "Let the man warn these guests of his," he said, "that the enemies they seek are awaiting them here."

"You have heard your orders," said Benkei, turning to the landlord, "why do you hesitate to obey them?"

"Sir," the other remonstrated, "they are sorer strong men and well armed. If you must needs have to do with them, I can bring you into their presence before they have time to don their helmets."

Benkei, without deigning to notice this suggestion, strode forward and made as though he would have treated the landlord to a repetition of his previous experience, but the man would not trust himself again within the giant's clutches. Springing up, he ran hurriedly into the inn, leaving the four companions standing with their backs to the rising sun, and the memory of a fair face they had all learned to love visiting them with strange distinctness in that quiet moment between the challenge and the combat.

(To be continued.)

DOUBLE ACROSTIC.

Hail, welcome guest! whose kindly face
Beams on us year by year,—
In whose bright smile we well may trace
A vision of good cheer!
With mirth and jollity and fun
Thy pleasant visits quickly run;
Too swift, alas!—ere well begun
Their termination's near!

1.
A word which oft your ears may greet,
T'express society's elite.

2.
The busy hum of toiling crowd
Is heard around me long and loud.

3.
Though "men may come and men may go,"
Yet I for ever onward flow.

4.
In outward show you can't confide,
Be wise, and take a peep inside.

5.
A useful corps in foreign state;
"Police" might well their name translate.

6.
A span of time is needed here;
Perhaps a day, perhaps a year.

7.
A wondrous storehouse;—wealth untold
Is oft contained within its hold.

8.
Their fruitful store now orchards yield,
And golden harvests grace the field.

9.
A lonely stroll, 'neath moonshine bright,
Is most conducive to this light.

METEOROLOGICAL REPORTS

FOR WEEK BEGINNING FRIDAY, DECEMBER 12TH, 1879.

Observatory of Daigaku, Moto-Fujimicho, Hongō, Tokio, Japan.

REMARKS.

Heavy line represents barometer.
Light continuous line—max. & min. thermometers.
Dotted line—represents velocity of wind.
.....percentage of humidity.
Max. velocity of wind 23 miles per hour on Tuesday, 9 p.m.
The barometer is reduced to the freezing point and to the level of the sea.
The highest barometer for the week was 30.189 inches on Friday at 10 p.m. and the lowest was 29.695 on Tuesday at 10 p.m. The range was almost exactly one half inch. The lowest temperature recorded during this week was 31° 5 on Friday and the highest 58° 7 on Wednesday. The only rain during the week was on Tuesday night and Wednesday morning, the total amount being 1.44 inches.

SHIPPING INTELLIGENCE.

INWARDS.

Dec. 14. Japanese steamer *Saminoye Maru*, Frabm, 856, from Hakodate, Mails and General, to M. B. Co.
Dec. 15. Japanese steamer *Tokai Maru*, Hogg, 652, from Sendai Bay, Mails and General, to M. B. Co.
Dec. 15. British barque *South Scott*, Estall, 662, from London, General, to L. Knittler & Co.
Dec. 16. Japanese steamer *Seirio Maru*, Franck, 486, from Bonin Islands, Mails and General, to M. B. Co.
Dec. 16. Japanese steamer *Shurio Maru*, Thompson, 524, from Kobe, Mails and General, to M. B. Co.
Dec. 18. Japanese steamer *Tokio Maru*, Swain, 1,146, from Shanghai and ports, Mails and General, to M. B. Co.
Dec. 19. Japanese steamer *Kokunoye Maru*, Dithlefsen, 1,133, from Kobe, Mails and General, to M. B. Co.
Dec. 19. H. M. Gun-vessel *Hornet*, Commauder J. S. Eaton, 584, 506 H. P., 4-guns, 73 men, from Kobe.
Dec. 20. French steamer *Libre*, Reynier, 1,726, from Hongkong, Mails and General, to M. M. Co.

PASSENGERS.

Per Japanese steamer *Saminoye Maru* from Hakodate:—Rev. Mr. Denorey and family. 60 Japanese in steerage.

Per Japanese steamer *Tokai Maru* from Sendai Bay:—8 Japanese in steerage.

Per British barque *Sarah Scott* from London:—3 Japanese in steerage.

Per Japanese steamer *Sharia Maru* from Kobe:—100 Japanese in steerage.

Per Japanese steamer *Tokio Maru* from Shanghai & ports:—Messrs. J. J. Marieno, W. R. Seaver, W. H. Stone, Mr. and Mrs. Thomas, Miss B. Fraser, Miss W. J. Barrows, Capt. Pyne, Mr. Mayeda, Consul to Fusan, Corea, Lieut. Gen. Muria, Col. A. Ibe, Major T. Shoda, Major M. Shimidzu, Capt. R. Abi, Lieut. K. Kagawa, Major M. Mamiya, Messrs. Jenkins, Ch. Schmitz, A. Greppe, C. H. Macy, Nugi, and Harikawa, Mr. and Mrs. Santo, Messrs. Suzuki, Kajima, Yamamoto, Yoshitomi, Sonoda, Nakauo, Saito, Nakaya, Shimomura, Nishiwaki, and Mr. and Mrs. Eshwring, in cabin, and 2 Europeans, 12 Chinese and 183 Japanese in steerage.

Per French steamer *Tigre* from Hongkong:—Messrs. Colomb, Ogura, Yoei and Salabelle.

OUTWARDS.

Dec. 13, British steamer *Unwoblation*, Young, 764, for Kobe and Nagasaki, General, despatched by Cornes & Co.

Dec. 13, H. B. M.'s gun-vessel *Seinger*, Commander Tudor, 430 tons, 4 guns, for Kobe.

Dec. 13, Japanese steamer *Tubango Maru*, Young, 1,230, for Hongkong, Mails and General, despatched by M. B. Co.

Dec. 15, French steamer *Tanaia*, De la Marcello, 1,735, for Hongkong, Mails and General, despatched by M. M. Co.

Dec. 17, Japanese steamer *Hiroshima Maru*, Haswell, 1,200, for Shanghai and ports, Mails and General, despatched by M. B. Co.

Dec. 19, Italian corvette *Vettor Pisani*, Captain H. R. H. Tomaso di Savoia, Duke of Genua, 1,800, 12 guns, for Yokosuka.

Dec. 19, Japanese steamer *Tokai Maru*, Hogg, 1,402, for Kobe, Mails and General, despatched by M. B. Co.

PASSENGERS.

Per Japanese steamer *Takaago Maru*, for Hongkong via Kobe:—Mr. and Mrs. Seykeedo, Messrs. Seykeedo Keyjee, H. J. Hawkins, Muramatsu, J. Z. Atkinson, P. T. Goodison, J. Tirrell.

Per French steamer *Tanaia* for Hongkong:—Mr. Turner, H. E. Alvarez, Spanish Minister, Messrs. C. D. Montaudin, De Hemptine, J. H. Wong, A. Moretti, T. Morgan, Insulviui, Wohlfarth, A. Exposito, L. Manzarelli and L. Amendola.

Dec. 15, British ship *Prince Frederick*, Clague, 1,496, for Hongkong, General, despatched by G. & J. Trading Co.

Dec. 15, Japanese steamer *Sumida Maru*, Hubenet, 896, for Hakodate, Mails and General, despatched by M. B. Co.

Dec. 16, American 3-masted schooner *Katie Flickenger*, Gilman, 472, for Hongkong, General, despatched by Walsh, Hall & Co.

Per Japanese steamer *Hiroshima Maru*, for Shanghai and way ports:—Mr. and Mrs. Townsend, Mrs. T. W. Gulick and two children, Mr. and Mrs. F. Bridge, European maid, and four children, Mrs. L. S. Whiting, Rev. D. C. Green, Dr. Lawrenson, Messrs. Mashime, E. King and servant, Onewa Chobe, Ishikawa, B. Roth, Takawa, H. St. John Smith, E. C. Kirby, P. A. Perrin, J. Milne, Yamaguchi, Maycesee, and Dr. Marten.

REPORTS.

The Japanese steamer *Sumidaga Maru* reports: Left Hakodate on 12th instant, midnight. Experienced fine weather with light S.W. winds to port. Arrived at 3 p.m. on the 14th instant.

The Japanese steamer *Tokai Maru* reports: Left Sendai Bay at 4.30 p.m. on the 13th instant. Fine clear weather throughout with variable winds. Arrived at 3.30 a.m. on the 15th instant at Yokohama.

The British barque *Sarah Scott* reports: Left London on the 4th of July; had strong westerly gales in the English Channel, and unfavorable weather in the Atlantic. Ran the casting down on the 39th parallel, before heavy gales and mountainous sea, during which the ship suffered loss of sails and some light spars, and had her bulwarks and chain plates strained. Came up through the Atlas Straits with light winds and calms; and experienced moderate variable winds and weather in the Pacific to Omai-saki, off which had a fresh gale. Arrived in port on the 15th of December. Passage, 163 days.

The Japanese steamer *Sharia Maru* reports: Left Kobe on Sunday evening, the 14th instant, at 7 p.m. Experienced variable E.N.E. winds with moderate weather throughout. Arrived at 1 p.m. 16th instant. Passage 42 hours.

The Japanese steamer *Tokio Maru* reports: Left Shanghai 7 a.m. 10th December for Nagasaki, experienced fine weather. Arrived at Nagasaki, 2.35 a.m. 12th. Left Nagasaki for Shimonoseki, 6.20 p.m. 12th. Arrived at 10.20 a.m. 13th. Left Shimonoseki for Kobe, 2.40 p.m. 13th. Arrived 4.35 p.m. 14th. Left Kobe for Yokohama, 6 p.m. 16th. Arrived at Yokohama, 6 a.m. 18th. From Kobe to port experienced very strong N. W. gale and heavy swell with clear weather.

The Japanese steamer *Kokumaru Maru* reports: Fine weather till Rock Island, from there to port light breeze and rain.

COMMERCIAL INTELLIGENCE.

IMPORTS.—Generally are still very dull, notwithstanding the spurt in 16/24 Yarn, which would almost seem to have died out again. *Bombay* spinings, however, are still enquired for. *Shirtings* quite neglected as indeed are all *Manchester* goods, except *Black Velvets*. *Woolens* are dull and inanimate.

COTTON YARNS:—

Nos. 16 to 24 Common to Medium ... per picul	\$26.50 to 32.75
" " Good to Best ... "	\$33.25 to 34.25
Bombay, No. 20 No. ... "	\$29.50 to 31.00
Nos. 28 to 32 Common to Medium ... "	\$35.00 to 36.00
" " Good to Best ... "	\$37.00 to 38.00
" 38 to 42 ... "	\$39.00 to 40.00

COTTON PIECE GOODS:—

Grey Shirtings:—7 lb. per piece 28½ yds. 39 in.	\$1.60 to 1.87½
" " 8½ lb. " 38½ " 39 in.	\$1.85 to 2.25
" " 9 lb. " 38½ " 45 in.	\$2.15 to 2.55
T. Cloths:—7 lb. " 24 yds. 32 in. per piece	\$1.40 to 1.65
Drills, English: 14-15 lb. 40 " 30 in.	\$2.40 to 2.60
Indigo Shirtings:— " 12 " 44 in.	\$1.80 to 1.90
Prints:—Assorted " 24 " 30 in.	\$1.25 to 2.60
Cotton Italians & Sateens Black 32 in.	\$0.11 to .14
Turkey Reds: 2 to 2½ lb. 24 yds. 30 in.	\$1.35 to 1.55
Do. 2½ to 2½ lb. 24 " 30 in.	\$1.50 to 1.65
Do. 3 lb. " 24 " 30 in.	\$1.75 to 1.90

COTTON PIECE GOODS:—Continued.

Velvets:—Black ... 35 " 22 in. per piece	\$9.00 to 10.00
Victoria Lawns:— " 12 " 42/3 in. "	\$0.75 to 0.80
Taffetas:— " 12 " 43 in. "	\$1.75 to 2.00

WOOLLENS:—

Plain Orleans ... 40-42 yds. 32 in.	5.25 to 6.25
Figured Orleans ... 29-30 yds. 31 in.	3.75 to 5.00
Lastings ... 29-30 yds. 31 in.	10.00 to 11.00
Italian Cloth ... 30 yds. 32 in.	0.22 to 0.32
Camlet Cords ... 29-30 yds. 22 in.	4.00 to 5.00
Mousselines de Laines:—Crape 24 yds. 30 in.	0.17½ to 0.17½
do. Itajime 24 yds. 30 in.	0.23 to 0.26½
do. Yuzen 24 yds. 30 in.	0.35 to 0.45
Cloths, all wool plain or fancy ... 48 in. to 52 in.	0.80 to 1.50
Pilots ... 54 in. to 56 in.	0.40 to 0.50
Presidents ... 54 in. to 56 in.	0.55 to 0.67½
Union ... 54 in. to 56 in.	0.32½ to 0.62½
Blankets, green 6 to 8 lbs ... per lb.	0.35 to 0.41

SUGAR.—Business has been on a very small scale. Stocks are estimated at 14,000 piculs.

Sugar:—Tahoe in bag ... per picul	\$5.60 to \$5.70
" " in basket ... "	\$5.20 to \$5.35
Taiwanfoo in bag ... "	\$5.70
do. in basket ... "	\$5.50
Ching-pak and Ke-pak ... "	\$8.00 to \$9.00

China No. 4-5 Kongfun & Kook-fah ... per picul	\$6.25 to \$8.00
Daitong ... "	\$4.00 to \$4.40
Japan Rice ... "	\$2.60 to \$3.00
Kerosene Oil ... "	\$1.78 to \$1.80
Newchwang Press ... "	\$2.20 to \$2.25

KEROSENE.—We hear of the sale of a few lots at \$1.80. Stocks are held to be about 280,000 cases.

EXPORTS.

SILK.—The demand has been small during the past week. Hanks especially have been neglected, but still holders are not inclined to make concessions of any importance. Kakedas have found buyers at quotations and Filatures, as well as the reeled Maibash, continue in favour.

Settlements:—180 bales of Hanks, 95 bales of Oshins and Kakedas, and 60 bales of Filatures, total 335 bales. Arrivals 390 bales; Stocks 4,100 bales. Total export 11,606 bales against 11,526 bales last season.

	In London at 3/10 per lb.	In Lyons at fr. 4.85. per kilo.		In London at 3/10. per lb.	In Lyons at fr. 4.85. per kilo.

MISCELLANEOUS.

**W. & A. GILBEY'S
WINES AND SPIRITS.**

W. & A. GILBEY have special facilities for carrying on an extensive Foreign Trade, having held for many years in their Excise Bonded Stores, for the purpose of their Home Trade, a stock of not less than 12,000 Casks of Wines and Spirits, which are equally available for Export. These stores are by far the largest private Duty Free Warehouses in the World, and are under the supervision of a staff of Excise Officers specially attached to these Warehouses.

THE EXTENT of W. & A. Gilbey's purchases enables them to give the best VALUE to the public, as a twentieth part of the Foreign Wines consumed in the United Kingdom is supplied from their stock. In the year 1876 W. & A. Gilbey paid duty on 1,881,049 gallons of Wines and Spirits, and the average quantity bottled and sent out by them daily was 3,050 dozens or 36,600 bottles.

QUALITY is guaranteed by W. & A. Gilbey, and is the same whether the Wines or Spirits are obtained direct from their Head Establishments or from any of their Agents. The purity and genuineness of every article in this list are guaranteed in accordance with Act of Parliament, 38 and 39 Vict., Cap. 63.

W. & A. Gilbey have always adhered to the standard of Bottle Measure recently recognised by the Government, namely—

6 bottles contain one gallon; 12 half-bottles contain one gallon.

SECURITY is ensured to the purchaser, each bottle bearing W. & A. Gilbey's seal and label guaranteeing quality and measure, and the strength also in the case of Spirits.

W. & A. Gilbey's Head Establishments:—

England.—(Offices) Pantheon, Oxford Street, London; (Warehouses, Duty Paid) Oval Road, Camden Town, London.

Ireland.—(Offices) Upper Sackville Street, Dublin; (Warehouses, Duty Paid) Upper Sackville St., Dublin.

Scotland.—(Offices) Haymarket, West End, Edinburgh; (Warehouses, Duty Paid) Haymarket, West End, Edinburgh.

France.—Principal Establishment, Chateau Loudenne, near St. Estephe, Medoc.

Excise Bonded Stores.—Warehouses, Nos. 1 to 5, North-Western Goods Station, and Bouny Street, Camden Town, London.

Distillery.—James Street, Camden Town, London.

Printing Department.—Poland Street, Oxford Street, London.

KEATING'S COUGH LOZENGES,

COUGHS,
ASTHMA,
BRONCHITIS,

ACCUMULATION OF PHLEGM.

Composed of the purest articles. These Lozenges contain no opium nor any deleterious drug, therefore the most delicate can take them with perfect confidence. Their beneficial effect is speedy and certain. The old unfailing family remedy is daily recommended by the most eminent Physicians. (In use nearly 60 years).

MEDICAL TESTIMONY.

July 25th, 1877. 23, Cold Harbour Lane, London.

Sir,—Your Lozenges are excellent, and their beneficial effects most reliable. I strongly recommend them in cases of Cough and Asthma. You are at liberty to state this as my opinion, formed from many years experience.

J. BRINGLOE, M.R.C.S.L., L.S.A., L.M.

Mr. T. KEATING, Indian Medical Service.

Dear Sir,—Having tried your Lozenges in India, I have much pleasure in testifying to their beneficial effects in cases of Incipient Consumption, Asthma and Bronchial Affections. I have prescribed them largely, with the best results.

W. B. G.—, Apothecary, H.M.S.

KEATING'S COUGH LOZENGES are sold by all Chemists, in bottles, of various sizes, each having the words "KEATING'S Cough Lozenges" engraven on the government stamp.

KEATING'S WORM TABLETS,

A PURELY VEGETABLE SWEETMEAT, both in appearance and taste, furnishing a most agreeable method of administering the only certain remedy for **INTESTINAL** or **THREAD WORMS**. It is a perfectly safe and mild preparation, and is especially adapted for Children.—**SOLD IN BOTTLES BY ALL CHEMISTS.**

Proprietor, **THOMAS KEATING, London,**

Export Chemist and Druggist.

THE GREATEST

WONDER OF MODERN TIMES!
HOLLOWAY'S PILLS.

Persons suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

Sir SAMUEL BAKER,

in his work entitled "The Nile Tributaries in Abyssinia," says, "I ordered the dragoman Mahomet to inform the Fakery that I was a Doctor, and that I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as possessing unmistakable purgative properties they create an undeniable effect upon the patient, which satisfies him of their value."

SIMPLE, SAFE AND CERTAIN!
HOLLOWAY'S OINTMENT.

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

Mr. J. T. COOPER,

In his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls, butter, and horse-feed poured in upon us, until at last a tea-spoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining stock." Sold by all Chemists and Medicine Vendors throughout the World

JAPANESE RAW SILK IN AMERICA.

IN an article on "Silk in America," in the *Japan Weekly Mail* of the 13th instant, we alluded to the remarkable recent increase in the export of the "noble article" from Japan to the United States, in which latter country, it is evident, a large and rapidly augmenting manufacturing industry is now firmly established. While the quantity of the raw material imported from Japan was somewhat less than that derived from Europe, and about half the amount received from Shanghai, it had yet advanced in a degree infinitely exceeding that attained by those centres of supply. It is of considerable moment to bear in mind that Yokohama despatched to America in 1878 one hundred and forty-eight per cent more silk than in 1877, and to remember that Japan has on the other side of the Pacific its most accessible market and the one most capable of extension. Without neglecting their older customers, those concerned in the silk industry of Japan should realize that America is the country which is likely to make the most extensive future demand upon their resources. And, above all, while proud of the success which they have already attained there for their material, they should keep ever before them the caution conveyed by the Secretary of the Silk Association of America to the effect that the reputation of their goods has been very rapidly acquired: it may be lost with equal celerity by carelessness. Their prospects, at present, apart from the undue fluctuation which fashion and speculation impart to the value of silk, for a permanent absorption of Japanese reelings in America, are excellent. It appears that all attempts, on any large scale, to produce cocoons there have been abandoned. The expense of labour, joined to other causes, will probably prevent any others being made except in case of great necessity. Mr. Wyckoff, from whose report we quoted in our previous review, dwells

with some emphasis upon this point. He says that, since 1840, the substance of which silk goods are made has not been produced in the States. Only a few scattered experiments, of little profit and no commercial importance, have been made from time to time since that date. For several years previously sericulture had been a business of some development in suitable localities; but it was annihilated about thirty years ago by the ruin which followed too great speculations in mulberry plantations, and a disastrous and universal blight of the trees. It is still true that healthy silkworms can be bred and educated throughout a large extent of the northern portion of the western continent by any one who has time, patience, and mulberry trees at command; but the possessor of even these facilities has to consider the all important question whether he can dispose of his cocoons at a profit. It is not these, it is reeled silk that the manufacturer requires. An elementary maxim of the trade is that reeling is the most important process in the preparation of raw silk, and the prime factor in imparting value to the production. It is best conducted in filatures where labour, at once cheap and skilled, can be applied. At this day no other country in the world possesses these conditions in the same degree as Japan, who should continue to be mindful of her advantages in this respect, and careful to maintain and make the best possible use of them. To her it is a matter of special significance that there is no filature now in the whole length and breadth of the United States territory. And, in the present condition of the labour market that country desires none, so long as it can obtain the fibre for its looms in the state of perfection in which it has recently been received from the reels of this empire. The reasonable conclusions arrived at, from all that has been said and written on the problem whether it would not be practicable to grow silk profitably in the republic, are against the enterprise. The experience of Australia, where so far no silk manufacturing industry exists, and where several efforts have been made to establish magnaneries in which cocoons can be produced for export, tends in the same direction. Indeed, universal experimental lessons on the subject teach that it is not at all desirable to undertake sericulture anywhere on an extensive scale, as the industry is not likely to prove remunerative even in a small way, if the proprietor must first make considerable outlay for land and mulberry trees, or has to hire labor specially, or at even moderate rates, for the undertaking. If the women and children of a peasant household can rear silkworms, in addition to their usual duties; and if a sufficient number of families in a neighborhood can be employed to keep a filature busy, then capital will always be forthcoming to erect the necessary works and machinery, and to train the operatives. These conditions have been found to obtain with peculiar advantage in Japan; and there they have been utilized with results, excellent indeed, but well capable of wider scope and corresponding profit.

Only twenty-four per cent of the raw silk consumed in

America is shipped from Europe: the remaining large proportion arrives from Asia; and even some of that sent from England is of oriental origin. Of the whole quantity there is very little "country" silk, for the reason that that staple requires much labor to be expended upon it in manufacturing processes. The material produced in China, being, in the first instance, of the "country" kind, has to be re-reeled; whereas, owing to its filatures, Japan sends a fibre that is equal in quality to the best European sorts. We presume that it is generally known that "country" silk is that which is reeled in households and by primitive methods. The title "filature" explains itself. In Asia, as in Europe, the coarser and inferior sorts are kept at home. The finest and best are exported.

Mr. Wyckoff makes a practical and interesting comparison between the action, in this particular enterprise, of the two sericultural populations of the remote orient. In China many years and no little effort were required to impress upon the people the necessity of re-reeling, to suit the requirements of the American market. Reels were made in the United States and sent to China, where they were only brought into use at all by the urgent and repeated counsels of the representatives of export firms; and even then the work was often found to be very carelessly done. Then, considerable adulteration, that fetish of Chinese trade, was persisted in, sugar, salt, rice and acetate of lead being introduced with great profusion into the merchandize. "The Japanese have taken a different course. Within four or five years they have established a number of filatures, where excellent work is performed. The government has encouraged the work, and owns one of the filatures, where skilled operatives from Europe were employed at first, and native labour has since been educated. The result has been that, while the Chinese have improved very little, the Japanese have advanced with singular rapidity, and their silk has taken rank with the best in our market. No fraud is attempted by adulteration in Japanese silks, and though there is, of course, some variation in their quality, their tendency is toward a uniformly higher standard. The amount of Japanese silk sent to this market is steadily increasing." Here we find a remarkable and very pertinent instance of the enormous progress made by Japan in a period which, as compared with the history of western countries, may be computed by days. Writing in 1874, Mr. Ernest de Baviera said that, notwithstanding the importance of Japan as a sericultural country, the technical processes of filature were unknown there till two years previously. In 1872 the first filature on the French system was founded at Tomioka. A few months subsequently another was erected in Tokio. Even when he published his valuable essay, the simple apparatus of the pristine silk-workers was employed for nearly the whole production of the raw silk of Japan. Thus the manufacturing perfection noticed by Mr. Wyckoff has been attained in a period of five years time, an achievement at least as remarkable as the extraordinary alterations and improvements, which he refers to as frequently and rapidly necessitated, in American machinery by the demands of fashion for the woven fabric. It would be unfair, however, to underrate the value of, and good service rendered by, the unpretentious implements invented and long employed by the forefathers of the existing race of Japanese workers in the produce of the bombyx. An article, recently published in our daily issue, from the *Sydney Mail*, shows the admiration which the magnificent out-turn of Japanese looms—and most of these are as primitive as they ever were—has excited at the New South Wales Exhibition. And, again to quote Mr. de Baviera, the Japanese silks which appeared on the European market in the years immediately

following the opening of this country, by no means betrayed the primitive system employed for reeling and, as for the manufactured stuffs, they appeared quite equal to the fullness of modern industrial effort in the west. "Industry, skill, and above all a great expenditure of time, in these countries, closed as they were to foreign civilization, had obtained results little inferior to those which our industries owe to the progress of science." Patience, perseverance, and dexterity are the qualities which have gained for Japan her well earned notoriety not only in the silk trade, whether for raw material or woven tissues—but in numerous other departments of artistic manufacture. They should be prized as a precious heritage to be cultivated and improved, and sedulously employed in those industries where scientific invention is rapidly superseding, with its wondrous and all but sentient apparatus, the old methods where manual work was but ill aided by rude mechanical appliances. Still possessing her former advantages of cheap, painstaking, enduring, and marvellously dexterous labour, performed by docile, sober, frugal artisans, who take a pride and pleasure in their operations, Japan has now advantages even greater than those she formerly possessed over the same classes in the occidental world; and there is every hope and prospect that she will continue to turn them to good account in those departments of industry which are still her glory and her force.

Before concluding this article we think it right to add a few words in support of our proposition that particular attention ought to be paid in this vicinity to the wants of the American silk market. The authority from whom we quote draws attention to the marked change which has taken place in the currents of trade from and to the United States since the opening of the direct routes thence to Asia. It is true of raw silk that, as it is a precious article of small bulk, the freight on it adds little to its cost, even though it may have to go more than half way round the world to reach its destination. Hence one might deem that it would matter little to American buyers whether they purchased their raw material in London, Lyons, or Yokohama. In fact the centrality of the first-named emporium, its remarkable eminence as a silk market, and the facilities it offers not only of choice, but for handling, sale, and purchase, might be so many effective reasons for their still resorting thither for their supplies from Asia, if the mere gain in cost of conveyance were all that could be set against the advantages to be derived from purchase nearer to the place of production. But by the new routes the great aim of modern commerce is realized. The bales destined for America reach their ultimate bourn much more rapidly than in former years, and so cost less in insurance and interest on capital, and incur less risk of loss through a depreciation in price while in transit. The growing importance of the American factories as consumers of raw silk may best be illustrated by the statement that the receipts in United States ports were in 1878 double what they were in 1870. In the former year they were 738,381 pounds; in the latter 1,590,663 pounds. It is in the nature of trade in the staple, and the precarious conditions on which its supply depends, that there should have been fluctuations in the interval; but this circumstance does not detract from the significance of the ultimate augmentation.

MERIT AND DETRACTION.

WHO are the people? In India, for instance, are they simply composed of the few thousand members of the dominant race, with its civil and military services, and the component parts of the mercantile establishments, of foreign

origin, which control the trade of the ports and supply the indigenous population with such articles of extraneous manufacture as it needs, or has been, by force of custom born of conquest, brought to imagine that it requires? Or do the hundreds of thousands who constitute the consuming and producing classes of Hindustan—the two hundred millions of inhabitants who toil in the various departments of agricultural, artistic and domestic industries—count for nothing in the problem of political economy, the solution whereof demands the definition of that unknown term, “the people?” Or, in Hongkong, are the people composed of the comparatively few heads and dependents of the English and other foreign firms which are there established; or have the hundred-fold more numerous Chinese residents any part or place in the category? It would appear that some journalists would answer the latter part of this query in the negative. The last number of a London summary for the Far East, which, in matters relating to the English colony in China, appears to be incapable of an independent opinion, and to pose only as the echo of distant sounds, often issuing from the diapason of partiality, reverberates with such a note. We now hear from London faint repetition of what we have heard in China, with the difference that the echo, like some quaint natural mockers in queer mountain corners, travesties or emphasizes the peal of noise without which it would be silent. Thus:—“Mr. Pope Hennessy defies popular feeling, and laughs sound precedent to scorn. What are such things to a master mind like his if they collide with his notions of what he conceives should be done? He forgets, however, the grand fact that sound government is only possible where the will of an intelligent people is consulted and considered; and that the governor who rides rough-shod over a peaceful and law-abiding community, whose only object was their own security and the honour of the British name, is a despot, fit only for the dark ages of the world’s history.”

What is the “object” of British, or French, or American, or German, or any other, merchants, lawyers, clergymen, journalists, or other workers in any square of the chequered plan of existence, seeking new spheres for their industry or talent, we will not take the trouble to consider, having for the present to notice the immediate relations of one colonial governor with his “people.”

Years of experience accumulated upon experience, in the routine of difficult and complicated duties, have brought the foreign civil service of Great Britain, both in its colonial and diplomatic branches, to so smooth a working point that it is only necessary, as a general rule, for those who are charged with its administration, in gross or detail, to follow precedent, if they merely desire to ensure such a reasonable measure of success in their achievements as is compatible with their own comfort and enjoyment. It is a well-established and usually recognized fact that the heads of departments at home, who have many things to occupy their time and attention, prefer not to be too much troubled about matters, which, though they may appear locally to be of considerable moment, at a distance wear that trivial aspect which remoteness lends. Present advantage very much depends upon avoiding rather than endeavoring to remove difficulties. It is so much easier to go round an obstacle than to level it. It may be a fact that the obstacle remains; but how much trouble has been dispensed with by prudently leaving it alone. This is true in official as well as private life. To follow a well worn groove, to travel in the track of precedent, to coincide with popular sentiment, has been found by governors, heads of offices, and subordinates, to be the surest way to gain golden opinions and to obtain promotion. And it is not astonishing to find the easiest plan the one most commonly pursued. It can frequently be followed without any sacrifice of conscience. Men of independent character and

high ability have found safety in its general scheme. Australian and other colonial viceroys can often perform the functions of their high position with assiduity and credit, and yet not ruffle the susceptibilities of those they govern; and this is the usual course of affairs, the popularity of colonial rulers being, under ordinary circumstances, a mere matter of degree, depending much upon the quantity of personal magnetism possessed by each incumbent. How admirably this theory can be illustrated is shown by the London paper, which has furnished us with the text of this article, in its encomium upon the last governor of Hongkong, “who was always careful not to tread upon the rights of the people.” Had he been aware of the extent of the abuses about him, he would probably have “trodden,” and rather heavily too.

Only occasionally do questions of anxiety occur to trouble the even tenor of the way of the administrator of a British dependency; and these questions are nearly always dependent upon some clashing or mixture of races. Sometimes points arise so obtrusively that the one responsible person, if he wishes to maintain his integrity and self-respect, must notice and deal with them. It would hardly be too much to say that it is his misfortune when such is the case. For, even in provinces where aboriginal races still dwell, he may not encounter difficulty. Lord Dufferin, in Canada, found a North American Indian policy, already in operation, remarkable for its benevolence and liberality. He followed it safely, easily, successfully. Had circumstances been different, had he been conscientiously compelled to pursue a course, in the interests of humanity, hostile to the supposed interests of the colonists, all his eloquence, wit, geniality, hospitality, and administrative ability, would not have redeemed him from the opprobrium of his “people.” When he can sail with the stream, Lord Lytton is one of the most universally liked men alive. Yet he is far from possessing the affection of his European subjects in India. The fact is, he found himself obliged to take a humane interest in the native population which British residents thought opposed to their rights. He is sustained, as he ought to be, by the Imperial government. Sir Bartle Frere’s system was a different one. In South Africa his policy was certainly not conciliatory to the aboriginal races. The history of the past twelve months will show sufficiently what results he managed to achieve. Yet he, too, is supported by his superiors, who, however, would have been in a better case if they had been represented by an agent of another stamp, working a less antagonistic policy. In fact, it is a principle of the Imperial scheme, that each individual, entrusted with the direction of any part of it, shall receive the support of those by whom he is delegated. If he were unworthy of such assistance he would not have been appointed, is the unwritten maxim applied to him. All the better for him if his actions are morally worthy of the countenance on which he can depend. How strong a man must feel in himself, if he is conscious that he has earned it by the consistent maintenance of a firm, yet mild, gentle, and humane policy.

This and other aspects of the question of the relation of Governors to subject or inferior populations, tend to show that there must be cases in which it is impossible for the former to travel in the well lubricated groove which winds through the avenues of popularity among the “people” of the dominant race. Occasionally, and never before his presence is needed, a man appears whose nature defies mere conventional and prescribed restrictions; who must, regardless of all consequences to himself or that calumny which, however baseless, leaves a temporary slime on the fairest reputations, take a high ground from which to view the responsibilities of his position. Come what may, should the vulgar sky of popular scorn and hatred burst, and void its thunders upon him, he holds his way calm and unmoved. He must do what he feels to be right, in spite of cajolery

or menace; and what he feels to be right, is right in more than the grand majority of cases. Such a man as this is Mr. J. Pope Hennessy, the present Governor of Hongkong. He has set his face, not only against oppression but against the careless, perverted, and ignorant administration of a code of exceptional severity, based upon the very dangerous ground of class legislation. It is law, however; and it has to be administered, but administered in strict accordance with its own provisions and treaty stipulations, not strained and twisted and abused in violation of justice and legality. His Excellency, in his whole public career, has been an opponent of cruelty and wrong; so that the course he has adopted in the colony he is now ruling is in keeping with his earlier history. His antecedents in Parliament, where he was one of the most strenuous advocates of the cause of outraged Poland: his later career at the helm of English colonies were but precursory steps on the path wherein he is still marching, a road traced by great and noble men before him, a track stony and dark and difficult, but lighted by heroic example and smoothed by the sympathy of all well-wishers of humanity,—of all who are free from the trammels of sordid interest or selfish prejudice.

Great stress has been laid by the hostile Hongkong press upon the fact that Lord Carnarvon gave but lukewarm and qualified approval to Mr. Hennessy's earliest efforts to ameliorate prison discipline, and temper the employment of the lash and deportation in the case of Chinese evil-doers. This was but an illustration of the old Colonial Office precept, *quieta non movere*, to which we have before alluded; but the responsible employes in that department were not long before they found that the abuses signalled by the new ruler were real and radical, and had to be removed, if the honour of the British name were to be kept untarnished in the Far East. Sir M. Hicks-Beach evidently concurs heartily in the administrator's schemes of reform. But whether these be approved or censured, the truth remains that they were eminently needed, and have been inaugurated, in spite of an amount and quality of reviling which forcibly suggests the howling of that rabble of boys which went out to mock the prophet. But enough. Whatever is now felt or said, but few years can elapse before even those who traduce Governor Hennessy, and carp at his "humanitarianism," must admit that he was right. No long time hence this true servant of "humanity," and faithful defender of his country's best interests in its remote dependencies, must receive that full and honorable recognition which his consistent and energetic uprightness merits and will command. In fact even now his detractors are all contained within the narrow limits comprising the foreign residents of the island and their friends abroad. In all other circles his name is esteemed and honoured, and no where more than in Japan. A great deal of that friendly feeling, on the part of Japanese of all ranks, which we are heartily pleased to find reviving, towards the great British nation, is in large part owing to the favourable impression produced here by that British subject and Governor, of whom no less a judge of human nature than General Grant recently exclaimed, "Hennessy is one of the noblest men I ever met."

RUSSIAN EXPLORATION.

AMONG publications which we have received by the English mail is a volume of the proceedings, for the current year, of the Imperial Russian Geographical Society. This is accompanied by a report of the October meeting of the members. The Secretary read reports of work done by, or in connection with, the Society during last summer. He spoke of Nordenskjöld's expedition, of Mr. Grigorief's explorations, and of the meteorological sta-

tion at Nova Zembla, where Mr. Tiaguine was in charge of scientific observations. Next he reported on the travels of Prejevalski, Potanine, Alferaki, and Peotsoff in Central Asia, and gave some of the conclusions derived from the researches of Samara's expedition, whose object was to consider the possibilities of a line of railway through that region. One of its associates had been delegated by the Society to join the explorers, and collect information and statistics upon Turkestan, Bokhara and Khiva. This expedition commenced its work last spring, and by the end of July had finished the exploration of the projected line from Karatugai, where the labours of last year were brought to a close, as far as Tashkend and Samarcand. The party visited Karauziak on the Syr Daria, and the coal mines near Kojend. On the 29th of June, all the members met at Samarcand, whence they intended to start on the 5th of July in two different directions. Count Rostortseff, Messrs. Liapovnoff, Sorokin, Musketoff, Karazin and two telegraphic employes, were going in the direction of Karchi, there to meet the Amir and to acquaint him with the object of their journey. The other members, namely, Messrs Sokolovski, Smakoff, Maieff, Lunkevitch, Kreitschmer, Valetski and Pelzmann, were to proceed in the direction of Kitab Schar, Yartub and Kultiminar, where they would wait for the return of the others.

The expedition was to traverse Dechan, Yurtchi, Sar-yosio, Regar, Duchambe and Baljonak. It was expected to reach Kuliaba, and thence to survey the river Panji throughout its entire course. At Hagretimara the party was to be met by Captain Zouboff of the Imperial Russian Navy, who was following the Petro Alexandrovski route to Kobjan by the Amon Daria. On the 25th of July, Captain Zouboff was fourteen versts distant from Schirabad, and had studied the course of the Amon in its whole length. All that would therefore remain for the expedition to accomplish, would be the exploration of the ancient beds of the Amon, now dried, which are most plainly distinguishable beyond Tcharjin.

The Geographical Society had received from the head of the expedition a telegram, dated the 22nd of August, announcing that the roads from Djam to Karchi, and from Kitab to Schar, had been surveyed, as well as those from the Iron Gates by Durbend and Byars as far as the ruins of Termes, upon the banks of the Amon Daria. Meteorological and astronomical observations had been taken, and interesting collections and sketches made, by the savants and artists attached to the expedition.

The Secretary next spoke of the investigations of Mr. Kuznetsoff in the south-western districts of Europe, of the journey of Mr. Syrkoff in Bulgaria, of the anthropological studies of Mr. Merejkovski in Crimea, of the ethnographical studies of Mr. Polinkoff in the Uralian and Caucasian regions, of Mr. Kibalchitch on the Dnieper, of Mr. Europeans in the government of Onets, and of Mr. Miklukha Maclay in Australasia.

The last letter from Mr. Maclay was received last spring. He then said that his health would oblige him to return to Europe or to go to Japan, but that under any circumstances he was compelled to leave tropical countries. The Geographical Society wished him to settle in the south of Europe, where he would be able to arrange the extensive stores of information which he had collected. He had been offered a passage in one of the Russian men-of-war of the Pacific squadron which was returning to Europe. Unfortunately the learned traveller preferred going on to Australia, where, indeed, he has made some very important zoological researches. News had since been received that Mr. Maclay had been placed at the head of a scientific expedition to Polynesia.

After the report had been read, Mr. Lenz, President of the Section for Physical Geography, made a communication on the subject of the conference held in Hamburg in the month of September last, to discuss the advisability of establishing international polar stations. The speaker gave a résumé of the history of the subject, detailed the reasons which induced the réunion, and gave the names of the scientists who represented Germany, France, Sweden and Norway, Holland, and Denmark. He then announced the results of the meeting, which consisted in the elaboration of a scheme for the work of meteorological polar stations, partly obligatory and uniform and partly discretionary and special, for each one of them, and in selecting the situations in the northern and southern hemispheres where these observatories should be established. The conference declared itself an International Commission permanently constituted for the organization of polar stations. Mr. Lenz concluded his address with an expression of the pleasure which he felt in announcing that the programme drawn up by the Hamburg Conference, was identical with that prepared by the Russian Geographical Society in 1878.

PILOTAGE REGULATIONS.

HER Majesty's *Chargé d'Affaires* has issued a proclamation, enjoining compliance, on the part of his countrymen, with the pilotage regulations of Japan. Among the numerous laws and ordinances which the experience of every civilized state in the world has found necessary for the protection of life and property along its shores, one of the most important is the code of regulations that governs pilots. The reason is obvious. Masters of merchant vessels trading to all parts of the world cannot be expected to possess a familiar acquaintance with all the currents, shoals and lights, in short with the navigation, of every coast, or part of a coast, on which they may find themselves. Consequently, men whose special business it is to know all these matters are called upon to direct the course; and during the time they are so employed, the vessel is almost, if not wholly, under their charge. In most cases therefore, the duties of a pilot entail care of, and responsibility for, life and valuable property. On his skill, judgment and knowledge, depends the safety of a ship, its passengers, and cargo. When one of these qualities is absent, the risk is proportionately great. Hence the necessity for a stringent examination into the character and attainments of each one who desires to serve as a pilot; and a scale to regulate his duties and emoluments. In Japan, owing to the dangerous nature of the coast, as well as to the uncertainty of the winds and currents, a stronger necessity than prevails elsewhere arises for the careful selection of trustworthy, skillful pilots; and it has long been full time that such regulations were put in force. Although the better class of the men then engaged in the service immediately availed themselves of the issue of this code by the Japanese Government, more than a year ago, and presented themselves for examination, there still remained a large number, chiefly composed of officers of merchant-ships who had been discharged for incompetence or drunkenness, who desired to continue to be pilots without qualifying themselves. Having no occupation, little or no character, and but a small acquaintance with their duties, they could afford to undersell the licensed pilots, and to tempt the cupidity of masters of vessels by returning a certain proportion of the authorized fees. But the evils did not cease here. These men were generally forced to land, without passports or permission of any kind, outside the limits laid down by treaty, and were frequently brought back, under an escort of police, to the place whence they started. In this state of things there were the elements

of much unpleasantness and discord between native and foreign officials; and it is therefore much to be regretted that a year has elapsed, since the promulgation of the regulations, before they have been made applicable to British subjects, who naturally, in view of the preponderance of residents of their nationality in the foreign population, form the bulk of the delinquents.

After comparing the code with similar regulations in other countries, we do not hesitate to pronounce them fair and just in the extreme. They provide in the usual way for the qualifications necessary to obtain a license, the districts within which pilots can exercise their calling, and the rate of their remuneration. Special overland passports, permitting the holders to land on any part of the coast, are also granted to all licensed pilots.

Granting that to many the measures of the government of this country may sometimes appear premature, unnecessary, or ill-judged, yet a certain class of ordinances must be admitted to be wise and politic; for they conduce to the benefit of every one. Such are the pilotage and harbour regulations, as well as the measures tending to improve the sanitary condition of the country. In matters of this kind, where delay is dangerous, the Japanese Government should receive the warm support of all foreign authorities and communities, even if it were accorded for no other than purely selfish reasons.

TO our own great regret, and no doubt to the disappointment of our subscribers, we have to announce that the manuscript of this week's number of "The Times of the Taisho" has been lost in transit from Tokio to our office, a misadventure which was discovered too late to allow the accomplished author the time necessary for rewriting it. On Friday at noon, finding that the paper had not yet come to hand, we telegraphed to Captain Brinkley asking him to send his "copy" with all possible despatch. By the first mail this morning we received a note from him, in which he stated that the manuscript had been mailed in Tokio on Tuesday morning. Inquiry was at once instituted at the Post Office; but no trace of the missing package can be found. For the first time, we believe, since the commencement of this serial tale, our contributor did not take the precaution of registering his despatch to us; and so, it has never been delivered. We do not know whether the postal department realizes, or desires to realize, how much inconvenience may ensue from the carelessness of its employés. At this moment we have such an acute perception of the extent of the annoyance which such misconduct can entail, that we can hardly trust ourselves to comment on it. And this is by no means the first time that the editor of this journal has had solid reason to complain of delay, misdelivery, and in one previous case non-delivery, of important communications or manuscript for publication. For the nonce we have no more to say than that we do hope that our present very substantial grievance will meet, at the hands of the proper authorities, that attention which it certainly demands.

CAPTAIN Brinkley has the mental and mechanical labour thrown upon him of rewriting a whole number of his romance; an infliction in his case the more unmerited that he is, from the mere narrow point of view of the conductor of a weekly journal, a model contributor. His "copy" is bright and legible, and demands from both "reader" and author the very minimum of correction in proof; and, still greater praise, it is always sent early. It does not arrive within a few hours of the time when it should be in the hands of the public; but leaves the writer, addressed to us, at the commencement of the week. We

mention this *en passant*, as a brilliant example worthy of being followed by less scrupulous correspondents. Meanwhile we all have to wait until next week for the thrilling scene which is evidently coming. Yoshitsune, Saburo, and Benkei are waiting without the inn for the seven strong men well armed who have abducted Iné, and to whom the terrified landlord has conveyed the challenge of the avengers. We fancy that a page or two of our next number will ring with the clang of steel, and be redolent of blood.

HITHERTO, as far as we can learn, no serious disease has been known to prevail among the cattle of Japan. Scab in sheep, of late years, has been by no means an infrequent malady; but horned stock have escaped such ravage as has decimated the herds of many countries in modern Europe. Shanghai and its neighbourhood have not escaped so fortunately. Three years ago an epidemic, closely resembling rinderpest, if it was not the same complaint, declared itself; and a foreign dairyman lost forty-nine of his animals. Native proprietors suffered in greater proportion. And now, we learn that, for more than three weeks prior to the departure of the last mail, a similar malady has committed considerable devastation among the cattle of both foreign and Chinese owners. At the date of latest advices the scourge appeared to be somewhat subsiding; but alarm on its account had by no means ceased. One authority, a veterinary surgeon, who thinks that it is a kind of typhus fever, asserts that no reluctance need be entertained to partake of the milk supplied from the foreign dairies; as, with the commencement of sickness, the lacteal secretion ceases. If this be so, the produce of both native and foreign farms may, as the *Courier* indicates, be partaken of with equal safety. We are not aware that many, if any, head of cattle are brought from China into Japan; but the sanitary authorities of the latter country would do well to see that the necessary precautions provided for in their recent proclamation are enforced. In Shanghai itself the present visitation is said to have been traced to infection communicated by an imported heifer; and two previous epidemics are believed to have originated in the same way.

THAT exquisite finish and wonderful elaboration of detail which characterise the finest specimens of silks from the looms of this empire, to which we make passing reference in our leading article on Japanese raw silk in America, is well illustrated in the description given by the *Sydney Mail* of the exhibits of tissues in the Japanese Court of the New South Wales Exhibition. We quote at some length as follows:—

Mino and Uni are specially famed for crapes and velvets, and Chikuzen for superior "obi," broad long silk sashes, worn by Japanese women. In all varieties the workmanship is excellent. The pyramidal case has crape of various colours—delicate blue, rich scarlet, pure white: crapes printed in checks, some wared, others with flowers; some woven of two kinds of silks, one of which—the yamamai, a yellowish-white—resists certain dyes, which the other absorbs. The material is dipped into the dye prepared, and, from a dull uniform yellowish tint it becomes rich red, with pale stripes. The silks are as varied in style and colour as the crapes—pure white, handsome brocades, twilled silk, kerchiefs for the neck of finest quality, rich sarasettes of neutral tints and softest hues in pink, blue, &c., prepared for linings of state robes, &c. In some of the gold brocades, thin strips of the finest gilt paper, very durable yet very flexible, are woven into the silk; and for embroidery these paper strips are rolled upon silk threads, and have all the beauty of gold threads of finest quality, without the hardness. Opposite to the central case a collection of silks and satins is seen; these are in some instances magnificently embroidered; birds, flowers, and various figures produced with exquisite finish—triumphs of patience and skill. In some cases the groundwork is formed of silk woven with dyed threads most beautifully shaded; on

this tinted surface wonderful designs are formed by combining embroidery with painting; this work is done by men, and the designs are used for ornamenting state robes, theatrical costumes, and recently for articles for export. There are sachets of great variety, embroideries for screens, cushions, &c. In the centre of the inner court, in a small salon, two chairs and an ottoman of exquisite workmanship, embroidered on satin, may be seen—these have been mounted by Sydney upholsterers. In this part of the court fine specimens of piece embroidery are found, intended for quilts and sofa-coverings; the ground, black satin of superior quality; the borders, scrolls, or leaves, of gold, with flowers of silver or glossy white silk. Under these magnificent robes, the national dress of Japanese ladies in the highest rank, the designs in some cases are startlingly grotesque—landscapes, gorgeous flowers, with extraordinary birds of gayest plumage, but the material and the work of the finest quality. Over one cabinet of great beauty two pieces of tapestry hang, which, according to the explanation of the intelligent Japanese, Mr. Asami, who is in charge of the exhibits, are the "Gobelins of Japan," and set forth a portion of the history of Confucius and some of his immediate followers. The philosopher appears to be mounted on an enormous bird with golden wings, a broad golden scroll waves round his head, and similar scrolls, with mysterious characters inscribed, are carried by his disciples.

WE are unable, this week, to do more, with reference to the fifth annual report of the Minister of Education, than acknowledge its receipt, and state that the results which it shows are, in the main, eminently satisfactory, and reflect great honour upon the organization and work of a department whereon much of the future welfare of Japan depends. We will endeavour to take an early opportunity of giving the subject somewhat more than cursory attention.

EUROPEAN journals continue to occupy themselves with the prospects of a contest between Japan and China, an event all near probability of which is now happily dissipated. While we have every reason to believe that any irritation caused by diplomatic differences, perhaps still existing on either side, will disappear under the soothing touch of time, and to hope that a permanent alliance, tending to the maintenance of peace and the spread of commerce in Eastern Asia, may be entered into between the two countries, we still find matter of interest in intelligent or even mistaken conjecture and comment, made at a distance, on the international relations of the two empires. In the 1st of November number of the *Examiner* the following paragraph occurs:—

Japan is determined not to be outstripped by China in her preparations for the coming conflict. Intelligence received from a Russian officer on board the *Djigit* at Yokohama, states that the Mikado has given orders for the construction of fifty gunboats, each to be designed on the "floating gun carriage" principle, and to carry a single heavy gun. The number seems large, and may possibly be exaggerated, but it is beyond doubt that at present China's naval strength is dangerously in excess of that of Japan. The Mikado, it is true, has five ironclads to the one possessed by China, but any of the four gunboats—*Alpha*, *Beta*, *Gamma*, and *Delta*—with their 28-ton guns, would be able to riddle the Japanese men-of-war, and four others of the same type are shortly to arrive at Canton from England. China besides possesses thirty-five gunboats of various designs, nine of them so large that a Russian officer considers them equal to the corvettes composing the fleet at Vladivostock. Japan, on the other hand, has only eight gunboats, most of which are inferior to those of China. The fifty new ones which she now proposes to construct will be used entirely for the defence of the Japanese coasts, thus allowing the five ironclads to proceed on cruiser service in Chinese waters. The new gunboats will carry only a crew of thirteen men, whereas the older ones have seventy or eighty on board, and the larger gunboats of the Chinese flotilla carry as many as 180. The recent naval war between Russia and Turkey was waged chiefly with the torpedo. The coming one between China and Japan promises to be largely a combat between fleets of gunboats.

THE Mitsu Bishi Company's enterprise in opening a line of steam communication hence with Hongkong, by way of Kobe, bids fair to prove remunerative to itself, and to do much towards increasing the commerce of certain districts on the shores of the inland sea with remote countries. "Dai Nihon," a contributor to the *Hogo News*, in an article on the development of the export trade, gives some very interesting and valuable information. We learn that shipments from Yokohama and Kobe to Hongkong by the Japanese vessels, between the 4th of October and the middle of December, were,

	Tons.	Value.
Per <i>Niigata Maru</i> , from Yokohama	12	...
" " " " Kobe	304	\$47,256
" <i>Sumida Maru</i> " Yokohama	33	...
" " " " Kobe	262	40,749
" <i>Niigata-Maru</i> " Yokohama	30	...
" " " " Kobe	347	\$8,706
" <i>Tokuego-Maru</i> " Yokohama	30	...
" " " " Kobe	143	17,724
" <i>Niigata-Maru</i> " Yokohama	50	...
" " " " Kobe	669	95,485

The total amount of cargo carried by the M. B. steamers on the four return trips was, for Kobe 1,110 tons, the value being \$90,729.42; whilst the gross tonnage of goods exported from that port to Hongkong was, in the five trips accomplished, 1,725, and the value of the goods \$239,940. The largest item of export is copper, which goes chiefly to India via Hongkong. The balance of merchandize sent away consists of articles of food used by Chinese, such as beche de mer, edible sea-weed, awabi, mushrooms, &c. And so great is the demand that the supply does not nearly meet it. By the *Niigata Maru*, such quantities of goods of this description were shipped that the market, both in Kobe and Osaka, was exhausted, and prices were forced up thirty per cent. The writer goes on to suggest that the capabilities of the newly started line might be greatly increased, if the Mitsu Bishi Company could so arrange its service as to establish a connection with some one of the many lines of steamers running from Hongkong to India; or by extending the present line to Bombay. The route last-named would not at first be likely to prove remunerative; "whilst the former is" in the opinion of the author, "not only practicable, but would from the very beginning most likely prove profitable, on account of the facilities it would afford to shippers of coffee, &c., to the United States, and importers of Bombay yarn, considerable quantities of which have arrived here direct during the present month; being almost the only direct importations of that article that have been made to this port for years. This certainly presages well for Kobe, which should, now that there is direct and regular communication with Hongkong, import all (or nearly all) the cotton yarn now used or distributed in Osaka; which amounts to three-fifths of the entire quantity imported into Japan." There is much soundness in Dai Nihon's views. It has long been evident that the capabilities of the southern regions of the empire are susceptible of much extension; and not only may the export commerce of Kobe be largely developed by means of the increased facilities for sea carriage afforded by the new scheme of the proprietor of the Mitsu Bishi Company; but, with the opening of new ports and the improvement of means of land transit, the prosperity of other towns and regions may be enhanced, to the advantage of the whole empire. We may take the opportunity of referring to the previous intelligent and careful communications of the same writer to the *Hogo News*. One on the depreciation of *satsu*, and another on the growth of cotton in Japan, may be specially referred to. We commend the lucid arrangement of many statistics in the latter article to the attention and imitation of more ambitious writers.

WE have received from Messrs. Kelly & Co. the "Nautical Pocket Almanac" for 1880. A simple glance at the table of contents will show that it is a valuable *rade mecum* to all masters and officers of vessels plying in the waters of China and Japan. It gives the names of all the steamers running from Shanghai, lists of mail and house flags, signals showing the depth of water at various bars, the distances from Shanghai to other ports in the Far East, the signals in use at the principal ports, their harbour regulations, and the positions of buoys, lights, and beacons on the coasts.

REFERRING to a short article in the *Japan Weekly Mail* of the 13th instant, "An Old Member" of the Yokohama Amateur Athletic Association endorses, by letter to the *Herald*, the views which we ventured to propound. He gives excellent reasons for the removal of the *renue* of the Society's meetings from the present distant, and in many respects inconvenient, position on the Rifle Range, to the more central and commodious Cricket Ground. He also candidly states the evident and possible objections to the proposed alteration; but we are happy to see that he concludes that the drawback would be more than compensated by the advantages accruing from the change. He proposes that the loss attendant upon the inability of the committee to charge gate-money should be made good by the sale of programmes, presentation of which would admit non-members to the enclosure, a portion whereof should be reserved for the occupancy of members of the Association and Cricket Club. No doubt the matter will meet with the consideration of both bodies, who should find no difficulty in perfecting some arrangement which will conduce to the benefit of the Yokohama Athletes and the public who rejoice to witness their contests. "An Old Member" pertinently says, that the present is the best time, as the Treasurer has a good balance in hand, which the present location, if it is to be retained, will soon deplete for necessary repairs to the running path, dressing room, and stand.

GREAT FIRE IN TOKIO.

SHORTLY after noon yesterday intelligence was received in Yokohama that a disastrous fire was burning in Tokio, and threatening, with the brisk gale then blowing, to defy control and prove at least as extensive as that which wrought such havoc in November, 1876. The result has unfortunately only verified the prediction. A reporter, whom we sent to the scene of the calamity, wrote to us at nine o'clock last evening as follows:—

"Any one acquainted with the geography of Tokio can realize the amount of destruction from the statement that the whole district bounded by Kiobashi and Nihonbashi on the left and the sea on the right is utterly destroyed; while at this moment the flames are carrying on their terrible work on the east side of the river, as well as in the island at the mouth. The area covered by the fire is far larger than in the great fire of 1876. Then the flames travelled in the same direction, but not so far. In Tsukiji, the church, as well as several houses and schools, are burnt down. Messrs. House, Bögel and some of the missionary societies are among the chief foreign sufferers.

"In the presence of a great calamity of this nature, organised charity naturally cannot be applied at once to alleviate the misery of the sufferers. Thousands—I may say with truth, tens of thousands—of people of both sexes, and of all ages, are homeless to-night. They are encamped in all the open places in the neighbourhood of the fire with their household gods around them, a few mats erected to keep off the wind,—and it is very bitter to-night,—a *hibachi*, perhaps a few *futon*, a chest of drawers, a cat, and possibly also a dog. It would be impossible to convey by words alone, to anyone who has not seen

them, the terrible position of these poor creatures, suddenly cast adrift in midwinter without the shelter of a roof-tree. A large number of them are children of tender age; many are old and feeble: some, it seemed to me, were too feeble to carry their blankets to an open space, and were forced to sit down on the roadside, in the violent biting wind, and clouds of dust, to—heaven only knows—perhaps to die. The local authorities are doing all they can at a pinch by giving food to all comers; missionaries also, to their honour be it spoken, are, to the extent of their power, giving shelter; and, in a few cases, private individuals have set to work to assist the homeless creatures. In this connection I cannot refrain from mentioning the case of one gentleman who, albeit not given to the melting mood, ordered rice to be cooked, rough shelter to be set, and as many as possible of the sufferers to be invited to partake of both;—and all this on the ruins of his own house. The case is one within my own observation, and it caused me to think better of human nature when I saw a man, forgetting his own misfortune, give his time, money, and possibly also his health, to mitigate the distress of people of another language and another race, and doing all this so unostentatiously that I doubt if any one, except those relieved, and even not all of those, will ever know who their benefactor was.

"I have heard as yet of no loss of life, nor am I in a position to make even an approximate estimate of the number of houses burnt."

The following streets have been destroyed:—

Hakuya-cho, Iwakura-cho, Kuremasa-cho, Shimomaki-cho, Honzaimoku-cho, Shinizumi-cho, Ogawa-cho, Saga-cho, Suzuki-cho, Gusoku-cho, Matsuya-cho, Hakcho-bori, Honhatcho-bori, Naka-cho, Kamejuna-cho, Yechizen-bori, Mizutani-cho, Minato-cho (Teppozu), Iritsue-cho (Tsuikiji), Suikai-cho, Tsukuda-jima, and Kawaguchi-cho (Reigan-jima).

PHILIPP FRANZ, FREIHERR VON SIEBOLD.

A BIOGRAPHICAL SKETCH.

(Translated from the German of Gerhard Schirnhöfer, Secretary to the Horticultural Society of Vienna.)

THE name of Siebold has long been known and honoured in the cultivated world. His services as botanist and geologist, as ethnographer and mineralogist—in short, as a naturalist in general, were rare and extraordinary, and drew towards him the attention of the whole scientific world; while at the same time they received high and universal recognition. Nothing was therefore more natural than that there should exist a wish publicly to honour this distinguished man by some outward and visible mark, i.e. by the erection of a monument to his memory. It is true that no such was required to hand down his name to posterity, for he has given us himself a monument *perennis* in his scientific writings and magnificent works, as well as in the treasures, unparalleled in their wealth and value, which he has collected, and which still form the chief points of attraction in the great museums of Leyden, Würzburg, and Munich.

Nevertheless, it is to a certain extent a duty of the world, which has derived so much mental sustenance from his collections and scientific writings, to give public expression to its high appreciation and gratitude by the erection of a memorial. On the 25th August, 1873, in the horticultural congress in Vienna, held in connection with the great exhibition, it was proposed that a monument to him be erected; and the proposal was received everywhere with much enthusiasm.

As the work is now approaching a conclusion, and as everyone is not fully acquainted with the circumstances, the difficulties and the accomplishments of Siebold's life, it has been deemed desirable to give some particulars on these matters, and we are gratified in being able to honour the memory of this celebrated man, even in a slight degree, by the following short biography.

Philipp Franz, Freiherr von Siebold, sprang from an old and much esteemed Bavarian family, and was born at Würzburg on the 17th of February, 1796. His ancestors before him had exhibited a praiseworthy love for the natural sciences; and so it happened that, while still a boy, Philipp Franz showed a thirst for similar knowledge.

The perusal of scientific works and books of travel was his favourite occupation, and formed his chief amusement in the interval of his other studies. It was therefore quite natural that he should devote himself to the study of medicine, as this profession has, of all others, the most to do with science. In 1820 he was admitted to the degree of Doctor of Medicine at Würzburg.

Armed with an unusually large fund of general scientific knowledge, penetrated with a strong desire to visit those distant lands which were the scenes of his boyish fancies, filled with a wish to see more than ordinary sights, and steeled by a vigorous will, fate was kind to him, for his desire, his love of inquiry, and his vigour were all put to a fiery test in a far distant land, which, up to that time, was almost wholly unknown.

In the year 1822 a new expedition of the East Indian Army went to Java, one of the Dutch possessions abroad, and Siebold was appointed medical officer of the first class by the King of the Netherlands, on account of his already recognized ability. He joined the expedition, and in 1823 reached the town of Batavia in Java. The following year a special mission set out from Batavia for Japan with the object, not only of improving commercial relations, but also to learn as much as possible about this curious country. Siebold had to accompany it, and to his young officer, hardly twenty-seven years old, was assigned the honourable and responsible task of superintending the scientific portion of the mission, for which purpose the Dutch Government placed a considerable sum of money at his disposal.

How well Siebold justified the honourable trust reposed in him, will be seen as this recital progresses. On the 9th of August 1823, the mission approached the island of Deshima. This is a small island artificially constructed by the Dutch in 1641, and lies in the immediate neighbourhood of Nagasaki. A terrible storm arose as their vessel was about to enter Nagasaki harbour, and every soul would have been shipwrecked, if the Japanese had not come to the assistance of the sorely pressed Europeans; and so the vessel got at last safely, on the 11th of August, to its destination. The Europeans had to undergo an examination by the Japanese authorities not unlike that to which criminals are put in other countries; but this was only to be expected from the state of the Japanese laws and customs in those days.

The Japanese Empire, called also Nippon, was up to that time, in imitation of its neighbour China, quite closed, and all strangers were forbidden to enter it without special permission to do so. But for this very reason the country had possessed a particular interest for the cultivated world, and exercised an extraordinary influence on our young scholars. The steps of all the Europeans, who by peculiar favor were admitted to visit Japan, were watched with Argus eyes; for, with such fanatical jealousy do people of this kind guard their native land, that they regard it almost as a desecration if it be trodden by strangers. It was very dangerous even to go for a single moment out of sight of the Japanese officials; and this of itself shows the great obstacles which a student of the country had to encounter. Our scholar, however, surmounted them all with unusual skill.

Among the Japanese, as with most Asiatic peoples, a peculiar respect was paid to those who possessed the, in their eyes, mysterious knowledge and skill in the healing art; and Siebold soon discovered that, on account of his medical knowledge, he was treated with much more confidence than any of his companions. Moreover, it is also certain that his rare urbanity, as well as his open and winning ways, drew every one, even the suspicious Japanese, towards him. When he commenced to work with his electric and other scientific apparatus, he must have appeared to them almost a worker of miracles. But it must not be concealed that Siebold also made a great impression on these people by other means; these were various presents, pearls, dresses, and especially the bright and ringing ducats the sound of which took captive the hearts of the Japanese. Before his influence in Japan had become great, he had to overcome much chicanery and disappointment, and to avoid many serious dangers to his own life—disappointments and dangers which can only be understood by those who have had opportunities of comprehending the peculiarities in the life of this people. Under such circumstances the path of the student was thorny, and the troubled hours and

bitter cares which he had to experience must at times have made Siebold almost lose heart. Still his hopefulness, thirst for knowledge, and strong will always conquered ultimately. When once he had become master of the situation, it could not give him very much trouble to penetrate into the interior of Japan. He travelled from one end of it to the other, accompanied by Japanese physicians and young men desirous of acquiring knowledge; he was the animating spirit, the guiding genius of this small expedition of Argonauts, seeking for the golden fleece of natural knowledge. A new world, new in all its forms, new in its marvellous flora, new in its rare fauna, new in its arts and beauties, new in all its colours and all its ways, unfolded itself in Japan to the astonished gaze of the student. Siebold was the right man for this; he knew how to inquire, to comprehend, and to value it all. In Japan he commenced several of his important scientific and literary works; and from time to time he sent to Europe the art treasures which he collected.

He first went to Yedo, the capital of the Empire, and residence of the Shōgun, a town said to contain a million and a half of inhabitants, in the year 1826. Here he had the fortune and honour of being received by His Highness the Shōgun; i.e. of expressing devotion in a crawling posture. The embassy soon returned to Nagasaki; but Siebold received permission to remain longer in Yedo; on condition that he would instruct Japanese physicians further in medical and surgical knowledge. That he used this permission for a further stay in the capital as much as possible for the purpose of increasing his collections and information, can easily be understood; but still he felt bound in gratitude to exert himself in spreading knowledge among the Japanese who surrounded him. His labours in this direction were certainly beneficial to Japan; for it must be said to the credit of the people, that, if they have certain failings, and especially a love of gain, in common with other Asiatic nations, yet they honourably distinguish themselves from the others by their thirst for knowledge, and their capacity for acquiring it.

From Yedo, well assisted by his pupils, he was enabled to penetrate the innermost secrets of Japan; and the Japanese, forgetting their patriotic duty to conceal all from the foreigner, betrayed matters which up to that time were unknown to the student. Even treasures from sacred temples devoted to the Buddhist or Shintō faiths were given to him for his good words or his gold. All kinds of drawings and maps came into his possession. One of the highest persons in the empire, the chief court spy, made him a present secretly of the chief map of the country, which voluntary gift Siebold naturally felt himself obliged to acknowledge with hard ducats. He accomplished all this, notwithstanding the isolation of the Japanese, and the strict laws of the land. But to the student himself the materials which he had collected seemed already so much, that if they were to be of any scientific use he must make up his mind to put them in order, and therefore he concluded, surprised and overjoyed at the unexpectedly brilliant results of his studies, to proceed to Europe, whither he had already sent the greater portion of his treasures. But in this zenith of his fortune, there came a serious danger suddenly, like a thunderbolt in a clear sky. One of those whom he had bribed, but who seems to have received too little, informed the Shōgun of the story of the map which the chief court spy had sold to Siebold. Both were thrown into prison and were tried as traitors to the country. Sentence was given that, instead of the public punishment of their offence, they were both to commit *harakiri*. Whether the court spy, in devotion to his master, and from loyalty to the law of the land, actually did so, or not, is a secret; but it is certain that for a considerable time it was believed that Siebold would be forced to commit suicide, or undergo the full penalty of the law. Meantime his friends and countrymen exerted themselves in his favour, and at the end of fourteen months detention he was released and sentenced to perpetual banishment from the empire. On the 1st January, 1830, Siebold left Nagasaki, where he had been incarcerated.

After a stay of six years, full of difficulties and dangers, but joyful in a wide range of knowledge, and above all rich in information and experience, bringing to his native land a hitherto unknown, unexplored, kingdom of natural and art treasures, Siebold arrived in Holland in July, 1830.

The king received him with truly royal grace, tendered him the thanks of the Fatherland, whose pride he now was, and which he had so enriched by his scientific collections; and, in order that he might arrange his treasures at leisure, and also in recognition of his services, appointed him a major unattached. He now pursued his work with accustomed resolution, and one learned work after another began to appear from his pen.

During his stay in Japan the great work: "*De historia naturalis in Japonica statu 1824*," was completed, as also "*Epitome lingue japonicæ*," in Batavia 1824. After his return appeared "*Catalogus librorum japonicorum*," and "*Index in bibliothecam japonicam*," and in 1833 "*Bibliotheca japonica*" in six volumes in Leyden. He had presented the greater part of his collections to the museum at Leyden, where he arranged them himself, thus making this one of the most valuable and interesting of existing museums. In 1832, appeared at Leyden a magnificent edition of the "*Fauna japonica*," in completing which work Siebold received valuable assistance from the zoologists Tommink, Schlegel and Haan. In the publication of the "*Flora japonica*" he was also indebted to the learned botanist Zuccarini, of Munich. He had done good service by introducing the tea plant from Japan into Java; and also enriched our gardens by bringing home many hundreds of new shrubs, and ornamental as well as useful plants.

In 1842 he was raised to the rank of baron (Freiherr) in the Netherlands, and was appointed by the king a colonel unattached on the general staff of his majesty. Siebold now resided chiefly on his estate at St. Martin on the Rhine, or in Bonn, and laboured with restless zeal at his scientific works, and especially in his great book "*Nippon*." Nevertheless he took a great interest in all questions relating to Japan, East India or China, and especially in matters affecting commerce. For he was consulted on these questions from all quarters; as in the whole of Europe there was no second individual who possessed such knowledge of Japanese and kindred languages, or so much insight into the political or mercantile conditions of that distant country.

In 1845 Siebold married Helene, Baroness von Gageru; and from this union sprang three sons, worthy of their father, and two daughters.

Siebold travelled through Europe in all directions, and thus placed himself in direct personal communication with all the scholars of his time, and there was hardly a scientific institution or academy which did not seek the honour of numbering the great man amongst its members by appointing him a corresponding member. In 1853, in obedience to the request of the Emperor Nicholas, he went to St. Petersburg. There was then a project in Russia to enter into commercial relations with China, and especially with Japan, through and from Asia, and by Kamtschatka. The Emperor had heard of the knowledge and attainments of Siebold, and hence the flattering invitation to Russia. His advice was valued on the Neva; and, decorated with the order of Vladimir, he returned home from the north. The year 1859 gave Siebold's career a quite unexpected turning. The Indo-Netherlands' company saw their trade with Japan, which hitherto they had almost monopolised, put in jeopardy. Privileges once only possessed by the Dutch in virtue of commercial treaties, had since been wrested from the Japanese by other great powers, such as the British, French and American; and all these nations now carried on an active trade in their productions with Japan. The Dutch thus lost much of their influence in these islands. The Shōgun also was sorely perplexed, and his power threatened by these new invaders. Now was shown on all sides a natural desire that Siebold should be the saviour and intermediary in these distresses. Truly it was a curious turn of affairs! Siebold, who twenty-eight years previously had been cast into prison, and banished from the empire, appeared suddenly as the Messiah for all! What thoughts must have passed through our scholar's brain! What events must have been recalled to his memory! But it is a fact that he responded to this call to his beloved Japan with joy; it presented him with the wished-for opportunity of increasing his knowledge and completing his collections. So in 1859 he went a second time to Japan, and he came a kind of minister plenipotentiary to that Yedo which, twenty-eight years previously he was compelled to leave as a political prisoner. He was received on all hands with the highest

marks of attention, because everyone had the highest expectations of what he would do; even the Shōgun himself gave him a portion of his palace to reside in, and met him in the most unconstrained manner. In the year 1861, with the full consent of the King of Holland, he entered directly into the service of the Shōgun. But, great as Siebold's political knowledge undoubtedly was, and great in appearance at least as was the confidence placed in him on all sides, yet he did not succeed in the task of clearing up misunderstandings in all directions, of pacifying contending parties, of acting as a medium, and reconciling the contending wishes and efforts of each nation. Jealousies between great nations are seldom settled otherwise than with the sword. Dissatisfied with the want of success of his mission; and now regarded, moreover, with suspicion by many with the exception of the Japanese, who always remained thankful to him, he left Yedo, and to the regret of the Shōgun, returned to Nagasaki, in order there to dedicate himself quietly to far more grateful studies, and to continue, with accustomed zeal, his investigations. Although his stay in Japan, on this occasion, was somewhat short, yet he collected a large quantity of new treasures for Europe.

But his ant-like love of work was not to continue long. By certain intrigues he was led to believe that the king of Holland had appointed him to Java, and would therefore accept no excuse for his further detention in the Japanese service. But the weary Siebold could no longer feel himself at peace in Java, and so in 1864 he returned to Europe. The Netherlands had no longer any charm for him, and therefore he turned his steps towards his native town of Würzburg. Here he lived entirely in his studies, and presented the treasures of nature and art, which he had collected during his second visit to Japan, to the local University. Moreover, he personally superintended their arrangement. At the same time he wrote many letters of travel and scientific essays in the *Allgemeine Augsburgische Zeitung* with especial reference to this second journey.

During this great activity, the Emperor Napoleon III. invited the scholar to Paris in order personally to confer with him, the most experienced man in Europe in all matters relating to Japan, on the best means of bringing about closer commercial intercourse between France and that empire. The rich mercantile world of France was much interested in the question, in the hope that it could interchange the productions of French industry with the raw produce of Japan. It was ultimately arranged that he should form and lead a new expedition to Japan in the interests of France. With almost youthful enthusiasm Siebold, now seventy years of age, accepted the unexpected prospect of a third journey to Japan; all the more so because he hoped, with the favour of the Shōgun, and also with the full approval of the Emperor Napoleon, to establish schools on the European system—an old and favourite desire of his. But this idea did not meet with sympathy from the French monopolists, because they believed that they saw in it a source of danger to their own industry. The subscription for the expedition, which was to amount to four millions of francs, came in slowly; and before it was completed 1866 arrived with its various bloody dramas in different countries of Europe. The expedition had to be abandoned, and Siebold returned to Munich in order to arrange in the saloons under the Arcades the great ethnographical museum there. Here he caught a succession of colds, and also suffered from blood poisoning; and in the midst of his incessant scientific activity this great naturalist, on the 18th October, 1866 gave up his life to the Creator of that nature which he loved so well. Two days after Philipp Franz von Siebold, Colonel in the Dutch Army, was conveyed with all the military honours belonging to his rank to eternal rest, mourned by his grief-stricken family, and regretted by the world which lost in him one of its greatest scholars, and most untiring naturalists.

Bavaria may justly be proud that she can call this distinguished man her son and citizen. But his fame is not confined to the region of the white and blue standard.* No, wherever the German tongue is heard it may with justice be said that German science, German earnestness, German energy and will, found expression in Philipp Franz von Siebold. In the German towns, Leyden,

Würzburg and Munich, Siebold's extraordinarily rich and valuable collections are the chief points of attraction in the museums. Moreover, in all great libraries worthy of mention, Siebold's many scientific works form a memorable monument, as lasting as bronze. As a further proof of the full recognition which was accorded everywhere to his great and rare services, we may mention that sixteen reigning monarchs and princes endeavoured to express their thanks to the scholar by awarding him various orders of their respective countries.

But it is not this which makes Siebold celebrated; to use Wagner's expression his celebrity will rest on "the new facts which this diligent and enthusiastic inquirer has added to the realms of knowledge; his scientific works are his permanent glory."

REUTER'S TELEGRAMS.

LONDON, December 23rd, 1879.

Telegraphic communication is interrupted with Cabul. British reinforcements are obstructed.

LONDON, December 26th, 1879.

Heavy reinforcements are being sent to Afghanistan. The steamer *Borussia* has foundered in the Atlantic. Two hundred lives lost.

The Japan Weekly Mail.

'FAIS CE QUE DOIS; ADIENNE QUE POURRA.'

NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. Whatever is intended for insertion in the JAPAN WEEKLY MAIL must be authenticated by the name and address of the writer, not for publication but as a guarantee of good faith.

It is particularly requested that all letters on business, relating to Advertisements, Job-printing, or Accounts, be addressed to the MANAGER.

And that literary contributions of every description be addressed to the EDITOR.

YOKOHAMA: SATURDAY, DECEMBER 27TH, 1879.

JAPANESE ERA 2539, MEIJI 12TH YEAR, 12TH MONTH, 17TH DAY, JIN-YO-SI.

NOTES OF THE WEEK.

BIRTHS.

On the 22nd instant, at No. 27 Bluff, the wife of WALTER MOURMILYAN, of a daughter.

On 24th instant, at No. 227 Bluff, the wife of E. FLINT KILBY, of a daughter.

DIED.

On the 26th instant, at No. 162, JAMES ROBERTSON, aged 39 years.

The French mail steamer *Tibre* arrived last Saturday morning, and the P. & O. steamer *Sunda* on Christmas morning. The Shanghai and way port steamers have also arrived and departed, the arrival being thoughtfully arranged by the Mitsu Bishi Company one day in advance of schedule time, so as not to interfere with the holidays. The American mail by the *City of Peking* is momentarily expected.

Among the men-of-war there has been little movement. The Italian corvette *Feltor Pisani* returned to the anchorage from Yokosuka, where she has been in dock, and the British gun-vessel *Grozier* left for Kobe, yesterday.

The Messageries Maritimes steamer *Tunis* left Hongkong yesterday, the 26th inst., at 6 p.m. with the European mail of the 19th of November.

The German frigate *Vineta* sailed from Europe via Madeira and the Cape of Good Hope for Japan early in November. This vessel was well-known in these waters two years ago. Prior to her departure she received on board several Japanese cadets for instruction in the duties of the naval profession.

The departure of the P. M. S. S. Co.'s steamer *City of Peking* for San Francisco, has been fixed for Saturday, the 3rd of January, at 4 p.m. This will interfere as little as possible with the holidays.

* The colours of the standard of Bavaria, (Translator).

In another part of our issue to-day will be found a translation of an interesting address on Siebold, the renowned naturalist and writer on Japan, delivered by the Secretary of the Horticultural Society of Vienna to his colleagues. Speaking thus as a scientific man to scientific men, the evidence he furnishes of the great value of Siebold's labours is unimpeachable. We are informed that the monument referred to is now on the point of completion. The site chosen for it is a large square in front of the royal palace in Würzburg, Siebold's native town. The statue, which will represent him in full uniform, is placed on a pedestal of granite given by the town. The completion of the image was delayed by the death of the sculptor first chosen—Schwanthaler of Munich. As further proof that the inhabitants of Würzburg are conscious of the honour conferred on them by their distinguished townsman, it will be interesting to mention that a hill outside the city, commanding a view of the valley of the Main, and a favourite resort of the people, has been called Siebold's hill. In the town itself public places have been laid out, containing nothing but Japanese shrubs and plants, for which the inhabitants are indebted to Siebold. We learn that the Japanese memorial-stone at Nagasaki, erected solely by means of Japanese subscriptions, has been finished.

Another exhibition of the *Ian-o-mono* took place in the Fukiage gardens on the 23rd instant. It was organized by the ex-prince of Satsuma, who was also one of the contestants. Among those present were the ministers of state, many nobles, the foreign diplomatic corps, and a number of other guests, Japanese and foreign. The weather was very favourable for outdoor amusements of this kind, and all those present thoroughly enjoyed the sport provided.

The latest *Graphic* contains a portrait of Professor Nordenskiöld, which we are certain our readers who had the pleasure of making the acquaintance of the illustrious Swede, during his recent sojourn in Yokohama, will say much more resembles someone or anyone else.

Some idea of the enormous expansion in the tea trade of British India, a comparatively speaking new industry in that country, is afforded by the fact that the exports of tea from Calcutta to Great Britain from the 1st of January to the 31st ultimo, were 27,856,554 lbs., as compared with 24,527,341 lbs., exported during the same period last year.

The sanitary bureau has issued its usual report of cholera cases up to the 20th of December instant. The total number of persons attacked to that date since the commencement of the epidemic was 164,278: of these 97,246 have died, 47,273 recovered, and 19,576 remained under treatment. The percentage of mortality amongst the patients has been 59.31 per cent; and the proportion of cases which have occurred to each ten thousand of the population, 47.07.

We understand that Yanagawa, in Chikugo, has lately been included in the numerous towns which now enjoy the benefits of telegraphic communication with the rest of the empire.

Those who are apt to feel alarmed at the continual paragraphs which appear in some sections of the press, descanting upon the decay of British valour, may derive some satisfaction from the perusal of the following incident in the present Afghan war.

"A party of Ghazis were surrounded on the top of a precipitous hillock, where—having made up their minds to die and in dying to sell their lives as dearly as possible—they had made their final stand. It was then that Captain Sartorius—a brother of the officer of the same name who won his Victoria Cross in Ashantee—proceeded with eight men of his regiment—the 59th Foot—to laboriously climb up the bare rock and to tackle the fanatics in a death struggle. We have heard a good deal recently of the manner in which the Victoria Cross is nowadays said to be given away too cheaply; of, in short, men being dubbed heroes because they did not run away—but there has not in the whole course of the Zulu or Afghan wars been a more plucky thing done than this deliberate advance of nine British soldiers—not forgetting a sepoy of the Baluchi regiment who volunteered to accompany them—to try conclusions with twenty desperate men who had made up their minds to die. A scrimmage—and a hot scrimmage—at the end of the climb was certain, for the Ghazis could not bolt if they had wanted to. The result was that "Tommy Atkinses" and Ghazis all came rolling down together—a stabbing, thrusting, and swearing crowd. The British soldier, however, can generally take care of himself in a fight of that sort, and at the

expense of one man killed and a few more—including their leader—tumbled across the fingers—the whole twenty fanatics were accounted for."

We understand that Her Britannic Majesty's Court for Japan is closed for the winter vacation between the 23rd instant and the 5th of January next. During this period the hearing of all ordinary civil suits for sums exceeding one hundred dollars is suspended, unless taken by consent; and the time allowed to defendants for putting in answers to suits instituted during the vacation will be computed from its expiry. The offices of the Court are closed each day at noon. The Court, however, takes and hears urgent motions and applications in Admiralty and Bankruptcy matters. The Summary Court also is open to suitors; and the Police Court hears criminal charges and disposes of police causes as usual.

He must be querulous, indeed, who would complain of the weather which the winter season has so far provided. A more enjoyable Christmas, for those who like to keep their holidays in the open air, could hardly have been provided. It is not with a wind rather boisterously caressing that they are likely to find fault. Hence many of our residents have taken advantage of the vacation to seek recreation in the surrounding country; and Yokohama has been partially deserted,—even more tranquil than usual,—during the past week. This has not prevented the accustomed decorations of the various stores and buildings, many of which are embellished with great taste and beauty of design. Notably gorgeous in their ornamentation, and display of those choice comestibles and viands without which Christmas would require to be rechristened, are the two principal butchers' establishments; and the elegance of the show in the windows and rooms of the noted French *patisserie* of Main Street must not pass unmentioned. Notwithstanding these signs, however, the dullness of the times throws its sombre shadows in many directions. The episcopal congregation is unable, apparently, to contribute enough funds to provide more than a junior clerk's salary for its coming chaplain; and the annual treat of a Christmas tree, with Santa Claus presiding in person and scattering his timely gifts, has had to be foregone. There was no pleasant gathering, as of yore, on Christmas eve at the Gaiety Theatre to celebrate the advent of Yule-tide in this pretty and appropriate manner. Fortunately, however, some friends of the little ones determined that the day should not be an entirely blank one for their protégés, and organized a little festival, nominally for the children of the Union Church Sunday School, but to which the whole juvenile population of the settlement, with their parents and friends, were cordially invited. The scene of the entertainment was the Union Church, where from half-past three till nearly seven in the evening a very pleasant time was spent. In the course of the afternoon Mr. Wilkin, the Superintendent of the Sunday School, made his report. He stated that the pupils were divided into nine classes, commencing with the elder boys and girls, and ending with the infant section of little ones from three years old and upward. The average attendance during the early part of the year, in fair weather, was from sixty-five to seventy. Since the end of October the number has increased to eighty; and during recent Sundays it has even reached one hundred. As regards scholars of ten years old, and over, there is a marked preponderance of girls. Mr. Wilkin has since informed us that the school library contains four hundred volumes, and is much used. Several hymns and songs were sung by the children. At the close of these and other exercises, which naturally, in consideration both of the celebration and the edifice where it was held, were principally of a sacred character, a distribution of liberal and well selected gifts was made, each one of at least one hundred and fifty children receiving some memento of the joyous season. Following this ceremony a series of dissolving views, comprising subjects both biblical and secular, was exhibited by Mr. Charleson, to the great delight not only of the younger but of the elder portion of the visitors, of whom there were so many that the Church was quite filled. The promoters of the fête deserve the best thanks of the children for whom it was designed, and of all those who take an interest in the welfare and improving pleasure of the rising generation.

Among the Christmas festivals we must not omit to mention the special services at the French and English churches. At

the former the customary *Missa prima in noctis* commenced on Christmas eve at half an hour before midnight, and attracted a large congregation. The Very Reverend Monseigneur Qsouf officiated at the altar, and the choir was reinforced for the occasion by some well-known amateurs; who, together with the organist of Christchurch, performed a mass by Luigi Bordese under the direction of Mr. Keil. During the robing of the Bishop a *prière* by the Flemish composer Beltjens, and at the Elevation a duet for tenor and baritone, *Ecce panis*, were sung. The *Noël* was by the French composer Adam, while the instrumental pieces included:—*Offertorium*, *The Hallelujah Chorus* from Handel's *Messiah*; and *Sortie*:—the *March of the Priests* from Mendelssohn's *Athalie*.

At half-past ten on Christmas morning a very large congregation assembled in Christchurch, which had been beautifully decorated by some of the lady members who always take upon themselves that labour of love. A full choir rendered, with splendid precision and effect, the grand old liturgy of the established Church of England. Specially noticeable were the anthems by Elvey and Goss, and a spirited *Te Deum* by the late Reverend Dr. Dykes of Durham. The sermon was preached by Mr. Garratt; and at its conclusion Handel's glorious *Hallelujah* pealed through the edifice. We much regret to learn that Mr. Griffin, who for the last four years has thrown all his enthusiastic energy into the musical services of Christchurch, retires from the post of organist at an early date.

Messrs. Val Vose, the ventriloquist, and Ira Brown, the banjo performer, have commenced a series of entertainments in the Gaiety Theatre. Both gentlemen have attained a wide reputation in their respective spheres of performance; and reference to the eulogistic critiques which have appeared in the press of the various countries where they have given performances, fully warrants us in anticipating that those who form their audiences here will have no occasion to regret the disposal of either their time or their money. We believe that the manner in which Mr. Vose conducts a conversation between a number of figures—his "merry odd folks"—is equally amusing and extraordinary.

A fire occurred at Aoki machi in Kanagawa yesterday morning at about two o'clock, and was not extinguished until half-past six. At one time, in consequence of the heavy gale which was blowing, it was feared that a very large portion of the town would have been destroyed; and, as it was, one hundred and thirty-five buildings were burned down. We are sorry to report that three firemen lost their lives in endeavouring to check the conflagration. The fire is said to have originated in a small building used for storing wood.

H. M. S. *Iron Duke* arrived at Amoy on the 4th instant and the *Egeria* was expected in the same port on the 6th. It was intended that they should remain until the 12th, when the Admiral was to proceed to Swatow in the *Egeria*, the *Iron Duke* going on to Hongkong.

At ten minutes past two on the afternoon of the 23rd instant, a slight shock of earthquake, of about four seconds duration was felt in this settlement.

The *China Mail* mentions that the Spanish gunboat *Melivela* was seen to founder in a late typhoon, with all on board, numbering fifty souls. She had left Mindoro, and was caught in the worst part of the storm, her disappearance having been seen by those on board of a sailing vessel that arrived in Manila on the 13th with the sad news. The Captain of the *Melivela* had been but recently married, and his wife was on board. Several of the native crew had also their wives with them.

We publish, in another part of our paper, the new regulations for the prevention of collisions at sea, which have been acquiesced in by all the leading maritime nations of the world. These rules are taken from the *London Gazette* of the 30th August last, and are of such importance that we give them nearly *in extenso*. We have printed these rules in a handy form for the convenience of those persons who may desire to become thoroughly acquainted with their provisions.

It is understood, says the *Shanghai Courier*, that the resignation of Sir Arthur E. Kennedy, K.C.M.G., Governor of Hong-

kong previous to Mr. Hennessy, and for the last two years and a half Governor of Queensland, is now in the hands of Her Majesty. Sir Arthur has had a partial stroke of paralysis and has been ordered home. It is considered improbable that he will return to the colonies to finish his term, and if the position he now holds be declared vacant, Mr. Hennessy is the first on the list for promotion.

We have received, from the publishers, a very complete and correct cabinet map of Yokohama, compiled and drawn by Mr. A. Farsari of No. 80, Main Street. Its range extends from the butcheries at Honmoku to the railway station, and from the furthestmost occupied houses on the Bluff to the sea. A distinct and effective system of shading shows at a glance the foreign lots, both occupied and unoccupied, the government buildings and Japanese houses, while the names of the principal streets and public buildings are plainly marked. Additional information may be obtained by consulting a table in the upper right hand corner, where the respective locations of the Consulates, Banks, Steam Ship Companies, Hotels, Newspaper Offices, Churches, and Clubs are given, the position of which can easily be ascertained on the plan by reference to the corresponding numbers. Mr. Farsari's work will be found a very useful companion to all residents in, and visitors to, this settlement.

PARIS LETTER.

The working class in its widest sense cannot complain, that their movements and "aspirations" have been crossed of late; they have been allowed to welcome back the amnestied, and to hold an official congress at Marseilles. The government, like the country, looked anxiously on at the experiment of self-government. Now the results have been lamentable. The ex-communists have been received, not as penitents, but something like martyrs and conquerors; they have allowed themselves to be led by demagogues of the most suspicious character, who have not hesitated to shake the red-flag before the tri-color, and to make the Commune, not symbolical with clemency and a new life, but with revolt and a crusade against, not the upper, but the middle classes, whose origin dates from their own, but who have elevated themselves by industry and economy; the powers that make men free and independent, and that are within reach of all. As was natural, a reaction has set in, which has compelled the government to display its determination, not only to uphold the constitution but to ensure itself from being out-raged. For taking up this salutary preservative, as well as conservative attitude, there are so-called liberal organs that accuse the ministry of employing the processes of the Second Empire and of the reign of de Broglie and Buffet. This is inexact; order and respect for the law must be maintained at all hazards. The "total" amnesty has been disposed of by the friends of that cry themselves.

The working classes have now held their third unfettered congress at Marseilles; the first came off at Paris, the second at Lyons. Not a practical consequence has flowed from the deliberations. Invited to expose their grievances, by a society only too ready to accord relief where possible, and to suggest remedies, the resolutions have failed to come to business. At Marseilles, the meeting has positively degenerated into a broad farce. Men of sense there were none, and the male sex seems to have been replaced by women without a call, who spouted the most arrant stuff and nonsense about their sex's wrongs and the injustices of employers. One strong minded female is reported to have been expelled, for indulging in the interruption, "you are a pack of old fools." It has leaked out that the women delegates were not strictly belonging to the class, whose complaints they formulated, but whose remedies they failed to propose.

The Municipal Council of Paris, has not been very wise in its generation; it now occupies a wing of the Louvre, beside the ruins of the Tuileries caused by the communists, whose crimes they appear to forget, by demanding for those at New Caledonia the entire amnesty: nay more, a returned communist took his seat at the board, sent there by the frondeurs of a city ward, to protest against the injustice of excluding the deepest dyed of the 1871 insurrectionists, from returning to France. M. Gambetta has got unpleasantly mixed up with the agitation, which I do not think will be put down by any prosecution, for the French love agitation, and believe it to be logical to turn against the executive for upholding the law. The existence of the Republic depends upon the courageous unity of the moderate republicans against that radicalism which has ever been the bane and undertaker of preceding republics. So many vast interests, not only in France, but in Europe, depend on the issue of the combat, that one does not like to follow up painful possibilities. There is Emile de Girardin in one of his eccentric moods, hounding on the people to demand that logical liberty, which means licence and a total disregard of the feelings and the prejudices of others—factors in administration that no statesman can overlook. There is Louis Blanc, wakened up from his Rip van Winkle slumber since 1848, and who can see no change in the world, and that his doctrines about the abolition of competition and the handing over to the state the functions of private companies, are as effete as the fœdal system or Orleansism. He has also re-branched his theories on education, which are not quite so sophistical as those on capital and labor. He points out the error of com-

selling students to graduate in a common rule of studies, ignoring altogether relative aptitudes and capacities. There is at least two grains of wheat in this bushel of chaff that might repay the finding.

The price of bread continues to fall, and this is an event of no small magnitude. Were the poor pinched, in addition to being out of employment, or in the receipt of a diminished scale of wages, they could easily be wickled and welded by agitators in want of a stump. A time arrives when stomachs cease to reason and fail to remember good counsels.

The winter has apparently come upon us unawares, and a series of biting frosts and pitiless north-east winds, have recalled us to consult the almanac. The newspapers are full of periodical advertisements of patent medicines, and what is perhaps more agreeable, of a fall in the price of fuel and a reduction in the cost of furs. It is to be presumed, that the vintage has been rescued at the twelfth hour, as there are no complaints of ruin in the journals, and the name of a vineyard proprietor rarely is to be encountered in the list of bankruptcies. But their place is occupied by numerous small tradesmen, ephemeral companies, and firms that have been going down hill for years and which the new commercial struggle for the fittest and the strongest has swept away. There is a suspicious lull in connection with a host of financial schemes recently floated; where profits were made by puffing up the value of shares leaving the unwary to buy bundles of paper. Notwithstanding all the costly lessons the French have received, they will still not only nibble, but bite, at every hook well-baited with the promise of high interest. France is not out of this wood yet.

It might be truly said now of the French army, that not a soldier wants a button to his gaiter; if the men be not up to the standard of organisation intended, the war material is complete; the defence of France is made; the bill has been published—some two and a quarter milliards—to repair, not so much the devastations of the Germans, as to make good the criminal neglect of the Second Empire. And yet I often think Frenchmen are not proud, not satisfied, at this noble and wonderful reascension. They are secure from external attack; internal divisions are really their only enemy. The country is nervously anxious at every turn of the cards of Europe. The alliance of Germany and Austria ought to gratify her, in the sense that it is a further bulwark for the peace of the world, but it is not so. France feels she is isolated, in the sense that she has no tangible ally, which by the by, she has constantly refused to make. She boasted she was free and wished to remain so; she is apprehensive that England may join the new coalition. There is no danger for France in all this, and it redoubles to impotence that "Salvation Army," which the Czar could threaten us Westerners with, when it pleased his Majesty to commence the work of destruction.

The colossal success of the Credit Foncier loan, asking for nine hundred millions, and being offered eleven milliards; with a surplus revenue of fr. one hundred millions for the first nine months of the current year, despite reduced war taxes and stagnant trade, led me lately to cast a glance on the "good old times," not from Beaumont's grandmother's point of view, who only bewailed, her fleshless arm her withered leg, and lost time, but to the epoch of Mme. de Sévigné, who wrote, "one is at despair; has not a son, and does not know where to borrow; we cannot coin, the farmers do not pay rents, and there is no one giving ourselves to the devil." Omer Talon reported to Louis XIV. that, "the peasantry were ruined, had to lie on straw, their chattels having been seized to pay taxes; the only atom of property they possess is their souls, which however, cannot be sold by public auction." La Bruyère wrote; "the peasants are like wild animals, black, livid and burned with the sun, since they have to live in the fields; at night they retire into holes, live upon black bread, water and roots." In 1649, the royalist soldiers broke into the churches of St. Cloud, Meudon, Clamart, &c., stripped the clergy of their canonicals, threw down the sacred vessels, pillaged and carried off every valuable article, and violated young girls aged ten years, who were with their mothers at mass. France cannot desire to re-see these old times; but how she ought to be grateful for her prosperity, and sage to secure the means that have attained it.

Patti has at last crossed the Rubicon, and with success. Since her conjugal escapades, she was afraid to appear before a Parisian audience, not that the French took part in her rights or wrongs; they only saw in her an artiste with an incomparable voice, whom they fondled and petted when she was "warm and young" and innocent. She has returned; the voice as perfect as of yore, but she has become old, has incipient crow's feet at the corner of her eyes, is putting up flesh, and has lost that girlish step and gait so much admired. Her mouth has now a hard expression, and her smiles seem to lack sunshine. At the Trocadero, five thousand spectators received her rapturously, almost with frenzy. But then her singing was sublime, full of earnestness, and gratefulness, to be forgiven for her philosophy, in which Elöisa shared—"Curse on all laws, but those which love has made." Friends prevailed upon her husband not to prohibit her singing, and the separation trial will be heard in a few weeks. One thing she must not do,—appear on the stage with Nicolini, who was the cause of the famous "accident at St. Petersburg." Virtue must be assumed.

Pending the time that the police capture the manlier Waller, who appears to be everywhere and nowhere—a kind of *Onesie Lambert*!—they have arrested a most extraordinary character, one Courtmet, better known on the gaudy records as the "Comte de Navarre." He is over seventy years of age, has belonged to the dangerous classes since his teens has escaped from prison several times, and committed some audacious thefts in the city. By means of his capital make up, coloring his hair, shaving off whiskers, "getting fat and lean by turns," he baffled the force and yet lived under the

eyes of the police for five years; he was even a constant attendant at the trials in the Courts. He had two mistresses who "made him up," and owing to their falling out, his appearance was neglected; one denounced him, and the rest followed. Prevost, the policeman, who cut up his two victims is not expected to live, he suffers from a low fever, not so much owing to remorse for his guilt, as for the disgrace brought upon his poor old mother. At the time of his arrest, he was a handsome, portly man, aged forty; now he is a wreck; bent, white haired, and a skeleton.

Six men are expected to be guillotined, two in Paris, within the next week.

Judge to female prisoner: "Have you been previously condemned?" "Yes, *mon juge*, three times by the doctors—but you see I am still in good health."

Mamma to little daughter: "What is that strange cat in the kitchen eating with yours?" "Oh! Mamma, it is the soldier of our cat come to visit."

Master to servant, "Why did you only bring me one of the three volumes of Little's dictionary?" "Because I thought one was enough to read at a time."

It was with downright fear and trembling, that Patti decided to face again Parisian spectators after the rupture with her husband—a Frenchman and Bonapartist with a host of friends—and her scandals with M. Nicolini; she is, and is not, a favorite here, her husband's politics have told against her, and her love of money and parsimonious habits, do not contribute to enhance popularity. In a sense the Parisians claim to have, if not made, perfected the *prima donna*, whose *once* infantine ways, delighted the crowd. Next month her demand for a separation will be definitely heard, the only difficulty, the question of money. The Marquis de Caux has not a son, and she married him, it is well-known, for his title. The match was made up by the Empress and turned out unhappily as most of those she arranged have done, Marshal Canrobert and his Scotch in-laws excepted. Adelina Patti believed in the duration of the Second Empire, and to become a real marchioness, with the *entrées* into the best society under imperial influence; the dream vanished, and she had only a husband, with a title of little value, *sans terre* and influence, to provide for, as a consequence of the battle of Sedan. Rossini, who was her guide, philosopher and friend, warned her not to marry the marquis; an artist, added the old cynic with his purse-drawn lips, ought either to marry a prince or an actor; she failed in the first, but helped herself to the second, her Marquis having degenerated to her agent. There ought not to be much difficulty about the separation as there are no children in question; these generally being the objects of contest in a demand for separation, as whichever of the parents is nominated guardian, claims more or less to have had reason on their side; the marquis wants a good annuity, and Patti finds it hard to pension "a creature she abhors." It is rather against Nicolini than the diva, that public opinion is severe, as not only has he destroyed one home, but has deserted his own; this will never allow him to appear next February in a Parisian stage with Patti. It was to make amends with the public, that she consented to sing at the Trocadero Concert for the Distressed Artists' Society, and which led to fr. 61,000, being realised. Five thousand persons went as much to see as to hear her, and there was a vague belief that a scene might ensue. Everybody who was anybody was present, and many gentlemen and ladies appeared in full dress at the *matinée*, which is not usual—at least at the Trocadero Concerts, which have the reputation of being free and easy. Patti looks her thirty-six years; she is fading fast, but her voice is as pure and rich as in its pristine purity; when she sang, not a few closed their eyes and brought back their thoughts to ten years ago, when she was in all the splendor of her youthful glory at the Italiens. The French were right on this occasion in saying the diva had put her "soul" into her singing—though *time* is generally employed like a noun of multitude. When she was recalled, she appeared leaning on the arm of M. Halanzier, the ex-director of the opera; she seemed to be deeply affected by the intensity of the ovation, for the audience represented all sections of society, and in her smiles I could detect she had a desire to enjoy a good cry—not a bail, though a cheap female luxury. She sang two airs from *Sémiramis* and *Ernani*, and the ladies were more frantic in the case of their *mouches* than the gentlemen with their hands. Sarah Bernhardt, the capricious, broke her promise to assist, and was pretty unanimously hissed—she believed beyond doubt the world could not contain two Cesars. Patti volunteered to replace her, by singing in French, at the piano, Victor Hugo's charming ballad—"If you have nothing to say to me," set to music by the Baroness Willie Rothschild; her costume was satin and red velvet, trimmed with a fringe of pearls and steel.

Marseilles has not done much at the *univier* congress to keep up the dignity of the fair sex, or to advance their reputation for modesty and good sense. France has quite a large number of female orators, more at home in clubs and public meetings than at their domestic firesides—if they know such. *Adieu*, they all seemed to have settled down in Marseilles like a swarm of bees, and positively excluded the men from speaking. They commanded the meeting, and one unfortunate fellow who attempted to laugh at the programme of the lady parliament, was soon made to descend from the tribune and was ultimately expelled. The sisters were, as usual, divided: one desired to have her sex on a perfect equality with man, another demanded that females ought to rank even their superiors, while a third denounced all men, whether generals, parsons, priests, popes, presidents or kings, as equally worthless, undesirable, and to be avoided. It was at this stage a policeman was carried out, suffering from epilepsy, caused it is supposed from an over-violent effort to keep his countenance; nothing but a visit from Mrs. Victoria Woodhall can restore the oratorical

fortunes of Frenchwomen. Unhappily they have killed any utility there might be in these kinds of gatherings, for the public is very kindly disposed to help the working classes out of any Slough of Despond in which they may be fixed, provided the means be indicated; it is in vain holding meetings and bayings to the moon to redress whatever social injustices woman may labor under, and if in this good work, the aid of men be necessary, women must secure that, by avoiding making fools of themselves.

Madame Grévy will give three important receptions during the coming season, balls are not yet spoken of; the President's health is not strong. I do not think this is exactly the reason why she hesitates to make young folks happy with a dance. I rather suspect she fears that the republic would not contribute a sufficient quota of ladies; if so, she is mistaken, as I have met many beautiful creatures at her soirées, and they were but the *arant garde*, be assured, of a goodly regiment. M. Gambetta after all may lead the way in this respect, he is not so averse, as last season, to giving a ball where ladies could be received by one of his many lady-friends, just as Lord Lyons, another bachelor, acts when he entertains. There have been a great many strangers visiting Paris this autumn, the Russians and English mustered very strong. The Prince and Princess of Wales can hardly be called visitors, they appear in Paris more frequently than many members of the French aristocracy, who bury themselves alive in the depths of their old castles, awaiting the restoration of their King, Henri V., who does not lead a return hermit life, but visits, travels a little, and enjoys field sports a great deal, while his lady is reported to write his very confidential letters. The members of the Orleanist family are holding their autumnal party gathering at Chantilly, the residence of the millionaire widower, the Duc d'Aumale. The Princesses run down from Paris in the morning and return at night; they do not like to sleep there, partly because the new castle is incomplete, and partly owing to the repugnance felt at residing under a roof where so tragic a suicide, or murder, as that of the Duc de Bourbon took place, the last representative of the illegitimate children of Louis XIV. and who left the property to the Duc d'Aumale. The latter is expending twelve million francs to restore the building, it will not be quite perfect, as that would involve a few more millions. Having no children, it is supposed that the Duc de Chartres, his nephew will come in for the property; he is the only member of the unpopular Orleanist Princes that finds any grace in the eyes of the public. As for his brother, the Comte de Paris, no one bestows a thought or a look upon him; oddly enough, he met with a carriage accident a few days ago, near the railway station of Neuilly, and quite close to the spot where his father, the Duc d'Orleans, was killed from the same cause.

Ladies who have resided in Paris, and have done a little shopping, must have made a pilgrimage sometime or other to the famous soft goods shop, *Bon Marché*, and it did not belie its name. Articles could be had there fifteen per cent cheaper than at the Louvre, and it was a very pleasant place to walk about in, as the assistants never teased you as at the Louvre, by bawling into your face, "Can I serve you, &c.?" The proprietor of this shop, M. Bourciant is dead, a young man comparatively speaking, and who attended to his business till attacked with consumption, of which he died. The doctors had recommended him to embark in agriculture for a cure: he did so; he established a large dairy, and sent all the milk twice a day to a children's asylum gratuitously. His wealth must be enormous: he leaves a young wife but no family, and it is his mother who carries on the business. Last week I visited the vast premises to see what the winter fashions were to be. There was a vast collection of rich and warm looking materials: the Oriental patterns predominated, and brocaded stuffs and embroidered tissues were very general. Silks, satins, and velvets are in all colors, but claret, delicate green and blues predominate. Colors are not at all so showy as last year; promenade dresses are in the new Lyons damask, and blue (gendarme) faille, with embroidered galon. Prune colored Indian cashmere also goes well with the new damask. Panther vigoque and other velvet are in favor for street dresses; coats and jackets are tight-fitting, and have artistic buttons and *brandebourgs*. Fur will be largely employed for trimming. When colored mantillas are worn, they must be in harmony with the dress, they too are covered with Indian patterns. The hats are, in shape, the same as during the summer; if anything, they are a little more audacious: the newest material for these is a kind of velvet full of cracks, like an old China plate for example. The *toque* is still a favorite, and it is to be hoped it will long continue so; a pretty opera cloak is made of white plush, lined with old gold colored satin.

The new popular opera house is a fact; it will reopen in a few days, and it ought to prove a success if the company keeps to its scale of moderate prices; this is not at all the French idea, which continues to augment prices the moment people accord their patronage to an undertaking. It requires a little fortune to go to a few of the chief places of amusement; happily they are the strangers who pay, as the natives go to cheaper houses; then they have cafes to fall back upon. The *Opera Comique* has been re-opened after its decoration and repair; it was positively a filthy place for any lady to enter, and she never left the dusty, dirty, boxes, without bringing away a souvenir of her visit. Now the house is really charming to spend an evening in, and the bill of fare is generally good. M. Carvalho has given the *Pré-aux-Cleres* and *Romeo and Juliette*, both attractive pieces, and very well executed. As for the Opera, it appears to be in a chaotic state; no singers, and worse, but little prospect of them. There is a conjurer here, a professor Herrmann, who is taking the town by storm with his astonishing tricks; he cuts up birds as unceremoniously as bank notes, and his empty pockets are a perfect cornucopia; the strangeness of the performance lies in his doing all in the middle of the spectators and independent of machinery or assistants.

JAPANESE NEWS.

[The following Notes on various Japanese matters are chiefly derived from the native papers, occasionally supplemented from original sources of information, and are carefully collated and edited, so as to make them readable and intelligible.]

COURT, POLITICAL AND OFFICIAL.

Generals Yamada, Minister for Public Works, and Oyama, Chief Superintendent of Police, were, on the 19th instant, appointed Councillors of the Decoration Bureau.

Sums of money will shortly be distributed amongst about seventy Policemen, who were sent to the Loochoo Islands when the Han Government was abolished.

A native paper states that an Englishman, named Mr. A. Marks, has lately been appointed Japanese Consul in Australia, and that he has agreed to serve in that capacity without remuneration.

It is also reported that the condition of Loochoo is peaceable and the people are apparently contented. A central police station is to be established shortly, and the principal officers and most of the constables will be sent from Tokio.

On Thursday last the Central Board of Health in Tokio was closed for the Christmas vacation, and will not reopen until the second Thursday in January.

A Notification has been issued by the Council of State, containing the postal regulations for the 13th year of Meiji, (1880).

His Majesty the Emperor has invited the Imperial Princes, the Daijin and the Sangi to attend the usual New Year's festivities at the palace.

Some of the members of the Provincial Assembly of Kochi Ken are about to publish a daily newspaper, to advocate their views, and bring into notice the capabilities and wants of the district.

A permanent Board of Health is to be established in connection with the Home Department and local Boards in the different Prefectures. The careful performance of their duties by these Boards should go far to prevent the recurrence of a cholera epidemic, as fatal in its results as the one just ended.

His Excellency the Vice-Prime Minister, has invited the Prime Minister and all the chief Government Officials, to a new year's entertainment which will extend over two days.

His Majesty the Emperor was so indisposed a few days since that he was unable to take his usual exercise on horseback. His Majesty has, however, completely recovered and resumed his ordinary amusements. He attended an exhibition of *Iakomono* at the Branch Palace, at Shiba, on Tuesday.

The Emperor visited the Naval College on Tuesday, and witnessed the distribution of certificates to the successful students at the recent examinations.

We learn from the *Mainichi Shinbun* that an Envoy Extraordinary will, in a few days be appointed from amongst the Sangi or Chokumin, and be despatched to China early next year, on a special mission.

His Excellency the Belgian Minister had an audience of His Majesty the Emperor on Tuesday last. His Excellency's lady was received by Her Majesty the Empress at the same time.

The two French officers in the War Department, who are leaving for Europe, were also admitted to an audience. His Majesty thanked them for the services they had rendered to the empire during their stay in Japan, and presented them with rolls of silk brocade as a farewell gift.

Mr. Kono Toshi Kama, the vice-president of the Genro-in, has been appointed president of the meeting of provincial Governors which will take place next year.

His Majesty the Emperor visited the Council of State on the 24th instant.

His Royal Highness The Duke of Genoa left a considerable sum of money for distribution amongst his attendants during his recent visit to Tokio.

The new Governor of Tokio Fu celebrated his appointment, by giving an entertainment to all the leading officials in the Fu, on the 24th instant.

Several valuable horses have lately been presented to His Majesty the Emperor.

His Majesty has lately interested himself greatly in rifle shooting; and the gallery at the palace has been enlarged. A grand rifle match will take place early next year, when the prizes will be distributed by the Emperor in person.

NAVAL AND MILITARY.

The cavalry of the Tokio garrison were exercised in revolver shooting on the 24th instant.

It has been finally decided to erect the new Naval college in the foreign style. The estimated cost is three hundred and twenty thousand yen.

From the *Nichi Nichi Shimbun*, we learn that the cost of the new powder manufactory at Tokio will be two hundred and twenty thousand yen. The money has been handed over to the Military Department for disbursement.

The following rules have been issued for the guidance of persons or public bodies, wishing to engage the services of the Japanese Military Band (Kiyododan).

1.—The band consists of a certain number of performers, but as this number may occasionally be reduced, it will not be necessary to specify the number of performers required, in any application for the services of the band.

2.—When the services of the band are required by a Government Department, the application must be made by the head of that Department or in the name of the Department, and be addressed to the President of the Kiyododan or the Kiyododan itself. If the application is made on behalf of a private body or individual, the application must be made in accordance with a form which will be prepared hereafter, specifying the reason the band is required, the date of performance, place, &c.

3.—If the services of the band are required by two or more private persons on the same day, the first application received shall be granted. Applications by the Government shall, in all cases, take precedence of other applications even although they may have been granted.

4.—Persons whose applications have been granted, will have to make their own arrangements with the band, respecting the number of performers, and time and place of attendance.

5.—All necessary instruments, music, &c., will be supplied by the Kiyododan.

6.—Persons employing the band may supply the performers with meals, but are strictly forbidden to furnish them with any wine, or other intoxicating drink.

7.—The cost of employing the band will vary, according to circumstances, from ten to twenty-five yen. This will include the expense of the transit of instruments, &c., and the remuneration of the band-master and performers.

8.—The sum fixed as the cost of employing the band, must be paid to the Kiyododan, within ten days from the date of employment.

INDUSTRIES, TRADE AND FINANCE.

Another meeting of the citizens of Yokohama took place on the 20th instant, in the Town Hall, in order to appoint the members of the proposed Yokohama Native Chamber of Commerce. Mr. Hara Zenzaburo, the well-known silk merchant, was entrusted with the presentation of the petition asking to be allowed to establish the Chamber.

A great sale of horses has been held in Mita, Tokio, and lasted for six days, commencing on the 20th instant. Racing took place there on the 20th and 21st instant.

Mr. Yonekura, the Director of the *Beisho Kaisha*, in Kagi-garcho, Tokio, is about to establish an association in Fukagawa, which will conduct all sales or purchases of rice for cash only.

The *Hochi Shimbun* states that the match factory established in Hakodate, last summer, by the Colonization Commission has proved very successful. The matches produced are of excellent quality and have been disposed of at a moderate price, thus proving a great boon to the inhabitants.

In consequence of the large demand for copper at the Mint (says the *Akeshu Shimbun*) the number of workmen in the Ikuno copper mine is to be increased.

The competitive exhibition of cotton, sugar, &c., at Osaka, will be held in the Government Museum building there, on the 15th March next. Mr. Tanaka and several other officials will leave Tokio about the 9th January to arrange the preliminaries and get everything in order by the day appointed for opening. It is reported that there will be about three thousand exhibitors of cotton from Hiogo, the famous cotton district of Japan.

The *Hochi Shimbun* of the 25th instant says that a rumour is current, that the government will dispose of one million silver yen in a few days.

Mr. Nakamura Dota has been appointed manager, and Mr. Koidzumi Shinkichi, assistant manager, of the "Specie Bank." The new institution will commence business in a few days at its premises in Honcho dori.

The *Glenorchy* has brought about thirty miles of submarine telegraph cable, which is intended to be used in laying a fresh cable across Tsugar Straits to Hakodate.

It is stated, in the native journals, that an exhibition on a small scale will be opened next March in Kiyoto.

About five millions of the new one yen denomination of kin-satsu are ready for issue, and will be exchanged for the paper money now in circulation, as soon as the five and ten yen denominations are completed. It is stated that two yen kin-satsu will be abolished.

MISCELLANEOUS.

A Russian gentleman, residing in Tokio, has forwarded a sum of money to the Colonization Commission, for the relief of the sufferers from the recent fire in Hakodate.

Mr. Otani Mitutaka, has presented five hundred yen to the fund for the same benevolent purpose.

The local newspaper has recommenced publication, but in consequence of the great losses of type, &c., is only able to appear twice a week, instead of three times as formerly.

The *Akeshu Shimbun* states that "Mr. Matsuda, the new Governor of Tokio Fu, summoned the manager and editor of the *Iroha Shimbun* to the Fusho on the 19th inst., and had some conversation with them the nature of which is yet unknown."

Beppu Kuro, a shizoku of Kagoshima, who was some time since sentenced to five years' penal servitude for a political offence, had his punishment reduced for good conduct while in gaol to two years' imprisonment. He was released altogether on the 17th instant.

Another fire occurred in Fukagawa, Tokio, on Sunday night. It broke out at about half-past ten o'clock p.m. and was not extinguished until half-past eleven, when some sixty houses had been totally destroyed.

Numerous donations have been made to the fund for repairing the Tenriji Temple, at Saga, in Kiyoto. His Majesty the Mikado has given five hundred yen, and Lieut.-General Toriwo, one thousand and five. It is to be hoped that this interesting relic of ancient times will shortly regain its pristine grandeur.

Japan is about to add to her constantly increasing and admirable light-house system by the erection of a light at Cape Yachi-ishi, near Tsuruga.

On the 15th instant there was a fall of snow at Matsumoto: the ground was covered to the depth of about an inch.

The new buildings at Sapporo, for the Colonization Commission, are to be proceeded with in March or April next year.

The native papers record several gifts by charitable persons to the Tokio poor-house.

In future, Japanese debtors who are unable or unwilling to liquidate their liabilities, are to be sentenced to terms of imprisonment varying according to the amount of the debt.

Mr. Hakoda Chiyota, the editor of the *Yei Shimbun*, was fined five yen on the 23rd instant for publishing a libel on Mr. Nakashima Ichibe.

The editor of the *Kofu Nichi Nichi Shimbun*, Mr. Tsuruda Kanai, was also fined five yen for a similar offence on the 20th instant.

IMPERIAL GOVERNMENT RAILWAYS.

TOKIO AND YOKOHAMA SECTION.

Statement of traffic receipts, for the week ending Sunday, December 21st, 1879.

Passengers, parcels, &c.	\$ 7,353.47
Merchandise, &c.	\$ 1,159.75

Total.....\$ 8,513.22

Miles open 18.

Merchandise, &c. \$ 1,983.18

Total \$10,255.84

Miles open, 47.

ARRIVAL OF THE FRENCH MAIL.

Simla, 18th November.

General Roberts telegraphs that a convoy of sick and wounded have started for India. All sick left in Kabul are well housed. A *Bombay Gazette* special from London says the *Central News* publishes a telegram to the effect that Lord Lytton returns to England immediately. The Court of Enquiry which sat to enquire into the charges of cruelty against the Ohoorkas at Charasia, made by Dr. Bourke, have been asked to explain why they did not report the matter officially.

Simla, 19th November.

The Bala Hissar is almost destroyed; the powder store remains. Any Afghan found in the fortress at night is shot. The News Agency has re-telegraphed to a Bombay paper that Lord Lytton's return to England is believed to be groundless. The *Pioneer* understands that certain papers found at Kabul are calculated to excite very painful impressions concerning the nature of the recent relations between the Governor of Kabul and the Russian Cabinet. Roberts is gazetted a Lieutenant-General.

Rome, 19th November.

The Italian Ministry has resigned owing to discussions in the left. Cairoli is forming a new Ministry.

Aden, 20th November.

The Peninsular and Oriental steamer *Venetia* with the outward English mails of the 7th, left for Bombay at 8 o'clock this morning. The *Hylasqua* left for Gallo and Calcutta at 9 o'clock.

Three arrests have been made in Ireland on account of seditious language.

Baker Pacha's powers are not to be executive; he will simply communicate to the Sultan the steps necessary to be taken in the proposed reforms.

Captain Creagh has been awarded the Victoria Cross.

Consols closed at 98.

Withdrawals from Bank for Germany about £100,000, Egypt £225,000. Shipment of Specie—Silver to Bombay \$60,000. Consols 98½ 6 per cent. Rents, 115. Bar silver, 53½ to 3. Exchange on India, 60 days' sight is 8½d. Bank Returns:—Reserve of Notes, £15,000,000; Bills discounted, £18,900,000; Bullion, £24,900,000; Proportion of Reserve, to liabilities, 45 3-16 per cent.

The three persons arrested in Ireland for seditious language are Mr. Kill-n, Barrister, Davitt, a liberated Fenian convict, both at Dublin, and Mr. Daly the proprietor of the *National* newspaper at Mayo.

Great excitement prevails throughout Ireland, and other warrants have been issued.

[Mr. Daly is a Barrister and for some years edited the London *Evening Standard*, the Tory organ. Ed. S. T.]

London, 21st November.

The *Times* publishes a letter from the Duke of Argyll, with reference to Lord Cranbrook's letter published in *The Times* of 18th instant, in which he (the Duke of Argyll) states that the refusal of Sher Ali to receive a British Mission at Kabul was contained in a letter dated May 22nd, 1876, and in which no mention was made of the Russian Embassy.

Constantinople, 21st November.

The Sultan has approved the proposal of Baker Pacha that the military service for all races and creeds be compulsory.

Allahabad Kuttra, 22nd November.

The report of the Commission left Kabul on the 18th. Of whatever recommendation, either by the Commissioner or General Roberts, there may be, nothing has transpired here. The final decision as to Yakoub Khan's guilt or innocence will be given by the Government; they will have before them a vast amount of evidence collected by Colonel Macgregor and Bellow and Hyath Khan. The inference which only can be drawn from the complicated story of the outbreak at Bala Hissar, the storming of the residency, and the conduct of the Ameer during and immediately after these events, rests upon a foundation of intrigue and lying which is very puzzling.

The telegraph from Kabul through to India has been opened. The cold is intense at night.

Rome, 22nd November.

A new Italian Ministry has been formed as follows:—Signor Cairoli, President of the Council and Foreign Minister; Signor Perer, Minister of Commerce and Agriculture; Signor Magliani, Minister of Finance; Signor Lepressi, Minister of the Interior; Signor Villa, Minister of Justice and Ecclesiastical Affairs; Admiral Acton, Minister of Marine; Signor Mancini, Minister of Public Instruction; Signor Baccarini, Minister of Public Works; and General Bonelli, Minister of War.

London, 22nd November.

The following Brevet promotions have been gazetted for services rendered in the Afghan war. To be Colonel:—Lieut. Colonel Norman Tanner; to be Lieut.-Colonels:—Majors Wilson, Sandford, Maclean, Gordon, Macqueen, Tanner, Keen, Blair, Collett, Campbell Stewart, Wauchope, Fitzhugh, Channer, Wood, Chapman, G. Stewart, Humfrey, Hatchell, Palmer, Parry, Sim, Prior, Galbraith, W. Campbell, Ross, Woleley, Hazlerigg, Woodruffe, Lockhardt; E. Chapman and Lovett. To be Majors:—Captains Faircloth, Buckley, G. W. Smith, G. Strong, Atkins, Brind, Kilock, (Kinlock), Carr, St. Quintin, Winne, Abadie, Scott, Thomson, Cook, Combe, James, Cook, Bidcock, Marshall, Stewart, Lantour, Rogers, Kennedy, Swinley, Davidson, Gerard, Wace, Morton, Haddae, North, Pretymann, Woodthorpe, Creagh, and Leach. The following gentlemen have been gazetted Companions of the Bath:—Colonels Blyth, Kennedy, Chichester, Gordon, Preston (Preston); Newdigate, Stirling, and Moore; and Lieut.-Colonels Rogers, Currie, Kear (Kean), Hunt, Browlow (Brownlow), Thomson, Tyndal, Luck, and Majors Macqueen, and Keen; and surgeons Smith and Hendles.

ARRIVAL OF THE ENGLISH MAIL.

Allahabad, 7th November.

There is said to be reason to believe that the Government of India are meditating the amalgamation of the Rajpootana and Central India Agencies, a step which Lord Mayo was anxious to carry out.

Dadar, 7th November.

In spite of what the *Bombay Gazette* says, a railway is to be made to Kandahar. Colonel DeBourbel, R. E., has been ordered to survey the route through Pishin. Out of the Pishin Valley the railway will pass by the Gwaja route. The entire work is intended to be completed in one year. The Bolan Pass since it has been taken over by Bombay has entirely changed its aspect. There is now a road along which a carriage can be driven at a trot, and every station is stocked with supplies for man and beast.

Madras, 13th November.

The Court of Inquiry has decided that the stranding of the *Himalanta* was the result of error of judgment on the part of the commander. The Court had under consideration the duty of suspending the captain's certificate; but looking to his long and useful service in his profession and to the certainty that nothing can add to the distress and mortification that the loss of this noble ship entail on him, and that he must carry with him a reflection that he has been the chief agent in her destruction, decided to restore his certificate to him. The Court restored the certificate of the Second Officer, but drew attention to the great danger to a young officer, of overconfidence when placed in a position of grave responsibility. The certificates of all the other officers were restored.

Simla, 14th November.

Sir John Strachey has introduced a Bill for amending the existing License Acts, and extending taxation to the official and professional classes. While repeating the former denials made by Sir Ashley Eden and himself, that the present tax falls upon the poor, Sir John said experience had shown that it descends too low and affects large numbers whose taxation is neither expedient nor financially profitable. The Bill exempts all traders with incomes below Rs. 250. This is approved by all local Governments, and greater relief than most of them think necessary. The average rate of tax on persons liable remains unaltered at one-and-half per cent. More than one million persons will be exempted with a loss of £240,000 revenue. To make good this loss and obtain a greater equality of taxation, a similar sum would be raised by extending the taxation at the rate of one-and-half per cent, to the richer official and salaried classes: Military men with salaries less than Rs. 6,000 are exempted. For others, the limit is Rs. 1,200. The Bill will not affect the revenue. It supersedes all local Acts. Assessment under existing Acts being made for the calendar year, it is necessary to pass the Bill before the 31st December, but no fresh tax will be actually levied until after April next.

Simla, 17th November.

General Roberts telegraphs, on the 14th, that a convoy of sick and wounded had started for India. All the sick left at Kabul are well housed. Quarters for the British portion of the force will be ready in a few days. Huts for the natives are under construction. Two severe earthquakes had occurred.

Lahore, 17th November.

The *Civil and Military Gazette* announces that Sir Peter Lumsden, Chief of the Staff of the Indian Army, proceeds to Europe on furlough early next month. It is understood the appointment will not be renewed in favour of any other officer after General Lumsden's departure.

Mr. Baden Powell, Conservator of Forests in the Punjab, has been deputed to Madras to advise the Madras Government on forest affairs, and to introduce in a modified form the Forest Act of Northern India. The Punjab and Supreme Governments entertained the highest opinions of Mr. Powell's services. Conservation and reproduction will be preferred to a money surplus in forest work.

The particulars of the fight at Doaba in the Tagas country show that the Satis first plundered Doaba, and murdered some inhabitants, and afterwards tried to cut off the company of the 67th in a running fight kept up along the banks of the Kabul river, the enemy in large numbers getting within forty yards, and only being checked by the fire of the Martinis. Forty-four men of the 67th kept at bay for over two hours a thousand of the enemy, expending over seventeen hundred rounds of ammunition. Captain Poole received a flesh wound in his leg, not serious. Sergeant Woolley, after being wounded, continued firing, and brought down two Satis who were trying to cut up a wounded man.

A telegram, dated Piphima, 17th, says that two Manipures were killed at Kohima on the 10th. The water supply that had been cut off has been re-established. Konoma is strongly fortified, but other villages were deserted. Six hundred troops were collected at Piphima. General Nation had arrived.

Gulistan, 19th November.

Sir Richard Temple arrived at Gulistan via Egwaja Pass to-day. His Excellency visited the Durra Pass from Ispentuzi this morning. The Durra Pass, considering the altitude of the Khijja Amran range presents the best route with the fewest difficulties for the construction of a railway to Kandahar, should this step be necessary.

Simla, 19th November.

General Gordon's Brigade in the Kurram has returned from the Alikheyl and Chankanna expedition and his troops are placed at General Tytler's disposal. He also hopes to move to Badesh Kheyl by the end of the week. News from Kabul dated 17th November states the General Macpherson's Brigade is expected to return to Kabul by the 21st, on which day General Baker, with a small force, is to proceed towards Maidan in the direction of Ghuzni, to collect supplies and settle the country from Kandahar. The chief of the Taraki Ghelezais from the country beyond the Kelyti-Ghilzi frontier, has reached Kandahar to submit and ask for service.

London, 26th November.

Withdrawals from Bank for Egypt, about £225,000. North America £225,000.

Guntoor, 20th November.

A cyclone of great virulence raged here last night, blowing from the E.N.E. and S.E., and doing much damage generally.

Calcutta, 21st November.

A column of the 44th Regiment has taken Sechema after some opposition, and lost two men. On returning a convoy of elephants was fired on below Seeharna. The village of Merema was seen burning from Piphima. The force is now distributed as follows:—The 44th head-quarters are at Sechema, a detachment of the 43rd is at Piphima, a detachment of the 44th at Workha, the original garrison detachment of the 42nd and the Frontier Police under Captain Reid are at Kohima. A detachment of the Frontier Police is at Pherema Pani; details of the 42nd, 43rd, and Frontier Police are at Samagutting. Two mountain guns with 100 men of the 44th were expected at Samagutting on the 21st.

Allahabad, 21st November.

General Hill has organized a local police force. A party of these under Sirdar Ebrahim Khan, an old pensioner of Fane's Horse, brought in from a village forty miles away a horse belonging to one of the Guide's escort, some Yoklans of the Embassy, and some tents. Major Hastings, Political officer, has prepared a statement showing the revenue of the Kabul Province and Kohistan. The Turkestan revenue and that of Herat can only be approximately estimated. General Baker commands the force proceeding to Murdan.

London, 24th November.

Another meeting has been held in Ireland at which the policy of the Government in respect to Ireland was condemned and the Irish people were urged to persevere in securing a free land.

The steamer *Penguin*, outward bound to Calcutta, has run ashore off Jebel Tuzur, in the Red Sea.

There is a panic in New York in consequence of bill speculations in railway stocks having collapsed.

The meeting referred to in this morning's telegram was held at Balla. Mr. Parnell addressed the meeting and counselled moderation. Several other meetings were held on Saturday, but all passed off quietly.

The *Times* publishes a telegram stating that Prince Bismarck has finally declined to participate in the Bi-metallic Conference.

Obituary—Countess Montijo, mother of the ex-Empress of the French.

Allahabad, 24th November.

Reports from Turkistan state the Nuk Mohamed, late the chief rebel leader at Kabul, has made his way *en* Balkh to the frontier, and means taking refuge with the Russians. The Amcer may leave for India any day now; probably he will be sent quietly away. No display of force will be necessary. Several headmen who have broken promises regarding furnishing supplies have been arrested.

Sir Andrew Clarke goes home next month.

Subadar Mahomed Karum Khan, of the 18th Punjab Infantry, has been dismissed the service for failing in duty at the time of the attack on the British Embassy at Kabul and elsewhere.

On Sunday and Monday, the 2nd and 3rd, Rangoon was visited by a cyclone of considerable violence, the worst weather that has been known there for many years. No very great damage appears to have been done, though several fine trees were rooted up. The rain was very heavy, but the wind shifty and gusty, rather than strong. Oppressively hot weather has followed, and the mugginess of a Madras September broods over the land.

St. Petersburg, 25th November.

It is re-asserted that Prince Gortchakoff is about to retire. Extensive internal reforms in Russia have been decided upon and a pacific policy is expected.

Allahabad, 25th November.

A raid in considerable force was made by Dhoetwals and Waziris near Chapri on the 20th. A detachment of the 18th Bengal Cavalry followed the raiders, killing five and wounding others without any loss on our side. The Zaimushts raided on the morning of the 24th and the cavalry again followed up the raiders, recovering the cattle and property stolen at Chiculo, killing and wounding some of the enemy. Three sowars were slightly wounded on our side.

Bombay, 25th November.

A special telegram to the *Bombay Gazette* from London, of the 25th, announces that Mr. John Delane, who for upwards of thirty years was Editor of *The Times*, is dead.

London, 25th November.

The Chilians have defeated the allied forces of Peru and Bolivia at Iquique, and captured the Peruvian corvette *Pilcomayo*.

Mr. Daly, the proprietor of the *National* newspaper, has been committed for trial, but bail was accepted. Killen Davitt, and others were remanded. Mr. Gladstone has arrived at Edinburgh, where he commences the electoral campaign. He has been enthusiastically welcomed. Consols, 98½, 5 % Rents, 115½. Bar Silver, 53½. Four % 79. Four and half % 86½. Paris Exchange on London, 25. 24½.

Reinforcements of troops are being sent to the west of Ireland owing to increased agrarian intimidation. Davitt, the liberated Fenian who was arrested for sedition, has been committed for trial, and bail was accepted.

Mr. Gladstone, in his electoral campaign, made his first speech at Edinburgh yesterday, in which he framed a powerful indictment against the policy of the Government and pointed out the necessity of replacing the present majority, which was absolutely responsible for the said policy, by a Liberal majority.

St. Petersburg, 26th November.

It is currently rumoured here that it is the intention of England, in concert with Persia, to occupy Herat. The *Golos*, in commenting thereon, accuses Persia of ingratitude to Russia.

London, 26th November.

It is expected that the steamer *Penguin* will become a total loss.

Allahabad, 26th November.

On the Maidan-Ghuzui road on the 23rd, after General Roberts had arrived, word was brought that several Sepoy Regiments who had attacked the Residency were at a village six miles off. A squadron of the 9th Lancers, and two squadrons of the 14th Bengal Lancers, under General Ross, were sent to capture them. They took the road leading to Banian and after trotting eight miles found the face of a low range of hills with a fortified enclosure having four towers. While making for it, a volley (? musketry) at 200 yards was fired at the cavalry from a tower. Fortunately the Lancers were in skirmishing order, and only one sowar was slightly wounded, two horses shot dead and another crippled. The hills were instantly covered with armed men and a heavy fire opened upon the cavalry, which withdrew. The enemy showed in great force and the cavalry could not dismount to attack. At day-break, after an eight miles' march the open valley was reached and it was found that the hills had been deserted. The men were then marched back to Maidan. The Nagas are rising in large numbers, and Konoma is occupied by 4,000.

Calcutta, 27th November.

Konoma was taken on the 22nd. The Nagas made a desperate resistance. Major Cock and Lieutenant Ridgway and Forbes were wounded and twenty or thirty native officers and men killed. The number wounded is unknown.

KORE AND OOTSU SECTION.

Statement of traffic receipts, for the week ending Sunday, 21st December, 1879.

Passengers, parcels, &c. \$10,709.94
Merchandise, &c. \$ 2,995.45

Total \$13,705.39

Corresponding week last year.

Passengers, parcels, &c. \$ 8,272.66
Merchandise, &c. \$ 1,983.18

Total \$10,255.84

Miles open, 47.

ARRIVAL OF THE FRENCH MAIL.

Simla, 18th November.

General Roberts telegraphs that a convoy of sick and wounded have started for India. All sick left in Kabul are well housed. A *Bombay Gazette* special from London says the *Central News* publishes a telegram to the effect that Lord Lytton returns to England immediately. The Court of Enquiry which sat to enquire into the charges of cruelty against the Ghoorkas at Charasia, made by Dr. Bourke, have been asked to explain why they did not report the matter officially.

Simla, 19th November.

The Bala Hissar is almost destroyed; the powder store remains. Any Afghan found in the fortress at night is shot. The News Agency has re-telegraphed to a Bombay paper that Lord Lytton's return to England is believed to be groundless. The *Pioneer* understands that certain papers found at Kabul are calculated to excite very painful impressions concerning the nature of the recent relations between the Governor of Kabul and the Russian Cabinet. Roberts is gazetted a Lieutenant-General.

Rome, 19th November.

The Italian Ministry has resigned owing to dissensions in the left. Cairoli is forming a new Ministry.

Aden, 20th November.

The Peninsular and Oriental steamer *Venetia* with the outward English mails of the 7th, left for Bombay at 8 o'clock this morning. The *Hydaspes* left for Gallo and Calcutta at 9 o'clock.

Three arrests have been made in Ireland on account of seditious language.

Baker Pacha's powers are not to be executive; he will simply communicate to the Sultan the steps necessary to be taken in the proposed reforms.

Captain Creagh has been awarded the Victoria Cross.

Consols closed at 98.

Withdrawals from Bank for Germany about £100,000, Egypt £225,000. Shipment of Specie—Silver to Bombay \$60,000. Consols 98½ 6 per cent. Rents, 115. Bar silver, 53½ to 54. Exchange on India, 60 days' sight is 8½d. Bank Returns:—Reserve of Notes, £15,000,000; Bills discounted, £18,900,000; Bullion, £28,900,000; Proportion of Reserve, to liabilities, 45 3-16 per cent.

The three persons arrested in Ireland for seditious language are Mr. Killen, Barrister, Davitt, a liberated Fenian convict, both at Dublin, and Mr. Daly the proprietor of the *National* newspaper at Mayo.

Great excitement prevails throughout Ireland, and other warrants have been issued.

[Mr. Daly is a Barrister and for some years edited the *London Evening Standard*, the Tory organ. Ed. S. T.]

London, 21st November.

The *Times* publishes a letter from the Duke of Argyll, with reference to Lord Cranbrook's letter published in *The Times* of 18th instant, in which he (the Duke of Argyll) states that the refusal of Sher Ali to receive a British Mission at Kabul was contained in a letter dated May 22nd, 1876, and in which no mention was made of the Russian Embassy.

Constantinople, 21st November.

The Sultan has approved the proposal of Baker Pacha that the military service for all races and creeds be compulsory.

Allahabad Kutra, 22nd November.

The report of the Commission left Kabul on the 18th, of whatever recommendation, either by the Commissioner or General Roberts, there may be, nothing has transpired here. The final decision as to Yakoub Khan's guilt or innocence will be given by the Government; they will have before them a vast amount of evidence collected by Colonel Macgregor and Bellew and Hyath Khan. The inference which only can be drawn from the complicated story of the outbreak at Bala Hissar, the storming of the residency, and the conduct of the Ameer during and immediately after these events, rests upon a foundation of intrigue and lying which is very puzzling.

The telegraph from Kabul through to India has been opened. The cold is intense at night.

Rome, 22nd November.

A new Italian Ministry has been formed as follows:—Signor Cairoli, President of the Council and Foreign Minister; Signor Perer, Minister of Commerce and Agriculture; Signor Magliani, Minister of Finance; Signor Depressi, Minister of the Interior; Signor Villa, Minister of Justice and Ecclesiastical Affairs; Admiral Acton, Minister of Marine; Signor Mancini, Minister of Public Instruction; Signor Baccarini, Minister of Public Works; and General Bonelli, Minister of War.

London, 22nd November.

The following Brevet promotions have been gazetted for services rendered in the Afghan war. To be Colonel:—Lieut. Colonel Norman Tanner; to be Lieut.-Colonels:—Majors Wilson, Sandford, Maclean, Gordon, Macquoen, Tanner, Keen, Blair, Collette, Campbell Stewart, Wauchope, Fitzhugh, Channer, Wood, Chapman, G. Stewart, Humfrey, Hatchell, Palmer, Parry, Sim, Prior, Galbraith, W. Campbell, Ross, Walseley, Hazlerigg, Woodruffe, Lockhardt; E. Chapman and Lovett. To be Majors:—Captains Faircloth, Buckley, G. W. Smith, G. Strong, Atkins, Brind, Killock, (Kinlock), Carr, St. Quintin, Winne, Abadie, Scott, Thomson, Cook, Combe, James, Cook, Bidcock, Marshall, Stewart, Lantour, Rogers, Kennedy, Swinley, Davidson, Gerard, Wace, Morton, Haddas, North, Pretzman, Woodthorpe, Creagh, and Leach. The following gentlemen have been gazetted Companions of the Bath:—Colonels Blyth, Kennedy, Chichester, Gordon, Preston (Preston); Newdigate, Stirling, and Moore; and Lieut.-Colonels Rogers, Currie, Kear (Kean), Hunt, Browlow (Brownlow), Thomson, Tyndal, Luck, and Majors Macquoen, and Keen; and surgeons Smith and Hendles.

ARRIVAL OF THE ENGLISH MAIL.

Allahabad, 7th November.

There is said to be reason to believe that the Government of India are meditating the amalgamation of the Rajpootana and Central India Agencies, a step which Lord Mayo was anxious to carry out.

Dadur, 7th November.

It spite of what the *Bombay Gazette* says, a railway is to be made to Kandahar. Colonel DeBourbel, R. E., has been ordered to survey the route through Pishin. Out of the Pishin Valley the railway will pass by the Gwaja route. The entire work is intended to be completed in one year. The Bolan Pass since it has been taken over by Bombay has entirely changed its aspect. There is now a road along which a carriage can be driven at a trot, and every station is stocked with supplies for man and beast.

Madras, 13th November.

The Court of Inquiry has decided that the stranding of the *Himalayan* was the result of error of judgment on the part of the commander. The Court had under consideration the duty of suspending the captain's certificate; but looking to his long and useful service in his profession and to the certainty that nothing can add to the distress and mortification that the loss of this noble ship entail on him, and that he must carry with him a reflection that he has been the chief agent in her destruction, decided to restore his certificate to him. The Court restored the certificate of the Second Officer, but drew attention to the great danger to a young officer, of overconfidence when placed in a position of grave responsibility. The certificates of all the other officers were restored.

Simla, 14th November.

Sir John Strachey has introduced a Bill for amending the existing License Acts, and extending taxation to the official and professional classes. While repeating the former denials made by Sir Ashley Eden and himself, that the present tax falls upon the poor, Sir John said experience had shown that it descends too low and affects large numbers whose taxation is neither expedient nor financially profitable. The Bill exempts all traders with incomes below Rs. 250. This is approved by all local Governments, and greater relief than most of them think necessary. The average rate of tax on persons liable remains unaltered at one-and-half per cent. More than one million persons will be exempted with a loss of £240,000 revenue. To make good this loss and obtain a greater equality of taxation, a similar sum would be raised by extending the taxation at the rate of one-and-half per cent, to the richer official and salaried classes: Military men with salaries less than Rs. 6,000 are exempted. For others, the limit is Rs. 1,200. The Bill will not affect the revenue. It supersedes all local Acts. Assessment under existing Acts being made for the calendar year, it is necessary to pass the Bill before the 31st December, but no fresh tax will be actually levied until after April next.

Simla, 17th November.

General Roberts telegraphs, on the 14th, that a convoy of sick and wounded had started for India. All the sick left at Kabul are well housed. Quarters for the British portion of the force will be ready in a few days. Huts for the natives are under construction. Two severe earthquakes had occurred.

Lahore, 17th November.

The *Civil and Military Gazette* announces that Sir Peter Lumsden, Chief of the Staff of the Indian Army, proceeds to Europe on furlough early next month. It is understood the appointment will not be renewed in favour of any other officer after General Lumsden's departure.

Mr. Baden Powell, Conservator of Forests in the Punjab, has been deputed to Madras to advise the Madras Government on forest affairs, and to introduce in a modified form the Forest Act of Northern India. The Punjab and Supreme Governments entertained the highest opinions of Mr. Powell's services. Conservation and reproduction will be preferred to a money surplus in forest work.

The particulars of the fight at Doaba in the Tagas country show that the Satis first plundered Doaba, and murdered some inhabitants, and afterwards tried to cut off the company of the 67th in a running fight kept up along the banks of the Kabul river, the enemy in large numbers getting within forty yards, and only being checked by the fire of the Martini. Fifty-four men of the 67th kept at bay for over two hours a thousand of the enemy, expending over seventeen hundred rounds of ammunition. Captain Poole received a flesh wound in his leg, not serious. Sergeant Woolley, after being wounded, continued firing, and brought down two Satis who were trying to cut up a wounded man.

A telegram, dated Piphima, 17th, says that two Munipures were killed at Kohima on the 10th. The water supply that had been cut off has been re-established. Konoma is strongly fortified, but other villages were deserted. Six hundred troops were collected at Piphima. General Nation had arrived.

Gulistan, 19th November.

Sir Richard Temple arrived at Gulistan via Egwaja Pass to-day. His Excellency visited the Durra Pass from Ispentuzi this morning. The Durra Pass, considering the altitude of the Khijja Amran range presents the best route with the fewest difficulties for the construction of a railway to Kandahar, should this step be necessary.

Simla, 19th November.

General Gordon's Brigade in the Kurram has returned from the Alikheyl and Chumkanna expedition and his troops are placed at General Tytler's disposal. He also hopes to move to Badesh Kheyl by the end of the week. News from Kabul dated 17th November states the General Macpherson's Brigade is expected to return to Kabul by the 21st, on which day General Baker, with a small force, is to proceed towards Maidan in the direction of Ghuzni, to collect supplies and settle the country from Kandahar. The chief of the Taraki Ghelzais from the country beyond the Kelyti-Ghilzi frontier, has reached Kandahar to submit and ask for service.

London, 26th November.

Withdrawals from Bank for Egypt, about £225,000. North America £225,000.

Guntoor, 20th November.

A cyclone of great virulence raged here last night, blowing from the E.N.E. and S.E., and doing much damage generally.

Calcutta, 21st November.

A column of the 44th Regiment has taken Sechemba after some opposition, and lost two men. On returning a convoy of elephants was fired on below Seeharna. The village of Merema was seen burning from Piphima. The force is now distributed as follows:—The 44th head-quarters are at Sechemba, a detachment of the 43rd is at Piphima, a detachment of the 44th at Workha, the original garrison detachment of the 42nd and the Frontier Police under Captain Reid are at Kohima. A detachment of the Frontier Police is at Pherema Pani; details of the 42nd, 43rd, and Frontier Police are at Samagutting. Two mountain guns with 100 men of the 44th were expected at Samagutting on the 21st.

Allahabad, 21st November.

General Hill has organized a local police force. A party of these under Sirdar Ebrahim Khan, an old pensioner of Fane's Horse, brought in from a village forty miles away a horse belonging to one of the Guide's escort, some Yoklana of the Embassy, and some tents. Major Hastings, Political officer, has prepared a statement showing the revenue of the Kabul Province and Kohistan. The Turkestan revenue and that of Herat can only be approximately estimated. General Baker commands the force proceeding to Murdan.

London, 24th November.

Another meeting has been held in Ireland at which the policy of the Government in respect to Ireland was condemned and the Irish people were urged to persevere in securing a free land.

The steamer *Penguin*, outward bound to Calcutta, has run ashore off Jebel Tuzur, in the Red Sea.

There is a panic in New York in consequence of bill speculations in railway stocks having collapsed.

The meeting referred to in this morning's telegram was held at Balla. Mr. Parnell addressed the meeting and counselled moderation. Several other meetings were held on Saturday, but all passed off quietly.

The *Times* publishes a telegram stating that Prince Bismark has finally declined to participate in the Bi-metallic Conference.

Obituary—Countess Montijo, mother of the ex-Empress of the French.

Allahabad, 24th November.

Reports from Turkistan state the Nuk Mohamed, late the chief rebel leader at Kabul, has made his way *via* Balkh to the frontier, and means taking refuge with the Russians. The Amir may leave for India any day now: probably he will be sent quietly away. No display of force will be necessary. Several headmen who have broken promises regarding furnishing supplies have been arrested.

Sir Andrew Clarke goes home next month.

Subadar Mahomed Karum Khan, of the 18th Punjab Infantry, has been dismissed the service for failing in duty at the time of the attack on the British Embassy at Kabul and elsewhere.

On Sunday and Monday, the 2nd and 3rd, Rangoon was visited by a cyclone of considerable violence, the worst weather that has been known there for many years. No very great damage appears to have been done, though several fine trees were rooted up. The rain was very heavy, but the wind shifty and gusty, rather than strong. Oppressively hot weather has followed, and the mugginess of a Madras September broods over the land.

St. Petersburg, 25th November.

It is re-asserted that Prince Gortchakoff is about to retire. Extensive internal reforms in Russia have been decided upon and a pacific policy is expected.

Allahabad, 25th November.

A raid in considerable force was made by Dhostwals and Wazaris near Chapri on the 20th. A detachment of the 18th Bengal Cavalry followed the raiders, killing five and wounding others without any loss on our side. The Zaimushts raided on the morning of the 24th and the cavalry again followed up the raiders, recovering the cattle and property stolen at Chiculo, killing and wounding some of the enemy. Calcutta, 27th November.

Konoma was taken on the 22nd. The Nagas made a desperate resistance. Major Cock and Lieutenant Ridgway and Forbes were wounded and twenty or thirty native officers and men killed. The number wounded is unknown.

Paris, 27th November.

The Chamber of Deputies was opened to-day. M. Gambetta in his opening speech urged a policy of conciliation.

St. Petersburg, 27th November.

The Russian Government is sending reinforcements of troops to Turkistan. The plan for the new route of advance is in preparation.

Aden, 27th November.

The *Bokhara* with the mails of the 14th inst., sailed for Bombay at three this afternoon.

London, 27th November.

The latest advices state that the Chilians have captured the city of Iquique.

Mr. Gladstone, in a speech at Dalkeith, favoured the idea of local autonomy for Ireland. The Hon. R. Bourke, in a speech at Lynn, defended the Afghan policy of the Government and said that the occupation of Kabul had revealed unperceived dangers. He gave it as his opinion that a durable and civilising peace in Afghanistan was by no means impossible.

Consols closed at 98½.

Kuttra, 28th November.

General Baker reports a further gathering of tribesmen on the Bazar road near the villages which were burnt on the 24th. On the Ghuzni road men were also gathering with an idea of a combined movement upon Maidan. As a precautionary measure, two native regiments were warned to be ready to march to Maidan at an hour's notice. Supplies in large quantity have been brought by convoys. Many Ghazis are said to be among the bands near Wardak.

London, 28th November.

The British Government is establishing in Canada a reserve of ten thousand men for active service in Canada and abroad.

Mr. Gladstone, speaking at West Calder, said the British policy was helping Russian aggrandisement.

PREVENTION OF COLLISIONS AT SEA.

(From the *London Gazette*.)

PRELIMINARY.

Art. 1. In the following rules every steamship which is under sail and not under steam, is to be considered a sailing ship, and every steamship which is under steam, whether under sail or not, is to be considered a ship under steam.

RULES CONCERNING LIGHTS.

Art. 2. The lights mentioned in the following Articles, numbered 3, 4, 5, 6, 7, 8, 9, 10, and 11, and no others, shall be carried in all weathers from sunset to sunrise.

Art. 3. A sea-going steamship, when under way, shall carry :

- (a) On or in front of the foremast, at a height above the hull of not less than 20 feet, and if the breadth of the ship exceeds 20 feet, then at a height above the hull not less than such breadth, a bright white light, so constructed as to show a uniform and unbroken light over an arc of the horizon of 20 points of the compass ; so fixed as to throw the light 10 points on each side of the ship, viz., from right ahead to two points abaft the beam on either side ; and of such a character as to be visible on a dark night, with a clear atmosphere, at a distance of at least five miles.
- (b) On the starboard side, a green light so constructed as to show a uniform and unbroken light over an arc of the horizon of 10 points of the compass ; so fixed as to throw the light from right ahead to two points abaft the beam on the starboard side ; and of such a character as to be visible on a dark night, with a clear atmosphere, at a distance of at least two miles.
- (c) On the port side, a red light, so constructed as to show a uniform and unbroken light over an arc of the horizon of 10 points of the compass ; so fixed as to throw the light from right ahead to two points abaft the beam on the port side ; and of such a character as to be visible on a dark night, with a clear atmosphere, at a distance of at least two miles.
- (d) The said green and red side lights shall be fitted with inboard screens projecting at least three feet forward from the light, so as to prevent these lights from being seen across the bow.

Art. 4. A steamship, when towing another ship, shall, in addition to her side lights, carry two bright white lights in a vertical line one over the other, not less than three feet apart, so as to distinguish her from other steamships. Each of these lights shall be of the same construction and character, and shall be carried in the same position, as the white light which other steamships are required to carry.

Art. 5. A ship, whether a steamship or sailing ship, when employed either in laying or in picking up a telegraph cable, or which from any accident is not under command, shall at night carry in the same position as the white light which steamships are required to carry, and, if a steamship, in place of that light, three red lights in tubular lanterns, each not less than 10 inches

in diameter, in a vertical line one over the other, not less than three feet apart ; and shall by day carry in a vertical line one over the other, not less than three feet apart, in front of but not lower than her foremast head, three black balls or shapes, each two feet in diameter. These shapes and lights are to be taken by approaching ships as signals that the ship using them is not under command, and cannot therefore get out of the way. The above ships, when not making any way through the water, shall not carry the side lights, but when making way shall carry them.

Art. 6. A sailing ship under way, or being towed, shall carry the same lights as are provided by Article 3 for a steamship under way, with the exception of the white light, which she shall never carry.

Art. 7. Whenever, as in the case of small vessels during bad weather, the green and red side lights cannot be fixed, these lights shall be kept on deck, on their respective sides of the vessel, ready for use, and shall, on the approach of or to, other vessels, be exhibited on their respective sides in sufficient time to prevent collision, in such manner as to make them both visible, and so that the green light shall not be seen on the port side nor the red light on the starboard side. To make the use of these portable lights more certain and easy, the lanterns containing them shall each be painted outside with the colour of the light they respectively contain, and shall be provided with proper screens.

Art. 8. A ship, whether a steamship or a sailing ship, when at anchor, shall carry, where it can best be seen, but at a height not exceeding 20 feet above the hull, a white light, in a globular lantern, of not less than eight inches in diameter, and so constructed as to show a clear, uniform, and unbroken light, visible all round the horizon at a distance of at least one mile.

Art. 9. A pilot-vessel, when engaged on her station on pilotage duty, shall not carry the lights required for other vessels, but shall carry a white light at the mast-head, visible all round the horizon, and shall also exhibit a flare-up light or flare-up lights at short intervals, which shall never exceed 15 minutes. A pilot-vessel, when not engaged on her station on pilotage duty, shall carry lights similar to those of other ships.

Art. 10. (a.) Open fishing boats and other open boats when under way shall not be obliged to carry the side lights required for other vessels : but every such boat shall in lieu thereof have ready at hand a lantern with a green glass on one side and a red glass on the other side ; and on the approach of or to other vessels, such lantern shall be exhibited in sufficient time to prevent collision, so that the green light shall not be seen on the port side, nor the red light on the starboard side.

(b.) A fishing vessel, and an open boat, when at anchor, shall exhibit a bright white light.

(c.) A fishing vessel, when employed in drift net fishing, shall carry on one of her masts two red lights in a vertical line one over the other, not less than three feet apart.

(d.) A trawler at work shall carry on one of her masts two lights in a vertical line one over the other, not less than three feet apart, the upper light red, and the lower green, and shall also either carry the side lights required for other vessels, or if the side lights cannot be carried, have ready at hand the coloured lights as provided in Article 7, or a lantern with a red and a green glass as described in paragraph (a) of this Article.

(e.) Fishing vessels and open boats shall not be prevented from using a flare-up in addition, if they desire to do so.

(f.) The lights mentioned in this Article are substituted for those mentioned in the 12th, 13th, and 14th Articles of the Convention between France and England scheduled to the British Sea Fisheries Act, 1868.

(g.) All lights required by this Article, except side lights, shall be globular lanterns so constructed as to show all round the horizon.

Art. 11. A ship which is being overtaken by another shall show from her stern to such last-mentioned ship a white light or a flare-up light.

SOUND SIGNALS FOR FOG, &c.

Art. 12. A steamship shall be provided with a steam whistle or other efficient steam sound signal, so placed that the sound may not be intercepted by any obstructions, and with an efficient fog-horn to be sounded by a bellows or other mechanical means, and also with an efficient bell. A sailing ship shall be provided with a similar fog-horn and bell.

In fog, mist, or falling snow, whether by day or night, the signals described in this article should be used as follows ; that is to say.

- (a.) A steamship under way shall make with her steam-whistle, or other steam sound signal, at intervals of not more than two minutes, a prolonged blast.
- (b.) A sailing ship under way shall make with her fog-horn, at intervals of not more than two minutes, when on the starboard tack one blast, when on the port tack two blasts in succession, and when with the wind abaft the beam three blasts in succession.
- (c.) A steamship and a sailing ship when not under way shall at intervals of not more than two minutes, ring the bell.

SPEED OF SHIPS IN FOG, &c.

Art. 13. Every ship, whether a sailing ship or steamship, shall in a fog, mist, or falling snow, go at a moderate speed.

STEERING AND SAILING RULES.

Art. 14. When two sailing ships are approaching one another so as to involve risk of collision, one of them shall keep out of the way of the other as follows, viz. :—

- (a.) A ship which is running free shall keep out of the way of a ship that is close-hauled.
- (b.) A ship which is close-hauled on the port tack shall keep out of the way of a ship which is close-hauled on the starboard tack.
- (c.) When both are running free with the wind on different sides, the ship which has the wind on the port side shall keep out of the way of the other.
- (d.) When both are running free with the wind on the same side, the ship which is to windward shall keep out of the way of the ship which is to leeward.
- (e.) A ship which has the wind aft shall keep out of the way of the other ship.

Art. 15. If two ships under steam are meeting end on, or nearly end on, so as to involve risk of collision, each shall alter her course to starboard, so that each may pass on the port side of the other.

This article only applies to cases where ships are meeting end on, or nearly end on, in such a manner as to involve risk of collision, and does not apply to two ships which must, if both keep on their respective courses, pass clear of each other.

The only cases to which it does apply are, when each of the two ships is end on, or nearly end on, to the other, in other words, the cases in which, by day, each ship sees the masts of the other in a line, or nearly in a line, with her own; and by night, to cases in which each ship is in such a position as to see both the side lights of the other.

It does not apply by day to cases in which a ship sees another ahead crossing her own course; or by night, to cases where the red light of one ship is opposed to the red light of the other, or where the green light of one ship is opposed to the green light of the other, or where a red light without a green light, or a green light without a red light, is seen ahead, or where both green and red lights are seen anywhere but ahead.

Art. 16. If two ships under steam are crossing so as to involve risk of collision, the ship which has the other on her own starboard side shall keep out of the way of the other.

Art. 17. If two ships, one of which is a sailing ship and the other a steamship are proceeding in such directions as to involve risk of collision, the steamship shall keep out of the way of the sailing ship.

Art. 18. Every steamship, when approaching another ship so as to involve risk of collision, shall slacken her speed or stop and reverse if necessary.

Art. 19. In taking any course authorised or required by these regulations, a steamship under way may indicate that course to any other ship which she has in sight by the following signals on her steam-whistle, viz. :—

One short blast to mean "I am directing my course to starboard."

Two short blasts to mean "I am directing my course to port."

Three short blasts to mean "I am going full speed astern."

The use of these signals is optional; but if they are used, the course of the ship must be in accordance with the signal made.

Art. 20. Notwithstanding anything contained in a preceding Article, every ship, whether a sailing ship or a steamship, overtaking any other, shall keep out of the way of the overtaken ship.

Art. 21. In narrow channels every steamship shall, when it is safe and practicable, keep to that side of the fairway or mid-channel which lies on the starboard side of such ship.

Art. 22. Where by the above rules one of two ships is to keep out of the way, the other shall keep her course.

Art. 23. In obeying and construing these rules due regard shall be had to all dangers of navigation; and to any special circumstances which may render a departure from the above rules necessary in order to avoid immediate danger.

NO SHIP, UNDER ANY CIRCUMSTANCES, TO NEGLECT PROPER PRECAUTIONS.

Art. 24. Nothing in these rules shall exonerate a ship, or the owner, or master, or crew thereof, from the consequences of any neglect to carry lights or signals, or of any neglect to keep a proper look-out, or of the neglect of any precaution which may be required by the ordinary practice of seamen, or by the special circumstances of the case.

RESERVATION OF RULES FOR HARBOURS AND INLAND NAVIGATION.

Art. 25. Nothing in these rules shall interfere with the operation of a special rule, duly made by local authority, relative to the navigation of any harbour, river, or inland navigation.

MADAME DE SAINTE-FOLYE'S BABIES.

(From the *Cornhill Magazine*.)

(Continued.)

One day, as Madame de Sainte-Folye sat in her drawing-room reflecting on the great stupidity and wickedness of the world—which had become a favourite subject for meditation with her of late—she heard an animated colloquy outside the door. Some human being with a voice like a parrot's was talking in the vilest French to the butler and M. de Beantoupet, who, to judge by their excited answers, seemed loth to admit him. At last the door opened, and M. de Beantoupet entered with an abashed countenance, ushering an extraordinary figure—nothing less than a full fledged Chinaman in the strange garb of his country. He had a lemon-coloured face, a pig-tail reaching to his heels, blue baggy breeches, a yellow gown and a devilish leer, and he appeared to be of any age between eighteen and eighty.

"Now, what is this new pleasantry!" cried the Countess, starting up from her sofa in anger, for she was not in an enduring humour just then. "If this be some fresh joke, M. de Beantoupet, I warn you that you may repent it."

"But this is no joke at all," answered the bewildered secretary. "This Chinaman is your godson; his name is *Lætus Marjorie Tung-Tcheek*, and he holds a letter which he says will explain everything."

"Oui, moi filleul à vous, bon chrétien—va à messe, bois vin, aime France et le pape," gabbled the young Chinese in voluble pidgion-French; and, grinning from ear to ear, he handed to the Countess a big envelope with the seal of the Catholic Church Mission in China.

Madame de Sainte-Folye, trembling with excitement, for she still suspected a hoax, tore open the envelope and read this :—

"Œuvre des Petits Chinois, Canton, China.

"The Rev. Father Superior of the Mission to Madame la Comtesse de Sainte-Folye.

"Madam,—You may remember the day when, on the occasion of your first communion, you generously subscribed five hundred francs of pocket-money, which you had saved, towards the 'Œuvre des Petits Chinois,' which has for its object the rescuing of infant Chinese from drowning, and the educating of them as Christians. The bearer of this missive would, but for your bounty, have been drowned like other infants belonging to overgrown families, for such is the method of checking the plethora of population out here; but, thanks be to you, he is now alive and well, and stands in a fair way to becoming a useful member of society. He has been christened with the names you gave him, you having been his god-mother by proxy. He speaks French, says his prayers in Latin, plays on the violin, and is most clever at carrying bones. Hearing, dear and esteemed lady, that you desired to adopt a child, the Church Mission have thought it would be agreeable to you to welcome *Lætus Marjorie Tung-Tcheek*, who owes you so much, and is, we can assure you, becomingly grateful.

"I have the honour to be, madam, your faithful servant,

"Balbus, Father Superior."

When the Countess had perused this epistle, she turned it over for a minute without raising her eyes towards the lad, who will be hereinafter described as Tung-Tcheek. She felt the paper, and saw it was true Chinese tissue, soft as silk; she scrutinised the seal, and found it to be undeniably genuine. Then she glanced at M. de Beantoupet, and seeing his face so ruefully expectant, could not forbear from smiling. As if he had been waiting for some such manifestation of geniality, the young Chinaman at once frisked forward, like a funny young dog as he was, seized the Countess's gown and lifted the hem to his lips.

"Stop, sir! What are you doing?" laughed Madame de Sainte-Folye, as she waved him off. "We shake hands here, that's enough. How old are you?"

"Two hundred and sixteen," answered Tung-Tcheek, bobbing his head gleefully.

"I suppose he reckons by months," suggested M. de Beantoupet; "that would make him eighteen."

"Let him answer for himself," rejoined the Countess, silencing the secretary: "I want to find out what's in the lad. Who is the emperor of your country, sir?"

"The Devil," answered Tung-Tcheek, with a shake of the head, as if it saddened him to confess so startling a fact.

"The Devil: what do you mean?"

"The Devil he rule in the hearts of all men not Christians, and most Chinese no Christians—so Devil he rule in China," saying which Tung-Tcheek winked as if he had got his answers pat.

"Ah, I understand; and since you are a Christian, how do you mean to spend your life?"

"I sin seventy-two times a day," answered Tung-Tcheek. "I tell lies and break all de commandments. Dat is what I shall do to my life's end."

"Well, that is a frank confession at all events," said the Countess, astonished.

"Yes; I try to do better, but it's no use," replied the Chinaman, evidently pleased with the impression he was producing; "Man born in sin, sin all his life long—can't help it. But when I die, I go straight to Heaven; nobody can stop me."

"That's a comforting sort of belief; I think I shall take to it," opined M. de Beantoupet.

"The lad is much more religious than you, for there is no dissimulation in him," said the Countess; "but now one question more, *Lætus*. What is the opinion you have been taught to have of us Franks, as I think you call us?"

"Franks have civilisation—do everything fast: travel by steam, learn fast, forget fast; always think of money; and kill each other

with caanon, saying all men brothers and should love each other."

"Decidedly he's charming, and he will be a most entertaining companion until we can send him back to China," said the Countess with a smile. "M. de Beaumontet, you will make inquiries as to when and how we can restore my godson to his native land."

"You don't mean to keep him here, then?" asked the secretary, rather relieved, for he had begun to fear lest his lemon-coloured friend should become the spoilt child of the Prefecture, and develop into a chartered buffoon.

"No, I have had enough of being laughed at," replied Madame de Sainte-Folye, drily.

But the Countess was not destined to be laughed at, at all events for the present, in connection with Tung-Tcheek. It chanced that there was a dinner-party that evening at the Prefecture, and when the Chinaman appeared at table with the best embroidered habiliments which he had brought in his box, he became an attractive object to the ladies, who, moreover, listened with great interest to the narrative of his life. There is a constantly ebbing and flowing fashion for China, so there might as well be a fashion for Chinese. Several ladies, hearing how their hostess had become godmother to a little Celestial during her girlhood, bethought themselves that it would be a *chic* thing to contribute to the "Œuvre des Petites Chinoises," and to get each of them a pet godson with a pig-tail whom they could show off at their tables for the amusement of their guests. The wondrously correct demeanour of Tung-Tcheek during the dinner, served to promote the excellent opinion that had been conceived of him at first sight. Peering out of the corners of his small eyes to watch what others did, he appeared laudably anxious to copy their manners and make no mistakes. To be sure, he blundered once or twice, as when he helped himself profusely to pepper instead of to salt, and drank desperately out of the decanter to assuage the fire on his tongue that resulted from this error; he also shovelled some hot potatoes into his pocket to eat them cold by and by as he said, because he preferred them that way, and he called rather loudly for champagne several times out of his turn, for the simple reason, as he said, that he liked that beverage. But these were little quips that did no one any harm, and only served to enhance the courivality of the repast.

A lady always feels kindly to those who help her to obtain *kudos* of any sort, so as Tung-Tcheek had ministered to the success of the prefectural banquet, and earned for the Countess a character for sanctity, she was put into a good humour with him. When all the guests had retired, she said:

"Well, Lactus" (for she always called him by his baptismal name), "we are going to give you a good bed now. What did you think of your dinner?"

"Why does your husband wear a pane of glass in his eye?" inquired the Chinaman, staring intently at the Prefect, who sat silent in an arm chair, ogling him as if he were some strange and not very welcome animal.

"To see through, I suppose," laughed the Countess. "Now, what do you think of my husband?"

"He very much afraid of you, dat's what I think," replied the Chinaman with engaging candour.

"Hush, Lactus, you mustn't say those things; they are not polite," said the Countess, amused but colouring.

"Why not, if they're true?" replied Tung-Tcheek, amazed.

"Because all truths are not good to tell."

"Take care, my dear, that's a new education you're beginning," remarked the Prefect with a smile.

"If you make me tell lies to please you, you bear blame of them," remarked Tung-Tcheek, wagging his head, "I tell no more than twenty lies a day to please myself."

"This young man will be quite a treasure to us," said M. de Beaumontet, rubbing his hands as he noticed a new blush rise to the Countess's face.

So the Countess had an adopted child at last, for Tung-Tcheek became definitely installed at the Prefecture as the *fil de la main*.

He was too much lionised for the Countess to care to part with him. His truthful sallies set drawing-room companies in a roar; and he was, besides, a good boy, for he spent most of his days reading good books given him by the missionaries, or carving bones. Out of a shin of beef he would make very pretty crucifixes, and from a leg-of-mutton bone he sculptured statuettes which were remarkable for the intention, if not for the correctness of the design. All this exemplariness of behaviour lasted for three weeks or so. Then Tung-Tcheek began to be thought rather a bore. His self-esteem being stimulated by the applause which his speeches won, he took upon himself to put bars to some of the sallies which he shot. He got to have his likes and dislikes. He loved a certain lady because she was redolent of nice perfumes, and loathed another because she had a red nose—which things he avowed without any reserve in the hearing of all whom it might concern. He told an old dowager that he could see she was wearing a wig; and asked a buxom widow, just on the wrong side of forty, why she painted herself? He expressed his conviction that a highly respected senator, who was a relative of the Count's, had a weakness for telling fibs; and roundly taxed the general in command of the garrison with being too fond of the bottle. But worse than all, he one evening entered into controversy with the bi-hop, and caught that right reverend prelate at fault in his theology. He moreover informed Sa Grandeur that the latter's mode of life was by no means so edifying as that of Catholic bi-hops in China, who flourished mostly on rice and water, and never indulged in strong drink, lest their example should cause others to sin. This kind of thing soon became unendurable, and Madame de Sainte-Folye perceived that she would lose all her friends if she did not pack off Tung-Tcheek to his country. She became the more disposed to do this as she saw no possibility of giving the truthful lad a career in France. His own talents, as he confessed, were limited to sinning but twenty-two times a day (an allowance which he seldom exceeded) and to carving bones. But it would not have

been decent that a godson of the Countess de Sainte-Folye should set up as a bone-seller.

"We will give him a sum of money to open a shop with in Canton, and we will despatch him by the next boat," said the Countess one day, when she had been discussing about her *protégé's* welfare with her husband and M. de Beaumontet.

But Tung-Tcheek, when he got wind of what was brewing, felt far from satisfied. He was too pleased with the civilities shown him in Europe to desire a return to China; and having, with the deep shrewdness of his race, obtained an insight into the position which a French prefect holds, he felt that he was equal to playing, if need were, a game of threats to secure the comfortable berth into which he had fallen. The first time Madame de Sainte-Folye plainly intimated to him her intention of sending him back to China, Tung-Tcheek laid down the bone of a cutlet which he was carving, and said: "No. You saved me from drowning, you bound to make my life happy; and I not happy if I go back."

"Why, but, you little monster, do you think I am bound to listen all my life to your disagreeable language?" exclaimed the Countess, for she was by this time very angry with Tung-Tcheek.

"You no right to complain of truth if you good Christian," answered the Chinaman coolly; "but you no christian. You frivolous woman, and awful liar; I heard your husband say so."

"How dare you!" cried the Countess, white with rage.

"You listen to me," said Tung-Tcheek, taking up his pigtail and combing out the tuft at the end, pensively, with his fingers. "I want marry rich wife, and have nice Government post, as all good French Christians do; if not I join de Opposition."

"Well I never!" ejaculated the Countess aghast; "pray, sir, who has been talking to you about Opposition?"

"In dis country," said Tung-Tcheek, as if he were beginning a speech, "every public man have a thousand enemies to one friend, dat's about the proportion. De thousand enemies push to get him down, and de few, few friends don't care much whether he's down or up—dat's my experience. Now I've lived in your house a month, and know all your secrets and everything about you. If you not do as I tell you, I go and make de Opposition laugh by going and repeating all I know. You not like to be laughed at because you silly woman, very vain and proud. Dat's de truth, my godmother."

"Oh you hilicious little viper!" ejaculated the Countess, but she remembered all the odium and ridicule she had incurred because of the baby Soulot, and she resolved to dissemble. She was not going to furnish the Radicals with a handle for saying that she bullied helpless foreigners as well as juvenile natives. So though she trembled inwardly from exasperation, she patted Tung-Tcheek on the head and pretended to treat his utterances as a joke. "You're a strange boy," said she, "but we will do our best for you. What sort of post should you like?"

"Plenty pay and little work, like your husband and other Christians," replied Tung-Tcheek, volubly, as he resumed the carving of his bone.

"And what sort of wife should you like?"

"One as much like you as possible."

"Ah! there's a compliment at last."

"No, it's truth—you clever woman, keep your husband in his place. He such a doukey that he no keep his place without you. Besides, you tell so many fibs that you save him all trouble on dat score."

"Go on, sir, go on," cried the Countess, who could scarcely realise the audacity of her *protégé*; "have you any more nice truths to tell?"

Tung-Tcheek said nothing for the moment, but quietly scraped his cutlet-bone with his knife. It was a fine summer evening. A perfume of roses streamed through the windows that opened on to a garden, and one could hear the strains of a distant band that was playing on the parade-ground. Suddenly Tung-Tcheek smiled and glanced up at Madame de Sainte-Folye, who had tears in her eyes, for she was growing seriously alarmed at the discovery that she had been fostering such an imp of evil.

"Pardieu me, Madame," said the Chinaman rising with a bow, and speaking in much improved French, "please consider all I have said as jokes."

"Queer jokes!" echoed the disgusted lady. "But what means this change I notice in your accent and manner?"

"I must confess I have been imposing upon you," answered Tung-Tcheek, laughing outright this time. "It is quite true that I am a Chinaman, that you saved me from drowning, and that I am your godson. But at the Church Mission School they teach us better French than I have hitherto spoken to you; besides which, I am the adopted son of a wealthy mandarin who has caused my education to be perfected, and who has now sent me to travel in Europe for my pleasure."

"Ah! that's it!" exclaimed the Countess, very much relieved, though Tung-Tcheek's surprising communication did not greatly endear him in her sight, for women do not love to be fooled; but tell me now why you have been making yourself so offensive. You were so nice during your first days here."

"The Christians who visit us in China and are good enough to bring us opium and brandy, speak to us a great deal of religion and civilization," said Tung-Tcheek, rather bitterly. "I wanted to see whether you would really allow a man to live here according to the principles you preach, and I find not."

"That is rather a paradox," replied the Countess, recovering her self-possession and good humour, "but I suppose you will go back to China with a very poor opinion of us all!"

"Not of you," said the Chinaman, with a grave society bow, which proved that he must have been accustomed to bandy soft words with the yellow beauties of his own land.

"In any case," added the Countess, archly, "I presume you no longer insist upon having a post under Government and a rich wife!"

"Oh no," laughed Tung-Tcheek, "the only favour I will beg is to be admitted once more as a guest at your table. But I will don European clothes for the occasion; they will serve to remind me of the kind of language which Christians are expected to speak amongst each other."

"Out of charity," said the Countess.

"Out of charity," assented Tung-Tcheek, with true Celestial courtesy.

So Tung-Tcheek figured that day at table in a swallow-tail coat and white tie, his pigtail being curled up in a roll at the back of his head, and next day he left Ville Joyeuse. One cannot say he was greatly missed. As for the Countess of Sainte-Folye, she felt, poor woman, that she had had enough of adopting other people's children, and she determined not to renew the dangerous experiment.

CLOUDLAND COLLOQUIES.

V.

THE CAMERA.

INTERLOCUTORS: PHŒBUS-APOLLO AND A PHOTOGRAPHER.

PHŒBUS (*gazing at an assortment of photographic portraits*). A queer collection!

Tis the fate of light
To shine on all things, but this curious sight
Inspires the wish 'twere not its later doom
Follies to limn as well as to illumine.

PHOTOGRAPHER. Your godship's modern function sweetly fits
Society's needs; although our bards and wits—

PHŒBUS. *Have* you such persons?

PHOTOGRAPHER. Please your godship, yea.

PHŒBUS. Pray drop the title; I'm in evening dress,
And so *incog*. Olympus scarce could tell.
Phœbus in mufti as a modern swell.

PHOTOGRAPHER. I'm sure you gods—well, *sir*, the garb you wear
Suits you superbly, and, might I but dare
Sollicit just one sitting, the result
Would add an idol to the current cult
Of focussed notables that should eclipse
The charm of Eveleen's eyes, fair Sarah's lips,
Or the dusky witchery of those Zulu shapes
Which even less superfluous raiment drapes
Than the lax laws of gay Burlesque demand.
Ah! *Sir*, you'd make my fortune!

PHŒBUS (*wrathfully*). Dare you stand
And pray great Phœbus? But, pooh! pooh! I waste
My wrath on you. The turn of modern taste
Is not toward recluse refinement.

PHOTOGRAPHER. No,
Or where were half my fashionable show
Of photographic loveliness?

PHŒBUS. Quite lost
To the free glances of the cockney host
Of cads and crutch-armed swells.

PHOTOGRAPHER. Ah, yea! You see
The pick of British Beauties sit to me.

PHŒBUS. Thrice happy man! Pygmalion never knew
The rapturous privilege reserved for you.

PHOTOGRAPHER. Was *he* a photographic artist?

PHŒBUS. No,
He lived before the camera, and so
His art quite lacked the vital charm which lures
The glances of the coldest eye in *yours*.

PHOTOGRAPHER. Poor fellow, what a pity!

PHŒBUS. Well, your trade
Has not the chance of Aphrodite's aid,
Which somewhat trims the balance. I should like
To show her this collection. It would strike
Venus as vastly funny. Those three dames—

PHOTOGRAPHER (*promptly*). The first is Mrs. —

PHŒBUS (*sharply*). Never mind their names.

I'm Phœbus, not a *féfœur*. But the three
Pose, I suppose, in friendly rivalry.
I wonder how young Paris would decide,
And which would get the apple, maid or bride?
PHOTOGRAPHER. I think the matrons mostly have the pull,
If young and lovely.

PHŒBUS. Ah! how very full
Of pure proud pleasure must their *partners* be!

PHOTOGRAPHER. Did Paris sit in judgment now, not throe,
But thirty, or three hundred would parade
Their charms—of course quite properly arrayed.

PHŒBUS. Propriety's comparative, like grace,
And varies much with person, time, and place.
What Venus thought so, cold Minerva banned
As meretricious. Beauty in your land
Halts midway—say with Juno; and, indeed,
You hint the Junoesque will oft succeed.
Where prudent *l'arche* fails. But you look sad!

PHOTOGRAPHER. Ah! I was thinking if I only had
My camera on Ida, and again
The beauteous Three should come—

PHŒBUS (*huffily*). Rash fool refrain!
Paris was privileged, but dare you think
That even frolic Venus would not shrink
From having her superb, frank-glowing grace
Displayed in a Boeotian market place,
In competition for the herd's acclaim
With that of mime and meretrix?

PHOTOGRAPHER.

You blame
Somewhat severely. These, *sire*, you should know,
Are democratic days, when high and low
Mingle in trade and pleasure, love and sport;
And earth's Olympians are not like the court
Of the high gods as painted by you weird
Wan-looking bard, him of the tangled beard
And Hamlet cloak.

PHŒBUS.

A fine, if sombre face.

But who is she whom next to him you place?

PHOTOGRAPHER. A Modern Muse.

PHŒBUS.

More like a Menad?

PHOTOGRAPHER.

Nay,

Though dress and dress flow free, 'tis but the way
Of our Terpsichore. This is in truth
The favourite goddess of our gilded youth.

PHŒBUS.

Unrivalled by her arch-cynical neighbour there,
She of the Bacchant face and unbound hair!

PHOTOGRAPHER.

Oh, *she* is not *professional*: at 'east,
Not in the sense of those who freely feast
The public with their charms upon the stage
For gloating worship and a golden wage.
She's a Professional Beauty, and, you see,
That term does *not* imply venality.
Like gentlemanly wielders of the bat,
Who play for love and ne'er pass round the bat,
She takes no hire, but enters Beauty's lists
En amateur.

PHŒBUS.

Though somewhat this assists
Clear comprehension, still I wholly fail
To see how even triumph can avail
In such a contest. Victory's worth, methinks,
Is measured by the vanquished. Honour shrinks
From competition with the Siren charms
Which often form Dishonour's aptest arms,
And Pride and Purity are changed indeed
If fired with the ambition to succeed
In rivalry that nought but shame assures
With blushless Phryne's lust-provoking lure.
Patrician 'gainst—"professional" we'll say:
The fight's a curious feature of the day!

PHOTOGRAPHER. Your godship will remember 'twas my art
First made it possible.

PHŒBUS.

Faith, then, its part

Is worthy a new Pandarus.

PHOTOGRAPHER (*slily*).

Indeed

And *yours*, great Phœbus?

PHŒBUS (*darkly*).

Thing of Theban breed

Wouldst wake Apollo's wrath!

PHOTOGRAPHER.

Ah! well, they say

That Edison's electric light one day
Will supersede the sun-god at this task.

PHŒBUS.

So be it! Nothing better would I ask.
Faugh! "A god kissing carrion" almost seems
To type the strangest ureting of extremes
But Phœbus acting as unwilling thrall
To art like *yours*, is stranger after all!

exit.

—*Witchall Review.*

DOUBLE ACROSTIC.

When tired of tasks, the schoolboy dull
For rest will often pray,
And anxious wait the welcome morn
That opens his holiday;
And oft, in e'en maturer years,
We long, as well as he,
To fling awhile our work aside
And wander fancy-free!

1.

An ancestor of 'bluest blooded' nobles of Castile;
Right oft in ancient days his foes his warlike pow'r did feel.

2.

Beneath the 'blue Italian skies' there flows a river bright,
Whose name (if you can guess it) may assist you to this light.

3.

'Tis scarce a river;—why? because it hasn't any source;
Perhaps we'd better style it, then, a simple watercourse.

4.

As Mr. Weller, senior, observed with gloomy face,
This might have proved a telling card in Pickwick's famous case.

5.

I am a-weary, for my mind is troubled and distressed;
I fain would seek my couch, and there compose myself to rest.

6.

An inkling, or a happy thought, or e'en a lucky guess,
Will here suffice to put you on the scent, as you'll confess.

7.

When sunk the sun, and in his stead the moon shines o'er the sea,
Then scientific folks derive great benefit from me.

8.

Now, last, a flower that's possessed of quite a classic name,
Though few, perchance, can cite the ancient legend 'bout the same.

HOODLUM.

DOUBLE ACROSTIC.

My first of my second is called the shot,
But some of my second my first are not.

1.
Fine, novel, and bright,
Are expressed by this light.

2.
A word from afar
To soften a bar.

3.
This title masonic
Is not histrionic.

4.
A child of the night
Is thus forced into light.

5.
More imposing, I own,
But give me a crown.

6.
Take care when it's dark,
Or your shine you may bark.

7.
Not easy to break,
And I'm said of a steak.

Q.

ANSWER TO DOUBLE ACROSTIC, OF DEC. 20TH, BY "HOODLUM."

METEOROLOGICAL REPORT

FOR WEEK BEGINNING FRIDAY, DECEMBER 19TH, 1879,
Observatory of Daigaku, Moto-Fujimicho Hongō, Tokio, Japan.

REMARKS.

Heavy line represents barometer.
Light continuous line—max. & min. thermometers.
.....represents velocity of wind.
.....percentage of humidity.
Max. velocity of wind, 28 miles per hour on Sunday, 1 p.m.
The barometer is reduced to the freezing point and to the level of the sea.
The maximum barometer for the week was 30.133 inches on Friday at 7 a.m. and the minimum 29.525 on Sunday at 2 p.m. The barometer has been low during the entire week but at the end is rising. The range of temperature has been considerable, amounting to 72° on Thursday, on which day occurred both the minimum and maximum temperature of the week. The record of wind velocity, does not, of course, include the high winds of Friday morning at which time a maximum of about 4 miles per hour at 5 a.m. is recorded.

SHIPPING INTELLIGENCE.

Transshipment... 1,241
Locals... 3,766

REPORTS.

The Japanese steamer *Ilingo Maru* reports: Left Hakodate 17th December, 10.30 p.m., arrived at Yokohama 21st at 5.30 a.m. Light and variable winds with heavy easterly swell.
The British steamer *Glenorchy* reports: Left Shanghai on the 19th December, at 1.30 p.m. Arrived at Yokohama on the 21st December, at 8 a.m.
The Japanese steamer *Niigata Maru* reports: Left Hongkong on the 13th instant at 6.30 a.m. arrived at Kobe on the 19th instant at 8 p.m. Had strong N.E. winds with high sea to Yokohama, thence to Kobe light variable winds. Left Kobe on the 20th inst. at 5 p.m. arrived on the 22nd instant at 3 a.m. From Kobe to Yokohama had strong N.W. gales with clear weather.
The Japanese steamer *Meiji Maru* reports: Left Hakodate 15th instant at 6.30 a.m. strong variable winds to Sirio Saki: from thence to Kamaishi strong S.E. winds accompanied with very heavy

easterly swell and high confused sea. Left Kamaishi 17th inst. at daylight for Kinkazan, blowing heavy with rain and high sea. Arrived at Kinkazan at 3 p.m. Left Kinkazan 18th inst. at 6 a.m. moderate breeze and cloudy. Steamed 12 miles out from lighthouse to test new fog-bell erected at the lighthouse: heard horn distinctly at that distance. From thence left for Yokohama with strong winds and heavy easterly swell to Cape King when experienced very heavy thunder-storm lasting about one hour: from thence to Yokohama moderately fine weather. Arrived at 3 p.m. 20th inst.

The British barque *Williams Manson* reports: Left Sydney October 20th. Sighted Norfolk Island 20th. Passed Hunter Island Nov. 4th. Crossed Equator 18th. Passed South of Saint Augustine, Dec. 4th. Sighted Cape Sawa 16th. Rounded Rock Island 20th. First part of passage strong N. winds then moderate S.E. trades for a few days succeeded by calm and variable weather. North of Equator strong trades for a week: 4 days calm and again N.E. winds driving the ship as far as Cape Ian. On the coast of Japan had one severe N.W. gale, but the last 14 days have been a continuation of calm and light winds, current setting to West. Also much thunder and lightning.

The American ship *Sandow* reports: Left New York June 14th. Crossed the Equator in the Atlantic in 31° West Longitude, July 27th. Ran the Easting down in 44° South moderate. Meridian Cape of Good Hope Oct. 4th. Java Head Oct. 1st. Anjer Oct. 4th. Came through the Eastern passage into Pacific on the 7th Dec. Experienced a heavy gale from N.N.W. off East point of Nipon, and hove to 12 hours, split sails and did sundry damage. On the 19th Dec. had another gale off Cape Sina. Experienced north easterly current on the coast with a set to the S.W. Took a pilot off Rock Island on the 20th Dec. Have been on the coast 12 days. Arrived at Yokohama at 6 p.m. 21st inst. Passage 190 days.

The Japanese steamer *Nagoya Maru* reports: Left Shanghai, 1.17 a.m. 17th Dec. for Nagasaki. Arrived at Nagasaki at 7.50 a.m. on the 19th Dec. Left Nagasaki for Shimonoeki, 6 p.m. 19th Dec. Arrived at Shimonoeki, 3.45 a.m. 20th Dec. Left Shimonoeki 11.26 p.m. 20th for Kobe. Arrived at Kobe, 9.42 a.m. on the 21st. Left Kobe for Yokohama, 6 p.m. 22nd. Arrived at Yokohama, 2 a.m. 24th. Experienced light winds and very fine weather from Shanghai to Nagasaki, from Nagasaki to Shimonoeki strong N.W. winds with great deal of rain; from Kobe to Yokohama, fine weather throughout.

The Japanese steamer *Kanagawa Maru* reports: Left Nagasaki, on the 20th instant at 7 a.m. and had moderate N.W. winds the greater part of the passage to Rock Island on the 22nd instant at 8 p.m. Thence to arrival light East and N.E. winds. At 9 a.m. on the 22nd instant, picked up a small Japanese cargo boat, 46 miles to the South of Kuki Saki with three men on it having been blown off the land with a N.W. gale: took the men and cargo on board and sent the boat adrift; a very heavy sea at the time. Arrived at anchorage at 2 p.m. 24th instant.

The British steamer *Sunda* reports: Left Hongkong on the 15th December at daylight; arrived on the 25th December at 12 noon.

MISCELLANEOUS.

W. & A. GILBEY'S WINES AND SPIRITS.

W. & A. GILBEY have special facilities for carrying on an extensive Foreign Trade, having held for many years in their Excise Bonded Stores, for the purpose of their Home Trade, a stock of not less than 12,000 Casks of Wines and Spirits, which are equally available for Export. These stores are by far the largest private Duty Free Warehouses in the World, and are under the supervision of a staff of Excise Officers specially attached to these Warehouses.

THE EXTENT of W. & A. Gilbey's purchases enables them to give the best VALUE to the public, as a twentieth part of the Foreign Wines consumed in the United Kingdom is supplied from their stock. In the year 1876 W. & A. Gilbey paid duty on 1,881,049 gallons of Wines and Spirits, and the average quantity bottled and sent out by them daily was 3,050 dozens or 36,600 bottles.

QUALITY is guaranteed by W. & A. Gilbey, and is the same whether the Wines or Spirits are obtained direct from their Head Establishments or from any of their Agents. The purity and genuineness of every article in this list are guaranteed in accordance with Act of Parliament, 38 and 39 Vict., Cap. 63.

W. & A. Gilbey have always adhered to the *standard* of Bottle Measure recently recognised by the Government, namely—

6 bottles contain one gallon; 12 half-bottles contain one gallon.

SECURITY is ensured to the purchaser, each bottle bearing W. & A. Gilbey's seal and label guaranteeing *quality* and *measure*, and the *strength* also in the case of Spirits.

W. & A. Gilbey's Head Establishments:—

England.—(Offices) Pantheon, Oxford Street, London;
(Warehouses, Duty Paid) Oval Road, Camden Town, London.

Ireland.—(Offices) Upper Sackville Street, Dublin;
(Warehouses, Duty Paid) Upper Sackville St., Dublin.

Scotland.—(Offices) Haymarket, West End, Edinburgh;
(Warehouses, Duty Paid) Haymarket, West End, Edinburgh.

France.—Principal Establishment, Chateau Loundenne, near St. Estephe, Medoc.

Excise Bonded Stores.—Warehouses, Nos. 1 to 5, North-Western Goods Station, and Bonny Street, Camden Town, London.

Distillery.—James Street, Camden Town, London.

Printing Department.—Poland Street, Oxford Street, London.

J. J. GARGAN,
ENGINEER AND MACHINIST,
No. 38, Creek Side.

Machinery of all kinds overhauled and Repaired.

House Building and Repairs Contracted for.

Yokohama, December 1st, 1879.

MISCELLANEOUS.

POST OFFICE NOTICE.

ON the 31st instant, all British Post Offices or Agencies in Japan will be closed, and the Postal business hitherto transacted at such Offices or Agencies will be transferred to the Imperial Japanese Post Office.

F. G. MACHADO,
British Postmaster,
Yokohama.

British Post Office,
Yokohama, December 15th, 1879.

NOTICE TO MARINERS.

No. 4 of the 12th Year of Meiji, (1879.)

SIRIYASAKI LIGHTHOUSE.

STEAM FOG SIREN.

THE GOVERNMENT OF JAPAN hereby gives
notice, that a Steam Fog Siren has been erected at
Si iyasaki lighthouse.

Siriyaaki, at the entrance to the Tanguu Straits, is the
extreme north-eastern point of the Province of Mutsu, in
the Island of Nippon.

The Siren will be sounded during fogs, snow storms or
other causes that may render the outline of the land indis-
tinct during the day, or the light by night.

The blast from the Siren will be of six seconds' duration
with intervals of one minute. During such time as may be
necessary for getting up steam for the Siren, or if from any
accident the Siren cannot be sounded, the Fog Bell, hung
from the balcony of the Lighthouse and rung by machinery,
will be sounded at the rate of fifteen strokes per minute as
before notified.

YAMADA AKIYOSHI,

Minister of Public Works.

Tokai, 20th December, 1879.

THE BEST REMEDY FOR INDIGESTION.

TRADE

MARK

CANONILE PILLS are confidently recommended as a simple Remedy for Indigestion, which is the cause of nearly all the diseases to which we are subject, being a medicine so uniformly grateful and beneficial, that it is with justice called the "Natural Strengtheners of the Human Stomach." "Norton's Pills" act as a powerful tonic and gentle aperient; are mild in their operation, safe under any circumstances, and thousands of persons can now bear testimony to the benefits to be derived from their use, as they have been a never-failing Family Friend for upwards of 45 years. Sold in Bottles at 1s. 1½d., 2s. 9d., and 11s. each, by all Medicine Vendors throughout the World.

CAUTION.

Be sure and ask for "NORTON'S PILLS," and do not be persuaded to purchase an imitation.

KEATING'S COUGH LOZENGES,

COUGHS,
ASTHMA,
BRONCHITIS,

ACCUMULATION OF PHEGM.

Composed of the purest articles. These Lozenges contain no opium nor any deleterious drug, therefore the most delicate can take them with perfect confidence. Their beneficial effect is speedy and certain. The old unailing family remedy is daily recommended by the most eminent Physicians. (In use nearly 60 years).

MEDICAL TESTIMONY.

July 25th, 1877. 22, Cold Harbour Lane, London.

"Sir,—Your Lozenges are excellent, and their beneficial effects most reliable. I strongly recommend them in cases of Cough and Asthma. You are at liberty to state this as my opinion, formed from many years experience.

J. BRINGLOE, M.R.C.S.L., L.S.A., L.M.

Mr. T. KEATING, Indian Medical Service.

Dear Sir,—Having tried your Lozenges in India, I have much pleasure in testifying to their beneficial effects in cases of Incipient Consumption, Asthma and Bronchial Affections. I have prescribed them largely, with the best results.

W. B. G.—, Apothecary. H.M.S.

KEATING'S COUGH LOZENGES are sold by all Chemists, in bottles, of various sizes, each having the words "KEATING'S Cough Lozenges" engraven on the government stamp.

KEATING'S WORM TABLETS,

A PURELY VEGETABLE SWEETMEAT, both in appearance and taste, furnishing a most agreeable method of administering the only certain remedy for INTESTINAL or THREAD WORMS. It is a perfectly safe and mild preparation, and is especially adapted for Children.—SOLD IN BOTTLES BY ALL CHEMISTS.

THE GREATEST

WONDER OF MODERN TIMES!
HOLLOWAY'S PILLS.

Persons suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER,

In his work entitled "The Nile Tributaries in Abyssinia," says, "I ordered the dragoman Mahomet to inform the Faky that I was a Doctor, and that I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as possessing unmistakable purgative properties they create an undeniable effect upon the patient, which satisfies him of their value."

SIMPLE, SAFE AND CERTAIN!
HOLLOWAY'S OINTMENT,

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

MR. J. T. COOPER,

In his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls, butter, and horse-feed poured in upon us, until at last a tea-spoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining stock." Sold by all Chemists and Medicine Vendors throughout the World
May 17th, 1878. tf.
